Landlocked salmon at Dan Hole Pond, Ossipee N. H., are not a success so far this season. The R. O. Harding party, there last Saturday, did not get a fish. But the Fish Commissioners of the State were met and agreed to plans for further stocking and protecting the pond. More salmon are being taken at Webb Lake, Maine, and Lake Auburn is also doing better, with several good salmon there this week. Good reports are being received from the Winthrop, Me., lakes. The Bangor salmon pool has also started in to do better. The biggest salmon ever taken from that pool was three or four years ago, a 28 pounder. On Monday the next largest fish was taken there, one weighing 26½lbs. A Mr. Buck was the lucky captor. Mr. Burnett, who came from Scotland with the intention of fishing the Bangor Pool, took a week ago a 16lb. salmon. Later he has had better success, landing two or three salmon. Landlocked salmon fishing has started in well at Rangeley Lake, several catches already being reported, though no very large fish. W. B. Farmer, of Boston, has taken a 4lb. salmon there, and a trout of 3lbs. E F. Belding, of Fitchburg, Mass, has taken a salmon of 3½lbs. Fishermen from all over the country are coming in and scattering about the Rangeley waters. Two carloads of people were landed at Bemis before the ice was out, and fully as many more at Rangeley, via the Narrow Gauge.

The owners of private trout waters near Boston are making the best of them this year, and the reports are that fishing is better than usual. SPECIAL.

THE ICE GONE.

Editor Forest and Stream:

The ice went out of the lake on the 5th.

I say "the lake," because there is for me only one lake that is *the* lake. There are thousands of bodies of water called lakes, and that some people think rather nice, but I have no interest in them. The Rangeleys, Moosehead, Lake St. John and all those do not attract me. Their fishes are not my particular friends, while in *the* lake I have no doubt there are thousands of trout that are just wagging their dear little tails and waiting for me to come and see how they have passed the winter. Probably they are less impatient than I am, for I don't see how I can wait more than a week longer, but as soon as they get accustomed to the new state of things I presume they will settle down to their usual occupations and never think of me at all. The weather and the water are too cold for me yet, although they may suit them very well.

I was going to wait for my Professor, but as, after having visited Como and Lugano and Maggiore, and found no lake like *the* lake, he has skipped over to Norway to see what that country has to offer, I cannot endure waiting much longer. But I know he is aching to get back, and when once he sets foot again on our native shores, I imagine he will only stop long enough to pick up the other Professor, and I shall have them both with me.

And then won't our camp be in a muddle! There will be books, pipes, tobacco, cameras, mathematical instruments, diagrams, boots, hats, knickerbockers, dead languages, carpenter's tools, writing material, and all sorts of things piled up on the tables and all over the floor. I never attempt to find anything of my own when those two are about. If I can pick my way into my bunk at night and out of it in the morning they are welcome to the rest of the establishment. You see I have to be awfully indulgent to them, and let them do about as they like. Their company is a good deal better than their room any day. And that reminds me that I must go to town and get some rockets and fireworks and things to greet them with when I hear their well-known jödel ring across the lake.

The boats are all painted, the canoes varnished, and the rods in order. I wait with what patience I can.

G. DE MONTAUBAN.

PROVINCE OF QUEBEC, May 10.

The Lampreys.

ITHACA, N. Y., May 13.—My attention has been called to a note of inquiry from a Baltimore, Md., correspondent, anent the lamprey and its ravages upon the fish supply of central New York waters, attention to which was recently directed through the columns of FOREST AND STREAM.

There are about twenty species or kinds of Lampreys known to science, and the "destructive lamprey" referred to in my article of recent date, is one of two species found in Cayuga Lake. It has been denominated the lake lamprey, and, appearing in a landlocked form, has been able to adapt itself to the inland fresh-water conditions throughout the year. The brook lamprey, also found hereabouts, is of a smaller form, and is said to be not injurious to fish.

Swift can no doubt obtain all the information of practical value he may wish for concerning lampreys, in an article on "The Lake and Brook Lampreys of New York," appearing in the *Wilder Quarter-Century Book*, 1893, and written by Prof. Gage, of Cornell, a conceded authority upon the subject. Or I dare say Mr. H. A. Surface, of Cornell, will cheerfully answer any questions relating to the lampreys which may be directed to him. M. CHILL.

Ohio Public Sentiment and Protection.

CHIEF WARDEN L. H. REUTINGER says of public opinion respecting game protection in Ohio:

"There were 492 arrests and 353 convictions made during the year 1896, and the total amount of fines collected was $6,898 72, which shows an increase over 1895 of 101 arrests; and 69 convictions and $2,188.52 of fines collected.

"Too much assistance cannot be given the wardens in this work, and I recommend that the law should be mandatory in requiring the prosecuting attorney of each county to give his support and assistance to the county wardens in the prosecution and enforcement of the fish and game laws. I have found during my brief experience that many prosecuting attorneys are very indifferent in rendering any assistance in this work to the county wardens. Whether because the compensation they receive is too small, or whether on account of the feeling that attends the enforcement of the fish and game laws, or both, I am unable to say. Hence the necessity of making it compulsory on the part of the prosecuting attorney.

"During my experience on Lake Erie I found that public sentiment existing in the counties bordering on the lake is adverse to enforcement of the fish and game laws, and that where a strong case is made against the offender it is more difficult to convict even though you have overwhelming evidence, and where you do find any persons that are friendly to the enforcement of the fish and game laws, they are afraid to openly express themselves for fear of doing injury to their business, etc.; thus you will see what difficulty attends the successful prosecution of the violators of the fish laws in these waters."

On the other hand, the Commissioners say: "We note an ever increasing sentiment in favor of fish and game protection. The laws enacted for the protection of fish and game throughout the State are more generally observed, and the fish and game wardens of the State are being better supported by public sentiment in their work than ever before."

Connecticut Trout.

HADDAM, Conn., May 15.—Trout in this section have been more plenty this season than for several years, thanks to the State, and our excellent Fish and Game Commissioners for furnishing the fry, and to the few who applied for it and for the past four years have replenished the small streams in this locality. The trout caught are small—many of them not exceeding the legal 6in. limit—but it is better than no fishing, and they are very sweet when nicely cooked.

This season has proved conclusively the efficacy of stocking streams to insure the continuance of trout in them. Four years ago I placed 6,000 fry in several small streams, and this year, on one of them, two rods in about an hour caught nine trout that weighed 4lbs. 10oz., and I have no doubt these were from the fry I planted in 1893. This year I have caused 12,000 fry to be planted in several small streams, and though the chances are sadly against my ever taking any of them, some good fellow, I hope, may enjoy the sport thus made possible. I have eaten fruit from trees planted by other hands.

I really do not know if our State Legislature has made an appropriation for furnishing trout fry for another year, but am under the impression it has not. Without this continued replenishing, trout in our streams will only be a remembrance instead of a reality, unless we make a close period for five years to get one season of fishing, and then repeat the close period. This might be a very sure way to gain a little fishing, but for an old fellow it would seem exceedingly slow. A.

Mending a Broken Tip.

BOSTON, May 14.—*Editor Forest and Stream:* It has been some time since I have had anything to communicate to your readers, as circumstances have "chained me to business" so closely that fishing has been out of the question. However, a small matter came to my attention the other day while in conversation with some of our experienced anglers, and which may prove of the utmost value to some of your readers.

I casually mentioned my mode of repairing a split-bamboo tip when one is "Far from the haunts of men." To my astonishment I found that the idea had never occurred to my friends, so I take the liberty of giving it to any others, through your columns, who may unfortunately need it this summer. Its simplicity and thorough success will recommend it to all anglers.

Take a common goose quill, and after splitting it lengthwise spring it over the broken tip. Then note carefully how much will have to be cut out of the quill to make it fit snug round the tip Cut out a little more than is necessary to accomplish this, so that when you wrap the quill with the waxed silk, which all careful anglers carry, it will hug the fracture closely.

Any one who tries this will find that a good and rapid splice (?) can be made. I have a tip so mended with a toothpick that I have used for over ten years.

I expect to take a short trip after trout this summer, and will "report my luck" later. W. M. BROWN.

North Carolina Tarpon.

NEW BERNE, N. C, May 7.—A large school of tarpon has been playing in the sound below Beaufort and Morehead City, N. C., since May 1, and a specimen which weighed 128lbs. and measured 42in. in length was caught in a net by Capt. Sam Willis just off Fort Macon, which is something unusual; it is said they seldom school so far north. Sheepshead are abundant and large in these waters, and large catches are made. The Atlantic Hotel, at Morehead, has passed into the hands of a wideawake and wealthy New Berne syndicate. It easily accommodates 1,000 guests, and State associations of various kinds meet there every summer, where a spacious hall is provided.

C. H.

Chemung County Association.

THE Chemung County (N. Y.) Fish and Game Protective Association held their annual election April 24, and the following officers were elected: Dr. F. G. Dean, President; Aaron Seafuse, Treas.; Edward Ellison, Sec'y; Lee Knapp, Warden; John Huffman, E. M. Leverich and C. F. Young, Delegates. EDWARD ELLISON, Sec'y.

That Sebago Salmon.

PORTLAND, Me., May 14.—Just a word about a wonderful (?) salmon caught at Sebago recently. It has been widely advertised as weighing 21¼lbs, "the largest ever caught with a line," etc. While it is despicable to spoil the story of the true angler, the facts of this story ought to be known. The salmon was caught in Kettle Cove, Sebago Lake, three days after our return; was brought to this city, was seen by a number of salmon experts, both fishermen and salesmen, and I personally lifted the fish. It was not permitted to be weighed by anyone. It was said to have been 30in. long and 9in. deep. (My 11lb. salmon, weighed out of the water, was 28in. long and 8in. deep.) After being photographed it was taken to Davis's gun store here and there carefully weighed by reliable men. The true weight was 14¼lbs. The owners explain—now—the first statement by saying that when first weighed they used the old-fashioned steel yards, which, you know, has *two* hooks to hang the article to be weighed upon. The *wrong hook* was accidentally chosen, hence the difference. We get big fish enough up here in Maine without the need of such little errors.

STANLEY P. WARREN, M.D.

Rockland County, N. Y.

NEW YORK, May 11.—It may be of interest to fishermen who anticipate going trout fishing in Cedar Pond Stream, in Rockland county, to know that the fishing there this season is not good, and a novice will be very apt to go home without the smell of fish on his clothes. A party, consisting of Messrs. Nelson, Yale and myself, went out there last Saturday. We began fishing at the old chemical works, and fished down stream all day and caught only twenty-five trout; some were small, and some were of fair size, many would weigh ½lb. Mr. Nelson caught four, I caught one, and the rest were caught by Mr. Yale, who used the red brick Stony Point fly. J. J. REDNER.

Black Bass in Ontario.

CHARLESTON LAKE, Ont., May 10.—*Editor Forest and Stream:* I inclose the catch of landlocked salmon by several gentlemen from New Jersey at Charleston Lake this spring. In two days fishing Mr. R B. Reading took 29, Judge Woodruff 13, Mr. Montgomery 9, Mr. Gummere 18, Mr. W. S. Hancock 11, Col. Van Cleef 29. The average weight was 4¾lbs.

Mr. R. B. Reading had the pleasure of landing a 10lb. fish, a beauty, and in fact all the fish this season were of the finest quality. Messrs. Iffland and Wismer, of New Jersey, are also making a fine catch. W. H. LEAVITT.

Trout Torpidity in July and August.

Editor Forest and Stream:

Some years ago I became satisfied that under certain conditions our brook trout were in the habit of lying torpid, particularly during the months of July and August, in waters where the bottom consisted of mud or ooze, and from further observations to ascertain how far this habit exists I am convinced that I was correct.

I would be glad to know whether this habit has been observed by others. X.

Not Bass Waters.

ALONG with the observance of the centennial of the consecration of Bishop Bass by the Episcopalians will be resurrected some of his wit and humor. He had his fund of jokes, and some of these have been preserved. Although born in Dorchester, he had some aversion about living there. Upon being remonstrated with for deserting his native place, he simply replied: "The brooks of Dorchester are not large enough for Bass to swim in."—*Boston Transcript.*

New Jersey Coast Fishing.

ASBURY PARK, N. J., May 15.—The first bass of the season to be taken from the beach fell to the lot of Dr. G. B. Herbert, at Manasquan Inlet, during the past week; weight 6½lbs. The prediction of two weeks ago is verified in the fact that a flood of kingfish has struck the coast and has given the angler sport rarely met with thus early. The promises for coast fishing for June is most excellent, and will be responded to by the fraternity with full appreciation.

LEONARD HULIT.

Rhode Island Salt-Water Fishing.

PROVIDENCE, R. I., May 16.—Tautog fishing is growing better every day, and from the wharves and bridges in Warren, and on the regular fishing grounds off Pawtuxet, Nayatt and Warwick, they are being taken quite plentifully, although no large single catches are reported. With the advent of a week or so of warm weather, the catches, the fish and the stories will be larger. W. H. M.

Sullivan County (N. Y.) Trout.

NEVERSINK, Sullivan county, N. Y., May 10.—Two gentlemen from Brooklyn, stopping with H. W. Dean, caught out of the Neversink a very large mess of trout; some of them ran 1½lbs. They were caught on Monday, May 10. Prospects for good fishing this coming week.

HENRY W. DEAN.

St. Lawrence River Muscallonge.

MR. G. M. SKINNER tells us that 500,000 muscallonge fry were received by the Anglers' Association last week from the Caledonia fish hatchery. Part of them were put in the river at Clayton and the rest at Alexandria Bay. A 6in. specimen seen at Clayton the other day was supposed to be of the 1896 output.

A Reminder of Old Days.

ONE of the handsomest salmon ever seen was caught recently in the Connecticut River at Brockway, in Lyme, in a net. It would probably weigh about 18lbs.

IN June ex-Pres. Cleveland will fish in Thirty-one Mile Lake up the Gatineau (Quebec) where the Gatineau Fish and Game Club owns one of the finest fishing resorts on the continent. Ex-Secretary of War Lamont spent two weeks last year as a guest of the club.

Stocking New Jersey Waters.

THE latest report of Charles A. Shriner, State Fish and Game Protector, gives this summary of fish stocking in New Jersey:

Arrangements having been completed for the procuring of a lot of fish from Lake Erie, a number of wardens started for Toledo on April 16. Unfortunately a severe storm prevented fishing in the lake and there was a delay of several days. The wardens started for home on the 22d, and at Port Jervis 300 adult channel catfish, weighing from ½ to 2½lbs., were released in the Delaware River. At Paterson 100 channel catfish and 200 pike-perch were placed temporarily in one of the reservoirs of the Passaic Water Company, as it was feared that transporting these fish in their somewhat exhausted condition to distant points in New Jersey would be attended with unnecessary risk. These fish will shortly be transferred to other waters in the State. The main part of the consignment of fish was taken to Greenwood Lake, where there were released 700 pike-perch, 100 channel catfish and 16 white bass. The small number of white bass obtained was due to the prevailing cold weather. Of the fish removed from Lake Erie only eleven died in transit, and the success of the transportation is in a great measure due to the cheerful coöperation on the part of the Erie Railroad Company, which not only gave the use of a car and transportation of the wardens free of charge, but also provided fresh water and abundant ice wherever wanted.

In addition to the above stocking, there have been placed in Rancocas Creek, Burlington county, 68 black bass, 7 pickerel and 195 perch.

The work of propagating smelts has also been concluded for the season, 36,000,000 fry having been distributed in the Hackensack, Raritan and Delaware rivers, and Greenwood Lake.

Under the new law all constables, police officers, and all members of regularly incorporated societies for the protection of fish and game are empowered to make arrests and conduct prosecutions. Laws, the violation of which were hitherto punishable only in actions of debt, will be enforced under the new law. This feature of the law will prove of great advantage in the enforcement of the laws protecting fishing in Barnegat Bay, where hitherto only civil suits could be instituted for the recovery of penalties. The old law was little less than a farce, as violators of the law, as a rule cared little how many judgments were obtained against them as long as their personal liberty was not endangered.

Two Tons of Trout—But a Lifetime to Do It.

MR. GEORGE C. WASHBURN, of Hartford, Conn., exhibited a fine string of trout recently which he had caught in Green River, Columbia county, N. Y. He brought home sixty-four, which weighed 16lbs. The largest weighed 2¼lbs., another 2lbs, and there were several which tipped the scales at a pound. Mr. Washburn fished Thursday evening, Friday and Friday evening till 9 o'clock, at which time he captured the big trout in his private spot in the stream. The river is about the size of the Hockanum River, and the spring water dashes over a rocky bed. Where the water is deep it looks green, which accounts for the name of Green River. Mr. Washburn says the sport there is the best for ten years. He has fished in the river ever since he was five years old, and estimates he has taken from this stream about two tons of fish.—*Hartford Times.*

INSTINCT VS. REASONING.

ROSSVILLE, S. I.—*Editor Forest and Stream:* Mr. Wade is right—so long as the essential is not involved—when he says that "we all admit that there is a wide difference between the mentalities of man and the lower animals." Nor am I much disposed to question that, as he says: "There are acts involving reasoning so low in reasoning requirements as to be within the compass of the mentalities of the most degraded human beings, and yet are entirely beyond the powers of the most intelligent animals." I doubt it, however. It seems to me that it would be more nearly true to say that the highest lower animals would most likely see dimly what the lowest human beings see clearly—if the lowest human beings see anything involving reason clearly.

The human mother is quieted quite as certainly by something which strongly reminds her of her lost child as is the cow, in the illustration adduced by Mr. Wade, by the skin of her calf stuffed with hay. Suppose that what strongly reminds the mother of her dead child is a book, she at once begins reading the book, which she may have scolded her child for tearing or soiling, as certainly as the cow will "proceed to eat the hay with which the skin was stuffed."

I have enough evidence to fill an issue of FOREST AND STREAM to prove that the lower animal knows the difference between a dead person and one living. It seems to me that in the cases mentioned both the human and the bovine mothers are appeased through the imagination—the object bringing the loved one back so vividly that it is for the time a real subjective presence, and as that subjective presence gradually fades away the contents of the object takes the mother's attention—in one case the hay, in the other the words

The monkey has intelligence enough to take advantage of the fire which man starts. But Mr. Wade seems to doubt that a monkey has reason enough to start a fire. Here is an instance which proves that he is wrong. A gentleman owned a monkey, who hated the hired man. This man one day left his window open. The monkey entered the man's room, unscrewed the top from a lamp, poured the kerosene oil with which the lamp was filled over the man's bed, struck a match, set fire to the oil and so nearly burned the barn, in which the room was, that it was only saved by the accident of the master's seeing smoke as he returned from a drive with a clerical friend. The scamp of a monkey had taken advantage of a general absence of the male portions of the family and the help to wreak its vengeance. It seems to me that that monkey knew a good deal about lighting a fire and also about the combustibility of a certain fuel.

Mr. Wade may say that the monkey could never have thought far enough to invent the match, and that it must have been taught to strike the match. As to the first objection, among men there are not many inventors, and they generally come accidentally upon their most important discoveries As to the monkey's being taught to strike the match, I doubt that any one would teach so mischievous a creature to do so dangerous a thing. Suppose, though, that the monkey was taught to both strike a match and to unscrew the top of a lamp, it must have discovered the combustibility of the oil for itself. Or, admitting that it was shown the combustibility of kerosene oil—admit, which can hardly be, that it was taught severally every element of its act of incendiarism—still it must have put those elements together under the influence of hatred. And I submit that in so doing it reasoned as essentially as did Edison when he put the things that he knew together and produced the phonograph. It is not the question of how much a lower animal reasons, nor of in what sphere it reasons, that I am discoursing, but as to whether it reasons.

In a letter in the same column with that of Mr. Wade, in the last issue of FOREST AND STREAM, Von W. expressed the hope that all the correspondents of FOREST AND STREAM may meet in the body as they do from week to week in spirit. That wish I heartily reciprocate.

CHARLES JOSIAH ADAMS.

As the subject has come before us whether or not the brutes have reason, I ask an attempt to convince some that they must not be too sure that they have not We may ask, in the outset, just when the reasoning faculty begins to act in man. I will not attempt to answer this question, but leave it with your readers. But let us take the infant of a few days. It puts its hand into the fire and weeps from pain. If it is not removed from the cause of its suffering it will put its hand into the fire again and again. Why? Because, as we express it, it has not sense (reason) to define the cause of its suffering and conclude to refrain from the action that brought its hand in contact with the fire. But wait a few months. It again feels the pain from heat. It cannot be induced to touch the fire again. Why? Because, as we say, it has sense (reason) to define the cause and refrain from touching fire. Its thoughts, expressed by words, would be: Now I must not put my hand into that flame or I shall be burned, as I was before. There has been an inference drawn from premises. If I understand it, instinct implies no logical deduction, being entirely distinct from reason in that the latter alone forms conclusions from premises. I now turn to the brute. He feels the pain from heat and learns to shun the cause of his pain. Has he not reasoned that a repetition of an act that gave him distress will pain him again?

I wish to teach my dog to jump over my arm. I give the command. He does not obey. I then put some meat on the floor. He dodges under my arm to get it; but I prevent, and reprove him. I try again. He attempts to run under my arm and I thwart his purpose by lowering my arm, and he has to jump over it to get what he desires; and he gets it. He soon learns that I mean he shall jump, and that by jumping he may have his food. He has learned a lesson. Whatever view others may have, I cannot do otherwise than regard teachableness as implying the existence of reason, be it in greater or lesser degree.

The difference our Creator has made between man and beast I regard to be this: Man has a high order of the faculty of ratiocination; the brute has a low order of reason. Man has a sense of moral obligation; the brute is devoid of it, *i. e.*, he cannot be made to understand the moral wrong of an act; he is incapable of moral conscientiousness.

N. D. ELTING.

A LOUISIANA FOX HUNT.

NORWOOD, La.—*Editor Forest and Stream:* Our fox hunting and quail shooting are very fine, and I want to describe one of our hunts to your family of readers. We seldom hunt foxes until the latter part of December, as the cover is very heavy and the mornings too hot for the dogs.

We had an ideal morning in February; there was a splendid white frost covering everything, while the ground was just slightly frozen, with just enough spice in the air to bring a tinge of red to your nose and ears, while the moon and stars vied with one another in their brightness. Truly, it was a glorious morning.

We were to meet at 5 o'clock at a trysting place agreed the evening before; so, after a cup of coffee I mount my horse, and as the sharp sound from the frozen ground as it is struck by his feet rings out in the crisp morning air, you can feel the blood surge to your finger tips.

I was first at the tryst, but soon I could hear the shrill notes of Mr. James's horn winding through the distance, answered by the melodious voices of the hounds, and scarcely had he joined us before the deep bass of Mr. Palmer's horn was heard as he approached us from the opposite direction, and as our course lays in his direction we turn to meet him. Scarcely had we gone 200yds. before the quiet of the morning is broken by the musical voice of one of the younger hounds, and then we are all on the *qui vive;* for should it be a fox soon we will hear Rambler or Dixie, who never give voice unless it be a fox. Yes, there they go, both of them, and he can't be far ahead, for they are going rapidly, and we follow in a brisk gallop. One by one the other dogs drop in until the invigorating music burst forth with such volume from the pack of thirty hounds, that it raises the hair on one's head, and try as you may, you just can't keep from cheering. On we go through open fields and pine woods. The increased speed of the pack tells us that the fox is up now. Your horse becomes enthused with the pleasure and champs the bit and tugs at the reins for his head, but you are fain to let him loose since you must husband his wind so as to be in at the catch. Faster and faster we go as the music swells with increasing volume. Day is just breaking and the red of the approaching sun lights up the land in all of its beauty. 'Tis a splendid sight as the sun glistens on the tops of the pines covered with frost.

Now we strike a broad roadway, and for about a mile the clatter of the horses' feet reminds one of the finish on some of our large race tracks. The dogs are nearly out of hearing, and we all stop to listen, with the horses pawing and impatient of the delay. The dogs are circling and we must beat them to a certain point, for now is the time to get the first

glimpse of the fox. Off we go at full speed, and those who have the best horses leave the others behind. We reach a point where we think he will pass, and stop with eyes and ears open while the beat of the heart sounds like a drum, so loud and fast does it beat with excitement. There he is, a perfect beauty as he comes with long leaps, his tail curled over his back, only playing as yet with the mouthy pack, who are fully 400yds. behind. We wait to see them pass, and here they come with Rambler, a noble specimen, fully 15yds. in the lead Oh, ye Gods, did ever such music come from musical instruments as does from this pack as they go by at full speed, followed by the cheers of all of us!

On we go for a couple of miles more. Keeping up with dogs, over fences and through the brushwood, when stop. The fox is up to his cunning. The dogs have passed 30 or 40yds. over the trail. The music ceases and they scamper here and yonder until some dog, old at the sport, goes back for some distance and give tongue hard. They all hurry back, while the echo from their mingled voices sounds from the hills close by.

The fox has taken a course at right angles to the former one, and we sit and listen, for the fox has been running for forty or fifty minutes, and must be tiring, and will now resort to his many tricks, making short turns here and there, and doubling back on his own trail. He has turned again and will cross that field to our left. We make for the field and try to judge at what point he will cross, when here he comes up that bridle path. He is becoming tired now. He does not leap so far, and his tail, which at the start was held high in the air, is gradually lowering and soon will be dragging the ground.

He doubles again and makes that fence that separates the open field from the woods, walks up the fence for a piece and then gathers all his strength for one leap.

He succeeds for awhile in throwing the dog off and gains some little distance. Soon they are on the trail again and for the next mile there is no break in the cry of the pack, when suddenly there is a sharp turn, the fox is tired now and will try the protection of the canebrakes and brier patches; but the dogs are too numerous, and soon he has to give up his shelter. As he comes out his brush is dragging the ground and his leaps are slow; but the dogs are tiring, too, and they have a cunning foe. He makes a broom sedge field and lies down, while on the dogs come, followed by the hunters, full of excitement, for they expect to catch in this field; but not so; for on the dogs go, when suddenly the fox is up and back under the very feet of your horse, and makes for the cane again.

The dogs are soon called back and once more force him out of the brush, and with one last effort he attempts to cross that open field. He has about 30yds. the start of the dogs, but on they come, and now excitement runs high. The distance between fox and dogs is decreasing. They see the fox now and are using every effort to catch him, amid the cheering of the huntsmen; they have him now, and with one squeal and a few bites for the dog he yields up the ghost.

The first man up is down and has the fox, holds him up for inspection, while a long blast of the horn announces that the hunt is over; and while we await those who were not fortunate enough to keep up we discuss the merits of various dogs, horses and riders, and then off home to breakfast, with appetites that would do justice to any cook. And all of us declare that fox hunting is one of the finest sports on earth, and so would your many readers if they would come and try it with us.

S. J. PERKINS, M.D.

Dogs for Alaska.

EDGAR, Neb., May 10.—*Editor Forest and Stream:* In FOREST AND STREAM for April 24 I notice that Podgers takes exception to the story that persons are buying dogs in Oregon to send to Alaska, and makes the charge that such dogs are no good in the far North only as they may be used for food.

Now I believe I will take issue with friend Podgers, and say that the large Newfoundland and St. Bernard dogs are better for all purposes than the Eskimo dog, and that they will travel greater distances in the same length of time, and drag a larger load.

Rev. Mr. Young in his work "By Canoe and Dog Train," on page 94, says that he surprised the missionary secretaries by his "unique request" for the large dogs, but says he finally secured them, and then says: "I found by years of experience that the St. Bernard and Newfoundland dogs had all the good qualities, and none of the defects of the Eskimo. By kindness and firmness they were easily broken in, and then a whip was only an ornamental appendage of the driver's picturesque costume. Of these splendid dogs I often had in my possession, counting old and young, as many as twenty at a time. The largest and best of them all was Jack, a noble St. Bernard. He was black as jet, and stood over 33in. high at his foreshoulder. When in good working trim he weighed about 160lbs.

"He had no equal in all that northern land. No blizzard storm, no matter how fickle and changeful, could lead him off from the desired camping place, even if the courage of other dogs failed them, and even though the guides gave up in despair."

Though I have never used dogs myself, I know that many large dogs are used in the far North, and I have the pictures of several dog teams that were taken at Edmonton, N. W. T., where they had come down to trade from the North, and they are all large dogs.

H.

The Tale of a Brindle Dog.

GREENBRIAR, Ala.—*Editor Forest and Stream:* A pathetic and singular story of a dog's devotion is creating considerable excitement and no end of pleasurable horror among the negroes of this neighborhood just at this time. Not having witnessed any of the incidents about to be related, I can vouch for their truth only upon the evidence of the "colored man and brother," which is superabundant.

An old "Afriker nigger," whose name is just Billy, who claims to be a centenarian, and who has long been reverently regarded as a witch by his race, about a month ago was stricken with pneumonia. Whether from fear of charms and spells or from the apathetic fatality with which the negro regards sickness and death, is uncertain, but the fact remains that the old fellow for three long weeks of suffering lay in his cabin absolutely unattended and alone, save for the companionship of his dog, a small brindle cur, and a visit, tremblingly paid once a day by a single colored woman who allowed her kindness of heart to overcome her terror of the fancied supernatural.

Finally one morning last week old Billy died, the negroes say "stiff"—there is no doubt about it. The alarm was given, and those of his acquaintance gathered from far and near. Such a rousing wake has not been held in North Alabama in years. Visitors came from twenty miles, and at midnight, when the preachers had encouraged religious excitement to the height of frenzy, the shouting of the "happy" could be plainly heard for three miles.

What followed I will relate as near as possible in the language of the Rev. Toney Moore, a colored minister, and my most reliable informant:

"Yer see, sah, Brer Billy, when he got ole, wus pow'ful swi'grus—de folks 'lowed he tricked 'um, an' dey 'us natu'ly skeert ob 'im enny how. So 'twus, dese menny years, dar hain't no boddy but Sis' Milly, an' dit leetle dorg had much ter do wid 'im. Sis' Milly 'ud 'tend ter im when he 'us poly, an de dorg stuck ter 'im all de time. Why sah; when we went ter put Brer Billy in de coffin, dat dog fit so an' med sich er ter do dat we try an' tie 'im, an' he bit an' snapt so dat we c'u'dn' do dat, so we driv' im out de house wid er stick, an' one de brudders had ter jes' stan' dar an' keep 'im out.

"Den when we went ter put de coffin in de wagin de dorg went ravin' mad. I neber heaya sich howls in all my time, an' do what we c'u'd, he stayed right dar 'longside er de pall-bearers an' howl and howl. Now, sah, I know Brer Billy wus dead—Ise seed lots er dead folks, but jes' as we 'us liftin' de coffin in de wagin we felt sumpin' movin' in dar an' den we heaya Brer Billy say, an' he spoke up loud:

"'Who dat hit my dorg?'

"Man! we drap dat coffin lack hit burnt us. Hit want nufin but popler, an' when hit hit de groun' hit bust wide open, an' Brer Billy sot up an' gin ter cuss lack all percessed, an' de dorg, he jump on 'im an' lick 'is face an' look lack he smile, he dat glad.

"Heeps o' de wimmin des drap in dey tracks, an' yer neber heayr sich er terdo as dar wus wid de screamin' an' runnin'. I warnt skeert, but sumhow I wus nigh er mile erway fo' I cud stop runnin' an' go back an' mack dem fool folks put Brer Billy back ter bed

"Arter all dat ter do we sont fur er doctor. Brer Billy grins ter be erbout fo' menny days an' de doctor say he 'spec he lib er nuther hundred years, dat is ef dat dorg lib ter keep folks frum puttin' 'im in de groun' fo' he do die." H.

American Dachshund Club.

CHICAGO.—*Editor Forest and Stream:* The American Dachshund Club held its seventh meeting May 6 in Chicago. The financial report was accepted as read. Mr. Edward A. Manice, Pittsfield, Mass., joined the club. The club will offer two cups, value $50 each, for best American-bred dog and bitch (each cup to be won three times by three different dogs before becoming the property of the winner). Officers of the club were elected as follows: Louis Boening, President; C. M. Trowbridge, Vice-President; A. Froembling, Secretary; Dr. C. Motschenbacher, delegate A. K. C.

A. FROEMBLING, Sec'y.

POINTS AND FLUSHES.

Our Dogs (England) in its notes, under the head of "Dogs in Dollarland," has the following: "The chief question agitating the American kennel world at present appears to be a threatened action for libel against FOREST AND STREAM, which some time ago published a statement that a brace prize had been awarded by Mr. C. H. Mason, not on merit but to animals belonging to Mr. F. S. Stedman, who acted as Mr. Mason's ring steward at the show, the suggestion being made that the award was obtained by trickery in the ring, ribbons or such like distinguishing mark having, it is alleged, been fastened to the collars of the dogs which had to win, etc." The foregoing is most admirably correct with the following exceptions: The matter is not the chief question, the American kennel world is not agitated over it, there is no threatened action for libel against FOREST AND STREAM, we never published the statement as asserted above. However we are pleased to see our contemporary so energetic in publishing "news."

IN our advertising columns will be found the full programme of the Continental Field Trial Club, as it relates to the chicken trials. The Minnesota Derby and the Northwest Stake will be run probably in Traverse county, Minnesota, to suit the convenience of the local sportsmen who support those stakes. The Secretary, Mr W. S. Bell, informs us that the prospects look bright for a good list of entries.

Wheeling.

WHEELING NOTES.

PAPER has long been used for making car wheels, and now a Connecticut Yankee turns up with an invention for paper bicycle wheel rims.

Long, tapering strips of paper, first made waterproof and covered with cement, are wound upon a mandrel, and afterward pressed into crescent-shaped cross sections to receive the tire. The rims are said to be light and strong, and to have a decided advantage over wood, in that they will not split.

The passenger committee of the Trunk Line Association makes the official statement that such railroads as have their own lines between New York and Chicago will carry bicycles as personal baggage between these points Eastern lines, such as the New York Central, West Shore, Delaware, Lackawanna & Western, check them only to Buffalo, where they may be rechecked to Chicago or intermediate points over the Western connections of these lines.

There seems to have been a general shakeup in the Eastern lines since the New Jersey bicycle baggage bill became a law.

Connecticut has a rather odd law aimed at practical jokers, habitual borrowers, and others who are not inclined to respect the rights of bicycle owners. According to this law, anyone who uses a bicycle without the owner's express permission may be fined not more than $50, or imprisoned not more than three months. Evidence of an intention to misappropriate the bicycle is not necessary for conviction under this law, and it is only required to show that it was taken without leave. Another section of the law provides a specific penalty for theft.

"A practical engineer and bridge builder," says the *Wheel*, "spent some of his evenings recently in figuring out for his own amusement just how much a bicycle ought to weigh. When he had finished his figuring the lowest estimate of what a wheel should weigh to carry the ordinary rider safely he could make, according to his training, was 60lbs., and that, he said, he would hesitate to guarantee. Cycle makers started at the bridge builder's estimate ten years ago, but now by practical experience they have found that they can safely build a road wheel to weigh as little as 22lbs., and in some cases even less The change has been a gradual one, rendered possible partly by a great number of important inventions and partly by the exact knowledge, secured by experience, of where the machine can safely be lightened. The diamond frame, the wood rim and the pneumatic tire have been the principal inventions which have resulted in the decreased weight, the first two being lighter themselves, and the last allowing a general cutting in the weight of the metallic parts by doing away with vibration, which is of course most trying to metals. In addition to this the experience of years has shown exactly the parts which bear the greatest strain, so that the others can be lightened. In all of this the bicycle differs from most other machines, which have a certain uniform margin of safety—that is, excess of strength—throughout. In the bicycle this is graduated according to the possible strain on the machine. In some places, where no sudden strain can possibly come, there is an excess strength of only some 25 per cent. In others, which are likely to be subjected to great pressure, the bicycle is four times as strong as is necessary to carry its load. In a general way the front part of the bicycle is the one which must be made especially strong, because in collisions and most all accidents which are likely to occur to a wheel it is the front portion that suffers the most. Besides, a man, on general principles, would prefer not to take too many chances of breaking his neck or leaving his classic features in the road by a header. A man has only one neck and his supply of features is limited. It is necessary, also, to have the parts about the crank-shaft unusually strong, because it is there that the strain of driving comes. From this point upward and backward the proportionate strength is gradually decreased."

In Rochester the street railways have taken up the rôle of Good Samaritan to unfortunate wheelmen. In the case of accident, either to the wheel or rider, the wheelman is permitted to board a car and take his bicycle with him. The injury, of course, must be self-evident, and not more than one bicycle will be carried on any one car.

In San Francisco street cars have been giving tired or unlucky riders a "lift" for some time past.

In Paris, it appears, there is a pound for lost bicycles. Bicycles, as a rule, are brought to this place by the police, and for a variety of causes not always specified. As a rule, however, the owner has infringed the law in some respect. Perhaps he has ridden without a light, or perhaps he has no plate on his wheel inscribed with his name and address.

Sometimes clever thieves have been known to take advantage of the pound to give them a title to stolen wheels. Having gotten possession of a bicycle, they take it to the police, saying:

"Here is a machine that I saw abandoned at a late hour last night in the street. Of course, I have no use for it, and here it is. Will you take care of it?"

The police send it to the pound, and if the owner is not heard from after a certain time a notice is sent to the person bringing it in, and he can then come and take it away. He has a safe title to the wheel, and can dispose of it or keep it, as he likes.

Truly, a veneer of honesty is the best policy for the bicycle thief.

When the bill defining the penalty for stealing a bicycle came up in the Massachusetts Legislature the other day, an enthusiastic member offered an amendment making the penalty imprisonment for life. This gentleman, no doubt, had a weather eye on the bicycle vote; but if the man wants to make himself truly popular with the wheelmen he will introduce a bill providing capital punishment for scorchers.

B. Waters on a Wheel.

THE dog editor is wooing the fickle bicycle. He will be the ninth wheelman on the FOREST AND STREAM force, provided he survives and does not get in jail. He has just had his first experience on the street.

From the standpoint of a public rehearsal, it was a success, and spectators assert that his performance was very entertaining. In his repertory were included the grapevine twist and other specialties, such as riding up on the sidewalk without dismounting, crawling through the frame of the wheel while in motion, getting off over the handle-bars, scratching his ear with one foot while balancing, etc.

While in the midst of his performance a colored woman with two children essayed to cross the street, thinking that the rider was going in the opposite direction.

At that moment, however, he turned and swiftly bore down upon the youngest, his mother's particular pet, who was trailing behind. Johnnie gave a yell and tried to join his mother, but he was adroitly cut off from the parental succor by an inshoot toward the curb, which gave the wheelman the inside track.

"Hi there! Get out of the way," ejaculated the great dog writer, who was gritting his teeth and sawing at the handle bar. "You don't want me to run over you, do you?"

The boy made a dash for the other side of the street, and his mother on the sidewalk turned the color of a bilious squash as she saw the bicycle turn and follow him.

Before the boy could gain the sidewalk the wheelman had gotten ahead of him, and he made another frantic turn to escape, but the wheel turned too Run which way he would the bicycle was on top of him, and every dodge and twist he made was duplicated.

Finally Johnnie gave up, thinking he would rather be run over and die than endure the suspense. His mother gave a shriek and fainted. The bicycle still pointed at Johnnie, but when within about 6in. of his bare heels it abruptly came to a standstill, and its rider dismounted.

"Johnnie," said the rider, "I am worse scared than you are. Let's call it even."

In explaining the incident afterward he explained that he had not been able to take his eyes off the boy, and that the bicycle had followed his trail like a hound. "When I tried to back pedal," he added, "the thing went faster, but at the last it stopped of its own accord."

He furthermore said that he didn't think he could duplicate the fancy curves he had made while chasing the boy for a $50 bill, and also that his next bicycle ride will not be in public.

J. B. B.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

FIXTURES.

MAY.

29-30-31. Buffalo, opening cruise, Port Colborn.
31. Minnetonka, open race, Lake Minnetonka.

SECRETARIES of clubs and of regatta committees are requested to send early notice of fixtures and other events; and also of decisions of protests, etc. We shall be glad to receive copies of club books.

THE American papers are making entirely too much of the Royal Ulster banquet and the absurd talk of a challenge for the America's Cup; they have, to all appearances, forgotten the miserable fiasco of the "Distant Shore" challenge, with its similar post-prandial origin and the "dark brown taste" which marked its speedy withdrawal. It must be remembered that this Irish dinner took place, not in "Greater New York," but a free country, where no Raines law exists to curb the enthusiasm of the speakers.

IF the reports in some New York papers are to be credited, a great deal of labor and money has been most unnecessarily wasted in the preparation of yachts to challenge for and defend the Seawanhaka cup. If, as positively stated, one of the new boats on her trial trip has made a speed between known points of 13.5 miles per hour, it is hardly worth while to hold trial races, and the holders of the cup might as well express it to Oyster Bay and turn their new fleet to any use for which it may be fitted other than international racing. We do not wish to throw doubt upon our contemporaries, not even to the extent of intimating that the measuring and timing may have been done after the methods used in connection with high-speed steam yachts; but at the same time we cannot forget the fairy tales of last spring, of the phenomenal speed of the first new 15-footers.

YACHT DESIGNING.—XIX.

BY W. P. STEPHENS.

(Continued from page 335.)

THE *triangle*, Fig. 34, called in English the *set square*, is a simple but very useful instrument; used in connection with the *straightedge* or *T square*, a great deal of work may be accomplished as accurately, and much more rapidly, than by the regular geometrical constructions. It is used for drawing lines at certain fixed angles, and also for drawing parallel lines. One of its three angles is always a right angle, thus serving to draw a perpendicular to the *straightedge* against which it rests. The other two angles may be equal, or 45° each; or one may be of 60°, and one of 30°. At least two sizes of each, the 45° and the 60 and 30°, are desirable. The value of the *triangle* depends upon the absolute truth of its angles, and the straightness of its sides. The extreme points of the angles are of no consequence, they cannot be kept intact and they are of little use; but the three sides should be straight, and at the proper inclination to each other. The *triangles* are made of the same materials as the *straightedges;* if of wood, they should be built up with the edges faced, and not of a single solid piece. Rubber and celluloid are the best materials, being lighter and more convenient to handle than metal; but a 45° *triangle* of the largest size, 12 to 16in. on each of the shortest edges, is a great convenience if it can be depended upon as absolutely accurate; and for this end metal, either steel or german silver, is more reliable than wood, rubber or celluloid. Such a *triangle* should be used with the greatest care, as even metal may be damaged by an accidental blow or fall, and with any impairment of the accuracy of the angles, or even a nick in an edge, the instrument is of little use.

With the three simple instruments, *straightedge, T-square,* and *triangle,* all straight ruling can be done, but there is certain work that can be done much more quickly with more complicated instruments. For drawing a large number of parallel lines close together, as in shading, there is the *parallel ruler,* two straightedges fastened together by two links of equal length, thus being always parallel when moved to or from each other. This instrument is indispensable in navigation and chart work, being used to transfer the compass bearings from the *rose* or *compass* to other parts of the chart; it is, however, by no means indispensable in practical drafting; the same work can be done better with a pair of triangles.

A similar instrument is the *rolling parallel ruler,* a straightedge fitted with a roller underneath, on which it may be

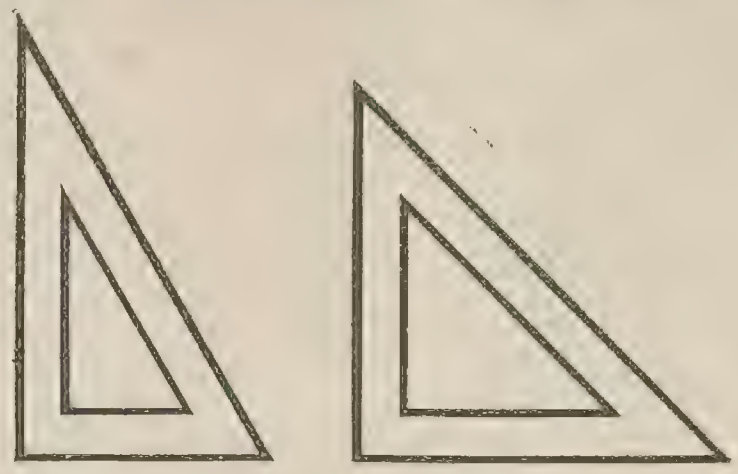

FIG. 34.

Triangle—60 and 30 degrees. Triangle—45 degrees.

moved back and forth in parallel lines. While useful at times, if at hand, neither of these are, in ordinary practice, worth what they cost.

The *section liner* consists of a straightedge, either a flat metal ruler or a round bar, with weights to keep it in place on the paper; a carriage travels from end to end of the bar, moved by a gear which engages a rack cut in the bar. This carriage has a second straightedge of rubber that can be set and clamped at any angle to the guide bar. A pawl and ratchet on the carriage regulates the distance of each movement, so that lines may be drawn at equal distances apart by throwing the pawl out of gear, the carriage may be moved any desired distance. With the pawl in gear, the instrument is used for *shading* and *cross-sectioning,* where many lines at small and equal distances are required. With the pawl out of gear, it becomes practically a *T square,* and is very useful for putting in a number of parallel lines, as in details of cabin work, etc. Such an instrument, costing $8 to $10, is very useful in an office where much drawing is done, but of course is not essential to the amateur's outfit.

It would appear upon first inspection that the drawing of straight lines was an easy matter compared with curves; but such is not the case. To draw a number of lines that shall be perfectly straight and spaced with absolute accuracy in regard to position and distance requires the best of tools and some skill in using them. A little practice in plotting lines of certain definite lengths and parallel or perpendicular to each other, as will be described later in connection with the laying off of the paper for a design, will show how very difficult it is to obtain the desirable degree of accuracy. On the other hand, these straight lines once drawn, the curves, both of short and long radius, may be run in comparatively quickly. The instruments for drawing curves are of four kinds:

Compasses and trammels.
Set Curves.
Splines or Battens.
Adjustable Curve Rulers.

The first of these, to be described later, as they are to be classed as *marking* instead of *ruling instruments,* are adapted only to curves which are true circles or parts of circles; for radii of 6in. or so, the *compass* is used, with a lengthening bar giving an additional 3 or 4in. of radius; for longer radii, up to a dozen feet if necessary, the *beam compass,* or *trammel,* is used.

The *set curves,* which are used in all classes of mechanical

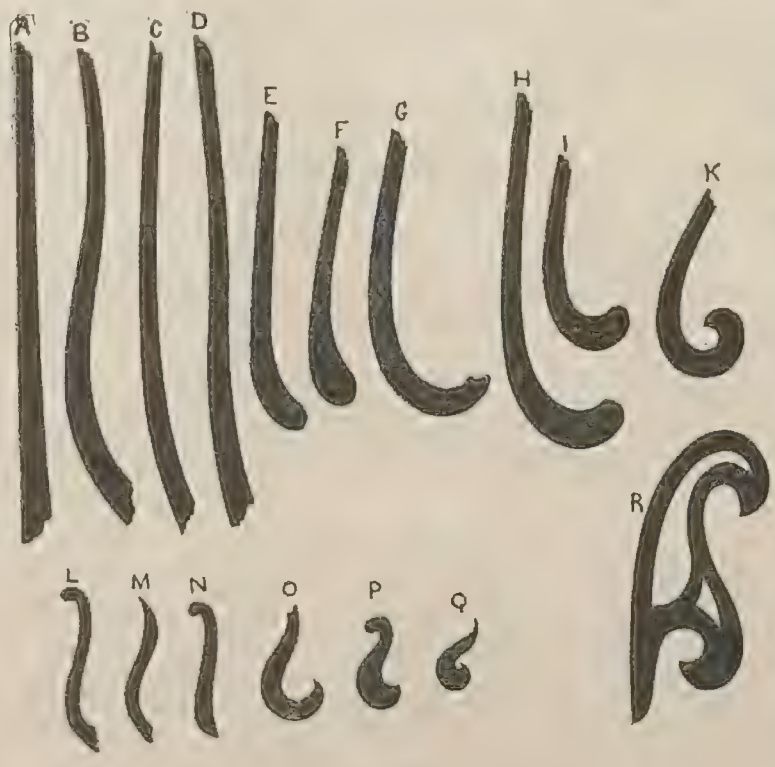

FIG. 35.

Copenhagen Ship Curves.

drafting, but especially in marine drafting, are *patterns, moulds* or *templets* of wood, metal, rubber or celluloid of a great variety of shapes. What are known the world over as "*Copenhagen Ship Curves*" were originally designed especially for marine drafting, each curve being calculated according to geometrical formulæ. The full set contains 120 curves, and in rubber costs about $65; the same curves may be obtained in wood at about two thirds of this price. The largest, about 24in. long, cost from $1 to $1.25 each in rubber, and 65 to 75 cents in wood; the smallest, only 2 or 3in. in length, cost about 25 cents in rubber. These curves are now to be had in celluloid, the price being about one-fifth greater than rubber.

Anything like a full set of ship curves is found only in the drafting rooms of large establishments, and even then there are many that are but seldom needed. While as large a collection as possible is always convenient, it will be found in practice that a comparatively small number will be sufficient, provided that they are of the right shapes and that the draftsman is so thoroughly familiar with every one that he will know as soon as he looks at a line just which curve he must pick up to fit it. With a very large collection of miscellaneous curves, the time lost in hunting for just the right one is more than is gained in using it when found. Some of the typical shapes are shown in Fig. 35.

Such a curve as A, which is one of the larger size, 24in. long, very nearly straight, is useful for lines that are not quite straight, but which have not a strong enough curvature to cause a spline to bend fairly; such as the lines of masts and booms in the sail plans. B shows a useful curve of the same size, what is called a *reverse curve,* two curves tangent to each other. Of all the *set curves,* the most useful are these of the S type, with two *reverse curves,* L, M, N are small curves about 6in. long, of the same type, very useful for the sections of the body plan. C is a true parabola—in fact all of these curves are parabolic—and makes a good sheer line for the hull of a sail plan, E and F being smaller curves for the same purpose. D is a *reverse curve* of very small curvature; it is useful in drawing the rabbet line and the side line of keel in the half-breadth plan, lines of very moderate curvature. Such curves as G, H, I are almost indispensable in designing the modern racing yacht of small size, for the hard turns of the level lines in the half-breadth plans; they are also useful for the bow ends of the section lines in the sheer plan. K is a smaller curve for the same purpose. L, M, N are small curves about 6in. long, with good reverses, as already mentioned. O, P are similar, but still smaller. Outside of the regular "*ship curves*" are others used by carriage and sleigh draftsmen, and for similar work. R shows a very useful curve of this kind, about 10 to 12in. long, one of the most generally useful curves that a draftsman can have.

In some works on drafting mention is made of "*pear-shaped curves*" as very useful to the marine draftsman, but such curves are not to be had in this country; they are entirely different from the "*pear wood curves*" mentioned in some lists and made of pear wood of all shapes. Among the miscellaneous curves made for different purposes are complete sets of *ellipses, parabolas* and *hyperbolas,* which are of no practical use to the marine draftsmen. There are also made extensive sets of circular curves, with radii graded from 20ft. down to 1½in.; these are called "*railroad curves,*" and are designed for drawing the curves of railway tracks, which are always circular. These curves also serve for drawing the crown of deck and the deck beams; a few of them in wood, or even cardboard, of 3 to 4ft. radius, will be found useful.

In purchasing an outfit of *set curves,* it is best to begin with a few, perhaps half a dozen, of medium and small sizes, using these until every inch of curve on each is well known, then others may be added by degrees as the need is found for them. In this way no money need be wasted on curves which look well on the walls, but are of limited utility in practice. Very good work can be done with wooden curves, but the rubber are preferable for a permanent outfit.

If of reliable manufacture these curves are in the main true and fair, but constant use will disclose lumps and unfair spots, especially in the very small ones. Such imperfections are a serious annoyance to the careful draftsman, but great care should be taken in the attempt to rectify them, which is best done by very fine sandpaper wrapped around a small block of wood and applied lightly to the hard places on the curve, which is laid flat on a table, the part under treatment projecting slightly over the edge.

The draftsman will frequently find it desirable to make his own curves for special purposes, such as the drawing of the stem contour or the midship or middle waterline section. A good material for this purpose is the heavy red cardboard known as "*press board*" and used by printers to lay between the printed sheets in subjecting them to hydraulic pressure, as is done in the case of fine books. This material may be had in sheets nearly or quite $\frac{1}{16}$in. thick. The outline of the curve is first traced on tracing paper and then transferred to the cardboard by pricking through with a needle or protracting point, or by tracing over transfer paper. The cardboard may be cut out with a penknife or scissors, as closely to the line as possible, the edge is then smoothed and trued up with fine sandpaper and the *templet* or *mould* is tested by applying to the drawing. The cardboard is hard enough to stand cutting and sandpapering, but it may be made harder and smoother by a coat of shellac varnish over the edges. With a little careful manipulation the edge of *mould* or *templet* may be made fair, smooth and true, and exactly fitted to the line on the paper. A single thickness of this material is hardly thick enough for pen drawing, but the outline may be run in with the pencil and inked with the rest of the drawing, by means of the thicker wood or rubber curves. For drawing the very flat curves of mast, boom, gaff, etc., the draftsman can make his own curves, of hard wood or rubber; it adds greatly to the appearance of a sail plan if the spars are drawn with the proper taper, and this can best be done with such moulds. A great deal of time may be saved by making special moulds for parts which are frequently duplicated, such as the midship section, rudder, centerboard, etc.

There are two things in particular about the work of the marine draftsman which are apt to excite the wonder of the casual observer: how the beautiful curves, such as the level lines, are drawn, and what the little lead coffins are for? One answer will suffice for both questions: the curved lines are drawn by means of a thin, flexible stick, as a guide for the pencil or pen; and the "little lead coffins" are used to anchor the stick in place while the pen or pencil is drawn along it. Such sticks are properly called *splines* or *battens,* and they are among the most indispensable portion of the draftsman's outfit. Their use is peculiar to marine drafting and they are practically unknown in other branches of the art. The proper material for the *splines* is wood, and lancewood is the best of all. Rubber and celluloid are used, but they are inferior to wood.

Considering the high degree of perfection now attained in the manufacture of the most delicate and elaborate instruments for draftsmen, engineers and surveyors, and the additional fact that good splines are the foundation of perfect work in marine drafting, it is most surprising that such cannot be purchased ready made or even obtained to order. The leading stores, in London as well as in this country, offer nothing better than the flimsy and flexible rubber *splines* or wooden ones that are crooked, knotty and very badly proportioned. The regular stock *batten* sold in the stores, of rubber, celluloid or wood, about ¼in. thick and

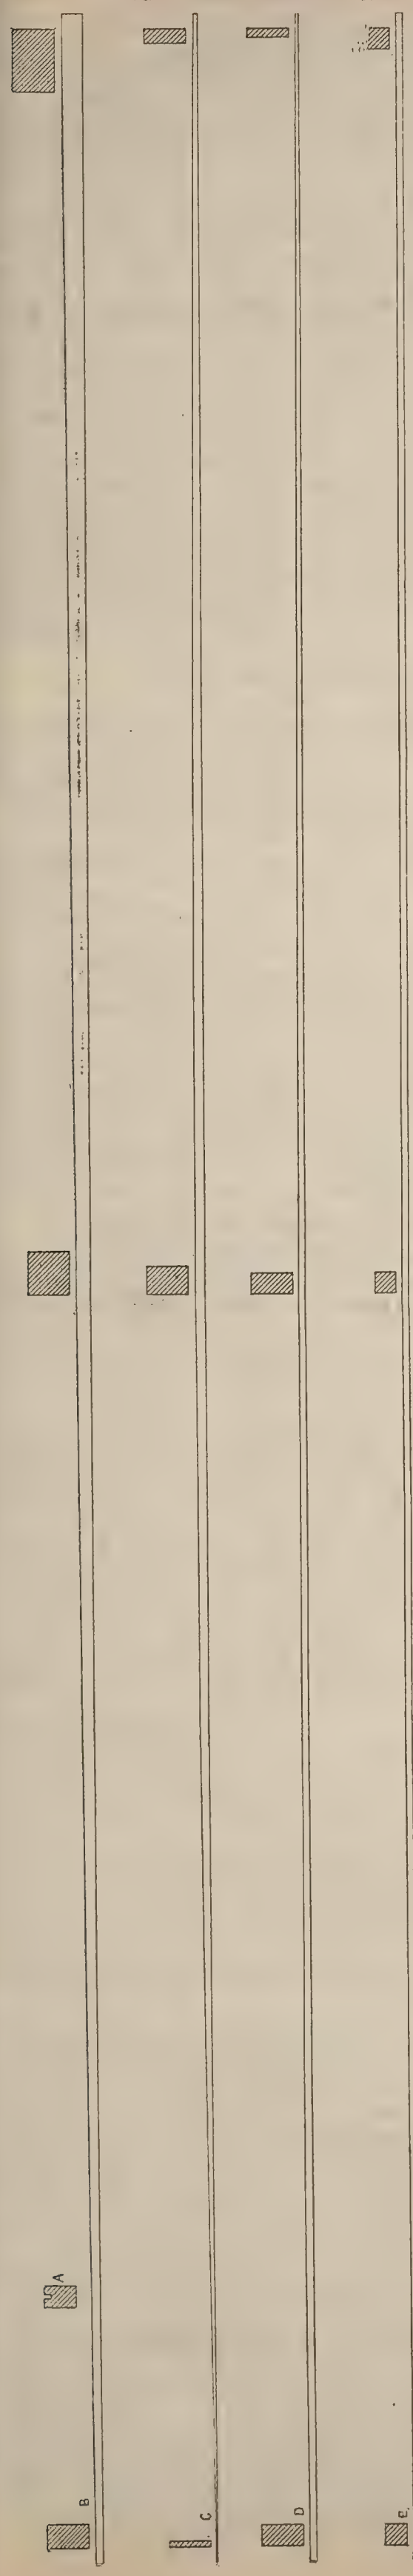

FIG. 36. The sections are full size; the longitudinal plans are about one-third size.

A—Section of ordinary batten, uniform from end to end, with groove. B—Sheer batten. C—Level line batten. D—Keel batten. E—Parallel batten.

$\frac{3}{16}$in. deep, with all edges parallel and a groove cut in the top to take the point of the spline weight, is about equal in grade to the commoner sort of cast metal dividers. We have seen a few *splines* of hard rubber, specially made and much larger in size, upward of $\frac{1}{4}$in. each way, that are very good tools; and the ordinary rubber *batten* has a limited use for lines of considerable curvature; it is also convenient in tracing lines already drawn with a good wooden *batten*. The celluloid *spline* is useful to a certain extent in that it is even more flexible than the rubber and thus better for very hard turns, as in the level lines in the counter. Each of these would be improved by the omission of the groove, which merely serves to chip out small pieces from the working edges, ruining the tool.

The extreme flexibility of celluloid makes it well adapted for the very short *splines* used in the body plan, as the *spline* may be quite large in section, allowing a good hold for the *weight* without interference with the pencil or pen, and yet may be sufficiently flexible to fit the short, quick turns of the sections.

As already stated, the best material for a *spline* or *batten* is wood, as it is at the same time both flexible and rigid to a degree unknown in rubber and celluloid; and the best wood is lancewood. This wood is comparatively unknown in America, but it is in common use in England for the shafts and tongues of carriages and wagons. In one of the noted English yards the old shafts were always carefully preserved, to be worked up into *splines* for the drafting room, the wood, of excellent quality in the first place, being thus perfectly seasoned. Perhaps the best substitute to be had in this country is spruce, such as is used for sounding boards by piano and organ makers. This special grade of the wood is of the finest quality obtainable, clear, free from sap and gum, and very straight in grain.

A good working outfit of *battens* should include several sets of varying lengths, each set containing four or five *battens*. Of these there should be one *sheer batten*, which, for a length of 5ft, may be $\frac{1}{4}$in. thick for the whole length, and $\frac{3}{8}$in. wide at one end, tapering to $\frac{1}{8}$in. at the other. For the longer level lines the *batten* may be of the same thickness, but widest in the middle, say $\frac{3}{16}$in., tapering to $\frac{1}{16}$in. at one end, and $\frac{1}{32}$in. at the other. This *batten* will have to make some sharp turns aft, but forward the curves will be much straighter, and the batten may be proportionately stiffer. Another *batten* tapering one way, $\frac{1}{4}$in. thick, and $\frac{3}{16}$in. or a little less in width at one and for a third of the length, then tapering to $\frac{1}{16}$in. at the other end, will be useful for the keel contour in the sheer plan. A *batten* about $\frac{1}{8}$in. square, and with no taper to either side, will answer for long, easy lines, such as the diagonals, and also for the side line of the keel and the rabbet line, both of very slight curvature. The other sets may be 42in., 36in. and 24in., each with a similar assortment of shapes. In addition there should be some short and very flexible *battens* for the body plan.

It is impossible to give exact sizes, as so much depends upon the kind of wood used and its elasticity. Dependent on these, the different *battens* must be so proportioned as to adapt themselves naturally to the class of lines for which they are designed; if they prove too stiff at any point they may be worked down with a small and very sharp plane or sandpaper. The best *batten* is the one which will fit the required curve with the fewest number of weights to restrain it. It will be evident that different lines, as, for instance, the sheer line and the load waterline in the sheer and half-breadth plans respectively, require very different *battens*; but the ordinary store *batten* ignores this difference and offers one uniform size for all purposes; flexible and wobbly, for instance, in the middle of a level line and too stiff to take the curve of the ends.

With a very flexible or badly proportioned *batten* the draftsman must lay out the line by placing *weight* after *weight* but a few inches apart and readjusting the whole series until his patience is exhausted, the line even then being in all probability imperfect. With a good *batten*, the required curve, fair and true, is thrown in at once and fixed by a few weights, little or no correction being required.

In making *battens*, a piece of wood of the required length and not less than 1½ to 2in. on a side is worked up straight, square and true on two adjoining sides. It is then slit lengthwise with a saw, and the first slab which comes off is resawn into *battens* The main piece is then refaced where the slab came off and again sawn. In this way the finished *batten* has at least one side, if not two adjoining sides, which has been worked true in the piece before sawing. After the *batten* is finally shaped, with the clean, bright surface left by a sharp plane, it should be polished with shellac varnish, giving it a hard, glossy coating. If in use it does not bend fairly and truly, it may be touched up with the plane or sandpaper, and again polished over the fresh wood.

For the level lines, bow-buttock lines, etc., the wood must be strong and flexible, so that the fine tapered ends will take a sharp turn without danger of breaking. For the *sheer battens* and those for the diagonals and other lines of moderate and regular curvature, a softer and less elastic wood may answer. Pine and mahogany can be used, and some other woods. Those who possess the tools and some skill in using them, as is the case with many amateurs, will in time be able to fit themselves with a good set of *battens*—better than can be purchased. Practice and experience will show where a *batten* may be improved for its designed purpose, or, possibly, if too light, be cut down to make one of a different form.

Harlem Y. C.

THE Harlem Y. C. will sail its fourteenth annual regatta on May 31, the courses being:

Course No. 1—From across a line between the steamer and Belden's Dock, City Island, around a stakeboat anchored inside of Throgg's Neck, keeping the same to port in rounding it, thence toward Matinnicock Point, keeping Stepping Stones Light to starboard in passing, around Matinnicock Point Buoy, keeping the same to port in rounding, and returning directly to the finishing line. Distance, 20 nautical miles.

Course No. 2—A straightaway course (omitting the run to Throgg's Neck) direct to Matinnicock Point Buoy, keeping it to port in rounding, and thence directly back to the finishing line. Distance, 16 nautical miles.

Course No. 3—Same as No. 1, except that yachts must pass Old Hen Buoy, keeping the same to port in rounding, and thence back to the finishing line. Distance, about 12 nautical miles.

The following classes will sail over course No. 1:

Cabin sloops, cutters and yawls: 51ft. class, 43ft. class, 36ft. class, 30ft. class. Open jib and mainsail: 30ft. class. Open catboats: 30ft. class. Cabin catboats: 30ft. class.

Over course No. 2:

Cabin sloops, cutters and yawls: 25ft. class, 20ft. class. Open jib and mainsail: 25ft. class. Open catboats: 25ft. class. Cabin catboats: 25ft. class.

Course No. 3, the 15 and 20ft. classes of open catboats. The steamboat W. C. Egerton has been chartered to follow the boats over the course.

A very good list of entries has already been received. The regatta committee includes Messrs. H. B. McAllister, P. H. Leary, J. Wimmer, W. T. Hyde, and Wm. A. Towner, chairman.

Racing About Boston.

MAKE no mistake. This is to be a great racing season in the classes under 30ft. racing length. There are more new boats than for several seasons past, and plenty of old ones, whose owners will make the new ones demonstrate their superiority by actual racing. And the 21ft. knockabout will not be by any means the least interesting of the lot. The restrictive rules of the Knockabout Association have fostered building and racing in the class, and at the same time have secured a safe, able and seaworthy boat. And they are not fin keels.

Nor is the naming of the new knockabouts an uninteresting feature of the sport. The story of "Poor Cock Robin" is even more in evidence than it was last year, when only the name of the principal in the story was used. "Jenny Wren" appears this season on the stern of Frank Peabody's new boat of his own design, while the "Fly," who saw Cock Robin die, is embodied in W. O. Gay's new Herreshoffer. Yachtsmen can now place their bets as to whether or not this latest Fly will see Cock Robin die, either at its own hands, or by those of some others of the new fleet. It is conceded that this Cock Robin will take a lot of killing, even by a Cockatoo, pugnacious as that little bird may be.

Gosling is the unassuming name by which F. O. North and L. M. Clark bring their new Lawley boat into the racing, but certainly the owners are no fledglings at the sport, whatever their boat may be.

Jacobin is the speed-implying title which T. E. Jacobs gives his new Purdon design, while H. M. Sears takes a chance with the Hazard from Herreshoff's hands. D. C. Percival, Jr., likes the name of his first knockabout too well to drop it, and so has had Herreshoff put it on the stern of the new one. Figures are added to it, though, and it stands as Sally III.

And there you have them, gentlemen. Pick your winner if you can.—*Boston Globe.*

The New Montreal Fleet.

A MONTREAL correspondent of the Boston *Globe* writes as follows of the new 20-footers for the defense of the cup:

To a party of members who went out to Dorval to inspect the progress that is being made with the work on the new and beautiful club house of the Royal St. Lawrence Y. C., G. Herrick Duggan, the designer-sailor who did such excellent work with Glencairn last year, permitted a view of the five boats which he is building for the trial races for a defender of the international Seawanhaka cup. It was a very unsatisfactory view, however, for in the dimly-lighted shed it was very difficult to see anything except the merest general outlines. Only the hulls are finished; and these gave the impression that the boats would be somewhat of a cross between a soapdish and a flatiron, with great breadth of beam and very shallow.

They did not look beautiful, but the designer seems to have the greatest confidence in them. Two of the boats will be fin-keels and the others centerboards. The boats are being built for Harrison B. Young, Com. Riddell, Shirley Davidson, Capt. Hamilton and Mr. Duggan himself. Great care is still being taken that the lines and figures are kept a secret, and people with cameras, or any suspicious looking person, who manage to get inside the grounds of the Royal St. Lawrence Y. C., where the sheds are, are being turned away without the slightest compunction.

Notwithstanding all this, the figures of the sail dimensions of some of the boats have become known, although it is impossible to obtain the sail plans. These figures, however, will give a pretty good idea of the general sail plans of all the Canadian boats.

The boat of M. J. Langeuil, which is just across from Montreal on the St. Lawrence, will have silk sails, as follows: Mainsail, 25ft. boom, 14ft 6in. hoist, 16ft. gaff, 33ft. 3in. leach; jib, 22ft. 10in. hoist, 19ft. leach, 10ft. 6in. foot.

The Duggan boat, built for Harrison B. Young, will have silk sails, as follows: Mainsail, 25ft. boom, 15ft. 7in. hoist, 13ft. gaff, 34ft. leach; jib, 22ft. 4in. hoist, 20ft. 5in. leach, 8ft. 3in. foot.

The sail dimensions of the two boats that are being built in Toronto by Cuthbert are also known. Both have cotton sails. The one built for Mr. Harry Abbott, son of the late premier, has sails as follows: Mainsail, 23ft. 9in. boom, 16ft. hoist, 13ft. 5in. gaff, 33ft. 2in. leach; jib, 22ft. hoist, 18ft. 4in. leach, 15ft. 6in. foot.

Another boat which is being built for an unknown by Cuthbert has cotton sails, as follows: Mainsail, 25ft. boom, 16ft. hoist, 12ft. 6in. gaff, 30ft. 6in. leach; staysail, 18ft. 6in. hoist, 17ft. 6in. leach, 8ft. 9in. foot; jib, 25ft. hoist, 20ft. 6in. leach, 11ft. 2in. foot.

Work on all the little boats is being pushed along fast, and the spars, which will be hollow, are being made now, but the boats will not be upon the water much before the Queen's birthday.

Huguenot Y. C.

NEW ROCHELLE—LONG ISLAND SOUND.

Saturday, May 15.

THE racing on Long Island Sound opened on May 15 in a light and variable southeast wind that made the race less interesting than the entries deserved. The race was given by the Huguenot Y. C., of New Rochelle, the course being around Execution and Hen and Chickens buoys. Two new Huntington boats were entered: the 20-footer Keneu and an unnamed 15-footer for a Western yachtsman. There was not enough of a steady wind to test the yachts. The times were

	Length.	Elapsed.	Corrected.

Hope, Arthur Iselin	15.00	2 09 20	.. .. ..

Celia, cleverly sailed by Irvine Zerega, won a close finish by quick handling at the line after she was apparently beaten by Houri.

The winners were: 30ft. cabin cats, Dosoris II., walkover; 25ft. cabin cats, Win or Lose; 25ft. cabin sloops, Jester, not measured; 25ft. open sloops, Celia; 25ft. open sloops, Keneu, walkover; 15ft. class, new Huntington boat.

Regatta Committee—E. Burton Hart, Jr., F. B. Jones and R. T. Badger.

New Rochelle Y. C.

THE New Rochelle Y. C. will open the yachting season of 1897 by giving a special regatta on Saturday, May 22. Entries are invited from all regularly organized yacht clubs. There will be races for yachts of these classes: Sloops, 20ft. class; cabin catboats, 25ft. class; open catboats, 25ft. class; open catboats, 20ft. class. There will be separate classes for open boats with shiftable ballast and unlimited crews.

The club offers as first prize for sloops of the 20ft. class a silver cup, and will award a second prize if five or more yachts start. A prize will be awarded to the winner in each class of catboats in which two or more boats start, and a second prize in each class in which five or more boats start. The owner of any yacht which starts and fails to go over the course must satisfy the regatta committee that the start was made in good faith.

Entries should be mailed to the Regatta Committee, New Rochelle Y. C., P. O. Box 735, New Rochelle, N. Y., in time to be received on the morning of Thursday, May 20.

GENERAL INSTRUCTIONS.

Hours of starting: The races will be started at 2 o'clock P. M.

Divisions: Yachts will be started in two divisions, viz.: First division—Sloops of the 20ft. class; second division—All catboats.

Starting line: The starting and finishing line will be marked by boats flying the club flag, and anchored at the entrance to Echo Bay.

Course.—All yachts will sail course No. 2, which is as follows:

Course No. 2.—From the starting line at Echo Bay, around red buoy on southwesterly end of Hen and Chickens Reef, leaving it on starboard hand; thence around striped buoy, known as Middle Ground Buoy, being the most easterly buoy on Execution Reef, leaving it on starboard hand; thence around easterly stakeboat at the starting line, leaving it on starboard hand. This course to be sailed three times. Total distance, 12¾ miles.

If the direction of the wind makes it advisable, this course will be sailed in reverse direction. The signal therefor will be flag B of the signal code, hoisted five minutes before the blue peter (the preparatory signal). In such case, yachts in finishing the race will cross the line from south to north.

Yachts must not pass between Execution Light and the ed buoy to the eastward thereof.

Starting Signals: The starting signals will be given from the committee's boat at the westerly end of the line, and will be as follows:

First Gun.—A blue peter will be hoisted as a preparatory signal. It will remain flying for five minutes.

Second Gun.—A red ball will be hoisted as the starting signal for yachts of the first division. It will be displayed for five minutes.

Third Gun.—A white ball will be hoisted as the starting signal for yachts of the second division.

The start in each division will be a one-gun start.

Shortening Course.—If in the judgment of the regatta committee it becmes necessary to end the races on the completion of the first or second round, the red ball will be hoisted under flag B of the signal code, and attention will be called thereto by two guns.

Racing Numbers.—Last year's racing numbers are useless, and must be discarded. Permanent racing numbers have been assigned to all known racing yachts, and may be obtained of Rehm & Co, No. 157 Fulton street, New York. Owners of yachts are urged to secure their permanent numbers before the race.

Measurement.—As the rules of the Yacht Racing Union of Long Island Sound require that all sloops of 25ft. racing length and under, and all catboats, shall be measured with crews aboard, all such yachts must be remeasured before racing this season. The regatta committee will accept the certificate of measurement of the measurer of any club, but reserves the right of remeasurement, in case of protest.

Rules.—In general the races will be sailed under the rules of the Yacht Racing Union of Long Island Sound.

CHAS. P. TOWER, Chairman,
PAUL A. MEYROWITZ,
J. R. THOMAS,
J. C. LIPPENCOTT,
A. P. WESTON, Sec'y,
} Regatta Committee.

The Larchmont Y. C. Programme.

THE following programme for the season has just been issued by the regatta committee of the Larchmont Y. C. Messrs. John F. Lovejoy, H. C. Wintringham and H. W. Coates.

Saturday, June 19.—Spring regatta, open to all classes.

Monday, July 5.—Eighteenth annual regatta, open to all classes; steamboat Albertina for members and guests.

RACE WEEK.

Saturday, July 17.—Open regatta for all classes; special race for schooners in cruising trim, in one class; first race of series for Class N, 30ft. racing length; first race of series for Class Q, 20ft. racing length.

Monday, July 19.—Special race for schooners, in racing trim, in one class; special race for schooners, in cruising trim, in one class; second race of series for class N, 30ft. racing length; second race of series for Class Q, 20ft. racing length.

Tuesday, July 20.—Four-oared gig race for Hen and Chicken colors, presented by former Commodore Harry M. Gillig; two-oared gig race for Dauntless colors, presented by Mr. H. B. Seeley; dinghy race for Execution colors, presented by Mr. H. B. Seeley; race for naphtha launches exceeding 21ft. load waterline length; race for naphtha launches 21ft. load waterline and under; tub races and water sports.

Wednesday, July 21.—Open regatta for all classes; special race for yawls, over 51ft. racing length, in cruising trim, all in one class; third race of series for class N, 30ft. racing length; special race for yawls, 51ft. and under racing length, all in one class; third race of series for class Q, 20ft. racing length.

Thursday, July 22.—Race for class K, yachts with cabin trunks, 51ft. racing length; fourth race of series for class N, 30ft. racing length; fourth race of series for class Q, 20ft. racing length.

Friday, July 23.—Schooner race, all in one class; race for class K, yachts with flush decks, 51ft. racing length; race for class L, 43ft. racing length; fifth race of series for class N, 30ft. racing length; fifth race of series for class Q, 20ft. racing length.

Saturday, July 24, Race Week Ends.—Open regatta for all classes; sixth race of series for class N, 30ft. racing length; sixth race of series for class Q, 20ft. racing length.

Saturday, Sept. 4.—Special race for class K, 51ft. racing length; special race for class N, 30ft. racing length; special race for class S, 20ft. racing length; special race for class T, 25ft. racing length.

Monday, Sept. 6 (Labor Day): Fall regatta, open to all classes.

Saturday, Sept. 11: Race for Larchmont cup for schooners; special race for class K, 51ft. racing length; special race for class Q, 20ft. racing length.

In all classes where two or more yachts start in a race with full intention of completing the course, a prize will be awarded. When three or more yachts start with like intention, a second prize will be awarded; and where five or more start with like intention, a third prize will be awarded.

The trustees of the club announce that the club house will be formally opened for the season on Saturday, May 29. The flag will be hoisted and formally saluted at 4 o'clock P. M., on the arrival of the 3:06 train from New York. Other trains leave New York at 1:04, 2:02, 4:08, 4:33, 5:05 and 5:30 o'clock P. M. Members desiring to return to New York the same evening can do so by the 9:08 and 11:20 o'clock P. M. trains. Dinner will be served from 6 until 8 o'clock.

Yacht Racing Union.

NOTICE TO REPRESENTATIVES.

THE attention of owners of yachts in the 25, 20 and 15ft. classes of sloops and in all classes of catboats, is called to the amended rule of measurement, requiring that all yachts in these classes be measured with weight on board to represent the crew. This necessitates having such yachts (except those with plumb stems and sterns) remeasured this season for load waterline length. Attention is also called to the amended rule making it compulsory for committees to disqualify any yacht starting in a race without having been officially measured.

The classes having been relettered, new racing numbers must be obtained this season for all yachts intending to race. Messrs. Rehm & Company, 157 Fulton street, New York, have been appointed to furnish the new numbers at the following prices: For yachts in Classes A, B, C, D, G, H and J 60 cents per pair; for yachts in Classes K, L, M and N 45 cents per pair; for yachts in Classes P, Q, R, S, T, V and W 35 cents per pair.

A yacht starting this season under her old number will be liable to disqualification.

A limited number of printed sheets giving the racing numbers of all registered sailing yachts have been issued and can be obtained from T. D. Rich, publisher, 108 Fulton street, New York, or from the undersigned, at $5 for one set and $7.50 for two sets. A sufficient number have been printed to provide each club with two sets, one for the regatta committee and one for the secretary.

The new rules and the schedule of racing events for the season have been issued, and can be obtained from Messrs. Thomson & Co., 55 Dey street, New York, or from the undersigned at $10 and $5 per hundred, respectively.

FOREST AND STREAM has been appointed by the Council the official organ of the Union and regatta committees. Chairmen and secretaries of clubs are requested to send all reports of races and other information in connection therewith to that paper.

FRANK BOWNE JONES,
Secretary of the Council.

Four Famous Yankee Ships.

From the American Shipbuilder.

TO BECOME a coal barge, or a barge of any sort, is the sere and yellow leaf of a ship's existence. Four of these, an ancient and once honorable fleet of packets and all of which have been for fourteen years mouldering alongside a grass-grown pier in the Erie Basin, were recently cast loose from their moorings and towed to Port Richmond, S. I., where, after the crooked spars and gray rigging have been removed, the hulks will be fashioned into the shape of barges. The ships are the Caravan, Fawn, E. W. Stetson and City of Montreal. They are the oldest American square-riggers now afloat save the Eliza Adams, which was built in 1835, and which is without doubt the most ancient of the full-rigged ships in the merchant marine of this country. Of the lot that has been condemned to finish their careers as colliers, the Caravan is the oldest, having been built in Bath in 1855. The Fawn is next on the list, with an age burden of thirty-seven years Following her is the City of Montreal, constructed in 1861, and the E. W. Stetson, in 1862. Some of these ships were formerly packets in the famous Swallow Tail Line, and all of them have a history. Interesting as any part of their active career is the manner in which it was brought to a close. These four ships, with four others equally famous in their day, the Hamilton Fish, Therese, J. A. Stamler and Marianne Nottebohm, all belonged to Thos. Dunham, a noted ship owner in the old days. His office was at No. 67 South street, and a barely legible sign over the barred doorway still marks the place where his master mariners met and talked of their ships and their voyages and cargoes. Mr. Dunham, so runs the legend, fell out with towboat people many years ago. Strained relations were brought about by one of the towboat craft stranding one of his packets while trying to bring her into port. It cost the owner a matter of $5,000 to get his vessel afloat again and to make suitable repairs, and then he gave orders forbidding any of his masters to have aught to do with anything propelled by the upstart steam again. His ships had thenceforth to work their way into port as best they could, and the delays caused by wind and tide worked so disadvantageously that trade slipped away from the line. Then finally, in disgust, the owner recalled all of his ships, discharged their crews, dismantled the vessels of all but their standing rigging, and laid up the entire fleet in the Erie Basin, vowing that they should lay there until steam had had its day and sail power could come into its own again. Mr. Dunham died, and the estate passed to his nephews, who sold four of the eight vessels. The purchaser was W. J. Burlee. The rigging and spars of the relics are almost worthless, but the hulls are sound, despite the long period they have lain idle. The four ships that were sold were moored abreast, and for the last fourteen years have been in charge of Capt. Daggett, "port captain of the fleet," he styles himself. In the comfortable cabins he has lived with his family during the years the vessels have been moored in the basin, and the grassy plot adjoining the shelter of his charges has been the playground of his children. The vessels are very much of the same size, the Caravan, with her 1,395 tons, being somewhat larger than the others. This vessel was built in Bath, as was also the Fawn. The tonnage of that ship is 1,015. The City of Montreal, constructed in Portsmouth, N. H., has a tonnage of 1,117, and the E. W. Stetson, launched at Damariscotta, Me., has a tonnage of 1,106. According to a list recently compiled by Capt. George Waldie, of the Sandy Hook pilots, there are but few wooden sailing vessels of American build which antedate these old-time ships of the Dunham estate, but with the exception of two barks, the Falcon and Triton, they are all fore-and-afters.

An International Question.

From the New York Sun.

THE unusual sight of an American-built yacht flying the signal of an American club at her truck with the national ensign of Great Britain from her taffrail was the subject of much comment at New Rochelle last Sunday. The yacht was the cutter Nirvana, owned by Rear-Com. Guy Standing, of the Corinthian fleet, which tugged at her moorings in Echo Bay, off the club house at Harrison's Island. She became the property of Standing last October, and at that time held a Custom House register from Boston. Soon after completing the purchase of the cutter, Standing wanted to have her registered at this port.

The application for registry compels the owner of a craft to state his nationality. Standing said he was a loyal subject of Great Britain, and the Collector informed him that his boat was debarred from sailing under "Old Glory" Thomas J. Dunn, Chief Clerk and Acting Deputy Collector of the Port, told the *Sun* reporter yesterday that even if Standing sells his yacht to an American she will not, under the law, be permitted to again fly the American flag unless she is rebuilt and enlarged.

"Suppose the owner made over his right and title to the craft to his wife, who was born in this country, could she fly our flag?" asked the reporter.

"Certainly not," replied Dunn. "When a woman marries she adopts the nationality of her husband. The only way at present in which that boat will be entitled to carry an American flag is by her owner becoming an American citizen."

The following amendment to the marine regulations of 1892, however, which will take effect on July 1, next, will, if Standing sells his cutter to an American, allow her new owner to send aloft his country's flag:

"A vessel registered pursuant to law, which by sale has become the property of a foreigner, shall be entitled to a new register upon afterward becoming American property, unless it has been enlarged or undergone change in build outside of the United States."

Rear-Commodore Standing, who is one of the most active workers in the Corinthian fleet, is an actor of some prominence, and about two years ago married Miss Isabel Urquhart, of Casino fame. He said in reference to the Nirvana matter:

"I am an Englishman, and, like many another, love the old country, although it is but a memory to me. I make my money here, and, in addition, it is a matter of fact that I spend it here. I like America and Americans; in fact, I shall never go back to England, except, possibly, on a visit. My property is here, and I can say that I probably have more and closer friends in this country than in England. Nevertheless, I do not feel as though I ought to become a citizen here. I am in the same position as many Americans who live in Great Britain. They remain true to their mother country, although probably they will never see her again."

Gilbert's Bar Y. C.

INDIAN RIVER, FLA.

THE usual monthly regatta of the G. B. Y. C. was held Saturday, May 8. There was a good breeze.

FIRST CLASS—22FT. AND OVER

	Corrected.
Albatross	0 46 25
Trochu	0 53 20

Winner, Albatross.

SECOND CLASS—UNDER 22FT.

Swallow	0 45 42
Gypsy	0 45 57
Ilderim	0 46 28
Beatrice	0 44 57

Winner, Beatrice.

The Lake Y. R. A. Circuit.

THE Lake Y. R. A. will this season return to the old plan of a racing circuit in place of regattas at two or three ports near together. The programme, as arranged by President Ambrose and approved by the executive committee, is as follows:

Cobourg—July 18. Kingston—July 19. Charlotte—July 23. Hamilton—July 27. Toronto—July 29. Niagara—July 31.

W. Q. Phillips will officiate as association officer at all the regattas, having charge of the laying out of courses, timing, etc. Mr. Phillips has in the past demonstrated his special capacity for this work.

YACHTING NEWS NOTES.

The following programme has been arranged finally for the Atlantic Y. C. cruise: Rendezvous, Monday, July 5, Larchmont. July 6, American Y. C. regatta, fleet at Milton Point. July 7, Riverside Y. C. regatta, fleet at Riverside. July 8, first squadron run, Riverside to Black Rock, via Eaton's Neck Buoy. July 9, second run, to Morris Cove. July 10, third run, to New London. July 11, informal run from New London to Shelter Island. July 12, race off Shelter Island.

The once familiar, but long-forgotten name of William T. Lee was called to mind last week by the sudden death of its owner in the New York Hospital. Mr. Lee was once president of the old Union Boat Club, established in Gowanus, South Brooklyn, in 1858, from which the Brooklyn Y. C. was formed in 1864. His services as secretary of the latter club were rewarded by the gift of a gold watch with the inscription: "Presented to Wm. T. Lee, Secretary of the Brooklyn Yacht Club, as a token of respect by the members, April 26, 1871," on the occasion of his retirement from the office, after a service of fifteen years. Mr. Lee, who was unmarried, was seventy-five years old; he lived in Ninetieth street, New York, but had dropped out of yachting On the evening of May 8 he was stricken with paralysis on Broadway, and taken to the hospital, where he died. He was identified by his watch. The once famous sandbag sloop, Wm. T. Lee, owned by Chas. A. Cheever, was named after him.

Com. Henry W. Lamb, Eastern Y. C., has appointed Henry D. Burnett fleet captain. The club house, on Marblehead Neck, will open for the season on May 28.

Priscilla, schr., has been sold by Edgar Harding to Howard W. Spurr, of Boston. This is the small wooden schooner, not the steel Cup defender Priscilla, built in 1885, she being now owned at Cleveland.

Carl, knockabout; one of the first of the class, whose lines were published in the FOREST AND STREAM of Feb. 3, 1895, has been sold by C. H. W. Foster to Dr. Farlow, of Marblehead. Mr. Foster now owns Cock Robin.

Alcedo I., steam yacht, has been sold by George Washington Childs Drexel to A. Baudine, Larchmont Y. C.

Meteor, schr., has been sold to R. J. Smith, of Boston, and has docked and fitted out at Tebo's for the trip around the Cape.

Capt. Nat Watson, who sailed the 30 footer Asahi so successfully last year, is now in command of Amorita, schr., W. G. Brokaw. Capt. Watson has been continuously in the service of Mr. Bayard Thayer since 1888, in this time racing Pappoose, Sayonara, Constellation and Asahi.

Ellesmere, schr., designed and built by Solheim at Gravesend Bay for Ferdinand McKaig, was launched on May 14 after an unsuccessful attempt on the previous day. She is 58ft. over all, 46ft. l.w.l., 17ft. 4in. beam and 7ft. draft, with 7 tons of lead in the keel. The yacht was launched without the keel, which was bolted on at McGowan's yard, Fifty-fifth street, Bay Ridge.

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1896-97.

The A. C. A. Regatta Programme.

THE following programme has been arranged by the regatta committee of the American Canoe Association for the annual meet at Grindstone Island in August. The number of events is larger than usual, but it is proposed to call some of the minor events at any convenient times during the meet when they may serve to amuse the camp; and some of the events will, as usual, not fill, in which case they will be omitted. The principal races will be held, of course, during the second week.

Regatta Programme.

Grindstone Island, Aug. 6-20.

SAILING.

Event No. 1. Paddling and sailing combined, ½ mile alternately; total, 3 miles; time limit, 1½ hours. Start to be made under paddle. P.S.—The same seat shall be used as in Event No. 3.

Event No. 2. Paddling, ½ mile with turn.

Event No. 3. Sailing, 4½ miles; time limit, 2 hours. Note.—Events Nos. 1, 2 and 3 are record races under Rule 5 of Racing Regulations.

Event No. 4. Unlimited sailing under Rule 1 of Sailing Regulations, 6 miles; time limit, 2½ hours. Starters in the trophy sailing race to be selected from this race under Rule 5 of Racing Regulations.

Event No. 5. Trophy sailing, 9 miles; time limit, 3½ hours. See Rule 5 of Racing Regulations.

Event No. 6. Dolphin sailing trophy, 7½ miles; time limit, 3 hours. The canoe winning first place in Event No. 5 will not be allowed to compete in this event.

Event No. 7. Club sailing, 4½ miles; time limit, 2 hours. First three members of any club to count, a club to be represented must enter at least three men. All men contesting must have become members of the club they represent prior to the first day of the 1897 meet.

Event No. 8. Division sailing, the same as No. 7, except read division in place of club. The sliding seat or stationary deck seat shall not exceed in length the width of the canoe.

Event No. 9. Novice sailing, 8 miles; time limit, 1½ hours. Open only to members who have not sailed a canoe prior to Sept. 1, 1896.

Event No. 10. Limited sailing, 3 miles; time limit 1½ hours. Sail area limited to 100sq. ft., and any seat which projects beyond the gunwales prohibited.

Event No. 11. Unclassified sailing, 4½ miles; time limit, 2 hours. Open only to canoes without self-bailing cockpits. No race unless three or more starters. Canoes must be outside the A. C. A. limit to compete in this event.

DIVISION.

Event No. 12. Atlantic Division cup.
Event No. 13. Central Division cup.
Event No. 14. Eastern Division cup.
Event No. 15. Northern Division cup.

Note.—These events will only be held if not sailed at Division meets. These races will be sailed under the rules provided by each Division, which will be posted on the bulletin board, and they will be called in the order published during the first week of camp.

Event No. 16. Open canoes, paddle ½ mile to windward with single blades and return under sail.

Event No. 17. Open canoes, sailing, 1½ miles.

PADDLING.

Event No. 18. Trophy paddling, 1 mile straightaway.

Event No. 19. Novice paddling, ½ mile with turn, open canoes, single blade, open only to members who have never paddled a race outside their own club races.

Event No. 20. Paddling, ½ mile with turn, open canoes, single blades.

Event No. 21. Tandem club paddling, ½ mile with turn, open canoes, single blades.

Event No. 22. Deck canoes, single paddling, ½ mile with turn, double blades.

Event No. 23. Decked canoes, tandem paddling, ½ mile with turn, double blades.

Event No. 24. Four paddling, ½ mile with turn, single blades, open canoes.

Event No. 25. Upset paddling.

Event No. 26 Tail end race, open canoes, single blades, paddler to kneel in bow and paddle bow first with the wind.

Event No. 27. Ladies' single paddling, ¼ mile straightaway, open canoes.

Event No. 28. Ladies' tandem paddling, ¼ mile straightaway, open canoes, single blades.

Event No. 29. Mixed tandem paddling, ¼ mile straightaway, open canoes, single blade.

Event No. 30. Hurry scurry, run, swim and paddle.

Event No. 31. Swimming 100yds.

Event No. 32. Tournament.

All paddling races except the trophy paddling shall be limited to canoes not less than 30in. beam and not less than 55lbs. weight.

The committee reserves the right to call any of the less important races at any time during the meet when it may see fit.

All events in which less than two entries present themselves at the line will be cancelled.

In events in which less than three start only one prize will be awarded. The regatta committee has provided prizes for each and every race on the programme.

The Atlantic Division Cruise.

THE executive committee of the Atlantic Division has published in pamphlet form the full programme of the division cruising meet which takes place from May 28 to June 3. The cruise offers another of those delightful little meets that old canoeists love to talk about at Plum Point in 1884-85.

INTINERARY.

Thursday, May 27.—6 P. M. meet for dinner at United States Hotel, Easton, Pa.

Friday, May 28.—Leave Phillipsburg (Easton) 7 A. M., and cruise ten miles to Riegelsville, N. J. Dinner at Riegelsville. Leave 2 P. M. Cruise nine miles to Frenchtown, where stop will be made for night,

Saturday, May 29.—Leave 7 A. M. Cruise 14 miles to Lambertville, N. J., where stop will be made for dinner. Afternoon cruise eleven miles to Park Island, near Trenton, where stop will be made for night, as guests of the Park Island Canoe Association.

Sunday, May 30.—Cruise to Delanco, N. J., with stop *en route* for dinner.

Monday (Memorial Day), Tuesday and Wednesday, May 31, June 1 and 2.—In camp at Delanco, N. J.

THE ROUTE.

The Delaware River, for the seventy miles over which the cruise will be made, from Easton, Pa., to Delanco, N. J., presents, we believe, more advantages of accessibility to the starting point, more beautiful river scenery, and better rapids and water for a canoe voyage than any other stream in the territory of the Atlantic Division.

Already a river of considerable size where the cruise is begun at Easton, it gradually increases in width and importance until the last rapid is passed at Trenton, and the placid waters of the head of tide-water are reached.

The general course of the river is south and southeast; the fall from the height of the river at the starting point to tide-water being 158ft.

Rapids are frequent, but all easily negotiated at an ordinary spring stage of water.

As to falls, there are but three—at Bull's Island; Wells's Falls, below Lambertville, N. J.; and Scudders's Falls, a short distance above Trenton. Around Wells's Falls, as stated before, a carry will be made, and the others will be easily passed through.

The Valley of the Delaware is inclosed within high and densely wooded mountains along the upper part, and in the middle and lower section, the beautiful and fertile rolling country of Bucks county, on the Pennsylvania shore, and Mercer county, in New Jersey, furnish an unending variety of scenery.

At all points at which stops will be made for the night,

ATLANTIC DIVISION CRUISE. CHART OF COURSE ON DELAWARE RIVER.

a good camp-site, as stated before, can be found for those who want to tent outdoors, and around a good fire, with pipe, song and story, and a recounting of the day's incidents, some of the choicest hours of the week will undoubtedly be spent.

This whole section is one of much historical interest as the scene of the most important operations of the Revolutionary War. Washington's Crossing, about eight miles above Trenton, marks the point where the great commander, coming from his winter quarters at Valley Forge, forced his way across the frozen river to attack the Hessians encamped there. Two granite shafts, lately erected on either side of the river, show the points between which the perilous journey was taken.

THE MEET AND RACES.

Delanco, near which the meet will be held, is a pretty suburban village upon the New Jersey shore, twelve miles above Philadelphia, convenient communication with the city being had thereto by boat and rail.

The site chosen for the meet is a short distance above the town proper, and is one which has long been a favorite camping spot for canoeists on the Delaware River. It is on a moderately high bluff, shaded with fine old trees, and a good flat area for tents. The river there is a full mile in width with an admirable view up and down the stream. The shore in front of the camp is a fine clean pebble beach, gradually shelving off into deep water.

Paddling, sailing and special races will be provided by the committee, with appropriate prizes, during the three days of camp. As to what the races will consist of depends upon the number and character of the canoes participating in the cruise and available for racing at the meet.

CANOE AND OUTFIT.

As to canoes, no rule can be laid down. Either an open or decked canoe, equipped with double or single blade paddles, should answer well. Sails could not be used to any advantage on the cruise.

A decked cruising canoe offers some advantages in going through heavy waters, and usually affords dry and convenient stowage for duffle. They are heavier, however, than the open canoe, one of which, a canvas covered boat, 16ft. by 32in., carried two men aggregating 350lbs., besides 50 bs. of extra weight, over this same course last year, in comfort and safety, and that too, when the water was comparatively low.

Where the boats will be shipped by freight or express to the starting point, or will be handled by the owner as baggage, if accompanied by him, the lighter open canoe has obvious advantages.

A long painter, say 30ft., of stout braided line and a good boat sponge is invaluable on a cruise of this kind.

Tents and camping outfit, which will be required at Delanco, with sails, may be shipped in care of A. S. Fenimore, Delanco, N. J., and will be safely taken care of until the arrival of the owner.

OUTFIT.

As already stated, arrangements have been made by the committee for lodging as well as boarding the participants in the cruise at the different stopping points along the river, and at Delanco, where the meets will be held. Under these circumstances it will be unnecessary to carry heavy camping and cooking duffle, the necessary outfit being confined to changes of clothing and waterproof covers.

If we may venture the suggestion for the benefit of the novice, the following has comprised the outfit taken over this same run, and found adequate:

Complete change of outer clothing, flannel shirt, change of medium-weight underwear, with extra socks or stockings, sweater, swimming trunks or tights, soft felt hat or cap, light canvas rubber-soled shoes for boat use, extra handkerchiefs, toilet articles, pair coarse towels, rubber coat or poncho, pair of rubber blankets.

For carrying duffle, rubber navy bags, or water-proofed bags of some description are excellent.

The choice of style of dress is one which the committee does not feel that it can dictate. But for this early season, when the nights are cool, knickerbockers and woollen stockings of good weight will have manifest advantages. Linen or duck trousers are cool, nothing more. They are easily soiled when cruising, and when wet are uncomfortable and unhealthy.

TRANSPORTATION.

Upon the railroads permitting the carriage of canoes, as baggage if accompanied by the owner or caretaker, to wit, the Pennsylvania and its connections, it seems probable that most of the members will accompany their canoes on the train, carrying them to Phillipsburg, N. J., the day before the start.

Transportation of boats by freight, containing light outfit well fastened in, even without a protective covering, has been found practicable and safe, and will be a convenient and economical way to ship to the starting point.

Everything thus sent should be marked "Care of J. E. Murray, A. C. A., Phillipsburg, N. J. To be held until called for."

The Pennsylvania Railroad and its Belvidere Division, from Philadelphia, Trenton and all points in the southern end of the Division, will carry canoes as baggage, as above stated, under circular letter dated Oct. 1, 1889, and Dec. 18, 1890, copies of which dates should be made for reference to trainmen who may be in ignorance of them.

The Central Railroad of New Jersey and the Delaware, Lackawanna & Western Railroad have freight and passenger stations at Phillipsburg, N. J., within easy carry of the river at starting point.

Rifle Range and Gallery.

Revolver Shooting in England.

LONDON, England, April 30.—On April 22 the following revolver scores were made at the South London Rifle Club:

Twenty yards, stationary target:

E Howe	674767—37	R Chicken	635676—33
T W Heath	774757—37	M Blood	535766—32
Lieut F E Varley	756645—33		

Fifty yards target: Capt. T. W. Heath, 7, 6, 5, 5, 5, 4—32.

(It is said that Capt. Heath's 40 at 50yds. on April 8 was a mistake of the scorer's; it ought to have been registered at 20yds.).

North London Rifle Club revolver scores on April 28 were as below.

Revolver series IV., stationary 50yds. target:

Class 1:

Lieut Clemence	777754—37	Carter	475545—31
C Knapp	567465—33	E Howe	265744—28

Class 2:

Holmes	657664—34	Capt. Evans	537737—32
W Luff	775364—32	Lieut Johnstone	725376—30

Class 3:

MacCormack	707636—31	Thompson	505326—21
Shearing	735423—24	Lieut Curley	533350—19

The world's record for the Martini rifle at 200, 500, 600yds., 7 shots with a sighting shot at each range, making 21 counting shots in all, highest possible 105 points, is 104 points made at the above club on June 29 of last year.

As the Martini rifle is now no longer used this score will most likely remain top forever. It was made by J. Garrud.

On April 28 at the above club Mr. Barker, of the 15th Middlesex V. R. C., equaled this score with the Lee rifle.

This is the world's record for the above rifle.

The shot for shot score is as below, the only shot out of the bull's eye being so close that it almost touched the "bull:"

600yds., sighter 5, score	5555555—35
500yds., sighter 5, score	5555555—35
200yds., sighter 5, score	5555515—34

Bull's eye counts 5 points.

Warren's Artillerymen are Winners.

WARREN, R. I., May 5.—The return rifle match between the teams composed of the non-commissioned officers and privates of the Warren Artillery Company and the Bristol Train of Artillery was shot at the in-door range of the Warren company this evening, in the presence of a number of the officers and members of both companies. Each man fired 5 shots at 200, 300 and 500yds.

The first contest at Bristol was won by the Warrens by a score of 330 to 300, and the contest to-night resulted in a score of 334 to 301, making the total score of the Warren company 664 to 601 for the Bristol company. The score of Sergt. White of 14 consecutive bull's eyes, or 74 out of a possible 75, was phenomenal, and excels any ever before made on the range, if not any ever made in the State. The full score of Wednesday's match follows:

Warren Artillery Company.

Private Johnson	445445444545545—66
Private Simister	355454554455444—66
Private Church	434453545555515—64
Private Crawley	344544445535455—64
Sergt White	555555555555455—74—334

Bristol Artillery Company.

Private Thayer	454344414344145—60
Private Gallup	441445554435445—64
Sergt Schlosser	454444444544445—62
Sergt. Hodgkinson	4445 3445443433—55
Sergt Barrett	443544535343443 60—301

W. H. MASON.

A Falling Bullet.

DENVER, Colo., May 6.—Thomas Jamison was brought here to-day from Cripple Creek dying from the effect of a remarkable accident. Yesterday Jamison fired his revolver into the air and then remained perfectly still examining the weapon. The ball fell, cutting his cheek wide open. It plowed into his side, breaking three ribs, and lodged deep in the abdomen. He was immediately brought to this city suffering terribly from the accumulation of blood in the stomach. An operation by the physicians relieved this, and also removed the bullet, but it is doubtful if the man can recover.—*New York Times.*

The FOREST AND STREAM *is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.*

Shell Mound.

SAN FRANCISCO, May 10.—*Editor Forest and Stream:* Yesterday proved an unusually calm day at Shell Mound range. Many marksmen were present, as it was class medal day all along the line Some extra fine rifle work was done by members of the Columbia Club on the Columbia target. I am sorry this target is not more generally used, as it is certainly the most sensible one in use by riflemen, its numbering being on the most rational basis:

Columbia Club scores:

Rifle—Re entry matches, open to all comers, 300yds., Columbia target, F. H. Bushnell rifle medal and cash prizes, 3-shot scores: F. O. Young, 7, 9, 9, 10; A. H. Pape, 9, 10, 12; Dr. Rodgers, 13; E. Jacobsen 17.

William Glindeman military medal and cash prizes, 10 shots, Creedmoor count: E Havey, 47, 45; F H. Bushnell, 46, 46.

F. O. Young rifle-record medal and cash prizes, 10-shot scores: Dr. Rodgers 49, E. Jacobsen 62, F. E. Mason 70, U. Barrere 87, A. Thurow 193.

Class medal, for members only, one 10-shot score. Champion class: Dr. Rodgers 61. F. E. Mason 64, F. O Young 69.

First class: C. B. Dorrel 70, G Schultz 128.

Second class: G. Barley 105, M. J. White 111.

Third class: O. Hinteman 70, C. F Waltham 109, Mrs. J. White 103, G. Manuel 120, Mrs. C. F. Waltham 158, V. J. Lannotte 162.

Pistol, re-entry matches, 50yds., open to all comers. Gordon Blanding medal and three cash prizes, 3-shot scores: C M. Daiss, 7, 8, 9, 10; J. E. Gorman, 9, 10; A. B. Dorrell, 9, 12, 14; F. O. Young 13, 16.

Diamond pistol medal and three cash prizes, 10-shot scores: C. M. Daiss, 40, 43; F. O. Young, 46; J. E Gorman 46, A. B. Dorrell 46.

Achille Roos .22cal. rifle medal, two ladies' medals and three cash prizes, 5 shot scores: E Jacobson, 8, 9, 9, 11; A. B. Dowell, 9, 11, 11; Mrs. M. Peck, 13, 14; Mrs. C. F. Waltham, 18, 18; C. F. Waltham 22.

Pistol class medals for members only, 10-shot scores:

Champion class - J. E. Gormad 38, Dr. L. O. Rodgers 46, A. H. Pape 46, C. M. Daiss 58. F. O. Young 58, A. B. Dorrell 60.

First class—M. J. White 49, F. E. Mason 65, E. Jacobson 61, L. Barrere 73.

Second class—F. M. Bushnell 65, G. M. Barley 83.

Third class—Mrs. M. J. White 99, R. W. Forrest 114, A. Hinteman 112, Mrs. C. F. Waltham 166.

Several of the German sharpshooting clubs held their monthly contests. Those for class medals were shot on the German 25-ring target, 25-shot scores. The bullseye contests were decided by the measuring machine. The winners and scores were as follows:

Germania Schuetzen Club, class medals, champion class—First, Dr. L. O. Rodgers 430 rings; second, D. B Faktor 426. First class—First, H. Burfeind 390; second, H. Helberg 385. Second class—Not filled. Third class—First, F. H. Bushnell 411; second, J. Tiedemann 394. Fourth class—First, J. F. Daly 309. Best first shot, John Tiedmann 23. Best last shot, F. H. Bushnell 25.

San Francisco Schuetzen Verein, class medals: Champion class, A. H. Pape, 433 rings; first not filled. Second class, J. Tiedemann, 380. Third class, F. Koch, 379 (won for good). Fourth class, J. C. Heise, 371. Best first shot, N. Ahrens, 24; best last shot, L. Bendel, 24.

Norddeuscher Schuetzen Club bullseye: First, G. Schultz, 254 points; second, I. Gilken, 356; third, D. Heise, 374; fourth, O. Lembe, 6 8; fifth, H. Hube., 745; sixth, J. Lankenau, 781; seventh, L. Ritzau, 795; eighth, H. Stelling, 831; ninth, C. F. Rust, 834; tenth, F. P. Schuster, 912; eleventh, W. Garms, 945; twelfth, H. Helberg, 1,168. ROEEL.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

May 25.—FINDLAY, O.—Tournament of the Magautrap Gun Club. Targets Chas. E. Steen, Sec'y.

May 25-27.—MARLIN, Texas.—Tournament of the Marlin Gun Club. E. K. Herrings, Sec'y.

May 25-27.—JOPLIN, Mo.—Tournament of the Joplin Gun Club. Added money announced later.

May 26.—BROOKLYN, N. Y.—Tournament of the Brooklyn Gun Club. Targets. Grounds at Liberty avenue and Enfield street, Brooklyn.

May 26-29.—EAST ST. LOUIS, Ill.—Annual tournament of the King's Smokeless Gun Club.

May 31.—CANAJOHARIE, N. Y.—Eastern New York Trap-Shooters' League tournament, under the auspices of the Canajoharie Gun Club. Charles Weeks, Sec'y.

May 31.—PORTLAND, Me.—Spring tournament of the Portland Gun Club. Targets. Added money announced later.

May 31-June 1.—GRAND RAPIDS, Mich.—Tournament of the Michigan Trap-Shooters' League, under the auspices of the Valley City Gun Club.

May 31.—NEW HAVEN, Conn.—Second tournament of the Connecticut Trap-Shooting Association, under the auspices of the New Haven Gun Club. W. H. Hazel, Sec'y.

June 1.—CHICAGO.—Illinois State Sportsmen's Association's convention at the Sherman House, 8 o'clock P. M. Contests for the Association's medals, cups and other prizes, June 1, 2, 3, at Watson's Park. John Watson's tournament at Watson's Park, live birds and targets, June 1 to 6, inclusive.

June 2-3.—HACKENSACK, N. J.—Anniversary tournament of the Bergen County Gun Club. *Recreation* cup shoot on June 2. C. O. Gardner, Jr., Sec'y.

June 2-4.—SPRINGFIELD, O.—Annual tournament of the Ohio Trap-Shooters' League, under the auspices of the Springfield Gun Club.

June 3.—BATH, Me.—Sixth annual tournament of the Bath Gun Club. Open to all. Geo. E. Thompson, Sec'y.

June 7-8.—PARKERSBURG, W. Va.—Tournament of the Mountain State Gun Club Targets. $350 added. Leon J. Epstein, Sec'y.

June 8-9.—Tournament of the Trap-Shooters' League of Indiana.

June 8-11.—AUBURN, N. Y.—New York State Sportsmen's Association tournament. C. W. Tuttle, Sec'y.

June 9-10.—MONROE, La.—Tournament of the Interstate Association, under the auspices of the Monroe Gun Club.

June 10.—NEWCASTLE, Pa.—Third tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

June 15-18.—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June 17-20.—ANACONDA, Mont.—Thirteenth annual tournament of the Sportsmen's Association of the Northwest and fourth annual tournament of the Montana State Sportsmen's Association, under the auspices of the Anaconda Gun Club. $1,500 added. C. A Tuttle, Sec'y.

June 22.—OGDEN, Ill.—Second annual tournament of the Ogden Gun Club. Wm. McKinley, Sec'y.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

July 1.—SHERBROOKE, Quebec.—Sherbrooke's grand annual. Inanimates. Open to all amateurs. C. H. Foss, Sec'y, Sherbrooke, P. Q.

July 3-5.—MITCHELL, S. D.—Tournament of the W. J. Healey Hardware Co.

July 5-6.—INDIANA MINERAL SPRINGS, Ind.—Indiana Mineral Springs tournament. Ben O Bush, Manager.

July 14-15.—NEW HAVEN, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

July 20-22.—PINE BLUFF, Ark.—Seventh annual tournament of the Arkansas State Sportsmen's Association. Added money announced later. Paul R. Litzke, Sec'y, Little Rock, Ark.

July 22.—MEADVILLE, Pa.—Fourth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 17-19.—TORONTO, Canada.—Tournament of the R. A. McCready Co., Ltd. Targets. $1,000 guaranteed. Open to all. Write for programmes.

Aug. 19.—WARREN, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept 6.—MERIDEN, Conn.—Third annual Labor Day tournament of the Parker Gun Club.

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club.

DRIVERS AND TWISTERS.

The Central Iowa shooting tournament will be held at Stanhope, Ia., May 26-27, under the management of G. E. Hamaker and E. L. Wheatley. All purses will be divided 35, 30, 20 and 15 per cent., unless otherwise stated. Ten-gauge guns will stand on the same mark with 12-gauges. Professionals will be handicapped 1 bird in all events. Bluerock targets will be thrown from three traps, "magautrap style." Two special features in the programme for May 26 are: No. 9, 20 straightaways, *30yds. rise*, $2; No. 12, 50 singles, $1, contest for the championship medal valued at $21. The managers write us as follows: "John Georgeson, the veteran trap shot, has laid his gun on the shelf, and will be with us to help manage the shoot. The Dayton Gun Club has promised to be here in full force. The Marshalltown boys say they will all be here, and Sioux City has promised us a large crowd. Gubben will be here with a good delegation from Randall, and we are expecting the boys from Fonda, Manson, Jewell, Iowa Falls, Des Moines, Malard, Algona, Waterloo, Forest City, Storm Lake, Kingsley, Jefferson, Webster City, Eldora, Kelly, Le Mars, Meredith, Ames, Humboldt and Goldfield. Don't miss us."

There has been recently organized an Interscholastic Gun Club League of Philadelphia and vicinity. The delegates of several of the schools met with the University of Pennsylvania Gun Club, at Houston Hall, Monday, May 10, and elected the following officers: President, Geo. Fox, De Lancy Academy; Vice-President, Harry Lay, Lawrenceville School; Secretary, S. K. Van Denburg, Hill School; Treasurer, Mr. O. Paul, U. of P. The league thus organized will hold annually two championship matches, one in December and one in March; the exact dates to be determined later. The matches will be held on the University of Pennsylvania grounds at Fernwood Pa. Any school desiring more definite information on this point should address the secretary, Mr. J. K. Van Denburg, the Hill School, Pottstown, Pa.

The following account of the contest for the W-A trophy of the Council Bluffs, Ia., Gun Club, appears in the Omaha *Bee* of May 7: "The handicap cup shoot of the members of the Council Bluffs Gun Club was held at the club grounds yesterday afternoon. The cup was a silver powder can, a very handsome and elaborate affair, containing 2lbs. of the best smokeless powder. Live birds were used as targets. Some excellent shooting was done before the cup was won by S. T. McAtee. Following is the score: W. D. Hardin (scratch) 21, Waterman (5) 10, Anderson (1) 21, Beresheim (scratch) 20, H. Hardin (2) 14, D. Stewart (9) 15, Zimmerli (2) 16, Kingsbury (2) 20, Matthai (1) 19, Casady (9) 12, F. S. Crabill (scratch) 20, H. S. West (scratch) 21, Leutzinger (4) 16, W. H. Bradley (8) 15, McAtee (7) 25, Oliver (1) 15, Hafer (3) 19, Beno (2) 22. Randlett (scratch) 20, Griffith (6) 18, Heinrichs (3) 24, T. Crabill (2) 10, Stubbs (scratch) 20."

The programme of the Eastern New York League tournament at Canajoharie, N. Y., under the auspices of the local Gun Club, on May 31 (Decoration Day), gives promise of a good day's sport. The schedule calls for thirteen events of 15 targets each, all at unknown angles, $1.50 entrance. All purses are to be divided under the "old system," 30, 25, 20, 15 and 10 per cent., targets being deducted from the purses in events 1-3 at 2 cents each; in events 4-13, inclusive, 3 cents a target will be charged, the extra cent going to form an average fund. Shooting commences on the arrival of the morning trains from the East and West; no postponement being probable on account of weather. Mr. Chas. Weeks, of Canajoharie, is secretary of the club, and will answer any inquiries in regard to the running of this tournament.

We have received the following communication from Mr. W. C. Pattison, of the Indiana Mineral Springs, Warren county, Ind.: "The tournament to be given at the Indiana Mineral Springs, July 5 and 6, will be under the management of Mr. Ben O. Bush, which is sufficient recommendation as to the manner in which the tournament will be conducted. The Springs can be reached via C. & E. I. R. R. and Wabash R. R., Attica being our railroad station. All points on these roads sell return ticket to the Springs at reduced rates. Any further information can be furnished by addressing W. C. Pattison, Indiana Mineral Springs, Ind."

Dr. John W. Bidwell, who has been president of the Winsted (Conn.) Gun Club for the past fifteen years; in fact, since the organization of the club, died suddenly on April 19 last. This necessitated the election of another president, and Mr. Wm. F. Hurlbert, a prominent attorney of Winsted, has been elected to serve as chief executive. The other officers are: Vice-President, Geo. W. Brown; Secretary-Treasurer, Wm. H. Phelps.

Wednesday, May 26, is the date set by the Brooklyn, N. Y., Gun Club for the 50-target handicap shoot for a gold watch donated by the club. The contest is open to all. Targets are thrown from a magautrap on these grounds, and the Brooklyn Club intends to keep itself before the trap-shooters of New York city and vicinity by doing its best to give its guests all the shooting they want and at as small expense as possible.

The regular monthly handicap shoot for the Bergen County Gun Club's E. C. cup will take place at the club's grounds. Hackensack, N. J., on Saturday next, May 22, beginning at 1:30 P. M. The conditions are: 50 targets, unknown angles, $1 entrance, with optional sweep on each 25 targets. Sweepstake shooting will commence at 10:30 A. M. The cup shoot is open to all members of the club and their friends.

The Climax Gun Club, of Plainfield, N. J., has made a change in its shooting grounds. In future the monthly shoots of this club will be held on the Crescent Oval, in Plainfield, instead of at Fanwood, as formerly. The first club shoot to be held at the Crescent Oval will be on May 26, when stages will meet the 1:10, 1:30 and 2:30 P. M. trains at the Plainfield depot and convey shooters to the grounds free of charge.

The Connecticut Trap Shooting Association's second tournament at New Haven, Conn., on Decoration Day (May 31) will surely be a popular affair. The six-men team race always insures a good crowd of contestants and "second string" men. The New Haven Gun Club, under the able management of President M. H. Clark, Secretary W. H. Hazel and Mr Bristol, understands looking after its guests, and will make things very pleasant for those who attend the Decoration Day shoot.

The Peekskill, N. Y., tournament on May 11-13 was a pleasant affair. The company was quite warm, too; in fact, altogether too hot for any shooters who were not close up to the expert class. Jack Fanning was out of trim, and shot away below his average, but gave the boys lots of amusement by carrying off the "booby prize—with trimmings"—on the first day of the shoot.

O. R. Dickey shot in splendid form on both days of the Peekskill, N. Y., shoot. His work on the first day was far above the average, while his dropping 5 out of 20 targets in the last event of that day was little short of miraculous. The race for first place on the second day was quite interesting, but—blood will tell, won't it?

At the annual meeting of the Forest City Gun Club, of Savannah, Ga., the following officers were elected: President, C. A. La Motte; Vice-President, P. J. Ott; Secretary, Harry B. Lemcke; Treasurer, John Rucker; Captain, F. J. Jangstetter. The members of this club have been making preparations to give their guests a warm welcome at the Interstate Association's tournament, which is being held this week, May 19-20.

The Decoration Day (May 31) prize shoot of the Boiling Springs Gun Club, of Rutherford, N. J., will bring out the members of that club in force. These holiday gatherings are always popular and lots of targets are thrown during the day. This means plenty of shooting for all.

Are you in the "$4-class"? This is a question shooters are asking one another now since the Cleveland programme came out. The question is one easily settled by the shooter himself, and Paul North expects no trouble in classifying the boys correctly.

The programme for the Monroe, La., Interstate Association tournament is noticed elsewhere. These Southern gentlemen apparently seem to like a warm programme in warm weather.

"Grimm, Gilbert, Budd, Heikes and Parmelee!" A warm combination, indeed. The above were among the forty shooters who took part in the opening day's programme of the Waterloo, Ia., tournament on May 11.

Mrs. Frank Class, the wife of Frank Class, of Morristown, N. J., is said to have killed 40 out of 50 targets on May 10 at the shoot of the Morristown Gun Club.

U. M. C. Thomas, Ferd Van Dyke and F. S. Edwards are New York's three representatives at the Savannah Interstate tournament this week.

MAY 15. EDWARD BANKS.

Kansas City.

KANSAS CITY, Mo., May 18.—*Special to Forest and Stream:* The tournament here opens under the most favorable auspices; the weather is fine and the attendance promises to exceed that of last year. Most of the prominent shooters are here, as well as a host of State shooters. This will no doubt prove to be the best tournament of the season. The only event of importance yesterday was the State team race, four men to a team, 15 live birds per man; eight teams were entered, and all but one of these were from Kansas City. The Foresters won the State medal on the fine score of 57; then came the O. K. with 55, Stockyards 54, Washington Park 51, St. Louis Belt Line and Pastimes 47, Kansas City 43. Many new shooters arrived during the night and this morning. So the entries in the target events will exceed 100. PAUL R. LITZKE.

New Haven Gun Club.

NEW HAVEN, Conn., May 12.—The members of the New Haven Gun Club held their regular monthly shoot to-day on the club's grounds near Schuetzen Park. About twenty shooters took part in the different events, the principal ones being the merchandise at 20 singles and the team shoot.

Bement, Robertson and Bennett tied for first place in the merchandise event, Bement winning on the shoot off. Kelly took second all alone, and Treat shot out Redfield for third place.

The teams were captained by A. B. Treat and J. B. Robertson, respectively. Robertson had rather the best of it, his team being 10 birds in the lead at the finish.

Mr. Sanford, of the Bridgeport Gun Club, was present and did some good shooting, as did also Whitney, Potter, Stevens and Bement, of the home club. Scores:

Robertson's Team.

G. W. HAZEL, Sec'y.

Western Traps.

ILLINOIS STATE SHOOT.

CHICAGO, Ill., May 15.—One of these days we shall see a copy of the programme of the Illinois State Sportsmen's Association. This old reliable institution will hold its convention at Chicago, June 1, and the week following June 1 will be devoted to the trap shooting features of the yearly assembly, the association events being followed by the open tournament at live birds and inanimates given by John Watson. It is certain there will be a crowd at this old-time fixture. Come and see the d. o. b. birds and the targets that go out from under the roof. Come and listen to the convention. You won't have a better time anywhere on the round of trap circuiting than you will right here. Come and see the 10-gauge rules. We are the only people who have them. We also have the Chicago Climate. Bring your overcoats and duck suits. Also bring your knitting and stay the whole week. John Watson has a whole herd of fat chickens and we will scare up enough to eat somewhere around town. P. S.—Bring your 10 gauge guns too. They touch a tender spot and soften up our hearts, making us think of the past that has long, long ago gone rattling down the grooves of time. Bring your 10-gauge guns and you shall shoot right in the ear of the 12-gauge men, just for the sake of Auld Lang Syne. We are modern as the Pyramids, at least, in trap-shooting rules, here in Chicago and the Illinois State Association.

COUNCIL BLUFFS GUN CLUB.

The Council Bluffs (Ia.) Gun Club shot its first handicap May 8, 23 out of 39 of its members turning out. S. T. McAtee, with a handicap of 7, won first. Gus Heinrichs, with a handicap of 3, won second.

COOK COUNTY LEAGUE.

The Cook County League, of Chicago, shoots its first season event to-day. Most of the other club grounds will therefore be vacant to-day. The trap season is now fully under way at all of our club grounds. Targets make the only form of shooting, no live bird matches or club shoots of great size on live birds having yet been pulled off this season, and it being now too late for that sort of shooting here. Few birds are shot in Chicago between March and June, the latter month giving us the State tournament on birds and targets. The organization of the target clubs into a league bids fair to be more active and effective this year than ever before, and it is very likely Chicago will grind a good line of targets this summer. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Limeport Gun Club.

LIMEPORT, Pa., May 8.—The medal shoot of the Limeport Gun Club was held here to-day. The conditions were 25 targets. A. S. A. rules. The scores:

H T Erdman	11111111101110111101110101—20
J Weiss	11011100111010010011001101—14

H. T. ERDMAN, Sec'y.

Androscoggin Gun Club.

LEWISTON, Me., May 13.—Our weekly club shoot took place to-day, and there was a fair turnout of shooters considering the day, which was wet and disagreeable. Quite a lot of interest is being taken in trap-shooting here this season on account of the Interstate shoot here in August, and I think some of the members of the club will be able to give a good account of themselves at that time. Event No. 2 was at unknown angles; No. 5 was the contest for the Doten challenge cup.

L. E. KEYES.

The Monroe Interstate.

VIA THE SHENANDOAH VALLEY ROUTE.

SHOOTERS from New York and vicinity desiring to attend the tournament, and to reach Monroe the day previous to the opening, will leave New York from foot of Liberty street, via the Baltimore & Ohio (Royal Blue Line), Sunday, June 6, at 2:00 P. M.; Philadelphia 4:20 P. M.; Baltimore 7:00 P. M.; Washington 9:00 P. M.; Knoxville 2:10 P. M. (Monday); Chattanooga 6:10 P. M.; Birmingham 10:15 P. M.; Meridian 6:00 A. M. (Tuesday); Jackson 9:55 A. M.; Vicksburg 11:45 A. M., arriving at Monroe 3:45 P. M.

Climax Monthly Shoot.

A REGULAR monthly shoot of the Climax Gun Club will be held on May 26 at Plainfield, N. J. A stage will meet the 1:10, 1:30 and 2:30 trains from New York, conveying shooters to the new grounds free of charge for this shoot. Now come and help us make a success of this, and see how you like our new grounds.

Kensington Gun Club.

LONG BRANCH, N. J., May 15.—The Kensington Gun Club was organized here on Wednesday, May 12, with 20 charter members. The following officers were elected: President, H. P. Bennett; Vice-President, C. B. Woolley; Secretary, C. L. Edwards; Treasurer, H. G. Woolley; Captain, H. C. Mapo, Jr. Weekly target shoots will be held on the club's grounds at Kensington Park. CHAS. L. EDWARDS.

The Peekskill Tournament.

THE annual tournament of the Peekskill (N. Y.) Gun Club, May 11-13, suffered considerably from wet and windy weather. The first day was fine enough, but the weather on the last two days was of a most disheartening nature. Rain fell in torrents at times on the last day, and it was hardly expected that there would be much of an attendance under such conditions. But the tournament was a success, despite the weather.

As usual, it drew together quite a number of crack shots. It is not a difficult matter to gather together a couple of warm squads at any tournament around New York; and Peekskill had her share of warm material.

AMONG THE SHOOTERS

were: O. R. Dickey, representing the Parker Gun Co.; Ferd. Van Dyke, of the Winchester Repeating Arms Co.; E. D. Fulford, Utica, N. Y.; H. M. Levengston, Saratoga Springs; J. S. Fanning, representing the interests of Gold Dust powder; Ralph Trimble, looking after the Du Pont Smokeless' side of the question; Gus Greiff, of Von Lengerke & Detmold, who came for the live birds; J. S. S. Remsen, Brooklyn, N. Y.; Esau, the assumed name, or rather, one of the many assumed names of a crack New York trap-shooter who prefers to hide his light under many a bushel; Ed. Taylor, of the Laflin & Rand Powder Co.; Dan Lefever, of the Lefever Arms Co.; Tom Keller, of the King's Smokeless and Peters' cartridge companies, and his running mate, Dutchy Smith, of Plainfield, N. J.; Neaf Apgar; Bob Snyder, of Schoverling, Daly & Gales; J. L. Brewer, New York; C. H. Perkins, Troy, N. Y.; E. Ingram, New York city, etc. We had almost forgotten W. F. Parker, a member of the firm of Parker Bros., a new man at the traps, but one who is coming very fast, and who promises to shoot his firm's gun to the front before long. On the second day there were several new arrivals, W. Allison, South Weymouth, Mass.; J. B. Sanders, Albany, N. Y., and Joe Baker, of Ridgefield, N. J., being among the number.

A glance at the above list of names shows that there was ample material for good scores. It was hardly to be wondered at, therefore, if the novices dropped out or else only shot along "for birds."

GROUNDS ARE PECULIARLY LOCATED.

The grounds of the club are peculiarly located. Peekskill is one of the hilliest of the many hilly cities that line both banks of the Hudson River. Being on the east side of the river, it is a matter of considerable difficulty to get a good sky background facing to the northeast. So difficult was it that the club did not bother about it much, but just went to work and inclosed a small space of ground at the foot of one of the hills, and planted itself right in the middle of a small arena and faced its traps squarely into the hillside. This makes it seem a difficult ground to make good scores on. We say "makes it seem," because the scores on the second day show that the boys found out how to break them, no matter if the targets did go far and fast. The traps were a set of the new bluerock expert traps, so "'nuff said" on that point. As somebody said, "They flung 'em for fair." Dickey and Fulford on the first day were able to register some big averages, their work making that of the others seem amateurish to a distressing degree.

THE OFFICIALS.

The tournament was most satisfactorily managed by Neaf Apgar, who not only ran the shoot, but also tried hard to accomplish the impossible feat of doing two things at once and both well—shooting and working. In the cashier's office were Messrs. E. F. Hill and O. J. Loder, both members of the home club and both efficient in their positions. The pulling, refereeing and scoring was done by any member of the club who was at liberty: Dr. Mason, Dr. Horton, J. B. Halsted, Frank Southard, Harry Dain, Snowden, G. W. Richmond, B. C. Everinghim, W. C. Gibb, etc., were always on hand and ready to do anything to help things along; Dr. Mason in particular was a very busy man, and his scores suffered in consequence.

The records of each day's scores, which are given below, will best give the history of this successful little shoot.

GENERAL AVERAGES

The general average column is one that Dickey can cut out and paste in his scrap book without any excuse for such action. Each of the eight men who shot out the entire two days' programme shot at 380 targets, and Dickey, by virtue of consistently good shooting, ended with 338 breaks, an average of 93.8, an average that speaks very highly for his work with the gun. The conditions really should be experienced to enable anybody to properly appreciate his work. Fulford, who also shot consistently well, landed only 6 targets behind Dickey, and had an average of 92.2. Edwards was third with 324, 8 targets behind Fulford and 14 behind Dickey, just managing to show up an average of 90 per cent. for the two days. Van Dyke was fourth, close up to Edwards, with 89 4 per cent. Levengston, Apgar, Trimble and Fanning, finished in order named. Below are the records:

	1st day.	2d day.	Total.	Ave.
Dickey	168	170	338	93.8
Fulford	164	168	332	92.2
Edwards	155	169	324	90
Van Dyke	156	166	322	89.4
Levengston	151	162	316	87.7
Apgar	157	151	308	85.5
Trimble	150	155	305	84.7
Fanning	142	148	290	80.5

GUNS, SHELLS AND POWDERS OF WINNERS.

The guns, shells and loads of the four high guns were as follows: Dickey—Parker, U. S. Rapid, 45grs. E. C. and 1¼oz. No. 7; Fulford—Greener, 3drs. Schultze, U. M. C. Trap, factory-loaded, 1¼oz. No. 7½; Edwards—Winchester, 32drs. E. C., U. M. C. Smokeless, factory-loaded, 1⅛oz. No. 7½; Van Dyke—Winchester, 54grs. W-A., W. R. A. Leader, factory-loaded, 1¼oz. No. 7½. Remsen and Esau, who divided third average on the first day, used the following guns and ammunition:—Remsen—Scott, Schultze; Esau, Francotte, single barrel, E. C.

First Day, May 11.

A finer day for the time of year than that which was provided for the opening day of the Peekskill shoot, could not be had for the asking. Some people may have found it a trifle too warm and enervating, for it was a regular midsummer day that had gotten out about six weeks too early. The hot sun poured down on the arena of the Peekskill Gun Club and made everybody hunt the shade. It just suited Dickey, who was in wonderful form, losing only 7 out of the first 170 shot at in the programme events; then came a case of mental aberration, and he lost 3 out of the first 4 targets he shot at in the last 20-bird event, all from No. 5 trap, and finished that 20 target event with 15, shooting himself out of the money! Fulford also lost 4 targets in that event, and ended up 4 behind Dickey, taking second average with 91.1 per cent.

Outside of the two above-named, it was a close race; Remsen and Esau tied with 158 breaks; Apgar was next with 157; then came Van Dyke, 156, Edwards 155, Levengston 154, W. F Parker 151, Trimble 150, Brewer 149. Fanning was last on the list of those who shot out the programme, being clean out of all form, and breaking only 142. His poor form, while it caused the loss of some good coin in the sweepstakes, earned him the "booby prize" of $2 offered by the club to the man who made the lowest average in all programme events.

Below are the

Second Day, May 12.

During the night a heavy downpour of rain made matters look decidedly blue for the second day of the shoot. In the extremely early hours of May 12 the rain came down in torrents, and was still falling persistently at 8 A. M., when the majority of the shooting guests of the Eagle Hotel gathered in the dining room for breakfast. About 9 the rain ceased almost entirely, only a slight drizzle causing a recourse to hacks in order to reach the grounds. The score and club house are all in one, and are covered by an ample roof that gives shelter when required, both from rain and from the sun's rays, for both kinds of weather were dealt out to the boys.

The greater part of the day the sky was dull and leaden-colored, but at times the sun got through and then everything steamed. The light was very varying, and there is something remarkable in the scores made by No. 1 squad in consequence. Targets were going about as far and as fast as one ever sees them go, and the light kept changing in a puzzling manner, yet No. 1 squad went out and did some excellent work. It just happened that each of its five members was in his best trim and therein lay the secret of some of its scores. In event No. 3 it broke 94 out of 100; in No. 4, 47 out of 50; in No. 7, 115 out of 125, Dickey losing 4 targets; in No. 8, 48 out of 50; in No. 10, 72 out of 75, and in No. 11, 96 out of 100 The five men broke 835 out of 900 shot at in the programme events, making a squad average of 92 7.

Dickey was on top again, but not without having to do some hustling, as Edwards and Fulford were only 1 and 2 targets respectively behind him, while Van Dyke was only 2 targets behind Fulford. Levengston also shot a good gait all through, ending up in fifth place with an average of just 90 per cent. Thus, all five members of No. 1 squad accounted for the first five places in the percentage column.

Trimble shot very well for more than half the events, but seemed to lack condition, and fell off towards the end of the day. Fanning was again badly off in his shooting, and his work was a source of much worriment to his friends, although it did not feaze Sharkey in the least. During the two days he had a hoodoo on righ -quarterers, and never could find them correctly or to his satisfaction. Sanders lost his chance of a nice average by losing 18 out of his last 55 targets; up to that time he had broken 107 out of 125 shot at. W. Allison won the "booby prize," as Halsted shot "for birds only" in most of the events.

Third Day, May 13.

The weather to-day was about as unpleasant as it could be, being windy and rainy all day. This kept the attendance down to a minimum Dickey shot well, losing only 2 birds out of 35 shot at, one of the lost birds falling dead out of bounds. Fanning and trimble split up first money in the handicap with 15 straight.

No. 1 was 5 birds, $5, bird included, three high guns; No. 2, 10 birds, $7, birds included, three moneys; No. 3, Peekskill Handicap, 15 birds, $10, birds extra, four moneys; No. 4, $2 miss-and-out. Scores:

	No. 1.	No. 2.	No. 4.

EDWARD BANKS.

Buffalo Trap.

AUDUBON GUN CLUB'S WEEKLY SHOOT.

BUFFALO, N. Y., May 8.—The attendance at to day's regular weekly shoot of the Audubon Gun Club was as large as usual. The club badge event (No. 3 in the table given below) attracted a lot of entries. In Class A, F. D. Kelsey won a heat; George McArthur was the winner in Class B; George Zoeller winning in Class C. Events Nos. 2, 5, 6, 7 and 8 were shot over some new traps, and as the club members have not gotten accustomed to them scores did not rule as high as usual. Below are the scores in to day's events:

Events:	1	2	3	4	5	6	7	8
Targets:	10	15	25	15	15	15	20	20

W. D. KENYON, Sec'y.

Boston Gun Club.

WELLINGTON, Mass., May 12.—From a week of moisture and dampness, the Boston Gun Club's Wednesday afternoon emerged quite passably decent—sufficiently so for 15 shooters to put in an appearance at Wellington this afternoon. The rain keeping off, no objection could be made, even though a variable wind prevented good shooting. This being the next to the last shoot for prizes, considerable interest was attached to the match event. The leaders failed to improve their opportunity, and it remained for Winters to make the only change of note in displacing Gordon from third position. Having a low score among his total awaiting erasure next Wednesday, his attendance that day renders his chances exceedingly good for second prize

Scores of this afternoon are as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	10	10	6	10	10	10	5	6	10	10	10	10

Baltimore Shooting Association.

BALTIMORE, Md., May 6.—To-day Malone scored his second win for the Baltimore Shooting Association's championship cup by killing 15 straight. Macalester has a win for the cup, this being the third time it was shot for. The shoots for this trophy take place once a month for a year, the man winning it the greatest number of times out of the twelve events becomes the owner of it. The affair is a handicap, Malone being scratch man to-day. The scores were:

Malone 15, Brown and Du Pont 14, Sims and Johnson 13, M. C. K. and Simon 12. Jamison and Harrison killed 7 and 6 respectively out of 10 and withdrew; Howard withdrew at the end of the 8th round with 7 kills; Antique scored 2 out of 4 and withdrew.

TRAP SHOOTING.

May 8.—The following scores were made on targets to-day on the grounds of the Baltimore Shooting Association. The first figures designate the number of targets shot at and the second the number broken. The events were handicaps extending from 25 to 35 targets:

First event: Gent 28, 16; Macalester 29, 25; Hill 29, 20; Walters 25, 15; Tyler 35, 15; Coe 29, 22; Collins 31, 14; Stanley 29, 17; Robb 31, 17; Evans 35, 11; Gallagher 35, 16; Harrison 30, 20; Malone 27, 22; Hamilton 30, 20; Wilson 35, 10; Bonday 29, 21; Parker 28 15; Fox 32, 17.

Second event: Gent 28, 20; Macalester 29, 25; Walters 30, 16; Hill 29, 20; Coe 29, 22; Collins 31, 23; Stanley 29, 18; Robb 31, 18; Evans 33, 16; Gallagher 35, 14; Harrison 30, 20; Malone 27, 22; Hamilton 30, 23; Wilson 35, 3; Bonday 29, 22; Parker 30, 18; Fox 32, 14.

Three 15-target events and one 10 target event were also shot, with the following results:

Events:	1	2	3	4	Events:	1	2	3	4

No. 3, same: Woodward 16, McCane 11, Brady 13, Haynes 18, Hull 17, Schmidt 9.

No. 4, same: Crock 14, Williams 15, Worthen 21, Lemons 22, McCane 14, Brady 14.

No. 5, same: Hull 17, Lee 13, Young 10, Haynes 20, Woodward 16, Schmidt 11.

No. 6, club shoot, handicap: Hull (0) 21, Haynes (5) 23, Worthen (3) 25, Crock (5) 22, Brady (10) 24, Schmidt (8) 15.

No. 7: Waldron 12, Woodward 15, Young 12, Lee 17, Wolf 15, Hull 23,

No. 8: Waldron 15, Lee 19, Wolf 11, Crock 21.

C. E. BRADY, Sec'y.

The Coming Tournament at Anaconda.

ANACONDA, Mont., May 8.—*Editor Forest and Stream:* The thirteenth annual tournament of the Northwest, comprising the States of Montana, Oregon, Washington, Idaho and the Province of British Columbia, and the fourth annual tournament of the Montana State Sportsmen's Association are to be held in conjunction, under the auspices of the Anaconda Rod and Gun Club, at Anaconda, Mont., June 16, 17, 18 and 19.

We have repeatedly pressed our claims to recognition by the Interstate Association without avail. But the Association of the Northwest has confidence enough in our ability to furnish a good programme for their entertainment, and at the last annual meeting, held at Spokane, Wash., unanimously voted to place the next annual meeting in our hands. In this far Western section Anaconda bears the reputation of doing whatever she undertakes in a thorough and enthusiastic manner, and we expect the coming tournament will be no deviation from the general rule. Situated as we are, in the center of the largest population of our own State, with convenient railroad facilities to the cities of Butte, Helena, Great Falls and Missoula, we can safely expect a good attendance from the above-named cities.

In addition the representatives of the Association in other States should make up our attendance to at least 150 entries. We have as good facilities for handling a large number of shooters as any club in the West. Our grounds are conveniently located in the east part of the city, about two minutes walk from the electric car line, which has regular communication with the city every half hour. We have a commodious club house, scorer's stands, secretary office and a spectator's stand which will seat 200 visitors.

Our target devices consist of a battery of five expert traps, fitted with North's electric pull, on which all trophy events will be shot in order to conform to the conditions under which the same were originally contested. In addition to this we have the latest improvements of the Cleveland Target Company, the magautrap. We, therefore, feel assured that we can provide all the shooting our visitors desire. Our hotel facilities are the best of any city of its size in the West, and our citizens point with pride to the convenience and equipments of the Montana Hotel, conceded by all traveling men to be the best of any between us and the Missouri River.

The citizens of our city have generously contributed $1,500, which amount is to be given in added money. In addition to this, the trophies owned by the Northwest Association and the Montana State Association amount to $1,000. This, with such merchandise prizes as we many secure, assures us sufficient attraction to induce all shooters to come if it is possible for them to do so.

The Anaconda Racing Association holds its meeting here commencing June 26, continuing thirty days. The purses they have given amount to $150,000. Already they have from 350 to 400 horses quartered at the race track, and among all the racing men who will attend there must be some who enjoy shooting; and those of the shooters who enjoy racing can, by stopping with us a few days, have the opportunity of seeing some of the best horseflesh to be found in the United States.

Our programme will be ready for distribution May 29, and we will be pleased to furnish same upon application. ANACONDA GUN CLUB,
per C. A. TUTTLE, Sec'y.

The Monroe Interstate Tournament.

FOLLOWING closely after the Interstate Association's tournament at Savannah, Ga., held this week, May 19-20, comes the same Association's tournament at Monroe, La., June 9-10, under the auspices of the Monroe Gun Club.

The programme gotten up for this shoot is a pretty stiff one as such things go; ten 20-target events, unknown angles, $2.50 entrance, $10 added to each purse, makes a schedule of events that calls for a lot of shooting and a lot of money. But such a programme will attract quite a number of shooters, and this tournament ought to be a good one. Monroe is so situated that she can draw from all sections in the South, while the members of the home club are popular enough to be able to count with certainty upon the attendance of more shooters than would be sufficient to make the tournament a success.

Headquarters for shooters during the tournament will be at the Orleans Hotel, where special rates will be made to shooters attending the tournament. Guns and shells should be forwarded to the Monroe Hardware Co., who will deliver same at the grounds free of charge. This company will also have high grade ammunition for sale on the grounds. The club has also secured special rates on all railroads as follows: One and one-third fare on the certificate plan has been secured for the round trip from the following railroads and their connections: Alabama & Vicksburg; New Orleans & Northeastern; Vicksburg, Shreveport & Pacific; St. Louis, Iron Mountain C Southern; International & Great Northern; Texas & Pacific; Illinois Central; Yazoo & Mississippi Valley; Houston, East & West Texas; Southern Pacific; New Orleans & Northwestern. Tickets on sale June 6 good to return until June 13.

The tournament will be held on the club's own grounds, five minutes' ride from the hotel headquarters. Shooting will commence at 8:30 sharp each day. Bluerock targets will be thrown from a magautrap at the rate of 3 cents in the programme events and 2 cents in all extra events. All purses will be divided under the Rose system into five moneys with the ratio points of 7, 5, 4, 3 and 2. Omnibuses of the Monroe Transfer Co. will carry shooters to and from the grounds at the rate of 25 cents for the round trip. The secretary of the club, Mr. W. O. Williams, will gladly answer any inquiries relating to the tournament.

Trap in Rhode Island.

PROVIDENCE, R. I., May 6.—The second series of prize shoots of the Rhode Island Shooting Club took place this afternoon. The main event was known as the Gold Dust powder event. The conditions were 25 targets, known angles. The prizes consisted of 5lbs. of Gold Dust powder divided into seven cans, and a leg on the silver W-A powder keg. This week, as last, an amateur with an allowance of six targets won the second claim. Despite the strong wind blowing in the faces of the shooters, some remarkably good scores were made, especially by I. F. Greener, S. F. Wilson, A. M. Hunt and R. C. Root. The winners of the prizes were A. E. Arnold, first; P. H. Randell, second; F. I. Greener, third and fourth; S. F. Wilson, third and fourth; W. H. Sheldon and R. C. Root, fifth and sixth; G. Cornett, Seventh; J. F. Rossie, eighth.

Next week the main event will be known as the E. C. Powder event, with ten prizes to shoot for. In the near future the various gun clubs in the State will compete in a three-man team shoot for an empire expert trap, offered by the Association as a prize to the winning team at 50 targets, known and unknown angles.

Below is a summary of the events shot:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

W. H. MASON.

Cobweb Gun Club.

NEW YORK, May 6.—The last shoot of the Cobweb Gun Club for this season was held this afternoon. The attendance was very small. In class A the winner was Charlie Zorn. William Cashan won in class B without a competitor, H. Miller won in class C. The scores were:

Class A.

C Zorn .....21122—5 E Miller.....10010—2
G Nichols.....11110—4

Class B.

William Cashan .....22121—5

Class C.

H Miller.....02011—3 G Thompson.....00010—1
G Erff .....20000—1

After the above race had been disposed of the winners in classes A and B respectively proposed a match at 5 birds, class handicap, loser to pay for the birds, and the winner to wear both medals until the commencement of the fall season. The result was a win for Cashan, who thus carries both medals with him. The scores were:

C Zorn (30).....10201—3 W Cashan (28).....12112—5

G. W. THOMPSON, JR., Sec'y.

Du Bray's 49th.

LOUISVILLE, Ky., May 11.—To-day was the forty-ninth birthday of Lieut. A. W. du Bray, of the Parker Gun Co., so the Kentucky Club decided to celebrate the occasion by holding a small live bird shoot. The main event was a handicap at 15 birds, 30yds. boundary. Du Bray was equal to the occasion, although placed at the 31yds. mark. Mr. du Bray was also presented with a very handsome scarf pin in honor of the occasion. Scores in the handicap were:

Du Bray.....222222222222222—15 Lyons.....22210210212222O2— 1

ON LONG ISLAND.

BROOKLYN GUN CLUB.

May 8.—The Brooklyn Gun Club held an open shoot for the stein cup presented for competition by its president, J. S. S. Remsen. There were thirteen entries for the race, which was at 50 targets, unknown angles, thrown from a magautrap, handicap allowance of extra targets to shoot at. The cup was won by C. W. Billings, a member of the club, and also a member of the Endeavor Gun Club, of Jersey City, quite a beginner in trap-shooting. He was allowed 15 extra targets to shoot at, and broke 41 out of his 50, adding 9 more out of his handicap allowance; this just made him score a highest possible. J. H. Swan, gave him quite a chase, breaking 49 out of 63 shot at. Remsen and Trimble made the highest scores of the scratch men. The first squad in the stein race was composed as follows: Remsen, Brewer, Fanning, Trimble and Edwards. Its scores in the first 25 targets resulted thus: Remsen 25, Brewer, Trimble and Edwards 24 each, Fanning 22; a total of 119 out of 125 shot at. The totals in the race were:

	1st 25.	2d 25.	Handicap.	Total.
Billings (15)	18	23	9	50
Swan (13)	21	17	11	49

T. BARON, Sec'y.

NEW UTRECHT GUN CLUB.

May 15.—The regular live-bird shoot of the New Utrecht Gun Club was held this afternoon at Woodlawn. C. Furgueson, Jr., and J Gaughen tied for the class A cup in the club event with straight scores. The tie will be shot off at some later date. J. N. Meyer won in class B and E. Lohman in class C. After the club shoot a number of team races were shot between teams of five men captained by C. Furgueson, Jr., and C. M. Meyer, respectively. Meyer's team paid for most of the birds. The scores:

Class A.

BROOKLYN GUN CLUB.

May 15.—The regular monthly shoot of the Brooklyn Gun Club was held this afternoon at the club's grounds, at Liberty avenue and Enfield street. C. W. Billings, with an allowance of 10 extra targets, won the club event with a full score of 50, he shooting at only 8 of his 10 extras; Baron, with an allowance of 5, and Remsen, scratch, were close up with 48 each. Sweepstake shooting was also indulged in. Scores:

IN NEW JERSEY.

ENDEAVOR G. C. VS. FREEHOLD G. C.

May 15.—The Freehold Gun Club can boast of a lot of members who are not afraid of keeping the club's word, even if it does put them to considerable bodily inconvenience to do so. For that reason the rain of to-day, heavy and persistent as it was, had no terrors for them; they came to Marion, N. J., and shot the team race against the Endeavor Gun Club as agreed upon. The Freeholders, for their grit, deserved a better fate than befell them.

The home club was not at its best as it puzzled the Endeavor Gun Club, under the weather conditions, to put nine men in the field against the nine men that came from Freehold. The result of the race, however, was a victory for the Endeavor Gun Club by 12 breaks the score standing 167 to 155. Each man shot at 25 targets, unknown angles. The rain and the dull sky made shooting quite hard, and scores as a result ruled low. Below are the scores in detail:

Endeavor Gun Club.

M Herrington.....1111111110111111001111111—22

SALVATOR HANDICAP AT ELKWOOD.

May 15.—The Salvator Handicap was shot at Elkwood Park to day, six men being entered. Capt. Money captured the event with a clean score to his credit. Noel Money was second with 24, and W. R. Patten was third high with a score of 23. The conditions were: 25 birds, $10 entrance. After the Salvator Handicap a 10-bird sweep, $5 entrance, and two target events, one at 15 targets, $5 entrance, the other at 10 targets, $2 entrance, were shot.

Messrs. Daly and Chanfrau, managers at Elkwood Park, announce the following programme for Wednesday, May 19: Clay target shoot, bird allowonce handicap, $2.50 entrance, targets extra, scratch men shoot at 50 targets only. Unknown allowance to the handicap men in regard to the number of extra targets to be shot at. The management desire to make the handicap such that the "novice shooters" will have as good a chance to win as the "scratch men." The referee is the only one who will know the exact number of targets to be shot at by the different contestants, and he will call the men from the score as soon as their allowance is shot up. No man can be credited with more than 50 breaks. Shooting commences at 1 P M. All targets thrown from the magautrap. The scores of Saturday were:

Catchpole Gun Club.

WOLCOTT, N. Y., May 12.—A handicap shoot for merchandise prizes was held this afternoon on the grounds of the Catchpole Gun Club. There were four prizes, two being donated by the club and the other two given by Mr. A. M. Jurdess, our popular cigar manufacturer, and by Mr. William Olmstead, a member of the club, respectively. The handicap was an allowance of misses as breaks. Scores:

Foster (2).....1001010001001011111010110010101011111—21+ 2—23

E. A. WADSWORTH, Sec'y.

Budd Challenged by Beck.

WE learn from Indianapolis, Ind., under date of May 12, that Mr. Geo. C Beck, of the Limited Gun Club, has challenged Mr. C. W. Budd for the Du Pont trophy. The forfeit money is up and everything has been done to comply with the conditions.

Answers to Correspondents.

No notice taken of anonymous communications

A. H. S., Meshoppen, Pa.—What trout flies are suitable for May and June? or otherwise post us. Ans. Grizzly-king, brown-hackle, professor, ibis, cow-dung, silver-doctor; dark flies bright days, bright flies dark days.

N. E., New York.—Will you kindly advise me where to go for a few days' fishing next week? Ans. You will find trout fishing at Canadensis or Parkside, on the Erie Railway, in Pennsylvania, or at Woodbourne, N. Y., on the Ontario & Western.

S. R. H.—We believe you refer to "Bernard Damascus" barrels. These were originated by Leopold Bernard, who manufactured them in France thirty or forty years ago. They are easily recognized by the figure. Since Bernard's death they have been quite freely imitated, as his barrels were held in high esteem.

R. F. C., Manchester, O.—1. What make of rifle is the hardest shooting gun in use? 2. What is the weight of same, also size of caliber, weight of ball and distance they will shoot with accuracy? Ans. 1. The English elephant double rifle. 2. The 4-bore, weighing 20lbs., shoots a charge of 12 to 14drs. of powder and a ball weighing between 3 and 4oz. Shots with such guns are rarely attempted at distances beyond 100yds., and as a rule the distance is much less.

W. P. H., Poughkeepsie, N. Y.—What is the authentic record in the United States for bass? Ans. According to FOREST AND STREAM'S "Big Fish Record," the largest small-mouth bass whose weight is known beyond any question weighed 10lbs. Another is mentioned, which is said on good authority to have weighed 11¼lbs., but this fish was not weighed in public. The largest large-mouth bass of which we have record weighed 22½lbs. The head of this latter fish may be seen in the FOREST AND STREAM office.

C. R. B., Mechanicsville.—1. I have a Gordon setter seven months old. His eyes are not sore, but they discharge matter, mostly nights. What can I do to stop it? 2. I have a foxhound nine months old which has distemper. What will I do for him? Ans. 1. Use the following drops: Sulphate of zinc, 2grs.; boracic acid, 5grs.; water, 1oz. Mix. A few drops in the eys four or five times a day. 2. Keep dog indoors, in a dry, comfortable, clean room. Feed well. Give 5grs. of salicylate of soda three times a day.

E. F., Allentown, Pa.—1. Some years ago I cut from the FOREST AND STREAM a recipe for repelling flies and mosquitoes, which was superior to anything I ever tried. The articles were oil tar, pennyroyal and sweet oil. Can you give me the proportions? 2. What flies would you recommend for first of June for Pocono Mountain, Tobyhanna and Tunckhanna still-waters? 3. Can you give me the address of Geo. Barnard & Co., canvas clothing makers? Ans. 1. Nessmuk's recipe: Simmer together over a slow fire 3oz. pine tar, 2oz. castor oil, 1oz pennyroyal oil, and bottle for use. Another recipe calls for 6 parts sweet oil, 1 part creosote, 1 part pennyroyal. 2. See answer to A. H. S. 3. Brooklyn, N. Y.

H. C. T., San Francisco.—In the issue of FOREST AND STREAM of March 27, on page 250, Mr. Cheney speaks of Mr. Hiram Hawes as using a slow tapered rod. Will you kindly explain the difference between a quick and a slow tapered rod? Ans.—Merely for the sake of illustrating the point, let it be assumed that a light rod is a true cylinder from end to end. It will then be very slow and ponderous in its action, bending alike at all points, save that in use it will bend most at the butt from the excessive weight of the tip and its lever action. If it is now tapered truly from one end to a point at the other, it then clearly will be much quicker in its action, the change making the tip lighter and more pliant and the butt relatively heavier and stiffer. Still it may be too weak and pliant near the handle for certain purposes, thus being slow in recovery. Now, if the rod is made with more substance from the handle to a certain point from it, say by way of illustration, a quarter of its length, while the rest of the tip remains the same, the added thickness being nicely tapered or dished so as to form a symmetrical whole, the greatest pliancy and action of the rod is then placed further away from the hand, and it will act correspondingly quicker in casting. Within certain limitations which are now apparent, a rod of a certain weight can be made slow or quick by a skillful disposition of its material in its makeup.

PUBLISHERS' DEPARTMENT.

"Vena Contracta Guns."

WE now have on hand a number of copies of the catalogue of Joseph Lang & Sons' "Vena Contracta" game guns, which we will forward on request as long as the supply lasts.—*Adv.*

Flies.

THE name of MacHarg has long been associated with some of the best trout, bass and salmon flies ever tied. Ten cents sent to J. B. MacHarg, Jr., Rome, N. Y., will bring a sample fly and fishing tackle catalogue.—*Adv.*

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR ; 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MAY 29, 1897.

VOL. XLVIII.—No. 22. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

ATTENTION is directed to the new form of address labels on the wrappers of subscribers' copies. The label shows the date of the close of the term for which the subscription is paid.

The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us for a new or renewed subscription. Unless specially requested to do so, we do not send separate receipts.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

King James the First and Queen Anne being hunting, the Queen, shooting at a deer, mistook her mark, and killed Jewel, the King's most principal and special hound; at which he stormed exceedingly awhile; but after that he knew who did it, he was soon pacified, and with much kindness wished her not to be troubled with it, for he should love her never the worse; and the next day sent her a diamond worth two thousand pounds as a legacy from his dead dog.

Letter of Arthur Wilson, August, 1613.

The Forest and Stream's Platform Plank.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1897.—No. IV.

MINNESOTA.

Chap. 221, Laws 1897.—Sec. 10 * * * The sale, exposing for sale, having in possession with intent to sell, or the shipment to any person, either within or without this State, by common or private carrier, of any ruffed grouse, sometimes known as partridge or pheasant, is hereby prohibited and made unlawful.

LEAP-YEARS FOR GAME.

ON the State reservoirs of Ohio and on Lake Erie within the Ohio limits duck shooting is forbidden on Sundays, Mondays and Tuesdays of each week in the open season. In Currituck waters of North Carolina decoy shooting is forbidden on Wednesdays and Saturdays of the open season for ducks. In Chesapeake Bay the Maryland law provides that each alternate week day shall be closed on duck shooting. In Maine during the forty-eight hours from Saturday sunrise to Monday sunrise salmon fishing is forbidden; and in New York a law of the same character provides a weekly close time for shad in the Hudson.

These are examples of the familiar expedient of providing for brief intervals of exemption from pursuit during the period when shooting or fishing is permitted. The purpose is to interrupt the open season, so that some portion of the game or fish may make good its escape.

A novel application of this principle has just been made in the new law of South Dakota where, following out the principle of close days in the week, a close year has been adopted coming once in every term of five years. It applies to big game and provides that buffalo, elk, deer, moose, antelope, mountain sheep and mountain goat may not be taken in the year 1900, and that hunting shall be prohibited in every fifth year thereafter. Such a system has much to commend it for efficiency; it certainly is wiser than the common shiftless neglect of game resources, until it is found necessary or considered expedient to make a long close time of two, or three, or five years. The inadequacy, injustice and futility of such long time close periods are found sometimes in that they are ignored by the lawless—which in these matters means the great majority—who disregard the close time altogether and get the game, while the law-abiding sportsman is cheated out of his share, so that at the end of the period the game supply is in no better condition than that it was at the beginning. Again, if the law chances to have been well observed, when the close time expires all hands turn in with ardor whetted by long abstinence, and in the first open season work quite as much destruction as that which would have been wrought under ordinary conditions in the open seasons covered by the close period term. A single close year, on the other hand, is more apt than a term of three or five years to be respected by all classes.

In this new departure has not South Dakota, then, set an example which might profitably be followed in other States with respect to the particular interests of the game supply in each section? For the convenience of fixing in the public mind the recurrence of such close years, they might be made identical with the leap-years, which are also the years of our Presidential elections. Thus, in Maine, every leap-year or national campaign year might be made a year of grace for moose; in the Adirondacks it might be a year of grace for deer, in Vermont for deer, in New Hampshire for moose and deer, in Michigan for deer, in Minnesota and Wisconsin for moose and deer, in Virginia for quail, in North Carolina for wildfowl; and so throughout the Union, in each particular State, for whatever variety of game might stand most in need of such periodical immunity. It is even possible that in its application to spring shooting we might find in the leap-year system at least a partial solution of that long-vexed and apparently never fully to be settled problem. A measure introduced in any of our Legislatures to forbid the spring shooting of ducks and snipe and shore birds for one year in four would perhaps not encounter the determined opposition which now defeats most endeavors to prohibit spring shooting absolutely; and the promoters of a leap-year spring shooting law could work for it with some heart. It might be practicable in this way even to secure an uniformity of legislation by several contiguous States for a once-in-four-years cessation of spring shooting, by common consent to prevail over the several States concerned.

The advantages of such a system applied as the exigencies of the game supply may demand would be these:

I. Being incorporated in the permanent law, and close times thus set apart far in advance, the leap-year provision would be simple, definite, readily comprehended and easily remembered. There would be no dates to be uncertain about. Most people know a leap year; and those who do not know leap years would at least find out before shooting time that a National campaign was in progress; so that if made identical with the leap years, which are also the years of the Presidential campaigns, the close game year would be fixed in the public mind, to be looked forward to, anticipated and prepared for. One would know years in advance that, for example, in the spring of 1900 he could not go duck hunting on Long Island, or that in the autumn of 1900 he could not go deer hunting in Michigan.

II. The interval of three open years separating the recurrence of the close years is so extended, that the one single year of prohibition could not reasonably be regarded as a hardship; and the deprivation of sport so entailed could not be complained of, particularly in view of the increased game supply assured for the three open years. For it would also be found

III. That although only one year in every four is closed, nevertheless, this one year will be sufficient to assure a decided improvement in the game supply. If there is anything in arithmetic, the thousands of wild ducks permitted to pass to their northern breeding grounds in one leap-year would assure the multiplication of ducks for the years to follow. If two and two make four, as is the rule with the deer tribe, the thousands of deer permitted to escape in a leap-year—in one such particular region as the Adirondacks—would mean a very substantial addition of the stock for the three years of shooting. In short, if one close year in four means in the long run one-fourth less of game destruction, it means also a game increase vastly greater in proportion—as much greater, with respect to wildfowl, as the product of ten thousand pairs of ducks exceeds in number the parent thousands.

IV. One full close year means an actual close time of much longer duration. For instance, in North Dakota, where the big game season runs from Oct. 15 to Dec. 15, while the closed leap-year of 1900 would involve on the part of the hunter a deprivation beyond the present system of only two months, it would assure for the game a close term extending from Dec. 15, 1899, to Oct. 15, 1901, or a total of twenty-two months. Such a long period of immunity from pursuit and of freedom from alarm is, as stock-breeders well know, particularly favorable to prolific breeding.

In short, if there is anything in game protection, and any virtue in withholding for a time the hand of destruction, a system of closed leap-years would work advantageously for the preservation and conservation of our diminishing game supply. The system is one which has decided merits, and to it no serious objections present themselves. We believe that the plan is one well worthy of serious consideration, and of at least experimental adoption. If it is good in South Dakota it would have like beneficial results elsewhere. We believe that in it will be found a partial solution of the problem of game conservation.

DECORATION DAY.

THE great conflict that for four years rent the land is more than thirty years behind us. A generation has grown up which knows of it only by tradition. Men who are now in middle life were but children then; they remember the stirring events of the war but dimly, and then by one or two of its incidents. It is only the gray-haired who have clear recollection of the horrors of the battle and of the sorrows that followed it.

The feelings that engendered the war and that grew with its continuance have largely passed away. After the lapse of a generation the men who fought on either side feel for each other a wider charity. The devotion of each to the cause for which he fought may not be less to-day than it was then, but the mellowing touch of time has softened the old rancour, and with the years have come toleration and gentleness.

Even to those who lost their nearest and dearest, time has brought its solace. The keen, hard agony of bereavement is softened to a tender regret. To-day, the hero who fell on the battle-field is not less a hero than the day he died; but the rebellious bitterness of the first grief has given place to a solemn pride in the life that was sacrificed for the cause held so dear.

Thank God, the bitterness of the old war feeling has for the most part been forgotten. Those who fought on either side acknowledge the bravery and the worth of those whom they met in the heat of battle, and all are glad to unite in honoring their courage and their devotion. The warm spring sun, which brightens the grass beneath which lie the forms that wore the blue and the gray, and which on Memorial Day will silver the bared gray heads of the comrades who stand about the graves, shines to-day on a people united in their love for the common flag which represents our common country.

In the pages of FOREST AND STREAM the brave soldiers of North and South have for many years met on common ground. In these pages the true sportsmen of both sections long ago put aside all hostile feeling and became united by the bond of a common interest—their love for nature, for the gun, the rod and the yacht. Many war stories have been printed in these columns, but in them all we recall no word of unkindness toward either section.

This is as it should be. In the pure delights of field and stream the harsher and rougher aspect of life's struggle may for a time well be lost sight of. And as we return from our outings refreshed and strengthened to renew life's battle, let us bring back from the contemplation of nature's beauties also a broader kindliness and a spirit of charity and good will for our fellows that will make easier not only our own lives, but also those of others.

VENEZUELAN PLUME BIRDS.

PLUME bird hunters from this country have scoured the South American continent in search of birds. They have penetrated far to the interior, following up and down the great rivers, searching out the nesting places and developing a traffic valued at many thousands of dollars. The warfare upon the herons of Venezuela by the plume hunters has been so destructive that the government has recently taken action to insure the protection of the birds. The decree issued on this subject transmitted to the State Department by our consul at Maracaibo, provides in brief that the birds shall be taken on their rookeries only by hunters who have obtained for the purpose a license, to be granted by the president of the State. The Secretary of State is charged with keeping a record of all the places where the rookeries are situated, their boundaries and extent, etc., and the quality and quantity of plumes which each one produces, together with the names of the persons who select the plumes, and the method of hunting. No transaction or sale can be entered into with respect to the plumes without a "pass" to be granted by the authorities for the purpose, nor without this document can the plumes be exported. It is absolutely prohibited to hunt herons with fire-arms, and the decree also forbids "all practices which may tend to destroy these birds." The entire industry of taking plumes is thus placed under strict official regulations. The adoption of the new system probably is to be taken as an earnest that the native supply will be conserved, and that in Venezuela at least the plume bird source of revenue will be maintained. We do these things differently in our country; with us the regulation or restriction is postponed until there is nothing left to regulate.

The Sportsman Tourist.

ON THE EDGE OF THE GRAN CHACO.

TOLD BY WILLIAM KINGSBURY TO WILLIAM H. AVIS.

Chapter I.

While I greatly regret being compelled to acknowledge that I was neither a sharer in the adventures, nor a participator in the glorious hunting and fishing enjoyed by those of whom I will write in the following description of a trip into the wilds of the Argentine Republic, still I shall strive to the best of my ability to give as accurate an account of the trip as I would had I been along. Should I succeed, much of the credit must be attributed to the fact that one of the party, who caught most of the fish and shot more than his share of the game, sits at my elbow spinning the story of the trip while I am writing it down.

The full names of but two of the party will be used, and the third member will be known simply as H.

Mr. William Kingsbury, who dictates the story, was born in Massachusetts. He is a man near the size of Nessmuk, being only 5ft. 2in. in height, and weighing about 110lbs. As was Nessmuk, he is a natural born hunter and a close observer of nature and the habits of all kinds of game. He has killed many deer and moose in Maine, the State of his ancestors, where several relatives are now guides. Up to four months ago, however, he has spent the past eleven years of his life on the pampas and on the edge of the Gran Chaco of the Argentine Republic. He and his chum, James Galvin, would spend about six months or so on some estancia as herders. When they grew tired of remaining in one place, they would take what money they had earned, and mounting their horses go off on a hunting trip, perhaps to some remote part of the republic not before visited, but more generally to the country bordering on the Gran Chaco.

Mr. James Galvin, Kingsbury's chum, was a young Dublin Irishman. He had traveled extensively in all quarters of the world, and was one of the crew of the yacht Sunbeam when she made her famous trip around the world. Mr. Kingsbury speaks in the highest terms of Jim, and declares that some day in the future he will roam the pampas again with his chum.

The third member of the party, H., born in England, was a jolly, happy go-lucky, devil-may-care sort of fellow, and wherever he went, there mirth and jolity were sure to be found. He was wealthy, and a person of considerable influence.

With this brief introduction of the three persons who will figure the most conspicuously in this yarn, I will immediately commence the description of how three months were passed in hunting and fishing on the Salado's banks, as told to me by Mr. Kingsbury.

WILLIAM H. AVIS.

James Galvin, H. and I had decided to take a trip up the River Salado, and into the Gran Chaco in the Argentine Republic. It was our intention to hunt, fish, camp and enjoy ourselves in general. As H.'s business was very pressing, when the day set for our departure arrived, it was decided that Jim and I should go ahead and H. would meet us later on. Our outfit consisted of four horses, two apiece. Two of these horses were used to carry our camping equipment and the provisions, and the other two, which we had used on several ranches or estancias where we had been employed, were tough, mettlesome little animals, which we ourselves had broken to the saddle; these two of course we rode. Besides the horses, we had my good pointer bitch Chena. She was a grand dog both on martinets and partridges. Our armament consisted of one Winchester, model '75, one double-barreled Parker, for shooting partridges and martinets, or any other game for that matter; two Smith & Wesson revolvers, a couple of serviceable hunting knives, two lassoes, and plenty of ammunition.

When we started from Los Cardos the cholera was raging, and so we were not loath to get away. We regretted, however, to start without H. After leaving Los Cardos, we struck across the country in a northerly direction. We had figured that we would make about thirty miles, and reach the estancia of Las Limpias, where we would put up for the night. We passed many lagoons which were alive with ducks and other waterfowl, but did not bother them, as we knew we could shoot something at any time we needed game. At every few yards partridges would fly out of the long grass almost from under the horses' feet. These partridges (called in Spanish *perdice chico*, meaning small partridge) are very gamy. They fly, I think, even swifter than the ruffed grouse of the United States. On the ranches they are found in the wheat stubble during the daytime, and secrete themselves in the long grass of the pampas at night. They are never found in coveys, except when very young; then they seem to stay together as long as the mother bird will furnish them food. As soon as they are left to shift for themselves they scatter, and are never found together afterward excepting in pairs during the mating season. They are so swift and gamy as to afford excellent sport to the lover of wing shooting.

The Argentine mode of snaring these birds is this: A native of the country, mounted on horseback and armed with a long, reed-like pole, on the end of which is fastened a noose made of horsehair, finds a bird in the grass and immediately begins to circle around it, gradually narrowing in on it. The bird watches these movements as though hypnotized, and allows the hunter to approach so near that he is able to reach out cautiously with the pole and quietly drop the noose over the bird's head; then he gives a quick, dexterous yank and pulls the fluttering, live bird toward him. After unloosing the bird he puts it in a bag carried for the purpose and starts to hunt up another one. In this manner thousands of birds are taken and sold alive in the markets of the cities. The larger martinet is taken in the same manner; this bird, however, is more wary and so harder to capture.

We stopped at noon by the side of a small, fresh-water lagoon and had our dinner. Jim attended to the culinary end of the business while I looked after the horses. As a general thing Jim attended to the cooking, being more adept at that business than myself, while I always acted as hostler.

We traveled through a country that afternoon that would prove a veritable paradise for the small game shooter. Martinets, partridges and hares could be seen on every side of us. The hares were of the large English variety, having been introduced into the Argentine Republic from England. They have increased to such an extent as fairly to overrun the country and are considered an abominable nuisance.

It was about 5 o'clock when we reached the estancia, our objective point for the day. Las Limpias, owned by an Englishman named Traill, is a large, fine estancia with many hundreds of head of stock. After asking permission of the owner to camp on his place, which he readily granted, we built a fire and roasted some beef over the coals. Besides the beef we had hot camp biscuit and mate bombilla. This is a drink which is as universal in that country as tea and coffee in our own land. Unlike tea and coffee, however, mate bombilla is not drunk from a cup, but is sucked through a tube from a gourd. The end of the tube, which is placed in the gourd, is bulb-shaped and full of tiny holes; this is so that the tube will act as a strainer. The yerba, from which the mate is made, comes from Paraguay, and the beverage itself is really Paraguayan tea. The manner in which the beverage is made is this: first, some yerba and sugar are placed in the gourd, then hot water is poured into the gourd until it is filled; the tube or bombilla is then placed in the opening at the top of the gourd and the beverage is ready to be sucked through the tube. I consider it a far more pleasant drink than tea or coffee, and it certainly is healthier than either.

After supper we procured some alfalfa for the horses and lariated them out for the night. When all had been made secure, we spread our blankets on the ground and crawled under them. Then, while the moon cast her soft, silvery beams down upon us and the Southern Cross twinkled among a myriad of glowing worlds, we were lulled to dreamless sleep by the softest wandering zephyr as it sighed faintly over the wide pampas' bosom.

We were astir next morning before dawn. While Jim put the water on to boil for the mate and prepared breakfast, I gave each of the horses another large bundle of alfalfa, which I procured from a stack near by and from which we had been told to help ourselves.

As soon as breakfast was over we were in the saddle and away. We had not gone far before we noticed Chena acting in a strange manner; she was staggering along and seemed entirely played out. What ailed her was a puzzle to us. Finally we concluded that she must have grown footsore, but it surprised us to think that she should get into such a condition in but one day's travel. Of course she had traveled a great deal further than we had, for while we rode in a straight line she would race here and there and point birds in all directions. She had done the same thing, however, on many other occasions, therefore it puzzled us to see her grow lame so soon.

When we had left the estancia a mile and a half in our rear, we struck the railroad which runs from Rosario to Cordova. Soon after crossing the track we came to a long prairie, which was covered with thousands of head of cattle belonging to a large estancia which we could see in the distance. While crossing this prairie we passed now and then mounds of earth made by the biscatcha, an animal similar to our prairie dog, only larger.

After crossing the prairie we came to a road that crossed a wide cañada. The cañada was covered partly with water and partly with long grass. In the water and among the grass were thousands of ducks and other water fowl. We soon entered the small town of Ombu, but as it was only 10 o'clock decided to go on to the town of Santa Clara de Bueno Vista, which we reached by noontime. The dog had grown so bad and was in such a pitiful condition that we almost decided to stop for a few days. She had tried a great many times to get a drink of water that morning, but as the lagoons which we passed were all salt, it had been impossible for her to do so. Now she was so completely exhausted that, just before we arrived at the fonda, she ran to the peletta, or public place for watering horses, and jumped in. She refused to come out at my command, and lay lapping the water as though she had never tasted anything half so good. Her bath revived her to such an extent, however, that she finally came into the fonda where we were eating and quietly lay down at our feet.

We lounged around until 4 o'clock, then, as the horses had enjoyed a good rest and Chena seemed very much revived, we proceeded out of town, intending to camp wherever night should overtake us. Taking the road which led to San Martin, we followed its devious windings in and out among hundreds of tacaruses or ant hills. While passing through the ant hills Chena struck the trail of an animal. By her actions we knew she had found something other than a partridge. When she first struck the trail she seemed to forget all about her indisposition of the morning, and as the scent grew hotter she went faster. Finally she dashed into a tangled clump of bushes, and we heard her give three or four sharp yelps. Handing my bridle rein to Jim, I dismounted and hurried forward. When I reached the clump of bushes I found that the dog was engaged in a very interesting fight with an iguana. The battle seemed to be going all her way, when suddenly her opponent managed to secure a good hold on her upper lip, and Chena yelped in despair. Soon the iguana lost his hold, and Chena, maddened at the treatment she had received, rushed desperately at the animal, and seizing him by the back soon made an end of him. We tied the iguana on one of the spare horses and took it along with us; they are grand eating.

Soon after the iguana incident we came to a house where we had supper and stopped all night. Invariably I found the natives the most hospitable people I ever met. Whenever we approached a house to make inquiries or asked permission to camp on their premises, the time never was when we received uncivil answers or when we were refused permission to camp where we liked. Most generally, as in this case, we were invited to have mate and to partake of dinner, supper, breakfast or to stop all night.

We bade our new friend good-by and were on our way again before sunrise. A fine, bracing breeze was blowing, and as the sun rose into the heavens that were unflecked by the faintest sign of cloud, it sent its darts of gold aslant the tops of the undulating pampas grass in such a manner that all the earth seemed a vast, fluctuating ocean of brilliant colors. With shirt collars thrown wide open, we dashed over the wide pampas as free as the birds that wing the air. It was a glorious morning and a glorious ride, and we gloriously enjoyed both the morning and the ride.

We had gone but a short distance, when San Martin broke to our view. Not caring to pass through it, we swung our horses to the right, and it soon disappeared in the distance. Shortly after we came to a long, wide cañada, which was infested with the usual allowance of unsightly ant hills to be met in such places. We saw a number of foxes, and numerous small owls would fly up from the ground, and, hanging just over our heads, screech demoniacally in our very faces. After entertaining us in this manner they would fly away and alight on the ground in front of us, where they would stand as straight as soldiers on dress parade and stare at us with their big, round eyes in the most comical, solemn manner imaginable.

As we issued from the cañada we came to an excellent road which leads directly through the old colony of Hesperanza. Years ago there were no trees where this colony now is. At the present time, however, beautiful foliaged squares are to be met throughout the colony. These trees were planted by the Swiss Colonists who settled here years ago; they consist of poplars, willows, and the *pariso*, or tree of paradise. We traveled over this road a distance of fifteen miles, and the trees meeting overhead in many places formed a complete arch, whose cool shade was greatly appreciated.

About noon we came to a nice little brook, and as our horses were somewhat jaded, and as the dog appeared to be growing worse than ever, we decided to camp. When dinner was over and we had rested awhile I examined Chena's feet, and found them in a terrible condition. The skin had come away from the bottoms and hung in loose patches almost ready to drop off. After removing the loose skin I thoroughly greased the wounded feet with some beef tallow, then, tearing up an old undershirt, I bound them up in pieces of cloth, which I tightly sewed around her legs, so that she would not lose the wrappings. As Chena showed no signs of improvement next morning, we stopped until the afternoon; then, although it went straight against us to do so, and seemed almost like murder, we decided to leave all the food we had with the dog, and go on without her. That she never would have deserted us in such a manner will be abundantly proved further along in my story. We felt, however, that we could not stop there any longer, as we were very anxious to reach Soledad, where we were to meet H. We would have managed to carry her somehow on one of the horses, but when we tried to fasten her on she raised such a row that we had to give it up. Knowing that it was but fifteen miles ahead to the town of Hesperanza, and concluding that Chena would manage to get there, with heavy hearts we left her and continued on our way. We felt so mean that we never looked back after starting. It was sundown when we reached the town of Hesperanza. As we had no desire to stop there, we continued on until we reached the road that led through the pass across the river Salado.

While making our way slowly in the direction of the river, we met a tall, venerable-appearing old gentleman, whose long locks and beard were snow white. He saluted us, and when we had returned his salutation, asked us where we were going. We told him that we were going a short way the other side of the river to camp for the night. "Hadn't you better turn back and stop at my house to-night?" he asked, in Spanish. "You and your horses look dusty and tired, and I have plenty of feed to give the horses, and some supper and good beds for yourselves." As he looked thoroughly honest, we decided to go back with him.

The house we found to be in a thick monte about 100yds. back from the road. It was an old-fashioned place, built of mud and sun-dried bricks. It had a tin roof and was surrounded by peach, orange and sauce, or South American willow trees. As it was right in the season for them, the orange trees hung loaded with the golden globes. Back of the house, in the midst of a clump of willows, was the corral. Taken altogether, it was a very charming place.

When we had removed the packs and saddles from the horses, we gave them a thorough scrubbing; then watered and led them into the corral, where our host had placed some great heaps of alfalfa for them. While they had greatly enjoyed their bath, still when we turned them loose in the corral, instead of immediately commencing to eat, they walked sniffing around the corral, and when they had at last found the driest and dirtiest place they could, they immediately lay down and rolled. When they finally got upon their feet again we didn't know whether to laugh or swear. The time we had spent in washing them had been literally thrown away; they certainly were the dirtiest lot of horses we had ever seen.

When we returned from the corral to the house we found the family seated around a small fire under the trees. There was the old gentleman, his wife, two grown daughters and two boys ten or twelve years of age; they were engaged in sucking mate. After our host had introduced us to the other members of the family, we were invited to be seated.

The old gentleman and one of his sons surrendered their stools to us, and the boy brought two steer skulls, to which the horns were still attached. These he placed in such a manner that the horns and nose rested on the ground; the upturned neck served as a seat. It is a common thing to find these skull-stools among the Gauchos of the pampas.

The supper consisted of plenty of bread, eggs, and large quantities of good, fresh milk. While we were eating, our host entertained us with yarns of some of the Indian scrimmages he had been mixed up in. He also recited many exciting incidents connected with the history of the Colony of Hesperanza. He told of how the Indians used to harass the people by swooping down upon them in an unexpected moment, running off large herds of cattle, and even taking the women and children along with them.

The old man was greatly interested in my Winchester; he had never seen a rifle like it before. Not that repeaters are necessarily scarce in that country, but because they are seldom owned by the poorer classes. I loaded and unloaded the rifle several times for his amusement; he wondered greatly at its perfect working. When I had finished showing the gun to him I leaned it against a tree to one side, and we were all soon engaged in conversation.

As the younger members seemed to be more deeply interested in the rifle than in the conversation, Jim, to satisfy their curiosity, picked it up and gave them a special exhibition and lecture on its wonderful mechanism. When he had given them a thorough explanation, he set the gun back in the place where he had taken it from.

I have said before that the general hospitality of the Gauchos of the Pampas cannot be surpassed. While they, as a rule, are bad people to antagonize, being unforgiving in their hatred of their enemies and unrelenting in their efforts for revenge; still, toward those whom they consider friendly, they are exceedingly polite and generous. We found our new acquaintance, Don Francisco Montenegro, a natural born gentleman, kind and generous to a fault. It seemed then—and time has only strengthened the impression—that perfection of these generous qualities had not only been developed in the old Don, but had been transmitted, through him and his good wife, to their offspring for a happier, more contented family than they appeared to be I had never seen before. While on our return, six months later, we found, to our extreme regret, that the poor old Don had gone to that mysterious realm from which none ever returns—death had claimed old age as its own.

We sat conversing under the orange trees until the first hours of the morning. Sweet zephyrs whispered, song-like, through the drooping branches of the willow trees, or sighed low and soft among the orange leaves. The alternating glow of cigarillos revealed, now and then, the dim outlines of a man's or woman's face, for the dark-eyed senoritas smoked as well as the men. The soft-spoken Spanish words drifted like low music notes on the quiet air until conversation lagged and yawning took its place. The old Don, noticing in us a desire to retire, finally led the way into the house, carrying my Winchester along with him.

Owing to the conversation, I had not thought to examine the Winchester after Jim had finished showing it to the younger members of the family; therefore, when we had all entered the house, I came near jumping out of my boots as a blinding flash and deafening explosion filled the room. "*Car-r-r-ramba!*" gasped the old man, staggering backward with his hands to his head.

Gathering my scattered senses as quickly as possible, I sprang to the old Don's side, and after a hurried examination was relieved to find that he had suffered no injury. It was a narrow escape, however, as the bullet had sped by within 6in. of his head, and had made a hole through the roof as large as the muzzle of a 10-gauge shotgun. Jim, who was unused to a repeater, had unknowingly left a cartridge in the gun, and as the Don went to stand it in a corner of the room, the hammer came in contact with some article stored there, and the cartridge was exploded. I considered myself as much to blame as Jim, and it taught us both a lesson which we did not soon forget.

In spite of our retiring so late, we were astir bright and early the next morning. After we had attended to the horses and had had some *mate*, we ate breakfast with the family, and were ready to start.

I forgot to mention that Jim had with him a double-barreled muzzle-loader of a well-known English make. With the exception of a break in the stock, that could be easily mended, this was an excellent gun. Not caring to carry it any further, and knowing that it would be very acceptable to our host, Jim presented it to him. The old man's eyes sparkled with pleasure, and hurrying into the house he soon reappeared with a Remington carbine and 300 rounds of ammunition, which he insisted Jim should take. Although Jim protested strongly, the old man was so persistent in his urging that Jim finally accepted. It was with real regret that we shook hands with the members of this family and started on our way.

[TO BE CONTINUED.]

"THET BOTTLE."

AN ox team is a curious sight in our village, situated, as we are, in the rich cotton lands of the Tennessee valley; and the appearance of one upon our streets vies in interest for children and those of idle turn with the peripatetic bears and players that sometimes beguile them of their pennies and applause. We know that ox teams are common in the foothills of the mountains fifty miles away; but we never see in harness anything less lordly than the mule, except at rare intervals, when some dweller of the hills, painfully and slow, a four days' journey to and fro, comes down to barter wool or timber for simple luxuries or necessary bread—a thing that seldom happens more than once or twice a year.

A few days ago, about the middle of an April afternoon of most oppressive heat, I became aware of a crowd collecting before my office door, and on glancing out to ascertain the cause beheld a wagon and a "yoke of steers" surrounded by the village rabble, resting under the shade of a beneficent oak. The driver, a grizzled giant, red of face and fast approaching age, was seated on his load of boards, and while he mopped the perspiration from his brow descanted volubly upon the decadence of the times, for the benefit of all who cared to listen, and perhaps to relieve the disappointment that he felt at finding no one who seemed to recognize the superior quality of his wares. I listened curiously:

"Why mens, I tell yer, this uster to be God's kentry when I 'us er boy; but 'tai't so now. I've fotch down es fine er lot er bo'ds es ever was riv' on Sugar Creek, an' these dod-burned fellers won't even look at 'em; an' thur hain't narry drap er licker in ther dum town. Fust time I've bin here in thirty year, an' ef I gits back home ergin, hits ther last dad-blame time yer ever see Ole Lem."

I could but feel sorry for the old fellow, and being anxious to study him at close quarters, I called him into the office.

"Yer wanter buy some bo'ds, mister?"

"No, but I wish to talk with you. Come in and sit down. You have had a long trip and I know you are tired. While you rest tell me something of your home, and the game in the mountains behind you," I replied, and while my visitor was filling his pipe I dispatched upon a secret mission of comfort a boy, who soon returned with a bowl of crushed ice, some sugar and a decanter of "heartsease." How the old fellow's eyes sparkled at the sight! And I shall never forget the expression of gratified surprise that came over his face.

"No, I don't wanter spile good liker 'ith sweet'nin'," he said, declining the sugar. "Er leetle ice an' er heep er whisky is my dram." I passed him the decanter. He regarded it critically for a little; his face grew grave, and then he asked, tremulously: "Boy, what mought yo' name be?"

I told him, unsuspicious of the consequences.

"Dod-burn ther leetle rooster!" he yelled, jumping to his feet and throwing his glass into the corner in his excitement, "I 'lowed I kno'd thet bottle. I've seed hit er hund'ed times—drunk out er hit 'fo' yer was born. I'me ole Lem Green—yo' daddy 'us ther best friend I had in ther worl', an' he died befo' Richmon' in my arms. Why, dod-burn ther leetle rooster!" and with this he grabbed me in a bear hug that was suffocating. I was powerless to extricate myself and had to submit until his longing was satisfied, and then he explained:

"I've thought er yer a thousan' times. Yo' ma went home ter her folks arter the war an' I 'lowed you never cum back er I'd er looked yer up long ergo. Yo' daddy wasn't much mo' 'n er boy when I fust kno'd 'im. He 'us er mighty man fur houn's an' uster cum up in ther hills ter run deer. Fust time I seen him I 'us out in ther woods one day huntin' I heard some houn's runin' an' purty soon er big buck come er splittin' by me an' I jes dropped 'im in 'is tracks. 'Bout er minit the dorgs 'us thar, an' whilst I 'us figh'in' 'em off yo' daddy rode up. He wus mad clean th'ough when he see'd ther buck wus shot an' asked:

" 'Did you shoot thet buck befo' my houn's?'

" 'Yes, suh,' I said, 'an' er mighty fine shot hit wus.'

" 'Wal,' said he, 'no man kin shoot deer befo' my dorgs. You got er gun? 'Fend yo'se'f; I'me goin' ter shoot you.' Well, suh, he dun all 'is talkin' so quiet thet I didn' kno' he 'us mad 'til' then, but I look'd up at 'im an' seed he sho meant hit.'

" 'All right mister,' I said, 'gimme time ter load my gun.'

" 'Go er head an' lode 'er,' said he, 'whilst I hitch my horse.' I rammed in the load an' wus just ready ter tell 'im ter step off ther groun', when I seed I'd lost my flint. I told 'im 'bout hit, an' asked 'm to loan me one. His gun 'us new-fash'on an' shot caps, so he didn't have er flint; but he cum an' holped me hunt in ther leaves fur mine. We didn't find hit, an' at last he asked me:

" 'Hain't yer got er knife; we kin fight 'ith knives?' I felt in all my pockets, but I had left my knife at home; so I offer'd ter fight 'im fis' an' skull. He said he hain't never fit thet way, but 'fo' I shu'd git erway from 'im he'd try me one time.

"Wall, suh, we pulled off our coats an' went at hit. I wus bull o' ther woods in thet kentry in them days, an' 'lowed I had er easy job ter whup 'im, an' hit tuck me 'bout er hour ter find out I 'us wrong. We fit an' fit, an' then we'd clinch an' roll over an' claw; an' then we'd stop an' res', an' go at hit ergin. By 'n' by we 'us mighty nigh played out, an' 'us jes' lyin' thur hol'in' on ter each other, waitin' fur win', when thur idee struck me we 'us doin' er po' bus'ness enny how; so I sed:

" 'Cap'in, I'se durn sorry I shot yer deer, an' I reckin you is, too.'

" 'Why in blazes didn' yer say thet at fust an' not hev enny racket erbout hit? Who is yer, enny how?' he said.

"I tole 'im; an' then we shuck han's; an' es hit wus get'in' 'long in thur shank er the evenin' I tuck 'im home with me to spend thur night.

"My ole dad wus standin' at thur gate when we rode up. We 'us thet tore up an' bloody thet he didn' even know me 'til I spoke up:

" 'Dad, here's thur fust man I ever locked horns with thet did'n' bawl; an' I've fotch' 'im home ter patch up er bit.'

" 'Did he whup yer, Lemuel?' the ole man asked kinder slow.

" 'No, suh,' yo' daddy spoke up quick, 'an' ther' haint a man this side o' Jericho thet's ever gwine ter whup 'im; an' ef ther' ar' he's got ter whup me nex'.

"Ther ole man wus tickled all over, but he just said: 'Light, stranger, an' cum in; thet house wus mine, hit's yourn now long es yer want hit.'

"Well, suh, frum thet day yo' daddy 'us my best fr'en', an' thur wa'n't any fall plum 'til thur war broke out thet he didn' cum up ter ther hills an' spen' er mont' 'ith me, er any summer thet I didn' cum down an' spen' er mont' 'ith 'im; an' thet's how I knows thet bottle.

"When ther South went out er ther Union the fust I kno'd er hit er nigger cum ridin' up ter my house one day, leadin' ther fines' horse I ever see, an' he fotch a letter frum yo' daddy. I wa'n't much han' at readin, but I kinder made hit out thet he'd bin 'pinted colonel an' 'us gwine ter the front, an' hed sent ther horse fur me ter ride, an' I mus' go 'long 'ith 'im.

"We didn' have no niggers, an' my ole daddy hed follered er the flag 'ith Ginral Scott the time he whupt ther greasers, an' I hed sumhow got ter love hit frum ther way he hed fotch me up. So me an' him sat thar thet night, an' talked ther letter over until plum daylight; an' then I woke thet nigger ter saddle up ther horses whilst I tole ther folks good-by, for thar wa'nt no use takin', I was boun' ter go 'ith Billy, fur I loved 'im best of all.

" 'Lem I've got yer 'lected cap'in, an' yo' cump'ny's waitin' fur yer,' was the fust thing Billy sed ter me when I rode up ter ther camp.

" 'I hain't no soldier, Billy,' I told him, 'an' I hain't er goin' ter fight ther ole flag. She'll float furever, an' furever, an' furever, 'fo' I pull er trigger on 'er; but I'm gwine erlong 'ith you, an' ther day yer miss me frum yo' side yer'll fin' me somewhar when ther battle's over, an' ef yer's got ther time ter spare, sen' me home ter dad.'

"He beg'd until he seed the talkin' wa'n't no use; I wa'n't er gwine ter shoot agin the stars an' stripes; but I slep' in 'is tent, an' stood by 'im in most er hundred fights; an' when they shot 'im down at Richmon' I fotch 'im home."

When old man Lem started back to the hills next morning "thet bottle" went with him. The wagon was empty and the bottle was full.

ALABAMA, May, 1897.

Natural History.

SOME INTELLIGENT BRUTES.

Editor Forest and Stream:

After reading Mr. Thompson's excellent articles, also Mount Tom's and Aztec's humorous and highly entertaining contributions on this subject, I cannot refrain from giving some personal experiences. I do not mean any disparagement to the human race, when I assert most emphatically, that in my opinion some horses and dogs have more reasoning power than some human beings. I believe that the intellects of animals are bright and dull just as those of men are. You often hear the expression from stock traders: "That horse has lots of sense." Did you ever stop to think what was meant by that expression? If you have ever dealt in horses, or had any practical experience with them, you know that this is a fact.

One example that came forcibly to my attention was in my own family. My father-in-law owned a fine trotting-horse named Oscar. The horse was a regular pet, and would follow my wife's mother almost into the house for an apple or a lump of sugar. When that horse was hooked up for a drive, if my wife's father had hold of the reins he could hardly hold him in. Oscar would chafe under the bit and actually pull the entire drag by the lines. In passing another conveyance he would make a plunge, just as if he was getting off in a regular race. But let my wife's mother drive, with no one in the drag but her and the children, and the horse would jog along like an old cow, and had actually to be urged with the whip to make him go fast enough. Now if that was not reason I would like to know what you could call it. The horse thought he was doing the right thing in the right place, and he was. The horse was not afraid of his master, for he had never received a lick or a harsh word in his life, and would nicker every time he saw him.

When I was a small boy, and during the latter years of my adored father's stay on this earth, we owned a very handsome and unusually large Newfoundland dog. The dog had been sent to father from New York by one of his friends. I well remember the day the little round black ball was taken out of a box at the express office. We boys, three of us, and the dog grew up companions, and would fight for each other at the drop of a hat. It was dangerous for any grown person or large boy to make one of us cry; as the dog would try to tear that person to pieces. We used to have lots of fun out of the dog at the swimming hole. A large deep creek ran through the farm, and the dog always accompanied us on all of our excursions. We would go to the swimming hole, which was at least 100yds. across and 10ft. deep. We could all swim like "didappers," but we loved to tease the dog; so one of us would swim out in the middle of the hole, throw up his hands, yell for help, and splash as if he was drowning. In the dog would go and bring the boy out. Of course the boy would hold on to the dog's long hair, and the dog would swim out with him. Then we would pet the dog, and make much ado over him, and old Charlie thought he had actually saved one of us.

It was two miles to the village and post-office. Just as regular as the day arrived, my father would call Charlie, give him his basket and show him a paper. Charlie would trot off, go to town, and make straight for the meat shop. The butcher had a standing order for the day's meat, and would wrap it up and put it in Charlie's basket, then the butcher always cut another piece and gave it to the dog. Then Charlie would trot around to the post-office, and the postmaster would tie up our mail and papers in a package and deposit them in the basket. Then Charlie would come as straight home as his legs could carry him, and woe to the dog who dared to interfere.

To this day it makes me shiver to think of how that dog acted the night my father passed away from earthly cares. How that dog knew father was dying can never be known; but he certainly knew it. He kept up such a pitiful howl out in the barn where he had been shut up in the corn-crib, that we took him a quarter of a mile from the house and tied him to a tree. He gnawed the rope in two and beat us back to the house, and was scratching at father's door when we arrived. Father heard him, and asked that he be let in, which was done. Charlie crouched at the side of the bed and licked father's hand, and wept as bitterly as any member of that family. His whine was not the whine of pleasure, but of heartrending grief, and the dog showed it for days afterward; as he moped about, and absolutely refused food or comfort. If Charlie had been loved during father's life-time, he was worshiped now, and there was not a dry eye in that family the day we dug a grave and buried the old dog in the orchard.

I had a very precocious setter once, named Bijou. I raised her from a puppy, and called her by this name because I considered her a regular jewel. She was a fine dog after birds, and the only dog I ever saw that would climb a tree. Don't laugh now. I do not mean a perpendicular tree, with no limbs within ten feet of the ground. But any leaning tree or fruit tree with limbs within four feet of the ground she would go up like a cat. She would hook her fore-paws over the limb and pull herself up, and get the bird or ball, or whatever you had put up there that she was searching for.

My wife's mother once owned a black and tan terrier named Gyp. It was desired to have Gyp's ears pointed and his tail cut off; so Mrs. Durando had the stable boy, Jim, do the work, and to the day of that dog's death he could never stand the sight of a negro. Jim, the mutilator, was a negro, and Gyp's bristles would go up if he smelled a negro, to say nothing of seeing one. We have had lots of fun by having the colored cook or house girl come up behind Gyp while he was lying asleep on the rug. The moment the dog got a whiff of the person of color he would almost have a fit, he would get so mad.

A friend of mine, Mr. William Cooke, of Chattanooga, owns a very fine pointer named Mack. Now when you go out after quail with Mack, he usually tells you how much he appreciates his being taken along, and some dogs can almost talk, to their masters especially. Why, I think that almost any man can see a dog laugh. They express their hilarity in the expression of the eyes, in the peculiar jerking in and out of the tongue, and in every wag of the tail. Well, Mack will sit beside the driver up on the seat of a buggy or wagon for miles, and never move until his master bids him go. If we are traveling through promising-looking country, you can see Mack raise his nose, look out over a field, then look his master just as straight in the eyes as he can, and ask him if he don't think we could find birds in there; but never offers to jump out or go until bidden. I have remarked on this trait of the dog a dozen times in the many pleasant outings with my friend Cook. When we are out of the conveyance, and Mack is told to "go and find them," the first thing he does, after jumping into a field, is to make a complete circle of the field close to the fence, on the inside of the field. Do you know what the dog is up to? If you do not I will tell you. He does that first, to see whether any birds have run into or out of the field lately. If he finds no scent going in or out, then he quarters the field thoroughly, and hunts it out to see if any birds are in there at all or not. Now if this is not reason what do you call it? Training would not make a dog do that trick.

Again, how can a dog dream if he does not think and reason? I owned an old deerhound named Rock some years ago, and, to use common parlance, "it would make a dog laugh" to hear old Rock have the nightmare after he had come in from a chase after a deer, and got his old ribs filled out full of good scraps.

The old fellow would lie on his back with his feet pawing up in the air, and he would run the whole race over again in his sleep. I have sat by the camp-fire and laughed at that old dog until my sides ached and the tears ran out of my eyes.

One more incident and I will close. This black and tan terrier that belonged to my wife's people got old and very cross. One day the dog snapped at some one and lay down again in front of the fire and we all thought he was asleep. Mrs. Durando spoke to her husband and said: "Ed, I wish you would take Gyp down on the river bank this evening and shoot him, I am afraid he will bite some of the children and they will have hydrophobia." Immediately the dog got up, marched out of the room and we did not lay eyes on him for a week. Finally we found him down at my brother-in-law's store hiding under a desk. Now tell me if that dog did not understand what Mrs. Durando said about him, why should he have acted in that way?

I once spent some months on a cotton plantation down in

Mississippi. Fastened to the top of the gin house was a large bell. It had been the custom on this plantation, even before the war and up to the present time, for all the hands to go to work and quit work by the sound of this bell. The bell rang at 6 A. M., 12 M., 1 P. M. and 6 P. M. There was on the plantation a mule, who had constituted in himself a self-ordained and independent "labor organization." This cuss of a mule would not go to work until the bell rang. At 12 o'clock he would quit work at the first stroke of the bell, would not go to work again until the bell rang, and would quit in the afternoon the moment the bell sounded. This may seem strange, but it is true as gospel. The mule would not tighten his traces after the bell sounded at noon. No matter if he was in the middle of a cotton row in the field or pulling in a wagon, he struck the moment the bell sounded. All the whipping and abuse you could heap upon him only made him more determined. He would stand and bray and kick at you as fast as his hindfeet could fly, and finally wind up by kicking himself out of harness.

One day his regular driver was sick, and the owner of the plantation put old Uncle Sam, a new hand, who had only gone to work on this place the day before, to drive this team and haul seed cotton out of the field to the gin house. At noon the bell rang and Pete struck for grub, as usual halfway between the field and gin house. Uncle Sam wanted to come on to the gin house with the load before he unharnessed for dinner, but Pete differed with him on this point. The old negro and the mule took up the whole noon hour trying to see which would have his way, and finally the mule came out victor. Uncle Sam had to give in, and unharnessed out in the field and came leading the mule to the house. The owner of the place and myself were watching the whole show and were enjoying it hugely. Uncle Sam led the mule up to where we stood in the barnyard, and said: "Mars Bob, dis 'ere rectified mule are dun struck fer higher wages." The owner said: "Sam, that mule has been striking for higher wages for the last twenty years, but he has never got an advance yet." ALFRED B. WINGFIELD.

Editor Forest and Stream:

In your issue of May 8 I notice a short article on the sagacity of a tortoise-shell cat, by Von W. I wonder if all wise cats are of the tortoise-shell variety. For several years one of my nearest neighbors owned a tortoise-shell cat, blind in one eye, that seemed to possess reasoning powers. If she didn't, it was a close shave.

These people lived in a large, old-fashioned brick house, the front door of which was adorned with an old-style door bell that turned with a crank. This crank or handle worked very easily, and after ringing the bell always dropped down and hung from the bottom.

When or how the shrewd feline first learned to ring the door bell no one knows, but it developed that when pussy was outside and wanted to come in she simply went around to the front door and rang the bell, as any sensible cat should, instead of yowling and mewing for half an hour and disturbing the family.

The first discovery my neighbors made of the cat's accomplishment was one day when one of them answered a ring, when, upon her opening the door to welcome the expected visitor, in walked the old cat, looking as wise and important as a judge. At first they supposed that some mischievous urchin had rung the bell and scampered away, and that the old cat had taken advantage of the open door to slip in. In a short time the same thing occurred again; in fact, it became quite frequent. They were greatly mystified, as it never occurred to them that the cat could ring the door bell. Finally, one of the members hid in a convenient place and watched. Patience was soon rewarded. Pussy came trotting up on the porch and walked under the door bell. After looking around a moment, apparently to see that her actions were not observed, she crouched and sprang straight up to the bell handle, at the same time giving it a hard side slap with her paw. The concussion whirled the handle around and rang the bell. In a few moments one of the family opened the door and puss walked in.

At first she did it evidently to gain admission in cold weather. Afterward it became a pastime Of course, the folks were obliged to answer the bell, as frequently they found an actual visitor. So the old cat always kept them guessing Perhaps they would answer the bell a dozen times to find puss the only visitor. This, of course, grew monotonous, and at the next ring of the bell some member of the family would go to the door wearing an ominous frown and loaded with suppressed wrath and a mop, only to find a lady caller.

In the course of time, among the numerous progeny this old cat brought into the world was a tortoise-shell kitten which the family took a fancy to and decided to raise, instead of consigning to a watery grave. When the kitten was well grown the old cat used to take it around to the front door and amuse herself by giving it lessons in ringing the bell, and in a short time the younger cat could ring the bell as well as its wise old mamma.

Another accomplishment the old cat acquired was her manner of eating raw oysters, of which she was very fond. She was taught to take an oyster from the dish with her paw and carry it to her mouth as decorously as a person would with a fork. The name of the family was Cooley, and this city was their home for many years.

FRANK E. KELLOGG.

SAVANNAH, Illinois.

Mr. Kellogg also sends some "Lines to Grandma Cooley's Cat," written by him for the local paper on the occasion of the intelligent creature's demise. We quote in part:

Only a cat with a tortoise shell,
Minus an eye and dumb as well,
Dead as the nail in the old-time door,
Her life-work done and her troubles o'er.
A humble mission was hers to fill,
This old she-cat that lived on the hill—
To eat, drink, sleep and catch the rats
(And never forgetting to raise more cats),
And other things she did as well,
Among them was ringing the front-door bell
And eating oysters with either paw,
As cute a thing as you ever saw.
A humble mission was hers, 'tis true,
Yet who shall say that her feline mew
Was not as important as the clack of men,
Who utter wise things with tongue or pen?
Everything here on this old, round earth
Has a niche to fill from the date of its birth;
The great "First Cause" has some hidden plan,
And a cat may help as much as a man—
Possibly more, for aught we know,
For we amount to but little here below,
And none may know till we reach the shore
Whether the end is a wall—or a door.

The Philadelphia Zoo.

THE report of the Board of Directors of the Philadelphia Zoölogical Society was made at its annual meeting held in Philadelphia last month.

From the financial standpoint the year has not been a successful one for the Society, the hard times and the unproductiveness of all forms of industry during this period having greatly affected the attendance at the Garden, so that a diminution of 30,000 is seen for the year. This, of course, means a corresponding decrease in receipts of gate money. The Board has made every effort to meet the reduced income, and so successfully that the present cost of operating the Garden is no greater than it was twenty years ago, although several buildings and many outdoor inclosures have been added, and the cultivated area of the ground much increased.

The collections during the year have been enlarged by 166 mammals, 168 birds, and 294 reptiles and batrachians, a total of 628 animals. Among the interesting additions are a raccoon dog, a sable antelope, several other antelopes from Africa, a wild sheep from the Himalaya Mountains, two toed sloth and a female orang.

The birds perhaps of most interest are a pair of young California vultures (*Otogyps californicus*). This vulture, which is almost as large as the condor, is limited in its range to a part of the Pacific coast, and is believed to be near extinction. Probably not more than two or three living examples of this species have ever been placed on exhibition, and it is known that there are at present no other specimens in captivity. The two at Philadelphia were obtained through the efforts of the late Capt. Charles Bendire, of the National Museum.

It is interesting to note that the Philadelphia Garden has received four beavers by exchange from the National Zoölogical Park. It is also interesting to observe that the Philadelphia Garden now has sixteen American buffalo, of which nine are females, all of which except two were bred in the Garden. Mr. Brown, very wisely, is endeavoring to infuse new blood into this herd by exchange, and last year made such an exchange with Mr. John A. Starin, of Glen Island, New York, for a four-year old bull. We feel certain that so long as the Philadelphia collections are under the charge of Mr. Brown every possible effort which care, knowledge and intelligence can insure will be expended for the collections.

The Woodcock's Night Song.

Editor Forest and Stream:

A communication from Mr. William Holliday, in your last issue, comes home to me with much force. I should be pleased to take him by the hand, for he seems to be a man after my own heart. He writes of the song of the woodcock at night, in mating time.

I well remember an experience of my boyhood days in my New Hampshire home. I was shooting muskrats at twilight in the spring of the year, and was stationed on the bank of a river near a broad alder run, and I should say that on the space of about two acres of ground, there were four or five woodcock, and as they were continually ascending and descending in their spiral flights, each gave his sharp clean-cut whistle, together with the peculiar, "spate, spate, spate."

So charmed was I, that it was nearly midnight before I could break away from the fascinating play. I never knew before that woodcock possessed this singular habit, nor did my father, who was an expert bird shooter, and quite a naturalist in his way. Taking him to the place the next evening, he was as much surprised and delighted as was I, at my discovery. I also agree with your correspondent in thinking the whistle produced by the wings.

This incident happened about forty years ago, but it is as distinct in my memory to-day, as though it occurred but yesterday; the freshness of the springtime, the crisp, bracing air of the evening, together with the strange, weird voices of the night, left an impression not easily effaced.

CHAS. WHEELER.

Northern Wildfowl in Florida Waters.

JACKSONVILLE, Fla.—In the winter of 1894–5 I shot two female surf ducks (*Pelionetta perspicillata*) in Nassau Sound, Fla., and last winter I shot two young red throated divers, or loons (*Colymbus septentrionalis*) in Ft George River, Fla. A fine male full-plumaged surf duck was shot last winter in the St. John's River, near Jacksonville, and the skin is now mounted and on exhibition in the window of a store on Bay street. In 1896 I saw a beautiful live specimen of the great northern diver, or loon (*Colymbus torquatus*), in Jacksonville that was caught by one of the coast pilots at Caryford's reef on the East Coast of Florida, near Miami. The same year I saw in Jacksonville two trumpeter swans (*Cygnus bucinator*) that were shot at Deigo, on the sea coast near Jacksonville, and sent to the Jacksonville market. They were very poor, and there were only two of them in the flock. The gunner that shot them had never seen any before, and he called them geese, as did also the marketman. The great northern diver also had never been seen by any of the local pilots or boatmen before. No one knew what it was.

It would seem that these Northern species are extending their range. J. FRAS. LE BARON, C. E.

Bird Specimens at Rouse's Point.

ROUSE'S POINT, N. Y., May 18.—On Saturday, May 15, Alex. Noel, a Canadian fisherman, shot and killed a splendid specimen of the great egret heron in the marsh just north of Fort Montgomery. He presented the bird to the Y. M. C. A. rooms, and it now ornaments one of the windows, adding one more bird to the already large collection that has been made by Mr. Glazier during his work here as secretary of the Y. M. C. A., some of them being very rare. Mr. Glazier is a taxidermist and has used his art to advantage in ornamenting the rooms here. Parties interested in the study of birds will find themselves well repaid for the time spent in visiting Mr. Glazier and his collection. The rooms are but a step from the D. & H. depot at this place.

W. MCCOMB, JR.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Game Bag and Gun.

THEN AND NOW.

PORTLAND, Ind.—*Editor Forest and Stream:* A few weeks ago I had a call from my friend George Hedrick, of Ohio, with whom I have camped several seasons in the Lake Superior region. He was carrying a cane made from an oak tree cut by General Anthony Wayne's soldiers in the summer of 1794, during his 90-day campaign against the Indians of the Northwest. General Wayne, after marching to the scene of S. Clair's defeat and erecting Fort Recovery, took a northeasterly direction, and in crossing a boggy stream called Beaver felled trees into the stream. These bogs became buried in muck and were recently removed by a dredge boat from a depth of 4ft., in a perfect state of preservation. An enterprising mechanic hauled one of these oak logs home and worked it into canes. As I handled that cane, mounted with the foot of a small deer taken near Republic, in the Michigan Northern Peninsula, I reflected that my father's family settled in 1828 on that historic spot where General St. Clair was ambushed, and that from the plains of eastern Ohio to the prairies of western Indiana there was a continuous growth of magnificent oak forest interspersed with walnut, ash, hickory, elm, sycamore, sugar, beech and other woods; and that this large tract of giant trees, towering so high as to test the marksman's skill in picking a squirrel from a topmost bough, was now no more. Therefore my text.

As late as 1872 there were some deer near the head of the Wabash River, between Fort Recovery and Greenville, O., old Fort Washington, and I hunted there with a long-barreled muzzleloading rifle a part of four days in October of that year. I saw eight deer, which was more than I have seen on some hunts I have taken in Wisconsin. They were mostly lying among the whitetop that grew thick in places where the forest was open, and grew tall enough to conceal a deer standing. One would arise from its bed, spread its tail like a peafowl, and with a few mighty bounds high above the tops of the weeds disappear around a convenient thicket. I might have hit some of them with clubs, but I could not get a bead on one with that fishpole of a rifle. Finally I caught one walking and doubled him up, and I was mighty proud over my first deer.

I had learned some things on a former trip, on which occasion I saw a deer standing broadside directly in front of me and about 150yds. distant. When I saw this deer I was so close to a tree that I could have touched the trunk with my gun. I instantly stepped sideways and behind the tree impelled by a desire to shoot with a rest, a thing that had become a habit from shooting a gun before I had the strength to hold it off-hand. How foolish I felt when I pushed my gun past the tree and looked for my deer to find that it had disappeared.

Another day near 10 A. M., as I was going due west and the sun was shining brightly, I saw a small deer standing about 100yds. distant in front of me, and looking northward. As I drew up my rifle, I saw a twig seemingly the size of a rye straw just back of the deer's foreleg, and so near the deer it looked like a safe center to shoot at. I drew on this twig and fired The deer gave a bound and disappeared. Keeping the twig in sight, I approached the spot; but as I drew near the twig grew in size very rapidly, and I found it to be a tough, knotty swamp ash fully 1in. in diameter. I had seen only the shaded portion, or about one-fourth of the bush. My ball had struck to the left of the center, gone half way through the bush, and then deflected to the left. I vowed then and there to shoot shy of twigs thereafter.

At this date the oak trees were being split into staves, and hauled to the railroad stations. Prior to that the finest trees were cut and split into rails, clapboards, lath and fencing posts for yard and garden fences. Then came men who paid from $10 to $15 for the best trees on the stump. These were split into 5ft. stave blocks, or squared their full length into ship timber. Now very little remains, and that is going like a June frost.

I handed the cane back to my friend, but I could not banish the recollections of my childhood. After he went away, I became restless. I have a sister living on the old home, and I concluded she wanted to see me. There were surely some rabbits on the old farm, and I could not abuse my mind of the thought that it would do me good to wander over the fields again. Fortunately a morning came with a light tracking snow, and 8 o'clock found me tying Dolly to the fence some two miles from town, for here were rabbit tracks. Bunny was at home in the fence corner, snugly tucked away beneath a leaning rail covered with weeds; but my little Smith & Wesson six-shooter brought him out and into the buggy, and Dolly and I trotted on. Two miles further up the gravel road were more rabbit tracks. This was easy, hunting rabbits in a buggy, with a sensible mare like Dolly. And now which way did this one go last? On one side of the road is a meadow; on the other a cornfield, with a brushy pond, and a fence separating this field from a meadow. I tie Dolly, climb the fence, and make a circle in the meadow first named. My rabbit has gone into the cornfield and returned, as the tracks indicate, though snow lies lightly on the timothy, and tracking here is difficult. I carried a double-barreled breechloading shotgun and shells loaded with No. 7s. The tricky rabbit led me in a circle, and at the most convenient moment bounded off for the fence at the highway, and was out of reach by the time I had snapped my first and emptied my second barrel at him. From the time of leaving home I had reproached myself for bringing a shotgun, but now I vowed to kill that rabbit with shotgun. So into the cornfield I went, but was surprised to find more rabbit tracks. The pond was alive with rabbits, to judge from the tracks. But I remembered what the old Indian said, "One deer make heep many tracks," and I did not expect to find a rabbit in every tuft of grass. I did not find any until I got over the fence and into the meadow, where I saw one sitting, and made its eye a target for my little six-shooter. But I knew it was not the one that ran away from me, and therefore circled further in my efforts to locate that one. Presently I saw its ears further out in the meadow. I recognized it by its scared look and took it with the shotgun.

Then Dolly and I continued our journey. Presently w came to the Salamonie River, and yonder to my left wa once a sawmill run by water power. I hauled from tha mill the finest walnut lumber I ever saw, great boards 40in wide. They were ripped by hand into casings for our house The millrace was fed from a great pond among the trees

We called it the duck pond, from the flight of wild ducks that visited it. My father and some friends seined it once about thirty eight years ago, and caught, in addition to several baskets of suckers, cat and sunfish, eleven pike that touched the ground when I took on my shoulder one end of the pole on which they were strung with a rope while a man carried the other end on his shoulder. The place is a cornfield now.

And now I come to the little hill where my grandfather, in 1830, made his last clearing; but I must not tarry here, for yonder is the crossroads, near which was the round log cabin with its puncheon floor, split from ash trees, and mud and stick chimney. One room, one door, one small window, and a great big, long-eared, silky-haired hound, on whose back I would climb and ride around in the yard. There were trees, too; great big trees that swayed to and fro, and whipped each other while the storm lasted. There is grass with weeds there now. And here a rabbit has been playing along the fence. What has possessed him to come here, where there is absolutely no shelter? I will look him up after dinner. Dinner comes at early noon here. We of this section eat three square meals each day. And I drive in just as I did twenty-five years ago when I brought home my first deer. It's a bluff, I have only rabbits now. "What was that you said, John? [John is my sister's husband] You were expecting me?" Now why should they be looking for me, and what led me to think they were?

After greetings and caring for Dolly's comfort I mentioned the rabbit tracks, and wondered if I had time to go and look for that rabbit before dinner. My sister said that she could wait dinner. She would ring the bell when she had dinner ready. Ring the bell? Oh, yes, I had forgotten the bell, but now I remembered it. I had heard it when that sister was not as old as she is now; heard it when there were others to gather with us around that board, and as I mechanically took my gun and hunting coat from the buggy I kept back that word that wa uppermost—that name our baby lips learn first to speak. John said he would go along, and went in and got his .32 40 Marlin. We passed through the field where once we made a dismal failure of riding two bucking mules, walked over the spot where I first breathed the breath of life and into that part I can remember as woods Here were rabbit tracks. Bunny had been having a picnic Some splendid Polen-Chinas came grunting around me. I remembered that once we had what we called razor backs and elm-pelers, only ghosts of what hogs are now. And I remembered that here I would in childood's days cut down bushes and hide beneath the leafy boughs, and climb saplings, and eat black haws, and gather wild plums; and later, when left to run the farm that a team that I was breaking ground with became frightened at the snapping of a rail as I got down off the fence after giving the horses and myself a breathing spell and dashed off as if possessed of Satan, the plow flying high in the air, then striking the ground, only to rebound far above the horses backs—"Look out"! It was John's voice and yonder went a rabbit for the fence just as fast as a rabbit can run. And little wonder, for John would have stepped on him, in fact his foot was over the rabbit. He was clearly out of range, but I threw a load of shot at him and then wished for my Winchester. He ran up the road and across into a weedy field. I followed and sat on the fence and watched his maneuvers. He thought he was hidden in the weeds, poor fellow, but the shelter was not sufficient and I could see all his movements. He back tracked, and doubled, and skipped about, every now and then sitting upright to look for me. No doubt he thought he was giving me a great game and could laugh at me from some safe retreat while I bothered my head over his multiplication table.

After dinner we started for the old covers. The first field—how the bluebirds once swarmed over it and nested in the hollow stumps, and I once saw a neighbor's dog run a deer across that field, and I shot many a squirrel there when that was woods. There was now nothing but sheep in that field. Nothing for a high-minded bird to light on. A weasel could not find a hiding place there. The second field was a copy of the first, and now we come to the orchard on an adjoining farm. There is a remnant of a peach tree, whose fruit years ago did tempt me and I did eat; and here is the brick house, once the comfortable home of a thrifty farmer. The house is a ruin, though I remember when it was built The barn is falling down, and the fences rotting to the ground. Back of the barn a flock of wild geese once settled in a wheat field, and I shot one with a rifle at a distance of 103 paces.

Down through the center of the farm I follow a large ditch where once there was a creek, every step bringing up memories of the past. Here my little dog once followed a muskrat into its den 10ft. from the entrance and came out minus one eyelid. And yonder stands an old elm from whose fork one dark night I shot a coon with my rifle while my big brother held a torch back of me. Now we come to the back field surrounded by woods that would be called timber on the prairies; but I don't see any of those tops that mingled with the clouds forty-three years ago. I must have lost John, or he must have lost me; at any rate I was lost to the present until I essayed to cross my little creek where I used to catch sunfish and little catfish the size of a man's finger, where my foot slipped and went under the edge of the ice into the water and the ice cut my shin; and then I was both cold and hot, and remembered that I was hunting rabbits, and as I sat on a sycamore log, and removing my rubber shoe wrung the water from my Mackinaw sock, I said: "Confound the ditch! I crossed here a thousand times when that waterway was a decent little babbling brook, and I loved that brook, but I don't like your new-fangled ways."

I went on through the woods, but I could not help counting the tree-tops that encumbered the ground, and I looked in vain for my old friends, the oak trees, from whose topmost boughs wild pigeons were wont to send forth their unmusical note. Yonder by that fence I once saw a stump dog, not so bad as a stump bear, but bad enough for my years of inexperience. I watched that stump dog for fully fifteen minutes and then climbed the fence nearly to it before I was assured it was harmless. Yonder adjoining wood lot is a wilderness of tree-top and brush. It was a near neighbor to my old home and a splendid squirrel woods. And then I turn toward the house, and as memories come thick and fast, I try to think that everything is for the best; that if my old friends, the trees and streams are no more, it was only the way of this world, and I too would soon be no more, and possibly the next generation would not care if the forests were destroyed and the streams dried up.

G. W. CUNNINGHAM.

IN A JACKSNIPE PASTURE.

HOLLAND, Mich,, May 17.—One Sunday afternoon this spring, while sauntering through the fields with two of my friends, we came upon a wet pasture in which we flushed a dozen or more jacksnipe. As I had not had my gun from its case this year, and here were the real birds rising with *scaipe! scaipe!* in all directions around us, and although I do not think it good policy to shoot in the spring, my desire to bag a few could not be suppressed.

Before returning home, I went to my office, took down my shooting coat from its hook, and in the pockets found a dozen shells loaded with No. 8s. Mounting my wheel, I rode out into the country three miles to friend B.'s home, and asked him to join me in a little hunt in the morning. He was willing to go, but could find no more shells than I had.

Early Monday morning, April 26, I rode to my office, donned shooting coat and boots and waited for B., who soon arrived on his bike. Strapping our guns to our wheels, we rode out of the city, and followed the side paths to the pasture. We had to leave my pointer at home, owing to a sprained shoulder.

As the road bisects the pasture, we laid our machines flat on the ground to reduce the chances of a stray shot puncturing a tire.

Hardly had we entered the west side when, with many *scaipes*, three jacks flushed before us. As I shot hurriedly, my first shot failed to score, but quickly manipulating the old "pump-stick," I grassed the bird with the second shot. B. also bagged one, being unable to fire again, owing to my position between him and the bird. The bird which escaped flew across the road.

We hunted this side of the pasture over carefully, but could flush no more birds.

Crossing to the east side, we had worked over two-thirds of the ground, when suddenly *scaipe! scaipe! scaipe!* three more birds arose, making noise enough for a dozen. Choosing my birds, I easily scored a double. B. shot his, and began looking around in the air for more. "Where are the rest of them?" he exclaimed. "They're all dead," I replied. Picking up my two, I showed them to him. He had not heard my second shot, which was fired at the time he shot; he supposed more had flushed. The expression of his face when he was looking for more snipe was amusing.

Only two more jacks were flushed; one rose wild out of range, the other B. bagged after we each had fired two ineffectual shots at it. Tying the bunch of birds to my handle bars, we slowly pedaled home. Six birds bagged out of eight flushed we did not consider bad, and were well satisfied with our hour's sport.

My desire was gratified, and the gun was put away until the fall or an occasional day at the traps.

ARTHUR W. BAUMGARTEL.

A DEER HUNT IN THE PENINSULA.

IT was a bright, sunny day in December, when a small party gathered in the palatial station of the Chesapeake & Ohio Railroad in Richmond, Va., bound for the Peninsula in quest of deer.

The leader, the Colonel, was a prominent member of the Richmond Bar, and had, according to his own statement, been deer hunting in the mountains on divers and sundry occasions. The others were novices, although feeling great confidence in their shooting ability to hit an object, if sufficiently large and not moving at too great speed. These were the Honorable Secretary, also of Richmond, a genial soul with true sporting instincts; the Baron, commonly known as the "smoothest pebble on the beach," whose good nature was inexhaustible, and who appreciated to the utmost a good story, a good dinner, and a bottle of the right temperature, and the Man from Boston, whence the Baron also came. This equal division of the party, one-half from old Virginia and the other from cold and puritanical Massachusetts, made a combination that assimilated exceedingly well, for notwithstanding the difference in their habitations, a greater one than mere distance implies, they had many tastes in common, believing fully in Martin Luther's famous saying.

The party was landed late in the afternoon at the "Burnt Ordinary" station on the C. & O., and were welcomed most hospitably by an old acquaintance of the Colonel's, and installed at the near-by tavern. Here and throughout their stay all realized the benefit of the Colonel's companionship, for was he not one of those silver-tongued orators of the late political campaign who stumped this part of the State, and by his arguments and logic confounded his opponents on the platform and routed them horse, foot, and artillery?

Result: every man we met, in either the village or wood, beamed on our Demosthenes and clasped him gladly by the hand. Our landlord and his wife were hosts *par excellence*, who looked diligently after the welfare of their guests and fed them on the fat of the land. At each meal we feasted on York River oysters, Old Virginia ham, roast turkey or duck, wild or domestic, home made sausages and corn bread; think then if you can that we decreased in girth during our stay. As it was then hog killing time and with not much doing on the farms, the whole-souled residents of the neighborhood joined us in the hunt, offering us dogs, horses, a deep knowledge of wood lore and their fellowship.

There was the Squire, an ex-cavalryman, and looking the picture of a raider as he came loping through the forest on his inseparable bay horse. There was Rich, our "driver," tireless and indefatigable, bearing the horn to whose blast the hounds so quickly rallied; his two brothers equally enthusiastic in the chase with himself; Carleton, former private secretary to the Colonel, but now turned from the error of his ways and tilling the soil; and last, the State's attorney, easy tempered, long of limb, and of great capacity; not over anxious to exert himself, but always ready for fun.

The weather during our stay was perfect; bright, with just enough crispness in the air to make our blood tingle and cause us to feel that life was worth living, and if during a long wait on a stand by a runway, listening intently for the distant voices of the dogs, one felt at all chilly he could always find one or the other of his neighbors provided with an infallible preventative against the cold. It was the first time some of us had heard the music of the hounds in chase, and music indeed it was.

The varying tones as the dogs were trailing, here recognizing Jackson's clarion voice and then the deeper note of Lee, then to hear them all blending together, when the deer was up, into one continuous swell, now rising, now falling, but never ceasing and always tuneful, would stir the most sluggish blood. Although the net result of our four days' hunt was one spike-horn buck, still the deer were there, the dogs starting three or four every day, and the renewed vigor the fresh air filled us with amply repaid us for our journey.

An amusing incident occurred on the second day when Willie and the State's Attorney were placed on adjoining stands that were not thought especially desirable. The Attorney being of a social disposition, left his post to call on his neighbor, and while they reclined on the dead leaves on the bank, chatting, never thinking of deer, as no dogs were within hearing, a sudden rustle of the leaves behind startled them, and behold a full-grown deer leaped over their heads to the middle of the roadway, at the next bound disappearing among the trees on the other side before either gaping hunter had gained his feet or recalled his scattered senses.

Another happened on our last drive, when the Colonel, wishing in his generosity to give his friends a chance, placed the Secretary and the Man from Boston next each other on the two best places. As the dogs were heard approaching, the Colonel ran to his Boston friend, warning him to keep a sharp lookout and then hurried back to the Secretary, who stood on guard giving an illustration of a man about to shoot a deer.

"If he comes through this opening," said his Honor, "I'll kill him sure, and should he come there," taking aim over his gun, "I'll pill him."

As he strutted up and down thirsting for innocent blood, the hoofs were heard of a deer coming, leaping between the trees, headed directly for his would-be slayer. His last bound landed him within 20ft. of the gun, but never thinking to pull the trigger the Secretary stood aghast, and when the deer having turned and gotten safely away, the Colonel asked, "Why, oh, why didn't you shoot?" he replied with much dignity, "Do you take me for a target for a battering ram? One more jump, and he would have struck me in the stomach."

Well, that hunt is o'er, and nothing remains but pleasant recollections to bear us up, and glowing anticipations of another to come in the autumn. THE MAN FROM BOSTON.

CHICAGO AND THE WEST.

New Warden for Illinois.

CHICAGO, Ill., May 22.—At 4 P. M. of May 19 Gov. Tanner signed the commission of Harry W. Loveday, of Chicago, as State game warden for that city. Mr. Loveday's friends, especially Mr. H. D. Nicholls, of the House, have labored faithfully for his appointment, and he has won in a contest of singular warmth over several other applicants for this position The position itself is no sinecure if handled as it should be, and there is no one man in the entire Western country who can be of more service to the sportsmen of the West than the State warden at Chicago. The real work which lies before him is not the prosecution of the individual violators of the law in the narrow hunting grounds left in this State. The real work lies with the wholesale violators of the laws, the game dealers of South Water street. The late warden, Mr. Blow, strictly left this branch of work alone, hence whatever effort he may have made during his term of office may be measured exactly by the extent of the hole left in a bucket of water after one pulls his finger out of it. There is no instance in his record of a single victory of any import gained in the furtherance of game protection. If Mr. Loveday during his term of office shall gain but one single victory of that nature, that is to say, one victory in this fight of the sportsman against South Water street, he will have done enough to cause his administration to stand out in shining contrast to that of his predecessors. Even within what are now the legal lines of action the game dealers of Chicago can continue a vast havoc among the game of the West. When they exceed that license, as in the past they have continually done, and deliberately hold out premium for violation of the laws of this and other States, the havoc which they create can have in view but one limit, and that the extinction of our Western game. If Mr. Loveday in his responsible position—a position which is far more responsible and far more conspicuous than it was a few years ago—will lead the war into what is really the enemy's country, he may feel sure that he will be followed by the sportsmen of the better class without distinction of clique or faction, and he may reckon upon the support of all the thinking press.

In person Mr. Loveday is well fitted for his work, should that work determine itself into the quality of police investigation. He is over 6ft. tall, and in build powerful as a giant. In business Mr. Loveday is a photographer, and his address is at the Schiller Building, Chicago. Mr. Loveday is one of the old time members of the Cumberland Club. His favorite sport is duck shooting.

Growing Strictness of Game Laws.

The new Minnesota game law is a good instance of the rapidly increasing strictness of game laws in this part of the West. Mention has already been made of certain radical changes in the game laws of Michigan and Wisconsin. Minnesota has long been practically a model in game law matters, and has now gone a step further in the line of modern legislation for the protection of fish and game, the State seeming being apparently cognizant of the fact that her heritage of wild creatures is one which should be appreciated and preserved. In the new Minnesota law the FOREST AND STREAM plank, "Stop the sale of game," has found a place. It is forbidden to expose for sale within the State any ruffed grouse or black bass. The deer season is cut down to ten days, from Oct 25 to Nov. 5. The moose law is still more severe. Only five days of open season are allowed on moose, from Nov. 1 to Nov. 5, and this not until 1898, which will end the five years close season on that animal. These figures certainly do not appeal to the non-resident sportsman, as perhaps it was not intended that they should. Should the law be generally observed, however, there is no question whatever of the result on the supply of game. Such laws would mean that this sort of game is forever to remain unexhausted in the State of Minnesota.

The action of the State of Minnesota on game matters is of exceptional interest, from the reason that the upper part of that State is now for the first time coming into general prominence as a sporting ground for that part of the public which formerly went to Michigan and Wisconsin. In its supply of deer, moose, mascallonge and bass, Minnesota has very much more to offer than Wisconsin at this date. This summer and this fall will see dozens and hundreds of sportsmen crowding into Minnesota who have never been there before, but who will follow the indication of a new sporting country just opening up. I mentioned last fall the sudden wave of non-resident deer hunting traffic which swept into upper Minnesota on account of the mix up in the Wisconsin law. This coming fall there will be a more deliberate and premeditated movement into the covers of that State. The

lower part of Minnesota, comprising the prairie country, has long been known and has long since been shot out, but the swamps and forests of the country lying above the head of the Mississippi River still remain full of possibilities and invitation for sportsmen living outside the State.

Spring Shooting.

The other evening I had a friend to dinner with me down town and we did not go to my club, where the girl fries beefsteak on top of the stove, but dropped in on Bill Werner, who runs the best department in one of the big restaurants of Chicago. In getting us up the plan of hostilities, Mr. Werner mentioned the fact that clams were more correct than oysters, because oysters at this season of the year are spawning and are not fit to eat. Mr. Werner suggested that it would be an unsportsman-like thing to shoot oysters in the spring.

During our dinner Mr. Werner had occasion to remark that there were still at that time, May 15, considerable numbers of jacksnipe hanging around in this country, and that some of these snipe were still being killed by shooters. "It is all wrong to shoot snipe at this time of the year," said he.

A friend of mine who was up at Lake Koshkonong this spring, and who helped in making quite a good bag of canvasbacks, said to me yesterday, in speaking of the occurrence: "I never felt worse over anything in my life. It was a shame to kill those birds at that season of the year. They were skinny and poor, and actually not fit to eat."

The above are some facts which may have some interrelation in their bearing upon the question of spring shooting.

Horicon Meeting.

The annual meeting of the Horicon Shooting Club, of Horicon, Wis., was held recently, and officers for the ensuing year were elected as follows: President, Robert Rom; Vice-President, J. W. Burns; Manager, W. T. Kleifoth; Secretary and Treasurer, L. F. McLean.

Changed Cars.

Mr. C. W. Norris, long of the Big Four Railroad of this city, and well known as a successful trout fisherman, has switched from railroading into commerce, and is now of the Chicago Paint Specialty Co., making an enamel by which anybody can enamel his own bicycle without having it sequestered for a year at some shop.

Novelists and "Forest and Stream."

A book reviewer in a Chicago paper calls attention to a curious error in natural history made in a recent novel by Max Pemberton. Mr. Pemberton lays the scene of his novel in Bosnia, but goes on to speak of a winter so severe that "the bears came down from the mountains, even to the gardens of the houses." The reviewer points out to Mr. Pemberton that he probably meant the wolves, as in severe winters bears have a habit of holing up under the snow, and not prowling around the gardens.

In his recent novel "Soldiers of Fortune," Mr. Richard Harding Davis describes a number of encounters with firearms, but in one passage he describes the men as sitting, "waiting with their thumbs on the triggers of their rifles." This feat, I think, is something not commonly attempted in actual life, though it is a common one in Mr. Davis' writings.

All intending novelists should be careful to read FOREST AND STREAM. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Successful Shooting near New York.

Editor Forest and Stream:

For many years I have enjoyed the stories of fishing and hunting in your paper, and now that I am unable to leave my business for more than a day or so at a time, I have found that the only way to quiet that longing for a good hunt with gun and dog, which will come over me as the seasons approach, is to read what others have done, and which are told so well by your many correspondents. In past years I have hunted over many parts of this country for different kinds of game, but for the last four years, up to last fall, I could not get away.

Now there are, I imagine, many who have to do their hunting through your paper, and so I tell you of my shooting, hoping it may give pleasure to some who, like myself, imagined that one had to go many miles from New York to find any birds at all.

On the first Friday afternoon in November I left the Grand Central Depot and went fifty miles up the Harlem R. R. and was there met by my cousin, Oscar Mead, with his trap, and after a few minutes' ride from the station, found myself kindly welcomed by his family in a large, roomy farmhouse, and after a good supper and a look at the bird dog that was to be our main stay in finding the quail—for quail we were after—I retired early, to be ready for Saturday's hunt.

The next morning my cousin and myself started, and after going about half a mile across some fields we came to a clump of woods that covered not over three acres. Our pointer Sport soon began to work in the open on the edge of the woods, and in less than a couple of minutes came to a steady point. We at once walked up and stepped in ahead of him, and as the birds rose we each gave them both barrels. As I had not shot a gun for four years, how delighted I was to see my bird fall at my first shot, though my second was a miss. My cousin was equally successful; and so with two between us to begin with we marked the birds as well as we could and started after them again. There were fourteen in all, and they stuck to that little piece of woods all day, and we kept them company. What, though we did make a good many misses, we had that keen enjoyment that only those feel who love hunting for hunting's sake, and not for how many they have killed.

When the sun began to go down we went home with ten birds in all, as satisfied as only tired hunters who have got their share can feel.

I could only get away on Saturdays, but I spent every Saturday in November and two in December up there, and in our six days' hunting we got, within a range of five miles, fifty quail, two partridges and one woodcock.

F. L. KNEELAND.

A New Resort in Texas.

HIGH ISLAND, via Galveston, Tex.—This is a new point, and is the coming summer as well as winter resort of the South. Hunters will flock here in abundance during the winter season. The shooting surpasses that of Florida. All species of duck, snipe, brant, geese, prairie chickens and deer are plentiful and easily reached. C. T. C.

A Victory for Texas Sportsmen.

THE sportsmen of Texas working through the Game Protective Association have won a great victory in the enactment of a new game law based upon the bill introduced and pushed on request of the Association by Representative Blair and Senator Lewis.

The new law declares that all game found within the borders of the State is the property of Texas, "and the taking or killing thereof is declared to be a privilege and not a right." And an express stipulation is made that no game may be shipped out of the State at any season. A special dispatch from Mr. O. C. Guessaz, of San Antonio, tells us:

W. L. Moody, of Galveston, who owns and runs the canvasback farm called Lake Surprise, fought the exportation game clause, but is finally beaten. No county is exempt. It is a great victory for us. Thanks are due Representative Blair and Senator Lewis. The strangest part of it all is that we came very near prohibiting the sale of game altogether.

Snake, Rabbit and Club.

ONE day while I was plowing in a cornfield I heard what I thought was the cry of a young rabbit. The sounds proceeded from a brush pile, and were the cries of an infant rabbit. A black snake had swallowed one of the rabbit's hindlegs up to the body, and had crawled up through the brush until the rabbit was suspended in the air about 4½ft. from the ground, and neither the snake nor the little rabbit could do any more. The parent rabbit was immediately beneath the young one on the ground, and was making earnest efforts to rescue her young. She would leap back and forth and then as high as she could, toward her young, but could not reach it. She was making a very peculiar, low, murmuring sound, similar to that made by a mother cat when in unusual anxiety about her young. I crept up cautiously and with a club delt the snake a blow which caused it to release the young animal, which escaped, along with its mother, with apparent joy and agility, as if unharmed. The snake also escaped. F. E. WHITTEMORE.

Chuckors in Illinois.

MACOMB, Ill., May 14.—*Editor Forest and Stream:* I am pleased to inform the readers of FOREST AND STREAM that my chuckor partridges have been heard of. Yesterday a flock of seven (grown) were seen on a man's farm three miles from this city. Two men were plowing in a bluegrass patch, when the birds became frightened and flew into the oat field and remained there half a day, walking around feeding on the oats that failed to be covered. The question is now, do these birds mate off like prairie chickens and quail, or do they go in flocks like guinea chickens?

Prairie chickens and quail have been mated for a month, and are laying and setting.

This would lead me to believe that the chuckors go in flocks like the guinea hens, as it is getting so late in the spring. If they mate off, they would have done so before now. W. O. BLAISDELL.

Poultry Yard Wisdom Applied to Wild Ducks.

I LIKE early fall chickens when they are ripe. Don't you? Now I suppose the best way to get them is to keep over the hens until about March, when they will be about ready to fill up a good nest of eggs, and then kill the hens. When it comes time we want a spring chicken in the fall we can begin to find fault and growl because there are no chickens for the table.

This is the way with spring shooting. Kill all the birds you can before they breed, and find fault in the fall because there are so few birds. This is what a lot of people are doing.

We berate the market shooter; but is the member of some club any better when he kills 50 to 100 ducks a day, and will kill the last one there is if he could? Kill the hens, and no chickens. Kill the birds in the spring, and no birds in the fall. Go on, and see where you come out. OLD MAN.

Iowa Prairie Chickens.

BERKELEY, Ia., May 15.—The outlook in this section of Iowa is unusually good for prairie chicken (pinnated grouse) shooting this fall. Owing to the continued wet weather this spring they have not attempted to nest on the lowlands, but all the nests which I have observed are on high ground, and consequently quite a number of the young will avoid being drowned, as has been the case in some of the previous years.

Five young wolves were discovered in an old straw stack by a farmer near here recently. During the past winter several farmers have complained of the depredations made by the wolves upon their hen roosts, but have never succeeded in killing the old ones. E. D. C.

The Maine Caribou Season.

AS THE FOREST AND STREAM was the first to point out, the Maine game law adopted at the last session omitted the provision of a close season for caribou. Commissioner Henry O. Stanley writes us under date of March 23, in this regard: "The Legislature two years ago gave us the power to grant (or rather make) special laws, and to add to close time on fish and game, but not to take off. We have the power to make the close time on caribou, and have done so, making the open time the same as on deer, viz., Oct. 1 to Jan. 1. It seems very queer that none of us noticed the omission of the close time on caribou."

A Stray Shinplaster

Comes to us once in a while for a copy of "Game Laws in a Brief;" but shinplasters nowadays are scarcer than Moose in New York; and 25 cents in postage stamps will do just as well.

Sea and River Fishing.

BLACK BASS OF THE TRENT.

Editor Forest and Stream:

Having spent many happy hours reading the experiences of some of your correspondents, I thought I would give you the contents of our camp log book.

Long before the season opened for black bass fishing we had our plans all arranged, and many pleasant evenings we spent together discussing the contemplated trip. As I look back to it now, I am convinced that half of the enjoyment of camping is the anticipation. We had spent a few weeks once before on the Trent, but this was our first experience there under canvas, but we had no trouble in perfecting the necessary arrangements. We secured from our genial wood and water boy his 12×24 tent with 6ft. walls. Four of us left Rochester Friday morning for the lake, thence by steamer North King for Coburg, Ontario. A wait of three hours for a train and then to Brighton, where we found team waiting us for a twenty-two-mile ride to Campellford. The drive was a long one, but the thought of the good times coming, combined with the natural wit of our friend Foster, lessened the distance wonderfully. Arriving in Campellford at 8 P. M., we were met by the genial host of the Hotel Winsor, T. Blute, and soon after supper retired for the night, a tired lot. Next morning we purchased what few remaining provisions we needed and started for the final pull to camp. The trip was a short and pleasant one of about six miles along the bluff banks of one of the finest rivers it has been my lot to see.

Healy Falls, where we pitched our tent, is simply the ideal spot for the man who loves a split-bamboo, a silk line and a small-mouth bass of from 1 to 3lbs. weight with which to toy in a rapid current. My word for it, his business cares at home will not occupy his attention while so doing. By 12 o'clock our tent was erected, the camp stove was in place, and dinner was being prepared.

A few words about our stove: It consisted of the top of an old stove which we secured in Campellford, and two lengths of stovepipe for a draft. Having built two walls 14in. high and 3ft. long, and 18in. apart, we placed the top on, connected the pipes, and filled the holes in the wall with mud to make the draft perfect. Such cooking as came off that stove! It makes my mouth water to think of it, but all the glory should not go to the stove. Our first cook was as good as a French *chef*. "I'll marry the cook myself" got to be a camp word from the excellence of his service. Having dined on such food as our larder contained, we proceeded to fish for black bass for supper, and in less than twenty minutes had more than we could use.

It was then that the idea was put in practice of returning the fish to the water in as good a condition as possible, when they were landed. I remember on one occasion four farmer boys came down to fish with rods that would make good tent poles; luck was against them, so we seized the opportunity of loading the boys up with fish. After drawing a net that we had made out of mosquito cloth through one of the small eddies, we had minnows enough for a couple of hours good fishing; and what sport it was. You put on a minnow, throw your line up in the rapids for the current to carry it behind some boulder, then you commence to wonder if that one weighs 2½ or 3lbs. The sport continued until we were out of minnows, and the boys started home with their burden, all they could carry, and with plenty left for camp use.

By Monday the remaining three of our party found us, and we settled into camp life with as much ease as the loggers on the river. We early four had arranged to put up a job on the later arrivals, but through some error it fell through; still we had our minds at work for something new, and the opportunity arrived after we had been in camp about a week. Foster proposed that he should shave the first dishwasher, who agreed. The victim was lathered in true tonsorial style and shaved on one side of his face. Foster then stepped back as if to strop the razor, laid it down, and sneaked out the back of the tent. Some one then purloined the razor and started after him. Our friend Miller, not knowing what had happened, waited and waited. Finally it dawned on him that it was a put-up job, and for a few minutes his anger got the best of his feelings, and he went on a hunt for that barber; but as it did not hasten his return, he looked on the affair as a joke on him and proceeded to square things.

One day an acquaintance from C. arrived. Here was another opportunity for the disposing of fish, so the tackle was produced and fishing commenced. I can almost feel that jerking sensation in my wrist now as I did then as I landed fish after fish, and it was a clear case of exhaustion on my part when I returned to camp. All had been as successful as myself in the catch. Such a string of bass! I doubt if I ever will see the like of it again. There were fully seventy-five of them, and two mascalonge. As a matter of fact bass were so plenty that Shepard came in camp and actually found fault that they got in his way; said he was trying to get a mess of bullheads for supper, and the bass grabbed his bait every time he made a cast, and before the line could get into the hole where the bullheads lay; however, he got twenty-two of them, and they were excellent, done nice and brown just to a turn, and out of that pure running water. A bullhead under those conditions is not to be slighted, however much we may despise him when taken from sluggish water.

Upon our return from the river one morning we were met by the boss of the loggers, whose camps were situated about a mile above us, and he insisted on our joining him at dinner. Not knowing what to expect, we hesitated for a few moments, but finally accepted. We were treated in royal style—that is, our appetites were. Each man had placed in front of him enough for six to eat. If I remember rightly, Rowarth wanted to fill his pockets with the good things to carry back to Rochester for the high-priced *chefs* to pattern after. I had always considered the loggers' lot a hard one, but from that time on I began to envy their fortune.

Our two weeks was drawing to a close, and how short the time seemed! All felt like staying a month longer, but business would not permit. As we packed our camp kit a little stanza of some old angler came in my mind, and I thought from the sweetness of the taste of our bass that they had dined likewise:

> "These little trout have dined on naught
> The past six months but what they ought—
> That is to say, the little sinners
> Have swallowed soft-shell crabs for dinners."

Our return trip was pleasant. How the ripples seemed to

beckon us to return as we took our last look at the river from a bend in the road. Some one commenced to hum "Say Au Revoir but not Good-Bye" and you could hear the chorus fully a mile away. It was the most pleasant trip in the recollections of the party. Our thoughts went back to the schoolboy days, and, as each related some little story of his first catch, I wondered if we would meet again the coming summer.

Now, one last word of advice to campers. If you want to camp and do it right, make your camp rules, appoint your workers, and let every member do the work assigned him. You will all enjoy yourselves in that way, and each and every one will have a share in the duties as well as pleasures of the camp, and you will come home with no bitter feelings, but will vote camping a success. STILLY.

MEN I HAVE FISHED WITH.

XLII.—Leonard Jewell.

THE name has an unfamiliar look as I write it, for no one called him anything but Len or Old Len. When I first met him, in 1874, he was nearly sixty years of age, tall, broad-shouldered, active and powerful, without an ounce of superfluous flesh. As related in the last sketch, he was the favorite guide of Mr. D. H. Fitzhugh, of Bay City, Mich. Their relations were much closer, however, for there existed a friendship between them only broken by death, if then, for Plato says: "True friendship between man and man is infinite and immortal." And this was a case of the truest friendship, and between men mentally and physically as unlike as possible. One light-hearted and jolly, fond of good living and companions; the other a taciturn man of the woods, satisfied with the simplest camp fare, if there was plenty of it.

The grayling were not rising well. "I'll tell you what to do," said Len, "I'll pole over to the weeds and get some caddis. Put one o' them on the hook, let it sink and you'll get 'em ev'ry time."

"I'll do no such thing. We came out to take them with the fly, and as they don't seem to care for the oak fly to-day, nor the black-prince with a tinsel body, I'll keep on changing until I've tried every fly in the book; but I decline to use bait."

"It's cur'us; that's just the way Dan talks, but when I go a-fishin' I want to catch fish; if they prefer bait to flies, I give 'em their choice."

"How about net and spear, Len; they are the next steps down. If these grayling refused fly and bait, would you net 'em, or spear 'em, in an any-way-to-get-'em fashion?"

"Years ago I would, but not now. I've been with Dan so many years, and he's showed me how to fly-fish, an' I've seen so much of skinning streams for market that I'm dead sot ag'in it; but in square, hook an' line fishin' what's the difference?"

"I see that your education has gone on well under Dan, but you haven't learned that one fish taken with a fly is more satisfactory than a dozen taken with bait; the bait-fisher is only a fellow craftsman, while the fly-fisher is a master of the art."

He evidently understood the allusion, and after a moment's thought asked: "Ain't your flies bait? What does a fish think they are unless they're something good to eat?"

This philosopher of the woods had asked a question the answer to which was perfectly clear to me, but would not be to him. A grayling rose at my royal-coachman and was hooked. I thanked the fish, mentally, for it relieved me from an immediate answer; and as it was reeled in and boated I called attention to that particular fly and thought it might be successful again. But Len was not to be put off. He repeated the question, and my only refuge was:

"O, bait-fishing for trout or grayling is dunghill fishing!"

"That's just what Dan says, an' I've talked with him often on the subject; but as long as you use light tackle and feel the fish fight as you reel it in, there seems little difference whether you deceive it by a hook concealed in a worm or in a bunch of feathers."

The mists of the morning had rolled up from the river, light clouds were reflected in the water, and the grayling began rising, but would not notice the royal-coachman, and I changed back to the yellow and brown-oak fly with success. "Len," said I, "when Dan and you go out after snipe and woodcock and you happen to see the bird that the dog points, you would not shoot it on the ground, would you? You would put the bird up and kill it in the air, if you could, and be proud of your skill. Isn't that so?"

"That's so, sure; but I never thought of comparing that with catching fish. Perhaps the two are something alike, after all. I wouldn't shoot a woodcock on the ground, and outside of seeing the dogs work, finding the birds and knocking them down, I don't see why men talk so much about woodcock. Dan has 'em cooked and asks me to eat 'em, but I'd ruther have ham an' eggs. They're very good, but too small to pick and bother with."

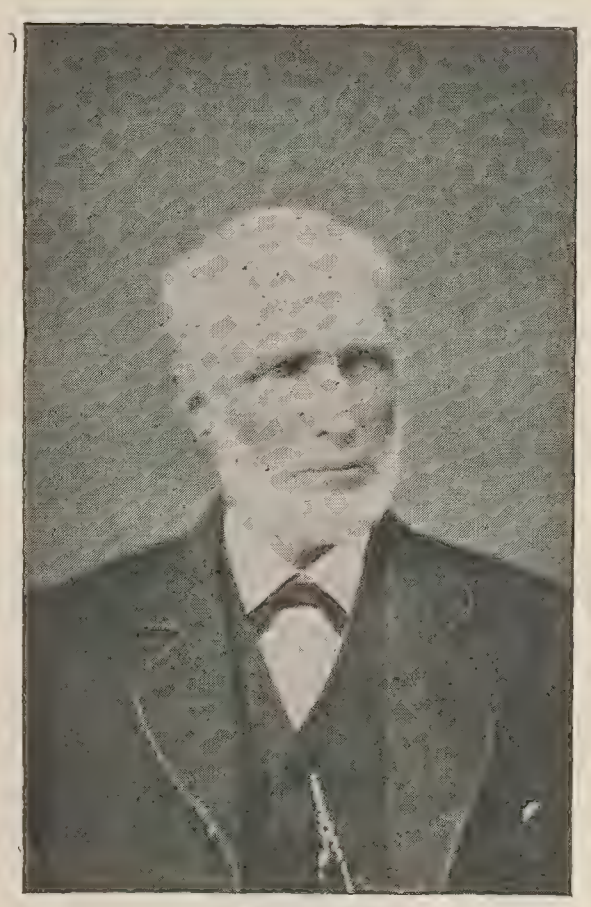
"That's a thing that every man decides for himself; but if we were in camp and there were just ham and eggs enough for one and an equal amount of woodcock, Len, we would never quarrel over the division. Pole me over to that sand-bar, quick!"

Fitzhugh's boats had wells in them for keeping fish alive. The cover formed a seat and had two holes in it, one to drop fish through and the other to run an anchoring pole through the bottom of the boat into the river bottom when required. Len did not know what I wanted, but we were under way in an instant, he following the motion of my hand. I had seen a long, snaky-looking thing swimming rather laboriously toward the shallow and naturally wanted to know what it might be. As I dipped it up in the landing net it proved to be a *Necturus*, "mud-puppy" or "water-dog," called by Len and the lake fishermen a "lizard." It was a good-sized one, about 16in. long, and its bright outside gills were perfect. This is the animal found every year and described as "a four-legged fish, the like of which was never before seen." They are plenty in the Great Lakes, but not so common in the rivers.

"Kill it, and throw it ashore for the minks or the meat-hawks," said Len.

"I'll do nothing of the kind," said I, dropping it in the well. "I intend to eat it."

Woodsman-like, Len made no reply to this. I had no idea that he believed me; he probably thought it some of my nonsense, but when I showed my capture to Dan and told him that I intended to eat it he asked if they were good to eat.



"Don't know, I never ate one nor heard of them being eaten; they're clean feeders, that's all I know. The thing isn't handsome, neither is a catfish nor a lobster, yet some man had the courage to eat the first one and I'm going to eat this one."

With an incredulous look Len said: "I'll skin it and dress it if you'll eat it, but I'd be hungrier 'n I ever have been afore I'd eat one."

The flesh looked white, and when dressed the animal somewhat resembled a squirrel, except for the long, flat swimming tail.

"I'll fry that thing after I fry the grayling," said Len, who now began to believe that the "thing" was really to be eaten, "an' then I'll scour out the frying-pan so's it 'll be fit to cook in again."

"Don't fear for your frying-pan, Len," said I, "this game is going to be roasted. Get me some wire and an ounce of salt pork and leave the rest to me." I cut the pork in strips and then into pieces 1in. long and larded the animal by cutting the flesh and poking in the pork, then by means of the wires roasted it before the fire, while Len fried the grayling. It was good. Dan looked at me curiously as I tasted it, but Len was disgusted. I assured Dan that it was good; he ate some, to the increased disgust of Len. Dan also called it good, and between us we put a polish on the bones and then wound up on grayling. The oft-quoted "woods appetite" is no creation of fancy. Often I think of it as I come to the table in the morning and try to eat, as a matter of duty, for in the city I never want breakfast, and wonder how it was possible to be hungry three times a day in the woods, and such hunger that never brought the least criticism on the cook, further than to let us have it now, and plenty of it. Pompey says of Marc Antony: "Epicurean cooks sharpen with cloyless

LEONARD JEWELL.

sauce his appetite," but there's something in the woods that renders epicurean cooks and cloyless sauces superfluous.

Dan Fitzhugh's love for Len Jewell is beyond my power to tell. If he said it once he did a hundred times, as he gazed on Len's powerful form: "Look at him! He has the face and form of a field marshal of France! Napoleon selected his marshals from just such men." A few years later he wrote me: "Come up and fish with us again. Old Len has forgiven you for eating a lizard and wants to hear some more of your yarns; he likes 'em, for you know he's not much of a liar himself, and often asks when you are coming up. The dear old fellow! he looks more like a field marshal every day. How I would like to dress him up as one and have his picture!"

In this connection I will say: The photo here presented was hunted up for this occasion by Mr. E. A. Cooley, of Bay City, Mich., a warm friend and companion of Dan and Len, who inclosed the photo in a letter last fall, and said: "It's old Len plainly enough, but a little more sleek and well-groomed than we usually saw him, still it is a good picture. I would have preferred one as we usually saw him in camp, but I think this is the only one now in existence." As I look on this picture and on that of Alvah Dunning there seems to be a family resemblance. Is there a type of man who by nature is forced to live as a woodsman, or does the life of a woodsman form the type?

Len was a single man; if he had ever married no one knew it, for he would never talk of himself. He had traveled over the pine lands for lumbermen and the hardwood lands for prospective settlers, and knew all about what every square mile of northern Michigan was worth, for either lumbering or farming—the pine lands being worthless after the timber was cut, because the soil was too sandy for cultivation, and it never grew a new crop of white pine. This was Len's business as a land-looker, and with his axe and a load of provisions on his back he remained in the forests for many weeks, adding to his commissary by his gun or his fish lines. Self-reliant, he lived in the woods for months without a base of supplies or a place of abode. An approaching storm was noted in time to find a hollow tree, and the brooks furnished fish at all times. His knowledge gained in such a summer campaign was his capital, but in his old age he preferred the lighter service that Dan Fitzhugh desired, and so it came about that the giant woodsman and the sportsman entered into a partnership where there was no balancing of books.

If Len Jewell ever drank anything stronger than coffee I never knew it, and can't, at this late day, remember that he ever smoked; but no man is free from "habits" of some kind, and Len, so Dan told me, blew in a good part of his earnings in a game that is called "poker," where they say three or four jacks can overpower two or three kings or queens. It must be an anarchist sort of game that wouldn't work in Europe, but perhaps Len was working for the restoration of the empire and the realization of Dan's dream that he should be a field marshal.

A letter from Mr. Fitzhugh in 1877, says: "Come up next year and try the Manistee. Frank, Babbit and Len were in my office yesterday, and other friends dropped in; they all want you to come up again. All spoke well of you except Len, who holds a grudge against you for eating that 'lizard.' He said: 'A man that'll eat a thing like that when there's good, Christian grub in camp, and plenty of it, is wrong in his mind, and liable to do something that you don't expect.' If you ate that thing, as I did, to horrify Len, you succeeded, but he doesn't blame me in the least. I read him your kind letter and he sends his love. He is very well, and looks more like a French field marshal every day. In full uniform he would shine as a handsome man, but perhaps my love for him makes me partial."

When we went on our third trip the object was pure sport, untempered by fishculture, as it was late in September; and then I saw my error in saying that a grayling never leaped from the water; but the statement is on record against me in the book, "Fishing with the Fly," and may be quoted by others. Len shook hands cordially, and his honest face lighted up in a manner that showed that my ichthyophagic idiosyncrasies had subsided into innocuous desuetude, only Len would have reduced this proposition to its lowest terms and it would have come out with the same meaning. For the third time Dan put Len in charge of my fortunes, while Archie Babbit, of Grayling, looked after him. Dan was not well, his old enemy, gout, had assailed him, but seemed to be withdrawing its forces, and he thought he could stand the trip. On the way down the Au Sable, which, by the way, is always given the French pronunciation of "Aw Sawble," with accent on the "Saw"; I asked Len about his carrying Dan on his back for twenty miles through the woods once when gout had attacked him on the river, and he said:

"Yes, Dan took sick and I had to get him out of the woods; the river was high and I couldn't pole him up less'n two days, so I took him on my back to the railroad and went down to Bay City with him, and then came back and brought the boats and camp up to Grayling. What else could I do?"

The giant woodsman spoke of it as one would speak of a day's work that was a trifle harder than usual—but just give it a thought. Dan Fitzhugh was a well-fed man of perhaps 160lbs., I am guessing at this and may be 30lbs. short; but Len Jewell took him on his back through a wilderness where there was no trail, over logs and under fallen trees, until he laid him down in Hartwick's Hotel, at Grayling. The daily pay of a guide does not include such service, and it was a feat that not one guide in 1,000 could perform, if he were inclined to try it. If I sketched Dan Fitzhugh correctly in my last article, you will know why his relations with his guide were not at all mercenary, and if the sketch of Len Jewell is complete I'll leave you to think it out, it's beyond my pencil to explain.

We took many grayling, but a fishing story is not intended further than to say that in the fall the yellow-bodied flies, like the oak-fly, did not seem to be such favorites, but the grayling seemed to prefer the brown ant, red spinner and cowdung, while I took several on that fly so abused by those who contend that a fly should represent some living thing, a red ibis. Frank Endicott, Dan Fitzhugh, Wakeman Holberton, Charles Hallock and other anglers have reviled this fly because it has no living representative, and have more or less gently deprecated its use. The fly will take trout, at times, and on that account I use it. Gentlemen, what more do you require of an artificial fly?

The patches of scrub oaks which had sprung up where the pines had been cut, or where fire had killed them, were turning red and yellow; and some distance back from the river was a tract of hard woods which Len directed me to as I went forth with a gun for ruffed grouse, or "partrige," as Len called them. I brought in four and saw three deer, and was tempted to take the rifle next day and get some venison for camp, a meat that was always a favorite, and is to-day.

Len was a rheumatic, Dan was gouty, and they were content to fish. I had not killed a deer since my trapping days with Antoine Gardapee in the early 50's, and after a few sighting shots sallied forth to renew an acquaintance with deer stalking, which I once thought to be a grand sport; but also with the idea of varying the camp menu, which was good enough as it was, but no matter how good any fodder is a change is always welcome. The grouse was a treat, although we had a change of food every day; and a prospect of venison was also a treat, even if none was to be had. The day was young. The sun was at my back, and for an hour I kept my shadow in front, making for the spot where the deer had been seen. The country was rolling, but so wooded that no prominent land-marks could be seen, and in the absence of a compass my shadow was the only thing to rely on for direction. No fresh deer tracks were seen. Noon came, and by a little spring I ate the whole of a roast partridge, half a loaf of bread, some corned beef and baked beans, rations for an entire day at one feed.

Several grouse, a raccoon and some fox-squirrels offered shots in a tempting way, but I let them pass. I could not find a deer, nor a track fresh enough to follow. I was tired, and a dry pine log offered a seat, and it was accepted. The day was quite warm and I may have dozed, but after a while something awakened the dozer from his semi-hypnotic state, and there was a deer leisurely walking along, not 50yds. away to the windward. As the rifle spoke the deer dropped, and the mighty hunter whose game found him rushed in, reloading as he went. It was a doe, and both fore-shoulders were broken, and she looked at me. That look haunts me to-day. Two great pleading eyes, with tears in them. Yes, tears; I'll swear to them, although all the hunters and scientists in the world say that only man sheds tears. If it is impossible for a deer to shed tears, then the ghost of that doe shed them for years afterward. I'm telling this story, and I say that doe looked at me with tears in her eyes. Æsop's fable of the boys and the frogs came up.

I felt guilty, but in mercy there was only one thing to do. If I could have put that animal on its legs there and then, there would have been no venison in camp. The day was passing; soon my shadow would be gone; but as the sun went down a star in the south came out, and by keeping

that to my right I reached the river, and an answering yell told the direction of the camp.

Said Len: "How is it that you're so hungry; I thought you took out grub enough for two days. Didn't you see a deer? I had my mouth fixed for venison."

"Len," said I, "give me something to eat. What you put up was only a bite for a hungry hunter. Yes, I saw a deer."

After I had engulfed half a gallon of bean soup and destroyed half of a boiled ham I said: "Now that I feel like a giant refreshed with wine, Len, I don't mind telling you that I killed a deer some ten miles west of the river, and I'll show you where it is in the morning; but I feel like a murderer, and if you or Dan want any more butchering done you may do it yourselves, I am too tender-hearted to do it. I'll catch the cold-blooded fish, but I'll be blessed, I think I mean blessed, if I'll kill another deer and have it look at me in that way."

Dan lay in the tent smoking, and said nothing. Len poked the fire, and after a while said: "Dan tells me you have been a soldier; did you feel as soft as that when there was fightin' goin' on?"

"Not by a mill-site, Len; the case is different; in one case your own life is at stake, and in the other you are safe. Without giving a lecture to you, let me say: In our civilization it is necessary that some men shall be butchers and others shall be undertakers. I have no taste for those respectable occupations, and can say, with Iago:

> " 'Though in the trade of war I have slain men,
> Yet do I hold it very stuff o' the conscience
> To do no contriv'd murder'."

Dan raised up on his elbow and said: "Len was a soldier also, and if he had been with Napoleon would have been a field marshal, for the little corporal said that every soldier carried the baton of a field marshal in his knapsack. But just what you and Len are quarreling about I don't know; you seem to have got into a sentimental strain. You go out one day and kill a lot of grouse and then you come into camp in a maudlin condition over a deer that you have killed. Really, I fail to understand the case."

"Dan," I answered, "the case is not to be understood by explanation. No argument will reach it. When I was a boy I killed every living thing except mankind, and thought it sport. I valued my own life lightly. To-day I decline to kill a quail because my dog may bring a wounded bird for me to finish. I can shoot grouse or ducks which come to my hand dead, and I prefer to have a deer come and lick my hand in the Zoölogical Gardens to killing it. As we get older we think more of such things, and that's all I've got to say about it. The deer is there; I'll show Len and Babbitt where it is in the morning, and if you want any more venison for camp you can't get me to kill it."

Len had listened to this talk, but the sentiment, for it was sentiment, was lost on him. After considering it awhile he said: "I s'pose you wouldn't eat any of that venison after what you have said about it."

"Yes I will."

"Well, I can't understand you at all. You can kill some things for sport and food and can kill and eat a beastly lizard that was never meant to be eaten. What's the matter with killing a deer? Wasn't they made to eat?"

"Let that go, Len, it's a notion of mine, and I'll never kill another deer. But I will not promise about lizards."

That was my last deer, some fourteen years ago, and the look it gave me lingers yet. My desire to kill lessens year by year, and a desire to breed and preserve game birds and animals takes its place. For many years my flock of semi-domesticated wood-ducks and other wildfowl was a delight as I watched them hatch and rear their young, but an enforced removal to the city ended that pleasure. There are women who kill deer. That is something that concerns them and which I have no right nor inclination to criticise. There is a little woman who is very dear to me who has taken the life of a mosquito after provocation, but I doubt if she could kill anything else.

Talking in this strain to Dan Fitzhugh after the deer had been brought in and dressed, and we had ordered the rib-chops for our dinner and all the remaining chops saved for us, for Len, like all woodsmen, preferred the hind-quarters, Dan said: "As I get older I begin to feel as you do about taking life, especially of the more intelligent animals, like deer, but to Len and all woodsmen a deer represents a certain amount of meat. They can't understand why you should enjoy spring lamb and mint sauce and yet object to killing the lamb any more than you should decline to pluck the mint. There is good sound reason for their views, for our ancestors, who in the pre-historic times fought the cave bear for tenement rights, had no such scruples as we have now. All this is the effect of education which tends to make us consider the rights and feelings of others, a perfectly unnatural state of affairs. Self interest is the only natural thought of natural man or other animals."

"My dear Dan," said I, "you are right. It has been a purely selfish thing on your part that has made you pay all the expenses of three trips for me to fish and shoot in northern Michigan with you. If we only do things for our own selfish benefit, as you say a man should, how can you justify yourself for such expenditures as you have made for me, Seth Green, George Dawson, Charles Hallock, Prof. Milner, Thad. Norris, and others."

"My dear boy, the companionship, the communion with kindred spirits and other things can't be reckoned in cold cash. Look at Len standing there like a statue. He is in my employ, but no money could pay the grand old man for his untiring devotion to me. If he outlives me he will be made comfortable in his old age."

At this time, in 1883, the actors in this comedy were men past the middle age; Len Jewell was sixty-nine, Dan Fitzhugh was sixty, and the writer was a mere boy of fifty. Therefore, there was a diffidence in pressing opinions on subjects connected with the killing of game; but Len had no sentimental objections about such things.

Len was in the Union army over three years, but on this, as on all other things, he would turn the conversation from himself.

Leonard Jewell died Jan. 20, 1886. Mr. E. A. Cooley writes: "The old man had no relatives, and few, if any, intimate friends. The last thirty years of his life were devoted almost exclusively to the service and companionship of Uncle Dan. Dan and I were with him when he died. When Dan and Len and I were on the Nipigon together in 1884, about halfway between Camp Alexander and Cameron's Pool, we found (alongside the trail) a little spring of the clearest, coldest, sweetest water I have ever tasted. About half an hour before old Len died he indicated that he wished a drink of water. I poured out a cupful of Lithia water from the bottle standing by the bedside, raised his head, and he took a sip of it. As I laid his head back on the pillow, in a voice so faint that I could scarcely hear him, the old man whispered, "It don't taste much like our spring on the Nipigon." And I have no doubt that the old man's last thoughts on earth, as probably his first ones in the next world, were of some fishing excursion which he had had with Uncle Dan."

Later Mr. Cooley sent me Len's military record. He enlisted as a private Dec. 18, 1861, in Co. A, 14th Michigan Infantry, and was honorably discharged April 6, 1865. Mr. Cooley says:

"Len was always a very reticent and reserved man, who never spoke of himself or his own affairs even to those who knew him best. I presume that, next to Mr. Fitzhugh, I have been with the old man more than almost any other person here, and I never heard him speak in any way of himself, his previous history, family connections, or anything of the kind. I do not even know whether he was ever married, nor where he came from, nor what his ancestry might have been. He had evidently spent the greater portion of his life on the outer edges of civilization; had had extensive intercourse with the Indians; must have been a hunter and trapper for a good many years; and from some things which I have observed, I should infer that at some period he must have been employed in a trading post trading with the Indians. He must have been a sailor, too, at some period, as he was a past grand master of the art of handling sailboats of all sizes and descriptions; and I have seen in his possession a kit such as sailors use in making or mending sails, and he was very expert with the sailmaker's needle."

Under the heading, "Len Jewell is Dead," a Bay City paper published the following:

"The above headline will be read with sincere sorrow by all the acquaintances of the deceased. He died at the Bay City Hospital yesterday morning after an illness of about ten days. Leonard Jewell was born in Rome, Oneida county, N. Y., Feb. 25, 1815, and was, therefore, in his seventy-first year. He came to Bay City in the fall of 1844, and has since resided here. He enlisted in the 14th Michigan Infantry, Company A, at the breaking out of the war, and was mustered out of service in North Carolina. He returned to Bay City and engaged in the business of looking up pine lands, which he has followed ever since. He was authority on pine property, showing good judgment and a remarkable faculty of estimating. He was very fond of hunting, and was acknowledged as being one of the best sportsmen in the city. He was a member of U. S. Grant post, G. A. R., under whose auspices his funeral will be held."

The G. A. R. post attended in a body and fired the usual volley over the grave of their departed comrade.

It is comforting to know that this grand, improvident man was cared for in his last days, and was respected in death as in life.

> "But when the warrior dieth
> His comrades in the war,
> With arms reversed and muffled drums,
> Follow his funeral car.
> They show his banners taken,
> They tell his battles won,
> And after him lead his masterless steed,
> While peals the minute-gun."

FRED MATHER.

SOME ONTARIO WATERS.

Gleason's Lake.

THREE of us made a trip on the Gateneau Valley Railway, forty one miles to Gleason's Lake, situated two miles from the station, and a jolly good time we had. There were G. B. Loveday and Fred Moore, of New York State, and the writer. We left Ottawa at 5:20 P. M. and reached Vanosta at 7:23, where we were met by Mr. Gleason with fine team and comfortable express wagon, and driven to his house, where our hearts were made glad by the sight of clean beds, etc., and well-spread table of goodies—as Mrs. G. remarked, "everything is home-made or our own raising."

The lake is about one mile long, half mile wide and 200ft. deep in center. We were up at 4:30 to look out for the "good places." We spent some time sailing around and trying our luck, and things were (in our minds) beginning to look sort of blue, when G. B. L. had a strike, played, and landed a 4½lb. bass. F. M. came next with another beauty, and I, well, I never saw what got on to my line, for down he went on a rush, and after running out between 30 and 40ft. of line there was a snap and he was gone, having broken a double salmon gut leader. Luck! Well call it what you like. G. B. L. and F. M. had not been idle, having landed three more beauties. Then I had a pull and knew I was fast to something good. It proved to be a 2½ft. maskinonge. We went back at 8 o'clock for breakfast and a rest.

Out again in evening (5 P. M.) we took three more bass and one maskinonge. We kept this up for three days, and (having kept our fish alive in a box) we counted up—thirty-five bass and five maskinonge—the best string my companions (G. B. L. and F. M.) had ever seen. Bass run very large in this lake—2 to 5lbs.—and we only had one less than 2lbs. It is a very handy place to reach, with fine scenery, clear water in the lake and pure fresh air. Several other lakes near at hand where both speckled and large gray trout abound.

Wilson's Corners.

Wilson's Corners are about sixteen miles from Ottawa, and are reached by either G. V. R. R. or vehicles. There are at least fifteen lakes within five miles, and good trout fishing in them all. There is a fine brook of pure crystal water at the Corners, where I spent three hours one fishing day. I walked up the road for about two miles, when I looked into the brook, which makes a long circle around the mountains before it strikes the Corners.

It is a pleasant walk when one is properly equipped. I wore hip rubber boots, a cool, light-fitting coat and short pants (just long enough to connect with boots) and did not exert myself, so making it a pleasure instead of hard work. When I reached the Corners I counted my catch of sixty-seven trout between 8 and 10in. in length. Of these I took thirty-four out of one hole and fifteen out of another; the rest were stragglers from under logs, stumps and banks. I hooked quite a number of smaller ones, but put them back into the brook for another time.

McGary's Lake

is situated twenty-five miles from Ottawa and two and a half miles from the station of Wakefield. From a distance of half a mile this lake looks like a mud pond, being surrounded by rushes, and the water is of a darkish color, but there is fish there, as I found out. It was a warm, balmy morning, with indications of rain. I breakfasted at The Shanty, and went down to the lake with my gun, where we shot two gray ducks and one very large black duck. Then we built a float of old logs, and going out on the lake fished for about three hours and only got two trout, when it began to rain. I went on shore, assumed long rubber boots, a rubber coat over all, and slouch hat, and went out again. Noticing a spot at the mouth of the creek where there was some rising and commotion in the water, I paddled over to the spot and started in. I have had sport before, but this surpassed anything I had ever seen or heard of. In two hours and five minutes I landed 104 trout, and lost several through not being properly hooked. Largest one, 1½lbs; smallest one, 9oz.

E. T. L.

MASCALONGE, PIKE, PICKEREL AND PIKE-PERCH.

From the Report of the New York Commissioners of Fisheries, Game and Forests.

THIS country has long been notable for the confusion which exists in the common names of its fishes, and it is doubtful if any amount of instruction on the subject will correct the evil of calling a fish by a name which does not belong to it, and never should have been applied to it. The Latin name of the large-mouthed black bass means that it is "trout-like" (literally, salmon-like), and it has a small fin, although it is not like a trout and it has not a small fin; but when the fish was first classified by a French naturalist, Lacépède, the specimen was sent from one of the Southern States, where the fish is known as a trout, and as the particular specimen happened to have a broken fin, the genus was baptized *Micropterus*, little fin, and the name must stick to the fish as long as it swims, because with scientists the law of priority in the classification and naming of fishes is as unchangeable as the laws of the Medes and the Persians.

Admitting the justice of the custom of scientists regarding the scientific names of our fishes, is there any good reason why inappropriate and incorrect common names should be applied to our fishes and persisted in when the appropriate and correct names are pointed out? It is not alone incorrect names applied to fishes which cause confusion, but a variety of names are applied to the same fish in different localities. For instance, the pike-perch is called also wall-eyed pike, glass eye, horn fish, dory, jack, jack salmon, green pike, blue pike, yellow pike, white pike, okow, and, of all things, salmon! It is known also, locally, as Champlain pike, Susquehanna pike, etc. The cousin of the pike-perch, properly the sauger, or sand-pike, is called gray pike, ground pike, pickering and pickerel.

The rock bass is called goggle eye, red-eye, and lake bass. The blue-nosed sunfish is called copper-nosed bream, and dollarel. The crappie is called new light, Campbellite, bachelor, bride's perch, strawberry perch, chinquapin perch, and sac a-lai. The calico bass is called grass bass, barfish, bitterhead, tin-mouth, sand perch and sac-a-lai; but it is not necessary to extend this list, except that I was recently asked to identify a fish called "silver bass, exactly like the black bass except in color," and found after considerable search that it was a name applied in Ohio to the mooneye or toothed herring.

In this State the statutes even err in the common names of some of our fishes. Pickerel are mentioned in the Game Law when the fish meant is really the pike, and the pike is mentioned when the law really refers to the pike perch. A gentleman asked some questions about the pike, and I replied to him and told him that apparently he was asking about the pike-perch, but he insisted that it was the pike. However, when I asked if the fish had one or two dorsal fins he replied that it had two, which is characteristic of the pike-perch, and not of the true pike. For the purpose of identification three figures have been prepared, showing the characteristics that are constant in the mascalonge (which is sometimes called a big pickerel and great pike), the pike and the pickerel.

Without regard to color or other markings, each of the fishes named may be identified from the peculiarity of scale formation shown in the accompanying cuts.

The mascalonge, the pike and the pickerel have each the same number of fins, placed in the same position on each fish, as will be seen in the colored drawings in this volume. The mascalonge has scales only on the upper part of cheek and gill covers, as shown in Fig. 1. The fish may be the mascalonge from the St. Lawrence River, with round brown spots on a light ground, or the mascalonge from Chautauqua Lake with blotches or splashes of brown, or it may be without spots of any kind, and it may be called Chautauqua pike, or Kentucky River or Muskingum River pike, and yet it will be a mascalonge and have scales on cheek and opercula, as shown in Fig. 1.

The colored drawing is made from a Chautauqua Lake mascalonge, for that is where the State hatches mascalonge, and this is the first time that a specimen has been figured correctly. It was reported to me that some of the Chautauqua Lake mascalonge were spotted like the St. Lawrence River fish, and I asked Superintendent Annin to investigate the matter, and I quote from his letter reporting to me: "I am inclined to think, and believe I am correct, that all the mascalonge of Chautauqua Lake are marked in the same manner. I secured three specimens, which our men thought were the spotted variety, as they call it, and sent two of them to Dr. Bean; and he says they are the same as he had last fall and the same as you have for the report. You know that oftentimes you will find a fish coming out of the same lake, only from a different bottom, which will be marked and colored differently, one from another. This, I think, is the explanation of the reported difference in coloration of the Chautauqua Lake mascalonge. The only round brown spots on the Chautauqua Lake fish are those found near the tail and along the belly line." This to me is conclusive, although I was informed in great detail that the fish of different ages or of different sexes have been taken with different markings, some with round brown spots and some with blotches almost like vertical bands, as shown in the colored plate.

The State hatches upwards of 3,000,000 of mascalonge annually, and there are demands for them for waters in which it would be unwise to plant them, and all such appli-

cations are denied. Mascalonge are hatched in boxes sunk in the lake and provided with double bottoms and tops, so that the eggs may not be eaten through the wire meshes by other fish. About 97 per cent. of impregnated eggs are hatched, and with the water at 55° Fahr. they hatch in about fifteen days, and it requires about the same length of time to absorb the umbilical sac of the fry. The fry when first hatched are extremely helpless, and a prey apparently to every living thing in the water. The ovaries of a 39½lb. mascalonge weighed 5lbs., and one female of 36lbs. yielded 265,000 eggs, although all of her eggs were not obtained. In spawning these large fish it is a rare thing, comparatively, to injure one of them.

The pike is commonly called pickerel in this State; there is a marked difference between the two fish. The pike grows to a weight of 50lbs. and more, as one was recorded from Ireland the present year of 54lbs. in weight. Our pike and the European pike are the same. The cheek and gill covers of the pike shown in Fig. 2 will explain how the scales are placed; they cover the cheek and part of the gill cover. The pike is the fish sometimes called the great northern pike, although a claim was made a few years ago for this title for the unspotted mascalonge.

The pickerel, proper, is a small fish as compared with the pike, as it averages in weight from 1½ to 2½lbs., and one of 5lbs. is a very large fish. Fig. 3 will show how the scales are placed on cheek and gill covers, extending over both.

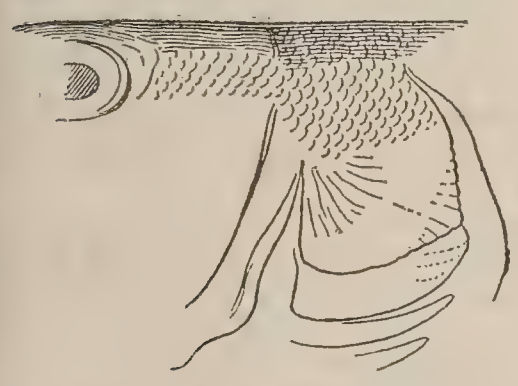


FIG. 1.—MASCALONGE.

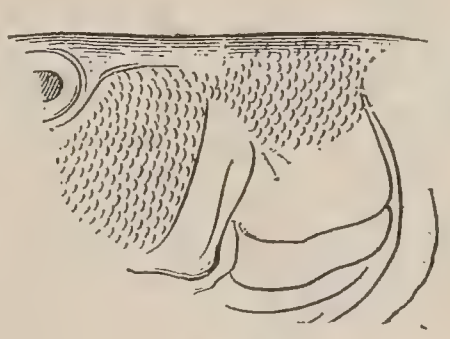

FIG. 2.—PIKE.

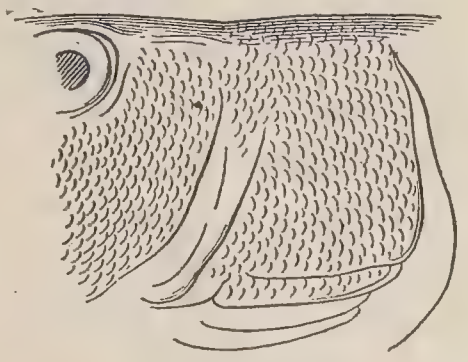

FIG. 3.—PICKEREL.

PART OF CHEEK AND GILL COVERS OF MASCALONGE, PIKE AND PICKEREL.

The fish are of the same species, and exactly alike structually, but one fish is spotted with spots that are nearly round, while the other has oblong spots, and the dark lines are more regular in the pond fish than in the river fish.

There is no good reason for confounding the pike perch with the pike, as one look at the colored plate will show the former fish with two dorsal fins, while the pike has but one. The pike-perch are hatched artificially by the State in large numbers, and it is an excellent food fish as well as a game fish to be taken with hook and line. The pike and pickerel are not hatched artificially in this country, but the pike is cultivated in Germany by artificial methods, and is more highly regarded in Europe than in America.

The reason for this is that we have such a great number of so-called game fishes that are considered superior to pike, that it has been relegated to an inferior position; and still the pike has its loyal adherents who regard it highly as a rod fish, and as a table fish. Should any one be in doubt about the species of the fish named, and desire to fit the fish with its proper name, the plates here given will prove a sure guide.

A. N. CHENEY, State Fishculturist.

CHICAGO AND THE WEST.

News in the Elevator Boy.

CHICAGO, Ill., May 22.—I found a bit of news in one of the elevator boys in this building the other day, which may be of use to the fish warden of the State of Wisconsin, if he cares to take advantage of it. The boy asked me when I was going fishing again, and I told him it didn't look as though I ever was going any more. "I saw a whole lot of fish caught this spring," he said, "up at Jefferson, Wis." "How was that," I asked him? 'Oh, it was pike," said he, "hundreds of pike; more fish than I ever saw in my life before. You see there is a dam there, and these fish were trying to get up over the dam. It was just after the ice went out. The men had nets and seines below the dam, and they dragged the pike out by the wagon load. Of course it was against the law, but they did it just the same."

Yes, it was against the law.

The Temptation of Trout.

St. Anthony was a good man, albeit sorely tempted, according to the traditions. If they had tried him with trout methinks he had fallen. Any man who has a drop of sporting blood in his veins will forsake family, business, home and honor to follow off after this subtlest, supremest and most dangerous of all temptations, which commonly, as doth the bullhead, in the end stingeth like an adder. I have spent more time, and been thrown down harder, chasing the elusive trout idea through far-off woods than has ever been my fortune in any other branch of activity. Yet I am always ready to go again, and when I can't go I want to go, and feel badly because I can't go out and fool myself again. This, I imagine, is the common experience of mankind.

It is not a common experience of mankind, however, to have so tempting a trout temptation come at him as that conveyed in the letter received from Mr. W. B. Mershon, of Saginaw, Mich. Mr. Mershon asked me to join him for a few days' fishing on Kinne Creek, the waters of the Pere Marquette Club, near Wingleton, Mich. The route to this country from Chicago would be by way of Milwaukee, thence by Flint and Pere Marquette boat to Ludington, which is only about an hour's ride by rail from Wingleton. One can leave Chicago in the afternoon, and be on the stream at 7:50 the following morning. Mr. Mershon says that he was on this stream two days last week, and got ninety trout. Six rods on the stream took 480 trout in four days. No fish were taken except upon the fly, and all fish under 7in. are returned to the water. When I add that Mr. Mershon states that there is always a pleasant party at the comfortable club house, I have perhaps said all that is needful to give an idea of the acute form in which the temptation of trout in this case attacks me. I don't see how I am going to escape running over there some night. There is a nice little crease which nature has deeply indented in the skin at the heel of my hand. It just measures the 7in. limit for a trout. Thus it seems to me obvious that nature intended I should sometime fish a day on Kinne Creek. At any rate I thank Mr. Mershon for his temptation.

The Temptation of Bass.

Mr. D. J. Hotchkiss, of Fox Lake, Wis., knows where there is a good fishing hole for bass, and he is good enough to add to my unhappiness by asking me to come up and help catch some of them. I am sure he will allow me to give in full his interesting letter:

"FOX LAKE, Wis., May 17.—Do you know how to catch a black bass? If so and you will come up here, I will take pleasure in showing you black bass until you can't rest. Our lake is full of them, but we farmers don't know how to catch them except an occasional one on a spoon hook or still fishing with a live minnow. Our season opens next Tuesday, 25th inst., and I would be pleased to entertain you and give you some good fishing. You may not remember me, but I called on you once a year or so ago, and belong to FOREST AND STREAM family, so it don't cut much figure whether you remember me or not. You are entitled to all the sport I can give you, and I will be glad to give you a day or a week at it, as you can spare the time. Will also show you a partridge (ruffed grouse) setting on a nest of twelve eggs, if you get here by the 25th. I have tried three times to get a picture of her, but my kodak don't seem to be able to make a picture of her, it is so dark on the ground where she is setting. I have snapped her three times without getting a picture. She lets me get within 6 or 8ft. of her, and then not to get a picture is hard luck. She sits still enough for me, and I snap away at her; then if I don't get a picture she must think it is my fault, and I guess it is. Bring your camera and I'll guarantee you a shot at her.

"Fox Lake is on the C. M. & St. P. R. R., about 150 miles from Chicago. You leave Chicago on the fast mail about 4 A. M., and get here at 10:30, or leave there at 11:30 A. M. and get here at 6:30. Can get back at 10 P. M., leaving here at 4:30, so you see you can make the trip in one day if you can't put in any more time.

"There is good pickerel fishing here, too, and the boys are getting lots of them, trolling.

'Do you know Johnson, the man who makes flies in Chicago? If so, bring him along. He promised to come up three years ago, but never got around to it. I have forgotten his name and address. Will guarantee to show you any quantity of black bass, and if you can't catch them, will give you pickerel fishing, and if that is too swift, will fill you up on perch. Come up and see us anyway, and if I don't show you lots of black bass I'll pay your expenses and $20 a day for your time."

It is too bad about Mr. Hotchkiss and his grouse, for I should very much like to add his picture to the interesting data of similar nature already in the possession or FOREST AND STREAM. As to the black bass, I imagine they are vulnerable in Fox Lake, as elsewhere, though there, as elsewhere, trolling and still-fishing are about the poorest ways to catch them. If Mr. Hotchkiss will get a nice basket of speckled frogs, and learn how to shoot them off a casting reel to a distance of 25 to 30yds. from his boat, he will be pleased to see the eagerness with which his advances will be met. A cloudy day, with a little wind, is better, and the best places to fish will be at the edges of the bulrushees and lilypads, not in very deep water. If the day is warm, the best time will be from 4 or 5 o'clock in the afternoon until dark. A little later in the season the same bass will rise to the fly in the evening in the shallow water over clean sand bottom close inshore. I should very much enjoy having a go at these bass with Mr. Hotchkiss some time.

Fishing Country.

Mr. M. B. Proctor, of Kansas City, Mo., wants to go fishing in Wisconsin. "I would prefer," he writes, "to go to some place in Iowa or Minnesota, which are more convenient to reach from here, but don't believe I can find the fishing in those places as in Wisconsin."

If Mr. Proctor will write to Fay L. Buck, Manitowish, Wis., he can make arrangements for good mascallonge and bass fishing. I think he is mistaken, however, in supposing that there is no fishing in Minnesota, although it is true that the best of fishing in Iowa is a thing of the past. If he will look up the advertisement of Habbekona Camp, in Minnesota, he can get into what I take to be new and very good country in Minnesota.

Nearby Fishing Points.

Bass are this week biting in fine style at Wilmington, on the Kankakee River, and are biting fairly well at Momence, on the same stream. At Fourth Lake, upper Illinois, they also bit well this week, and large catches continue to be reported from Cedar Lake, Ind. Mr. R. Miller was at Fox Lake, Ill., this week. He struck a bright, calm day, and had poor success. He says the bass are now on the spawning beds in those waters. Fox River continues a little bit muddy, but should offer fishing this week.

The Rockport Tarpon Country.

Dr. Frothingham, of this city, is just back from a fishing trip to the now celebrated tarpon country of Arkansas Pass, at Rockport, Texas, where he took four good tarpon, and his wife also got one good fish. He reports the water a trifle muddy and not in perfect condition for the sport.

Mr. S. M. Sutherland, of this city, perhaps holds the record of tarpon fishing at Rockport, where he took six fine fish in one day. Mr. Sutherland inaugurated a curious custom in tarpon fishing which might be emulated by others. Instead of gaffing his tarpon and landing them in the boat, he went ashore and beached his fish. Then he fastened to the back fin of each fish a little tag of phosphor bronze bearing his name. He replaced in the water eight tarpon thus tagged, and now he is waiting to hear from them again.

Rockport, Texas, was known as a tarpon point apparently to but a few local anglers at the time Dick Merrill and I discovered it four years ago. Since then it has attracted considerable attention through one channel or another, and now it is visited by a great many tarpon fishermen from all over the country. There is no doubt that it offers far better tarpon fishing than the best points in Florida, which long claimed a monopoly in this sport. If all the tarpon anglers follow Mr. Sutherland's example, the visible supply of tarpon may not seriously be decreased.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

SILKWORM GUT.

REDDITCH, England, May 12.—*Editor Forest and Stream:* We noticed in your April issue, just to hand, an article on silkworm gut, and in reply to it would say the tackle dealers in the States have just the same chance of getting the first whack at the gut as the English tackle dealers, as they know the manufacturers and the grades of gut which are made.

There is very little of the highest and thickest grade to be had at any price, and we find that as a rule the tackle dealers, with the exception of a few, go in for cheap grades of gut, whereas if they would deal more in what is termed in the trade Maranas and 1st. Padron, it is our opinion that it would suit black bass fishing much better and be far more reliable than the cheaper qualities, such as Regular and 2nd. Padron.

As to the very long gut, there is nothing made 40in. in length, and such has never been produced to our knowledge, the average longest length being about 17in., and very little is produced up to 22in. most of which is too fine for fishing in the States.

There is no difficulty in obtaining the finest gut if tackle dealers will pay the price for it.

S. ALLCOCK & Co.

United States Consular Agent Theodor Mertens, at Grao, Spain, transmits to the State Department the following notes on Spanish silkworm gut:

"An article of perhaps no little interest to many persons in the United States and of some substantial importance to Spanish industry is the so-called gut from silkworms. This is useful for fishing purposes, partly on account of its great tenacity and partly owing to its transparent quality, the line attaching the hook when in the water not being visible.

"Since the decline of silk culture in this country the industry of making these silk threads has increased, leaving the peasants some profit; the prices, however, fluctuate according to the value of the silk. The higher the price of silk the fewer silkworms are used for fishing lines, and vice versa; yet about 4 per cent. of the silk grubs are destined yearly for the above-named purpose.

"The manner of obtaining this thread-like gut is as follows: After the grub has eaten enough mulberry leaves and before it begins to spin, which is during the months of May and June, it is thrown into vinegar for several hours. The insect is killed, and the substance which the grub, if alive, would have spun into a cocoon is forcibly drawn out from the dead worm into a much thicker and shorter silken thread, in which operation dexterity and experience on the part of the laborer are important. Two thick threads (from each grub) are placed for about four hours in clear, cold water, after which they are dipped during ten to fifteen minutes in a solution of some caustic, for which purpose soft soap dissolved in water is used here. This serves to loosen a fine outer skin, which is next removed by the hands, while the laborer holds the thread between his teeth. The silk is then hung up to dry, care being taken to choose a shady place, as the sun has the effect of making them too brittle afterward. In some parts of the country these silk guts are bleached with sulphur vapor, which makes them look beautifully glossy and snow white, like spun glass, while those naturally dried retain always a yellowish tint.

"The quality of the gut is decided according to the healthy condition of the worm, round indicating a good quality and flat an inferior one; also, the length is important, thirty-two centimeters of fine, useful thread being sometimes made. The thickness depends also upon the condition of the grub. It is found to be as much as one millimeter in the Spanish insect, while those from Italy and Greece produce very fine and thin gut strings. These are, to some extent, imported here and sold again by weight at from $50 to $60 (United States) per kilogram. About 40,000 to 50,000 threads are in each kilogram. The Spanish production is made up neatly in bundles of one hundred threads and sold by ten such bundles, or one thousand threads, at about $4 for the round kind and $1.50 to $2 for the flat kind.

"The time for selling this article wholesale is during January, February, March and April; the retail trade is during the summer months and fishing season. Although Murcia is the principal place of this industry, yet most sales are made outside of that city.

"The peasants of Murcia raised their prices upon the slightest demand, which drove buyers from the place; the peasants now go every year with their goods, packed in boxes, up and down the entire coast of Spain on the Mediterranean as far as France. Valencia is considered the best market.

"Orders from firms abroad should be given only to reliable persons here, who, at the same time, understand this article well. Direct negotiations with the traders should be avoided. This article offers too little opportunity for fraud.

"This United States consular agency is willing to answer any inquiries from American firms and will place them in communication with a reliable commercial house here."

Chicago Fly-Casting Club.

CHICAGO, May 22.—*Editor Forest and Stream:* We send you scores of the bait-casting to-day. On account of the high winds prevailing, the other competitions were declared off. Bait-casting: C. Babcock 85ft., L. F. Crosby 69ft., B. W. Goodsell 82⅘ft., L. Goodwin 82⅕ft., E. D. Letterman 89⅖ft., C. A. Lippincott 89ft., G. A. Murrell 96ft., H. A. Newkirk 81⅗ft., F. N. Peet 92⅖ft., J. E. Strong 76⅗ft., J. H. Smith 88ft., J. Haskell 94⅘ft.

The medal holder for bait casting is Geo. A. Murrell.

GEO. A. MURRELL.

For Pere Marquette Waters.

SAGINAW, Mich., May 17.—Just came back from a two days' fishing at the Pere Marquette Club. Our stream is literally alive with trout this year. Had a couple of invited friends along, not expert anglers; there were six in the party, and in two days we took 480 trout. We are allowed to retain nothing smaller than 7in. I think this speaks well for our stream. They are not liver-fed fish by any means, but are as wild as hawks. We simply plant fry and yearlings every year in the stream and nature does the rest. W. B. M.

ON NEW ENGLAND WATERS.

Boston, May 22.—It has been a great week for fishing parties and fishermen. A great many are absent at their favorite waters, and a great many are going. To date the reports of catches are not particularly encouraging, if one reads between the lines of the many newspaper reports. A dozen failures should be put between these lines where one of the successes is mentioned. At the Upper Dam, Richardson Lake, Me., there has been a crowd of anglers, beginning to arrive as soon as the ice was out, but their success was poor. One gentleman fished faithfully six days with a record of six trout, the largest not over 2lbs. Another gentleman, from Lynn, fished a week and finally did obtain a trout of 7lbs., the largest of the season. He went up to the mouth of Mill Brook and fished one day. There were ten other fishermen there. He took two small trout, and others did no better.

At Rangeley there has been better sport than almost anywhere on the lakes of that name. But the crowd is great. General Passenger and Ticket Agent F. E Boothby writes me that he has a report from Rangeley stating that the number of sportsmen there is greater than ever before for so early in the season. He also has a report of a landlocked salmon being taken early in the week, weighing 10lbs. This is a very large salmon for that lake; but sportsmen who are watching the progress of salmon in the Rangeleys, since stocking with them begun, think that the size of the fish is increasing every year. It is very certain that the food for salmon, in the shape of smelts, is increasing. These fish have been introduced in the Rangeley waters but a few years—introduced by the Fish Commission, for salmon food. This spring a gentleman informs me that the water below the Upper Dam has been literally alive with smelt; something never seen before. He also states that the big trout could be seen following up the smelts, and seizing them as often as their digestion would allow. Apparently the trout were having a great feast, and they utterly declined to take the ordinary live minnow bait, or to rise to a fly, while the smelt lasted. The same feature has been noted at Bemis.

Reports from Moosehead are pleasing the hotel men this year, and one may easily be glad of it, from a business standpoint. Mr. O. A. Dennen informed me Monday the Tisdale party, of Leominster, Mass., had just taken a lake trout weighing 30lbs.; a monster, and about the largest one of which there is any authentic record from that lake. Good success is also being had with brook on that lake. The big Produce party left Boston for Moosehead Thursday evening. The party is to be joined by the Camp Comfort Club, from Pawtuxet. The present trip makes the fiftieth one to the credit of Mr. Edwin Smith—a veteran angler, surely; and may the boys all live to make as many trips.

Another Boston party of representative business men is off on a fishing trip this week, to the beautiful camps of the Inglewood Club, in New Brunswick The party is largely composed of members of the club, and will be absent for a couple of weeks. They left Boston Friday evening. There were at least thirty sportsmen on the 7:45 train from the Union Station last evening; not including the many persons "going a-fishing" quietly by themselves. Who will say that the love of sport with rod and reel is not on the increase.

Mr. R. A. Tuttle, proprietor of Lake Point Cottage at Rangeley Outlet, with his party, went up to camp on Monday. They had a through parlor car from Boston to Bemis. The remarkable feature was that such a car is being run to the very heart of the Rangeleys, reaching Bemis at 6 in the evening, only nine hours from Boston; then getting to The Birches at 7 o'clock, Haines Landing at 7:30, and over to camp by dusk.

The Duck Lake Club left Boston Friday evening for the Schoodics. The club, under the management of Mr. H. O. Underwood, has three camps at the Schoodics, one at Grand Lake, one at Pleasant Lake and one at Duck Lake. At one or the other of these camps the club members are almost always sure of fairly good fishing, as fishing goes nowadays. Word just comes in from a Boston gentleman that he has taken a salmon weighing 20lbs. at Grand Lake, or in that vicinity. It is suggested that such must be a sea salmon, if the report is true, since the landlocked salmon of the Schoodics do not grow to that size.

Mr. J. Otis Wetherbee is out from his trip to B Pond, where he has had good fishing He has been accompanied by Mr. Bayard Thayer and Congressman Simpkins. Mr. George R. Hall, of the Adams House, Boston, is just in from Moosehead, where he has had excellent fishing. A noble string of trout fell to the lot of his party. On the trip Mr. Hall visited Castle Harmony, Harmony Lake, where he found cold weather and poor fishing. Mr. James G. Wildman, with the two Foster Brothers, have returned from Moosehead Lake with a string of sixty-two good trout. Mr. Wildman says that he took a great many fish on the Stanley smelt, Sebago pattern. E. P. Mason has just returned from Bemir, where he did not have great luck. Mr. Harry Percival, of Bemir, says that the water has been alive with smelt, even at Bemir, and that many of them have been floating dead on the top of the water. On these minnows the trout have gorged themselves, and have not taken to other bait. In the maw of one trout of 2½lbs. thirteen of these little smelt were found.

Mr. Louis Cabot, of Brookline, goes to his salmon river, the Grand, P. Q., June 1. For his guest he has Mr. G. H. Richards, who doubtless believes he is particularly fortunate in being invited to the "best salmon river in the world."

Mr. D. H. Blanchard and Mr. E. Rolin Jones are on a fishing trip to the latter's beautiful camps at Winnepisaukee.

Special.

Moosehead Lake.

Bangor, Me., May 22.—S. L. Small and Dana Crockett, of Dexter, at the thoroughfare between Sugar Island and the mainland near the place known as McNear's, fished an hour and captured four trout, the combined weight of which was 14lbs. The trout weighed 5, 4¼, 2½, 2¼lbs.

C. C. More, of New York, is enjoying some great fly fishing, killing twelve, fourteen, and even up to thirty trout a day.

A laker weighing 29lbs. was captured off Norcross Brook last Saturday, at 11:30 in the morning.

The Mohawk Fishing Club is having good luck. Monday the club's catch was sixty-seven, ex-Senator Jacques landing the largest fish.

George Emmett, of Attleboro, Mass., has captured his full allowance and has the record for the largest square-tailer thus far. It weighed 4¾lbs. dressed. Mr. Emmett has fished most of the time off Green Island.

Sebec Lake.

Great catches of landlocked salmon are reported from Sebec Lake. The Commissioners of Inland Fisheries and Game visited the lake the first of the week and report numerous catches of fine fish. Geo. M. Houghton.

Some Maine Waters.

Dixfield, Me., May 23.—I have just come home from a two week's trip over a large section of the State, visiting Sebago, Sebec and Moosehead, besides many places in Aroostook county. We could only stop a day in a place and had but short time for fishing. At Sebago I only had one-half day, during which I hooked and landed four salmon; smallest 4lbs., largest 10½lbs. Also hooked two others which I lost. Messrs Carleton, Oak and myself had one day at Sebec Lake, taking in all fifteen salmon of 3 to 4lbs. each.

At Moosehead a party of eight of us took 250lbs. in one day, mainly lakers. This would almost seem to stamp us as fish hogs; but after examining the stomachs of some of those lakers, I have no compunctions in that direction. I saw one opened, weighing 8¼lbs. as he was caught, with two good-sized shiners, one white fish and a trout of at least 1½lbs. In another there was certainly a pint of smelts.

We found it too early for fly-fishing, as the weather thus far has been very cold and the season late, although Mr. Oak succeeded in rising two or three at the outlet. We caught our fish by trolling with the Stanley smelt—we could not get them with anything else. At Moosehead and Sebec Messrs. Oak, Carleton and myself ran two rods each—one baited with Stanley smelt, Sebago pattern, the other with live minnow. Every strike we had was on the smelt.

To-morrow I go to Auburn Lake, where some very fine salmon have been taken this spring of 4 to 9lbs. The last of this week we go to Rangeley. At all of these places we have hearings, and only get a day or part of one to try the fish.

June 1 we are called to Grand Lake on fishway matters, starting with canoe at Duck Lake, through Bottle, Dobsis lakes and others to Grand Lake Stream, and home via Calais and Princeton. Will try and find time when I return to let you know what incidents of interest occur on the route.

June 21 we go to Rangeley at the meeting of the Maine Fish and Game Association; from Rangeley to Parmachene, to hold hearings in regard to streams and ponds in that vicinity. H. O. Stanley.

New Found Lake.

North Dumbarton, N. H., May 22.—Recently, while at New Found Lake, N. H., I saw a fine string of landlocked salmon which were caught by a party of three during the week. The fish weighed from 3 to 10lbs. I also saw the record of the same party for a number of seasons, showing some very large fish—trout up to 23lbs. and salmon up to 13lbs. C. M. Stark.

THE MASSACHUSETTS ASSOCIATION.

Boston, May 21.—*Editor Forest and Stream:* The last regular meeting of the Massachusetts Fish and Game Protective Association before the vacation season was held at Young's Hotel last evening, and in spite of the fact that a considerable number of the members are already in the woods and on the lakes indulging in their favorite pastime, there was a large attendance. And it was good to see the veterans—those who have passed the chairs, so to speak, ex-Presidents Wiggin, Clarke and Samuels—still on deck and eager to further the work of the Association. There was a business meeting of the board of management at 6 o'clock, Col. Rockwell, the president, in the chair. Secretary Kimball reported on several matters of correspondence with various parties upon subjects connected with fish and game protection; he also read a letter from the Boston Curling Club offering the use of their house and grounds on Fresh Pond in case the Association might desire to hold a fly-casting tournament, and it was ordered that the courtesy be acknowledged and accepted. The idea seemed to strike several gentlemen favorably, and it was voted to refer the matter to a special committee to consider and report upon it later. It is probably too late to do anything in that line this season, but something may come from it another year. Col. Rockwell suggested the advisability of having printed a sort of prospectus setting forth the objects and aims of the Association, to be distributed where they might do the most good, and the subject was referred to the publication committee. Secretary Kimball called attention to the demand for copies of the cloth poster issued by the Association giving the close dates and all kinds of fish and game and he was authorized to procure a further supply for general circulation. Upon the adjournment of the board the supper room was visited, where upward of seventy-five members with a few guests took seats. The meal over, a brief business meeting was held at which the following members were elected: A. H. Gillis, A. L. Kidd, George W. Gale, S M. Smith, T. B. Parker, G. H. Gray, W. P. Bruisseau, G. W. Tufts, T. F. Galvin, B. Herbert White. President Rockwell then opened the speech meeting in a few remarks and introduced Hon. H. N. Shepard, a well known member of the bar, who gave a very interesting talk upon "Lake St. John and the Ouananische." Mr. Shepard at once disclaimed being a fisherman, but said he did love the woods, the lakes and the streams, and he was always ready to go whenever he could into new and strange countries in search of the beautiful and wonderful in nature; the Lake St. John country filled the bill in these particulars, and of course to the fisherman it is a very paradise. While on the subject of this particular fish Col. Rockwell followed with a brief narration of his experiences at the Grand Discharge, and said that he didn't think much of the gameness of the ouananiche. Mr. James Murray Kay was the next speaker, and he gave a very interesting talk upon "Salmon Angling" as well as upon the habits and peculiarities of the *Salmo salar*. Incidentally he remarked that a man who fishes for the score is not a sportsman but a barbarian—a sentiment that was loudly applauded. Mr. St. N. Church, of New Bedford, spoke for the men who use the rifle as well as the rod (but rather prefer the rifle), and the meeting, a really profitable and enjoyable one, was shortly after brought to a close. Wm. B. Smart.

Iowa Fishing Season.

Charles City, Ia., May 16.—Iowa's fish law expired the 15th, and many parties were out to try their luck in the Cedar River at this place. As far as reported, quite all were more or less successful.

Among the best catches were fifteen black bass, the two largest weighing 4 and 4¼lbs.; eight pickerel, ranging in weight from 2 to 6lbs.; while the largest one hooked for the day reached 15lbs., 42½in. in length, being caught a few miles below the city. Very few pike were taken, although the riled condition of the water would seem to favor their biting better than the above-named varieties. Vane Simmonds.

RHODE ISLAND SEA FISHING.

Providence, R. I., May 24.—*Editor Forest and Stream:* A number of squiteague, which is one of the most delicious fish of these waters, have recently been taken in traps in Palmer's River, Warren, but none have yet taken the hook. Striped bass and perch are also taken in the traps.

The tautog season in the upper bay is waning, and the fish are moving down the bay. They have commenced to mate, and although the amateurs still make catches off the old Beacon, Sabin's Point and Bullock's Point lighthouses, the majority of the fish are further down the bay, at Conimicut Light and that vicinity, where some large catches are reported. Horace H Franklin, of this city, caught a 7-pounder here on Friday. One weighing an even 18lbs. was caught the same day off Price's Neck, Newport, which establishes the record for this vicinity. George Waterman caught one below Pawtuxet weighing 13lbs. and another of 6½lbs. His catch for that day (19th inst.) was nearly 100lbs. Tautog are most uncertain fish, and while generally biting best on the ebb tide, are liable to bite in any weather and on any day. This season they have been running very well. The fishermen who have once tasted the joy of hauling in a good-sized tautog with either hand line or rod and reel will never forsake the sport for anything else so long as the tautog are running.

Fish Commissioner John H. Northup took a party down the bay Tuesday on a fishing trip. The party consisted of James C. Collins, clerk of the Fish Commissioners; Judge James Harris, of Smithfield; Attorney General Tanner, Jas. T. Lockwood, Benjamin Hill, Charles I. Northup and Elihu R. Shippee. A pleasant trip was made, and about 100lbs. of tautog were caught; Benjamin Hill catching the largest, which weighed 7lbs.

A fine 30lb moose was born at the menagerie connected with Roger Williams Park on Wednesday last. The parents are a pair that were purchased of a famous old trapper and hunter of New Brunswick, named Philip Sellick.

P. P. Dodge, of this city, caught a tautog weighing 11lbs. 7oz. off Bullock's Point lighthouse Monday.

Messrs. Brown and Lillibridge, two well-known fishermen, of Saylesville, went down to the southern part of the State on the 15th, trout fishing, and were very successful, exhibiting on their return ninety-seven of the speckled beauties as the result of their outing. All were fair-sized fish.

The Trout in Nova Scotia.

Halifax, N. S., May 20.—*Editor Forest and Stream:* For the last ten days or more a heavy fog has obliterated this section of the country, the intermissions being taken advantage of by showers, and the sad tones of the fog bell on George's Island has been a fitting accompaniment to the growls of those fishermen who love not to wrap themselves in cold, wet oil skins and sit for hours in a wetter boat.

Nevertheless, the lakes have been spotted with the more enthusiastic and also the market fishermen, the latter, usually, at this time succeeding best, as they are least fastidious in the choice of lures. The Mayfly is rising to an extent that makes the artificial almost useless. Last week I saw within a radius of 10ft. of our boat six large trout out of the water at the same time, and although we had flies on our casts very closely resembling the real, we were treated with damp contempt.

My companion, Mr. Eagar, a resident and experienced sportsman, informs me that when the ephemera cease to rise, the following few days will be magnificent for fishing, and he is now in communication with several lakes, awaiting the word.

About three weeks ago we tried the lake and runs near the Fourteen-Mile House, remaining two days, and although the conditions were quite unfavorable, we brought back twenty-three fine trout, the largest weighing 2½lbs.

Three local fishermen returning from Musquodoboit Harbor about the end of April, report the fishing first-class, but the roads dreadful. They brought in forty two trout, averaging about 2½lbs., and two salmon, weight not given.

There were also exhibited in the windows of a couple of tradesmen, on May 5, part of a fare of 140 trout, killed at Mill Lake, Hubbard's Cove, the largest marked 4½lbs., and he looked it. The Saturday markets are full of flabby-looking trout that sell from 20 to 60 cents a string of half a dozen.

We expect the grayling to run in about three weeks, and I anticipate some rare sport. I wish Mr. Cheney was up here. I feel certain he would break his grayling record.

H. M. Rosenberg.

New York Black Bass Law.

The new law signed by Gov. Black last Saturday makes the open season for black bass or Oswego bass June 15 to Dec. 31 inclusive. This applies to the entire State with the exception of the Thousand Island waters, where the open season is June 9 to Jan. 1, and waters of town of Horicon, where the season is July 10 to Jan. 1.

The Black Fly and Mosquito.

Actual test in the Maine woods last season convinced me that two-thirds pure tar and one third vaseline, well worked together, is a perfect repellent to black flies and mosquitoes. Two or three applications a day are sufficient, and soap and water will effectually remove it. H. S. C.

Last week two wires that run from the station telegraph office in Portsmouth were found to be crossed. William Ballard, the railroad lineman, was notified, and he found the trouble about two miles west of the city. It was caused by a small steel trap with about 2ft. of chain attached to it. The chain was tightly wound several times around the two wires, bringing them in contact and rendering them both useless. There were blood and feathers on the trap, and it was probably done by some large bird getting caught in the trap and flying off with it attached to its leg. In its flight the chain hanging below caught upon the wires, the sudden jerk winding it tightly around and liberating the bird. Mr. Ballard says it was the strangest cross he has seen in fifteen years as a lineman.—*Manchester (N. H.) Union.*

A family in this town moved not long ago into a house which was found to be infested with rats in great numbers. All the usual remedies were tried in vain. After the family were nearly in despair a friend advised them to get a pair of rabbits and let them run about the house. The rabbits were brought to the house and the rats left. The Pied Piper of Hamelin was not more effective. It is a good thing to know this method of ridding a house of rats, but each one must decide for himself which is worse about a house—rabbits or rats.—*Baltimore Sun.*

The Kennel.

SCHOOLING THE DOG.—I.

[This paper is the first of a series on the education of the dog as it relates to sport with the gun in field shooting. The subject will be fully treated in all its details.

IN the education of the dog, as in the education of boys and girls and men and women, there are no educational systems which compensate for ignorance and inefficiency on the part of the teacher, or for incapacity on the part of the pupil. There must be ability to convey knowledge on the one hand, and on the other an ability to receive it, else there is no proper progress. The mental capacity of the dog and the knowledge necessary to serve him through life are infinitely less than those required to serve man, but none the less his manner of acquiring knowledge is much the same as man's. Still, while the manner of it is similar, the dog's sources of information are much narrower, for, being of a lower order of intelligence than man, and having no power of speech worth considering in this connection, he can learn only from repeated, direct experience.

Man learns much from his fellow man through the medium of speech, besides having the knowledge of the world to draw upon, as preserved in writings. The dog's lessons, as between teacher and pupil, must always be object lessons. Continued discourse conveys no knowledge to him, as it does between man and man.

This is considering the matter in the narrow scope as it relates to teacher and pupil. It may be possible to show that the dog has faculties of a higher order than the mere recognition and relation of objects; but he must acquire his knowledge before he is able to apply it, and the matter of acquiring it is what is herein considered; hence, without going into any abstruse treatment of the objective and subjective, it is sufficient for the purpose to ignore herein the more intricate phenomena of mind.

Thus, any system held forth as having some inherent virtue, whereby a dog will be trained quickly and thoroughly regardless of his capacity to receive a training or the trainer's ability to give it, denotes that the claimant of such system is either very simple in the matter of which he treats, or is not very scrupulous as to his manner of treating it.

Every one cannot train a dog, but every one can try to train, and after trying he will know more about it than if he had never tried; in fact, without having tried, one will never know definitely whether he can or cannot train. Nor are there any men who are born trainers. Some men may have a natural aptitude for it, and learn it quickly and accurately, as they learn anything else quickly and accurately for which they have an aptitude. Contrary to common belief, therefore, the training of a dog is not one of the things which come intuitively. In theory, every man knows a sure cure for his friend's cold; what is the correct thing to do to start a balky horse, and without a moment's thought he can give an *ex cathedra* opinion on any great public question of the day—and they are all very good as theories. If they fail consecutively a thousand times in practice, they are equally as good to serve again on occasion.

The more inexperienced the man the more impractical and opinionated he is certain to be. If he be experienced and correctly practical in certain specialties he may be visionary concerning those of others, of which he has little knowledge. It is not strange then that nearly everyone thinks he can train a dog.

Nor is dog-training a matter of set forms, and arbitrary methods of applications on the part of a competent trainer, though the beginner generally proceeds on the theory that he has but to learn a method by rote, and the application of it is a matter of course. A method of training, as set forth in books, may be thoroughly efficient so far as a method can be expressed in words, but there is much beside all that, and essentially supplementary to it, which the beginner must acquire by observation and experience and which he must learn for himself. Having the theory accurately set forth, he must thus qualify himself for its practical application, and in applying it, nothing is more important than a thorough understanding of the dog himself; that is to say, the understanding on the part of the trainer of the dog's capacity to understand and of what the dog understands of his teacher's purposes; and he should be able to judge of the dog's peculiarities of character. If the dog is incapable of learning quickly owing to stupidity, or, though highly intelligent he from obstinacy refuses to learn, the former would need the most patient consideration; the latter, due consideration with unremitting firmness, and perhaps punishment. Yet the novice would be likely to use the same set method in the same way on both, and also on all others. There are hundreds of little differences of dog character and capabilities to be considered, and until the trainer reaches a point of discernment where he can perceive, understand and take advantage of them, his attempts as a teacher will be but little more than mechanical. He may, now and then, have success with a dog from the accident that the set, arbitrary method happens to fit the dog's peculiarities, but it is merely a happening. With a little thought over it, it is clear that it is palpably absurd to apply one set method to the nervous, the stupid, the intelligent, the lazy, the timid, the diligent, the fast, the slow, the weak, the strong, etc. Such must result in many failures, and the best success will be moderate.

Methods should be modified to the circumstances of each individual case, compromising with the idiosyncrasies of the pupil, and applying with a view to securing certain results and not with a view to preserve arbitrary methods of teaching. By kindness, and preserving the dog's interest, always keeping progress within his capacity, success will be the result in every case where it is possible. There will be failures betimes, as in cases where the dog is mentally weak, so much so that he is a dullard, or understanding what is taught him for the moment, he cannot remember it from day to day; or if he is proficient in learning, he may be too indolent to work afield, so that if trained he is merely a trained loafer; or he may be well trained and diligent yet incapable of good performance, owing to the functional powers of the nose, as an organ of scent, being deficient or absent. In such cases the trainer is powerless to correct the dog's shortcomings, also he may not be able to recognize the cause of the trouble, and therefore the greater need of close and careful observation of details from the start.

No trainer can supply qualities which nature has omitted. To be able to determine nicely all these points requires close observation. A knowledge of dog character will come to a trainer after a certain experience, even if he is left entirely to his own resources, but such is from a long experimental experience; but what is learned slowly from many experiments, losses and failures could have been much better learned at the beginning from the observance of advice given in approved methods and the exercise of perception and judgment.

Thus having given some consideration to the dog, he next would act wisely in giving a great deal to himself. He will need to study himself from a new standpoint. As a teacher, he will find a new character in himself, differing essentially from his every-day one. As teacher he will find that he is irritable, impatient, and unreasonable in his requirements of the dog; that he becomes angry over the dog's failure to do in a few moments what the trainer directs, and that his anger increases when the dog shows utter ignorance of the language which the trainer knows so well Knowing the language himself, he does not consider that the dog is ignorant of it, and has to learn the sound of the order so as to keep it in memory, and next its meaning and its application. At this juncture the amateur generally falls to and gives the dog a sound beating, and calls the tumult dog training. At the next lesson the poor dog associates the whole affair with a sound beating, and is in a state of mind for anything else rather than receiving lessons.

When a dog's fears are aroused, or he is made to feel needlessly uncomfortable, worried and uneasy, his progress as a pupil is slow. If the lessons are made obnoxious to him, the trainer has succeeded in making him more intent on avoiding them or having them ended than in learning their purpose. With a violent teacher the dog's life is truly a sad one. Knowledge is then acquired under the most disheartening difficulties. Under the same violent conditions the teacher would rise in rebellion and implore the world to witness his wrongs. If, when learning his A B C's, the good pedagogue had told him the names of the letters two or three times, then failing to receive proper answer, had jerked him violently by his neck, kicked him in his ribs and slashed him with a heavy whip, he would have considered a lesson as something devoid of pleasure. The harshness and inefficiency so deterrent to the boy's progress and so harmful to his nature are equally so to the dog's. The same patient labor on the part of the teacher in dealing with the education of the boy is the same required in dealing with the education of the dog. Their manner of gaining knowledge differs but little. Punishment teaches nothing in the way of acquiring knowledge excepting that his teacher is an unpleasant person, and one to be avoided. Punishment serves in its place to prevent a dog from doing certain things, and that is the extent of its mission. It is good in its place as a preventive, but it develops nothing useful. But when it is applied for the reason that the teacher is angry, it is entirely outside of the purposes of dog training, though the teacher may imagine the violence is a part of it. Until the trainer can control his temper and fit his efforts to the dog's capacity and progress, he will be inefficient. And these things no one can do for him. His own judgment and self-control are his only reliance, as they are entirely outside the scope of any system.

A. K. C. MEETING.

THE regular quarterly meeting of the American Kennel Club was held in its offices at 55 Liberty street, May 20.

There were present American Fox Terrier Club (H. H. Hunnewell, Jr.), Boston Terrier Club (L. A. Burritt), Butterfly Bench Show Association (D. E. Waters), Collie Club (James Watson), Irish Terrier Club (W. L. Beadleston), Metropolitan Kennel Club (G. M. Carnochan), New England Kennel Club (Edward Brooks), Pointer Club (George Jarvis), Southern California Kennel Club (C. D. Bernheimer), Poodle Club (H. G. Trevor), National Beagle Club (H. F. Schellhass), Gordon Setter Club (J. B. Blossom); Associates (G. W. H. Ritchie and A. C. Wilmerding). Vice-President Edward Brooks presided. Capt. Knocker was accepted as the delegate of the San Francisco Kennel Club.

The treasurer's report showed a balance of $4,018.66 on hand. The secretary's quarterly report was accepted and placed on file. The report of the advisory board (April 6) was read as already published, accepted and placed on file. The report of the Stud Book committee was accepted with the adoption of its recommendations, as follows: *Re* the pedigree of the black and tan terrier Pittsburgh Ben (38,195) on application of W. H. Davis, for the cancellation of this dog's registration, was refused, there being no evidence to support it.

Re application of Robert Walker, in the matter of the breeder of Dunrobin Ossian, Oswald, Noel and Torfrida, the committee recommended that the original entries be canceled, as they are wrong, and that Mr. Albion L. Page register them correctly, paying the fee the same as for an original entry. The wins and records of Dunrobin Ossian and Dunrobin Oswald to stand. Mr. Page was under a mistaken belief that he was the breeder, but on having his attention called to the error he asked for its correction.

The application of Fred J. Rommell, Chicago, for reinstatement was dismissed.

The committee recommended the suspension of Joe Saks, Washington, till he gives information concerning the pedigree of the fox terrier Dixie II., given as by Blemton Valiant—Belgrave Viola, which is thought to be incorrect. Mr. Saks had ignored the committee's inquiries concerning the matter.

The complaint of Wm. Grebe, *re* the breeder and pedigree of the corded poodle Black Prince (39,424), the committee concluded to permit the registration of Black Prince; not as now in the stud book, but by Tell (Othello—Desdemona) out of Flora.

Two other cases were mentioned by the committee which were not ready to be reported on, each being in respect to false pedigrees traced to Miller, of Westchester, Pa., who was disqualified last year. Endeavors to obtain the necessary evidence upon which the postal authorities could act have in previous cases failed, but it is hoped that in these cases the required affidavits may be secured.

The committee on rules reported that it has under consideration general amendments to the rules governing dog shows and clubs holding such shows. It will conclude its labors so its recommendations may be published in July or August. Mr. Vredenburg made a verbal report in behalf of the special committee appointed to confer with the special committee of the Canadian Kennel Club. He reported that the following had been agreed upon: That the C. K. C. should be the Canadian Advisory Board of the A. K. C.; that all questions relating to Canada should be acted upon by that committee or board, subject, however, to confirmation or appeal to this club; that every show held in Canada must be held under A. K. C. rules, and that every show held in Canada must pay the A. K. C. the sum of $10, the same as is exacted from A. K. C. members; that the A. K. C. cease receiving money for registrations; that all listings for Canadian show must be made with the A. K. C. This was agreed to by the C. K. C., with the following conditions: That so far as challenge classes are concerned, the A. K. C. should make the same exceptions in their favor that was made in favor of the Pacific Coast; that Canada should be entitled to a representation in the A. K. C. with three delegates, one of whom was to be chairman of the Canadian Kennel Board, and by virtue of that position he was to have a seat on the Executive Board.

As this memorandum was changed materially by the Canadian Kennel Club in its application, the agreement is still in abeyance. The special committee's report was accepted and placed on file, and further negotiation will be allowed them.

The following kennel names were granted: Bayonne, to Mr. Leslie A. Burritt; Beaumaris, to Mr. Bulkley Wells; Bridge, to Mr. J. H. Mullins; Dorchester, to Mr. C. C. Kammerer; Fashion, to Mr. H. Shearman; Golden, to Mr. J. B. Martin; Scaleby, to Mr. John A. Detweller; Shadyside, to Messrs. Frederick S. Stedman and W. F. Bender; Tippecanoe, to Mr. Joseph Missenheimer; Verona, to Mrs. P. A. Hearst and Mr. J. E. de Ruyter.

The charges of misconduct by Mr. W. L. Washington against Mr. Alfred Von Cotzhausen, and the complaint of Mr. F. P. Kirby in behalf of Mr. Walter Griscome against the National Greyhound Club for non-payment of the club medal, won at the late New York show, were referred to the executive board.

The secretary reported that he had requested the Pacific Advisory Board to investigate the question of Mr. A. Russell Crowell accepting money on behalf of the A. K. C. and forgetting to send the same to the A. K. C.

Mr. Harry Malcolm, on appeal, was reinstated.

The action of a judge on the Pacific coast in giving so many equal firsts and seconds and thirds was declared to be reprehensible, and was referred to the committee on rules.

The Bull Terrier Club of America was dropped from the roll of membership.

The question of the relief to the dog show clubs whose forfeits of $25 have been forfeited for violations of the rule, was laid on the table pending the report of the committee on rules.

The Seattle Kennel Club was dropped for non-payment of dues.

A resolution was passed as follows:

Whereas, It is reported in the public press that the British Board of Agriculture has issued orders restricting the importation of dogs from America, based upon the idea that rabies is prevalent here, and,

Whereas, It is well known to those most closely connected with dogs as owners that rabies is practically unknown in this country, and that alleged cases of hydrophobia arising from the bites of dogs claimed to be rabid are in nearly every case published for sensational purposes, and with no knowledge of the actual condition of the dog, and the alleged cure of such persons is therefore purely imaginary and mercenary, be it therefore

Resolved that a special committee may be appointed by this club, whose duty it shall be to obtain information of a reliable nature regarding the existence of rabies in the United States, by communicating with dog owners throughout the country, and by such further steps as it may deem necessary.

The chairman stated that he would appoint a committee of five, three of whom would be expert veterinarians, and two members of the club.

National Beagle Club of America.

AN executive meeting of the National Beagle Club of America was held at the rooms of the American Kennel Club, May 13. Members present: H. F. Schellhass, Chairman; James W. Appleton, George B. Post, Jr., A. Wright Post and G. Mifflin Wharton.

Voted that the eighth annual field trials be held during the week commencing Monday, Oct. 25. Carried, that the chair appoint a field trial committee, members of which will be published later. GEORGE W. ROGERS, Sec'y.

208 WEST EIGHTY-EIGHTH STREET, New York.

POINTS AND FLUSHES.

From a correspondent we learn that the Manitoba Dog Owners' Association purpose having an amateur meeting, followed by the Manitoba Club, with the Continental switched between at the conclusion. The Northwestern will have a champion stake, the prize of which probably will be an illuminated Diploma (cost $25). In addition thereto Messrs. Walker & Sons will give a silver trophy costing $100. There will be no entry or starter's fees, and the winner will take the cup and diploma. Mr. Edward Dexter was invited to accept the patronship of the Northwestern Field Trial Club in place of the late highly respected patron, A. P. Heywood-Lonsdale. Mr. Dexter accepted, and said he was thoroughly in accord with the desires of the Northwestern Field Trials Club, viz., to have and hold field trials for the sake of encouraging sport in its purest and truest form, rather than from the usual incentive of a monetary consideration. The Northwestern Field Trial Club also think that in offering a trophy and diploma, with the reputation and story that go with such trophies, that their efforts will be appreciated by those who have a desire to find by an honest test if they own a champion, and especially when there is absolutely no expenditure in connection.

The doings of the A. K. C. afford a standard theme for some writers, in so far as they can find something to criticise adversely or something which can be forced to seem like error. Its beneficent works are rarely touched upon. When there is error, it is good and proper to point it out and disapprove it; but the manufacture of error is in itself a most reprehensible error. The latest "kick" against the A. K. C. action is in respect to the cancellation of the pug Hooker's win in the challenge class at the late St. Louis show. The rule governing such entry specifies that "it is necessary to specify on the entry blank a sufficient number of first prize winnings to entitle it to compete in such class until such time as it has won in a challenge class, after which one challenge win shall be sufficient." The entry of Hooker mentioned his eligibility as follows: "Winnings—First, New York, Chicago, St. Louis." Now that does not specify winnings "to entitle it to compete." It specifies *where* the winnings were, but not what they were.

No one can tell from the statement quoted above whether the dog won in open, novice, puppy or other classes. It is plain that the entry being so faulty the cancellation was just.

The premium list and entry blanks of the New England Kennel Club's open air dog show, to be held at the club grounds, Braintree, Mass., June 19, can be obtained of James E. Green, Braintree, Mass. Entry fee $1. Entries close on June 8. The club desires that those who are interested in dogs will aid and coöperate in making the show a success.

The kennel of the late A. P. Heywood-Lonsdale will be sold to the highest bidder at Aldridge's, London, on July 2. There are sixty-one all told.

N. Q. Pope, of Poland, Me., one of the oldest and most enthusiastic of fanciers and supporters of hound interests, died on May 13, of pneumonia, after a short illness. He was an active member of the Brunswick Fur Club and contributed much toward its success. He was on the point of giving up kennel interests, and a few days before his death he had promised all his dogs to Mr. A. McGregor, who had charge of his kennels.

Quite an important overhauling of the Boston Terrier Standard and Scale of Points is to be considered at a meeting to be held on June 4, at Young's Hotel, Boston, at 8 o'clock.

Mr. W. S. Bell, secretary of the Continental Field Trial Club, under date of May 22 writes us as follows: "Permit me through the medium of your paper to again call attention to the closing date of the Blue Ribbon Stake of the Continental Field Trials Club's chicken trials. These will be held at Morris, Manitoba, and advice from there reports plenty of chickens, therefore we look forward to successful trials. The entries will close June 1. I hope owners and handlers will take cognizance of this and give us a bumper entry list."

Mr. J. B. Baker, New York, recently purchased Tony Gale, a dog of excellent merit, and joined interest with the Eldred Kennels.

We learn that Mr. W. S. Bell will judge the Blue Ribbon and Excelsior Stake of the Continental Field Trial Club. His long experience and satisfactory performances will assure that he will do the judging skillfully.

Mr. Robert Johnson, Newburgh, N. Y., Superintendent of the Orange County Bench Show, Middleton, N. Y., informs us that his club claims the dates Sept. 21 to 24.

At an adjourned meeting of the Western Canada Kennel Club held recently in the Clarenden Hotel, Winnipeg, it was decided to hold the club's annual field trials on Aug. 30 and 31 instead of Sept. 6.

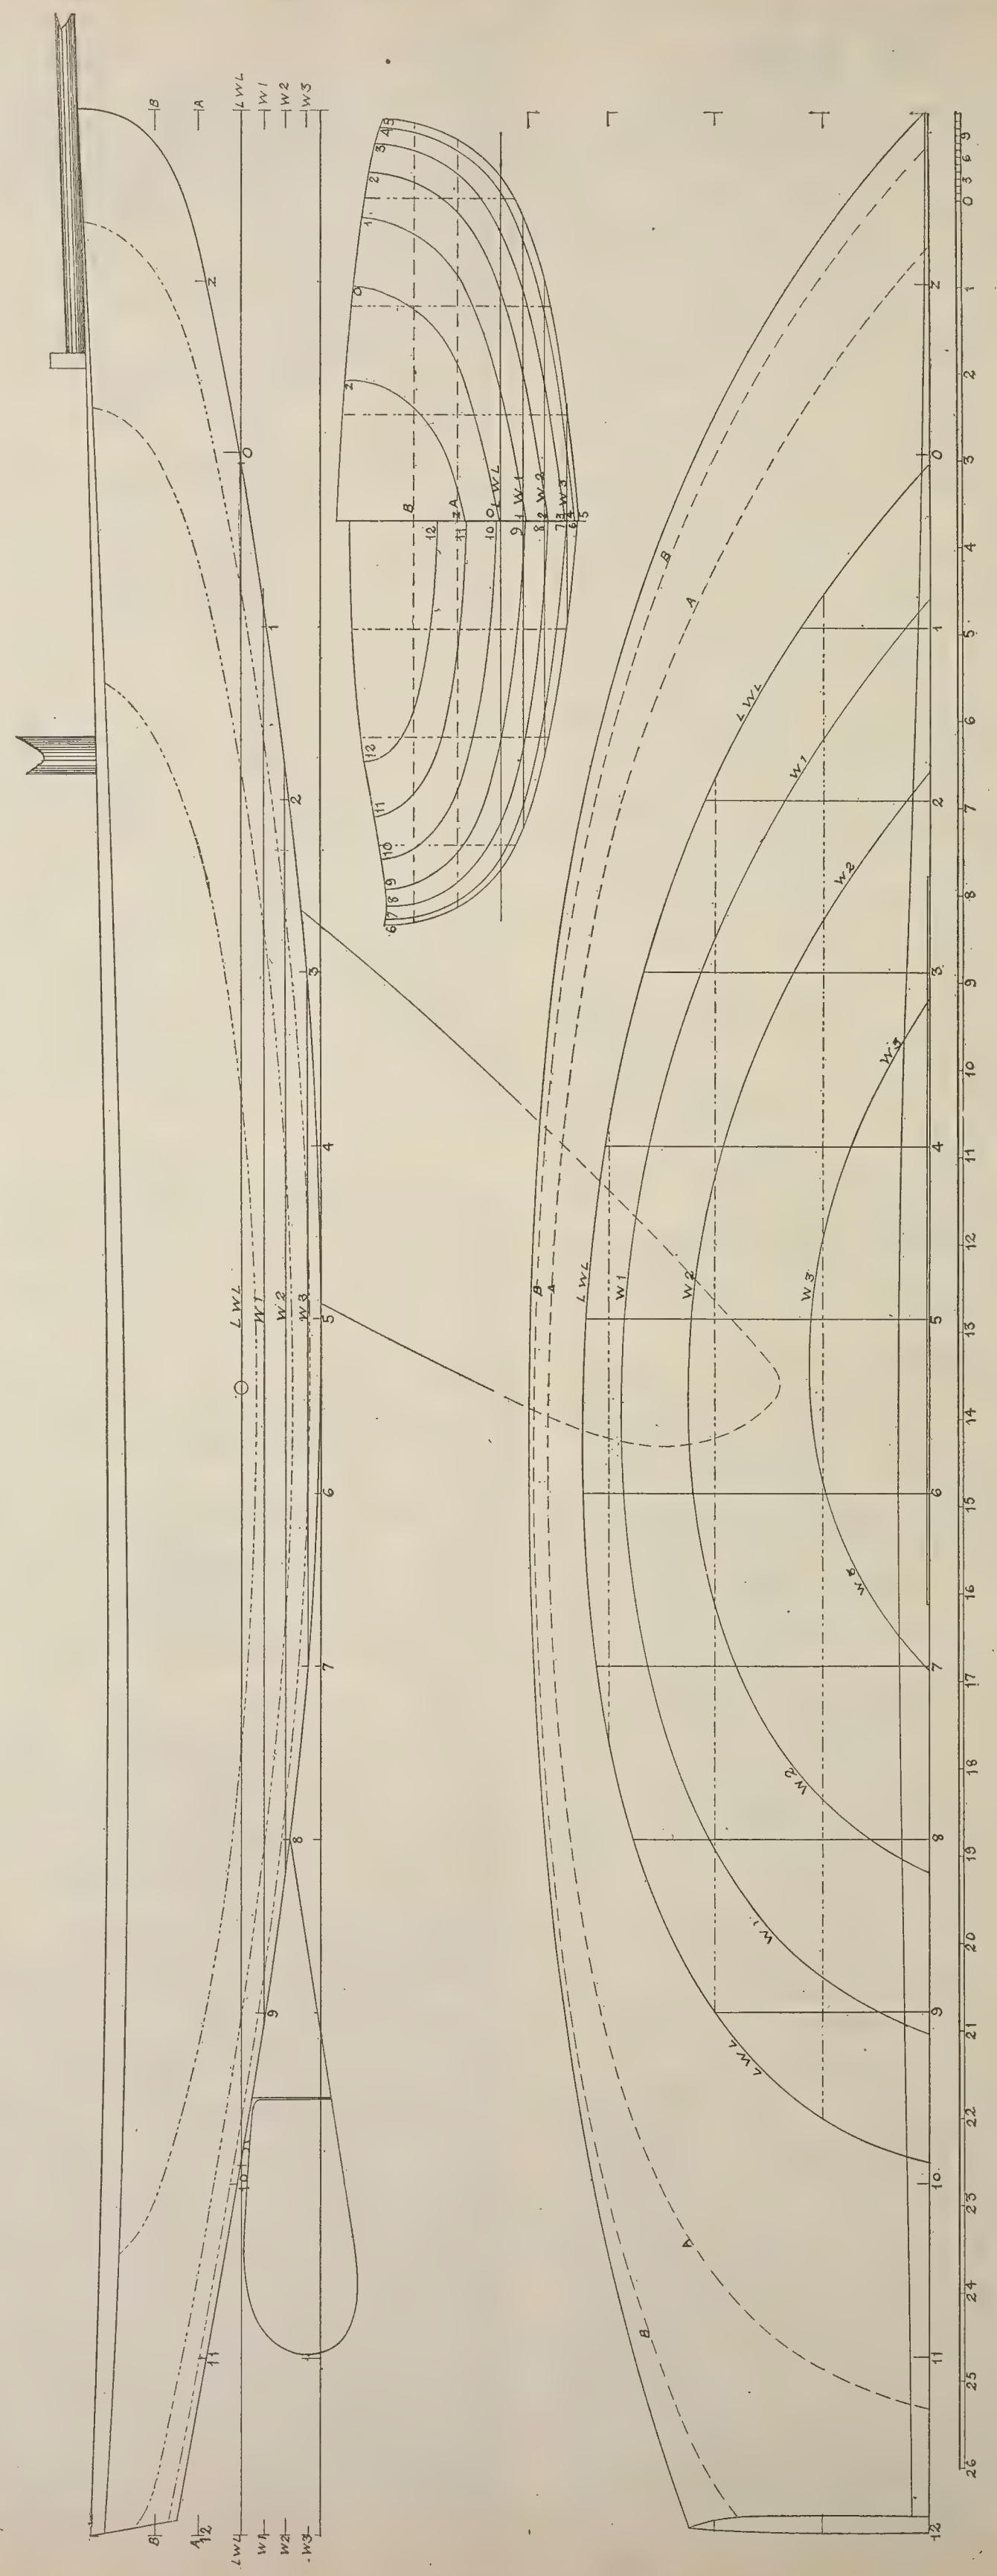
Mr. J. J. Flynn, secretary, writes us under date of May 13 as follows: "Kindly say that the dates of the International Fox Terrier show have been cancelled, and that the show will not be held until later."

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable

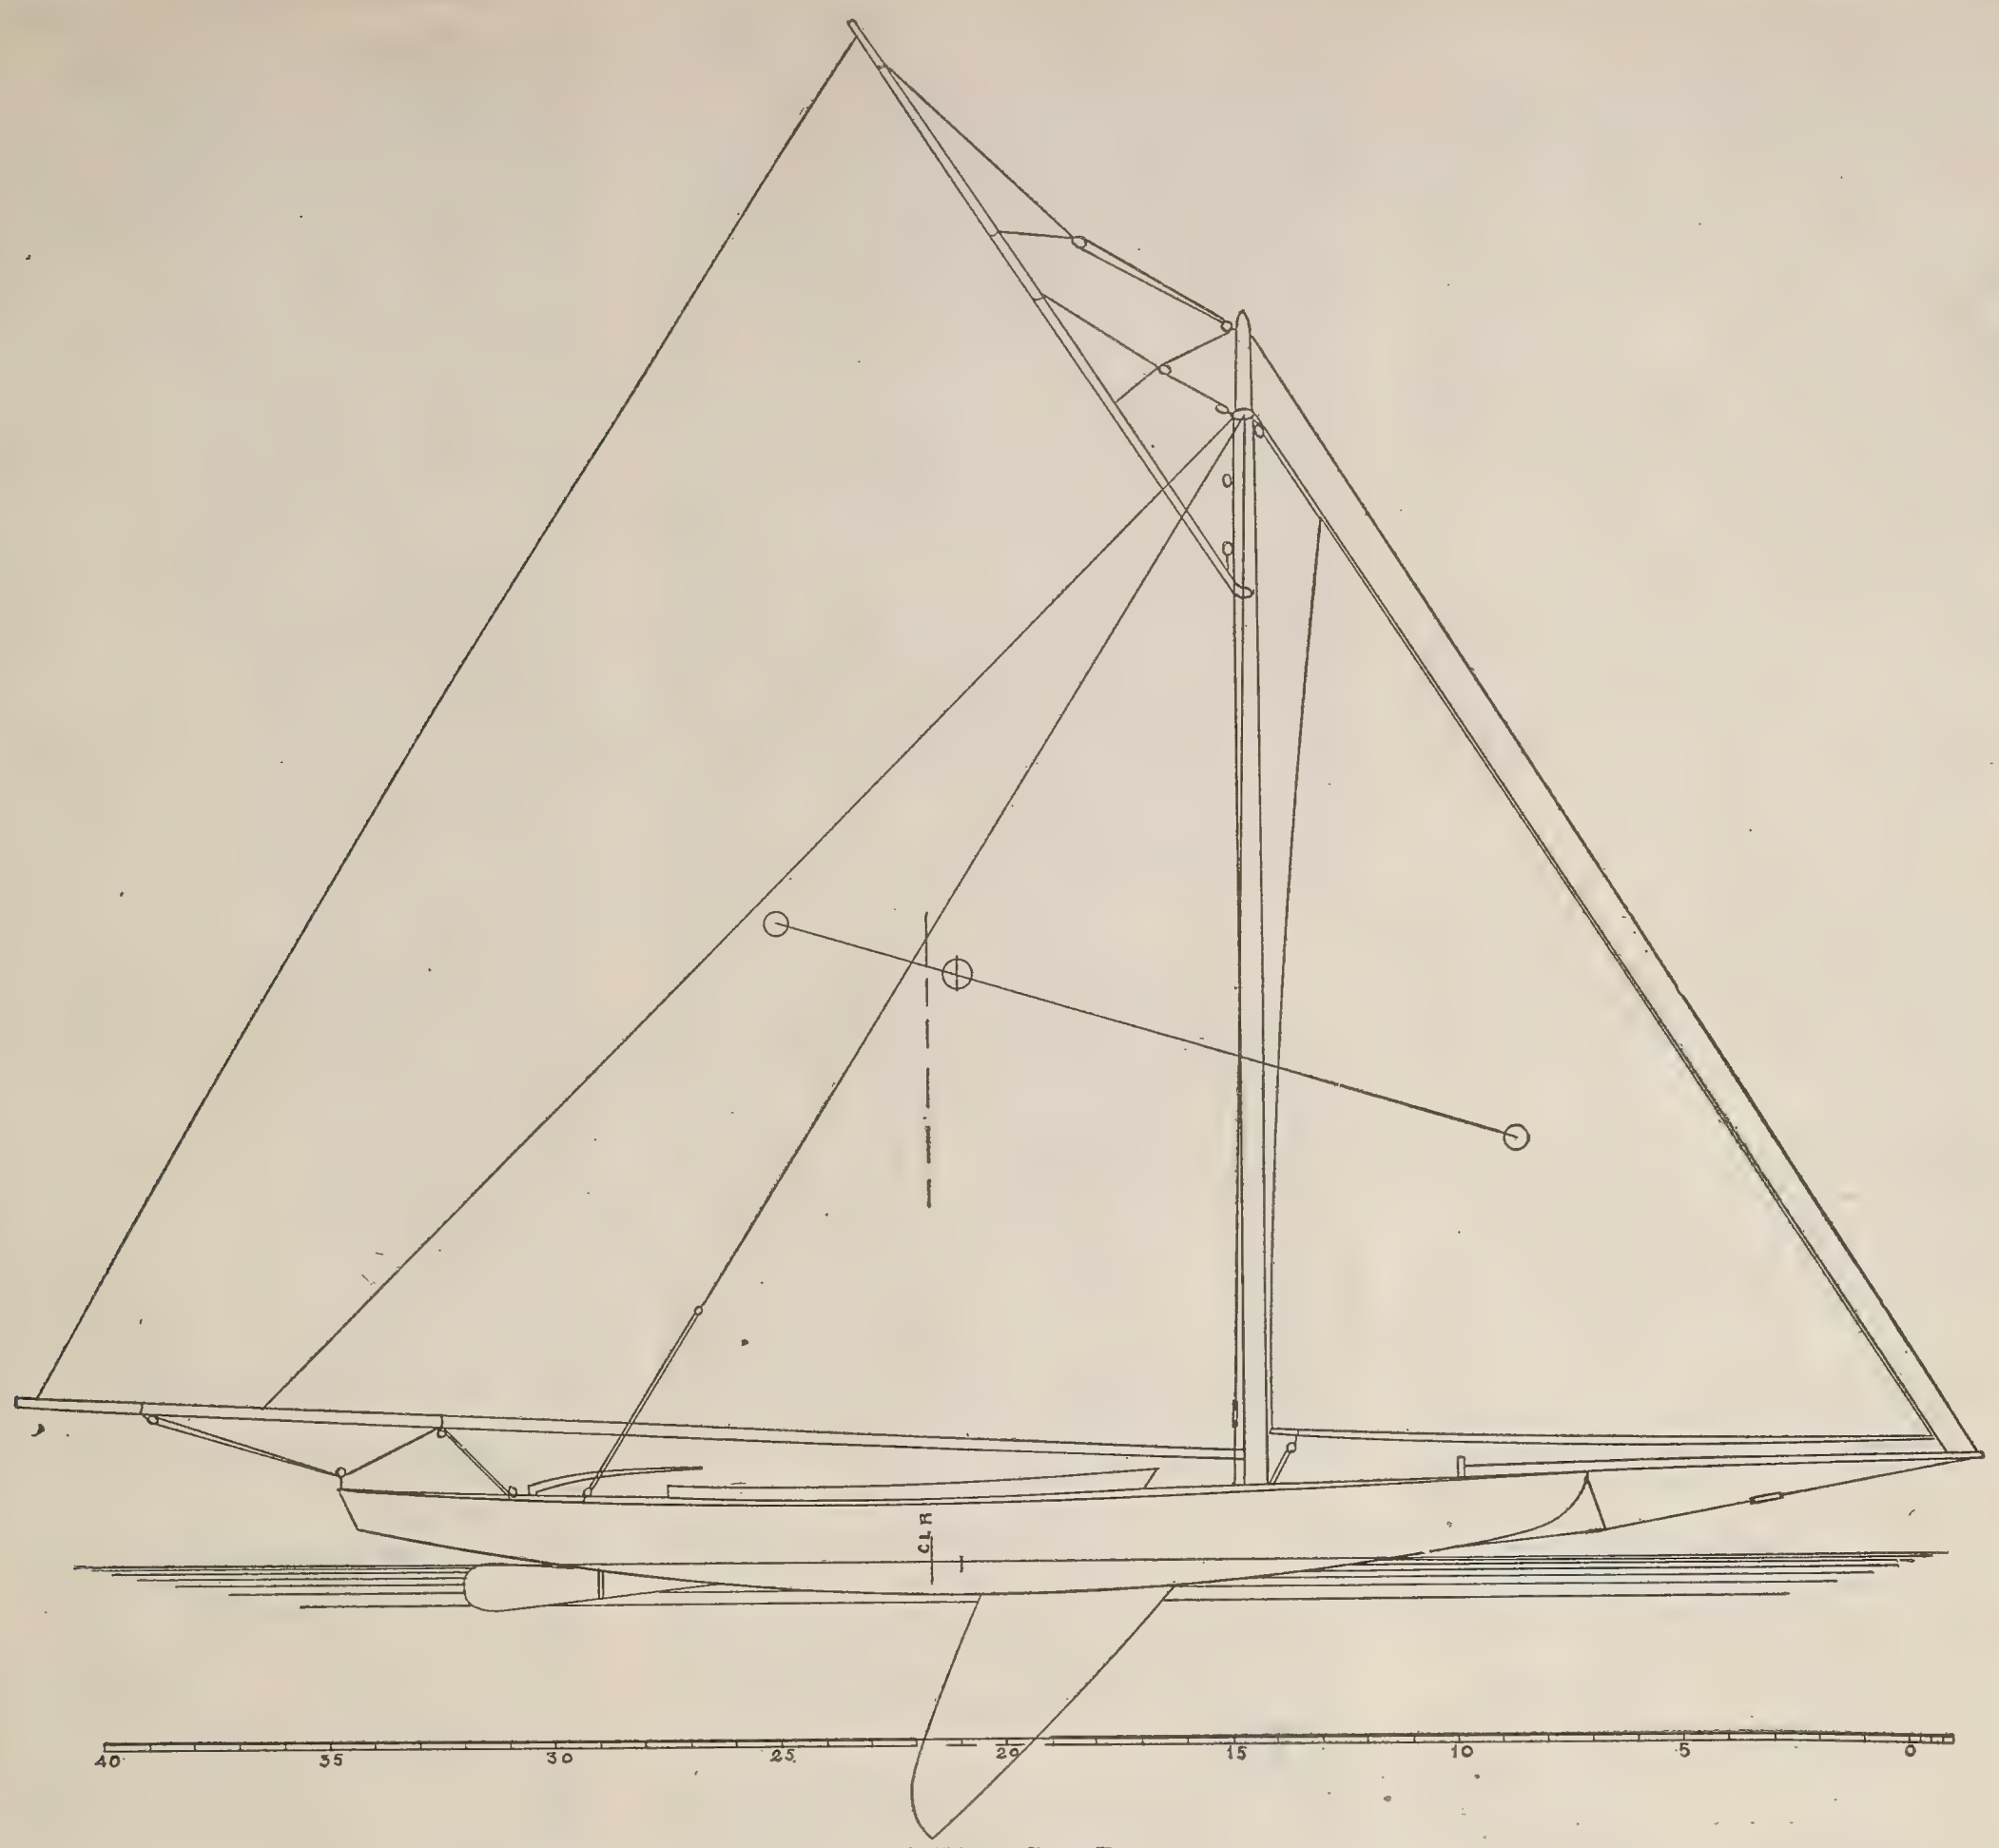
WHEELING NOTES.

THE writer of a series of articles in an English photographic publication on stalking with the camera, uses his bicycle as a means of reaching his hunting grounds. The material assistance rendered by the wheel may be judged from a description of the apparatus taken into the field:



"As a matter of fact," he writes, "the camera I have used all last year, with lens, tripod and one double back, weighs 16lbs., besides which I generally carry eight more quarter-plate dark slides, two half-plates, two spare lenses, with a host of etceteras, and on working far from home perhaps two or three dozen plates and a changing bag besides. The whole of this heavy load when at home I pack on a bicycle until reaching the scene of the day's work, when the machine is left at some house or farm, or hidden carefully in a ditch and well covered over with grass and leaves."

The author of these articles devotes much of his time to photographing birds and small animals in their native haunts. He is an enthusiast at his work, and a picture in the article from which the quotation is made shows him up to his armpits in water focusing his camera, which is concealed behind a blind of twigs or some unseen bit of animate nature. His study opens up an interesting and convenient field for naturalists and lovers of nature. Even the commonest birds familiar to everybody well repay study and observation, and photographic records of their daily life are of value and a never-failing source of interest.



The story of a rider who couldn't mount his wheel when the repairer had accidentally changed the step to the right side was told in these columns some time ago. His was, perhaps, a rare instance for a rider of some experience. There are, however, at the present time many riders of last year's crop who have not yet learned to dismount from either pedal. Taking into consideration the fact that a bicycle travels from 15 to 20ft. at each revolution of the pedals, it can easily be seen that there are times when it does not pay to wait for the customary pedal to come around before getting off. Most riders can fall off in an emergency, but it is safer to be able to dismount properly from the pedal that happens to be in position.

Talk about being too old to ride! Really no one is too old.

We know of a lady ninety years young, as Holmes would have said, who, in compliance with a suggestion made by one of her grandsons, took her first bicycle ride on the birthday that opened up the last decade of her century. This old lady made the circuit of her grounds on a tandem, and said that she enjoyed the experience. And yet some youthful persons of fifty or sixty give age as an excuse for not riding.

HYPATIA. RACING SLOOP DESIGNED BY W. E. STARR FOR GWYNNE GARRETT, JR., 1896.

HYPATIA. SAIL PLAN.

Good saddle horses in the East and most plugs in the West are taught to guide by a pressure of the bridle rein on the neck instead of a pull on either rein. The best of the cow ponies are still more sympathetic to their rider's wish and are guided by an inclination of his body in the direction it is desired to go.

It should be the same way with a bicycle. Steering should be accomplished by a slight swaying of the body rather than by any sudden jerk or thrust of the handle bar. The instinct of the bicycle for guiding is incredibly fine and the response immediate. Conversely, only riders with a cultivated sense of balance can approach perfection in steering.

It is said that in France young men of a certain set now carry light canes when awheel. Thus the story goes, they can bring their machines to a standstill by leaning a little to one side and supporting themselves with the canes while they chat with some acquaintance.

The Connecticut man has a happy faculty for taking care of himself under the toughest contingencies of existence. Thomas Reed, of Meriden, who has just returned home, was one of the five Americans captured on the filibuster Laurada by the Spaniards. He took life in Morro Castle coolly for two months, and on his transfer to a military camp exercised his ingenuity and effected an escape, making his way from Cuba to Key West in a small boat.

His compatriot, Allison Gilbert, of Derby, passed last winter in camp on the banks of a small river in the interior of Alaska. He writes home that he expects to arrive in California next winter and will then start for Connecticut on his bicycle. What a small button this world is anyway, and what a boon the bicycle may be to the modern knights errant!

In a recent decision in a case before the United States Circuit Court for the northern district of New York, Justice Coxe sustained the Fairbanks & Berlo patent of May 9, 1893, on wood rims for bicycle wheels. The Court held that a marked improvement over existing types had been made in the wood rim, which required an exercise of inventive faculties, and consequently was justly eligible to the protection afforded by the Patent Bureau.

The existing type of carriage wheels, though using wooden rims, are constructed upon a different basic principle, depending upon compression spokes and an iron reinforcing tire, and though laminated felloes have been used the break joint and varying grain features of the patent are new, while the weight is carried by suspension spokes and pneumatic tires.

His honor closes by affirming that "the patentees have done much to make the modern bicycle a perfect machine."

Yachting.

VENCEDOR, the Chicago fin-keel, has been sold by Mr. Berriman to H. M. Gillig, formerly Commodore of the Larchmont Y. C., and owner of Romona, Gloriana and other yachts. Mr. Gillig will bring her on by rail and race her on the Sound. She will be canvased for the 60ft. class, to race with Wasp.

Mr. Duggan's Defender.

THE first of the fleet of 20-footers designed by G. H. Duggan to compete for the honor of defending the Seawanhaka Corinthian international cup was launched successfully on May 19 at Dorval. The boat is the one designed by Mr. Duggan for his own and Mr. Shearwood's use. Outside of the staff of builders those present were Mr. and Mrs. Duggan and Mr. Shearwood. The boat had stood on the ways all day blackleaded and varnished, and her shining surface scintillated in the bright sun and was the admiration of the few favored to look at it. The hollow mast had been set in place and the shrouds and such light rigging as is requisite was erected. When Messrs. Duggan and Shearwood arrived late in the afternoon the rudder was shipped, and then after some preparatory work the blocks were knocked away and the truck on which the yacht rested slid into the water and the boat floated gracefully in Lake St. Louis. The centerboard was next placed in its box, and after arranging the spreaders the boat was ready for its sails. The boat will be taken down the lake to Mr. Duggan's place, and the remaining arrangements will be completed there. She presents a neat appearance on the water, and looks as if she could travel at a pretty good clip in any sort of a breeze.

There are three other 20-footers on the ground in front of the yacht shed and one more in the shed, and all of these will be launched this week. Mr. Harrison B. Young's boat is on the way, and will go into the water to-day. Her mast and rigging have been placed on board, and her sails are lying in the grass on the club house lawn. The other two boats have been blackleaded and varnished, and are out drying, awaiting their spars. Of these five boats it is expected that all will be ready before Saturday, and on that day there will be a trial spin of the quintette.

Maida, the second of the Duggan designed 20-footers, was launched from the Royal St. Lawrence Y. C. grounds at Dorval yesterday afternoon. Maida is the property of Harrison B. Young, and in general appearance is kindred to Mr. Duggan's own boat; but in detail there are a number of differences. Mr. Duggan's boat lies well out of the water, and has a big overhang forward and aft. Mr. Young's boat is broad and shallow; without the centerboard its draft is about 4in., and with the centerboard in position the draft is hardly more than 6in. The boat lies flat on the water, and is stiff, and the indications are that she will be the fastest of the five in rough weather or with a good blow. After being launched yesterday, the centerboard was swung on board and placed in the box. The board is quite a heavy one, and weighs in the neighborhood of 400lbs.—*Toronto Globe, May 20.*

Hypatia.

CENTERBOARD RACING SLOOP.

WE have once more spoken of the rapid change that has taken place in the middle West in the abandoning of the old fleet of sandbag sloops and catboats, imported from Long Island Sound, for smaller and more modern racing craft. This movement has been quite general for two or three years and is extending each year, every small lake in Wisconsin and Minnesota having a growing fleet of 15 or 20-footers, the local designers, both amateur and professional, competing with Herreshoff, Linton Hope and other well-known Eastern or English designers. The design here illustrated was sent to us privately for inspection; at our request permission was given to publish it. The designer is Mr. W. J. Starr, a yachtsman of Eau Claire, Wis., an amateur; the design was made and the yacht built for Gwynn Garnett, Jr., of Chicago, a member of the Green Lake Y. C., of Green Lake, Wis., where the yacht was raced last season.

The design is interesting from the fact that, though made in February, 1896, it shows a very full waterline and an appreciation on the part of the designer of those points of advantage which were developed to an extreme degree later in the season in the racing of the 15ft. class on Long Island Sound.

The dimensions are:

Length, over all	27ft.	9in.
L.W.L.	19ft.	6in.
Overhang, bow	4ft.	
stern	4ft.	3in.
Beam, extreme	9ft.	3in.
L.W.L.	8ft.	
Draft, hull		11in.
with board	6ft.	6in.
Ballast	None.	
Mast, from fore end l.w.l	3ft.	5in.
deck to hounds	23ft.	9in.
pole	2ft.	
Boom	27ft.	
Gaff	15ft.	
Bowsprit, beyond end, l.w.l	13ft.	6in.
Mainsail, hoist	19ft.	
tack to peak	32ft.	6in.
clew to throat	32ft.	
area, sq. ft.	475sq.	ft.
Jib, area, sq. ft.	150sq.	ft.
Total area, sq. ft.	625sq.	ft.

The rules of the club place a tax upon all overhang in excess of one-third the L.W.L. The yacht proved lighter in construction than anticipated, and as she carried her sail ably without ballast she was raced in this trim, her L.W.L. measuring but 18ft. The designed freeboard, already quite high for a modern racing boat, was thus increased by a couple of inches. Her crew last season lacked the experience necessary to show her at her best, but she proved very fast. It is proposed for the present season to put on a new deck, reducing the freeboard 3in., and moving the mast a little forward, at the same time giving her a new mainsail with a foot less hoist and a higher peak. The centerboard is of 5-16in. steel.

Seawanhaka Corinthian Y. C.

SPECIAL ORDER NO. 1.

I. HERBERT L. SATTERLEE is hereby appointed fleet captain, and W. G. Ulshoeffer is hereby appointed signal officer of the Seawanhaka Corinthian Y. C. for the current year.

II. The fleet captain is charged with the publication of this order. HENRY C. ROUSE, Commodore.

GENERAL ORDERS NO. 1.

I. The squadron will rendezvous at Seawanhaka Harbor, Oyster Bay, on Saturday, May 28, in order to take part in the opening exercises at the club house.

II. A meeting of captains will be held on board the flagship at 11 A. M. to discuss the programme for the day.

III. All vessels in harbor will dress ship at 12 o'clock noon, and fire a salute when the club burgee is mast-headed on the club flagstaff.

IV. Divine service will be held on the flagship on Sunday, May 30, at 11, A. M., the fleet chaplain officiating. The captains of all vessels in harbor, and the members, with their guests are invited to attend.

By order of Commodore Rouse.

HERBERT L. SATTERLEE, Fleet Captain.

The race committee announces the following programme: May 29—Race for special classes. June 26—Annual race. July 12 and succeeding days until decided—Trial races to select the yacht to represent the club in the match with the Royal St. Lawrence Y. C., of Montreal, for the Seawanhaka International Challenge Cup. July 17—Race for the Alfred Roosevelt Memorial Cup Aug. 14, 16 and 17—International Challenge Cup match at Montreal. Sept. 4—Race for special classes. Beginning May 29—Saturday races.

Race Programme—No. 1.

RACE FOR SPECIAL CLASSES—SATURDAY, MAY 29.

In addition to the usual opening day race for the club catboats the race committee announce a special race on that day in the 15 and 20ft. classes of sloops.

The race for these classes is open to entries from the Atlantic, Beverly, Brooklyn, Corinthian of Marblehead, Corinthian of New York, Eastern, Harlem, Larchmont, Massachusetts, Marine and Field, New York and Pavonia yacht clubs, the yacht clubs of the Yacht Racing Union of Long Island Sound and the New York and Brooklyn canoe clubs.

Open to Sloops—Class Q, 20ft. class. Class R, 15ft. class. Catboats—The club catboats.

A prize in silver will be awarded to the winning yachts in classes Q and R of sloops, and a prize will be awarded to the helmsman of the winning club catboat.

A special prize of the value of fifty dollars ($50) is offered to the helmsman (who must be a member of the club) who shall sail in at least three of the regular Saturday races for the club catboats beginning May 29, and who shall win the highest percentage of races sailed during the season of 1897.

Course.—The course for all classes will be inside the bay and in view from the club house.

For Sloops.—Starting from west to east across a line beween the club float and a stakeboat anchored southeast of the float, thence around a mark bearing a red ball, anchored northeast of Plumb Point, and distant therefrom about one mile, leaving it on starboard hand, thence around a mark bearing a red ball, anchored southeast of Moses Point Buoy, leaving it on starboard hand, thence across the starting line, twice around; thence, after finishing the second round, around Black Channel Buoy off Plumb Point, leaving it on starboard hand, thence to a finish across the starting line. In the first two rounds yachts will pass on the channel side of the Black Channel Buoy.

For Catboats.—Three times around the short triangle.

The start will be a one-gun start with a preparatory signal, and will be made at 12 o'clock noon.

First Signal.—Preparatory. A gun will be fired and the blue peter hoisted at the yard arm of the club flagstaff. (There will be an interval of five minutes between each signal and the succeeding signal.)

Second Signal.—Start for both classes of sloops. A gun will be fired, the blue peter lowered and a red ball hoisted.

Third Signal.—Start for the club catboats. A gun will be fired, the red ball lowered and a white ball hoisted.

Fourth Signal.—Will denote conclusion of the race, which may be terminated in the discretion of the race committee at the conclusion of any round. A gun will be fired and the club burgee lowered from the head of the flagstaff.

The race will be governed by the Racing Rules of the Yacht Racing Union of Long Island Sound, and will be under the direction of the race committee of the club.

Copies of the racing rules and entry blanks will be furnished upon application to the secretary of the race committee.

Entries must be made in writing and filed with the secretary of the race committee by 12 o'clock noon on May 27, accompanied by the Y. R. U. measurement of the yacht, certified to by her owner or the measurer of the club from which she is entered.

Race Committee.
OLIVER E. CROMWELL, Chairman, 64 Leonard St., New York.
CHARLES W. WETMORE, 30 Broad St., New York.
WALTER C. KERR, 26 Cortlandt St., New York.
D. LE ROY DRESSER, 55 White St., New York.
CHARLES A. SHERMAN, Secretary, 64 Leonard St., New York.

The house committee has arranged a new schedule of charges for board and rooms, which it is expected will prove acceptable to members.

The club house at Oyster Bay will be opened for the season on Saturday, May 29, when the club steamer will begin making regular connections with the trains at Oyster Bay station.

At a recent meeting of the club a regulation club ribbon was adopted. This ribbon can be made into belts or hat bands and can be purchased, by members only, from Messrs. Dunlap & Co., No. 180 Fifth avenue, who are exclusively authorized to manufacture and supply it.

Royal St. Lawrence Y. C.

THE Royal St. Lawrence Y. C. has issued the following programme for the season:

The station of the club shall be at is house at Dorval.

The courses for racing shall be the A course for A, 30 and 25ft. classes, and the B and C courses for the 20 and 15ft. classes, as the sailing committee may determine.

The following races will be held as follows during the season, on the dates fixed:

Saturday, May 22, 20ft. class, club prize; Monday, May 24, 20ft. class, first Ross series; Monday, May 24, 15ft. class, club prize; Saturday, May 29, 20ft. class, club prizes, three pewters; Saturday, June 5, 20ft. class, second Ross series; Wednesday, June 9, 20ft. class, club prizes; Saturday, June 12, 20ft. class, third Ross series; Saturday, June 12, 15ft. class, club prizes; Saturday, June 19, 30ft. class, fourth Ross series; Saturday, June 19, A, 30 and 25ft. classes, club prizes; Wednesday, June 23, 20ft. class, club prizes; Saturday, June 26, 20ft. class, fifth Ross series; Saturday, June 26, 15ft. class, club prizes; Thursday, July 1, A, 30 and 25ft. classes, Sir Donald Smith challenge cup; Thursday, July 1, 20ft. class, sixth Ross series; Thursday, July 1, 15ft. class, club prizes; Saturday, July 3, 20ft. class, seventh Ross series; Wednesday, July 7, 20ft. class, club prizes; Saturday, July 10, 20ft. class, eighth Ross series; Saturday, July 10, 15ft. class, club prizes; Saturday, July 17, 20ft. class, ninth Ross series; Saturday, July 17, A, 30 and 25ft. classes, club prizes; Saturday, July 24, tenth Ross series; Monday, Tuesday and Wednesday, Aug. 2, 3 and 4, 20ft. class, trial races to select a defender of Seawanhaka Corinthian challenge cup; Saturday, Aug. 14, 20ft. class, beginning of series of five international races for Seawanhaka international cup; Saturday, Aug. 21, A and 30ft. classes, club prizes; Saturday, Aug. 21, 25ft. class, Girouard tankard; Saturday, Aug. 21, 20 and 15ft. classes. Hamilton trophy.

No entrance fee will be charged for any of the club's sailing races.

The regular club races will be started as provided for in the sailing regulations, at 3:30 P. M. for Saturday races, and 6:30 for Wednesday evening races. The Sir Donald Smith cup race will be started at 10 A. M., and the 20ft. and 15ft. races on July 1, at 2 P. M. The trial races will be started at 10 A. M., and the International Cup races at the same hour. Any alteration of the hour of starting will be signaled as elsewhere provided for.

In all club races and races for trophies, the prize will go to the winning boat, and first, second and third prizes will be given under the provisions of Sailing Regulations XXIX.

In the Ross series and all other series races, place will be determined by points, and each boat completing a round will be given points as follows: First boat, 20 points; second boat, 19 points; third boat, 18 points; fourth boat, 17 points, and so on downward by one point. The first Ross prize will go to the boat winning the greatest number of points, and the second to the next, and so on, there being four prizes—$250 for first, $200 for second, $150 for third, and $100 for fourth.

The measurers have been instructed to enforce the measurement rule strictly in accordance with the letter thereof, and no question of doubt shall be decided in favor of the boat. All boats will be measured in the club's basin, Dorval.

Yacht-Building at Ogdensburgh.

THE Spalding-St. Lawrence Boat Co. is now very busy at its shops at Ogdensburgh, N.Y., the work being mainly small sailing yachts and yacht boats. The company has this year devoted itself specially to these two classes, and has abandoned its cheaper grades of rowboats and skiffs The list of racing yachts, which claims the first notice, is headed by the new bulb-fin Shark, shipped last week to Oyster Bay. This yacht was designed by Gardner & Cox for Com. Rouse, S. C. Y. C., and Mr. Colgate Hoyt, and will be sailed in the races by Sherman Hoyt, who owned and raced Paprika last year. She is of the regulation dimensions, about 30ft. over all, 17ft. 6in. l.w.l., with 500sq. ft. of sail. Her beam is 6ft., and she will draw the full limit, 5ft. with fin on, but the hull draws only 6in. The model is of the Question type in a way, but the sections show a round bilge instead of a chine; at the same time she has the nearly flat bottom, full deck line forward with nearly parallel sides, square transom and very long easy fore and aft lines that were characteristic of the first boat of the type. She is narrower in proportion than Paprika, and the fore and aft lines are apparently fairer and easier.

As to model, while one may admire the skill of the designer in handling this particular type, the boat is anything but a beauty; the construction and workmanship, however, do credit to both designer and builder. The planking is of mahogany, in strips about 1in. wide, with hollow-and-round edges, each plank edge-nailed with brass wire nails extending through into the second plank below. This makes a very smooth, strong and stiff skin, which is reinforced by light frames spaced close together. Additional strength is obtained by the use of light tie straps below of steel or Tobin bronze, very ingeniously disposed. The cockpit is small, with a watertight bulkhead fore and aft. The rig includes a gaff mainsail.

The spars are all hollow, and very beautiful sticks, clear, sound wood to begin with, and put together in the best possible manner. Last year the company for the first time obtained a lot of spruce from the Pacific coast—Washington—thus obviating the difficulty encountered by all makes of light spars in the East, of obtaining good material. This year, in addition to a new stock of the same lumber, it has secured the services of Mr. L. K. Young, formerly of Bridgeport, whose hollow spars have always rated as the best made. With the new material, Mr. Young is turning out work far superior to any before seen; he is also making his pattern of blocks and other fittings of all kinds. The rigging department is also in the hands of an expert, and in these two important branches the work is of the very best possible.

It has always been the case in all parts of the country, but especially on fresh water, that the quality of work on spars and rigging was very much inferior to that which could be had in hulls and sails. The present work of the company completely disproves the old experience of many, that however perfect a hull might be turned out by the builders on fresh water, the rig required to be entirely replaced by a salt water man.

The spars for Shark are hollow, and lined with stout burlaps, fastened by a special glue, the secret of Mr. Young; the added weight is not appreciable, and the stiffness and ultimate strength are greatly increased. This mast has a triple spreader, an arm on each side for the main shroud and one forward for the mast stay, which leads from the masthead over the spreader and down through the deck. The spreaders are of bent wood, fastened to the hollow shell by an ingenious arrangement that prevents any great strain at one point.

Both fin and rudder, the former a bronze casting, and the latter of mahogany, will be narrower than the usual practice. The rudder is a very neat piece of woodwork.

The second 20-footer designed by C. H. Crane, owned by A. W. Durkee and J. H. Crane, is on the stocks in the shop. She is 29ft. 6in. over all, with the regulation l.w.l. and sail area, 8ft. extreme beam, 6ft. 2in. beam at l.w.l., and 6in. draft, a centerboard boat. The model is very different from that of Shark, the sides flaring considerably. The bow is much like El Heirie on deck and quite as hard to plank. The counter is cut off square. The planking is of Spanish cedar in single thickness, about ½in., ship-lap joints, making a smooth skin. The frames are light also, but the hull will weigh considerably more than Shark. The rig has a gaff mainsail, the spars, rigging and fittings being made by the company.

Another boat from the design of Mr. Crane was shipped last month, a sailing boat for the schooner Coronet, D. W. James. She is called a "life-boat," being very completely fitted with bulkheads and air tanks for use in case of an emergency; but in model she is more like the modern sailing tender carried by large yachts, with but moderate freeboard and fairly long overhangs. She is 27ft. 6in. over all, 18ft. l.w.l., 6ft. 6in. beam, 3ft. 6in. depth, with mainsail and jib rig and hollow spars.

A few weeks since the company shipped the very handsome sailing boat designed for Mr. Lloyd Phœnix by W. P. Stephens and built last year when Intrepid was abroad. She is now aboard the yacht.

There is just completed a little racing catboat of 16ft. l.w.l., named Elsa, designed by W. P. Stephens for Mr. C. I. Hudson, of New York, who will sail her at Alexandria Bay on the St. Lawrence. She is wide and very powerful, of light construction and fitted with hollow spars.

Of the well-known Scarecrow and La Gloria models designed by Mr. Stephens and first published in the FOREST AND STREAM, the company is building several; it has lately shipped to Mr. H. S. Chisholm, of Buffalo, N. Y., one of the No. 2 Scarecrow models, a 20-footer, a very handsomely finished craft, with bulb fin and sloop rig, named Kittiwake. Another similar boat is now in stock, to be finished with either centerboard or fin in trunk and gaff or leg-o'-mutton rig, as the purchaser may select. A smaller boat of the same model, 15ft. class, goes to W. B. Tuttle, Syracuse, and one to E. M. Scull, Overbrook, Pa. There is also completed a 15ft. La Gloria model, for E. F. Cooley, Lansing, Mich. On the stocks is the first of the special 16ft. sailing boat designed by Mr. Stephens last winter, and also one of the so-called "one-design canoe" model, whose design has appeared in the FOREST AND STREAM. The former of these is for C. M. Stebbins, Newburgh, who will use her on Orange Lake, the other for E. E. Buddington, Cranford, N. J.

In the small shop directly beside the river, where the steam yacht Vailima is hauled up, there is a handsome little racing sloop designed by Mr. Stephens for J. G. Averell, of Rochester, N. Y. She is for the 22ft. class of the Lake Y. R. A., the same class as Koko, the fin-keel illustrated in the FOREST AND STREAM of May 2-9, 1896, but as one of the conditions was that she should be capable of cruising about the lake from port to port, as well as racing in the class, the extreme open fin type was not admissible. The yacht is 30ft. over all, 19ft. l.w.l., 8ft. extreme beam, 7ft. 6in. beam at l.w.l., and 5ft., the limit, in draft. She is as near to the fin-keel in model as the normal wooden construction and some regard for internal room will admit of. The section is a very strong S, and the keel, a very fine casting containing two tons of lead, is well bulbed. She has the ordinary cutter rudder, of wood, and both in model and fittings is intended to stand such hard use as she must be put to at times in knocking about the lake. With a 12in. trunk she will have 5ft. headroom and accommodation for three in sleeping, cooking, etc. She is now planked up, showing a very powerful form and easy fore and aft lines, in spite of the displacement and beam.

The company has for some time made a special feature of yacht's boats, in the effort to improve this class of craft. It has built a number from special designs by W. P. Stephens, and is now turning out a very shipshape and serviceable boat. The effort, on the part of both designer and builder, has been to eliminate the numerous faults both of design and construction in the average yacht boat; and to produce craft specially fitted for the distinct uses of yacht service, and at the same time strong, light and shipshape. A number of boats are now under way, a 24ft. gig and 20ft. cutter were lately furnished to the schooner Yampa, R. S. Palmer; the new steam yacht Vergana, F. H. Benedict, will have an 18ft. cutter and 16ft. dinghy; the schooner Carmita will have a 12ft. gig and 11ft. dinghy; the schooner Iroquois, Com. Rouse, S. C. Y. C., will have a 15ft. dinghy, and A. N. Chandler, of Philadelphia, has ordered a 14ft. dinghy. The latter gentleman has also ordered a 14ft. power tender, with American Motor Co. engine. The steam yacht Intrepid will have a very handsome 15ft. dinghy, finished in teak. The schooner Southern Cross, Vice-Com. Phillips, Knickerbocker Y. C., will have a power tender 18ft. long, with Manhattan gas engine.

The company is finishing off a number of the finer grades of skiffs and some rowboats, and also has in hand several hulls for naphtha engines.

New Rochelle Y. C.

NEW ROCHELLE—LONG ISLAND SOUND.

Saturday, May 22.

THE New Rochelle Y. C. opened its club house on Saturday, May 22, with music, dancing, dinner and general festivities, including a race. The course was to Hen and Chickens Buoy, then Execution Buoy and home, this triangle to be sailed three times. The 25ft. cabin cat class had a good list of starters, but only one 20-footer, Keneu, was present. She sailed alone, as did the new Webber sloop Surprise and the Huntington 15-footer, which has been christened Dad. The wind was very light from N.W. over the first leg, all drifting; but a light S.E. breeze came in and helped the fleet through two rounds of the course, when the race was called. Keneu and Dad led the fleet for some time, but the first round was timed:

Win or Lose	4 28 25	Keneu	4 31 00
Surprise	4 28 40	Dad	4 34 00
Mary S.	4 30 15	Ondawa	4 35 32

The final times were:

	Length.	Finish.	Elapsed.
SLOOPS—20FT CLASS.			
Keneu, M. Clark	20.00	5 41 31	3 07 31
CABIN CATBOATS—25FT. CLASS.			
Addie, W. L. Diaz		Did not finish.	
Mary S., E B Hall		5 42 33	3 04 33
Melita, O. H. Chellborg	22.46	6 01 55	3 22 55
Win or Lose, J. S. Appleby	23.75	5 43 58	3 04 58
Grace, J. F. Lambden		Did not finish.	
Jonquil, R. B. Roosevelt		Did not finish.	
Argo, Daniel Bacon		5 54 29	3 15 29
OPEN CATS—25FT CLASS.			
Edwina, J. N. Gould	21.44	5 47 09	3 08 09
Ondawa, H. Lambden	20.91	5 45 11	3 06 11
CABIN SLOOPS—36FT CLASS.			
Surprise, J. L. Baird	36.00	5 39 09	3 05 09
OPEN SLOOPS—15FT CLASS.			
Dad, L. Huntington	15.00	5 43 30	3 09 30

"Yacht Designing."

THE following comments on the articles on "Yacht Designing" have reached us lately. We shall be glad to hear from all who are reading the articles as they appear:

"Perhaps I am dull, but the articles on 'Yacht Designing' appear disconnected and somewhat incomprehensible to me, especially that part relating to the buttock lines." Another correspondent writes: "I have been very much interested in reading the articles on 'Yacht Designing' in the FOREST AND STREAM from week to week, and must congratulate you upon the plain and intelligent way in which you present the subject Any one who has had experience in the handling of designs and drafting tools must especially appreciate your suggestions in regard to the use of flat sheets and the unreliability of T-squares in drawing long lines. Too great confidence in a T-square has caused me many hours of extra work. Have you found the planimeter and similar instruments practicable or feasible? If so, I hope you will tell us all about them in the coming papers. I have several times been tempted to buy a planimeter, but have not been able to find any one who could give me practical instructions in the use of it. The salesman in one store told me that it was a very simple instrument, but when I presented different figures for him to compute, he gave it up and said that he did not understand it. It was the same with two other instrument makers whom I talked with."

The Howard 20-footer.

THE new 20-footer Aranca, which Mr. W. W. Howard will race this summer, has been launched, and made a trial trip at Clayton, N. Y. She was designed and built by R. E. Fry, who built Yankee and Ulmec for Mr. Howard, and is 32ft. 8in. over all, 17ft. 6in. l.w.l., 10ft. 1½in. beam and 6in. draft. The centerboard is of saw steel plate. She has the long, self-bailing cockpit, as in Almec, 10ft. long and 6ft. wide. The hull is light, and, as in all of Mr. Fry's boats, the workmanship is excellent.

Corinthian Y. C., of Philadelphia.

COM. GRISCOM has appointed W. Barklie Henry fleet captain and Dr. Archibald G. Thompson fleet surgeon.

GENERAL ORDERS NO. 2.

I. The opening of the yachting season will be celebrated on Saturday, June 5.

The fleet will rendezvous off the club house, Essington, at 2 o'clock.

II. At 3 o'clock a gun will be fired from the flagship, and the club signal will be hoisted at the club house. The fleet will then salute the flag, by each yacht, in quick succession, firing one gun.

III. The yachts will remain at anchor during the afternoon, and at 3:30 o'clock, upon signal from the flagship, will "dress ship."

IV. A meeting of captains will be held on board the flagship at 8 o'clock P. M., to determine upon the date of the annual club cruise.

By order of the commodore:

W. BARKLIE HENRY, Fleet Captain.

YACHTING NEWS NOTES.

The latest contribution to the literature of the sea is entitled "A Deep-Water Voyage," and is by Paul E. Stevenson, of New York, a member of the New York, Seawanhaka Corinthian and other yacht clubs, and for several years owner of the sloop Thetis, whose lines appeared in the FOREST AND STREAM, June 19, 1886. Mr. Stevenson, who is evidently an ardent lover of the sea, after some seasons' yachting on the coast and various passages by steamer across the Atlantic and through the West Indies, planned a real sea voyage of much greater extent, which was carried out in 1894 by embarking with his wife on the British ship Mandalore, at New York for Calcutta. With these two as the only passengers, the ship sailed from New York on July 2, and after a very trying experience with calm weather about the Equator, passed the Cape of Good Hope on Sept. 15, finally reaching Calcutta on Nov. 7. The voyage was comparatively uneventful, the main incident being continued calm weather both in the Atlantic and Indian oceans, but both the passengers seem to have enjoyed most thoroughly the novel experiences of real sea-going, so rare in these days of steam and high speeds, and to have left the ship with genuine regret.

Mr. Stevenson has told the story of the voyage in diary form, and in spite of the absence of wreck, pirates, mutiny and sensational incidents, he has contrived to make a very interesting book. Writing as a landsman, with just enough knowledge of the sea to enable him to understand and appreciate, and with the keen interest excited by the novelty of the experience, his story is likely to appeal directly to the non-technical reader who is desirous of learning something about life afloat, but who finds himself more bewildered than instructed by the writings of old seamen.

Mr. Stevenson's chief deprivation during the lengthy voyage seems to have been the absence of daily reports of the doings of Vigilant, then racing in British waters, the results being unknown to him until November. It is rather amusing to read of his fear that she might be beaten on the Thames through adverse local conditions, or might be "pocketed" by some of her three rivals, Valkyrie II., Britannia and Satanita; and his confidence in her success in the absence of these contingencies. It was not until the voyage was over that he learned of the sinking of Valkyrie and the wrecking of Satanita, that made the racing of 1894 practically a duel between Vigilant and Britannia on the Clyde, the Irish Sea and the Solent, the former being the loser. The makers of the book, the J. B. Lippincott Co., of Philadelphia, have turned out a very neat and attractive volume.

Osborn, of Peekskill, has just completed a 40ft. steam yacht for Dr. S. F. Horton, of the Peekskill Gun Club. On Decoration Day Dr. Horton will take the club to Newburg on the yacht, and the day will be spent in a friendly shoot with the Orange Lake Club at Orange Lake.

We have received the year book of the Yacht Racing Association of Great Britain for 1897, somewhat larger than the previous volumes and enlarged in its contents, which now include the official measures of most of the British racing yachts. The linear rating rule, the Y. R. A. sailing rules, the details of measurement and the proceedings of the council, including many questions of protests, are given in full, making a very valuable book for reference.

Columbia, steam yacht, J. H. Ladew, arrived at New York on May 16 with her owner on board, after a cruise of five months in the West Indies.

The Royal Canadian Y. C., of Toronto, has announced the following fixtures: Saturday, May 29—27ft., 22ft., and skiff classes; Saturday, June 12—First and 37ft. classes; Saturday, June 26—27ft., 22ft., and skiff classes; Thursday, July 1—Race for Queen's cup (yachts over 42ft. c. l.); Saturday, July 10—First and 37ft. classes; Saturday, July 24—27ft., 22ft. and skiff classes; Saturday, Aug 7—First and 37ft. classes; Saturday, Aug. 21—27ft., 22ft., and skiff classes; Saturday, Sept. 4—First and 37ft. classes; Thursday, Sept. 7—Race for Prince of Wales's cup (all classes); Saturday, Sept. 11—Skiff class. The club has now the following prizes for the season's racing: First class, Murray cup; 37ft. class, Lorne cup; 27ft. class, Cosgrove cup; 22ft. class, McGaw cup; skiff class, Hartman cup; not allotted, Lansdown cup.

The May meeting of the New York Y. C. was held on May 20 with Vice-Com. Ledyard in the chair, Com. Morgan, who is still in Europe, being expected home on June 7. The following members were elected: Charles L. Seabury, Frank V. Alexandre, Daniel B. Burnham, David F. Sellers, U. S. N.; J. Adolph Mollenhauer, S. Barton French, Oliver H. Payne, John N. Robins, Jacob C. Rogers, Francis Peabody, Edward Bell, Edwin D. Trowbridge, T. H. Pratt, Sir W. F. Haynes-Smith, K. C. M. G., Henry Darlington, Charles H. Coster, William W. Griscom, Alfred W. Hoyt, Samuel Bettle, Henry De Forest Weekes and Clifford V. Brokaw. Sec'y Oddie, Chester Griswold and Frank T. Robinson were appointed a committee to select a cup to be presented by the club to former Com. Edward M. Brown. The regatta committee was authorized to offer prizes for a special race of the 30-footers, to be sailed on June 17 at the same time as the annual regatta of the club. The committee on the Newport Harbor improvements, of which E. T. Gerry is chairman, reported very satisfactory progress in opposing the proposed sewer and securing an advantageous change of the plans. The date of Aug. 2 was selected for the rendezvous at Glen Cove for the cruise. A letter was read from Com. H. W. Lamb, Eastern Y. C., writing unofficially and as a member of the New York Y. C., suggesting that the proposed race from Vineyard Haven around Cape Cod should finish at Marblehead instead of a point further east. The letter was laid aside until the return of Com. Morgan. A letter from the secretary of the Royal Swedish Y. C., of Stockholm, was read, concerning the regatta to be held in the Baltic from July 7 to 14, as already published in the FOREST AND STREAM.

Namouna, steam yacht, James Gordon Bennett, arrived at New York on May 23 with Mr. Bennett, Henry Ridgeway, Lady Bulkeley and daughter on board. Namouna sailed from Toulon on May 3, calling at Madeira on May 9, Las Palmas on May 10 and Bermuda on May 21.

Claymore, steam yacht, has been sold by J. K. Todd to Com. J. B. Edson, Shelter Island Y. C.

Royal Phelps Carroll, owner of Navahoe, has returned from Europe, and announces that the yacht will be in commission and raced this season. Her only opponent will be Vigilant, under cruising rig.

The Queen City Y. C., of Toronto, opened the season with a handicap cruising race for all classes to Port Credit, on Saturday, May 22. The skiff class has been divided into two, known as the 16ft. and 20ft. classes, conformably with the action of other clubs. The racing fixtures for the year are as follows: 27ft. class, June 5, July 10, Aug. 28; 22ft. class, June 5, Aug. 7, Sept. 18; 20ft. class, June 19, July 17, Aug. 21; 16ft. class, June 19, July 24, Aug. 14.

The yawl designed by A. Cary Smith and built by Reed Bros., of Fall River, for Oliver Adams, has been named Takana. She is now at Larchmont.

The eleventh annual meeting of the Miramichi Y. C. was held on May 13, at Newcastle, with Commodore Miller presiding. The following officers were elected: Com., J. C. Miller; Vice-Com., J. L. Stewart; Rear-Com., F. L. Pedolin, M.D.; Sec'y-Treas., J. R. Lawlor. Trustees: Hon. L. J. Tweedie, R. H. Gremley, P. B. Wheeler. Membership Committee: Dr. Pedolin, W. A. Park, Jas. Robinson, M.P., Chas. Sargeant, H. Williston. Regatta Committee: R. R. Call, E. Hutchison, L. J. Tweedie, J. H. Sargeant, D. G. Smith. Vice-Com. Stewart announced that he had been authorized by Hon. J. P. Burchill to offer the club a fine binocular marine glass as a prize, and a resolution accepting the offer and thanking Mr. Burchill was passed. The following programme of events for the season was adopted: Monday, May 24, club cruise; Saturday, June 12, race at Newcastle, tringular, for Gov. Foster's cup; Thursday, July 1, club cruise; Monday, July 12, race at Chatham, triangular, for the Thos. D. Adams cup; Thursday, Aug. 12, race from Loggieville to Oak Point and back, for the Stewart championship pennant; Thursday, Sept. 9, race at Newcastle, triangular, for the Watt cup; Saturday, Oct. 9, race at Chatham, triangular, for the Gould cup. A resolution was passed to the effect that the Burchill marine glass is to become the property of the yacht winning the most club races during this season, and that in case of a tie, there will be another race to decide the ownership.

Yampa, schr., R. S. Palmer, sailed from Larchmont on May 22, calling at New London next day to drop several passengers, and continuing her voyage to Southampton. Mr. Palmer was unable to sail on her, owing to recent illness, but will join her by steamer. He is represented on board by Geo. A. Cormack, of New York. With Mr. Cormack are S. L. Husted, C. C. Munroe and Dr. E. L. McGinnis. Mr. T. C. Zerega, who has been traveling on the continent for several months, is now waiting in London to join her. After taking aboard Messrs. Palmer and Zerega, the yacht will visit the Baltic in company with the racing fleet, and will cruise during the summer in northern waters. This is the third long cruise Mr. Palmer has made since he purchased Yampa, to the Mediterranean and English Channel in 1895 and to the West Indies in 1896. The yacht, which has been put in fine shape during the winter, is in charge of Capt. F. L. Siemon, formerly of Dauntless.

The American Y. C. has arranged with a New York coal company to have a coal barge with special apparatus for coaling yachts stationed off Milton Point, Long Island sound. The barge will supply both coal and water to Sachts.

Canoeing.

Atlantic Division Cruise.

THE Central Railroad of New Jersey will carry canoes and camping outfits free from Jersey City to Philipsburg or Easton. Rate quoted for members of the party, if ten or more travel together, $1.50 per capita from Jersey City to Philipsburg or Easton; if separately, regular trip from New York to Philipsburg $2.05, to Easton $2.10.

Members will please communicate with James K. Hand, Grand Central Depot, New York city, in regard to purchase of tickets, advising how much duffle they desire to carry, so that the railroad company may be advised in time.

Notice will be sent giving leaving time of trains from New York, and block tickets for the party purchased as soon as requisite number have advised. Canoes and duffle may be shipped by truck or local express to baggage room, C. R. R. of N. J., foot of Liberty street, New York, where they will be cared for, and handled over the ferry and to the baggage car.

TRANSPORTATION COMMITTEE,
JAMES K. HAND,
Grand Central Station, New York city.
MAURICE D. WILT,
Philadelphia.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

May 31.—CANAJOHARIE, N. Y.—Eastern New York Trap-Shooters' League tournament, under the auspices of the Canajoharie Gun Club. Charles Weeks, Sec'y.

May 31.—PORTLAND, Me.—Spring tournament of the Portland Gun Club. Targets. Added money announced later.

May 31-June 1.—GRAND RAPIDS, Mich.—Tournament of the Michigan Trap-Shooters' League, under the auspices of the Valley City Gun Club.

May 31.—NEW HAVEN, Conn.—Second tournament of the Connecticut Trap Shooting Association, under the auspices of the New Haven Gun Club. W. H Hazel, Sec'y

May 31.—NEWBURGH, N. Y.—Tournament of the Glenwood Gun Club.

June 1.—CHICAGO.—Illinois State Sportsmen's Association's convention at the Sherman House, 8 o'clock P. M. Contests for the Association's medals, cups and other prizes, June 1, 2, 3, at Watson's Park. John Watson's tournament at Watson's Park, live birds and targets, June 1 to 6, inclusive.

June 2-3.—HACKENSACK, N. J.—Anniversary tournament of the Bergen County Gun Club. *Recreation* cup shoot on June 2. C. O. Gardner, Jr., Sec'y.

June 2-4.—SPRINGFIELD, O.—Annual tournament of the Ohio Trap-Shooters' League, under the auspices of the Springfield Gun Club.

June 7-8.—PARKERSBURG, W. Va.—Tournament of the Mountain State Gun Club Targets. $350 added. Leon J. Epstein, Sec'y.

June 8-9.—KOKOMO, Ind.—Tournament of the Trap-Shooters' League of Indiana

June 8-10.—SIOUX CITY, Ia.—Third amateur tournament of the Soo Gun Club. W. C. Wells, Sec'y.

June 10.—BATH, Me.—Sixth annual tournament of the Bath Gun Club. Open to all. Geo. E. Thompson, Sec'y.

June 8-11.—AUBURN, N. Y.—New York State Sportsmen's Association tournament. C. W. Tuttle, Sec'y.

June 9-10.—MONROE, La.—Tournament of the Interstate Association, under the auspices of the Monroe Gun Club.

June 10.—NEWCASTLE, Pa.—Third tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

June 15-18.—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June 17-20.—ANACONDA, Mont.—Thirteenth annual tournament of the Sportsmen's Association of the Northwest and fourth annual tournament of the Montana State Sportsmen's Association, under the auspices of the Anaconda Gun Club. $1,500 added. C A Tuttle, Sec'y.

June 22.—OGDEN, Ill.—Second annual tournament of the Ogden Gun Club. Wm. McKinley, Sec'y.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

July 1.—SHERBROOKE, Quebec.—Sherbrooke's grand annual. Inanimates. Open to all amateurs. C. H. Foss, Sec'y, Sherbrooke, P. Q.

July 3-5.—MITCHELL, S. D.—Tournament of the W. J. Healey Hardware Co.

July 5-6.—INDIANA MINERAL SPRINGS, Ind.—Indiana Mineral Springs tournament. Ben O Bush, Manager.

July 7-8.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. H. T. Hearsey, sec'y-treas. of the League.

July 14-15.—NEW HAVEN, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

July 20-22.—PINE BLUFF, Ark.—Seventh annual tournament of the Arkansas State Sportsmen's Association. Added money announced later. Paul R. Litzke, Sec'y, Little Rock, Ark.

July 22.—MEADVILLE, Pa.—Fourth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 17-19.—TORONTO, Canada.—Tournament of the R. A. McCready Co., Ltd. Targets. $1,000 guaranteed. Open to all. Write for programmes.

Aug. 19.—WARREN, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept 6.—MERIDEN, Conn.—Third annual Labor Day tournament of the Parker Gun Club.

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Sept. 28-29.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. H. T. Hearsey, sec'y-treas. of the League.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

Commencing with week after next, the Northern portion of the country will offer the inducements of three weeks of trap-shooting to those who like to take part in tournaments. First comes the New York State shoot, June 8-11, a shoot that promises to gather together an extremely large number of shooters. Then comes the Chamberlin tournament, at Cleveland, June 16-18, a tournament that will introduce the "$4 class" to the general public. This shoot will be preceded by two days at targets on the grounds of the Cleveland Gun Club, the grounds on which the Chamberlin shoot will be held. On those two days all events will be shot under the auspices of the Cleveland Gun Club. It must not be overlooked that Paul North (perhaps we ought to say the Chamberlin Company) will throw all bluerocks free of charge on June 16-18. Then comes the Pennsylvania State shoot, at Oil City, Pa., a city that is located within easy distance of Cleveland. The dates for this shoot are June 22-25. Thus we have four days at Auburn, N. Y., five days at Cleveland, O., and four days at Oil City, Pa., making altogether thirteen days of trap-shooting between the dates of June 8 and June 25.

Barney Worthen, of Charleston, S. C., is a corking good shot, and showed just how good he really is by breaking 163 out of 170 on the first day of the interstate shoot at Savannah, Ga. And his record was not made on easy targets, nor with an easy background to shoot against.

The programme for Elkwood Park on Saturday next, May 29, is the Ogden handicap, 15 birds, $10, birds extra; handicaps 25 to 30yds.; high guns; to commence at 1 P. M. On Decoration Day the main attraction will be the Veteran's handicap, 10 birds, $10, birds extra, handicaps 25 to 31yds.; high guns; commencing at 1 P. M. In addition to the above there will be target events all day, targets being thrown from a magautrap. A target programme will be a specialty on every Wednesday during the summer. The first attempt at this kind of sport at Elkwood Park was held on May 19, and proved a thorough success.

We have received the following communication from Mr. C. W. Tuttle, of Auburn, N. Y., in regard to the division of purses in the "open events" at the New York State shoot: "Will you kindly state in Drivers and Twisters column of your next issue that the big open sweeps at our coming State shoot will be divided as shooters wish, probably by the old plan, while all State events will be divided under the Rose system. We feel sure that the coming shoot will be a record-breaker in point of attendance." We would also state that programmes for the New York State shoot are now ready for distribution.

When we wrote the Driver and Twister in regard to the three weeks of trap shooting in the northern part of the United States during the month of June, we overlooked the fact that we might have added in the three days (June 2-4) of the Ohio Trap Shooters' League at Springfield, O., at which $200 will be added to the purses. This annual gathering of Ohio trap-shooters is always a big one, and this year's meet will be no exception to the rule, as the shoot is to be given under the auspices of one of the best and most energetic gun clubs in the Buckeye State. There is a good "open to all" programme.

This is the week of the King's Smokeless Gun Club, of East St. Louis, Ill. The programme for the four days (May 26-29) calls for eight events of 20 targets for each day, with an entrance fee in every event of $2.50. Manufacturers' agents will pay 50 cents extra in every event, while "experts" who make "90 per cent. or better on the first day pay 50 cents extra on the second day." The tournament will be under the management of Jack Parker, and all targets will be thrown from a magautrap.

The movement to start a State organization in New Jersey has borne enough fruit to date to show that the Jerseymen want such an organization. The movement will come to a head in the next few weeks, and we shall probably see a State shoot in Jersey before the fall is upon us. The meeting of May 19, reported elsewhere in these columns, shows that there is enough material at hand to form a really good organization, with capable and energetic officers to govern it.

While at Savannah, Ga., last week we heard a good deal about the coming Interstate shoot at Monroe, La. This, the last of the tournaments on the Interstate Association's southern circuit for 1897, promises to be exceedingly well attended. The programme is a good one, and the $200 added money will draw out a lot of shooters. The dates for the shoot are June 9-10. Shells and guns should be shipped in care of the Monroe Hardware Company.

It is really astonishing how modest some men are. Take Simon Glover, of Rochester, N. Y., for instance: Sim will tell you—and tell it to you seriously and with a sorrowful look upon his face—that he cannot shoot live birds, and never could. And now, here he comes North with the Kansas City *Star* cup in his valise as the result of his having beaten out 60 competitors in the race for that trophy with a score of 30 straight.

With Charlie Budd as Du Pont champion, Charlie Grimm as cast-iron champion, and Sim Glover as the *Star* champion, the live-bird world of trap-shooters have an elegant sufficiency of champions. Neither Brewer, Elliott nor Carver can now have any difficulty in getting on a match when they want one. All the above trophies are open to all, nobody and no powder barred.

The New Haven (Conn.) Gun Club will have its hands full on Decoration Day, the occasion being the visit of the gun clubs of the State of Connecticut that go to form the Connecticut Trap-Shooters' League. The team race is, of course, the main attraction; but there will also be plenty of sweepstake shooting to satisfy all comers.

The Endeavor Gun Club, of Jersey City, N. J., and the Dunellen (N. J.) Gun Club had a friendly 9 men team race on Saturday last, May 22, on the grounds of the Dunellen Gun Club. The result was a victory for the Endeavors, for whom M. Herrington pounded out 24 out of 25, while Louis Piercy, the fifteen-year-old crack of the same club, placed a score of 23 to his credit.

In the contest for the *Shooting and Fishing* trophy between teams representing respectively the cities of Seattle and Tacoma, shot May 16, the Tacoma team had almost a walk-over. The scores were: Tacoma—Peirce 47, Young 44, Sheard 43, Smith 38, Kimball 36; total, 208. Seattle—Hardy 41, Stevens 40, Churchill 39, Ellis 37, Norton 25; total, 182.

The Glenwood Gun Club, of Newburgh, N. Y., a new organization in that city, has gotten out a nice little programme for its Decoration Day shoot, and will do its best to make things pleasant for its guests on that occasion. The grounds are easily reached by electric cars.

The Glenwood (S. C.) Gun Club announces a big live-bird shoot for Wednesday of this week, May 26. It is "gala week" at Glenwood, and the local shooters are looking forward to a goodly gathering of the clans.

The Trap-Shooters' League of Indiana has granted to the Limited Gun Club, of Indianapolis, sanction to hold tournaments on July 7-8 and Sept. 28-29.

The Bath Gun Club, of Bath, Me., has changed the date of its tournament from June 3 to June 10.

May 25. Edward Banks.

Programmes for Forthcoming Tournaments.

OHIO TRAP SHOOTERS' LEAGUE.

The eleventh annual tournament of the Ohio Trap Shooters' League will be held at Springfield, O., June 2-4, on the grounds of the local gun club. These grounds are easily reached, being only ten minutes' ride on electric street cars from the center of the city, and are among the finest equipped in the State. The programme states that "the magautrap will be used in all events, and the programme has been carefully and judiciously arranged to please the wants of all who may attend."

The "open-to-all" programme contains eight 15-target events and two 20 target events on each of the first two days, with $70 per day for added money; on the third day there will be only six 15 target events instead of eight, while the added money will be $60 in place of $70. But each day there is a special race, open to members of the League only. They are scheduled as follows:

June 2: *Ohio State Journal* trophy, presented to the league by the *Ohio State Journal*, of Columbus. It is shot for at 30 targets, unknown angles, and was won last year by D. A. Upson, of Cleveland.

June 3: L. C. Smith trophy and championship of the State. This event is shot for at 50 birds, unknown angles, and is now held by D. A. Upson, who won it last year with the score of 47 out of 50.

June 4: *Sportsmen's Review* trophy for two-men teams; 25 targets per man, unknown angles. The Buckeye Gun Club won it last year with a total of 49 out of 50. On this date there will also be a handicap race for the E. C. cup, 50 targets per man, unknown angles, the cup becoming the personal property of the winner.

Five bluerock expert traps and one magautrap will be in commission on June 1 for preliminary practice work. The Rose system of dividing purses will be used, with ratio points as follows: In all 15-target events, 7, 5, 4, 3 and 2; in 20 target events, 7, 5, 4, 3, 2 and 1. Shells sent in care of J. D. Foley, 32 South Fountain avenue, will be delivered at the grounds free of charge.

The annual meeting of the League will be held Thursday evening, June 3, at 8 P. M., in the Arcade Hotel. The new St. James Hotel will be headquarters for shooters, and will give a special rate of $2.

NEW YORK STATE TOURNAMENT.

The programme for the New York State shoot, June 8-11, is now ready for distribution, and those who propose attending this shoot, and who may not have received a copy of the programme should write to the Auburn Gun Club for a copy of the same. Our reason for suggesting this action is the fact that we cannot give in the space at our disposal a complete synopsis of the contents of the programme.

The State events, open only to members of the State organization, will be interesting as ever, while the fact that the purses in these events will be divided into eight moneys under the Rose system shows plainly enough that the Auburn Gun Club does not mean to let anybody shoot without a chance of drawing back something. All these events are at 25 targets, unknown angles, all targets being thrown from a magautrap.

The Lefever medal contest, the four-men team race, and the big merchandise event will all attract many entries, each of these events being favorites at the annual gatherings of this Association. Two other State events are the E. C. cup shoot and the C. A. Bannister cup shoot, both 50-target events, unknown angles, entrance in each event being for the price of the targets only, with optional sweeps attached. The E. C. cup will be shot for on the first day, June 8, while the C. A. Bannister cup, the 4-men team race, and the Dean Richmond cup contest (the live-bird team championship) will make up the State events programme for the last day, June 11.

On the open traps there will be two entirely separate programmes shot off on each day. On No. 2 trap the programme is made up as follows: Four 20 target events, $3; four 15-target events, $2. On No. 3 trap the programme runs thus: Four 20-target events, $1.50; four 15-target events, $1. In all these events the purses will be divided according to the will of the majority of shooters.

All targets will be thrown from magautraps, and will be charged for at the rate of 2 cents each. Of course, bluerock targets will be used exclusively. We presume that all shells shipped in care of the Auburn Gun Club will be delivered at the grounds as usual.

The lengthy and valuable list of merchandise prizes offered for competition by the Auburn Gun Club, proves exclusively that the club has spared no pains to make this shoot as attractive as any of its predecessors.

SOO GUN CLUB.

The Soo Gun Club, of Sioux City, Ia., has issued the programme for its third annual "amateur tournament," which takes place June 8-10. Among the "Remarks" will be found the following:

"All purses divided 40, 30, 20 and 10 per cent. If a majority of shooters present desire to try division of purses under the Rose system on second day of shoot, the same will be adopted. All ties to be divided; $135 in cash and merchandise added each day, also $50 gold medal second day. This tournament will be open to shooters from Iowa, Minnesota, Nebraska and Dakota, the following shooters being barred: Grim, Budd, Gilbert, Wilson, Parmelee, Latshaw and Denn. The club reserves the right to bar other professionals if they see fit. All odd events will be shot from a set of 5 expert traps, known angles. All even events will be shot from the magautrap. Our grounds will be open to all shooters on Monday, June 7, for practice on the magautrap."

The list of average prizes is too lengthy for us to make much mention of it; it is sufficient to state that the list comprises some good cash prizes and some excellent "plunder" trophies. Half the programme events each day will be shot from 5 expert traps, the other half from a magautrap.

New Jersey State Sportsmen's Association.

In another column of this department is a report of the meeting held on May 19 for the purpose of organizing and promoting trap interests in the State of New Jersey by the establishing of a live State Association. In the inauguration of such an important movement a vital essential is that it be started on a sound foundation, one recognizing the common parliamentary forms of organizing, so that it may be worthy of confidence in respect to the present, and avoid the perils of the future, which are sure to result from illegality.

The old New Jersey State Sportsmen's Association in its recent illegal meeting set forth the advantages it could offer and the promises it could make. It could offer two trophies, about $300 in the treasury (the last treasurer's report showed a balance of $15) and a history; but it for years possessed all these things itself, and, possessing them, it has been in a state of coma the while. It could not evoke interest enough to hold a meeting of its own men. What benefit is a reorganization of such a body?

It is a fair presumption that a history made up largely of inaction is not a desirable one. It is more in accord with the spirit of the trap world of to day to ask the N. J. S. S. A. to bring itself up to date than to ask the trap-shooting interests to retrograde to a dormant body which, as the years have shown, has no vitality in itself, nor any inclination to be vitalized by others. So ancient and inoperative had the Association become, that its officers who were present at the meeting had forgotten the essentials of the constitution and by-laws, and the action of the meeting was a groping in the dark.

The trap shooting interests of to-day have advanced far beyond the stage wherein the Association peacefully lay down to sleep and slept. New rules are required as compared with the old. New rules are in existence which could be adopted; therefore, why try to patch up the obsolete? Why cannot the advanced interests of to-day be recognized by the Association taking action of its own, instead of asking others to take action and help to revive it? Why doesn't it revive itself? It never has shown any interest in itself or others of late years.

The recent meeting showed that there was present abundant material of up-to-date quality to form a new association. The new interests are stronger in numbers, and incomparably stronger in their energy and activity. They could have formed an association of their own free from the baneful disturbances which now possess it, namely, the illegality of the meeting, the adjustment of the many promises made, and the revivification of a body which had no interest in itself or others, or its future.

The meeting of the New Jersey State Sportsmen's Association was illegal for the following reasons: No delegate present had a credential to the meeting; the meeting was not called according to the requirements of the constitution, which make mandatory that the president give the members a written notice thirty days before the meeting, stating its purposes so that the clubs could have time to consider the matter and appoint and instruct their delegates. As the Association had been inoperative since 1889, and therefore a fair presumption that the members had paid no dues since, it is doubtful if a single one of them was in good standing and legally eligible to send a delegate.

If instead of a thirty days' notice, a few members could get together at three minutes' notice, three or four meetings could be held in different places at the same time, and one would not know what the other was doing; an absurdity of course, but absurd because it is illegal, as the last meeting was illegal.

We have it from one of the most important officers of the Association that the last meeting was illegal, and therefore many of the provisions made cannot be carried out legally.

As there is so much material with which to form a new Association it would be better to make a new and independent beginning, form a new association, and make a history of its own; one full of activity, sportsmanship with trophies representing more purpose than a fee to others to come in and keep it from dying. Trophies should be for competition, and not as an inducement to other clubs to save it from death. It would be a mistake to go backward in history instead of forward.

The N. J. S. S. A. had no charter, at least there is no record of one in the New Jersey State archives, hence it was not incorporated and has no existence in law. We are informed that three clubs constitute its full membership.

To sum up, the old Association had no legal existence; it has no money in its treasury, the $45 credit being more than covered by its debit account; three clubs constitute its membership; it has not held a meeting since 1889, though repeated calls were made for one, and it was many years previous when its trophies were competed for; being defunct it could not revive itself; the recent meeting was illegal and therefore void.

And yet the great trap-shooting interests of New Jersey should not suffer loss through the lack of proper organization of its numerous live interests.

St. Johnsbury Amateurs.

St. Johnsbury, Vt., May 18.—We have got our gun club well started with thirty-three members, and much interest evinced. This sport can be enjoyed without much loss of time. The scores do not yet begin to show up much, but are improvements over the first four shoots. This is the score of the fifth shoot, May 15, by men men who had never before shot at clay-pigeons.

Match at 25 birds each: Dr. E. H. Ross 9, J. W. Titcomb 15, W. W. Husband 1, Dr. H. G. Bullard 11, W. Eastman 1, Frank French 5, C. C. Bingham 3, Paul Carter 5, Tom Hunter 15, H. A. Belknap 11, Fred Beck 14, Oscar Beck 13, C. H. Horton 9, Claude Welfoot 15, E. S. Hunter 17.

Some of these men had not shoot at the former meets. We have good grounds and are now using three traps, but expect to get five up soon. At the annual meeting, held last Friday, J. W. Titcomb was elected President; E. F. Griswold, Vice-President; Fred Beck, Secretary and Treasurer; H. A. Belknap, Field Captain.

John W. Titcomb.

Hartford Shooting.

Hartford, Conn., May 21.—I send you the scores made by the Colt Gun Club, for the handsome trophy presented by the W-A Powder Co. A handicap of added targets was allowed to the poorer shooters. The trophy was won by Harry Nichols:

	Broke.	Allowance.	Total.		Broke.	Allowance.	Total.
H Nichols	40	10	50	O Treat	31	10	41
J Pitkin	48	0	48	G Ripley	26	15	41

M. F. Cook, Sec'y.

Missouri State Tournament.

Kansas City, Mo., May 17.—The twentieth annual tournament of the Missouri State Fish and Game Protective Association was inaugurated at Washington Park to-day. There was but one event on the programme, that of the State team championship.

Contrary to the expectation of the local clubs, but one outside club was represented, and this of an unknown quality, so that the shoot virtually resolved itself into a contest of the Kansas City gun clubs. Kansas City can boast of its pigeon shooters with pardonable pride, as there is not a city in the country which possesses so many good shots. Just look at the array of talent! With seven such strong teams representing the city, it is not a matter of surprise that the other clubs were not better represented.

As is frequently the case, the result of this event proved quite a surprise to the knowing ones. The Foresters, the winners, were scarcely rated 1, 2, 3. They made a great start, however, as their first two men up each scored their 15 birds straight. The other two men added 5 more to this before the first miss had to be recorded. Two more misses were added before the finish, and the result shows the fine score of 57 out of 60.

The O. K's were second with 55, and they were the favorites in the race. With the exception of Miles they were all in great form. This clever young shooter, usually so steady, was sadly out of form, and for no reason that he can attribute. Hickman, the first man on this team, killed straight, but Miles only scored 11. When Herman and Gottlieb came to the score they realized that it was a hopeless task to endeavor to cut down the Foresters' lead of 4 birds. They, nevertheless, reduced it to 2, and almost equaled the great score of Barton and Russell, scoring 29, and then Herman lost his last bird.

This was really a race between the old and the young. All of the Foresters are men of mature age, while all of the O. K. are in the spring of life, so to speak, with the exception of Ed. Hickman, and nobody can guess within a decade of his existence. Ed always looks the same.

Right on the heels of the O. K.'s came the Stock Yard team. Two 14s and a like number of 13s is what this quartette put up, very uniform shooting for a team. Washington Park Club was next with 51; N. Jarrett led his team with a straight score. There was quite a gap between the next team, St. Louis, Belt Line and Pastimes all being bunched together; 47 was these teams' total. Connor was high man with 14, on the St. Louis team; Frank Smith did the same thing for the Belt Lines with the same score, as did Jim Porter for the Pastimes. The surprise of the race, though, was the Kansas City's. The very same men represented the club last year, and won the trophy on a score of 57, and then three of the team knocked out a straight, one man losing all the birds for the team; 43 is what they had to be content with this time, 14 birds less than they scored last year. George Schrader's score is a puzzle to those who know what an excellent shot he is. The same may also be said of Peck, who is usually so reliable.

The conditions are four men to a team, 15 birds per man, entrance $20 per team, birds extra; trophy to first, $40 to second, $30 to third, $20 to fourth and $10 to fifth; $100 to the team holding the medal last.

The weather was fine, with plenty of wind to make the bird fast; collectively they were an excellent lot. No record was kept of the dead out of bounds.

Second Day, May 18.

The weather on Tuesday was again fine, though there was little wind blowing, and for this reason the pigeons were not as good as on the previous day. There were only three live-bird events on the programme: a 5, a 7 and a 10-bird event. In each of these straight scores were numerous.

The entries in the target events did not reach as high as was expected, fifty-four being the top number, though altogether sixty-seven shooters participated, and of these forty shot the entire programme. At the top of the list will be found Harvey McMurchy and Gilbert a tie for first honors with 94.3. Then there is Budd with 93.1, and Sexton and Glora with 91.8; Parmelee is just one behind this pair, leading Heikes by a similar margin. The others follow in the order of merit. This is the first time the magautrap has been used in a Western tournament, and to many it is a new thing, and to most of these it is a puzzle. Straight scores are not numerous, and not until the third event was there one scored when Capt. Foster broke the spell. Then Heikes, Glover and Crabill also got into his hole. After this there was always one or more straights in each event. The fortunate ones today were Weston, who was the only 18 in the second, while Sexton, Linderman and Parmelee each got a straight alone. Linderman also made the longest straight run of the day, 56, without a skip. Gilbert and Budd had a little contest by themselves, each endeavoring to score the most 19s. This resulted in a tie. Just seven times did they score that number. Wright, Bruns, Hifer, Rhodes, Nothy and Boehner shot in but one event.

The programme consisted of eight 20-bird events, with $20 added to each event, and five equal moneys.

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Av.

Third Day, March 19.

The shooting continued under the most favorable circumstances on Wednesday, and entries were numerous at both the target and pigeon traps. At both of these Gilbert is still showing the same form which characterized his work since the start. His total to-day was nearly a duplicate of yesterday, 11 losses in the target events and a straight score on live birds. In the van to-day will be seen Running, Heikes and Gilbert, with 93.1. Heikes is there by virtue of his great finish, 59 out of his last 60, and the last 43 of them straight. This being the best consecutive run of the day. Budd and Glover are the only other two who reached 90 per cent, though McMurchy was only 1 break short of this. The lucky ones to-day were Weston, Heikes, Gilbert and Parmelee, each capturing first alone without a tie; Weston in No. 1, Heikes in No. 3, Gilbert in No. 5 and Parmelee in No. 6. For the first 4 events the money was divided on a basis of five equal moneys, but after that it was changed to the old 30, 25, 20, 15 and 10 system. The management having become thoroughly convinced that a system that is so rotten, and which encouraged crooked shooting, was not the kind to maintain at so high a class tournament. Sixteens invariably pair better than 17 and 18, and some of the foxy shooters were not long in ascertaining this fact, and doubtless this was responsible for the row of goose eggs at the end of some of the scores; though when we found them, the total invariably was 16. Seventy shooters participated in the regular target programme events, but sixty are only shown in the table below. This is a trifle more than on the first day, though the number that shot through is not quite as large, thirty-four being the number of these. The following shot in but one event: North, N. Jarrett, Glasner, Bochner, Legg, Coyle, Higdon, Schott, Connor and J Stevenson. The programme consisted of eight 20-target events, which appear below:

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Av.
Running	18	18	19	19	19	19	18	19	160	149	93.1

SPECIAL EVENT STAR TROPHY.

There was also a special event on the programme to-day, and that was a 50-target race for the Kansas City *Star* trophy. This was an elegant watch charm fashioned in the shape of a star and appropriately inscribed. This contest was restricted to residents of Missouri and Kansas City. No big scores were made in this event, but it brought about an interesting and spirited contest. The result being a tie on 45 by Hodges, Gottlieb and McIlhany. Each of them rattling good shots, and two at least have shown themselves hot company on numerous occasions. Hodges not having the experience of the other two, though coming fast. Few shooters have shown such marked improvement as he in the last six months. The tie was shot off at 25 and both Hodges and McIlhany got off wrong, as they lost several birds right at the start. While big good-natured Chris was taking things easy and smashing his targets with the same steady precision that he developed in the last part of the race. Only once did he skip; that was after he had chalked 11 straight and was leading his opponent at least two birds. After this he made no more mistakes, and finished with 24, which made 48 out of his last 50, he having only scored 21 out of his first string of 25. McIlhany scored 22 and Hodges 20. This shoot-off was fraught with much interest, from the fact that the trio engaged are all young men who have a host of admirers and are deservedly popular. No finer ever walked down a firing line. Gottlieb is Kansas City's idol, McIlhany is Weir City's pet, while at Olathe they think that Hodges is about the proper one.

Conditions: 50 targets, unknown angles, for *Star* trophy, entrance $2:

Cornett	11110101011101111100111 11	–19

McIlhany	01111111101101111111111 11 –22

Fourth Day, May 20.

To-day we have but to record that which often happens, the trade representatives all bunched at the head of the list, with McMurchy and Heikes tied for first place with the fine average of 95 per cent. Right after them come Gilbert and Glover with 94 3, only one break separating these two from the leaders. Then comes Budd, who has the distinction of getting three straights in a line and making the longest straight run of the tournament up to the present time, something like 65. Budd, too, was the fortunate one of the day, his straight in the fifth event netting him first alone, the only time that it occurred during the day. Linderman ranks after Budd, and is the only amateur who is well to the front. Dick shot very consistently, and being popular his friends are elated to see him so near the top; 92 5 is a fast clip. Collectively the contestants all shot better to-day and with few exceptions all improved their averages. This is to some extent to be attributed to the targets being thrown somewhat higher, and not down under the hill, as on the previous two days. The weather conditions still remained perfect and the attendance good, though not as much interest is taken in the target events, as the big championship event is in progress at the live-bird traps. Twenty-eight shot through the programme events, and fifty nine participated altogether; of this number five, Taylor, Boehner, Custice, Dingman and White shot only in one event. There was $225 added money to-day, $25 in each event, including the special.

The standing of all, with the exception of the five mentioned above are shown in the table below, ranking in order of merit:

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Av.
McMurchy	19	17	20	20	18	19	19	20	160	152	95

Duck	..	..	12	..	13	16	..	..	60	41	68.3

There was also a special 20-target event, open only to amateurs and those who had shot in a majority of the events of the previous two days, and had not been in for first or second money at any time. Entrance in this event was price of targets, and the purse was $25., hung up by R. S. Elliott & Co, three equal moneys. This event had twenty-seven entries, and Howe, T. Blackwell, J. S. Smith, Rickmers, Newton and Sayles cut up first money on 18, second going to A Smith, White, Norton and Sweet on 17; Clyde, Sims, Koohler, Brown and Bruns scored 16 and divided third. Here the 17s received more than the 18s, another illustration of the inconsistency of the equal money division of purses.

Fifth Day, May 21.

The principal feature in the target events to-day was Budd' great shooting. He scored four straights and two 19s, losing but 7 targets in all, finishing with an average of 95.6, the highest yet reached by any one during the tournament. Hale and Heikes are second, though 5 birds separate them from the leader. Barlow and Gilbert follow, each being credited with 1 less than Hale and Heikes. This seems to have been a bad day for the "perfesh," for of the ten who reached 90 per cent. only three are in that class. Sim Glover losing 9 birds in one event, 7 of them in succession, is one of the surprises of the shoot. This occurred after he had won the cup, and may probably be due to the reaction. McMurchy's work also is in marked contrast to that of the previous day. From first to twenty-third is quite a drop. But look at the Simon Pure class which has been trailing in the rear all this time. To-day it came up with a rush, Hale, Barlow, Linderman, Jackson, McIlhany and Sexton, all bunched near the top.

Aside from the usual eight 20-target events, there was also a team race on the programme, open only to teams whose members were residents of Missouri. The entrance in this was $10 per team and $50 was added, in addition to the medal that went to the high team. There was to have been five moneys, but as only four teams entered there could not of course be more moneys than teams. The medal and first money was won by the team composed of Sergeant, McIlhany, Barre and Wilmot, whose team total was 89. Kansas also entered a team, but were only permitted to shoot for birds. This team, composed of Running, Sexton, Barlow and Stevenson, scored 90.

To-day twenty-six shot through the programme, while the aggregate number participating was fifty. Of this number Duck, Salisbury, Dickey, Blackwell, Rube, Reno and Glassner shot only in one event. The weather again was all that could be desired.

SCORES OF MAY 21.

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Av.
Budd	19	20	18	20	19	20	20	17	160	153	95.6

The scores in the team race were:

Kansas team: Running 24, Sexton 23, Barlow 22, Stevenson 21—90.

Sergeant's team: Sergeant 24, McIlhany 24, Barre 23, Wilmot 18—89.

Cornett's team—Cornett 22, Hale 20, Gottlieb 19, Norton 18—79.

Herman's team: Herman 21, Ledo 19, Scott 17, Sweet 16—73.

"STAR" CUP RACE.

The race for this elegant trophy had the good entry of sixty-three, ten more than last year. Among them were most of the representative shots of the country, the notable ones being Charley Budd, the present Du Pont's champion; Fred Gilbert, ex-Du Pont champion; J. A. R. Elliott, who was the *Star* cup champion before the race begun; Rolla Heikes, the mud pie champion, as they contemptuously term it here; Harvey McMurchy, who is not a champion, but who occasionally out-shoots one of his class; so with the exception of the two "world's champions"—Carver and Brewer—and the cast-iron champion and the sparrow champion, there was little talent lacking, as State champions were numerous.

But now we can add one more to the above list, as Sim Glover won the cup and has therefore joined the champion class. Most likely this will cause him no end of trouble, and perhaps before the ink is dry on this he will receive challenges galore. With so many champions there should be no lack of matches.

The race was a good hot one, all but the shoot-off, and the birds were by no means ordinary. This is borne out by the fact that so many hard hit birds went out of bounds. Four scored straight—Glover, C. C. Herman, Lamb and Crabill. The tie was shot off at 5 birds, and it required just that number to decide the winner. Glover, the winner, was the first to the score, then Crabill, Lamb and Herman. The first two rounds were safely passed by all, though Crabill had a narrow escape on his bird. This bird, a fairly fast one, went almost to the boundary before it dropped. Crabill was shooting in very poor time. His next one, although hit, went out entirely. The others managed to stay in. Glover's 4th was a hot driver, but was well killed close to the trap by an excellent first, the second being entirely unnecessary. Crabill having dropped out, Lamb now shot in his turn. The bird he drew was a screamer, and to add to the difficulty Lamb was woefully slow. The result was a lost bird. Herman added one more to his score. Glover then killed his 5th, an easy one. Herman drew a fast left quarterer, and by a well-placed first had it down on the ground. The referee announced "dead bird," and the shooter deliberately took aim and fired his second while the bird was on the ground, but the bird had fallen in a little depression in the ground, and the charge passed harmlessly over it. The shooter left the score, but in the meantime the bird's head was up in the air viewing the surroundings. When the boy who went to retrieve it had approached within a few feet, the bird rose and went out of bounds. Thus the bird once declared dead had to be scored lost, and Glover won the cup by virtue of some good luck and excellent shooting. The five birds that Glover drew in the shoot-off were only ordinary, with the exception of one, but this was killed in the same excellent time as the rest. Herman, too, was shooting in fine time, but did not appear to be as composed as Glover. This is the most important feature of the many interesting ones of the big race.

Eight men scored 24, and of this number Hagerman, Jim Porter, Parmelee, Budd, J. S. Smith and Hale lost their birds dead out of bounds. Nine scored 23, and of these, Parker, Gilbert and Taylor had a similar experience with their lost birds.

Conditions, championship cup event: 25 live birds, $25, birds included, $1,000 guaranteed, all surplus added, six moneys, 30, 25, 15, 15, 10 and 5. All at 30yds.

Other scores were as follows:

21: F. J. Smith, Brucker, Hubbard, N. Jarrett, Whittier, Running, Curtice, H. W. Stevenson, W. W. Herman, Cockrill, Roy, Forsythe and Linderman.

20: Orr, Fletcher, Coyle, Whitworth, J. W. Den, Walden, Malvin, Foster and Ross.

19: Dr. Jackson, McIlhany and W. T. Den.

18: Boehner, McCurdy and Clapp.

17: Aby.

Cragin withdrew with 16 out of 21, Clyde with 15 out of 21, and Jarrett with 4 out of 8.

Pawtuxet Gun Club

PAWTUXET, R. I., May 8.—The fifth contest for the W-A trophy was held to day, Badmington scoring his first win for the cup. As none of the other shooters had any chance to win, even if they broke all their allowance of extra targets, none of them shot up. Sheldon and and Greene, the scratch men, both withdrew from the race. Scores were:

Badmington (4)	01011111101111011110101111001	–21
Hawkins (2)	11111111001111111000011100	–18

Sweepstake, 10 targets: Mooney 10, Sheldon 9, Root 8, Bain 8, Arnold 6, Hawkins 2, Greene 3, Crandall 6, Badmington 3. PAWTUXET.

New Jersey Trap-Shooters' in Session.

FOR a movement which promised so much in the way of broadening, vitalizing and improving the sport of trap-shooting in New Jersey, the meeting held in Room 1009, 377 Broadway, on May 19, accomplished but little, and that little of the vaguest and most uncertain import so far as any immediate benefits are concerned. That there was a strong sentiment in favor of reorganization and action is demonstrated by the response accorded to the call of the committee, Messrs. Wise, Huck and Banks, there being present delegates from twelve clubs, as follows: Endeavor Gun Club (C. W. McPeck); Passaic City Gun Club (C. R. Wise and Capt. Hall); Boiling Springs Gun Club (W. H. Huck and A. Jeanneret); Elizabeth Gun Club (R. E. Chetwood); Newark Gun Club (J. Pentz and W. H. Green); East Side Gun Club (Henry Reiboldt); Jersey City Heights Gun Club (Justus von Lengerke and A. Heritage); Oritani Gun Club (G. P. Ricardo); South Side Gun Club (Isaac H. Terrill and C. M. Smith); Bergen County Gun Club (Capt. A. W. Money and G. P. Griffiths); Arlington Shooting Club (M. Herrington), and Essex Gun Club (Mr. Green).

The meeting was called to order at 2 o'clock. Captain Money presided. Mr. Wise read the call of the meeting, which mentioned its purposes, etc. Mr. Jacob Pentz arrived shortly afterward and, on motion of Mr. Carl Von Lengerke, Mr. Pentz was elected secretary. Unfortunately, the call for the meeting was construed differently by the clubs interested, some considering it an official call of the New Jersey State Sportsmen's Association, others simply recognizing it as it really was. In treating of the matter in the issue of April 24, FOREST AND STREAM explained the situation specifically, and that while the meeting was an effort to reorganize the old Association, if revivification were possible, the meeting was one of inquiry and promotion. The precise words were: "For more than a year past there has been desultory talk about getting the Jersey shooters together and reorganizing the State Association, but nothing was actually done until recently, when a committee of three was nominated at a monthly meeting of the Boiling Springs Gun Club to test the feeling of the trap-shoo ers of New Jersey on the matter, and to call a meeting of delegates from the various clubs in the State for the purpose of effecting a reorganization of the old Association. This committee, acting under the authority given it at that meeting, has issued the following circular to the gun clubs of the State." The call for a meeting to promote the reorganization being misunderstood by some as the act of the Association, and by others as an attempt to usurp the functions of it; as a result, some of the delegates had credentials to a meeting of the New Jersey State Sportsmen's Association, while others simply had credentials to the meeting called at the time and place stated above. Thus, some of the credentials were irregular. One delegate had no written credentials. However, there was a common and earnest purpose in the interest of reorganization and improvement, and the defects of the credentials in a preliminary meeting could be treated with leniency, with no harm done. In a thoroughly organized body, the matter is vitally different. The committee was discharged and its report accepted, save that, on the objection of Mr. Pentz, the part stating that a promise was given to donate to a new association the two trophies of the old association. This part was withdrawn. Mr. Pentz explained that the cups belonged to the association; that those having the cups in charge were custodians, therefore not owners, and had no right to promise them as stated.

A long discussion followed concerning the status of the Association under the laws of New Jersey, which prohibit the organizing of corporate bodies so as to prevent the formation of trusts. Some thought they nevertheless could form an association, others thought they couldn't. The prevailing opinion was that they could organize. If not incorporated, however, they would avoid fees and taxes, but would have no legal standing. Mr. von Lengerke stated that the subject had much *pro* and *con*, and that also was about the conclusion of it. The matter of game protection also was discussed *pro* and *con*.

Mr. Pentz made a plea for the recognition and support of the old association, setting forth that it had two trophies still open to competition, some $300 in the treasury, and a history, though as to the benefits of the history, made up of many years' silence and inaction, nothing was said; and at all events, the making of a history is the cheapest and easiest sort of an asset. He further promised that all the old officers would resign, and thus place in power a new administration reflecting the newer condition.

Mr. Carl von Lengerke asked what were the prospects of the old association holding a meeting; that previous calls had failed, and, therefore, matters might go on as before. The reply was, in substance, that things would be mended by new members coming in.

It was thought that, regardless of formalities, a meeting of the old association could be held then and there. About 3 o'clock a recess of ten minutes was taken. Some informal consultation was necessary, as there seemed to be no unanimity of opinion or purpose, and insufficient knowledge of the new conditions imported into the affair by holding two meetings under such conditions which had some conflicting interests. However, this proved to be the end of the meeting called for May 19, etc., for when the delegates were again called to order it was announced that an informal meeting of the New Jersey State Sportsmen's Association would then be held by the call of Mr. Heritage, the president. Of the membership of the New Jersey State Sportsmen's Association, representatives of the following clubs were present: Bergen County Gun Club, Jersey City Gun Club, Newark Gun Club, Boiling Springs Gun Club, South Side Gun Club, and Essex Association.

Mr. Pentz then informed the meeting that the Association could pass on applications for membership then and there, and that he would give his pledge that all the old officers of the Association would resign. The following clubs, through their representatives, then applied for membership and were admitted: Passaic City, Endeavor, Bergen County, Oritani, Elizabeth (conditionally on the club sanctioning the application later), East Side, Climax gun clubs and Arlington Shooting Association. A single ballot was cast for all the clubs.

There was no available copy of the New Jersey State Sportsmen's Association's constitution and by-laws, and no one had any knowledge of them. This hampered the work. It was thought that the initiation fee was $5, though again some one thought it was $10. In short, the Association had been hibernating so long that its constitution, by-laws, etc., were forgotten by its own officers. Then the matter of officers evoked a strong interest. There was an earnest desire manifested from a part of the members present to have the old officers resign at once, while the officers, though willing to resign, preferred to do so later at a meeting, of which due notice was given, and all the members of the Association could be present and thereby secure a full representation. This applied quite as forcibly to calling the meeting then being held, etc., as it did to the election of officers, but that seemed to escape notice. The illegality of the act of election was set forth as being an obstacle. However, as the pressure increased, Mr. Pentz and Mr. Hobart tendered their resignations, which were acted on separately at the request of Mr. Pentz, and both were promptly accepted. The president, Mr. A. Heritage, next tendered his resignation, and this act evoked a long discussion, some opposing, some favoring it. It was set forth that, if the president's resignation was accepted, the club would be powerless to act, as there would be no officer to call a meeting; others held that, regardless of his resignation, the president continued in office till his successor was elected. After a long debate Mr. Green moved that the president's resignation be accepted on the condition that he hold over till his successor was elected. Mr. Wise held that the meeting was irregular and that the Association had virtually gone out of existence. There was much division of opinion. The old members of the Association could give no information of the constitution and by-laws, therefore there was no settled policy or unanimity in amalgamating the live interests of to-day with the dormant matters of a past age, so that what was accomplished represented no matured thought or settled purpose, or legal certainty. All the conclusions arrived at were what seemed the most tangible out of vague data and uncertain status.

Mr. Green moved that the president call a meeting for the purpose of electing officers, to be held in Jersey city. Mr. Wise moved as an amendment that the meeting proceed to the election of temporary officers at once, and the amendment was carried.

The election of officers was then held, and resulted as follows; President, Capt. A. W. Money; Secretary, Mr. C. S. Wise; Corresponding Secretary, Mr. Carl von Lengerke. Capt. Money then took the chair. On motion it was decided to hold a meeting in Taylor's Hotel, Jersey City, at 2 o'clock, June 2. On motion the chair appointed a committee to revise the constitution and by-laws, and to inquire into the Association's finances and act in matters in general as they deemed best for the Association's interests.

It is most regrettable that so much that is illegal and therefore so much that is inconclusive was transacted. It is probable that, so far as any official action is concerned, matters stand precisely as if the meeting had never been held. As to the illegality, it may be briefly summed up as follows: The call issued by the committee, Messrs. Wise, Huck and Banks, was for a specific purpose, an attempt to reorganize the New Jersey State Sportsmen's Association or to organize a new association. Some of the credentials were given to the delegates to represent members of the N. J. S. S. A. at a meeting of that Association, while other credentials were given in accordance with the call. As no meeting of the Association had been called, it is clear that the credentials were worthless.

When the so-called N. J. S. S. A.'s meeting was called, the credentials of the delegates were not questioned, although not one of them had credentials to the meeting. The meeting itself was wholly illegal, it being contrary to the section of the Association's constitution governing the call of meeting. I was so informed by an important officer of the Association. He declared that the president of the Association could call a special meeting at any time, but that to do so he was required to state the purposes of it, and to give each member written notice thirty days in advance. By so doing, the members would be given time to consider the matter, and an opportunity to appoint and instruct their delegates, and be represented. As no such notice was given, and no one present ever had credentials to such meeting, it is self-evident that the meeting is void.

B. WATERS.

Pennsylvania and Ohio Border Gun Club League.

GREENVILLE, Pa., May 20.—The second tournament of the Pennsylvania and Ohio Border Gun Club League was held in this place today. About 40 shooters, including the teams from Warren, Youngstown, New Castle and Meadville, were present. The weather was very threatening, and the shooters faced a stiff wind all day. The last two events were shot off in a heavy rain. However, some excellent scores were made, and the wind only served to make the sport more exciting. Among the noted shots present were Jack Winston and A. P. Pope. Pope is a member of the local club, and though he did not get here until after dinner, took part in a number of events.

The league team shoot was the most interesting and exciting event of the day. All through this event Greenville and Warren were neck and neck, and it was not known which would win until the last bird was broken.

The score for this event follows:

Warren.

All events were at 10 targets except Nos. 5, 11 and 12.

ROBERT E. BEATTY.

Montpelier Gun Club.

MONTPELIER, Vt., May 21.—Eight members only were on hand for the practice shoot to day. The scores would probably show better had not the spirit for fun overbalanced the idea that every target must be broken.

Mr. Geo. Ehle, a new member, arrived too late to shoot with the rest, so his score doesn't appear

Event No. 10 went off so rapidly that the scorer was not able to follow things closely, so that those who got too much credit and others need not kick. Nos. 1, 3 and 10, known, and 2 and 4, unknown; No. 5, doubles; 6, 7 and 8, reverse, and 9, expert.

The Connersville Tournament.

CONNERSVILLE, Ind., May 13.—The combined target and live-bird tournament given by T. F. Thomas and J H. Shipley, closed to day. The attendance on the first day exceeded all expectations, but the second day's events were poorly patronized, as practically all the out of-town shooters left for their homes on the first day. The programme for to-day was abandoned, and a number of live bird events were shot instead. Frost and Winston, however, shot the first five regular events. The entrance fee was 10 cents per bird for the targets, and all purses were divided into 50, 30 and 20 per cent. The scores of the target events were:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	10	15	10	15	25	20	15	15	15	15	15

J. G. L.

ON LONG ISLAND.

NEW UTRECHT GUN CLUB.

May 22.—This was the regular day for the semi-monthly target shoot of the New Utrecht Gun Club. For the club badges, J. Gaughen was the winner in Class A, and C. C. Fleet in Class B. Gus Greiff scored his second win for the Bennett cup, with 22 out of 25. Scores were:

Greiff	9	7	9	8	F A Thompson	9	7	8	7
O'Brien	6	6	3	5	Gaugher	..	..	..	8
Adams	8	7	6	7					

Nos. 1, 2 and 3 were at unknown angles; No. 4 at 5 pairs. The afternoon's sport closed with twelve miss-and-outs, in which honors were well divided.

G. E. POOL, Sec'y.

Orange Gun Club.

ORANGE, Mass., May 15.—The regular club shoot of the Orange Gun Club was held to-day, instead of Wednesday. The shooting was at 25 empire targets, regular angles. The scores:

G. H. Thompson 22 and 20, L. A. French 20 and 19, F. L. Walker 20 and 19, W. L. Mann 19, Chas. Cobb 18, A. C. Parkman 15, E. E. Ellis 14 and 14, P. Whitman 13, A. Sherwin 10, E. C. Whitney 10.

W. L. MANN, Sec'y.

Savannah's Interstate Tournament.

THE third target tournament on the Interstate Association's circuit for 1897, was held at Savannah, Ga., May 19–20, under the auspices of the Forest City Gun Club. In regard to the attendance of shooters we were somewhat disappointed, as we had looked for this tournament to come very close to the standard set for this year by the Interstate shoot at Baltimore in April last. And the disappointment was not ours alone, as the Forest City Gun Club felt rather disheartened at the lack of support from some clubs and cities, which it had calculated upon for furnishing the material for one or two more squads. The "one or two more squads" did not materialize, however; why they didn't is more than we can say. Macon, Ga., by means of a communication to A. W. Du Bray from Mr. Etheridge, did send regrets that were evidently genuine, and which met with similar expressions of regret on the part of all present

A SUCCESSFUL SHOOT.

Although the attendance was, as we have said, smaller than might have been expected, the shoot was a successful one, particularly from the point of view taken in these matters by the members of the Interstate Association. 'New material" was on hand in sufficient quantity to satisfy the Association that its outlay for this tournament was by no means thrown away.

The entries did not run high in any one event, but they kept up well, although those who shot through the programme on each day were not a large number. There were thirty-three shooters present on the first day; yet the average number of entries was only 23.6. The highest number of entries in any event was 29 in No 8; the lowest, 19 in No. 5. The first day's figures were: No. 1, 20 entries; No 2, 22; No. 3, 23; No. 4, 25; No. 5, 19; No. 6, 28; No. 7, 20; No 8, 29; No. 9, 23; No 10, 27. Of the above, Nos. 2, 5, 7 and 9 were 20-target events; the rest were 15-target events. The figures given above, therefore, seem to show as plainly as possible that 20-target events, four moneys, are not popular with the rank and file. The six 15-target events on the first day had an average entry list of 25 3, as against an average of 21 for the four 20-target events.

On the second day the figures were: No. 1, 22 entries; No. 2, 18; No. 3, 25; No. 4, 25; No. 5, 23; No. 6, 25; No. 7, 18; No 8, 27; No. 9, 19; No. 10, 24; giving an average of 22 6, only 1 less than on the first day. Comparing the figures again, we have an average of 24.6 in the six 15-target events, and only 19.5 in the 20-target events—figures that speak for themselves, and that talk quite plainly.

Returning to the first point touched upon, the attendance from out of town clubs, we must place

THE PALMETTOES, OF CHARLESTON,

in the van. This club furnished a full squad on the first day and a total of eight shooters for the second day. Foremost among them we shall have to name B. H. Worthen, who by dint of some excellent work on the first day, and some consistently good shooting on the second day, carried off the chief honors of the tournament. Next is G. H. Peterman, who tied for third place on the second day. Capt. George H. Swan was out of form, as was also W. E Post, both of them men who can shoot a good stiff gait as a rule. T. P. Costello has been doing some first-rate shoo ing at home, but he makes a very common mistake—that of not sticking to any one load He came to Savannah and tried to shoot a load that suited Barney Worthen to a T, but which "knocked the stuffin' " out of Costy's shoulder before five events had been decided. With his shoulder in bad trim and with his "guessing cap" on, owing to his failure to place his load in the right place from the start, Costello was handicapped throughout the shoot, but pulled himself together on the second day and pounded out a straight in event No. 14. The above named five shooters were the Palmetto Gun Club's representatives on the first day, the party being under the chaperonage of Capt. Joe Peters, who rooted for the team and thoroughly enjoyed the easy task he set himself—that of keeping tab on Barney Worthen's misses. On the second day L W. Bicaise, G. A. Steck and Whilden were added to the number, and each one held his end up well.

OTHER OUT OF-TOWN SHOOTERS

were J. H. Polhill (Hamilton) and Dr. G. W. Blanton (Ross), of Brunswick, Ga.; H. Meinert and G. A. Black, of the Marietta (Ga) Gun Club, the last-named shooter being present on the second day; H. C. Bridgers (Tarheel), of Tarboro, N. C., another rattling good shot who was out of form most decidedly; T. J. Desmond, of Stillmore, Ga., whose scores speak feelingly and tell plainly enough what lack of practice will do to the best in the land. Capt. Thos Marton, of Bluffton, N. C., was another who found that target shooting after two years' absence from the traps was not as easy as it had been for him; he shot through the programme, however, and beat his first day's record of 123 breaks by 16 on the second day, thus showing that practice means everything, at any rate in trap shooting.

THE TRADE

had just five representatives on hand (unless you count in Edwards of the FOREST AND STREAM). These were: H. G. Wheeler, of Marlborough, Mass., representing King's Smokeless and Peters's Victor shells; F. Van Dyke, of the Winchester Repeating Arms Company; U. M. C. Thomas, of the U. M C. Company, a great favorite with the Southern boys, and a shooter who has never missed a single Interstate Association tournament: H. P. Collins, of the Du Pont and Hazard Powder companies; and last, but of course not least, A. W. du Bray, of the Parker Gun Company, who was eminently contented to sit in the shade and watch Worthen and Wheeler do their joint "snuffin' out act" with guns built by the firm he represents.

THE HOME CLUB.

The home club was well represented in point of numbers, sixteen members taking part in one or more events during the two days. The names of those sixteen shooters were: John Rocker, H. Rocker, C. A. La Motte, H. Woeltjen, J. Riedemann, George Ebberwein, P. Morton, W. T. Morgan, F. J. Morgan, R. W. Allen, J. Hearn, H. B. Lemcke, T. J Dinkins, F. J. Ulmer, R. Groetherr and F. G. Jaugstetter. Of the above number Mr. La Motte is the club's president, Harry Lemcke its secretary, and F. G. Jaugstetter its captain. John Rocker showed by his consistently good shooting that he is deserving of his reputation of being the best shot in the club, and he would probably have made a higher average than 85 per cent had he not taken a hand at odd times to help things along. Messrs La Motte, Woeltjen and H. Rocker also played the mischief with several of their totals owing to their willingness to score or referee on all occasions. Working and good shooting don't go well together in double harness.

THE OFFICIALS

of the club, as stated above, helped things along very considerably, but to nobody is more credit due for the smooth running of this shoot than to the club's treasurer, P J. Ott, who took entire charge of the cashier's office and its attendant hard work single-handed, making new records for celerity in paying out moneys, with never a mistake or a "ball-up" to mar his record. We regret that the name of the scorer on the pads has slipped our memory, as his correct work deserves special mention. In many instances his figures were needed to straighten out the errors on the blackboard which were due to the inexperience of some of the volunteers for the position of "blackboard man."

Another person who merits extra good marks for his work is young Fred Jaugstetter, the son of the club's captain. Notwithstanding the heat of the sun on both days, he sat at the pulling box all through the tournament without a particle of shade to make things pleasanter for him. He pulled, too, in a manner that was a marked contrast from that usually met with. He made few, if any, mistakes, and no balks occurred through inattention on his part. This is all the more worthy of mention from the fact that the shooters shot in squads of five, not six; in the 15-target events every man shot at 3 targets from each trap before moving up; in the 20-target events, at 4 targets before moving. This method, which is far preferable to the old style of "walk-around," skips a trap every three or four rounds, as the case may be, and it requires the closest attention on the part of the puller to avoid balking the No. 1 man of the squad after a change of position.

A SMOOTHLY RUN TOURNAMENT.

Aided by the club, manager Shaner had no troubles of his own, save some little ones, such as small particles of sand blocking the magnets and "a wire out." The five expert bluerock traps, the property of the Interstate Association, were, as usual in the best of shape, and we are beginning to wonder now what is the actual life of these traps when under the fatherly care of Mr. Shaner. At this shoot the traps added a total of about 11,000 targets to their previous record, as follows: May 18, preliminary work in the afternoon, 1,465; May 19, 4,600; May 20, 4,400. The figures for May 19 and 20 are in good round numbers, and include several extra events shot after the programme had been completed; they are under, rather than over the actual figures. Simon, the club's boss trapper, is a treasure indeed.

The magautrap was in position, and was used for some of the practice events shot on the "preliminary afternoon," but the home club decided to stick to the expert traps for all programme events, preferring the style of shooting to which its members and the majority of its guests were accustomed to rather than a style that was totally new to almost all of the Southern shooters.

GROUNDS AND BACKGROUND.

Before closing the introductory portion of our report of this shoot we shall have to say a few words as to the grounds, and the background against which the targets were thrown.

The grounds are easily reached by electric cars on the Belt line, or on cars of the Whitaker street road. At the grounds themselves there was ample accommodation for twice the number of shooters present, the Interstate Association's big tent being a great help in this respect. The club house is a two story building, well fitted up inside for the purposes for which it was designed.

The background is a hard one, and it needed the very closest attention to business to get on to every target quickly and accurately. For this reason Worthen's work was all the more remarkable. The grounds are, or more correctly speaking were, inclosed with an 8ft board fence; right in front of the traps a section of about 50 or 60yds. has succumbed to old age and a rude push of the wind. The fallen section thus opens up a view of the country beyond, and gives in the immediate foreground a line of bushes that looked to us like sassafras bushes, from their young yellow-green leaves. Away in the distance are plenty of trees that are dark enough to look black; to the right is a grove of high pines that makes right-quarterers from Nos. 1, 2 and 3 traps, and straightaways from Nos. 4 and 5, extremely hard to locate for slow shooters. Barring the background and a strong breeze that sprang up at noontime on May 19, there was nothing to prevent high scoring; but those two items were in themselves sufficient to cause many a dull thud.

GENERAL AVERAGES.

Only ten men completed their scores in the 10 programme events on each day, although Hamilton really shot in all the events, but did not complete his scores in either No. 9 or No. 10 on the second day. Several others only missed one or two events.

Of those who shot through the programme, Barney Worthen, of course, took first place by virtue of his extraordinary shooting on the first day Wheeler, who led Worthen by 2 targets on the second day, finished only 5 targets below first place. Edwards was in third place, but there were 10 targets between him and Wheeler, and 15 between him and the leader, Worthen. Van Dyke was fourth, but his record of 87.6 does not represent anything like Van's true form. As a matter of fact, the South is Van Dyke's Jonah: he has never seemed able to do himself justice at any of the Southern tournaments. He will have another try at Monroe, La., in the near future.

Geo. Peterman, of Charleston, S. C, a clubmate of Worthen's, was off on the first day, but his average of 90 per cent. on the second day pulled him up into fifth place for the general averages. John Rocker, the best shot in the Forest City Gun Club, carried his club's colors into sixth place by reason of his steady and consistent work on both days. Capt. Geo. Swan's troubles were equally heavy on both days, and his rightful position on the list is not the one he takes in the table given below. Capt. Thos. Martin, of Bluffton, S. C., in past years one of the best shots in this section, did not always shoot in his old form, but he stuck to it, and an occasional straight or an "all but one" showed that only lack or practice kept him out of the front ranks. U. M. C found the peculiar background very trying for one who does not shoot quickly, and too many targets escaped his load in consequence—but U. M. C. did not worry at all. Du Pont Collins was out of all form, and was "guessing" most of the time. His low scores are all the more remarkable from the fact that he shoots in excellent time and frequently makes nice runs after dropping three or four targets in rapid succession.

Below is a table of the general averages:

	1st day.	2d day.	Total	Shot at.	Ave.
B H Worthen	163	155	318	340	93.2
H G Wheeler	156	157	313	340	92
F S Edwards	150	153	303	340	89.1
F Van Dyke	143	150	293	340	87.6
G H Peterman	142	153	295	340	86.7
John Rocker	143	146	289	340	85
G H Swan	139	127	266	340	78.2
Capt Martin	123	139	262	340	77
U M C	132	126	258	340	75 8
H P Collins	103	107	210	340	61.7

GUNS AND LOADS OF THE HIGH MEN.

The Parker gun was on top both days, Worthen and Wheeler both handling guns that were built by the Meriden, Conn., firm. E C. won first average on the first day, and also took the first place in the general averages; King's Smokeless getting into the post of honor on the second day, and taking second place in the general average list.

The guns and loads of the four high guns were: Worthen, Parker gun, Smokeless shell, 3drs. of E. C. No. 2. Wheeler, Parker gun, Peters' Victor shell, 3drs. King's Smokeless. Edwards, Winchester gun, Smokeless shell, 42grs. E. C. No. 1. Van Dyke, Winchester gun, Leader shell, 54grs. W-A.

A canvass of the thirty-three shooters taking part in the programme events on the first day showed: U. M. C. shells, 21; Winchester 8, and Peters' Victor 4. Twenty-eight of the thirty-three used the following powders or combinations: E C. 9, Du Pont 9, Gold Dust 2, Hazard 1, Du Pont and Hazard 1, King's Smokeless 1, W-A 2, Schultz 1, Du Pont and E. C. 2. The other five shooters stuck to no particular powder.

The table of guns has been mislaid, but we remember well that L. C Smith guns led, with Parkers second, and Winchesters in third place, in regard to numbers used.

First Day, May 19.

The first day of the tournament was chiefly remarkable for the excellent shooting of Barney Worthen, of Charleston, who headed the list with a total of 163 breaks out of 170 shot at. His nearest opponent was H. G. Wheeler, of Marlboro, Mass., who, despite his seven months' absence from the traps, managed to come in second with 156 breaks and an average of 91.7. Worthen's average of 95.8 speaks for itself. Edwards and Van Dyke filled third and fourth places on the list.

The weather was perfect for the greater part of the day, but the strong breeze which sprang up as usual about mid-day, lasting through the afternoon, made the targets in the latter half of the programme events rather more tricky than during the first half.

Below are the

SCORES OF MAY 19.

Events:	1	2	3	4	5	6	7	8	9	10			
Targets:	*15*	*20*	*15*	*15*	*20*	*15*	*20*	*15*	*20*	*15*	Shot at.	Broke.	Av.
B H Worthen	14	20	14	15	20	15	19	14	19	13	170	163	95.8

J F Ulmer	..	..	..	..	..	..	..	..	14	w	13	30	27	90

T. J. Morgan shot in No. 6 and broke 6 out of 15; R. Groetherr shot in No. 8 and broke 10 out of 15.

Second Day, May 20.

This was a warm day, and the warmth made itself felt in the somewhat uneven shooting of the top-notchers. At times they would make spurts and then fall down in the next events; but, all things considered, the scores were good.

Wheeler was high with 157 breaks and an average of 92.3; Worthen was next with 155 and an average of 91.1. Peterman and Edwards tied for third and fourth places with an average of just 90 per cent., while Van Dyke, who was still out of form, came in fifth with a percentage of 88.2. Below are the

SCORES OF MAY 20.

Events:	1	2	3	4	5	6	7	8	9	10			
Targets:	*15*	*20*	*15*	*15*	*20*	*15*	*20*	*15*	*20*	*15*	Shot at.	Broke.	Av.

REMINISCENCES.

An interested spectator on the second day of the shoot was Mr. L. C. Parker, a brother of W. F. Parker, of the firm of Parker Bros., Meriden, Conn.

Gil Wheeler was on hand and broke targets with that monotonous regularity for which he is renowned Wheeler has been busy all winter on the east coast of Florida looking after the bicycle departments and the interests of the bicycle riders of the great hotels that form the Florida East Coast Hotel System. By the time this item is in print Wheeler will be on his way northward, and will be found at Auburn, N. Y., Cleveland, O., and probably Oil City, Pa., during the tournaments to be held in those cities next month. He will make his home temporarily in New York State for the summer, possibly in the vicinity of Lakewood. Although Gil had not shot a target since the Vicksburg tournament last fall, he showed that he was one of the few who do not need any practice.

The Palmetto boys were satisfied with the showing made by their crack Barney Worthen. They would have been hard to please, indeed, if his shooting didn't satisfy them. His best work was done on the first day, right at the start. He commenced by breaking 14 out of 15, losing his 13th target. He then ran 20 straight in No. 2, and followed it up with 14 out of 15 in No. 3, losing his 13th target in this event as in No. 1. This gave him a run of 34 consecutive breaks with two to go on with, viz, the 14th and 15th targets in No. 3. To these he added three consecutive straight scores of 15, 20 and 15, respectively, in Nos. 4, 5 and 6, his run at the end of No. 6 being 52 straight. In No. 7 he ran 12 straight before dropping a target, making his total run 64 straight. He finished No. 7 with 19 out of 20, thus totaling 117 out of 120 shot at! It will be noticed that each of his three lost targets was No. 13 in their respective events.

He called "Pull!" The trap sprung and the gun went off. The bell rang. And Collins said, "Quite right, quite right!" And thereby hangs a tale.

The Forest City Gun Club had a regularly constituted committee to receive its guests at the depots. Shooters were warmly welcomed as soon as they put their foot in Savannah.

U. M. C. Thomas, Ferd. Van Dyke and H. P Collins made the trip from New York to Savannah on the steamer Nacoochee, of the Ocean Steamship Line. All three expressed themselves as more than pleased with the trip, but Du Pont Collins, of course, had his grievance—he "wasn't exactly hungry" for every meal.

Tarheel Bridgers says that he is more of a success as a lizard catcher than as a target smasher. And, by the way, how did that lizard find its way into Du Bray's gun barrel? Also those strange bugs and things into U. M. C.'s boxes of cartridges?

Simon, the boss trapper of the Forest City Gun Club, was Elmer Shaner's right hand man, and helped greatly to take the rough edges off the duties of the manager of the tournament. Gun clubs should remember that good trappers (and plenty of them) mean shooters pleased and lots of targets thrown.

Capt. Rawson was the only representative from Atlanta, Ga. The captain was unable to get to the grounds until late on May 20, but he couldn't be kept out of any event until the sun and Elmer Shaner put a stop to the shooting.

Ferd Van Dyke has a hoodoo that pursues him whenever he goes to a tournament in the South, preventing him from doing justice to his skill as a shooter. The hoodoo was on top in Savannah, for Van shot in something like twenty-seven events, eight of them 20-target events and the rest 15-target events, extras and regulars, and never made a straight all the time. He will wrestle with that hoodoo at Monroe, La., June 9–10, in all likelihood, and says he'll "throw him then sure."

In saying "good-bye" Du Bray added: "I'll see you probably at Cleveland, but certainly at Oil City."

People in the South generally, and in Savannah in particular, have a curious habit of rising very early in the morning, yet not a single inhabitant of the Forest City rose as early as Elmer Shaner did on the two days of the shoot. We speak feelingly in the matter.

McEachern, a member of the Wilmington, N. C., Gun Club, was a visitor to Savannah on May 20 and stopped at the Pulaski House, so of course we met him. He called up many pleasant recollections of the Wilmington Interstate shoot in May, 1895. EDWARD BANKS.

Boston Gun Club.

WELLINGTON, Mass., May 19.—The Boston Gun Club closed its '97 spring prize series at Wellington to-day with a more than pleasant afternoon shoot; weather of the very best and everything in apple-pie order. The series of fifteen shoots has been the means of bringing together over fifty different shooters and more than 200 scores were entered meanwhile for the prizes. The six best of each contestant were selected for prize total, and the more a shooter placed the better his chance of selection. The winning scores are given below, Mr. Spencer marching off complacently with the first prize, a machine loader, tucked under his arm His scores certainly entitle him to it, but his handicap for next series has increased, and just now he is looking for a capable load at 18 instead of 16yds. rise. Mr. Winters's 101 is also worthy of mention, as he discarded but two scores. The Phillipps-Andover representatives also did themselves proud, Messrs. Eastman and Taft entering as late as the tenth shoot, and placing creditable totals considering that none were thrown away. Another two scores for selection would have afforded them excellent opportunity for reaching nearer the top.

The new series of eight shoots commences Wednesday next, May 26, and continues every Wednesday, with the exception of June 16, until July 21 The match score will be 25 targets, 15 unknown and 10 unknown; distance handicap; entrance free to all shooters.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13

Hall (14)	1011010100—5	11110—4	00 10 w —10
Nickols (15)	0110100100—4	w	.. .. .. — 4

Prize match totals:

Spencer	20 19 19 18 17 15—108	First.
Winters	19 17 17 17 16 15—101	Second.
Miskay	18 17 16 16 15 5— 87	Third.
Gordon	17 16 16 16 15 15— 95	Fourth.
Woodruff	18 17 14 14 13 13— 89	Fifth.
Horace	16 16 15 14 13 13— 87	Sixth.
Eastman	18 16 16 14 12 11— 87	Seventh.
Williams	18 15 14 14 13 11— 85	Eighth.
Harris	16 15 14 14 12 12— 83	Ninth.
Taft	16 15 14 14 12 12— 83	Tenth.
Nichols	15 15 14 14 13 10— 81	Eleventh.
Paine	17 13 13 13 11 10— 77	Twelfth.

Sewall finished also 75, Sheffield 74, Needham 62. As per B. Y. C. rules, ties above are decided by best attendance, and Horace and Harris have choice over Eastman and Taft.

Cook County Trap-Shooter's League.

CHICAGO, Ill., May 15.—The opening shoot of the Cook County Trap-Shooter's League was held to-day on the Cicero Club grounds, Madison street and Des Plaines River, with about seventy-five members present.

The weather being unpropitious undoubtedly caused the absence of many from the event.

Perhaps the proximity of the club grounds to the river has something to do with the fact that they are always favored with rain when they hold the League shoot, which is unfortunate, as it causes loss to them and mars the pleasure of those present, by interfering with the proper service of the electric pull.

While the club have naturally beautiful grounds to shoot over, the general impression of the League members seems to be that they are the hardest in the League, yet a glance at the scores of those present last Saturday will show that the majority of the shooters equaled, if not surpassed, their averages.

Mr. F. P. Stannard may be justly proud of his score of 43 straight made with a new gun of his own manufacture. Among the other good scores may be mentioned those of Messrs. Houston, Dr. Shaw, Fehrman, Bowers, Steck, Adams, "Patty" and Ruble. The following is the score of the programme of events and practice work, also the result of the League shoot in their annual contest for team and individual prizes:

No. 1, 10 targets, known traps and angles: Wescott 7, Barnard 5, Knott 7, Lowrey 6, W. Cheesman 7, Irwin 4.

No. 2, same: Wescott 7, Knott 5, Barnard 5, Ruble 9, W. Cheesman 4, Lowrey 8.

No. 3, same: Wescott 8, Ruble 7, Kuss 5, Morgan 2, Houston 7, F. P. Stannard 10; Lowrey 7, Knott 8.

No. 4, 10 targets, practice: W. Cheesman 4, Kuss 10, Morgan 3, Houston 8.

No. 5, 10 targets, reverse pull: Stannard 5, Houston 6, Wescott 4, Ruble 9, Kuss 7, Lowrey 8.

No. 6, 15 targets, known traps, unknown angles: Kuss 12, Houston 9, F. P. Stannard 15, A. W. Adams 13, Ruble 15, Dr. Liddy 13

No. 7, 10 targets, same: Morgan 4, Houston 6, Levi 4, Edgar 6, Goodrich 9, Bowers 8

No. 8, 15 targets, same: Ruble 14, Morgan 9, Steiger 12, Richards 13, Spreyne 12, Bowers 10, Goodrich 12, Kuss 12, A. W. Adams 15, Dr. Liddy 11, F. P. Stannard 13, Houston 9, Dr. Miller 10, F. M. Smith 3, Dr. Carson 9, Steck 12, Fehrman 8, Neal 13, Boedker 8, A. C. Black 11, Greeley 11, Levi 5, Lawlor 5; Dr. Reber 14.

No. 9, 20 targets, same: Kuss 17, Dr. Liddy 12, F. P. Stannard 18, Dr. Carson 9, F. M. Smith 5, Fehrman 17, Smith 6, Neal 18; Bowers 11, Prickett 8, Patty 17, Von Lengerke 18.

No. 10, 15 targets, same, practice: Sanderson 12, Smedes 6, Ferguson 12, Spreyne 12, Houston 10, Graham 11.

No. 11, 15 targets, known traps, unknown angles: Von Lengerke 14, Dr. Mathews 9, Dr. Miller 9; Migichyo 11, Spreyne 13, Ferguson 8, Fehrman 14, Antoine 10, Ferguson 10, Belling 3, Black 9, Goodrich 8, Sanderson 11, Kuss 13, Steiger 9, Boedker, 11, Morgan 11, Richards 13, Dr. Miller 9, Adams 13, Ruble 14, Smedes 9, Smith 4, Houston 13, Patty 14, Neal 13, Belling 7, Stannard 15, Dr. Carson 10, Steck 11.

No 12, 20 targets, same: Dr. Miller 14, Adams 19, Smedes 10, Dr. Liddy 11, Steiger 11, Fehrman 15, Kuss 18, Sanderson 12, Richards 17, Stannard 15, Neal 17, Murrow 11, Ferguson 13, Spreyne 13, Randall 11, Houston 18, Patty 18.

No. 13, 15 targets, same: Goodrich 11, Dr. Reber 11, Steck 15, Walters 9, Smith 6, Houston 12, Knott 7, Will 10, Cutter 11, Adams 12, Steiger 10, Patty 13, Kuss 15, Sanderson 9, Richards 13, Lawlor 10, Stannard 13, Young 11; Fox 8, Belling 5, Bormann 1, Lowrey 8, Will 10, A. Cheesman 9.

No. 14, same: Steck 10, Kuss 12, Sanderson 6, Lawlor 8, Patty 11, Spreyne 10, Beling 5, Bormann 1, Richards 10, Young 7, Lowrey 7, Kuss 14.

Cook County Trap-Shooters' League Contest: As there seems to be some misunderstanding in the selection of the teams, we omit team results, and only give scores made.

Calumet Heights Club: Turtle 20, Booth 20, Ferguson 21, Metcalf 17, Boedker 12, Edgar 21, Houston 23, A. C. Black 19, Knowles 15, Norcom 19, Greeley 17, Young 21.

Garfield Club: Levi 12, T. Graham 21, Pilz 17, Shaw 23, Kuss 22, Dr. Leddy 16, Tohrman 22, Von Lengerke 23, Richards 17, Bowers 24.

Garden City Club: Neal 19, Steiger 15, Ruble 23, Antoine 21.

Eurica Club: Morgan 17, Patty 23 Reber 18, Prickett 13, Walters 18, Goodrich 20, A. W. Adams 21, Spreyne 21, Whitman 19, F. P Stannard 24, Dr. Miller 18, Dr. Carson 20, Murrow 10, Steck 22, Marshall 16, F. M Smith 12.

Cicero Club: Dr. Matthews 16, Barnard 12, Knott 12, Bormann 5, Lawlor 13, Lowrey 16, Beling 15, W. Cheesman 18, Goetter 16, A. Cheesman 17, Fox 17, Will 17.

CICERO.

Albany Tournament.

ALBANY, N. Y., May 18.—The ninth annual tournament of the West End Gun Club which closed to day, was not as successful in the way of numbers in attendance as some of our former tournaments have been. Seventeen entries were recorded in all. The weather conditions were all that could be desired. The targets were thrown low and very swift; this, coupled with a bad background, made the shooting very difficult. The trade was represented by Fanning shooting the Gold Dust, and Trimble shooting the Du Pont Smokeless. Both gentlemen made many friends for themselves and the powders they represent. Before the forenoon wore away the only Tom Keller made his appearance, and was warmly welcomed by his many friends. He fully explained the merits of King's Smokeless and Peters' shells.

The programme consisted of ten 15-target events. The purses were divided in four moneys, 35, 30, 20 and 15 per cent. Ten per cent. of the net purse was deducted for a general average, which was divided the same as in the regular events. The regular order of scores below will tell who captured these. At the close of the regular events a team race was shot. The result proved very satisfactory to Tee Kay.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.
Trimble	13	13	14	14	13	13	13	12	15	13	150	123

C. R. MIZNER.

Trap on Cape Cod.

SANDWICH, Mass., May 22.—The Sandwich Gun Club held the second shoot of the season to-day. Only four members put in an appearance, the other members not being able to get away from their work. Mr. Jones, one of our oldest and best shots, made his first appearance, and shot finely toward the finish, breaking his last 13 straight. Conditions were 25 bluerocks per man, unknown angles:

S N Jones.....1000101010000101110111111—14
E W Haines.....1111010000101111010111101—16

C E Brady.....0001001111111100110101111—16

Match at 7 bluerocks:

S N Jones.....1111111—7 E J Beck.....1111110—6

GEORGE H. HAINES, Sec'y.

Blenheim Gun Club Tournament.

BLENHEIM, Ont., May 5.—Through the persistent energy of W. E. Hall, manager of the Blenheim Gun Club, trophy shooting has come right to the front in and around Blenheim, Ont., and it was decided to give a team race between Blenheim, St. Thomas, Chatham and Windsor of ten men each, 20 birds per man, the two winning teams to receive $10 in gold; these two teams then to shoot off at the same number of birds for a silver cup valued at $25. To the credit and liberality of the Blenheim team would say that they threw empire targets free of cost in addition to the above donation. The sweeps were well patronized during both days, especially No. 10 merchandise event. On the second day, in which there were five prizes donated by merchants of Blenheim, the most interest was displayed. Windsor and St. Thomas won, and in the final shoot off Windsor won the cup. Stott, of Windsor, won the first average prize of $5 for the first day, and Tyro, second average, $5. The general average for the two days was won by Forest Conover, Lemington, Ont., he participating in all events.

W. H. BRADY.

Down Where the Pineapples Grow.

HOBE SOUND, Fla.—The Hobe Sound Gun Club is a new club of only seven members. We would have more, only seven are all the men there are in a radius of twenty miles. We stop picking pineapples every Saturday afternoon long enough to shoot a little, and manage to burn a little powder, even if quail are out of season and the ducks have gone North.

We have no officers, but just get out and shoot over our one trap, and shoot hard. Birds are not allowed over 20ft. from the ground, and the trap must throw 60yds., unknown angles. The following scores were made at our last shoot:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	10	10	10	10	10	20	10
C S Smith	4	6	7	..	..	..	..	..	..
H D McVean	4	6	8	4	6	4	7	14	8
W G Stokes	3	4	6	3	5	..	..	..	..
C R Sergeantson	3	5	6	2	6	6	7	14	9
A Goldy	2	5	6	6	5	4	6	..	..
W G Brown	1	0	..	..	..	..	..	..	..

The Gilbert's Bar Y. C. about a month ago decided to form a shooting division and appointed a committee to "do the best they could." The "best they could" was two traps and a couple of barrels of bluerocks. The traps duly arrived and were set up for use at the last field day of the yacht club. All the boys that could muster up courage enough to try were sent off by themselves, and the two boldest among them announced themselves as captains and chose sides for a team race. Only 10 birds were shot, as the time was limited. Only three of the shooters had ever faced a trap before, and of course the result of the shoot was a large basket of "hen fruit." We hope to do better some time. Here is the story of the surprise: Capt. G. E. Andrews 4, E. C. B Tyndall 2, Rev. Dr. Panter 0, H. W. Bessey 4, C. B. Harrison 1, E. S. Harmer 1, P. M. Aston 2—14; Capt. C H. Racey 1, R. N. Hoke 3, E. Moore 0, G. A. M. Levett 7, H. E. Sewall 4, H. Panter 0, W. A. Bessey 1—16. The club has appointed the following officers: Shooting Master, E. C. B. Tyndall; Assistant Shooting Master, H. D. McVean. The atmosphere will be full of shot again on June 12, and then perhaps the score will be different.

H. D. MCVEAN, Sec'y.

Soo Gun Club.

SIOUX CITY, Ia., May 14.—Below find scores of the Soo Gun Club, made to day at its grounds, the occasion being the first of the series of gold medal shoots during the season of 1897. This was the first trial over the new magautrap for the majority of the members. The wind blew a gale, and the jack like flight of the bluerocks accounts for the low scores.

Harris, Boyd and Keefe tied for first, but in the shoot-off Harris won the medal, and will wear it until the shoot of May 27. Scores:

Harris.....1110111001101000100111011—15
Boyd.....0000111100110111101010111—15
Keefe.....1101000101111101100101011—15

BLUE ROCK.

Haverhill Gun Club.

HAVERHILL, Mass., May 22.—The regular weekly practice shoot of the Haverhill Gun Club was held on its grounds to-day. The attendance was very light, although the day was simply perfect for trap-shooting; the only wonder is how any shooter could keep away from the sport on such a day. Below are the scores made:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	10	10	10	10	10	10	10	10	10	10	10
Leighton	4	8	9	5	8	9	4	7	3	..	..
Lambert	6	8	7	7	6	10	4	6	6	7	7
Stevens	5	8	6	7	..	8	9	8	6	7	9
Merritt	8	8	7	8	..	..	3	..	..	..	..
Miller	4	5	4	8	8	5	..	5	..	..	..
Short	7	4	6	2	3	..	..	..	..	..	..

The first six events were at regular angles, Nos. 7 and 8 were at unknown angles, and Nos. 9, 10 and 11 unknown traps and angles.

GEO. F. STEVENS, Sec'y.

Answers to Correspondents.

No notice taken of anonymous communications

Life Saver, San Francisco, Cal.—Address The Life Saving Benevolent Association of New York, 51 Wall street, New York.

R. S. Bradley.—A party of three would like to have a shoot of two or three weeks in Arkansas, and as the law prohibits shipping game out of the State, can you or any of your readers inform us where there is some freezer or commission house that will buy our ducks? Ans.—We infer that you refer to local commission houses. We can give you no address.

J. A. G., Albany, N. Y.—What are the pedigrees of Mark, bred by J. Otto Donner (I believe Mark's sire was Emperor Fred, but am not sure), and Flora II. (imported). She is said to be registered. Ans.—Mark is not registered. Address Mr. J. Otto Donner, New York, for the information. There is a Flora II. registered in Volume I., A. K. C. S. B., and was owned by John Davidson. There was a Flora II., which was registered in E. K. C. S. B., No. 373.

H. C. B., Harrisburg, Pa.—I have a beagle pup, ten months old, which is afflicted with the jerks, as I call it, in his right foreleg and shoulder. I noticed it for two months. It is getting worse, and has gotten to be a continual twitch, as regular as the heart beats. When run a short time, he often falls—the same thing when he sleeps, a regular jerk. He seems healthy every other way. Can anything be done for him? Ans. It is very probably the result of distemper, in which case very little can be done for it. Give tonics and feed well.

PUBLISHERS' DEPARTMENT.

Three Famous Resorts

of the "Land of the Sky" are Asheville, Biltmore and Hot Springs. The route is via the Southern Railway, with splendidly arranged and magnificently appointed through-car service. Pullman drawing room sleeping cars between New York, Washington and Nashville—where the Tennessee Centennial Exposition is now in progress—through the "Land of the Sky." Knoxville and Chattanooga—Lookout Mountain, the scene of the "Battle Above the Clouds." The Norfolk & Chattanooga Limited daily, between Norfolk, Raleigh, Durham, Greensboro (with connection from New York, Washington and Virginia), and Nashville, through Asheville, Hot Springs, Knoxville and Chattanooga. This train carries Pullman's finest drawing-room buffet sleeping cars between Norfolk and Nashville, and elegant vestibuled day coaches between Norfolk and Chattanooga. Pullman drawing-room sleeping cars are also operated between Jacksonville and Cincinnati, through Savannah, Columbia, Spartanburg, Asheville, Knoxville and Harriman Junction.

Visitors to the Tennessee Centennial Exposition at Nashville will find a visit to Asheville or vicinity most delightful and valuable. The Southern Railway now has in press its annual "Summer Homes and Resorts" folder, containing a full list of the many delightful resorts, hotels and summer homes on its line, which will be mailed by the General Passenger Agent, or New York office, 271 Broadway.—*Adv.*

The Green Mountains of Vermont.

NOW THAT the Vermont close season for deer has at last expired and a month been given for hunting, the region has assumed a new interest for sportsmen. Some of the best hunting in the State will be near Rutland, about Killington, Pico and Shrewsbury peaks, where there is much wild country and where the deer, thanks to abundant food and strict protection, have increased till they have become a pest to the neighboring farmers. The best localities are all described in the souvenir edition of "The Heart of the Green Mountains," published by the Rutland Railroad Co. This is a book of 156 pages, 9×11in. in size, with fifty large photo half-tone and crayon reproductions and 75,000 words of text. The first 2,000 copies are for general distribution. The country from the White River to Otter Creek and Lake Champlain is beautifully illustrated. A copy will be sent to any reader of FOREST AND STREAM on receipt of twelve 2-cent stamps. Address E. B. Aldrich, G. P. A. Rutland R. R., Rutland, Vt.—*Adv.*

The Great Northwest.

EACH year the Northern Pacific Railroad compiles a well written and well illustrated book of information regarding the country through which this great transcontinental route passes. "Wonderland for 1897" is the latest of these publications.

As in previous years there is much interest to sportsmen touched upon, from the buffalo and bears of the Yellowstone Park to the new trout of Lake Crescent, whose discovery was chronicled in FOREST AND STREAM by Rear-Admiral Beardsley.

Chapters of special interest are "The Great Northwest," "The Yellowstone Park," "Go Make Money," and "The Heart of the Olympics."

The book will be sent on receipt of 6 cents in stamps by Chas. S. Fee, G. P. A. Northern Pacific R. R., St. Paul, Minn.—*Adv.*

Hunter Bicycles.

HAVING attained the highest eminence in the manufacture of fine shotguns, the Hunter Arms Co looked for new worlds to conquer, and the result is the Hunter bicycle. Hunter bicycles have the same perfection of lines and detail that characterize Smith guns, and are destined to become equally well-known and popular.

A handsome catalogue with lithographed cover and tinted cuts containing matter of unusual interest to wheelmen will be sent on request made to the Hunter Arms Co., Fulton, N. Y.—*Adv.*

Fishing on the Picturesque Erie

IS a handsome little pamphlet full of meat for the trout or bass fisherman. The game laws of the States through which the Erie passes are given, and full particulars regarding the fishing that may be expected at various points, including records of the best catches and charges for boats, guides, etc. There are two or three very good illustrations of fishing scenes. Address D. J. Roberts, G. P. A., Erie R. R., New York.—*Adv.*

The Adirondacks.

Now that the ice is out of the Adirondack lakes, the best fishing of the year is to be had. The trout in lakes and brooks are hungry and eager to be caught, and full of life and fight. The Delaware & Hudson R. R. Co. publishes a very complete and copiously illustrated guide to the Adirondacks, which will be sent on request, mentioning FOREST AND STREAM, by J. W. Burdick, G. P. A., Albany, N. Y.—*Adv.*

Cruisers and Battleships.

R. S. WADDELL, Cincinnati, O., general agent for Messrs. E. I. Du Pont de Nemours & Co., have issued a very handsome illustrated souvenir of the principal cruisers and battleships of the American Navy, intended for gratuitous distribution. It will be sent to any address for 5 cents in postage to cover mailing.—*Adv.*

"The Art of Shooting."

WE have just received the long-delayed consignment of Lancaster's "Art of Shooting," last edition, price $3, and can now supply orders.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JUNE 5, 1897.

VOL. XLVIII.—No. 23. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

ATTENTION is directed to the new form of address labels on the wrappers of subscribers' copies. The label shows the date of the close of the term for which the subscription is paid.

The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us for a new or renewed subscription. Unless specially requested to do so, we do not send separate receipts.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Doubt not, therefore, sir, but that angling is an art, and an art worth your learning. The question is rather, whether you be capable of learning it? For angling is somewhat like poetry, men are to be born so; I mean, with inclinations to it, though both may be heightened by discourse and practice; but he that hopes to be a good angler, must not only bring an inquiring, searching, observing wit, but he must bring a large measure of hope and patience, and a love and propensity to the art itself; but having once got and practiced it, then doubt not but angling will prove to be so pleasant that it will prove to be like virtue, a reward to itself. Izaak Walton.

The Forest and Stream's Platform Plank.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1897.—No. V.

PENNSYLVANIA.

Act of May 27, 1897.—Section 5. That it shall be unlawful at any period or season of the year to kill, entrap, or pursue with intent to kill or entrap, any elk, deer, fawn, wild turkey, pheasant, grouse, quail, partridge or woodcock, in any part of this Commonwealth for the purpose of selling the same. And it shall be unlawful for the proprietor, manager, clerk or agent of any market, or other person, firm or corporation, to purchase, sell or expose for sale any elk, deer, fawn, wild turkey, pheasant, grouse, quail, partridge or woodcock killed or entrapped within this Commonwealth. That it shall be unlawful for the proprietor, manager, clerk or agent of any market or any other person, firm or corporation to purchase for the purpose of again selling the same any elk, deer, fawn, wild turkey, pheasant, grouse, quail, partridge or woodcock killed or entrapped within this Commonwealth. [Penalty, $100 for every elk or deer; $25 for every hind.]

GOVERNMENT GAME PRESERVES.

WE print on another page the outline of a scheme of Government game preserves as thought out and submitted by Mr. W. G. Van Name. The proposal is that the National Government shall set apart in certain States, out of its own possessions or out of territories to be secured for the purpose, certain reservations in localities frequented by migratory fowl, upon which shooting shall be forbidden, to the end that the reserves so constituted shall be game refuges for the birds on their flights north and south.

This is not the first time that in despair of effectual action by individual States for the protection of migratory wildfowl, students of the problem have turned to the Government to secure from it that which the States have refused to give. Congressional intervention for the enactment of a national game law has repeatedly been suggested; but the always sufficient answer to the proposition is that such action is not within the province of Congress. Game protection belongs to the police power of the State, and is something that must be exercised for itself by the State, and matters belonging to it do not come within the jurisdiction of the National Government. Mr. Van Name, however, appears now for the first time to have suggested a plan which is free from such objection. His proposition is simply to extend in their application principles which are already in practical operation. In the National Park for example, which is a Government reservation lying within State boundaries, the Government exercises the same unquestioned jurisdiction with respect to game as to other affairs, and hunting is forbidden absolutely at all times. It is within the province of the general Government to acquire lands for various purposes in the several States, and it could acquire tracts for game reserve purposes. Having come into possession of such territories, it could make such regulations as it might deem fit for their control. On the ground of constitutionality, therefore, we believe that no valid objection could be brought against Mr. Van Name's scheme of Government game reserves.

Nor is there any question that such a system put into operation would be of tremendous advantage to the game supply, and would go far toward a solution of the ever present problem of conserving the parent stock. The proposal is to select such places as are most frequented by the game on its northern and southern flights and in which under present conditions it is most exposed to destruction. Such locations will readily suggest themselves to all wildfowl shooters, both on the Atlantic coast and in the West. Observation and experience teach us that if these particular localities were perfectly protected throughout the season the supply of birds would be conserved beyond computation.

We invite careful reading and consideration of the subject as set forth in our game columns. Is the plan a practicable one?

THE LAND OF MEMORY.

ONE who has reached or passed the middle milestone of his journey, and still loves the fields for the best they have to give, sees nothing about him or beyond him so beautiful as the enchanted land of youth, which lies far beyond him, half veiled in the golden haze of memory.

Long ago he beheld in the mirage of youth and hope scenes as fair as these, ever before him, but ever receding as he advanced. They were never nearer than to-morrow, then faded, then vanished. Now he knows that he shall never find in all the world a land so perfect as that which lies so far behind him. He remembers it not as a land of the fancy, but of blissful realities.

Its steadfast cold was exhilarating, its golden sunshine never too hot, its winters never too long; its genial springs, its balmy summers, its mellow autumns, never too short, for the months of each season were longer than years are now. What greenness of fields, what profusion of flowers and fruits, what gorgeousness of woods, what immaculate whiteness of snow, each season held!

What delectable hills its woodlands climbed to glorified heights, from depths of sylvan shade where illusive voices called and echoed, not the piping of thrushes nor murmur of pines nor liquid monotone of streams, but strange and mysterious voices, perhaps of woodland sprites. There were never sweeter songs of birds nor dreamier lullaby of wind-swept pines, nor more musical babble of brooks spilled from moss-rimmed pools whose liquid amber was streaked with silver gleams of trout eager to catch the simplest lure.

Where the brook crept through the sprawling alders unnumbered woodcock bored the fat mold; where it joined the broader stream, hordes of ducks thronged the marshes and wrinkled the broad, slow current with their braided wakes. Beneath, in watery aisles, pillared with lily stems and roofed with purple pads, pickerel, great pike and bass swam in stately procession. There the muskrat built his domed lodge and kept the marshes populous in the depths of winter with his busy, unseen, silent tribe, and all the year the stealthy mink, richest prize of the young trapper, prowled along the shores, preying on fish, flesh and fowl.

When April sun and shower steeped the woods in the balm of spring, they boomed far and near with the grouse's drum-beat; in autumn, with the frequent thunder of his flight. Then pigeons thronged to feasts of beech mast; squirrels barked and chattered in every nut tree; unbroken bevies of quail piped in the stubble fields.

Cornfields were not valued according to their yield of grain, but according to the raccoons that were attracted to them, and the wild, jolly night hunts they afforded. Every upland and lowland cover harbored a fox, and there was not a day of the hunting season that the tuneful cry of hounds might not be heard swelling and dying on hill crest and in hollow. There was even a possibility of shots at deer and bear that kept one always hopeful of such happy chances, and there was a legendary panther, whose gruesome presence one felt in the silent glens where twilight and darkness alternately brooded.

All the happy land and the pleasant waters were an inexhaustible preserve guarded by no keeper, placarded with no trespass signs, but as free to all comers as to the birds of passage.

Just as it was then, it lies behind you now, traversed by shadowy forms of comrades, but you may not enter it—only may you look backward upon it through the mist of years and of eyes grown dim with age. Yet blest is he who so beholds it, and in such possession holds it.

SNAP SHOTS.

THIS has been a great year for the Plank, as the anti-sale of game laws which we are printing from week to week at the head of this page so well show. To-day, as the fifth of the series, is given the provision of the Pennsylvania law which was approved by Governor Hastings last week. The section is ironclad, and rivets are supplied in another provision which forbids any export of game from the State. By this new law Pennsylvania reclaims for the use and enjoyment of her citizens at large the game resources which have been monopolized by the markets. There is no question that if the law shall have anything like fair and adequate enforcement a great change is in store for the sportsmen of the Keystone State, who will no longer be compelled to return empty-handed from game covers depleted by the snarers. The bill was introduced and championed by Hon. Frank G. Harris, Chairman of the House Fish and Game Committee. Mr. Harris has been for many years a constant reader of the FOREST AND STREAM; and of course he was sound and firm on this question.

Conditions similar to those which have made abandoned farms in New England wild game covers prevail in India with abandoned tea plantations. Large areas upon which attempts were made to cultivate tea have been given over to wilderness again, and are now the haunts of jungle fowl and pheasants. And in India as in America the gradual and steady decrease of shooting resources is such as to make very acceptable to the sportsman every such reprisal, by which a bit of wilderness is restored and a feathered game refuge established.

The most notable game restocking enterprise of the day is that which has been so successful in reëstablishing the wild deer in Vermont. Next October the law will be off, and for the first time within the experience of most Green Mountain Boys of our generation they may then hunt the deer on their native heath. In these restorations of game resources we of to-day are only putting into execution the projects of a half century ago. In the story sent by Antler, and printed to-day, of an elk herding experiment in the fifties, reference is made to a scheme proposed at that time by Professor Baird and others, that the Government should restock with elk in New York, Pennsylvania and elsewhere lands not suited to agricultural purposes. Presumably nothing ever came of the project; at all events, there are no elk now in these States outside of preserves. Meanwhile there remain vast areas of wilderness wherein, if our fathers had had the sense and foresight to provide protection, the indigenous stock of elk might yet be represented.

We spoke the other day of the persistency and tenacity with which the unworthier classes of animal life, which we call vermin, maintain themselves. An interesting illustration of this is afforded in the experience of a trapper which a Boston correspondent sends us. Plying his vocation in eastern Massachusetts, this one man took during the last fall and winter one otter, seven raccoons, three foxes, thirty two mink, two hundred skunks, and seven hundred and three muskrats, making a total of nine hundred and forty-six fur-bearing animals. He has operated on the Nashua, Sudbury and Charles rivers, and Rosemary Brook. During the second week in March he caught in five consecutive days muskrats to the numbers as follows: forty-three, thirty-seven, thirty-two, thirty-five and twenty-five. Thi smust be considered a remarkable record, having been made so close to the haunts of civilization.

The dealers in millinery supplies in this city bestirred themselves to prevent the Governor's signature of a bill passed by the Albany Legislature forbidding the traffic in the plumage of wild birds, and they were so successful in their arguments with the Governor that he permitted the bill to perish on Monday last by withholding from it his signature. The millinery interest was too strong to combat successfully.

The Sportsman Tourist.

THE CHESTNUT RIDGE

And Along Its Foot.—II.

I SHOULD not think the region of the Chestnut Ridge could ever have been a good country for fox hunting—except for the fox; the ground was so broken and so overgrown with trees and thickets of underbrush that it would seem to have been almost impossible for a mounted huntsman to push his way across. Nevertheless, the sport had its devotees; one of the most conspicuous and best known of whom was old Sheriff M. The sheriff was a large-boned, dark-complexioned man who talked a little thick, as though he had "a mitten on his tongue." He had always a fine horse or two in his stable and a pack of hounds in the yard. The favorite animal of this troop was one he called Sing, or, as he pronounced it, Thing. The joy of the old man's heart was to gather up a half-dozen cronies and canter off to hunt the fox along the foot of the ridge.

On one memorable occasion, so the legend runs, the sheriff and his favorite hound distinguished themselves. The chase had been long and arduous. For several hours the fox had led over the hills and through the thickets with Sing and the sheriff in hot pursuit. But at length it was evident from the yelling of the pack that Reynard had been run to earth. The sheriff was in advance of his companions. Jumping from his horse and scrambling through a clump of bushes he came to the spot where the dogs were baying and yelling around the end of a hollow log that lay upon the ground. It was clear that the fox had sought refuge in this log. Stooping down and looking in, the hindquarters of a large animal were dimly to be seen. The sheriff was excited. "Here Thing! Here Thing!" he shouted; "the biggeth fox I ever thaw!" and reaching in he drew out, not the fox, but the identical hound that he was so wildly calling. The dog had crawled into the log as far as he could go, after the fox, the latter, meanwhile, had crept through an opening in the log 30ft. above and was gone. The laugh was on the sheriff, and it was long before he heard the last of "the biggeth fox."

Another sportsman well-known in that region forty years ago was a little, old, weather-beaten fisherman of the Conemaugh. He had a thin, wizened face, long elf locks, and wore, summer and winter, rain or shine, an old slouch hat and a broad leather apron. I do not remember ever seeing him without this leather apron. In it he always carried the fish that he caught. It was a common thing, as one rambled along the shore of the river, to come across this old man reclining in some sequestered nook, watching his fish-poles, which were "set" not far distant.

I think he was an inoffensive old man, as became a disciple of the immortal Izaak, and only when he was badgered by the village boys as he carried his fish through the streets in his apron did he lose his characteristic patience and turn upon his tormentors. "But past is all his fame." If I remember rightly, he was found dead one day on the bank of the river that he had so long frequented. It seems a fitting place for him to die. Perhaps if he could have had his choice he would have preferred no other spot.

Prior to the construction of the line of public improvements through the valley of the Conemaugh, a turnpike road leading from Philadelphia to Pittsburg had been made. It was called the Northern Turnpike, and was the great artery through which flowed the stream of traffic and travel between the East and the West. Before this highway was constructed only rude country roads existed, which were little more than vistas cut through the forests, some of the worst places being "corduroyed"—that is, made passable by laying the trunks of small trees side by side across the swampy spots—but otherwise almost impassable by reason of the stumps of trees and the rocks that were left *in situ*. Frederick Post, traversing this region in the fall of 1758, describes one of the roads as "the worst that ever was traveled," and one of his horses lost his footing and "rolled down the hill like a wheel." A near relative of mine came with her father's family early in the present century from the Lake George region in northern New York into this part of western Pennsylvania. They came by wagon over the country roads, such as they were, and were six weeks on the way. They lodged in the houses of the settlers along the road where houses were to be found, otherwise they camped out and slept in and under the wagon. I recall the interest with which she invested her narrative; it was much such an adventure as I suppose a wagon ride would now be across the upper half of Wisconsin. The census of 1820 gave Pennsylvania a population of only a little over 1,000,000.

As the railroad was a vast improvement upon the canal, and the canal upon the turnpike, so the last was an immense improvement upon the primitive road. Tiego, in his "Geography of Pennsylvania," 1843, grows enthusiastic over the advantages of the lately constructed turpike road. "In order to contrast the former times and facilities with the present," he says, "it may be mentioned that before turnpikes were constructed it required a good team of five or six horses from eighteen to twenty-five days to transport from 2,500 to 3,500lbs. of goods from Philadelphia to Pittsburg. On the completion of the turnpike across the mountains, the load of a wagon was increased to 6,000 or 8,000lbs., and the trip was made in twelve or fifteen days."

Villages and wayside inns sprang up as by magic all along the new highway. Long lines of broad-tired, canvas-topped Conestoga wagons drawn by teams of six or eight horses with tinkling bells moved slowly but picturesquely across the Pennsylvania hills between the remote cities at either end. At night these put up at the aforesaid inns, or "taverns," as they were more commonly called, where the teamsters had much rude sport while the horses stood champing their oats in the moonlight beside the wagons. It was a common sight in our village when I was a boy. It reminded one of Homer:

> "A thousand fires burned on the plain, and by each
> Sat fifty in the light of the blazing fire;
> And horses eating white barley and corn,
> Standing by the chariots, awaited fair-throned Aurora."

This translation is by that fine fellow Henry D. Thoreau, one of the specially favored high priests of nature.

A name honorably associated with this part of the country is that of Dr. R. M. S. Jackson. This gentleman was distinguished as a physician and scientist. He was a member of the first geological survey corps of the State, and is spoken of by Prof. Lesley, in his "Historical Sketch of Geological Explorations," as a man of "singular but erratic genius," who set aside a geological theory maintained until his time, "after a thorough examination of the case with eyes from the glance of which nothing escaped, and with a brain never excelled." I well remember Dr Jackson. His chief identification with this section is through his book, "The Mountain," a stout volume of nearly 650 pages, which treats of the fauna, the flora, and other natural characteristics of the Allegheny range. This book is a singular melange of wit, learning and curious remark. He was founder of the sanitarium known far and wide as Cresson Springs, on the mountain top, on the line of the Pennsylvania Railroad. When the Civil War broke out Dr. Jackson offered his services to his country. He became surgeon-in-chief of the Army of the Cumberland, and died near Chattanooga in 1863, shortly after the battle of Lookout Mountain.

That part of the Pennsylvania canal system which lay in the Conemaugh Valley, consisted of alternating stretches of levels and of slack-water pools. There were ten dams across the stream, which afforded about twenty miles of slack-water navigation These pools formed broad, smooth sheets of water which lay among the hills, reflecting the wooded heights in their mirror-like surfaces, and as picturesque as Highland lochs. The navigation of a canal is ordinarily and naturally free enough from peril; but occasionally, in times of high freshets, the navigation of the slack-water was not entirely without danger. More than one canal boat was carried over these dams, to the ruin of the boat and the loss of human life.

As I began this little paper with an anecdote of one of the old-timers, I may as well close it with another. Among the residents of our village was an old colored individual who was proverbially lazy. It seemed necessary, however, that he should do something, and casting about in his mind for an easy job, it occurred to him that steering a canal boat was about as near doing nothing as anything he could get at. He secured this desirable position. He had been but a few hours aboard when the boat entered one of the dams. The water was high, and the captain, putting the tiller into the hands of his new auxiliary, descended into the cabin for his breakfast. In a very short time the boat gave a great thump, and running up the stairs the captain found the bow of the boat up against the tow path; the stern, carried out by the force of the current, was swirling out half-way across the river, while his steersman was hanging on manfully to the tiller.

"Hello, you old black scoundrel," cried the captain, excitedly, "I thought you said you could steer a boat!"

"So I kin, sah," replied the imperturbable darkey, "so I kin, sah; dat is not my fault, sah; dat is de bow's man's fault, my end is out far enough!" T. J. CHAPMAN

PITTSBURG, Pa.

ON THE EDGE OF THE GRAN CHACO.

TOLD BY WILLIAM KINGSBURY TO WILLIAM H. AVIS.

Chapter II.

THE sun had just risen when we reached the edge of a long cañada and we could see the river a mile and a half away. The road was now lined with algarrobo trees, from whose limbs hung yellowish pods 6in. in length. These pods are eagerly eaten by cattle, horses and other animals.

We crossed the river on a flat-bottomed ferryboat and struck off along the river bank. We were now getting into a wilder country, and as we progressed we saw many flocks of pigeons and gaudily-colored paroquets. While we had met mostly pampas land heretofore, our route now led through alternating patches of thick monte and high-grassed meadow land. Then again we would occasionally sight an ostrich or deer. As it would have been wanton slaughter to kill any of the larger game, for we wished to travel as light as possible and not to load the horses down with meat, we let the ostriches and deer go unmolested. We well knew that we were bound for a section where they were plenty and the meat could be used.

That noon we stopped in the shade cast by the foliage of a large algarrobo tree. When the horses had been turned loose to feed upon the rich, succulent grass that bordered the river's bank, and while Jim skirmished for fuel for a fire, I hunted up some fishing tackle, and after baiting the hook with a piece of raw meat went to the river and cast in. Presently the line tightened with a dull, heavy tug, then, as it commenced to swerve slowly to the right, I gave a quick jerk and found I had hooked something. As I hauled in hand over hand the line gyrated sluggishly in the water, and I soon landed a catfish that weighed in the neighborhood of 6lbs. Casting in again I soon had its mate, and as we now had more fish than we could possibly eat, I quit.

Unlike the catfish of our own country the flesh of the catfish of the Salado River has a very fine flavor. This is because the waters of the Salado are salt. Instead of black this fish is a very light gray. From the river Parana I have seen them taken as heavy as 150lbs.

We spitted the fish and broiled them over the coals until they had the delicate, brownish hue of perfectly cooked fish.

The country through which we passed that afternoon was similar to that of the morning, but wilder. As we drew further away from civilization game of all descriptions appeared in greater quantity. Deer and ostrich grew more numerous. While we were passing through a monte we were startled by a sudden stir in the thick undergrowth nearby, and a large puma appeared to view bounding off into the forest's depths; he disappeared so quickly that we were unable to get a shot at him. We also saw a great ant-hill, which showed indications of having been visited by a great ant bear.

We camped under a giant ombu tree, and after the camp had been established I repaired to the river and soon secured a good mess of catfish. Jim in the meantime had shot half a dozen pigeons from a nearby tree with the Parker.

When we finally sought our blankets, we were unable to obtain much sleep on account of the strange and sometimes fierce sounds which emanated from the depths of the wild, thick monte, on the edge of which we were encamped.

Next morning, as we were crossing a low cañada where the long grass grew so rank and high in places that we were unable to see over its top from the saddle, Jim discovered an ostrich nest half full of egg shells. Near the nest we we found half a dozen bad eggs, which plainly indicated that the old bird had done hatching for the season. The nest was fully a yard in diameter, and was built up from the ground in a sort of mound shape. The top was scooped out saucer-like, and was filled with soft grass. Now we know that as a general thing ostriches do not build nests in this manner; therefore, we concluded that the birds who had built in such a peculiar shape must have had some reason for it. Whether we were right or wrong, we finally concluded that as the cañada was more or less covered with water during the rainy season, the old birds had built the nest mound-shape in order to keep the eggs dry.

The grass in which we found the nest is very common throughout the pampas of the Argentine Republic. Starting in bunches from the ground in the springtime, it grows to a height of 2½ft., and is very luxuriant. The blade starting wide at the base, gradually tapers to an extreme point. Out of the center of each bunch of grass grows a number of long reeds, which average fully 9ft. in height. The tips of these reeds are surmounted by long, drooping, feather-like flowers, which, in the fall of the year, look like silver. The effects of the sun's rays shining upon miles and miles of these waving plumes is beautiful beyond description, and can only be likened to light trembling on a boundless sea of scintillating silver. Among all this beauty, however, lurk many dangers, for here the scorpion, centipede, tarantula and different varieties of reptiles find homes. It also shields from view (in the wilder sections of the country) the puma, jaguar (or South American lion), the hungry wolf, and other fierce beasts.

That evening we reached San Justo, which is a typical Argentine Republic frontier town. It is near the edge of the Gran Chaco, and is also near the Salado River. While leisurely passing through the town, we suddenly heard the advancing clatter of an approaching horse. We were exceedingly surprised to have a fully accoutred vigilante, or frontier policeman, dash up to us, and inform us in Spanish that we must go with him. We asked him how had we broken the law, and he said that the captain would explain when we reached the quartel, or police station. After considerable argument we found there was no escape, so we went with him.

Having reached police headquarters, which we found to be a long, low, white-washed building near the plaza, we were ordered to dismount, and were immediately surrounded by half a dozen vigilantes. In the crowd was the commissario or captain, a dark, thin, wiry-looking individual with a short, cropped beard and mustache. As we stood with our hands on our bridle reins, this individual questioned us closely as to our business and destination; he also made himself obnoxiously free in an examination ou our property.

Jim finally grew hot under such treatment, and when he could stand it no longer, he showered upon the commissario and his horde such an explosive volley of expressive Spanish, as to cause them to stand gaping in jealous amazement at his wonderful ability to surpass even themselves at that game.

After the commissario had critically examined my Winchester, and had plainly stated that it very much resembled one that had been stolen from him a year before, then it was my turn to grow hot. While I do not lay claim to be able to command such an unbroken flow of adjectives as Jim can, still I fairly outdid myself in my efforts on this occasion to do the subject justice. I informed the commissario that nothing but the brain of an idiot would absorb the notion that any gun manufactory built each gun differently. "This," I said, "could be easily understood by a jackass, as that animal has brains; but by a commissario—never!" Now it was the commissario's turn to grow hot, but he very soon cooled down when Jim informed him that we were friends of Don Pancho.

Don Pancho was the principal ranchman of that neighborhood, and the most important individual in the community, therefore, when Jim informed the commissario that we were on our way to the Don's estancia, he not only cooled down, but he immediately assumed a most polite and apologetic tone, and we were allowed to depart without further molestation. Jim's ready wit had saved us much trouble. As a general thing these petty officials make themselves exceedingly obnoxious in all parts of the Republic. Like many insignificant office holders in our own country, they absorb the idea that they are fearfully and wonderfully important. Apparently, such officials as these subsist more on boodle extracted from the pockets of the unwary than from their own salaries.

The sun had set before we left the town, and we hurried to cross the river before dark. When we had arrived at the outskirts of the town we hailed a passing native and inquired of him the right direction to the river. After giving us full information he told us that we were on a dangerous road and that we stood a good chance of meeting thieves, especially after dark. We thanked him and continued on our way. Soon the moon rose and flooded the earth with silver. When we had arrived within 200 or 300yds. of the toll bridge that spans the Salado we turned abruptly to the right and entered a thick monte. Here we prepared our camp for the night.

We experienced a most miserable time that night fighting mosquitoes, but made up for lost slumber by sleeping well into the next forenoon. When finally we arose I went to the river to bathe and to fish, and Jim started off with his gun after birds. When I returned to camp with fish enough for breakfast, I found Jim there ahead of me. He was preparing some paroquets, which he had shot, for broiling over the coals.

We reached San Antonio that evening and were welcomed by our old friend Croft. The estancia Rincon de San Antonio is a large ranch, fully thirty miles in length and fifteen miles in its widest part. Thousands of head of cattle, horses and sheep are owned here. Croft, an Englishman, was the principal ranchman on the place.

We camped on the porch of the house that night, but obtained very little sleep. Not only were the mosquitoes nearly unendurable, but a band of Corentinas arrived in the middle of the night with a large troop of cattle for the estancia. They killed a steer and cooked its flesh over a large fire. They made the night hideous with their wild howls and wilder carousals.

The Corentinas are full-blooded Indians, and a wild lot they are, too. Very few of them speak Spanish. The reason for this is that the Jesuits learned the Corentina's language when they settled among them; then they preached to them in their own language.

We breakfasted with our friend Croft and his wife next

morning. Croft owned a place in Soledad, and he invited us to go there and make it our headquarters until the arrival of H. After breakfast we saddled and started for Soledad.

While crossing the cañada we saw plenty of game, such as deer, ostriches, partridges and martinets. Many flocks of ducks rose from the lagoons.

We reached the ranch about 4 o'clock, and were warmly received by Don Antonio. The old Don conducted us to a shanty by the side of his own house, and invited us to make ourselves perfectly at home and stay as long as we wished.

Don Antonio's family numbered nine members—his wife, himself and seven children. The eldest of his three daughters, a maiden of sixteen, was a real spanish beauty, possessing all those charming features of beauty so characteristic of young Spanish women. Such were the associates with whom our lot was cast for a month.

Never will I forget the jolly gatherings on semi-tropical evenings under the orange trees; nor tales of adventures and travels (indulged in by members of the company) in foreign lands, while the mate passed from one to another in much the same manner as Indians would pass the pipe of peace; then, there were the soft, sweet, Spanish songs sung by the beautiful Señorita to the enchanting accompaniment of the guitar. Those were happy times, and if health and strength do not fail me, I mean some day to live them over again.

We had been here but a short time, and while we had done as yet no hunting for large game, still, we had managed to keep the family more than supplied with partridges, martinets, ducks and geese, and had not allowed them to want for plenty of fish.

Finally a day came which none who saw it can ever forget. The sun rose that morning beautiful and clear, and all indications pointed to clear weather for some time to come. Jim bagged a good lot of birds in the afternoon, and I returned toward evening fairly staggering under a heavy string of fish taken from the waters of the San Antonio. When the evening meal had been disposed of our jolly circle gathered in its accustomed place under the orange trees, and, as usual, with joke, song and anecdote whiled a number of hours away. The moon shone bright and silvery, casting a network of shadows under the trees; a gentle breeze tempered the air to a delicious coolness. Suddenly, without the slightest warning or apparent cause, the breeze ceased, the atmosphere grew oppressively hot, almost to suffocation it seemed. Looking at a small thermometer which I always carried, I was surprised to find that it registered 112°.

Soon a breeze commenced gently to blow from the south. At first it was as stifling as the heated breath of a furnace, but it gradually grew cooler and cooler, until the conditions of an hour before were completely reversed and the thermometer showed 75°, a drop of nearly 40° within an hour. A haze like a curtain of gauze began to spread itself far and near over the face of the heavens. Through this misty curtain the moon shone, dull and lusterless. Now and then a strange, tremulous rumbling, which seemed to come from everywhere at once, filled the air; this mysterious sound gradually grew louder and louder. Finally, drove after drove of cattle, horses and sheep went thundering over the pampas toward the thick montes. Well they knew the fierce pampero! They had seen it spread death and destruction among their kind before. The members of the family by this time had also become thoroughly frightened, and as for Jim and me—well, the less said the better.

Soon, away off down low, where the wide pampas seemed to lift its breast to the horizon, a line of ink-like blackness appeared to rise out of the earth and spread like a sable pall across the heavens. Slowly, slowly at first it climbed, then faster and faster. It was as if a million factory chimneys were belching forth great volumes of soot below the horizon's edge. Out of the very ground stream upon stream of lurid flame leaped in jagged lines of fire to the extreme ends of this line of stygian blackness; it appeared that earth and sky had suddenly become transformed into a mammoth furnace of raging fire and tumbling smoke. This wild scene was accompanied by one incessant roar of continuous thunder. The wind, which had been steadily increasing, was now blowing a gale, and it was very cold; it was nothing, however, compared to what was coming.

We watched the awful approach of the pampero with trembling and fear. While we knew our brick shanty (as well as the old Don's house) was strongly secured by heavy steel cables which passed over the low roof to the ground on either side, and were there anchored deeply in the earth, still we well knew that the full strength of shanty, house and cables would be tested to their utmost before the terrible storm had passed. In fact we feared greatly that everything would be swept away and greatly dreaded to enter the shanty; yet we knew we could not stay outside.

When the pampero had climbed to near the zenith the Don and his family entered the house, and Jim and I walked over to our dwelling where we stood for an instant looking, as it seemed, into the very bowels of hell. Just as that world of fire, roar and blackness seemed crouching for the final spring that would prove the destruction of everything with which it should come in contact, we entered the shanty and tightly secured the door. We had hardly secured the window when it seemed that all the forces of perdition had been turned loose upon the earth.

It would be useless for mortal, with either tongue or pen, to attempt to describe that storm. To be realized it would have had to be seen, and even then, I doubt if a true picture of its terrific grandeur and awful sublimity could have been retained by the strongest human mind, for it seemed to dull and numb the very sensibilities; we didn't sleep a wink all night long. The incessant roar of the wind, which rocked the shanty as if it were a cradle; the stupefying boom of the thunder and the crashing volleys of hailstones on the roof not only prevented sleep, but made it impossible for us to talk, as we could not hear one another's voice. We simply lay side by side in a sort of stupor until morning. It was an awful night, and we were thankful indeed when, shortly after daylight, the storm spent its strength and passed away.

When we realized that the storm was really over we ventured forth into the open air, and what a sight was presented to our view! The sun was shining brightly; a brisk, delightful breeze swept from off the pampas, across miles and miles of heavy grass that had been flattened to the ground; but lo—most wonderful to relate—there, where had trickled the San Antonio, a stream but a few yards wide the day before, flowed a mighty river fully two miles wide. No cattle, horses or sheep met the sight, but the old Don seemed not to be concerned on that account. He said that while some had undoubtedly been killed, he was sure that the number would be small, and that the others would soon return from the thick forests where they had betaken themselves the night before for protection from the storm. He was right, for before night the plains around the house were once more covered with stock. I think that not more than fifty head had been killed, and they were mostly sheep.

Chapter III.

After breakfast, Don Antonio proposed that we take all the dogs, and that all hands go on a grand biscatchera exterminating expedition. This, of course, not only meant the destruction of any biscatcheras that we might come across, but the slaughter of the inmates as well. It must be understood that the biscatcha (the animal which lives in the house or biscatchera) is an inveterate enemy of the ranchman of the Argentine Republic. Owners of estancias infested with these pests find it impossible to get entirely rid of them. Besides undermining the ground and building large mounds on the surface, the biscatcha eats off the grass, leaving the ground barren, and in other ways causes great damage. Thousands and thousands of dollars are yearly expended by the ranchmen in their efforts to rid their estancias of the pests.

It would have puzzled the brain of any naturalist had he been compelled to figure out the different strains of the mixed breeds of the eight or ten mongrels that accompanied us on our exterminating tour that morning. There were big dogs and little dogs, fat dogs and lean dogs, tall dogs and short dogs; in fact, they were of all sorts, sizes and colors, also of all temperaments; one and all, however, thoroughly understood the business they were to be engaged in, as they plainly showed by the wild, excited manner in which they tumbled about when they saw us preparing for business.

We started for a large biscatcha village down by the river. Jim carried his Parker, while I had my faithful Winchester. The old Don was armed with a machete; each of his four sons carried a shovel. The shovels were to be used in digging gutters from the flooded lagoons to the entrances of the biscatcheras, so as to flood the biscatchas out. It was but a short while before the fun commenced.

Selecting the largest biscatchera (mound) nearest a lagoon, the boys set to work and soon dug a trench to the main entrance of the mound from the lagoon. We had stopped up all the smaller holes, making it impossible for the biscatchas to come out any other way than by the main entrance. When the trench connected entrance and lagoon, the water rushed in in a flood. Before long we could hear sniffings, snorts and splashes; then as the hole filled up and the sounds grew plainer, we looked in and could see, now and then, a biscatcha pop his head above the rapidly rising water, only to disappear again. The water had nearly reached the top of the hole when there was a sudden rush, and a large buck biscatcha broke like a shot from the hole; quick as he was, however, the old Don was quicker, for, like a streak, he brought his machete down on the biscatcha's neck with such force as to completely sever the head from its body.

Before the old don was ready to stop him, another biscatcha, then another, broke from the hole. Jim and I fired as quick as we could, and dropped them both in their tracks. They were now coming so fast that we more than had our hands full, and between the reports of the guns, the furious snapping, growling and barking of the dogs, the wild swipes made by the old Don with his machete, and his sons with their shovels, the scrambling ground and lofty tumblings in the mud and water, the snorts, yells, howls and laughter, it was by far the most animated bit of hunting I had ever indulged in or witnessed. We killed in the neighborhood of twenty-five biscatchas at this mound, and when they ceased to come out the water was turned into another mound, and soon the same performance was being enacted over again.

We killed that morning more than 200 of these animals, and had it not taken so long for the water to fill the holes, there can be no doubt but we would have killed more than twice that number. Some of the small, young ones, we took with us to the house; they are very tender and very good eating when properly cooked. The old ones are coarse and tough, have a strong, disagreeable flavor, and are seldom eaten.

That afternoon more than fifty boys came from the village of Soledad on horseback and carried off the dead biscatchas. They took them for the skins, which when cut into thin strips are highly prized for mending reins, saddles and shoes.

As the meat larder was running low, and as Jim and I didn't care to live entirely on biscatcha meat, we decided to go on a hunt after large game.

We were away before sunrise. Jim decided to hunt the cañada along the edge of the overflowed river, while I struck off in the direction of the open pampas. After a mile I thought I could make out the backs of three deer showing above the grass on the top of a knoll some distance ahead. Dismounting, I hobbled the horse and set out to stalk them. Carefully working my way to where I judged I would be able to obtain a view, I cautiously raised my head, and there, about 300yds. off, stood an old buck, a doe and a young buck. They were the common, small deer of the pampas called gama. Quickly dropping to the ground again, I waited a short while, then quietly commenced to snake my way through the grass once more. I had gone another 100yds. when I was startled by a loud hissing directly in front of my face. Lifting my head, I found myself gazing into the wide, gaping mouth of an iguana.

While I knew an iguana would not be apt to attack a person unless cornered and compelled to defend itself, still, I'm not the one to say that I was not frightened at the predicament I was in; the very unexpectedness of the occurrence was enough to startle anyone. I felt my flesh creep, and my hair nearly lifted my hat for an instant; then, as I realized that the animal before me was almost harmless, and that it was undoubtedly more frightened than I was, I could hardly help laughing at thought of the ludicrousness of the situation. There in front of me and disputing the way stood the iguana. It had raised itself as high upon its legs as it possibly could, and as thus it stood with lashing tail and wide-open mouth hissing like a goose, it looked exceedingly comical. I reached for my rifle, which I had dropped in my first surprise, and was pulling it toward me, when the iguana made a sudden dive, and as I ducked my head scrambled helter-skelter over my back. I gave him a parting kick as he disappeared in the grass behind me. This movement on the part of the iguana was more than I had bargained for. Whether he really intended to attack me, I cannot say. I think, however, that he probably lost his head and could not see where he was going in his desire to escape. Whether he intended to attack me or not, I have no desire to experience another such close meeting.

Taking a cautious peep I was considerably gratified to observe that the deer were still feeding, and were not over 200yds. away. Continuing the cautious advance, I worked up to what I judged was another hundred yards. I lay low for awhile, then ventured another peep, and there, within easy range, stood the three deer.

As it was no new thing for me to shoot deer, and as they seemed not to be in any hurry to leave, evidently not having discovered my presence, I worked slowly up to an extra thick clump of grass and sat down. The deer would feed first in one direction, then in another, and they looked so innocent, graceful and beautiful, that I really regretted to shoot them. I watched them for perhaps half an hour, then selecting the young buck waited until he turned broadside to me, poked the rifle through the clump of grass and fired. At the report the buck dropped like a stone; he must have been killed instantly.

The old buck and doe, instead of running away, stopped eating and commenced to walk around the fallen deer in a curious manner. They would sniff at the body, then gaze all around, the old buck stamping and whistling all the while.

As it was near the rutting season I decided not to fire at the old buck. So I killed the doe.

I now thought that the old buck would surely run, but I was mistaken, for he made no effort whatever in that direction. Instead he stood stamping and whistling louder than ever. He had an elegant pair of antlers for his species, but as I was not hunting antlers but meat, and as I had secured all the meat we would be able to use for some time to come, and as it would have been useless slaughter to have killed him, I jumped upon my feet, and, waving my arms above my head, let out such an unearthly yell that the old fellow started to gallop like the wind across the pampas, and it was but a short while before he was out of sight.

The buck and doe were in good condition, plump and fat. Fastening their legs securely together with a piece of rawhide, which I always carried for just such a purpose, after considerable trouble I managed to swing them across the horse behind the saddle. Then, mounting, I started slowly for the house, the deer partly dragging on the ground each side of the horse.

I had not gone far before I saw Jim riding slowly toward me, and I could see that he was not returning empty-handed. I could make out some kind of game on his horse back of the saddle. When we met, I saw that he had shot a large ostrich. He had his game secured in the usual way of carrying an ostrich—its neck had been drawn through the saddle girth on one side the horse, while one leg had been secured in a like manner on the opposite side.

"I went about a mile after we parted," he said, "when, as I reached the edge of the river, I happened to look off to one side and saw a whole troop of ostriches coming down to the river. Riding well to leeward of them, I left the horse, and after considerable crawling managed to get up to within 50yds. I selected the nicest bird in the lot and immediately cut loose with a charge of buckshot. As the ostrich dropped, the rest of the troop cut out at such a clip that they were soon out of sight. I could easily have shot another, only I reserved my second barrel in order to finish this one in case he should prove not to be dead. I found, however, that the gun had done good work, as the ostrich was stone dead when I reached it."

When we arrived at the house it was near dinner time, so we immediately skinned the ostrich and two deer, and it was but a short while before the delicious odor of broiling venison filled the air. After dinner, we cut the deer meat into strips, which we jerked, then salted and hung in the sun, so that it would dry. We presented the ostrich skin to the eldest daughter, and she declared that she would make it into a shoulder cape. This she could easily do, and beautiful capes they are, being not only ornamental, but perfectly waterproof as well.

News was brought us that afternoon that a Gaucho's baby had died in the town of Soledad; and that a dance of the little Angelito would be celebrated the next night at the Gaucho's house. As about everybody attends on such occasions, we all decided to go.

The dance of the little Angelito is in some respects somewhat similar to an Irish wake. At a dance of the little Angelito dancing is indulged in, and generally this dance is continued night after night, in different houses (as the dead child is borrowed first by one person, then another) until it becomes absolutely necessary to bury the body. While I am not entirely sure that I am right, still, I think that this custom is an old Indian one; at any rate, I never saw it practiced among the full-blooded Spaniards. As many of the Gauchos are half-breeds, they of course observe many Indian customs, and I think this dance is one of them.

Soon after sundown next evening Jim and I and a couple of the boys started on horseback for the Gaucho's house, where the dance was to be held. When we had reached our destination and dismounted, we found ourselves in front of a long, low whitewashed shanty, built of sun-dried bricks. That we were not the first to arrive was plainly evident by the number of horses which were tied around about. Tying our horses to a couple of spare posts, we entered the house, which we found to be thickly crowded. At the further end of the room was a table, and stretched at full length on the table and dressed in white lay the body of the dead child; around it a number of candles were burning.

When we were observed by the people in the room, they parted as best they could, and Jim and I were conducted up near the table where the baby lay, and were given seats. We had been employed on a nearby rancho a couple of years before, and so were pretty well known by the people present. Being white men, we were treated very courteously. In fact, full-blooded white people are always treated with great civility by the Gauchos and In-

dians. Especially is this the case when the whites are supposed to be Englishmen.

The low tone of three guitars (solemnly played for the monotonous dance that was in progress) seemed to be played by hidden musicians; for, as the men, women and children were all smoking cigarillos, the room was so filled with smoke that we could not see the players. The conditions were such, in fact, as to make breathing really difficult.

In one place, dimly showing through the thick haze of smoke, would be gathered a group of dried, wrinkled, old women, while in another part of the room would be a lot of old men. In still another place gathered young people, some of whom—especially the girls—were exceedingly handsome. Scattered promiscuously among these different groups, could be seen the picturesque dress of the Gaucho; the wide, flowing lumbachas (breeches), the high-heeled boots, the broad-brimmed hats, the white shirts, short, black coats and silver-trimmed belts; the fierce, black moustachios and gleaming white teeth of these rovers of the pampas; the slow, easy movements of the mirthless dancers; the firefly-like glow of countless cigarillos showing dimly through the thick haze of tobacco smoke; the dead baby lying so still and white; all these combined formed a picture so strange that once looked upon it could never be forgotten. We staid until after 2 o'clock, when the dance ended for the night.

The dancers had nearly all dispersed, and Jim and I were about to mount our horses, when, suddenly six revolver shots rang out in quick succession from down the road. The shots were followed by some shouting and screaming, and as it appeared something important had happened, we quickly swung ourselves into saddles, and with hands on revolvers galloped in the direction of the trouble. We found a small crowd gathered around a carriage, in which a woman was seated. She was supporting in her arms the body of a man. She was the wife of the Juez de Paz (Justice of Peace), and the body she supported was that of her husband. He had been shot six times by one of his own vigilantes, and was stone dead.

The man who had done the shooting escaped into the Gran Chaco. He was the murdered man's sergeant and had killed him on account of some family trouble. He was subsequently captured and is now confined in the State prison at La Plata.

Next morning Jim's horse, Zino, was missing, as also was the rope by which he had been tethered. This was his favorite horse and he felt very badly over its disappearance. We hunted in all directions the whole of that day, but could find no signs of the horse; he had evidently been stolen. It seemed strange that my horse had not been molested, as he was tethered right near Jim's.

A FUR TRADER'S JOURNAL.

THE value of Dr. Coues's historical work on the early Western explorers is so well known as to need no comment. It appeals alike to the historian, the geographer, the naturalist, and the ethnologist, for the work of these early explorers in virgin fields covered a very wide range From the necessities of the case, however, this work was general, and much of it requires interpretation at the hands of a specialist, and comment in the light of events and information that are more recent. No one is better fitted to do this work than is Dr. Coues; himself a traveler, a naturalist, and a writer whose abilities are sufficiently familiar to every one.

His latest contribution to the early history of the West has just appeared from the press of Francis P Harper. It consists of the journals of Alexander Henry, fur trader of the Northwest Company, and of David Thompson, official geographer and explorer of the same company, and covers a period extending from 1799–1814. The story told by these journals is one of exploration, trading and adventure among the Indians on the Red, Saskatchewan, Missouri and Columbia rivers, and from the dates given it is evident that this wide extent of country was then almost untouched by white men; no visible impression had been made on the numbers of the wild animals by the coming of the traders, and but little on the manners and customs of the natives.

Alexander Henry was the younger of two men of the same name—uncle and nephew—both of whom were fur traders leading "similar lives in like scenes under identical occupations." The Travels and Adventures in Canada and the Indian Territories, between the Years 1760 and 1776, written by the elder Henry, was published in New York in 1809; the journal of the younger man is preserved in the Library of Parliament at Ottawa, and is the basis of the present work.

Apart from the actual editorial work, the condensing smoothing, polishing and the elision of unimportant matters needed for this journal, is the critical comment by the editor, a most useful and most interesting part of the present work. This covers the naming and locating of all, or nearly all, the individuals mentioned in Henry's journal. To do this it was necessary to become familiar with the history of the Northwest Fur Company, and others with which it had close relations, with the lists of its employees, with its routes of travel, and with a host of other details, many of them apparently of trifling importance, but all having a bearing on this journal. Besides this, the geographical notes represent a vast amount of work in the identification of places whose old names have long been forgotten, comparison of places named by Henry with the same places to-day, and the tracing of the writer's sometimes obscure routes.

David Thompson, whose name appears on the title page of the present work as its co-author with Henry, was celebrated as an astronomer, geographer, explorer and discoverer, whose service with the Hudson Bay Company, the Northwest Company and the International Boundary Commission covered many years. His contributions to the work, which are chiefly geographical, are, like Dr. Coues's, in the form of notes, the main text being solely Henry's.

Henry was a fur trader—a business man, looking for his profit from trade, and willing to go to any reasonable lengths to secure his end—which was a good trade. He never forgot that he was in the country for furs. And yet he was a simple-hearted man, whose kindly qualities cannot fail often to attract us, while on the other hand the stern moralist may stand aghast at some of his relations. As the editor remarks, this is not a work *pueris virginibusque*, but it is replete with interest for adults.

For readers of FOREST AND STREAM this interest has to do largely with the enormous abundance of wild game in those early days, and with the ways of the Indians. Of these matters the volumes are full. Thus, in the Red River Valley, where the brigade camped Aug. 26, 1800, Henry says: "The Indians had found the ground on which we tented covered with buffaloes and shot several, the carcasses of which lay near us, only lacking the choice bits. The ravages of the buffalo at this place are astonishing to a person unaccustomed to these meadows. The beach, once a soft, black mud into which a man would sink knee-deep, is now made hard as pavement by the numerous herds coming to drink. The willows are entirely trampled and torn to pieces; even the bark of the smaller trees is rubbed off in many places. The grass on the first bank of the river is entirely worn away. Numerous paths, some of which are a foot deep in the hard turf, come from the plains to the brink of the river, and the vast quantity of dung gives this place the appearance of a cattle yard "

Again, in the same valley and only a day or two later, while building the fort at Panbian (Pembina), he says:

"We saw five bears. D smarais and myself crossed over and pursued them. We had a long chase and repeatedly sighted them, but they escaped us in the brush. On our return we found a large one lying dead, which we supposed must have been wounded by the Indians some time ago He was swelled up and ready to burst. Bears make prodigious ravages in the brush and willows; the plum trees are torn to pieces, and every tree that bears fruit has shared the same fate; the tops of the oaks are also very roughly handled—broken and torn down to get the acorns. The havoc they commit is astonishing; their dung lies about in the woods as plentiful as that of the buffalo in the meadow."

This comment on the abundance of the animals is not, it must be remembered, that of a novice, but of an old hunter, to whom such things had been long familiar. Remarks similar to these are made about the red deer (elk, *Cervus canadensis*) on this river.

An interesting comment on the keenness of the scent of the buffalo and an observation which has no doubt been paralleled by more than one of our readers, is given in this citation:

"We saw a great herd of (buffalo) cows going at full speed southward, but on coming to our track, which goes to the Salt Lake, they began to smell the ground, and, as suddenly as if they had been fired at, turned toward the mountains. It is surprising how sagacious those animals are When in the least alarmed they will smell the track of even a single person in the grass, and run away in a contrary direction. I have seen large herds walking very slowly to pasture, and feeding as they went, come to a place where some persons had passed on foot, when they would instantly stop, smell the ground, draw back a few paces, bellow, and tear up the earth with their horns. Sometimes the whole herd would range along the route, keeping up a terrible noise until one of them was hardy enough to jump over, when they would all follow and run some distance."

As bearing on a subject recently discussed in FOREST AND STREAM, the following is of interest:

"The Crees inform me they have seen a calf as white as snow in a herd of buffalo. White buffalo are very scarce. They are of inestimable value among the nations of the Missouri, but of none to the Crees and Assinaboines, except to trade to the other nations. There are also some of a dirty gray, but these are very rare."

Henry mentions frequently and at length the vast numbers of dead buffalo floating down the river in spring—"one continuous line in the current for two days and nights"—animals drowned either by breaking through the ice or by being mired in attempting to cross the river, and Dr. Coues quotes from Masson, John McDonnell journal of May 18, 1795, when he was descending the Qu'Appelle River, as saying:

"Observing a good many carcasses of buffalo in the river and along its banks, I was taken up the whole day with counting them, and to my surprise found I had numbered when we put up at night 7,360 drowned and mired along the river and in it. It is true, in one or two places, I went on shore and walked from one carcass to another, where they lay from three to five files deep."

We learn that wolf puppies are born on Red River about April 1, and that May 1 the stench of the decaying buffalo along the stream was "intolerable," and "that their number lying along the beach and on the banks above passes all imagination "

Very interesting is Henry's frequent use of terms now obsolete in the Northwest, and which we have heard employed only by the oldest voyageurs. Such are: to tent, now to camp; *fort-bois*, or strong wood for heavy timber; *en decouverte*, or on discovery, for on a scout.

In July, 1806, Henry made a trip to the villages of the Mandanes and Big Bellies, tribes now living at Fort Berthold, in North Dakota, and while with them accompanied them to the Northern Cheyenne camp, where a peace was to be made, an attempt which seems not to have been crowned with marked success. His return to the Pembina post and the season of 1807 and 1808, closes the first volume of 446 pages.

Part II. of Henry's journal deals with the Saskatchewan. We follow him from the Red River, through Lake Winnipeg and up the Saskatchewan to its headwaters. During the years 1808–1811 he built and occupied various posts on the North Saskatchewan, and on this stream he traded with the Assinaboines, Crees, the three tribes of the Blackfeet, the Sarcees and the Atséna, which are now called the Prairie Gros Ventres. Everywhere through the journal are interesting references to game and fish, and to Indians and their habits. Some of his accounts of the Indians are wonderfully good, and full of spirit and flavor. With the Indians he had much trouble, and he complained bitterly of this, not seeming to realize that the difficulty was due in large measure to the fact that he was trading liquor to them. Mingled with all this are references to the number of eggs that he puts under his setting hens, the announcement of the fact that one of his hens hatched a chicken. the fact that his potatoes did not come to anything, and that his turnips have run to leaves.

On page 558 is mention of Mr. Bird, a Hudson's Bay Co. employee, of whose first name Dr Coues knows nothing. This was probably Thomas Bird. His son, a half breed, also named Thomas, died only two or three years ago in the Piegan country in northern Montana at a great age. His grandson, also Thomas, was living recently.

Horse thieves, usually Crees and Assinaboines, were very troublesome at Fort Vermillion in February, 1810. Here is one example of their boldness. Henry says: "My people had a narrow escape this morning from being murdered by a party of sixteen thieves, who met them at Piantes River. They said the thieves had been watching for several days near the fort, and had been up as far as Moose Creek, but could find no horses; also that they had watched two days near the fort to shoot me, as they really wanted my scalp; but that having been disappointed about both my scalp and my horses, they must absolutely have Clement's scalp. The thieves had also said that they knew Cardinal and Martelle, and would do them no harm, further than taking some trifling articles from them, such as their tobacco, belts, knives, and two new guns which belonged to me. Our people gave them to understand that they had come from some Indian's tents *en derouine* (on a trading journey), having their sleds loaded with skins and furs which Cardinal got from the freemen on the road; at which the thieves said they would take the furs, were these not too heavy to carry on their backs. If our men had been loaded with dry goods we should have lost everything, but fortunately the thieves did not see the bag of balls which lay under a bundle of skins. Cardinal, who is a most loquacious person, was exercised to the utmost of his ability, and by his fluency saved the life of Clement from these scoundrels. They were so bent on mischief that after they had let our men go and Cardinal had proceeded a few paces, they came up to him and offered to return the guns and other articles they had taken if he would drive ahead and leave Clement behind, for they absolutely must have his scalp. Here Cardinal was put to his wit's end; however, he pulled out a pistol he had concealed, and gave it to one of the Crees, who seemed to be the most decent one of the lot, begging this fellow to give him charity, and allow his comrade to live also. This had the desired effect; the Cree instantly placed himself between our people and the Indians, telling Cardinal to drive on and fear nothing."

On Oct. 8, 1810, Henry tells us of another white buffalo, saying: "These Piegans had the fresh hide of a bull they had killed at the foot of the Rocky Mountains. This was really a curiosity. The hair on the back was dirty white, the long hair under the throat and fore legs iron gray, and the sides and belly were yellow. I wished to purchase, but the owner would not part with it on any consideration."

In November he speaks of the abundance of grizzly bears, saying that one of his men had killed five buffalo, but the grizzly bears were so numerous that they devoured three before the hunter could cut them up and carry them to camp. On the same day he speaks of the strong wood buffalo (mountain bison) as being numerous, but as wild as moose. Crossing the mountains toward the Pacific slope Henry saw his first mountain sheep and white goat, which greatly impressed him. After reaching the headwaters of a stream flowing into the Columbia, he turned back again toward the east.

Chapter XXII. is devoted in large part to accounts of the Indians living on both sides of the mountain, but more space is given to the Piegans and their habits than to any others, and it is evident that the author thinks more highly of that tribe than of any of those which he met with east of the mountains.

Between the close of Part II. and Part III. there is a break of more than two years. Henry is then found at Astoria at the mouth of the Columbia, and the journal is continued with unbroken daily entries to within a few hours of Henry's death, by drowning, May 22, 1814. This part, devoted to the Columbia, is not less interesting than those which have gone before, but no references can be given here.

With the work are given three large folding section maps traced in facsimile from David Thompson's original great chart, no portion of which has ever appeared before. The work is in three volumes, the first two containing about 475 pages each, and the third devoted entirely to a very full index covering 100 pages. An admirable portrait of Dr. Coues is given as a frontispiece for the work.

Natural History.

JACK, EVERY INCH A BEAR.

THE natural history contributed to FOREST AND STREAM is certainly neither the least entertaining nor instructive of its many topics. In recent numbers I have read many accounts of animal intelligence that have recalled to my memory a great many instances coming under my observation.

Almost any anecdote of the shrewdness or intelligence of domestic animals will remind the most of us of numberless exhibitions of a kindred nature that we have witnessed. It is not the fortune of every reader, however, to observe the characteristics of wild animals. Perhaps it is owing to this fact that the intellectual endowments of the latter are so rarely appreciated.

When the intellect of humanity is educated up to the admission of other animals—dumb animals—into the realm of reason, I hope bears will not be extinct, and that bruin will be placed well toward the top notch with intelligent quadrupeds. Having been once seized and possessed of (as well as by, at times) a certain brown bear, I speak from a knowledge of the subject that approximates wisdom.

Von W.'s account of the cat and the door-latch particularly reminds me of Jack, a bear of the cinnamon family, that I had no end of trouble and fun with. Jack was very much too intelligent for a dumb brute, but he was a little too rude and unconventional for higher society. I gave an Indian boy a $10 gold piece for Jack, which was paying about $5 a pound, at the time, for a bundle of red hair full of teeth and claws. In a few weeks, however, I knew I had at least $10 worth of bear. In three or four months I was confident that I had got more for my money than I had expected, and thereafter I was constantly impressed that an investment of a like sum never secured a more comprehensive, variegated and diversified lot of amusement and trouble.

Let me digress here to observe that if any reader would like to impress his wife or his son, as the case may be, with the purchasing power of money, let her or him buy a bear. Indeed, in these times money is cash, but invested in a bear it is almost everything you can imagine.

Jack's intelligence developed together with his material structure, and almost kept pace with his appetite. He had free range over forty acres of ground, including a barn, orchard, and the house when he felt like it. Two large-sized dogs wooled him around for a while, but after he had devoted himself to growing for three months or so he was a revelation to dogs.

When a new town dog came along, he usually capered up to Jack with a confident air of superiority. Jack would arise from all-fours to his diplomatic position on two feet, and the new dog would look surprised and hesitate. Then he would conclude to bluff Jack, and make two or three jumps toward him. About the third jump the new dog would collide with a cuff that would make his mouth water and his brains rattle. Sometimes the first cuff would offend a dog, but the second or third would convince him that i

didn't pay, and he would go away with a sort of an apologetic expression, but as rapidly as his dazed understanding could work his motive power.

With dogs he knew Jack was very sociable, and he was always ready for a friendly rough-and-tumble scuffle with them, rarely losing his temper. The dogs, though, usually did the greater part of the tumbling.

The kitchen our family used in summer opened into the yard, from an L facing the main building, by a glass or sash door. In hot weather the kitchen was frequently used also for a dining-room. Behind the kitchen, a large live-oak tree grew, spreading its branches over the roof. This part of the house was about all that Jack seemed interested in, for he very soon knew where the eatables were stored.

He soon learned when meals were ready and he was usually on hand promptly, and then I had either to chain him or close the door. When three or four months old he could easily peer through the sash in the door by standing upon his feet—that is, his hindfeet. (Really a bear has only two feet. I have doubts as to bears being quadrupeds. Most people seem to think they are. It is true they often walk and run upon all-fours, but that is when they are not otherwise using their hands. Bears certainly ought to be classified as bipeds.)

Jack did not content himself with peering into the kitchen, and if he didn't reason a little upon the problem of "how to get in," then I have no judgment of consequence. He learned in a very short time to turn the door knob, open the door and walk in. Then we kept the door locked, and we thought we had settled the matter; but Jack had it still under consideration. He tried all the windows, and tried to get under the floor and come up inside. Then he climbed up the tree and dropped down upon the roof. After prying around in this way for several days, we thought he had given it up; but one evening when the table was spread for supper and the family were in the upper rooms, there was a clatter in the kitchen. Several of us went down at once, and the cause of the clatter was very evident indeed. Jack was in the center of the supper table, but most of the supper was apparently in the center of Jack. He was very much occupied with a berry pie, and totally regardless of all decorum and decency he was sitting on the butter dish and smearing preserves and pie from a radiating center to the remotest corners of the room.

After clearing out the wrecker and clearing up the wreckage we began to query how the intruder had entered. The doors and windows were closed and fastened, but a glance upward explained all. There was a ragged hole in the canvas ceiling, and up through that we could see the sky. Jack had dropped off the tree to the roof and simply dug his way down through the shingles, then dropped again about 4ft. to the canvas and through that 10ft. to the kitchen table, where he reaped his reward without either grace or thanksgiving.

This was only an incident of his career—only one of his adventures. He robbed neighboring orchards and grape patches after finishing ours; he was found at midnight in other people's kitchens; he got on the roof of a house occupied by a colored family and frightened them out of their wits, for they thought he was the devil sure, and the whole lot of them "jined" the church the following Sunday. In fact the town was too small to hold Jack, and at the age of about eight months he came to an untimely, tragic and sudden end.

You see he had never read anything about the origin of individual rights to property. The words mine or thine meant nothing to him. He evidently believed in having everything free and easy on a sort of community partnership plan, and probably in a paternal form of government. He could not comprehend why a certain Louisiana colonel—a neighbor—should have a large supply of choice apples while there was a gnawing vacuum in his (Jack's) diaphragm. So Jack went over to the Colonel's and helped himself. After many visits he upset the boxes of apples he couldn't eat, the Colonel ran him up a tree and shot him dead. I saved his curly brown hide, but it reminded me of so many cunning pranks and intelligent traits of poor Jack's that I put it out of sight forever.

There are many unworthier animals than such as Jack, bear, every inch a bear, though he was. He would play for hours with children, and I never knew him to be ill-tempered as long as he was well fed. When hungry he was not to be trifled with. He was of a species considered next the grizzly in size and ferocity in a wild state.

When I have seen similar animals confined in narrow cages, I have mused that all the brutality on exhibition was not behind the bars, and when I have seen bears led about with rings in their nostrils by Italians with goads, I have considered that the wrong brutes were being tortured. I have never had any desire, although fond of hunting, to kill bears since I had one for a pet. They are not nearly as ferocious as commonly supposed, in their native haunts. Only hunger or injury will cause them to be so. They certainly rank very high in the scale of animals of intelligence, and I would vote for laws protecting them from extermination.

In conclusion, speaking from observation and experience, I have found that the study of any animals will not fail to arouse our sympathetic interest in them They all improve upon acquaintance, and but a dim conception of the animal world can be acquired from books or treatises

"He prayeth best who loveth best
All things, both great and small."

Coleridge must have been an accomplished naturalist, therefore one of the best kind of sportsmen. RANSACKER.

SHASTA MOUNTAINS, Cal., May, 1897.

Wolf Poisoning.

BIG MOOSE LAKE N Y., May 17.—I am glad to see a letter in FOREST AND STREAM from J. W. Shultz, of Montana. He killed one of the last panthers in the Adirondacks near Big Moose Lake. He speaks of the action of strychnine on dogs and wolves. I suggest that they put the poison in a small lump of lard or tallow. The poison in meat does not touch the stomach for some time, but if put in lard or tallow the lard immediately dissolves, and the poison takes effect at once. I learned this by seeing my father poison foxes; he always found them near the bait. The lard might not work in very hot weather; the most of the time it will.

J. H. HIGBY.

"Angling Talks."

WE have a very few copies of George Dawson's "Angling Talks," a series of chapters of entertaining chat about men, fishermen, fish, fishing and fishing places. Cloth, 50 cents. Forest and Stream Publishing Co.

DOMESTICATED ELK.

GRAND VIEW, Tenn.—As usual, I am dwelling much on reminiscences of the past, and I send you a paper published some forty years ago. It was written by my brother (long since deceased), by request of the secretary of the Cattaraugus (N. Y.) Agricultural and Horticultural Society. The paper explains itself, and shows what some opinions were regarding the preservation of game forty years ago. As I had considerable to do with the manager and management of this elk business, it is possible that I may have an undue interest in the matter. E. L. STRATTON (ANTLER).

The American Elk Domesticated.

From the Transactions of the State Agricultural Society.

Mr. Lorenzo Stratton, of Little Valley, has been experimenting for a few years past, with a view to test the practicability of domesticating elk; and for this purpose inclosed a tract of very hilly land, well wooded, for ranging and browsing. His animals are so amiable that he has driven several of them to the three last fairs of Cattaraugus county, without difficulty, where they attracted great attention. In answer to a note of inquiry, Mr. Stratton has kindly furnished the following interesting paper, and it is hoped that the suggestion it contains may attract attention. The success attending Mr. Stratton's experiments thus far certainly argues well for more extended efforts.

From Cattaraugus County Report.

Mr. John Manley: Dear Sir—I have received your letter, asking, as secretary of the Cattaraugus County Agricultural and Horticultural Society, some statement in relation to my experience in domesticating the American elk or "great wapiti" deer.

To commence at the beginning. I came in possession of my first pair in the spring of 1853, in the course of trade with the agents of a Western fur company, who had purchased the fawns of a tribe of Indians on some of the head branches of the Missouri River. At the time of my purchase I had no other object in view than the hope of reproducing a few, and having the pleasure of seeing a herd of these magnificent foresters quietly feeding on the identical grounds where nature had once planted and provided for their ancestors, in untold numbers. In view of their rapid decrease on the approach of civilization, and the threatening prospect of exterminating the entire race, I have deemed it something more than idle curiosity to preserve from destruction some of the characteristics of our American forests. It is not yet fifty years since the elk were so numerous in this country that the Indian or pioneer trapper, after finishing his store of provisions for his breakfast, might with confidence expect to sup on a choice cut from the sirloin of an elk; and the Indian is now living who can boast of killing three elk in one day, within 100 rods of where you have held your last three agricultural fairs; and another Indian informs me that he once killed an antlered buck within rifle shot of the Cattaraugus depot, and, as near as can now be ascertained, the famous forester fell on the precise ground where since has been reared the elegant and substantial residence of Judge Leavenworth.

But what a change has been wrought since? It has now been some years since the last track of the elk has been seen in the fastnesses of the Pennsylvania woods. It is said there may yet a few be found on the western shore of Lake Huron, in the vicinity of the Au Sable River. Where next may we find them? Within some six or seven years herds of hundreds, and perhaps thousands, were to be found in the vicinity of St. Paul, Minn.; but now we might as well look for them in Orange county. Their western range being large prairies, skirted with narrow strips and small patches of woodland, they were easily slaughtered and driven off by the first settlers; and at the present time they are only to be found by at least a week's journey beyond the lines of civilization.

The first thing that called my attention to this matter, as likely to afford any pecuniary profit, was a document laid before the Senate by Wm. R. King, Vice-President of the United States, and also President of the Senate, by Prof. S. F. Baird, of the Smithsonian Institution, at the instance of Thomas Ewbanks, Commissioner of Patents. The substance of which document was a call on the Government for means to procure, domesticate and restock certain portions of land in the States of New York, Pennsylvania and other States which were nearly or quite worthless for agricultural purposes, but would still be a most inviting place for this purpose—citing as sufficient proof of its practicability, that formerly this country produced elk as naturally as it does now brush and white rabbits.

Now, as I had a pair of elk and a quantity of this description of land at the time my attention was called to this view of the subject, it readily occurred to me that I might indulge my fancy in this business, with a fair prospect of remuneration. I therefore set about it in a business way, by purchasing at different times three more elk, and preparing them a pasture of 125 acres of well-fenced woodland, in which they have now been for three years, without any additional expense worth naming beyond a visit to the park some three or four times a week, at which time I always carry a pocket of corn, oats, or a handful of clover heads, in summer, all of which they are very fond; and in this way I keep on excellent terms with them. My success in domesticating them by this sort of treatment has been quite satisfactory; instead of scampering away like wild animals when I approach them, they crowd around me like so many pets. My original number of five purchased elk have increased to ten, with a prospect of an additional increase of four next spring.

During the winter and in time of deep snows, they gather into a thicket of brush (which embraces about one-half of these grounds), which they trim with great apparent relish; and notwithstanding the deep snows and severe winter of 1855–6, they remained in high order, with no other resources than the staddle timber or brush, which they laid waste by the acre. The inclosure I have for them would be quite sufficient to sustain from fifty to sixty elk until they have destroyed the brush, at which time their pasture would have to be extended over new territory, or trees be cut in winter for them to browse.

Now, in view of the character and price of large quantities of land in this country, and also of the fact that these mountain ranges were formerly the natural home of the elk, and their perfect susceptibility of domestication, I deem it an enterprise of the first importance that portions of these lands should be restocked with their original denizens; and not only to the naturalist, the man of science, but to those wishing a profitable investment, it holds out every inducement. When we consider the amount of lands in this country only fitted for such purposes, I do not hesitate to say that it might be made a business of vast importance. While the world is being ransacked to obtain rare and foreign animals, which may never be acclimated to this country, and whose utility is rather questionable if they should be, the elk, with all its claims to our attention, with scarcely an effort to domesticate, is rapidly disappearing from the land. When we consider the short space of time (say fifty years) since the elk ranged the entire country between this and the Mississippi River, it is a fair estimate, with the increased facilities of travel and emigration, and what is being done in the Territories of Utah, Nebraska and Dakota, that within twenty-five years the race will be entirely extinct, unless proper means is resorted to for their domestication—not a very pleasant prospect, when our forest might produce, at comparatively small expense, an abundance of venison, the quality of which is the very crowning dish of the epicure, adding materially to the wealth and the importance of the country.

The elk, although having many characteristics of the deer, has yet a strong individuality of his own: it is not particularly timid, or liable to stampede or sudden fright like the deer, but depends more upon prowess than flight, in case of danger. The elk is not so restless in disposition, and therefore more disposed to fatten. I have been much surprised to see my whole number (ten) in higher condition than any ten animals that could be selected among all the domestic cattle on the farm, which had the advantage of good pastures.

The weight of a full-grown buck is from five to six hundred pounds; that of a doe, from four to five hundred. They mature at about four years of age. The bucks only, have antlers, which they shed yearly, like the deer. The engraving I send you does not give very flattering portraits, but the best I could get executed in the country. Yours respectfully, LORENZO STRATTON.

LITTLE VALLEY, N. Y., February, 1857.

Antler tells us of the outcome of the experiment: "So far as it was carried out it was a success. Had there been a moderate amount of capital invested with a larger territory of cheap mountain land added, and with close attention to the business, it would have been a profitable investment and doubtless would have shown handsome dividends. But when we decided to move South the elk business had to be abandoned. Most of the stock on hand was bought by some foreigners and shipped by rail to New York, thence some to Italy and the rest to Germany, and three or four were slaughtered at home. Whether Professor Baird's propositions or suggestions were ever acted on I never learned."

BIRDS OF COLORADO.

FIRST and last, much has been written about the birds of Colorado, although this much is little by comparison with the contributions to ornithology made in the older States of the Union. Still, Allen, Acken, Bendire, Coues, Ridgeway, Morrison and others have added a great deal to our knowledge of the birds of this State.

Lying as it does partly on the plains and partly in the mountains, Colorado might be expected to furnish a great variety and number of species, and as a matter of fact we find that the 363 species and varieties known to occur in it, is a greater number than has been taken in any State in the Union, except Nebraska, which slightly exceeds it in numbers.

In the publications of the State Agricultural College, in Bulletin No. 37, Technical Series No. 2, is given an interesting list of the Birds of Colorada by Mr. W. W. Cooke, the State Agriculturist. Mr. Cooke's work in ornithology is sufficiently well known, and it is fortunate that so careful an observer should have taken up the work of making us a modern list of its birds. These number, as stated, 363 species, of which 230 are known to breed. On the plains at the foot of the mountains are found many truly Eastern species; in the mountains themselves are found many species from the West and from the North, while in the Southern part of the State over twenty truly Southern species have been taken.

Though much ornithological work has been done in Colorado, many parts of the State have never yet been visited by the ornithologist, and it is by no means to be supposed that anywhere near the whole number of species occurring in the State have been recorded. Nevertheless there have been an extraordinary number of straggling visitants taken. Among these are three varieties of surf ducks, a wheatear, a white-winged dove, a white ibis, a roseate spoonbill, and a scarlet ibis.

Following his introduction Mr. Cooke gives twelve lists of birds, which he classifies as follows: (1) Residents, 37 species; (2) regular winter visitants from the North, 24; (3) regular breeders that sometimes occur in winter, 17; (4) rare or accidental winter visitors, 22; (5) summer residents, 228; (6) summer visitants, not known to breed, 15; (7) migrants, 58; (8) stragglers, 48; (9) regular visitants from East and Southeast, 14; (10) rare visitants from South and Southeast, 33; (11) regular visitants, from West and Southwest, 20; and (12) rare visitants from West and Southwest, 12.

Following this are some data on the migration of Colorado birds, in which dates of arrival at three points in Colorado are compared with dates of arrival at St. Louis, Mo.

A very full bibliography of Colorado ornithology is followed by a history of Colorado ornithology—both very interesting—and this by the annotated list of the birds of Colorado, which occupies 80 pages. A page of addenda at the end of the work gives three more species for the State than are mentioned in the body of the work. The list of birds is quite fully annotated and very interesting, and from these notes much might be selected worth repeating. We can only refer, however, to some of the game birds.

It appears the quail has been introduced at various places along the mountains, and in many of these places it is quite common. Those which were turned loose a few years ago in Estes Park, at an altitude of about 8,000ft., are occasionally heard from. The California partridge was also introduced. The sharp-tail grouse (*Var campestris*), occurs in small numbers, but seems to have been nearly exterminated. The wild turkey is rapidly decreasing in number.

This list is one which ought to be in the hands of every ornithologist, and we learn that it can be obtained without charge by addressing the Director of the Agricultural Experiment Station, Ft. Collins, Colorada.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

SINGING MICE.

CHICAGO, Ill., May 15.—Some friend, whose name is unknown, has sent me a clipping from a newspaper published at Beaver Dam, Wis., mentioning the capture of that rare animal, a singing mouse. The item reads in full as follows:

"Fox Lake has one of those rare creatures known as a singing mouse. It looks just like any other mouse and acts like them, except that it sings very much like a canary bird. It has a very sweet little chirp and quite a vocabulary of sounds, and when everything is still and quiet, he fills the store with beautiful melody. The mouse is at the 'Annex' store, and was captured in a trap by Sam Tarrant. The boys had heard him for some days around the shelves, but did not know what it was. Finally he was seen sitting on the edge of a box of starch, singing away for dear life. Sam set a trap for him, and succeeded in getting him into it in a day or so. It was a catch-em-alive trap, and the little fellow was not injured. He is now fixed out in a nice cage, and taking life easy with plenty to eat and the best of care. In return, when all is quiet and not too many around, the mouse sings away to his heart's content. Sam is very proud of his little warbler. We have heard of singing mice before, but this is the first one we ever saw or heard, and it is quite a curiosity."

This is the fifth singing mouse of which I have ever heard in my life, nor do I suppose many persons have heard of even so many as that among their own personal acquaintances. The animal is well known to naturalists and scientists, and the extreme delicacy and shrillness of the note of the singing mouse has been cause of editorial comment in one of the great newspapers of the land. It was therein stated that the vibrations of the note of the singing mouse are too extremely rapid to be distinguished by all human ears. The note resembles that of a diminutive canary, having a sort of tremulous, thrilling character.

The first singing mouse of which I ever heard made its home in the cellar window of my family's home, and though I never myself either saw or heard it, its presence was often mentioned by my mother, who heard it at different times. It was first discovered by an Irish servant, who came to my mother very much excited, declaring that the creature was bewitched, but that she had seen it, a mouse in appearance but a bird in voice, sitting up on its hind legs and singing in a most unnatural fashion. This mouse was a pet about the place for some weeks or months, but I do not know what finally became of it. Perhaps the cat could tell.

Oddly enough, just a few days before I got the clipping above shown, I met on the streets of Chicago—where one in time will meet everybody he ever knew—a man I formerly knew out in Kansas. He was at that time a photographer, and it was a practice among some of us at that time to use his photographic gallery as a gymnasium and boxing hall. This friend, whose name is W. Glines, in the course of our talk brought up a matter which had quite escaped my memory. I always have said that I never really saw a singing mouse, but he reminded me that I had, and that this occurred in his gallery at Hutchinson, Kansas. "Don't you remember our mouse?" he said; "the little fellow that used to sing to us? It was a little, reddish colored mouse, that used to come and sit on the pile of backgrounds and scenes and sing like a little bird. Its paws were so thin the light would show through them, and it was a dainty little thing as ever was. You know we never would harm it, and it became very tame. I don't know what became of it, but it was there quite a while. I remember you sat down in the gallery one time and wrote something about it. It was an odd mouse, sure enough."

A friend of mine in Chicago, a sculptor not unknown in many parts of the world, was another person to hear the voice of the singing mouse. He says that he had retired for the night and was nearly asleep, when he gradually became conscious that something was going on the room. He listened, and finally made out a fine, shrill, thin, but very sweet voice, which was thrilling and warbling like some ecstatic bird. He says that the thing seemed absolutely supernatural to him, so uncanny that he was of a mind to be disturbed by it. The singing lasted for some time, and its effect has lasted far longer in the life of this gentleman, who declares that no man has ever heard a singing mouse and then forgotten it. The experience is certainly one of the rare ones in any man's life

Yet another instance of hearing a singing mouse came to my knowledge not very long ago. A young lady of this city said that she had once or twice heard mice in her room, and also heard some sort of a sound which sounded like a far-away canary bird singing at the top of its voice. She did not know what was the source of this sound, but set a trap for the mice and took the singing mouse the first night She says that the mouse sat up in the trap, "with its hands folded," and sang in the sweetest and weirdest way that had ever been her fortune to hear. As this mouse was apparently begging for its life, and offering an equivalent of song, it was spared and for a time kept about the place; but at length, I believe, met with some accident which ended its life.

Still another case of a like nature came under my observation within the past year. An artist friend of mine, who at that time lived in Chicago but has now gone to New York, once confessed, with a touch of shame in his voice, as though he did not expect to be believed, that he had lately heard a mouse that could sing. He too heard the mouse at night (at which time the note of the singing mouse is most apt to be heard), and he too describes the note of this curious animal as being extraordinarily fine and high, so thin and sweet that it seemed not to be produced by any physical agency. "It seemed like a spirit singing," said he "and for a long time I could not believe that it was really going on right there in my room." He seemed relieved when told that two of us then present had also at earlier times heard the voice of the strange little mouse. So far as I know, the mouse is the only animal known except birds whose voice has a distinctly and admittedly musical quality. Were not this known to be a fact, the story of such an occurrence would seem a most incredible and absurd affair, and the published statement of the Wisconsin paper might be taken as a canard worthy the Sunday edition of more pretentious journals. While the matter would probably be passed over without much notice by the greater part of the readers of the paper, the item was upon its actual merits one of the rarest pieces of news which has appeared in print for some time. Indeed, I for one have never before seen in print in any publication an authentic account of a singing mouse actually seen and heard. While a few of my friends and I myself have had such an experience, the facts were never made public so far as I know, nor did I ever see such mention made by any one else before.

E. HOUGH.

The Canada Jay.

MR. MATHER'S story of the Canada jay taking the fish out of the fry-pan reminds me to write of the extreme fearlessness of these birds, as I found them last October on the upper waters of the St. John River in Province of Quebec

One bright pleasant day I was out alone, watching some open bogs for caribou. When I brought out my noon-day lunch of bread and cheese three Canada jays came flying about me, showing a desire to share in the repast. So I threw pieces to them and gradually coaxed them nearer, rewarding each advance with a good bite of the food. In a few minutes I had one sitting on each knee eating from my hands, and then one sitting perched upon the forefinger of one hand and feeding on a piece of bread held in the other hand.

I closed my thumb against the finger on which the bird sat, catching her toes and making her a prisoner. Against this there was a most vigorous protest, and although she was released unharmed, the confidence of the trio was broken and future advances were made with greater caution.

Wherever the traveler of the woods may pitch his tent in these northern wilds this restless and noisy little fellow quickly makes his appearance. Among many trophies and mementos gathered in repeated trips to the wilderness, none seems more characteristic of the woods life in logging camp, sportsman's cabin and tent than the Canada jays that perch in life-like pose above my mantel.

PROVIDENCE, R. I., May 24.

Game Bag and Gun.

GOVERNMENT GAME RESERVES.

For the Protection of Migratory Game Birds.

Editor Forest and Stream:

It could hardly be expected that the game laws of the different States would be as successful in protecting the migratory game birds as in the case of those species which remain all the year in or about one locality. Although their migratory habits enable them to avoid many dangers, yet others are incurred by them which birds of stationary habits are not subjected to, and the great extent of territory over which they travel renders their preservation by game laws much more difficult and less certain in its results.

The number of birds of the plover and snipe families which annually visit that part of the Connecticut coast with which I am most familiar has decreased to about one-fourth of what it was a dozen or fifteen years ago. Though a thickly settled region, such as that named, is the first to feel the decrease, it is to be noted that in the case of migratory birds such as decrease cannot be considered as a matter of local concern only. It is conceivable that the partridges in a certain State or county might be almost exterminated without affecting appreciably the numbers in States adjoining. This is far from being the case where the same individual birds constitute the game supply of the numerous places they visit in their migrations. The destruction brought about by pot-hunters and market-gunners in one place will have its effects on the shooting over a large extent of the country, while the encouragement to suppress this destruction is diminished by the knowledge that birds protected from too effective methods of capture in one State may be the victims of the same methods of hunting in another. The increase of population, and particularly the increase of means of easy and rapid transportation, and the fact that a double-barrel breechloader or a repeating shotgun is now so cheap as to be within the reach of everybody, old and young, no matter how limited his purse may be, are driving the birds from one place after another where they were formerly accustomed to feed and rest during their migrations, or even to winter, and they are obliged to collect in the few localities where the wide extent of feeding grounds or the remoteness or inaccessibility of the place still afford them some safety. In these favored places the numbers may still be kept up, but it is at the expense of a large area almost deserted or only occasionally visited by the birds.

Along the coast the great increase in the number and population of the summer resorts has spoiled the shooting, not only by increasing the number of gunners, but even more by frightening the birds away. It is only a matter of a few years before the whole ocean shore of the State of New Jersey will be a perfectly continuous line of hotels and cottages from the Highlands to Cape May, excepting the inlets between the beaches.

The fact that the migratory birds are enabled to breed and to pass a large part of the year in more or less remote and inaccessible regions is now of less protection to them than formerly. Large areas in the North and West which were available as breeding grounds are now invaded by settlers and egg-hunters, while more gunners annually follow them to the countries south of us. Altogether the outlook for birds of this kind is not at all promising.

The State Legislatures are clearly enough unable to make the laws necessary for the preservation of a bird which breeds far to the north of our limits and passes twice a year through eight or ten States and several counties, venturing perhaps in Venezuela or Brazil. The idea naturally suggests itself that the taking of such birds and the protection of their eggs should be a subject for regulation by the National Government or even for International agreement. Though there is no probability of any such arrangement for a long time to come, yet it is very desirable that some effort should be made by the Government for their preservation.

Probably the most effective plan would be to have a series of reservations in different parts of the country where the birds would find a safe place to rest and feed during their stay here. Although this would not prevent the use of the land or water thus set apart for many purposes, it would be necessary to prohibit shooting entirely, at least during the season when the birds intended to be protected would be likely to be there; and to discourage all unnecessary disturbing of the birds. There is not the least doubt that the birds would soon discover the greater security such reservations would offer, and would show their appreciation of them by visiting them in increasing numbers and prolonging their stay. There is sufficient evidence of this in the results in the few places in this country where the birds have been given careful and complete protection for any length of time.

It seems not unlikely that in the vicinity of such reservations there would be considerable improvement in the shooting from the birds which would, of course, often stray from there, though of course the main object in view would be to give sufficient protection to the various species to allow of their numbers increasing up to something more like their former abundance; but this incidental effect might in some cases be considerable, when it is taken into account that the present scarcity of game is often due to their fearing to stop during their migrations or being immediately driven away when they venture to do so.

But in order that anything may be accomplished by this plan it is essential that these reservations should be in the places most frequented by the birds. This is about the same as saying that the reservations must include the best feeding grounds; and, unfortunately, these are very apt to be also the best places for shooting. Many of these are now in the hands of private parties or clubs, and could only be secured at considerable or sometimes very large expense.

Without discussing here whether it is not time that the Government should spend a considerable sum for game protection, it is to be noted that along the coast the Government already has the title to many places well adapted to the purpose, and has in the Light House and Life-Saving Service employees who could in many cases look after the game without interfering with their other duties. In the West the Government still owns much land and water which should now be set aside for game preserves, even if at the present it should not seem worth while to have them watched. This step could be taken when the necessity for it should arise, but the Government should reserve the right while it can do so without expense.

In regard to the size of the reservations, if rightly located they need not usually be large. In fact, in many cases there would be little gain in extending their limits; usually it would be better to have several small ones near together than one large one. Often nearly all the birds killed on a given pond or marsh are shot within the limits of a few acres, or more will be killed from one blind than on all the rest of the ground together. It need hardly be said that such places as these are the ones which are most important to include in the preserves, and that often nothing would be gained by extending the reservations much more than necessary to effectually protect such places. The location of the reservations should be determined by practical ornithologists and sportsmen, who have some interest in the work beyond the improvement of their own financial condition; for it is evident that if the Government should undertake to spend any money, considerable influence would be brought to bear on them by those who had land worthless for the purpose to dispose of, or who would prefer that the reservation should not include their favorite shooting ground

I think that fifty square miles of such reservations judiciously distributed east of the Mississippi River would have an important effect on the abundance of game, and would be an arrangement capable of expansion as the needs of the case might require. The Government of the United States would thus be able to give the game increased protection without interference with the State laws, and whatever expenditure of money and care might be necessary in establishing and looking after such preserves would be applied in the most effective manner possible and in the places where it is most required. It must be remembered that the State game laws cover a great deal of ground never visited by birds of the kinds this plan is intended to protect, and a law covering those places only where its enforcement would be effective would have in many respects a better chance of being enforced than a general law. Violations on these reservations would be punishable in the United States courts.

In conclusion I would like to emphasize once more the fact that such a plan would be almost worthless if the right places for protection are not selected. In this connection it may not be out of place to call attention to the following paragraph from the New York *Times*, Feb. 20, 1897:

> Robins flock to a big reed swamp in Randolph, N. C., to roost at this season of the year, and destructive hunters follow them in swarms with lights and bags and capture them by hundreds. One man caught 500 this way one day last week. How there are any robins left is a wonder.

Is it not probable that such a reservation as proposed above covering that place would have considerable effect on the number of robins, not only locally, but later in the season in the Northern States? For they are the same individual birds which inhabit our gardens and door-yards in the North during the summer which are slaughtered in this fashion in the South. Although the protection of game birds is a more difficult matter, the same principles hold true, and a more extended and systematic plan of protection than the game laws in the States afford is greatly needed.

W. G. VAN NAME.

NEW HAVEN, CONN.

SOME OF THE PROPRIETIES.

Editor Forest and Stream:

Nature, for some unknown reason, smooths the folds of memory, making us forgetful of wintry skies, dead leaves, yellow grass, bruised hands, cold feet and aching limbs, and permits us only to recall bright skies, pretty foliage and grass, birds, songs and happiness. One has truly said: "Nature can soothe if she cannot satisfy," and for this, if nothing more, she is entitled to a heavy first mortgage on our gratitude. As one who formerly hunted, fished and trapped to quite an extent, I wish to express myself through the FOREST AND STREAM. To-day, amid the surroundings of a budding Adirondack spring, and in sight of the very rocks and trees which helped so materially to nourish my boyhood, youth and early manhood, my mind turns back to those days of sunshine so carelessly spent.

> "Ah, happy hills; ah, pleasing shade;
> Ah, fields beloved in vain,
> Where once my careless childhood stray'd."

Years have passed, and with their passing many changes have been wrought. However, in all the passing years there has not been a time when the recollection of boyhood's happy outdoor pastimes has not served a good purpose. And I may say right here, without any mental reservation whatever, that no man ever lived who possessed a more genuine, abiding love for the woods and appreciation of the allurements thereof than the writer. In my veins courses the blood of generation after generation that loved to invade the solitudes of nature, finding happiness and solace there. And the ambition to equal, if not excel, in this line all of my name who have gone before has been one of the guiding influences of my life.

Be this as it may, however, I am impelled from a sense of duty to my fellow-men to voice a sentiment which prevails quite generally throughout the civilized world.

There are certain proprieties which a sportsman should invariably observe. Indeed, there are connected with his particular mode of recreation certain rules and amenities of

conduct, the observance of which is as essential to his success and pleasure as the presence of game itself. No doubt every one of them is as familiar to him as the several and delicately wrought parts of the mechanism of his favorite fowling-piece, yet possibly a brief enumeration of a portion of them at least may not prove wholly without interest to a number of so-called "sportsmen."

Every hunter should bear in mind the fact that his is a dangerous sport, one in which he is in duty bound to exercise the greatest caution at all times, not only for his own sake, but that of the public at large also. In his hands he carries the possibility of instant death, and at any moment the slightest carelessness or heedlessness on his part is liable to result in the bitter sorrow of a lifetime. And likewise that he is abroad for the pleasure and benefit to be derived from his avocation, and not to demonstrate how much innocent life he can ruthlessly destroy. I know individuals who make a practice of going through the woods firing at everything that crosses their path, keeping up a continual fusilade not unlike the advance of a skirmish line in time of war. Such a custom is utterly foreign to the tactics of a true sportsman, and as a notable instance, it will be remembered that Nessmuk, the veteran woodsman and writer, with whom many old readers of FOREST AND STREAM are familiar, fired but three shots during his memorable excursion of twelve days' duration through the unbroken wilderness of upper Wisconsin.

While going to and from the game fields the sportsman should be careful not to trample grain or other crops, tear down or mutilate fences, or permit his dog to chase or worry cattle or poultry. The sportsman should always remember that he is necessarily dependent upon the good-will of the land owner for the privilege of indulging himself in his cherished sport, and he may in return, with the exercise of forethought, render his presence of benefit to his benefactor as well, but not by constituting himself a dreaded nuisance by lawlessness and lack of regard for the interests of others.

And last, but not least, he should lend his untiring coöperation to the strict enforcement of the game laws. They were instituted for his good as much as that of anyone else, and to conscientiously obey them, and see them unflinchingly upheld, will accrue to the benefit of none other of the community more than to his. In this connection the writer readily recalls the fact that there has been considerable discussion of the "hounding question" within the past few months, resulting in the passage of the Ives anti-hounding bill, which has received the signature of Governor Black and become a law. This law prohibits jacking and hounding deer in the Empire State for a period of five years. And, right or wrong, the law should be observed. The penalties attached for disobedience are heavy, and those who fail to comply with the provisions of the law will have cause for regret. Those who honestly believe that it would have been better to let hounding continue, should by all means give the new law a fair chance to prove its merits. Those who feel ugly, if there are such, should remember that no man ever lost materially by keeping within the bounds of law, and that in the long run there is nothing gained by participation in lawlessness.

GEORGE L. BROWN.

ELIZABETHTOWN, N. Y.

IN THE CASCADES.

PITTSBURG, Pa.—*Editor Forest and Stream:* My friend, L. B. A., of Portland, Ore., has been up to his old tricks of tantalizing the "chained" by writing me all about his latest trip into the Cascades. The only way I can get even with him is to send you the inclosed extract from his letter that you may publish it for the benefit of some of the other sufferers who are, like me, still "chained to business"

R. L. W.

"My three months in the mountains were not productive of any very interesting or exciting times. Two months were spent in the erection of the cabin, and the last few weeks were mostly spent in cruising around with Lieut. Elliot and his detail. We made one trip around the southern base to the east side of the mountain, where we intended to remain several days; he exploring and mapping, and I hunting goats; but we cut our stay short, as there were no goats, and a hurricane was blowing that made living up on one of the bare buttes a burden.

"The first morning there the gale commenced, but I, thinking it was only a morning breeze, tackled the mountain for goats. Their fresh tracks, beds and wool were thick about our camp, and I went out prepared to stay all night if necessary, and intending to follow them around to the north side if they were not on the east. I crossed a great glacier, which heads in crater of the mountain and reaches to base, over four miles—a dandy—the kind you read about—and climbed and climbed in the teeth of the gale, which sent showers of frozen snow, sand and gravel in my face until I had often to lie flat for a few moments till the rush was over, and found no goats. I found beds of seven in two places, but was sure they had gone on around to the north slopes, where I essayed to follow.

"This was about halfway up and over some of the hardest climbing I ever had; but when I tried to cross a snow field to reach the desired ground I found it impossible, as the cold wind had not permitted the snow to soften, and it was very steep, and had no break from summit to base, and was a good half mile wide—in fact, I couldn't see the other side of it. My only alternative was to get back to camp, but when I looked over the ground I had traversed I concluded to camp right there and die in peace rather than dash my life out in the cañons below.

"On my left yawned the gaping, hungry looking crevasses of the big glacier a few hundred feet below, whose cold blue depth did not look attractive as a final resting place. On my right the unyielding sea of glittering ice, where one would be literally worn out before reaching its lower limit. Behind me dropped away the ground I had come over half hidden in clouds of flying sand. I'd had enough of that, and above and in front towered the beetling crags which mark the rim of the crater with a sharp and jagged backbone zigzagging down to where I stood and which seemed my only route of escape. I tackled it—after lunching in a sheltered spot with a tiny bird for company, who seemed as delighted to share my crumbs in that quiet spot as I was to give them—the only sign of life within the range of my vision.

"It was simply an indescribable struggle for over 2,000ft. up that backbone of treacherous shale which appeared to be solid rock, but was so seamed and checked with the frosts and heat of ages that only a touch would shatter a mass into ons of fragments through which I could only toil on all urs and had to hang on then to keep from being blown away. Upon reaching the extreme summit I got the full benefit of the gale as I poked my head above the crest—for it nearly blew my head off. I couldn't stand at all and had to lie prone and worm myself over and down into the depression inside the crater's rim. I was half frozen and stiff with cold by this time and could only manage to exhume the record book from its box in the cairn—print my name and date with benumbed and shaking fingers—put it back, and hung down on to the sheltered and sunny slopes of the south side. My circulation was soon restored and I took a good rest in a warm spot and made for camp—finding an easy way winding around to the east from the beaten trail near the summit.

"At camp the tent was down, and everything had boulders piled on to hold them down. We couldn't lay down a tinplate or cup without a rock in it. One or two little draws furnished protection to some extent, in which we cooked after building a stone wall to windward. We only had one tree to anchor the tent to, and the Lieutenant and I put in all the evening getting it back in place and piling rocks around the edge; but it blew loose all right, and we put in the night with that canvas pressing down so hard on us that we couldn't turn over.

"We lost no time in geting under way next morning, following down Pine Creek ten or twelve miles, and camping near its confluence with the larger fork which heads in the big glacier. Here I went a-fishing, and caught nine beauties 8 to 12in., and showed a soldier how to shoot a big Dolly Varden which lay in a riffle, and measured on the carbine reached from muzzle to trigger, and weighed 15lbs.—a good two meals for all hands.

"The next morning we took to a ridge, and made the highest point, 4,500ft., lying between Lewis River and the mountain, descending toward the river and camping in a little meadow away up in the head of a cañon. The next day we struck a cañon which took us five minutes to get in and five hours to get out of. We had to dig and chop and pick and bridge, and finally take the packs and rigging from the backs of the five mules, and carry them to a little bench above; then cut a clean open trail to the backbone—say 200yds. of thick brush and windfall—as the stubborn brutes, after once being down and getting discouraged, would not move an inch unless they could see a clean trail ahead, and then only by one of us taking each by the halter shank and letting them run us up trail.

"That afternoon we became separated. The Lieutenant being alone looking out a route in one direction and I in charge of the caravan cutting after him, we had a misunderstanding of signals, through no real fault of either, and we went into camp without him, finding him next day out near the river. He had found a deserted cabin and stayed there, and waited for us to come on. We reached the lake that evening O. K. after ten days' absence.

"I was not with him the first two or three days, but went prospecting alone, without result. The second day I was with him we camped near a line of marshes nearly south of the mountain, and hitherto unknown, so far as I can hear. I went out alone, and after traversing four or five small marshes—grass up to the shoulders and huckleberries galore—I emerged upon a large one, and scanning its distant edge I made out a big black bear picking huckleberries, on the opposite side, about 200yds., I thought. Well, I made a bold sneak and gained about 100 on him, wallowing through the sloppy iron water and its nasty-looking deposit to a log, which was the closest I could accomplish. While making this maneuver I had observed on my right, say 300yds. away, a brown object which I took at first to be a pony, then a red rotten stump; but it finally became a well-defined brown bear of goodly proportions, watching me with considerable interest. I calculated at 100yds., and took a quiet rest on the log with a nerve as steady as I ever exhibited at a Sunday night lunch, and blazed away, thinking only of bear steak and liver, of which I was as absolutely sure of partaking that evening as I was of bacon and rice. But, my friend, I was miserably deceived. My bear, *my* bear, made one swift glide and was lost to human view in the thicket of mountain alder, which fringed the marsh; and a hasty glance to see how the other one stood up under the hard times revealed his vanishing form in a short brown streak reaching into the cover. It was hard luck, I tell you; but upon stepping the distance I found it near 175yds., and I had dropped under him through my miscalculation. What can a fellow be expected to know of distance, anyway, when he don't get to shoot but on special occasions once or twice a year. I hold as my opinion that a man should go big game hunting at least once a month for a few days, in a place where game is plenty, and should put in three-quarters of the rest of his time in fishing, hunting birds and loading shells, not to speak of caring for fishing tackle, which could be squeezed into the other quarter of his time some way, and still leave him ample time for the demands of society and business.

"After a few days' rest at camp, we went to Goat Mountain, camping in a pleasant spot below Joe's Cabin, at the lower end of the marsh. First day Lieutenant and I went prospecting for an Indian silver mine of wondrous wealth, which we failed to locate, but we got a glimpse of another bear across the marsh from us—too far to shoot—killed several birds on the side. The next day we prospected some more, with the same result, but found ourselves short a man that night. One corporal, an Englishman of high cockney pedigree, with absolutely no knowledge of hunting, mountaineering or woodcraft, a burden to the expedition, but with a bushel of medals for shooting, went a-hunting. When we could get no answer to our signals in the morning from camp, I took a Dutchman, by name of Bruns, and started up Goat Mountain in the direction we supposed he had gone. Lieutenant, being half sick, couldn't leave camp. But I took his barometer and we climbed clear to the summit of that towering rock, signaling as we went, but receiving no answer. This ascent was one of the objects of the trip, and I ascertained the altitude to be 4,914ft. and 4in. at the very apex, where white man has never stood before. Many have made the attempt and reached some one of the five lower points; but from my knowledge of the country, gained in frequent trips which have covered all sides, I had theorized that by following a certain ridge the summit could be reached, unless perpendicular cliffs should be found which were not visible from a distance, and I was correct. We found deer trails leading to the point and diverging into thickets of vine maple, which makes such safe 'lying down ground.'

"Upon our return to camp the corporal was still absent and we were beginning to think accident had befallen him, so I headed an expedition next morning down toward the Toutle, while Lieutenant started muleback to the lake for additional rations in case we didn't find him that day. I found his trail at last in the sandy banks of the Toutle and after figuring out which way he traveled last in the confusion of tracks he had made when he found himself on the banks of the river at the same spot, after a circle in the timber, I chased him up the broad cañon, and found that after crossing the cañon, going into the hills to the north and getting back again, he had discovered the Spirit Lake trail and followed the old mule tracks out past Cold Spring and toward camp. We arrived in a half hour after dark and found him there. Lieutenant had found him wandering on the pine flats in the forenoon. He had killed a pheasant each day, and that had comprised his ration.

"The next day we reached the lake again and after a few days' good fishing, pulled for home, riding in an army ambulance. Taking it all in all, I enjoyed the last weeks very much, having good company, working hard at times, but not too long at a time, and enjoying the confidence of the Lieutenant, who made me second in command, consulted me on all exigencies and left me to pick the route and locate the trail most of the time—the which I duly appreciated, and was pleased to have any opportunity to lessen his work."

DUCK EGG ALBUMEN.

FOREST AND STREAM has taken exception to the widely published alarmist reports that the extinction of the wild duck supply was threatened by the gathering of their eggs for albumen. It has shown that, as far as can be ascertained, no such trade in duck egg albumen exists, and that the decrease in the number of ducks is due rather to spring and market-shooting and an increased number of gunners than to any other cause.

The correctness of this position is forcibly substantiated by the statement of a prominent New York importer. This gentleman some time since received from foreign correspondents an importation of five cases, or about 1,100lbs., of duck egg albumen manufactured by a French company in Tonquin. It was distributed in the usual course of trade among confectioners and print manufacturers, the two trades which absorb most of the albumen of commerce, and was by them given a thorough trial, with the result that it was found utterly unsuited for their use.

The calico printers could not use it, as it did not properly fasten the colors on the cotton cloth. The confectioners could not use for making macaroons and other confections, as they found that this albumen would not beat up as required for their work. In fact, the duck egg albumen in both cases seemed to lack the qualities which give the albumen from hens' eggs its value.

As a result of these experiments, the part of the consignment which had not been used was returned to the French company.

This disastrous shipment is the first and last importation of duck egg albumen into the United States of which my informant has knowledge, and his business position is such that he would know if there was any regular demand or supply of the article. He says that he understands that in Europe they have had no better success than in this country in trying to utilize duck egg albumen, and that the expectations of the French company, who thought they were going to make a fortune from the business, have never been realized.

All of which goes to show that the gentlemen who would have us believe that the trade in albumen was the cause of the lessening supply of our wild ducks, and that the Alaska Indians were to blame rather than excessive shooting all over the North American continent, are wrong in their premises, as if there is no commercial demand for duck egg albumen there can be no incentive for securing it

J. B. BURNHAM.

Spring Shooting.

TORONTO, May 26.—*Editor Forest and Stream:* With the advent of spring the pleasure derived from the perusal of FOREST AND STREAM is marred by the reports of the usual spring slaughter of game. I fail to understand how men claiming to be gentlemen and sportsmen can justify their conduct in shooting game birds en route to their breeding grounds. Some of your contributors who boast of having shot large numbers of ducks and snipe this spring must be pot hunters of the worst type—men who knowingly do wrong for the pleasure derived from it, and not, as is often the case with poor men, from necessity. If a farmer were to kill all his poultry in the spring and still expect to have a supply for market during the following season, he would be considered a proper subject for a lunatic asylum. Yet he would be acting quite as reasonably as the spring shooters who persist in violating the laws of nature and common sense. When it is taken into consideration that to every man who could shoot game on the wing twenty years ago, there are fifty now, it will be readily understood that it is imperative that action be taken to prohibit spring shooting. It requires no stretch of imagination to foretell the result if legislative action is longer deferred. All species of American game birds will be like the buffalo and the wild pigeon—things of the past.

I trust that many of your able contributors will take this important matter in hand and not rest from their efforts until spring shooting is abolished all over the United States and Canada. The conserving of fish and game as a food supply is a very important public question, and it should be the duty of the law-makers to use every effort to perpetuate this most valuable heritage.

RANGER.

Bird Trapping in Greater New York.

ON the morning of May 23, while taking bird notes in that part of Brooklyn known as Flatbush, I accidentally ran upon several bird traps; placed near these traps was a live bird, used, no doubt, as a "come on" to the other birds. In the bushes some distance from the traps were seated three men, anxiously looking in my direction as I approached. I afterward learned that these men are frequent visitors to this locality early in the morning, trapping birds. Cannot this be stopped?

BIRD STUDENT.

[Yes, it can be stopped if Bird Student will send some definite information to Chief Protector J. Warner Pond, Albany, N. Y.]

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

IN IDAHO MOUNTAINS.—III.

(*Continued from page 243.*)

OUR camp was at the union of two valleys, and into each of them reached an Indian trail of immemorial usage. Their dust was cut deep with the hoofs of pony trains which had passed up into the summer hunting grounds. Occasional intimations of Indian hunting parties had come to us in the heavy columns of pitchy smoke to the north; but we were camped just short of the field of their operations, and for the first ten days had not been foul of their baneful presence. The effluent wave of cayuses, squaws and hunters rolled in on us at last with such results as you may now hear.

We were just lighting our pipes after the evening meal when the visitation appeared in dusty file at a slight elevation of the trail and a scant fifty paces from our fire. It was a piebald crowd, savage to its smallest detail and yet orderly. A wise old pony pioneered the way, and she carried a precious freight! Highest upon her back, with legs stretched astride like a strained wish-bone, rode a shapeless squaw, separated from the submerged pony by bales of hide, hair and meat. Hung to the perimeter of this mass of the hunting harvest, and sustained in some wild-fashioned pouch was a glittering-eyed child. Following this leadership came an endless procession of ponies and colts, some burdened, some ranging free. Three bucks, mounted lightly, passed toward the end of the line; but at the extreme rear, among the dogs stoically trudging in the dust was a squaw who was being disciplined for some infraction of the Indian code of family duty. We had been entirely ignored, although furtively and thoroughly inspected. Jim prophesied a visit later when in the view of these people the time was proper—and he was right.

Camp was made below us, and while the squaws were shaping things for the night two of the bucks came riding back to call. They slipped from their ponies and moved to the log by the fire without a word, and seated themselves. Taking our cue from Jim, we awaited their pleasure, offering them what coffee was still in the pot by way of good will. They drank it as if it was their right, but sat on in silence, moving not whether the smoke poured over them or away from them. At last the elder man arose to look at a pair of elk horns whose massive growth attracted him. He gave us to understand then by signs and broken English that he had left a phenomenal set of horns back on the mountain. I finally persuaded him to go for them.

During his absence the Major and I agreed that it would be a day well spent to place ourselves under the guidance of these men for a day's hunt. And we opened negotiations to that end with the young buck, who was stolidly awaiting his companion's return, still in the smoke of the fire. The bargain was finally struck after much affectation of indifference on the Indian's part. The terms were these: When the sun reached a certain point in the pines above us these two Indians should present themselves on the following morning; they were to receive a fixed sum for the day, and they were to receive from the Major $5 additional for any bull elk which the Major might get through their assistance.

By six on the following morning the sun had climbed to its appointed place, and true to the bargain our native hunters promptly took their places by the steaming coffee. Picturesque and primitive were they indeed. Apart from their modern guns, these men might have passed for the same wild hunters inimitably described by Parkman as roaming the Western mountains a half century since. Their unbonneted heads shone like crows' backs in May. Their raiment was of the materials yielded in the chase. The younger man, standing about 5ft. 4in., was the type of mounted Indian hunter. His broad shoulders were covered with an unbuttoned skin coat; his deep, heavily muscled chest was bare. Each of his short, powerful legs was wrapped to the knee with a separate strip of soft buckskin, wound round and round. From the knee to his moccasins the lower leg had no covering.

Equally rude were the trappings of the ponies. The two animals together weighed scarce 1,400lbs., and were fat with mountain grass. Small elk horn saddles without stirrups, and elk thong bridles without bits, were their only harness

They were sufficiently unpretentious to look at, but in the chase of that day it was well for the Major and me that we followed on ponies, whose strength had been built up with three weeks of grain feeding.

When we were all in the saddle not a moment was lost by our new guides in taking us into their confidence. They started straight up the face of the mountain at a dog trot. For the next hour I might as well have been astride a saddle hung up on the wall. If there was an easy way to get around a tangle of chapparal, the Indian avoided it with unfailing determination. If there was a steep, slippery rock with an easy trail around it, he dodged that trail as though it had been an ambush. Not a word was spoken. The Indians looked not back once to see if we were still on the mountain or in the ravine at the bottom.

Their thongs fell steadily on their ponies' flanks, their heels kicked steadily on the ponies' ribs, and they sailed along, far above and in the fading distance, for a summit which looked to be on the yonder side of Heaven.

The Major's trials lightened my own burdens greatly. He suffered in that hour as few men are given to suffer in this life. His pony labored with him in the chapparal as a small ant wrestles with a fat caterpiller. When the pony was lost to sight among the roots, his successes and failures in getting a footing were traced in the lurchings and reelings of the Major. When we reached the top we found the Indians waiting for us. Their ponies were running rivers of perspiration and sobbing for breath. They had been mercilessly overridden, but their riders stood so idly by them, cool and unconcerned. I suspect these people had used the occasion to indulge in a bit of bravado. We got more of it within the day

We were off again at once across the short level of the mountain's crest. The steep, deep pitch, which ceased only in the white waters of Snake River, quickly bade us pause. Here a game trail stretched its dusty belt along the upper face of the ridge. Its kindly footing and easy descent made grateful contrast to the arduous, untracked route just left.

The lull in our tribulation was brief. My stomach barely had the dent of the pommel out of it before we entered a whirlwind of Nimrodic experiences that bewilder my mind even in the recollection, and at the time my brain just missed being turned to gray chaos.

These experiences began, I remember, by one of the Indians slinking to the ground as a cat flattens when an unexpected bird dropped near by. His companion behind followed the act spontaneously, as one dog heeds the other when taint of quail stiffens the leader Their eager eyes led my own to the valley, and there, 1,000ft. below, shone the white rump of an elk. The beast was wholly unconscious of danger, as were his four or five companions. There was every chance for a successful stalk, and my ingenious brain at once mapped out the protecting cover by which the Major might approach and secure his coveted bull, but I was to learn a new thing about Indian hunting. Already the countenances of those men were blazing with eagerness. Our presence was forgotten The money reward which was theirs for an atom of self-restraint was forgotten. Little cared they that some thirty carcasses were already strapped to their packs in camp—a plethora for the winter's food and buckskin. Little cared they that to kill, as it was now in their hearts to do, was improvident, useless and wanton. They were the reincarnation of the savages who cut in strips the body and ate the heart of Captain Campbell at the siege of Detroit by Pontiac two centuries and more ago. I have seen white men kill game with unheeding ruthlessness, but it was to boast of afterward in sporting journals or elsewhere. I never saw human faces so transformed with pure lust of blood as were those of these two men.

The elk were now an anti-climax. The Indians themselves held my interest. A flashing sign or two of the hard and their plan was revealed to each other. Then, like hounds from the leash, they fell from the edge of the trail and went bounding with yells down the mountain, straight for the game.

Our action must be prompt to keep the chase in sight, for the startled animals were already placing a small knoll in the line of our vision

With a cry to the Major to follow, I plunged in the wake of our bold leaders. The Major hurled his 250lbs after me. I will revert to his fortunes later. Mighty little thought I of him after I had unanchored myself from the honest footing of the trail, except as the thought flashed over me—if he gets rolling end on, what will happen to all living things below, since there is no telegraph system connected with him by which to get a clear line?

But I was pursuing Injuns, and all fibers of mind and body were in use to that end, you bet!

When I had gone 50ft. I had as merry a concourse of stones and sticks flying along in company as could possibly be desired. And there were intervals, protracted enough to smoke a pipe, in which my feet were in midair. It is not implied that I did smoke a pipe at such times—I shouldn't have known where to find my trousers for striking a match—nor is it implied that I traveled on my head all the time, although there were "reversals of form," to use a turf phrase, when my head seemed to make good walking. There were gaps in the ground, and I think they were put there to show me why the Lord made birds.

About 800ft. from the top—I had been "all over the ground" and my information is quite accurate—my contemplative frame of mind was interrupted by the bark of a rifle.

"Ah!" thought I, 'they have rounded up their cattle, calves and all, and if there is any good anchorage I will calm myself and take an observation." I maneuvered for a "pople," but down went its lithe form under my onward rush, and over I slid in leap-frog fashion. Art is long, however, and I got myself slowed up to moderate going. When I felt that I had some time to myself once more I opened a weather eye for a pair of lost Indians. They were there. The elk were fairly run down, and one by one were falling before the rifles as they toiled heavily up through the burnt timber. It was a sickening sight. I sat down on the haunch of a splendid great bull whose horns were distorted and worthless—not one ounce of hoof, hide, horn or meat to be stirred from where death struck it down—and the spot was a good one from which to have edited the game hog department of FOREST AND STREAM.

I turned my perturbed thoughts to the Major for diversion. Not a sign of him. There seemed to be only one method of escape so complete as his—he had traveled too fast for gravity to hold him on the earth, and must have moved out into space, a betrowsered asteroid with sombrero on its head. Well, thought I, he will do well at it. He has the size, and with his .50 110 ought to make a first-rate policeman to enforce heavenly peace. But the Major had not taken that tack. It is true he was nowhere along the line of our recent travels, but a rifleshot a little to one side gave notice that he was one of us; and you must know the Major had done a wonderfully cute thing. When he discovered that he was running away with himself, he received an inspiration to the effect that a "switchback" could save him, and that nothing else could, not even free silver. There was a shoulder of the mountain just at his left. He tacked for it. It was his switchback, and his velocity just missed running him up over the top of it. I made the toilsome return to him, and there we awaited the recreant Indians. These red hounds came in time from their forbidden chase. When they found where the Major had lodged, and why, they promptly dubbed him him squawman—that phrase of unfathomed contempt; but they warded off all rebuke by calmly assuming that they could not understand English.

Twice again during the day was this performance repeated under varying conditions. The second time the setting was spectacular and the performance thrilling.

We were in a great stretch of burnt timber—burut perhaps by these same men and in stretches of thousands of acres solely to drive game from cover for easy killing. Two young elk jumped up a little distance ahead. The Indians took it into their heads to "course" the animals in pure joy of the chase. It was genuine "timber topping" that followed. Their course lay on a hillside bristling with logs cut by the fire and felled by the wind, as if giants had planned a Titan's game of jackstraws. To see these men in this wild sport made easy the forgetting of their sins against life.

A more reckless and dexterous race could not be ridden. The younger man embodied the boldness, horsemanship, courage and wild abandon of the best traditions of his race—nor did his pony fail him. Both were game to the core. They passed through places—their unity unbroken—where a fawn might have hesitated; literally lost in the spaces closed in by the stacked windfalls. One picture stands in memory with especial vividness. The pony was driven with a yell at a log, face high on the side of approach and a third higher on the distant side. He gallantly rose to it, mounted far enough to hook his fore legs over it and hung with his hind toes barely touching the ground. His rider saw the situation before it was really disclosed, sprang to the log while the pony still seemed in midair, seized the frame of the saddle as the pony renewed the struggle to get over, half twisted the brave little beast to where he balanced with all feet dangling, then both disappeared over the log to reappear almost instantly, the boy in the saddle and both again in excited pursuit. It was a tableau of a past time. It was an anachronism in the decade which has witnessed the beschooled and becalicoed Indian holding pathetic ghost dances to conjure back the vanished buffalo and the youth of his race. This chase ended in a sight which is prophetic. The two elk paused on the summit of the mountain—mere forms on the horizon—looked for a moment at their pursuers and passed from sight, hunted off the face of the earth as it seemed.

In a time brief as this writing, the Indians too passed from view, following close on the vanished game. How soon does that certain hour strike when both the Indian and the elk are to cease save as the one is coralled in the netted enclosure and the other is cabined, cribbed and confined with the impassable restraints of the white man's civilization? Nay, has it not already struck? TWINKLE.

Armless but Able.

IN reply to a letter of inquiry, Mr. J. B. Thompson, postmaster at Gilmore, Ark., writes as follows:

Editor Forest and Stream:

Yours of 13th to Wm. Bell, the armless man, was referred by Bell himself to me with request to answer for him. As he has no hands his handwriting is done by the mouth. Taking the pen in his mouth, he can sign his name and write a little, but of course very slowly.

I suppose what you have seen in papers is true. I have known Bell for ten years, and it is wonderful what he can do without his arms. As for fishing and trapping, I never saw him fishing with hook and line, but he can do it holding the fishing rod under his chin. He has several fall and winters here run a line of traps, attending them himself. He sets the traps with his feet and I have seen him often come in with raccoons and other game taken from his traps. He uses a Winchester rifle and is an expert shot; can put the gun on his shoulder himself, balance it there and get it down, and shoots quickly and accurately, using a string tied to the trigger, and pulling it with his teeth. Of course, when in the woods he often uses a stump or log to rest his gun. If none is convenient he lies down and holds the gun with his feet.

He does 'most anything without arms that an ordinary person can do. During the recent floods here he went out several times with me to rescue stock from the water, wading where he could, and when too deep swimming after them. He swims well, but on his back entirely. He plays cards, throws dice, fights, and does a little of everything. He can throw a stone or brick, placing it on his foot and kicking it accurately and with great force. He is very strong in the legs and neck, and can hold an ordinary man by getting his arm under his chin and by catching him by one leg between his (Bell's) leg. It would be impossible to tell all about him; he is simply wonderful. Both arms are off at the shoulder. He lost them in a woolen mill when he was only ten years old. He is about 5ft. 9in. high and will weigh 180lbs.

When he came in to-day and asked me to reply to this letter I asked him which pocket it was in, and went through him and got your letter. When he comes into the store to buy anything the clerks have to feel in his pocket and get the money. Nothing you have heard or can surmise would exaggerate his case. J. B. THOMPSON, P. M.

"The Platform Plank" a Hundred Years Ago.

PROFESSOR JNO. D QUACKENBOS of this city writes to the Manchester N. H., *Mirror*:

A man of more than average wisdom remarked some twenty-nine hundred years ago that there is nothing new under the sun. I have just met with an interesting application of this piece of philosophy, in a little pamphlet that has come into my possession, entitled "Thoughts on the Present Laws for Preserving Game, and Some Methods Proposed for Making a Game Law both Useful and Effectual," published in London in 1750. It anticipates the "platform plank" of FOREST AND STREAM—the Sale of Game should be forbidden at all Seasons—by insisting on the absolute prohibition of game traffic as an essential to game preservation. The quaint old author deplores the prevalence of poaching, and the rapid diminution of game birds and quadrupeds in consequence of the improvements in firearms and the growing skill of sportsmen.

"The Art of shooting flying," he says, "is come to such a Degree of Perfection that few Fowls escape. And it can be no Wonder that Pheasant, Partridges, Woodcocks, and the like, are so scarce to be found, when there are hardly any left to breed. Many Marksmen are so expert at the work that, with a tolerable good Pointer, they will destroy more birds than a Setter can do with his Net, altho' this latter seems to be as compleat an Engine of Destruction as can be invented." How applicable the argument in this day of breech-loading and repeating shotguns. Poaching, he adds, may be made unprofitable "by preventing any Game being sold to any manner of Persons." And the author further shows his mastery of the situation by contending that: "Provision should be made for effectually preventing all Sorts of Carriers from carrying Game that has not a Direction signed by a Person qualified, expressing the Carrier by whom it is sent, and upon what Day, and whither to be carried. And such as carry Game should be obliged to have a Basket or place for that Use only, that Search might be made more easily, and forged Tickets may be more quickly discovered; and all Persons counterfeiting or forging any Directions should be severely punished." Verily, the tricks of to-day are old. JOHN D. QUACKENBOS.

[The wise old fellow who had these sensible thoughts in England in 1750 would think then all the harder in 1897 in the United States.]

Pennsylvania Game Law.

THE new Pennsylvania game law approved last week forbids entirely the sale or export of game killed in the Commonwealth. The open seasons are as follows:

Wild turkey, pheasant, grouse, quail, partridge, prairie chicken, Oct. 15 to Dec. 15 inclusive. Woodcock, month of July and Oct. 15 to Dec. 15 English and Mongolian or Chinese pheasant protected to 1902. Hare or rabbit, Nov. 1 to Dec. 15 inclusive. Black gray or fox squirrel, Oct. 15 to Dec. 15 inclusive. Ferrets forbidden. Elk, deer, fawn, month of November. Killing in water and use of dogs forbidden.

One person may not kill in one day more than ten ruffed grouse (commonly called pheasant), or fifteen quail (or Virginia partridge), or ten woodcock, or two wild turkeys; or in one season more than two deer.

Sea and River Fishing.

FISHING IN THE SHENANDOAH.

DID you, reader, ever fish in the Shenandoah? If so, did you always find the water clear when the fishing fever was on you, or have you, like myself, been often disappointed with muddy water when inclination was greatest and your time for going most opportune? I recall a good many years ago, when my knowledge of that beautiful river was more limited than now, of reading an amusing but not greatly overdrawn description, written, I think, by Guy Carleton, and given as a preface to one of William Mills & Sons' fishing catalogues, of what one should do who wanted to fish that stream; and without being now able from memory to recall very accurately his instructions, one was told that before starting he must get together his bait and tackle, then write to a friend living on the river and get him to write at once the condition of the water. Most probably the reply would be, "Water is muddy, but possibly good fishing in a week if no more rains." Possessing your soul in patience as best you could, you wait, and in a few days get a telegram saying, "River clearing, come along." With promptness you get your things together, and just as you are ready to leave the house for the train another message is handed you, saying, "Rains above us, water very muddy." And thus it may continue for days or weeks. Just such experience has been mine and for more than one occasion; but then one sometimes strikes it right, and is generally repaid for his previous waiting and cussing.

Having been unable to try the bass during the spring fishing other than one day in Goose Creek, off Leesburg, knowing that the close season for the Shenandoah ended May 15 (and more the pity, for the bass I caught had not finished spawning), tackle was overhauled, bait caught, a restless feeling comes over me

"And I kinder fall to wishin'
I was where the waters swish,
Fer if the Lord made fishin',
Why, a feller orter fish."

Thus prepared and thus feeling I wrote to my friend, J. W. Kenner, proprietor of the Kenner House, at Riverton, to write me on Saturday, the 15, the condition of the water, and if in condition I would leave on Monday, the 17th; cautioning him, however, if the water was then clear, but should it be muddy before I started Monday to telegraph me The reply came Sunday that both rivers (the north and south branches join there) were muddy and would probably not be clear before the end of the coming week. Such a report was disappointing but not unexpected. Knowing that I could not get off from business engagements the latter part of the week, I had abandoned my trip for the time, when to my surprise, while at supper Monday night, a telegram was handed me, saying, "Fish biting; bring bait; come at once." Acting upon the information contained in the letter received the day before, other engagements had been made, my fishing partner also made engagements that would keep him from leaving, and as I never—well, hardly ever—let pleasure interfere with business, and being unable to reverse the usual order of things, as Mr. Mather, in his Article XLI., tells us Mr. Fitzhugh did, I could not say that my pleasure was to practice law, my business to fish; I was in a quandary. A fellow-fisherman, situated as I then was, can appreciate my feelings. My wife (God bless her!) settled the question by saying, "Get ready and go, even if you have to make the trip by yourself. You have been talking about it long enough." I didn't need more encouragement, but hustled around that night, saw a party for whom I had some important work on hand, got his consent to postpone it for a day or two, and having my bait in a box in an ice pond near at hand, next morning found me prepared for a twelve-mile drive to Marshall, where the train was then taken for Riverton, at which place I arrived on time at 12:12.

Riverton is a pretty town, mostly situated on high ground, just at the junction of the North and South Branches of the Shenandoah, the hotel recently added to and improved, kept by Joe Kenner, as his intimates call him, ably aided by his estimable wife and her sister, and by whom fishermen are accorded a hearty welcome, is about equally distant (five minutes' walk) from two large dams, one on each river, under which bass congregate, and during the spring and early summer fishing a great many are caught there. Hotel charges are reasonable, and many acts of courtesy are extended for which no charge is made, but which are duly appreciated by visiting fishermen, many of whom come there with their wives and spend some time. Getting my dinner, I soon had "limbered," to use Mr. Mather's term, a new Bristol steel rod, which I was anxious to christen, and made quick time for the dam on North River, and there found two fishermen who had had fairly good sport, and one of whom, Mr. Sanford, of Orange, had that day caught his first bass, landing just as I reached the river a fine one. He was naturally a happy mortal, and forever afterward will, I venture, be an enthusiastic fisherman. To my regret, however, the fish had ceased biting for the day, and fish as I did, I caught but three that evening.

Knowing that the morning fishing is always the best at this time on this river, I was up and at it next morning by 4 A. M. Although the early bird may get the worm, the early fisherman, in this instance at least, did not get the fish, for it was some hours afterward when other fishermen had come and I had crossed over to the mill on the opposite bank before I got the long wished-for strike. You know the feeling, if you have ever "been there." I have him sure; a good one from the way he fights. He is hooked some 20yds. away; the water is swift and he puts up a game fight. Hello! he is out of the water trying to shake that hook out, but to no use The rod is christened; it has acted its part well, and as I stand 8ft. above the water on the abuttment to the mill a friend gets the net under him and I have a game fighter who has chased a minnow once too often, and hurriedly trying my pocket scales I find him but a fraction under 3lbs., and while I have caught much larger my experience is that a fish of this size, especially if caught in swift water, will give you more pleasure to land, putting up a better fight than one twice his weight. That was the only fish caught that morning. After breakfast I caught his mate.

When dinner was over I tried the South Branch, which was not so clear, but with little success. Others that evening had excellent sport under the North dam where that morning no fish would bite.

My time was limited, and the following morning I was compelled to leave. I was again on the river early, and just as I got my minnow in the water, Miss Brock and her brother appeared, both good—can I use the term—fishermen. Hardly had we begun before she and I each landed a bass. I had made arrangements for a boat to go out under the dam, so left them on the abuttment and anchored as close under the dam as the boiling waters would permit, and there I sat without a bite and saw, every few minutes, Miss Brock and her brother landing bass. Did I break the Commandments? Well, I leave it for you to imagine. It was not long, however, before I moved closer to the other side and, yes—luck, do you call it—changed, and before leaving time I had safely landed four beauties, worth to me many times more than the small ones I had just before seen caught, some of which were returned to the stream. My catch for the trip numbered only an even dozen, but, as the boatman remarked: "You have the finest fish that have been caught here this season," I was satisfied. I had not caught as many as others, but my fish were larger; they fished with minnows, I with "Mad Toms," as we call them, fish resembling the cat, but seeming to be a species by itself, which are found in the small streams here and which never seem to grow over 4 or 5in. long. But let one stick or sting you and his power for pain seems unlimited. To a novice he is a terror to put on the hook, but when you know how—well, it's easy.

Just as I was about to leave my friend Brock, a brother-in-law of E. P. Wilkins, the genial depot agent for the Southern Railway at that point, brought me six nice ones,

A FLORIDA SAWFISH.

Length 14ft., breadth 4½ft., weight 600lbs. Taken with rod and reel by E. Vom Hofe, of New York, at Fort Myers, Fla., May 2, 1897.

caught by him that morning, to add to my string. No account of a trip to Riverton is complete without a word about Doc Wilkins—as his friends call him—an enthusiastic huntsman, a successful fisherman, a "good fellow" in its broadest sense. Long may he live.

I reached home about 1 o'clock. Of course I had to show my string as I passed through the town, and the remarks heard amply repaid one for getting up early and working late; but wait, my thoughts, as I recall that trip, have run away with my pen. So boil it down or cut it entire without any complaint from C. M. WHITE.

WARRENTON, Va., May 24.

"Men I Have Fished With."

WHAT a marvelous book of biography you are building up, chapter by chapter, in FOREST AND STREAM. Nothing you could do to perpetuate yourself and friends could be more opportune or so acceptable to all. I have just finished the perusal of the sketch of Dan Fitzhugh, which seems to me to be the most soul-fetching of them all It is full of *bonhomie* and brotherly sentiment. I am glad you did not omit my small part of the grayling drama.—*Charles Hallock to Fred Mather.*

Black Bass Season on Long Island.

THE Long Island black bass season named in the Long Island sections of the game law runs from May 30 to Dec. 31. The general State season is June 15 to Dec. 31, and in the general law no exception is made in reference to Long Island. There is thus another conflict of provisions. Chief Protector Pond advises us that the general law does not apply to Long Island, but that the old dates, May 30 to Dec. 31, prevail there.

COLOR VARIATIONS IN FISHES.

Editor Forest and Stream:

I think very few anglers who fish in different waters fail to observe the great variation that exists in the shading and coloring of fishes belonging to the same species, and yet, with such a great army of observers, I have seen no exchange of opinion that calls attention to or sheds any light upon this subject

After considerable thought, and with frequent changes of opinion, many theories, the result of ideas early and hastily formed, have been discarded or remodeled, as each year and change of locality opened some new field for observation, and left me much perplexed, while endeavoring to solve a problem that seemed to be a child of so many conditions.

That all fishes have color markings, well defined, that follow from one generation to another, each after its own kind, is quite well understood; but I have never seen any reasons advanced to account for the often and sometimes wonderful variation of color found on fishes of the same kinds in waters of different localities and climate, and while this condition holds good with all the different fishes with which I am acquainted, it has been observed that some seem more susceptible to variation in color than others, and that the variation often goes to greater extremes from light to very dark shades, which often occur under different conditions.

Well knowing that it would be impossible to take upon myself the task of tracing all of the many fresh-water fishes found in waters so widely separated, and to treat all in detail, I must confine these notes to a few of our game fishes.

I have observed the brook trout of New Brunswick, Canada, Maine, New Hampshire and also Massachusetts, and know of no fish more susceptible to greater variations in color markings, which vary from a beautiful shimmer of silver, with bright red markings, such as trout possess that live in very clear springs, or in streams or lakes that are very transparent, to the very dark color of trout found in less transparent waters, as occurred in some cases where I have seen specimens taken from the deep holes of a cold springy bog having very dark water, that were shaded a very dark smoky bay color mingled with bronze, and were nearly the color of the big-mouth black bass of Florida.

That this variation is not due to climate or locality seems apparent, because the greatest difference I have ever observed has often been found in waters that were only separated by a short distance. I remember a trout stream in northern Maine, where I spent a few years of my boyhood, that furnishes a striking illustration of this. In the main stream, although the water was quite clear, it seemed dark compared with the waters of a small tributary brook. This little brook was given birth and fed by springs of crystal clearness, which burst forth from the base of too large hills a mile from the main stream; it flowed over a stony bottom of sand and pebbles, and its waters were clear as crystal. The trout caught in this little brook were as bright as silver, while those taken from the main stream were many shades darker. Another curious circumstance that is worth mentioning is the fact that late in autumn quite large trout would ascend the little brook to spawn, and after spending some days in the clear waters of this little brook would bleach out, as we boys called it, and become much lighter in color than when found in the main stream below.

I have found that trout do not have in an extreme degree this faculty of varying in color, and I might also mention the pickerel found in nearly all of the northern States, as another fish that varies very much in color, and under conditions where locality does not seem to be a very important factor. To support this idea, I might cite the wonderful difference of color between the pickerel found in Lake Champlain and Lake George, which are only a short distance apart. The fish in one shine like silver, while they are dark and smoky-colored in the other. As the pickerel will live in waters that are too warm for trout, we often find them in waters that are dark and discolored from decaying vegetable matter, and in such water I have often found the pickerel in color as dark as midnight. I have also observed that in small bodies of water, which perhaps were only separated by a narrow ridge of land, that even here also the fish varied greatly in coloring.

The bass, both large and small mouth, although naturally much darker fish than either the trout or pickerel, seem also to partake of this faculty of assuming different shades of color in waters having a wider range or climate than either of the other fishes. I have caught them as far north as Canada, and, as in the case of the large-mouth, as far south as the Caloosahatchee River in Florida, and the same variation in coloring seemed as much in evidence in the South as in the North.

Another striking feature of these many observations is the fact that I have never seen any fish that varied much in color found in the same water, except under certain conditions to which I will refer later. It is a fact worthy of notice that, in any body of water where the color of the fish seems to take either a light or a dark shade, this peculiarity affects all alike, and all tend to shade in the same way. This rule, while holding good in waters of small area under normal conditions, will not always furnish a reliable base to calculate from, as the following cases will show.

In the waters of Lake Champlain, which drain a large territory, we find some difference in the transparency of the water in different sections, notably that which exists between the main lake and the great back bay, where the bass vary in color, showing a dark smoky color in one case while in the other the shadings of the fish show a greenish tinge, and as a whole are much lighter than in the other. Extremes of this condition are more noticeable when found in smaller bodies of water, as the following case will fully illustrate: I once lived near a small lake of very clear water, and the fish found in it were very bright. At the foot of the lake was a bog, the result of a dam which caused the permanent overflow of a meadow. This place was overgrown with water weeds of various kinds, and the water in the bog was always dark and discolored owing to the decay of so much vegetable matter, and the fish taken from these waters were dark and smoky. Every spring the pickerel from the clear waters of the lake came into this bog for spawning, and after remaining some two or three weeks became nearly as dark as the fish that permanently lived there. After the spawning season was over and they again returned and became scattered over the main lake, they bleached out so as to resemble in appearance the fish that spawned in the lake, and others that failed to visit the bog during spring migrations. The many cases already cited seem sufficient to show that these varying conditions really exist, and under what circumstances they are usually found.

Many years ago when first I commenced trying to solve this problem, I conceived the idea that light was the most

important factor in causing this variation in the coloring of fishes. And as most of the darkest fishes were found in dark water, where the bottoms were black and muddy, while the bright fishes were found in transparent waters with sandy bottoms, it seemed quite plausible, as dark waters with their usually muddy bottoms, absorb more light than their more transparent neighbors.

But I was soon confounded with the fact that the lake trout and the fresh-water smelt, both of which often live in great depths of water and get little light, were of silvery brightness. And also, that the pickerel taken from the water through the ice in March, after living in almost midnight darkness for almost five months, owing to the water being covered with ice and snow, came out even more silvery than during the previous summer.

It was some years before I became acquainted with a case which seemed to indicate so plainly an entirely different cause for this color variation so often noticed, and with no satisfactory reason to account for. This was at a small, boggy pond in Carroll county, New Hampshire, which I once had occasion to visit during a fishing trip. The waters were considerably discolored from the decay of vegetable matter, as the pond was rankly overgrown with water weeds. On one shore the pond washed the base of a hill where considerable iron deposits seemed manifest, and the water became quite black, being converted by chemical action into a weak solution of tanate of iron. The fish found here were also dark as midnight. At last! here was a case that could be accounted for on principles which seemed able to stand fire.

A cup of tea furnishes the same conditions. Insert a bright knife-blade and allow it to stand for a few hours and both tea and knife-blade become quite black, while the tea has been converted into a weak solution of tanate of iron. Later years of observation have only confirmed this as the principal cause of the variation in the color of fishes.

The iron is not often present in sufficient quantities to be noticed, either in the water or the effect it produces when united with the tannin, on the color of the fishes.

But the tannin is always present in proportion to the amount of the decaying vegetation. A tanner uses oak or hemlock bark to accomplish the tanning of hides, while nature furnishes the tannin in the water which literally tan the hides of the fishes as they live.

Tannin alone is not responsible for all variations in the coloring of fishes. I have taken fish from some waters that were very whitish, owing to the presence of considerable clay along the bed of the stream, and the fish found in these waters were of a filmy whitish color, with no special markings of brilliancy.

Observations made while in Florida, where nearly all waters are slow and sluggish, and are often much discolored from the decay of vegetation, have only strengthened this opinion, which refers to tannin as being the principal agent which influences the shading of color on fishes, and the fish found there in such waters were very dark and smoky colored, while in the clear, springy waters there, of which I saw considerable, the fish were of light silvery shades. The result of these observations and researches have made it possible to formulate a rule, by which I find it easy to tell the color of the water a fish came from by seeing the fish, or to tell, after viewing a body of water and noting its color, what will be the prevailing shades of color found on the fish that live in it.

I am not aware that this varying in color of fishes and its attendant causes has ever been written of at any length, and it is with some feeling of trepidation that I pen this article for our angling readers, well knowing that among their ranks are some of the brightest of minds, who have seen far more experience, and wield a mightier pen than mine; and if among them some take up the cudgel to demolish the result of these many observations, perhaps they may accomplish what I have long been endeavoring to do, and reveal the subtle artist hidden beneath the surface of the shimmering waters, which paints in beautiful and varying colors the complexions of our fishes.

GEO. W. DEARBORN.

ANGLING NOTES.

American Fisheries Society.

IT has been announced in this journal that the twenty-sixth annual meeting of the American Fisheries Society would be held in Detroit, Mich., June 17, 18 and 19. The local committee appointed by President Whitaker, has reported a programme for the entertainment of the members. The meeting of the Society will be called to order in the Ladies' Ordinary of the Russell House on the morning of the 17th, and a business session will be held. The Russell House will be the headquarters of the Society during the meeting. At 2 o'clock on the afternoon of the 17th the members of the Society will be taken for a thirty-mile ride across Lake St. Clair to the Lake St. Clair Shooting and Fishing Club, where they will dine at 5 o'clock. The ride will give the visitors an opportunity to view the beauties of the Venice of the lakes. For this trip Messrs. M. S Smith and F. H. Walker have tendered the use of their private steam yachts, and the party will return to Detroit about 9 o'clock in the evening. On the 18th the entire day will be devoted to the work of the Society, reading of papers and the discussions which follow. On the evening of the 18th the Society will be entertained by the officers of the Michigan Central Railroad on a trip in their private car to the trout hatchery at Paris, 200 miles north from Detroit. The 19th will be spent at Paris viewing the station and the work conducted there, and if there should be any unfinished business it will be completed at a session during the day. During this trip the members of the Society will be the guests of the Michigan Central Railroad officers, through whose courtesy this journey is made possible, and I am privately assured that every provision will be made for the comfort and accommodation of the guests.

Papers will be read by Prof. E. A. Birge, of the faculty of the University of Wisconsin, who is also a member of the Michigan Fish Commission; Prof. S A. Forbes, of the University of Illinois, and in charge of the Natural History Laboratory; Prof. Jacob Reighard, of the Michigan University; Fish Commissioner John W. Titcomb, of Vermont; Supt. Seymour Bowen, of the Michigan Fish Commission, and by other members who have announced their intention of preparing papers, but have not yet furnished the titles of them. This meeting promises to be a notable one in many ways, as it is the first time that three days have been devoted to the annual gathering, and more than ordinary efforts have been made to make the meeting an enjoyable one; and the papers to be read promise to be particularly interesting.

A. N. CHENEY.

ON PERE MARQUETTE WATERS.

MY business took me to Saginaw, and having finished I was preparing to leave for Chicago, when Friend Mershon spake as follows: "I'm going trout fishing to-night; you come along with me. The stream is on the railroad on your way to Chicago, so you can have an enjoyable outing and still not go out of your way home."

"But," said I, "I've no rig, and I can't catch trout with my hat."

"Never mind the rig. Come along, and I'll see that you want for nothing. I have duplicate sets of everything at the club house."

Leaving Saginaw at 5 P. M. on the F. & P. M. road, after an enjoyable ride we reached Wingleton at 9 P. M., the home of the Pere Marquette Club. In the party were Jed Avery, Kenna, Morley, Mershon, Brown and myself.

The night air was sharp and crisp, the crackling log fire on the open hearth giving us a cheery welcome to the club room. We were to make an early start, so no overhauling of flies, tackle, waders, etc., was to be left for the early morning hours. Lockers were ransacked and apparel hung before the blazing fire for an airing. Leaders are selected and placed in the soaking box, reels are oiled, and then the serious work of the evening commences—the selection of the flies for the morrow.

When you read of Montana trout, and learn how in that wild and woolly country they simply bite a piece out of the tail of a red flannel shirt, put it on a hook and yank 5lb. trout out as fast as the hook can be cast into the stream, you naturally wonder why there should be so much discussion as to the proper color, size, style and kind of fly to be used.

What cares a trout whether a fly has a brown body and gray wings or gray body and brown wings; whether it looks like a mosquito or a full fledged butterfly? Why be so particular? A fly is a fly, and as long as a bunch of feathers is made to approximate a fly, why care about the colors?

This is what you naturally would suppose, but how differently do you learn upon the stream at the expense of an aching arm and possibly a ruffled temper.

Each man has his own ideas as to the best fly, and from the hundreds of flies in each book not more than half a dozen are selected as "taking" lures. And when the flies are selected each man gives a sigh of relief, sticks the flies in his hat and breathes easier for the rest of the evening.

Above the fireplace is a splendidly executed blue print of an 8½lb. rainbow trout. We turn to Father Brown, the Nestor of the club, for the history of that trout. Jerome, in his "Three Men in a Boat" tells of a trout mounted and hung in the tap-room of an English inn. During the course of the evening six different fishermen privately informed Jerome how he caught it, the flies he used, the length of leader, weight of rod, etc., etc. The landlord finally imparted to Jerome, confidentially, of course, just where and how he caught it. When the landlord left the room, Jerome being left alone, arose to get a closer view of the fish, slipped, and in falling tore loose the fish from its fastenings. All the king's horses and all the king's men could not make that fish whole again. Being of plaster of Paris, it strewed the floor with its fragments far and wide.

Father Brown denies any similarity between the plaster fish and the blue print trout, for he had actually weighed and packed the fish off to the taxidermist's for mounting. It was taken on a minnow in the Manistee River.

It was near midnight when we turned in, and at 5 A. M. were ready for breakfast.

On our way to the stream Mershon enlightens me as to its history. He informs me that the club owns 1,700 acres of land, the actual length of the stream being three and one-half miles. The stream is fed by scores of springs and has no inlet. It runs through a sandy country exclusively, and no matter how hard the downpour of rain, you can fish the stream during or right after a shower as well as on a bright day. The water is never muddy nor roily; the rain water entering the stream runs over and through the sandy soil, carrying no mud or clay with it.

Having no inlet the stream is self-contained, and never yet has there been a spring washout. The greatest variation has never yet exceeded 3in., winter or summer, which has proven a great saving to the club, there being no annual outlay whatever for screens, dams, etc., washed away.

In the spring, when everyone was anxious for the first fishing, those favoring the surrounding streams were obliged to return home without wetting a line, for the streams were beyond their banks, making fishing impossible.

This creek was, as usual, wending its musical way peacefully along as if there was no such thing as a flood or washout in the land.

Before we wet our lines we go and look at the nursery and see hundreds of trout of all ages and sizes penned up in large square pools through which the spring water flows.

On one side of the stream is a high bluff, along which the keeper drives his buggy, thus having a full view of the stream from one end to the other. I spend the time to make the round with him. We start in at the head of the creek, where there is an area of two acres of water from 4 to 8ft. deep, forming the lurking place of the "daddy" trout of the stream. Early morning and late evening fishing here has resulted in landing many 2lb. and heavier fish.

Jed is already in this spot up to his armpits, almost, in water, industriously swishing his flies over its placid surface. We drive along and pass all kinds of fishing spots, pools, open stretches where a fly can be cast from the bank in freedom, close places with alders on each bank where casting must be done from midstream, deep holes screened by fallen trees whence by careful fishing some big ones may be landed, and here a stretch of rapids where there is always a ripple even on the calmest day, and where the proper fly will bring out trout after trout.

Here we come to a natural dam, then more wide open, fishing, not an alder or sapling to cross the aerial path of ones fly and leader. Toward the end of the stream we see the wild, timber part of the fishing, where the stream is as wild as one could desire.

Here the expert who glories in missing overhanging pine boughs and alders and dodging his flies through the meshes of uprooted stumps in midstream can enjoy himself and risk the penalty of 3ft. of leader and flies dangling 20ft. up from a pine bough.

Here are tangled brush heaps in the stream, out of which it will test one's rod, nerves and adroitness to keep the wily and agile trout.

We see all kinds of fishing, from head to foot of stream; the novice, the amateur and the expert can take his choice in the three and a-half miles of fishing.

What a day it was for angling. Splash, splash, splash, trout jumping in every pool, from every mossbed, from under every log. The creek seems alive with them. But what educated trout!

It was fun to listen as the noon hour came around and brought them all to one common spot, the shanty at the spring, where rested the lunch basket.

"Jumping below the screen, pshaw!" says Jed. "If there was one jumping up in the pond there were a thousand."

"Never saw anything in all my born days like it, and I've fished Castalia and Fontinalis," says Kenna.

"The stream is swarming with fish," says Mershon, as he dips his cup into the spring; "but what fly are they after?"

This is a leading question. With the exception of Morley, who has come in with his creel overflowing, no one else has hit the right fly. They all have fish, but they have had to coax and wheedle them into taking flies they did not want. By persistently trying new casts now and then trout were taken. It meant work for every trout caught. Morley not only hit on the right fly, but he fished up stream and waded the brook, thus reaching the lunching spot with a full hand.

As we sit in the shelter enjoying our lunch, the trout keep up a continuous splashing in the pool in front of us. It is a beautiful sight to see sometimes a dozen trout in the bright, sunshiny air at a time; leaping, diving, splashing, they make an ideal musical accompaniment to a fisherman's lunch.

Lunch over, Morley's fly is again closely inspected and discussed. It is an old fly, and the rest have nothing just like it, nor has Morley more than one of them. The next nearest thing to it is hunted out from the books, fresh casts are made up, and each one wends his way to his favorite spot, and the task of beguiling the wary trout is once more begun.

Splash! splash! Swish! swish! the trout leap and the line cuts the air. The trout are "coy and hard to please." *Labor omnia vincit.* Not every cast, but now and then one lands a fish You change grounds and return again, giving the trout a rest. One place was as good as another; trout everywhere.

It is nearly 6 o'clock; the boys begin to gather at the meeting place, leg, back and arm weary, but not with empty creels. The big fish are compared, and tales of how they were taken and the hair-breadth escapes go round.

They are all satisfied, and Morley more than satisfied, for he has nearly filled his creel a second time. Jed Avery is full of enthusiasm. "Fishing, why, bless your heart, I never saw such trout fishing in all my born days. My arm aches, for I've had to coax every fish I have in my basket. I've seen enough trout to-day jumping around me to give a fellow nervous prostration. I do believe that with a taking fly I could have filled my basket every hour. Phew! but I'm tired."

And this is the story and experience of them all. Kenna caught his without moving out of his tracks all day. Brown wandered up and down stream, looking for inviting logs, overhanging banks and cavernous rocks, and worked for the big fellows lurking in their hiding-places. If we heard it once going home, we heard it a dozen times, "If I only had had the right kind of a fly to day, oh, my!"

I've talked with many fishermen and have seen some trout streams, but I have never seen the equal of Wingleton Creek for varied fishing and quantities of trout. Under any stone, log, bush, bank or bunch of moss was a lurking trout.

I talked with Betts, the genial keeper of the club, and expressed my surprise at the numbers of fish and the incessant leaping all day.

"Yes," he said, "there were a few to-day, but if you want to just see the water boil come here in June on a still, lowry day, when the flies are thick on the water; the trout then make a noise like a waterfall."

I thought I had seen a fairly good day for trout, but it seems that in the leafy month of June there is even better fishing in store for the lucky disciple of Izaak Walton who finds himself wading the crystal, icy waters of the Pere Marquette Fishing Club.

CHARLES CRISTADORO.

ST. PAUL, Minn., May 24.

Pacific Coast Trout.

A CONTROVERSY has arisen between my friend, J. R. Mead, and myself that has assumed the importance of a wine dinner, about names and identity of some of our Pacific Coast trout. I argue that the black-spotted trout and cut-throat trout are identical. He asserts that they are not. And in support of his position he has called my attention to their technical or classification names as being different, viz: *Salmo purpuratus* and *Salmo mykiss*, respectively. Nevertheless, I shall continue to insist that they are one and the same fish until Dr. Jordan, Dr. Bean, Judge Cheney, or some other of the learned ones sets me right if I am wrong.

Dr. Jordan, in his "Salmon and Trout of the Pacific Coast," in which he is presumed to mention all the varieties, speaks at length of the cut-throat, but makes no mention (that I am able to discover) of the black-spotted. The same learned gentleman wrote the article on "The Salmons of the Pacific" in that exhaustive treatise, "The Fishery Industries of the United States," and therein speaks at length of the black-spotted trout, but makes no mention (that I am able to discover) of the cut-throat. If they are not identical, why were not both accorded a place in both these works, and yet, if identical, why do they bear different technical names?

In the "Synopsis of the Fishes of North America," by Jordan and Gilbert, the cut-throat seems not to have been accorded a place except in a note to *Salmo gairdneri*, on page 313, referring to the fact that *Salmo mykiss* had apparently been confused with *Salmo purpuratus*, but the latter is described in perfect detail and as the salmon trout of the Columbia, Yellowstone trout, Rocky Mountain trout and lake trout.

S. H. GREENE.

PORTLAND, Ore., April 22.

[There is no question that Hallock applied the name "cut-throat" to one of the forms of black spotted trout of the Rocky Mountain region. Jordan and Evermann now recognize eleven forms of that variable and widely distributed species, beginning with the typical *mykiss*, of Alaska, and including Clark's trout, Lewis's trout, Gibbs's trout, the Tahoe trout, Utah Lake trout, Rio Grande trout, Colorado River trout, Waba Lake trout, green-back trout and the yellow fin trout. If we were asked to name the typical form of black-spotted trout, to which Hallock's name was intended to apply, we would say it is *Salmo pleuriticus*, Cope, now known as *Salmo mykiss pleuriticus*. The name *purpuratus* is a synonym of the older name *mykiss*.]

MEN I HAVE FISHED WITH.

XLIII.—Fred E. Jones.

TWENTY years ago "The Great New York Aquarium; Coup & Reiche, proprietors," stood at the corner of Thirty-fifth street and Broadway, where a theater now stands. The building is the same, and but few changes have been made in the outside. One day Mr. Coup introduced me to Mr. Jones, who owned a large tract of land in Pike county or in Wayne county, Pa., where pike of enormous size could be taken through the ice in great numbers, and Mr. Coup wanted a dozen or more. I had better go and get some. It was in January, and I well knew that the chance of getting pike was very slim, although Jones assured Coup that we could get all we wanted. I had no desire to go, but Mr. Coup insisted.

Finding him alone, I said: "Mr. Coup, I have done considerable fishing through the ice as man and boy, and feel confident that the ice in the lakes in Pike county is now about 2ft. thick, and a man can't cut holes enough in a day to amount to anything, and they will freeze up faster than he can cut them. Besides this, I fear I will lose the salmon eggs if I go away." I had 50,000 eggs of the chinook salmon to hatch for Prof. Baird, then U. S. Fish Commissioner, and this was my first trial of hatching trout and salmon in city water, and I did not wish to lose them by going off on what appeared to be a fool's errand, and then write an excuse.

"Well, now," said Coup, "you go. Jones owns the lake; he says he can get them, and he ought to know. You put wire netting over the salmon troughs, so that people can see the eggs, but can't handle them, and they will be all right when you come back; but don't stay over two weeks, I can't spare you longer."

We went. I had done my duty in telling Mr. Coup, who had never caught a fish in his life, of the difficulties in the way, and was again doing my duty in obeying orders. Going up the Erie Railway to Hawley gave me a good chance to study my new friend—a man of perhaps thirty years, tall, well built and carefully groomed. He was the editor or owner of some financial paper circulating in Wall street, and talked of things on an enlarged scale. He was to have the finest shooting lodge in America next year. At present he was occupying a cottage, which he bought with the place, not far from Blooming Grove Park. He was having a "drag" built for hunting, with refrigerator for game, gun racks and other conveniences, to cost $2,000. I was a little skeptical about this, until a few days later, when he showed me the drag at a carriage makers, and talked about some improvements he wanted made.

We waited at Hawley about an hour and listened to a grisly lot of old settlers telling of "b'ar hunts," around the grocery stove, until William drove up in a sleigh for us. It was a cold drive of several miles to the cottage, and there we found a hot fire and dinner. William and his wife were an old couple from Yorkshire, and they had only been a year in America, and one night in New York city, when Jones captured them and shipped them to his shooting box. All that could be learned of the prospect for fishing was when William said, in reply to a question: "Yezzir, there's minners a-plenty, zir; I cotched 'em w'en you wrote as you was a-comin', zir, an' they're in the bait-box in the spring, all alive an' 'ealthy, zir, an' plenty on 'em, zir."

The wind howled all night and did not cease when morning came; but after breakfast we went out on the lake in front of the house, armed with lines and tip-ups, an axe and an ice-chisel. The lunch basket was large and heavy. After reaching what Jones said was the best spot in the lake for "pickerel," as he called them, we began work. William cut some holes with the chisel while I made a wind-break of evergreens on the shore and built a fire, for a man would soon get numb in the keen wind. The ice was over 20in. thick, and by the time the old man would have one hole cut and we had dropped a baited line in it and set the tip-up, it would be blown full of snow and frozen over.

Six holes had been cut and baited when the sun reached meridian and I had boiled the coffee and then gave the dinner yell. Jones was more enthusiastic than I, for he had, or pretended to have, faith in capturing some pike. I had none, hence he could stand the blizzard out on the ice, moving from one hole to another, clearing out the snow and ice and freeing the lines, while I fussed about the fire in the more congenial work of boiling coffee and had William bringing in wood, for which he was very thankful.

"William," I said, "are there many pike in this lake?"

"Yezzir; I heerd Mizz'r Jones tell a gentleman that 'e killed un 'twas near two stone weight once in this same lake."

"Two pounds is only a small pike, I don't think much of that."

"Hi said near two stone, zir, an' that's twenty-hate p'un', a big un in the hold country, an' a big un 'ere, as I 'ears 'em talk. The fish might 'a' weighed summat like twenty-four p'un', I forgets the hexact figger."

"Did you see the fish, William?"

"No, zir, it was afore I coom; but I've 'eard of it many times."

"Was that the only pike you know of being taken from the lake? You were here all last summer. Were any pike caught in the lake?"

"Oh, blez you, zir, yezzir; there was Mr. Courtney, 'im as lives in New York with the black mustarche—of course you knows 'im—'e took ten in the week 'e was 'ere an' the biggest weighed near a stone. Then Mr. Briggs 'kem up—you knows 'im—'e as 'as the big liver an' white pointer an' the little red setter as is blind in 'er left eye. Well, 'e took three pike in a mornin' when the hexpress didn't bring hup some shells for 'is gun, as 'e 'ad hordered hexpressly for snipe, w'ile the hautom flight of woodcock 'ad not come, an' Hi hagree with 'im that w'en the snipe is a-flyin' wild on a windy day one wants a little more powder be'ind 'is shot 'an he do in a close thicket for woodcock. So 'e sez to me: 'Will'um,' sez 'e, 'if there's any fish in this lake I'll try 'em,' sez 'e, 'for w'ile I don't care much for fishin', there's nothin' else to be done,' an' 'e tipped me a $5 bill. Oh, 'e was a gentleman, 'e was, an' I put 'im hout hin the lake among the weeds, an' 'is first fish weighed 2lbs. over a stone."

"That was good; 16lbs. is a fine pike. Did he get many more this day?"

"No, zir, on'y two smaller ones; just at that Mr. Jones shot off a signal that the noon train at Hawley had the cartridges, an' Mr. Briggs said 'e'd 'ad enough an' would go in to dinner an' try the snipe in the hafternoon. Mr. Briggs is like me, zir; fishin'll do w'en there's no shootin' to be 'ad."

This conversation took place before Fred Jones came in to luncheon, and it left me in the same condition of doubt as before. I did not know Mr. Courtney "with the black mustarche," nor Mr. Briggs with the remarkable dogs, but the hint that the latter gentleman gave William a very liberal tip and immediately caught the record pike, was not lost. Jones was coming toward the fire, and luncheon, but before he came within speaking distance I had thought the thing out in this way: "William, your $5 tip from Mr. Briggs sounds like an intimation that a tip is not only a proper thing, but that a fiver is about the proper size of the tip, if a gentleman expects to be put in the way of taking many fish. William, you may be innocent enough to believe that I know every man in New York who wears a 'black mustarche,' or has a red setter with only one eye. I mistrust that you have created these characters for my benefit, William," and I thought of Sairy Gamp and Mrs. Harris, but, by this time Jones arrived with his mittens held to both ears and his mustache frozen to his chin. After thawing out and eating a generous lunch and drinking a lot of hot coffee, the effect of the wind was seen in drowsiness, and soon Jones was asleep with his feet to the fire.

Motioning to William we left him to visit the holes, which were frozen over to the depth of an inch or more, and overhauled the lines and put the tip-ups in working order. Four of the baits were there but two hooks were bare, which was encouraging; but the holes would freeze before we got around to the first one and I hadn't enthusiasm enough to stand out there and become frozen, like a hole in the ice, and the old man was glad when I decided to go to camp. We had been gone nearly an hour and Jones was still sleeping. We must have slept also, for when Jones awoke he was on his feet before we knew it, and the fire was low. We visited the lines, found the baits all alive and left them for the night, taking to the wooded shore to avoid the wind.

Jones was annoyed by his disappointment, but we talked of other things until nearly bed-time, when he remarked: "If the wind goes down to-night we may get some fish to-morrow; what do you think?"

"Perhaps so; I hope so, but I'm not familiar enough with the lake to judge. Have you taken many pike here in the winter?"

"No; never tried it before, but there have been some good ones taken in the summer. My friend Briggs took one of about 10lbs., trolling, and I took one of about the same size, and many others have been caught here since I owned the lake."

William's men were real, at least; and he had merely enlarged the weights of the fish. Doubts of William's veracity vanished.

"Were we fishing in the deepest part of the lake?" I asked.

"Yes; the most northern hole was over the deepest part; as near as I can remember, the water there is about 60ft. deep, and it shoals up to about 20ft. at the southern hole. That ought to cover the best grounds, hadn't it?"

"As far as the north and south ranges are concerned, it should. But the fish may be in places east or west of our line of holes. Pike are very local, merely shifting to the weedy shallows in summer, where the food is to be found. In my opinion, it's too late in the season, and too cold, for pike-fishing through the ice."

"Don't they feed all winter? I've been told they do, and in that case, how does the lateness of the season and the cold affect them? Tell me that."

"That's an easy one. The pike does take food all winter, but not in such quantities as in summer. The lateness of the season gives us ice so thick that it is a morning's work for a man to cut six holes, and our lines froze in before a man could visit them and get back to the first one."

"Don't you consider six holes in the best part of the lake enough?"

"Pardon me, my boy, but you have evidently done little ice-fishing for pike, and —"

"You're right! I never did any; the question was asked for information, and not for argument."

"Then," said I, "permit me to say that we do not know that the holes were in the best part of the lake. Coming to a strange water, I brought tackle enough to fish 100 holes; and if the weather was mild and the ice only 4 or 5in. thick, we three men could have cut the holes in two hours and tried them for the best places, and after finding them, could have let a good portion of the holes freeze up. In such a case the skillful ice-fisher gets the ranges of the best places, and the next year he can fish the same spots without wasting labor on cutting holes where the fish do not range."

"Then you think we had better try new places to-morrow?"

"That is what I would certainly do."

The wind howled all night, and shook the house. The big stove in the best room tried its utmost to warm the cottage, but the walls were cold, the furniture absorbed the heat, for William and Betsy had only run the kitchen fire up to that time, and the furniture absorbed all the heat in the air. A country house, the main part of which is shut up all winter, can absorb more caloric in its floors, ceilings, walls and furniture, than is stored in seventeen tons of anthracite coal if burned in stoves in three days. Betsy had lighted the fires in the best rooms and the dining room about sundown.

At supper, the warm plates were chilled before Jones had carved the roast beef, which he had sent from the city, and the tallow on top of the gravy was reminiscent of the sudden freezing of the fishing holes which we had left.

Jones dropped the carver, and with a pitiful look, said: "Fred, if you don't mind, we will move our dinner into the kitchen where it will be warm. I dislike to ask yon to do it, but I think you'll agree that it will be the best thing to do."

"Fred," said I, "that was the very thing I was thinking of. No apologies. The case is a clear one; it's a question of style or comfort, of a hot roast or a cold gravy, and the move will be a good one."

Betsey hustled around; whisked the roast into the oven while she heated the gravy. Gave the plates and vegetables a turn at the fire, and in a short time we sat down to a good dinner, smoking hot, in a room where there was enough warmth to prevent mastication being interfered with by shivering. Of course there was a flavor of ancient tobacco smoke in the room, but it was so commingled with the odors of departed pancakes that did not exactly recall Tennyson's lines:

> "The woodbine spices are wafted abroad,
> And the musk of the roses blown."

But it was just the every-day perfume of a country kitchen, where an old couple live through a hard winter and make it serve all the purposes of a city flat. I've smelled it before, and so have most sportsmen who have gone into the country or who live in the country in winter. The kitchen is the living room; and to air it is not to be thought of. Fresh air is cold air, which requires much coal to heat, and neither William, Betsey nor the cat wanted too much of it. We mentally agreed with the old people that the kitchen was the best room in the house, and there we stayed and played checkers, a game that Jones was expert at while I was a duffer.

We listened to William's glowing account of the game and the guns of "hold Hengland." How he used to snare rabbits and grouse, the old poacher; and how he "never see a gun in Hamerica as could kill a grouse at 100yds., like was common in Hengland." And so we passed the evening, listening to the wind and to what William fondly believed to be facts concerning the superior guns and sportsmanship of a land where he had passed his boyhood; but of the new world, in which he had lately arrived, he knew nothing.

The delights of a country house which has not been heated all winter have been faintly drawn in this sketch, as far as the lower floor. We took our lamps and went through the "Siberious" hall with shivers that no doubt turned the roast beef gravy into tallow in our digestive organs; but of the awful plunge between sheets in the bedrooms above, which had not been occupied in several months, my pen is incompetent to tell. Those who have experienced this torture are the only ones who can sympathize with the victim. No amount of bedclothing can obliterate the semi-consciousness which usurps the place of that gentle sleep so apostrophized by Sancho Panza.

The wind blew hard the next morning and I flatly declined to go on the lake, even to look at the baited lines, and told Jones that it was no use in trying to fish while such weather lasted. I would stay and try it after the wind had let up; and he took me around to the wagon maker's, where I saw the drag, aforementioned; and then we went to Hawley for provisions and mail. As near as I could judge the same old fellows sat around the fire, killing deer and bear over again. But of the art of trimming whiskers they seemed to be ignorant. As I drew near the stove, one, whose sun-burned, matted and straggling beard resembled a wind-tossed wisp of hay, remarked: "Yes, an' I'll tell ye, 'tain't right fur these city fellers to come up here an' fence in a big trac' o' land an' keep deer shut up fur their own shootin' an' keepin' out folks that's born and raised here, an' has hunted them hills afore they's born. They say some one broke their fence this winter an' put the dogs through and got five deer. I dunno who done it, but if I knowed I wouldn't tell."

This was evidently for my benefit, but the shot was wasted. Another old fellow, with chin whiskers like rope-yarn, let fly a stream of tobacco juice at the head of an eagle which was cast in relief on the stove, hit the mark, and essayed to follow his partner's lead when Jones came along with his bundles and we started for home. Relating this to Jones as the sleigh skimmed along, he told me that they were probably puzzling their heads to know if I was one of the Blooming Grove Park Association, or had come up to join him in making a new park. "The old fellow," said he, "who told of breaking the fence and getting five deer was the one who did it, according to all reports, but it's best not to interfere with them unless you have the strongest kind of a case, and then a jury of their neighbors will never decide against them."

At sundown the wind lulled, but as bed-time approached a fear of those dreadful cold sheets appalled me, and I suggested that we spend the night in chairs by the fire. "Did you undress and get into those cold sheets?" asked Jones.

"I did, most certainly. If the bed had been my own I might have 'turned in like a trooper's horse, shoes and all,' but I observed all the proprieties in the house of my host."

"Proprieties be blowed," said Jones, "those sheets Betsey put on for style; I pulled 'em out and slept between the blankets and supposed that you did the same." The hint was not lost and I "drifted gently down the tides of sleep," until "jocund day stood tip-toe on the misty mountain tops."

The still morning, with a warm sun, was a welcome change. We cut out the lines, but the baits were dead. New holes were cut on east and west lines, and while they skimmed over with ice there was no drift of snow to clog them and hasten the freezing. We had thirty lines in the water that were fishing by noon and had caught one yellow perch of about a ½lb., which, with a rabbit that I killed with a pistol in early morning, we cooked for dinner. The afternoon brought nothing, although we kept fresh baits on the lines and the holes open.

The experiment had been tried, and at night I insisted on returning to New York in the morning, in spite of Jones's protests that now the weather was good we should try other parts of the lake. I had opposed the trip, for reasons already given, and I did not believe that the interest of my employers would be served by a longer stay, and this is my judgment to-day, that fishing through ice over 10in. thick is not likely to be a success, unless you know the lake and where the fish congregate for the winter.

Fred E. Jones was, and is, a puzzle to me. In this sketch there has been an attempt to introduce the reader to a man whom he never heard of, and to try and interest him in the man, as I knew him. Jones was not a frank, companionable fellow. He was a liberal entertainer on this trip and after, but I never felt entirely at home with him. Perhaps the fault was not his. If he were living he might say the same of me. We are so prone to measure other men in our own bushel that we seldom pause to think how we would fit into their measures. I am writing of a dead man; he was always kind, courteous and friendly to me; why should we say more? Yet there was a measure of distance between us that never allowed of that close

friendship which comes in younger life between men of kindred tastes.

I dined with Jones in his Brooklyn home after the trip for pike, and his gun room was to me a marvel of completeness. I owned a heavy duck gun and a light gun for woodcock, snipe, *et al*, and thought that a complete outfit, but Fred Jones had thirty-seven guns in the racks of his Brooklyn house and showed me each one and described its points. I counted the guns as we adjourned to the smoking room and in a bewildered way wondered when, how and where a man could find use for them. All of which shows that my gun education was deficient, and made me think that a man who only owned two guns was only fit to kill two kinds of game.

Next spring Fred Jones came into the Aquarium, as was his daily custom, and announced that he had sold all his Pennsylvania property and was going West. He gave a dinner at Delmonico's at which the Aquarium staff was present, and, in a speech, referred to our trip for pike. To this, "Tody" Hamilton, then our press agent, now with Barnum & Bailey, replied that the failure to get the giant pike was nothing to our failure to telegraph that we had caught one of 100lbs., but that it had been seized by the sheriff as an illegal capture; for so we had deprived the press of an item.

Mr. Jones went into the far West to some Indian agency, with which he had an official connection, and the first news we had of him was that he and a companion had been drowned while on a hunting trip.

FRED MATHER.

THE UNITED STATES HATCHERY AT ST. JOHNSBURY, VERMONT.

CENTRAL NEW YORK WATERS.

ITHACA, N. Y., May 28.—Through the kindly offices of Mr. A. J. Dollinger, of Redwood, N. Y., it was my good fortune to have my name attached to a box that arrived in town the 25th inst. containing fourteen noble specimens of lake trout, a catch made by Messrs. A. J. and Edward Dollinger during a few hours of easy angling a couple of days previous to its arrival here.

Mr. Dollinger advises me that some exceedingly fine creels of trout have been taken from the lakes abounding in the vicinity of Redwood. Mr. Geo. Ballentine recently stopped three days at Redwood, and in that time took forty three trout from adjacent waters. Ex-Senator John H. Selkreg, of this city, not unknown to FOREST AND STREAM readers, lately returned from Redwood, where he enjoyed several days' magnificent fishing. The veteran angler speaks in glowing terms of the fishing resources of the Redwood lakes, and pronounces the rich and restful locality a veritable angler's paradise.

Plenty of good trout, pike and pickerel fishing is being enjoyed there at present, and the opening of the bass season, June 15, should find bass and mascalonge biting voraciously.

Some very flattering reports are abroad of the fishing now being had at the northern extremity of Cayuga Lake. Auburn anglers have been especially lucky of late in the vicinity of Cayuga Village, where the pickerel fishing has been exceptionally gratifying. A number of big catches have been reported within a fortnight. A Seneca Falls lady is credited with taking a 15lb. pickerel recently, but from what Mr. A. N. Cheney writes of the pickerel, it may be inferred that this 15lb. pickerel was in reality a pike, and a pretty sturdy pike, too, please note At Union Springs and at Carr's Cove, two miles south of the Springs, some goodly creels of pike, pickerel and perch are forthcoming. At Carr's Cove, notably, some fairly phenomenal catches of perch have been made this spring. Some 2,000 perch is the estimated best day's catch for the season to date.

Larger perch, if anything, are taken at the Ithaca end of of the lake, but numerically the supply is not so large. Bass anglers are putting their tackle in order in anticipation of the open season close at hand. At Union Springs, at Canoga across the lake, Carr's, Sheldrake, Kidders, Ladoga Park, and from the latter named place along the east shore of the lake to Ithaca, and thence along Fall Creek to the big falls, the lovers of bass fishing may expect to encounter this wily and proud fighting game fish.

M. CHILL.

ARE SMELT A MENACE?

Editor Forest and Stream:

What is the trouble with the Fish Commissioners, that they should be so much interested in the breeding of smelt, and in favor of introducing them into lake trout and landlocked salmon waters? Are there no harmless fish that can be used for this purpose? Do these men know what they are advocating and doing? How about the introduction of the English sparrow? And how was it sixty years ago, when some men one afternoon in the town of Moriah, Essex county, N. Y., went to Bullwaggy Bay, near Port Henry, and drew a seine, and in a hogshead of water transported some pickerel (*Esox lucius*) to a small pond that empties into the headwaters of Schroon River, where the fish increased finely? At the outlet of this pond there was a dam, which went out with a spring flood; the pickerel went down stream with the flood, and in one season stocked Schroon River, Schroon Lake, and also Paradox Lake. People in those days thought the fish a great institution, so they carried them to Lake Sanford, in Newcomb; from here (for revenge) they were taken to Long Lake, where they soon destroyed all the trout in the Racquette River waters. From here, by way of the Indian carry, they were placed in the Saranac system of lakes and streams. And the end is not yet. This is the result of an afternoon frolic to stock a little mud pond (Bullpout, or Newport Pond) in the town of Moriah, Essex county, N. Y.

It is a serious matter to disturb the balance of nature. Men should consider carefully before venturing to do so.

I see that the Fish Commissioners congratulate themselves that it took them only six years to fully stock two of the most beautiful trout and landlocked salmon lakes in New England, and that the lake trout there caught are larger and fatter than common. Just so; the adult trout fatten on the smelt and the smelt can fatten on the young trout and landlocked salmon; so the wheel goes round. The smelt being 1,000 to one in the majority, any novice can figure out what the result will be.

Let the Fish Commissioners be assured of one thing—they have effectually stopped the breeding and increase of trout and landlocked salmon in these lakes for all time to come. As an object lesson, look at Lake Champlain from Westport to Cumberland Head. It is an ideal lake trout water in every respect. For the last fifty years there has been once in the while a fine lake trout caught, but like angels' visits they are few and far between. Why do they not increase and become plenty? For answer I would say it was this: smelt have free access to this lake from the sea, and have partially or practically become landlocked, that is, they can be found at all times of the year in all the deeper parts of the lake and in the identical depth of water that would naturally be inhabited by the young and adult trout.

The planting of lake trout and landlocked salmon in Champlain, with the idea that they would breed and increase, is fallacious in the extreme. It will only result in a waste of time and money.

Although if landlocked salmon could be made to breed in the streams running into Champlain, that is above where the smelt go, and would stay there till they grew of a size that the smelt could not destroy, we might be hopeful of a favorable result

Young lake trout and landlocked salmon have no more chance among smelt than young lambs have in a pack of wolves Anyone who has fished through the ice for smelt, and has seen them dart a yard or more and strike a heavy sinker or large bait, can judge whether they are a predatory fish or not. The boys catch them without a hook, by simply tying a white rag to a line for a bait; the smelt strike this and hold on and are drawn out of the water. I have seen quite a number caught in this way. The smelt's mouth is large and well armed with sharp, hooked teeth. They are well equipped for business, and they breed like the plague of flies in Egypt. A pretty style of fish this to introduce into lake trout and landlocked salmon waters. Remember, when hungry they will attack a fish of nearly their own size and weight This I know to be absolutely true. The most unfortunate part of the whole business is this, that the smelt live nearly the whole year round in the identical depth of water that the trout, both young and old, frequent.

The introduction of smelt into the great lakes would be almost a national calamity. The day it is done foretokens the extinction of the trout fishing, both commercial and sporting.

Being myself an old fisherman and something of a student naturalist, I call on the Fish Commissioners to rise and explain.

BAINBRIDGE BISHOP.

STERLING LAKE.

IT will be a matter of interest to the anglers of Greater New York to learn that there is big game fishing almost at their door. Not forty miles from City Hall, as the crow flies, nestling in the beautiful Ramapo Mountains, about midway between the well-known Greenwood and Tuxedo lakes, lies as pretty a gem of the forest as the State affords. Though its neighbors attract scores and hundreds of visitors, Sterling Lake modestly plays a Cinderella-like part. The angler at Greenwood Lake has a vague impression—born of the gossip of the guides—of a big pond five miles over the mountains; but few ever wander to its shores, and fewer still know aught of its treasures.

The lake has an area of 1,200 acres or thereabouts, and a depth of 300ft. in places. It is fed almost entirely by bottom springs, there being but two or three small brooks falling into it. Thus its pure, crystal waters are always cold. With precipitous rock-bound shores and long reaches of sand in the deeps, this pond is an ideal home for the lake and salmon trout which, about twenty-five years ago, some wise men planted there. For years after the plant was made, nothing was heard of it. Later, an occasional small fish told that they were there. Up to 1894 probably half a dozen fish was the extent of the yield. In May of that year Messrs. J. B. Staples and O. L. Marvin, two of the best anglers in northern New Jersey and full of faith in their skill, essayed the waters in which such artists as Seth Green had wet lines in vain. Their first day's catch was enough to inspire them with a lasting love for this beautiful pond. Seven lake and salmon trout weighing from 4½ to 9¼lbs. each, and aggregating 49¼lbs., were their reward. And they sacredly kept the angling tradition by losing their largest fish. This, a laker, which they assert positively was larger than their subsequent 14-pounder, they fought for over an hour. As he persisted in sulking at the bottom and "tugging," they were forced to work him into shallow water, when the proximity of the boat and the moving oars induced him to keep up a dogged sort of motion. To get him into shoal water was a long, tedious task, as they wisely refrained from doing anything but give direction to his own infrequent changes of position In shoal water, when the boat and oars worried him, he at length wore out. But the hook had torn a large hole in his mouth, and the rather small gaff entered the same, and gaff and hook tore out in lifting him from the water, and he sank slowly to the bottom. When the ripples had passed, they saw him lying on his side there in 12ft of water, with his huge gills expanded to the full and slowly throbbing in almost complete exhaustion.

"If I were able to keep my eyes open under water," says Mr. Marvin, in telling of it, "I'd have dived and saved that fish. You could have pushed your hand clean through his gills." And as the fish doesn't swim that can muss up Mr. Staples's personal appearance, they soon after saw him slowly work off into the dark depths, leaving them alone with their feelings—feelings, which figuratively had been through a lusty sausage grinder.

Upon other occasions during that year they took from two to five fish per day. In 1895, as recorded in FOREST AND STREAM, their most enviable catch was on May 15, a 14 pounder to Mr. Staples's rod and an 11¼-pounder making Mr. Marvin a good second in the race. Other parties took fish, but in no case was the first record here mentioned equalled. In 1896 the catches were fair, and this year's record for the first half of May is as follows: May 1, two fish, larger 6½lbs.; May 3, one fish, 7½lbs.; May 8, two fish, 5lbs. each; May 14, four fish, largest 6lbs.

The lake is owned by a well-known mining company and is not open to the public.

SHADWOOD.

The Nepigon.

PORT ARTHUR, Can., May 22.—*Editor Forest and Stream:* Trout fishing has commenced on the Nepigon River. Some of our local sportsmen have already wet their lines and caught a few of the speckled beauties. I think this will be a good season for trout fishing, as the water in the Nepigon is lower than other seasons. Two parties of Americans have made arrangements for guides, canoes and outfits. They are expected here about the first week in June. Mr. McKirdy is making great preparations for the usual number of tourists who visit the Nepigon season after season, and also for some who have not been here, and readers of FOREST AND STREAM who may require information can get it by applying to Mr. McKirdy, who has a circular printed for that purpose.

JOHN E. NEWSOME.

The St. Johnsbury Hatchery.

FROM Fish and Game Commissioner John W. Titcomb, of Vermont, we have received the illustration of the United States hatchery at St. Johnsbury, as published in the Vermont League's year-book of 1897. The hatchery is situated two miles from St. Johnsbury depot. The product of the institution is distributed under the direction of the U. S Commissioner. It is in charge of John W. Titcomb, Supt.

SCHOOLING THE DOG.—II.

TRAINING and breaking, the terms in common use to denote the education of the dog, are both misleading in their implication, since, first, they differ from the terms which are used to denote the acquiring of an education; and, second, because the terms, up to within a not very distant period of time, were associated with a more or less violent manner of treating the dog under the name of training him, so that the schooling of the dog was generally considered as something apart from all other schooling. The whip or boot or gun was considered the direct medium for instilling knowledge and obedience.

Many of the old-time trainers were also market-shooters, both occupations being followed to secure the desired profit. An old, trained dog was relied upon for steady work to the gun, thus assisting the shooting, while the young dog was permitted to fit in as unimportant opportunity offered; that is to say such opportunity as would not interfere with the shooting. The green dog, if he did not assist the older dog, at all events must not obstruct him nor spoil a shot, for that was a material loss. The quickest way to correct faulty doings, under the old system, was to soundly thrash the puppy. If he flushed, it made him wary of flushing; if he chased, or refused to obey, or did not know how to obey, or went in the wrong place, or went too fast, punishment was in order, and if that did not intimidate him or check his ardor with the desired promptness, a charge of bird shot was considered as being most efficacious

The markert-shooter and old-time trainer bawled his orders out in a loud, harsh voice, gave labored signals, and when not shouting orders he was blowing his whistle, so that all the birds in the vicinity could not fail to know there was a dangerous, fearsome party near at hand. The puppy, if he heeded all that was said and signaled to him, had little time for anything in the way of learning about birds. What he

learned was mostly what he could pick up from his own observation, compromising as well as he could with the unfavorable conditions and obstructions set up by his trainer. If his ardent perseverance was so great as to withstand his trainer's ignorance, ill temper and harsh treatment, he in time might develop into a fairly efficient assistant to the gun, though in most instances there was a lack of finish in the different details, such as mouthing the bird when retrieving it, or retrieving it but part way, or backing imperfectly, or breaking shot, etc.

The pursuit of prey is the dog's greatest pleasure. He will steal away from home to self hunt, or hunt with boys, or with vagrant dogs, the duration of his absence being at times limited by the degree of fatigue he suffers; at others, by the degree of hunger; at others again, by the degree of physical endurance and hunger combined. Sometimes he may be absent a few hours; sometimes several days, returning much reduced in flesh, and worn, wearied and famished. He will leave his master to go with a stranger who carries a gun, and if he be the rare exception which will not do so at once, he readily strikes up a friendship and can soon be induced to go with the stranger. The report of a gun in the distance will often cause him to bolt from his master to the gun, that he may join in the sport. In the pursuit itself he will plod cheerfully through mud or snow; swim in cold water; work through brush and briars; gallop bravely in the open, eager to find and capture, never satiated with success; and desisting only because physical exhaustion intervenes. When from hard work he is too footsore and stiff in the morning to take an interest in his breakfast, his spirits rise at sight of the gun and the start for the fields, and he works away till the stiffness and soreness disappear or force him to quit.

There are exceptions to this, for there are dogs which are indolent, or too weak to accomplish what they endeavor to, or dogs in which the hunting instinct is absent. They, however, are so few that they are not worth considering in the matter or education, and when one comes across them they are not worth the trouble of training.

Thus there is in the dog all the hunting propensity that is necessary for the trainer to work upon, sometimes more than is necessary. All the natural qualities are born in the dog. He, on opportunity, develops them himself to a higher degree of practical usefulness through his own experience and effort than he could from the efforts of any trainer. He learns to follow the trail quickly and with precision, to recognize the foot scent and body scent, and the near proximity of the birds and the best method of capturing them. He distinguishes the likely places which serve as their haunts from the places which they avoid. When they are flushed he learns to mark their flight, the probable length of it, and how to find them again.

To learn all these, the dog must have the opportunities to do so. Given the opportunities, he learns the different details with more or less quickness, according to his capacity to learn, for dogs vary in their ability to learn quite as much as men do. The teacher can do but little more in the dog's natural development than to provide the opportunities afield. The dog cannot take advantage of his opportunities afield if he is constantly balked, punished, called to, or kept in check. He must have his fling for awhile in order to learn methods of pursuit, and to develop his ardor.

Dogs which are permitted to self-hunt, acquire great skill in the application of methods, and exhibit intelligence to an astonishing degree To develop the dog's hunting powers to the utmost should be the purpose of the trainer, and next to so school him that he applies his powers in the interest of the gun. The puppy will make many mistakes, but they are inseparable from his education. When committed, they serve to point out what is right as well as what is wrong.

Too often the amateur begins the subjugation first and makes it paramount to all other considerations. Every effort of the dog is governed rigidly by what the trainer considers the correct form of work to the gun. Instead of permitting the puppy's powers to develop and then schooling him to devote them to the gun, he is schooled to the gun and then permitted to develop as he best can, often a disastrous method, as many times the teacher then so dominates his pupil that the latter from habit looks to him for orders on every occasion, and is without self-confidence or independence. Many good dogs are spoiled by such hasty and severe training before they are is given any liberty afield. Without the ability and inclination to hunt, the dog is worthless for field purposes. If restrained too much the result may be that he loses all inclination to search for birds. If the dog will not hunt, the teacher is powerless in the matter. He is passive so far as the dog's hunting inclinations are concerned; he can be active only in shaping up and schooling such efforts as the dog will put forth.

It is now clear that if the teacher checks the dog's efforts or intimidates him so all his effort ceases, the training is accordingly either marred or ended.

But the dog's natural fondness for the pursuit of birds and his enthusiasm in his efforts to capture them are so great that he generally submits to much punishment associated with them and his teacher before he desists from hunting. If he becomes afraid of his trainer, he then is so intimidated that he dare not venture on any independent act on of his own. But let him have opportunity to go afield with someone else—the cause of his fears then being absent—he resumes hunting with his native enthusiasm and diligence.

The loud and incessant ordering and blowing of the whistle, with or without cause, are faults also quite common to the amateur and latter-day trainer. Nearly all trainers are self-taught, or at least have no one to point out their faults to them, so that bad habits of method and manner acquired in the beginning often stay with them throughout life. Under such circumstances they are quite unconscious of their unpleasant manner, one very annoying when shooting with one or more companions, and at all times a great handicap to the dog in his work, since the voice or whistle often flushes birds, and if in proximity to the dog at the time, he is blamed for it when he is really blameless. The trainer, however, is so intent on securing obedience and is so habituated to associating his loud orders with the control of the dog that he seldom considers them in any other connection.

It is easy to train a dog to obedience to quiet tones of the voice and gentle signals, and infinitely better to handle him afield in that manner than in one of noise and violence, apart from all considerations of ease and elegance.

B. WATERS.

Mr. J. B. Stoddard, of Thomasville, N. C., will take a flight northward shortly, first visiting New York, thence going to Manitoba where he will prepare some dogs for the trials to be held there. He has room for a few more pupils in his string.

POINTS AND FLUSHES.

THE official organ of the Collie Club has a suggestion that it would be well to have cards for hanging over members' dogs at shows as do the members of the Bulldog Club, etc., and the editor of the *Chronicle* asks: "How would a square blue card with the cross of St. Andrew do?—flag of Scotland, in fact." That flag has been shorn of a little of its national glory for many years, but, notwithstanding, it is hardly fair for anyone to suggest that it go to the dogs.

Mr. W. W. Titus, Whittemore, Iowa, has decided to return to the vocation of training and breeding dogs, and to that end he will shortly close out his present business. Mr. Titus will accept dogs to train, and this is an opportunity to secure the services of an excellent trainer which owners should not fail to consider.

Mr. Chas. D. Purroy, 128 West Twenty-ninth street, New York, writes us as follow under date of May 28: "Last February my fox terrier dog Patrol strayed from home and I have just traced him to a dog dealer in this city, who tells me he sold him to a German farmer of Long Island, who is a breeder of pigeons, but whose further address he does not know. The dog's color is white, black head with white mark down center, black mark on neck, two large black marks on back, weight about 19lbs. Should you favor me by giving this publicity it may be that one of your many readers could aid me in his recovery."

Following is part of text of the order issued by the Board of Agriculture (England) of which cognizance was taken by the A. K. C. at its recent meeting:

The Board of Agriculture, by virtue and in exercise of the powers in them vested under the Diseases of Animals Acts, 1894 and 1896, and of every other power enabling them in this behalf, do order, and it is hereby ordered, as follows:

PROHIBITION OF IMPORTATION OF DOGS.—1. Dogs brought to Great Britain from any other country (except Ireland or the Isle of Man), shall not be landed in Great Britain otherwise than in accordance with the provisions of this order.

LICENSES FOR IMPORTATION IN PARTICULAR CASES.—2. The board may in any particular case grant a license authorizing the landing of a dog, and such dog may thereupon be landed subject to and in accordance with the conditions of such license.

APPLICATIONS FOR LICENSES.—3. Any application for a license under the preceding article is to be made in writing to the secretary, Board of Agriculture, 4 Whitehall place, London, S.W., and is to be accompanied by a statement signed by the owner of the dog to which the application relates, or by his agent, authorized in writing for this purpose, containing the following information, namely:

(i.) the description of the dog, stating so far as possible for purposes of identification the particulars of its breed, sex, age and color;

(ii.) the country from which it is proposed to be brought;

(iii.) the port at which it is proposed to be landed; and

(iv.) the place to which it is proposed after being landed to be moved for the purposes of such detention and isolation as may be required by the Board, and also the route by which it is proposed to be moved to such place of detention.

CONDITIONS OF LICENSE.—4—(1). The Board may insert in any license granted under this order, authorizing the landing of a dog, such conditions as they think necessary or desirable for the following purposes:

(*a*) for prescribing and regulating the detention and isolation of the dog by and at the expense of its owner for any period not exceeding six months at a place to be provided for that purpose by such owner and to be described in the license; or

(*b*) for regulating the movement of the dog to such place of detention and its movement during the period of detention prescribed by the license.

(2) A dog landed under the authority of a license granted under this order shall be detained and isolated in accordance with the conditions of such license, and shall not be moved in contravention of any such condition.

RESTRICTION ON GRANTING OF LICENSE.—5. An applicant for a license to be granted under this order for the landing of a dog will be required to satisfy the Board that proper and suitable arrangements can be made for such detention and isolation of the dog as appears to the Board to be necessary or desirable.

PROCEEDINGS UNDER CUSTOMS ACTS FOR UNLAWFUL LANDING.—6.—(1) If any person lands or attempts to land a dog in contravention of this order, he shall be liable to the penalties imposed on persons importing or attempting to import goods, the importation whereof is prohibited by or under the Customs Acts.

(2) The dog in respect whereof the offense is committed shall be forfeited.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable

FOUR DAYS AWHEEL IN ENGLAND.

NEW YORK, May 8.—*Editor Forest and Stream:* One hot morning at Petersham I awoke, realizing that there were but six days left before the sailing of my steamer in which to see rural England and try bicycling on her far-famed roads.

Petersham is a part of Richmond, some twelve miles from London, on the Surrey side of the river. It would be quite as simple to ride from London down Piccadilly, on the direct road to Windsor, as to take this detour and start from Petersham; in fact, I think one might find even better going to Windsor by that route. Be that as it may, we were at Petersham, and having previously seen Richmond very thoroughly, we had no desire to retrace our way; and, therefore, about 11 o'clock in the morning, with a very indefinite idea of the route, we swung into our saddles and started south on the main road for Windsor.

At Kingston, some three miles from Petersham, we turned sharply to the west, crossed the Thames and found ourselves in Hampton. A very pretty stretch of level, shady road leads through Hampton and past Hampton Court, running for several miles along the north bank of the Thames. On this Sunday morning the river was covered with every imaginable pleasure craft—launch, shell, punt and canoe—the bright gleam of bunting and awning and the shimmer of white canvas in the sunlight making a charming picture of light and color.

The road from Kingston to Windsor (sixteen miles) runs through Egham and strikes diagonally across the Long Walk half a mile from the Castle Gates. I need not warn you that half a day is all too short a time to give to Windsor. We had, however, spent a day in the castle and park only a short time before, and although I should have liked to again seen St. George's, where so many of England's monarchs are buried, and to have another glimpse of the Memorial Chapel, we realized that forty miles lay between us and the change of clothes which awaited us at Oxford, and allowed ourselves but a short hour for an excellent lunch and quiet pipe at the White Hart.

From Windsor, down Peascod lane to the Oxford road, and straight through Maidenhead to Henley, is sixteen miles, easily ridden in an hour and a quarter. There is nothing particularly interesting in this stretch, but the time shows that it is good level wheeling.

No more delightful place could be found for a couple of hours rest than the Red Lion at Henley. Such was my thought as we drank our tea by the open windows, watching the boats on the river and chatting with a group of "oars" on Yale's chances for the cup—now a matter of ancient history. The long coffee room was filled with parties who, having spent the day on the river, had stopped for a cup of tea before returning to London, and were ready to make strangers welcome.

Leaving Henley shortly before 6 o'clock, we took the straight road to Oxford—twenty-three miles. Here one leaves the Thames valley to ride across the glorious rolling country, which, to me, is rural England's greatest charm.

I shall not attempt to picture the beauties of that ride. The brilliant green and gold of the fields stretched away on either hand as far as the eye could reach, lined by the darker hue of the dividing hedges. Here and there the deep red of the low brick cottages, in charming contrast of color, might be detected beneath the trees, while bright on the hills and soft in the valleys shone the varying hues of the long twilight.

The road was hard and fast all the way with easy ascents and descents. At Wallingford, a charming little village with a picturesque inn at the cross roads, I punctured my front tire with a blackthorn, and owing to the delay caused by this accident it was 8 o'clock when we dismounted at Randolph's Hotel in Oxford.

We had tea the following afternoon in the rooms of Mr. ——, a professor at New ——. Sitting in his windows with a party of "Summerville girls," we could look out on the garden surrounded by the old city wall, and then in the cool of the early evening we strolled through Magdalene, watched the crews work on the river and came back by Addison's walk.

It was late when we started for Leamington; and I doubt not we lost many of the beauties of the ride. The road, which runs through Banbury, is level and good. If there was anything of interest in Leamington we failed to discover it, so after a good breakfast at the Mansion House on Tuesday morning we sent our luggage to Stratford, took a turn through the town and started for Kenilworth

It is, if my memory is correct, seven miles from Leamington to Kenilworth. The road was the poorest that we had seen, being very hard and stony, and suggesting the New York Boulevard above 125th street, but it is level and tolerably shady. The road leads straight through Kenilworth, but at the cross-roads at the northern end of the town, turn to the left and ride right up on to the sidewalk, which alone bridges a brook at the bottom of the hill.

It is not more than half a mile from the town to Kenilworth Castle. We spent an hour wandering about the splendid old ruin, picturing to ourselves the castle as it appeared in the days of that "valiant warrior, who never drew a sword," and recalling the time when we nearly broke our hearts over Scott's charming story. At the top of the hill, on leaving the Castle, we were well repaid for dismounting by a beautiful view, and I strongly advise any one coming here to follow our example.

We arrived at Coventry in plenty of time to lunch at the King's Head. Coventry—a busy, dirty, little town—is the headquarters for the bicycle manufacturing industry of England. Having seen many of their wheels, we did not care to investigate their factories and process of construction, but confined our attention to St. Michael's Church and St. Mary's Hall. The latter is an old mayor's hall, where, in a room that has recently been added, all the charters of the town are preserved and exhibited. I was surprised to read, with comparative ease, a charter signed by Edward I.

Leaving Coventry, our way as far as Kenilworth lay directly back over the road we had traveled during the morning. One is repaid in this case for doubling by the picturesque approach to the old town from this direction, with the ruins of the castle towering above the trees. At the cross-roads at the southern end of the town we turned to the left, taking the road to Warwick. If I am not mistaken we rode from Coventry to Warwick in about an hour. Besides that grand old feudal castle, with its magnificent galleries and splendid hall, whose modern furnishings and air of real comfort gave but an additional charm to a background of armor and weapons of every description, we visited St. Mary's Church and Beauchamp Chapel. The latter is a perfect gem, and, with the possible exception of the Chapel of Henry VII. at Westminster, is the most exquisite piece of architecture in all England. By the way, before going to the church, ride down to the bridge and take a last look at the castle from there; the five minutes so spent will well repay one.

From Warwick we had nine miles of good road, including a long, fast coast, in, I think, the last couple of miles, and before we realized it we had crossed the Avon and were in Stratford.

The average Englishman wonders why all Americans wish to see Stratford-on-Avon. He tells you that it is a flat, uninteresting country, and a stupid little town, and he is perfectly right. There is little in Stratford to please the eye, and nothing which seems to throw new light on that marvelous life which began and ended there; but the lover of Shakespeare will never forget the hour when he first knelt by the altar rail of the old church and with his eyes fixed on the lowly grave with its strange inscription, thanked God that he, too, had been privileged to add his tribute to the mighty heart and mind that lies below.

It was a few minutes before 6 that we arrived at the Shakespeare Hotel, which stands right on the street. It is a delightful, rambling old house, with five gables, whose rooms, instead of numbers, bear the names of Shakespeare's

plays. Being a youthful bachelor, I was somewhat amused to be assigned to King Lear. The coffee room is "As You Like It;" and allow me to suggest that you investigate an apartment entitled "Measure for Measure," which is presided over by Miss B., who has a keen appreciation of the requirements of Americans.

Wednesday morning, in attempting to ride to Worcester, we were caught in a severe storm. By the time we reached Alchester we were literally soaked, and as our baggage lay behind us, at Stratford, we were obliged to retrace our way. We thought then that our tour was ended, but as the rain moderated in the afternoon, we determined to make one more attempt, and at 5 o'clock made another start, this time toward Birmingham. It had been storming for hours, and we started in a soft drizzle, yet the roads, though slippery, were hard. The sensation was exactly the same as riding on wet macadam. It was not a pleasant ride, trees and hedges were ladened with the rain, a mist hung low over the fields, and the effect was dark and dreary.

We stopped at Henley-in-Arden for a cup of tea, and on leaving the inn found the clouds at last breaking away and the whole country bathed in the warm evening sunlight. Our spirits rose in proportion and suffered no reaction until, on dismounting at 7:30 o'clock at the Grand Hotel, Birmingham, we suddenly realized that our little cruise was at an end. It must be an excellent road from Stratford to Birmingham, for it was good going even in the wet, but it is not particularly interesting. Undoubtedly, the best route from Stratford is toward Worcester, where you ride at once into a very charming country.

We spent the night at Birmingham, a most unattractive, dirty city, and taking the morning train, on Thursday, were able to lunch in London, thus exactly carrying out our plans made on starting.

Wheeling in England is far more pleasant than in this country. The roads, to an American rider, appear really wonderful, and in our trip we were never more than walking distance from some clean, comfortable inn The English method of forwarding luggage is very simple, and I found it more reliable than our express system. All that I ever did was to give the boots a shilling in the morning and tell him where I wished to find my bag in the evening.

As regards bicycles, it is, in my opinion, a mistake to ride too light a machine. I rode a wheel geared to 72in., and found it most satisfactory. My tires, however, which were light, were entirely used up. The roads are very hard, and anyone riding for the scenery and not caring to pick his way, would do well to use heavy tires, which should also prove something of a protection against the dreaded blackthorn.

It would, of course, be a simple matter to spend a week or more on the route that I have given without feeling it a waste of time. My only desire is to point out to those who have but a limited time at their disposal, that they can ride it, with very great enjoyment and without undue exertion, in four days. C. A. LUMET.

THE BARDS AND THE BICYCLE.

"BIKE, and the world bikes with you;
Walk, and you walk alone,"

sings a latter day poet whose verse finds place in a compilation of cycling poetry made and published by Mr. Edward Redmond, of Rochester. Now that the world is divided into those who ride and those who are going to, there is no doubt room for such a compilation. In his preface Mr. Redmond says:

"Yet, who would have predicted only a little while ago that the domain of literature itself would be incidentally enlarged and adorned through the coming of the wheel? Nevertheless so it is. A new school of poesy has arisen to celebrate the tribulations and triumphs of the bicycling world. The bards of the bicycle have invaded Helicon in force, and have drank deeply from the waters of its sacred rill." The compiler says that the bards have taken water, but unless we had been so informed we should certainly have imagined that the drink which furnished their inspiration was something else. This, for instance, may have been composed upon Helicon water, but we doubt it:

"The high-grade bike Lord Ronald had bought,
Leapt like a Texas steer.
It skinned the shins of Lady Clare,
And stood her on her ear."

And then the author goes on to tell:

"Down stept Lord Ronald from his bike,
'Oh, Lady Clare, you shame your worth,
Your waist is all ripped up the back,
While you are rooting in the earth.'

"'I'm going to ride this thing,' she said,
As she felt around for her back hair;
'I'm going to ride the critter, or
My name will not be Lady Clare.'"

The poetry certainly has an up-to-date air to it. The piece called the "Spinning Wheel" is one of the best characterizations possible of a certain kind of femininity very much in evidence just now. The reference is to the Boulevard girl.

1776.

"Beside her wheel my ladye sits,
And spins the livelong day.
The drifted wool her fairy touch
Like magic melts away.
Certes, she is passing fair,
Fairer than verse may tell.
She winds the skeins about my hands,
And round my heart a spell.
The sunbeams dancing in her eyes
Dare me a kiss to steal,
From gentle Mistress Dorothy
Beside her spinning wheel."

1896.

"Scorching down the Boulevard,
Chewing gum and pedaling hard.
Ting-ling! almost knock me flat,
Dizzy tie, Fedora hat,
Scarlet bloomers: 'Tis a picture,
Makes my very senses reel.
'What was that?' I ask. Oh, merely
Dot astride her spinning wheel."

From Dorothy to Dot is quite a comedown, but no greater than the change from the stately measure of the first verse to the tripping, jerky lines of the last.

Another bard has something more kindly to say of the scorching girl. It happens this is his particular Phillida.

"She does not show a sign
Of a wing,
But her figure is divine;
And the fling
Of her abbreviated gown,
As she flickers through the town,
Might buy the throne and crown
Of a king."

If there is one subject upon which wheelmen are more united than any other it is the need of good roads. Phillida and Dot could never scorch if they did not have them. The reverse of good roads is the most unpleasant subject a true cyclist can contemplate. No wonder the author of "Just Mud" is sad.

"Mud, mud, mud,
As far as the eye can see,
And I'm glad that my tongue can't utter
The thoughts that arise in me.

* * * * * * * * *

"And the half-filled carts go on
With a little jag of a load,
But oh, just to feel the joy of a wheel
And a nice, hard, level road.

"Mud, mud, mud,
As far as the eye can see,
But the joy I miss on a road like this
Can never come back to me."

In every great upward movement of the human race there are always disgruntled individuals who can see nothing good in the new order of things.

Politics and bicycles are two great national institutions, yet one of the poets that has been corraled for the compilation ventures to poke fun at them, and to suggest a baby carriage fad as a substitute for wheeling. His contribution is entitled:

"LAMENT FROM THE CRADLE.

"Up from the cradle came a wail,
At first a pensive coo;
Into a weird, vociferous wail
Of mournfulness it grew.
His sorrow, in a vein prolix,
He struggled to reveal:
'My father's talking politics,
And mother rides a wheel.'

"'They say I'm cross—I'm simply sad
At being slighted so,
I wish the baby carriage fad
Could somehow get a show.
How can you blame one in my fix
For setting up a squeal?
My father's talking politics,
And mother rides a wheel.'"

There are 150 pages in "The Bards and the Bicycle," and a greater number of subjects. Many of the verses readily adapt themselves to popular airs, and such are noted.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

FIXTURES.

JUNE.

5. Atlantic, Adams cups, New York Bay.
5. Buffalo, opening cruise, small classes, Port Albino.
12. Brooklyn, annual, New York Bay.
12. Atlantic, special, New York Bay.
12. Buffalo, pennant, Lake Erie.
12. Gravesend Bay, annual, New York Bay.
15. Atlantic, annual.
17. Corinthian Marblehead, club, Massachusetts Bay.
19. Marine and Field, open, New York Bay.
19. Columbia, annual, Hudson River.
26. Buffalo, ladies' day, Lake Erie.
26. Gravesend Bay, cruise, New York Bay.
26. Atlantic, Adams cups, New York Bay.
26. Brooklyn, first special, New York Bay.

THERE is some possibility of Defender being fitted out by C. Oliver Iselin and raced this season; but even if the possibility becomes a certainty there is very little promise of good sport in the class. True, both Navahoe and Vigilant will be in commission; but even if they were fitted and raced at their best it is a foregone conclusion that Defender can beat both too easily to make such a contest interesting. Of course over some of the regular club courses and on the runs of the New York cruise the lesser draft of the centerboard boats might give them an unfair advantage, and doubtless Defender would be frequently hampered in many ways by her great draft. As far as Vigilant is concerned, her owner purchased her solely for cruising, in fact he even contemplated converting her into a yawl for that purpose, she has been fitted with a smaller rig, and she is now in no sense in the same class as Defender. Altogether the outlook for racing in the 90ft. class is by no means encouraging.

THE Boston *Herald* is still trying, through its Glasgow correspondent, to work up a movement in favor of 46ft. l.w.l. yachts. According to the *Herald's* views of measurement, such a race should be on the basis of waterline length only, with "no restrictions on skill" in the shape of the length and sail area rule, American or English. The Clyde yachtsmen, however well they may deserve the familiar epithet of "canny," as yet have not discovered what a race on such terms would mean for a British yacht. While the American "46-footer," if the extinct class should be resuscitated, would be a craft of great power and excessive sail area on a limited waterline, an enlarged Wasp, the innocent Scotch yachtsmen are tempted with the idea of racing craft of the British type, of the same waterline, but of just about half the power, such as Dragon III. or Eucharis. There is no likelihood whatever of a contest, but if one were arranged on the proposed plan of the *Herald*, the American designers would merely have to go ahead in a line with which they are perfectly familiar, while the British designer would be called upon to experiment in a new and unknown class of yacht. The experiment of racing the British 20-rater Jessica, a very fine example of Mr. Will Fife's work in this class, similar to Dragon III., against the American 46-footer Wasp, as made here in 892, shows what a one-sided affair such a contest would be. f international racing is to be introduced in the medium-sized yachts, it must be under some fair system of measurement not widely different from those now used in America and Great Britain, and the class selected must be one now in existence, and not one that has passed away.

MEMORIAL DAY.

May 31, 1897.

Harlem Y. C. Opening Race.

CITY ISLAND - LONG ISLAND SOUND.

THE regatta of the Harlem Y. C., the first of the Sound Y. R. U. races, brought out a goodly number of starters, but was marred by lack of wind. The morning was very unpromising, with fog and rain, but after the clearing up at noon there came a light breeze and the race was started. The times were:

OPEN CATS—18FT CLASS 12 MILES			
I D. K., T. McLaughlin	13.00	5 29 21	5 29 21

The winners were Pontiac, Mignon, Olive L., Camilla, Lizzie V., Cygnet, E. Z. Sloat, Yankee Girl, Eddie S., Zetes, Regina and I. D. K.

Millionaire, sloop, was in collision during the race with the coasting schooner L. L. Hamlin, of Providence, being struck by the latter in the attempt to cross her bows. The yacht lost her topmast and had her boom unshipped, while three men were thrown overboard, but were rescued.

Atlantic Y. C. Opening Race.

BAY RIDGE—NEW YORK HARBOR.

THE Atlantic Y. C. celebrated the day with a race for the regular classes, starting from off the Bell Buoy, Bay Ridge, the larger yachts sailing around the Southwest Spit and return, the smaller rounding the Bell Buoy in the Swash Channel, 19¾ and 14½ miles. The morning was foggy and rainy, but some time after noon the sky cleared and the light S.W. wind came in, so the race was started. When working about the line Feydeh was in collision with Hera, tearing the latter's mainsail so badly that she was forced to withdraw, Feydeh being uninjured. The afternoon turned out very pleasant, the reverse of the morning, and though the wind was light the course was sailed, the times being:

SLOOPS—CLASS J.

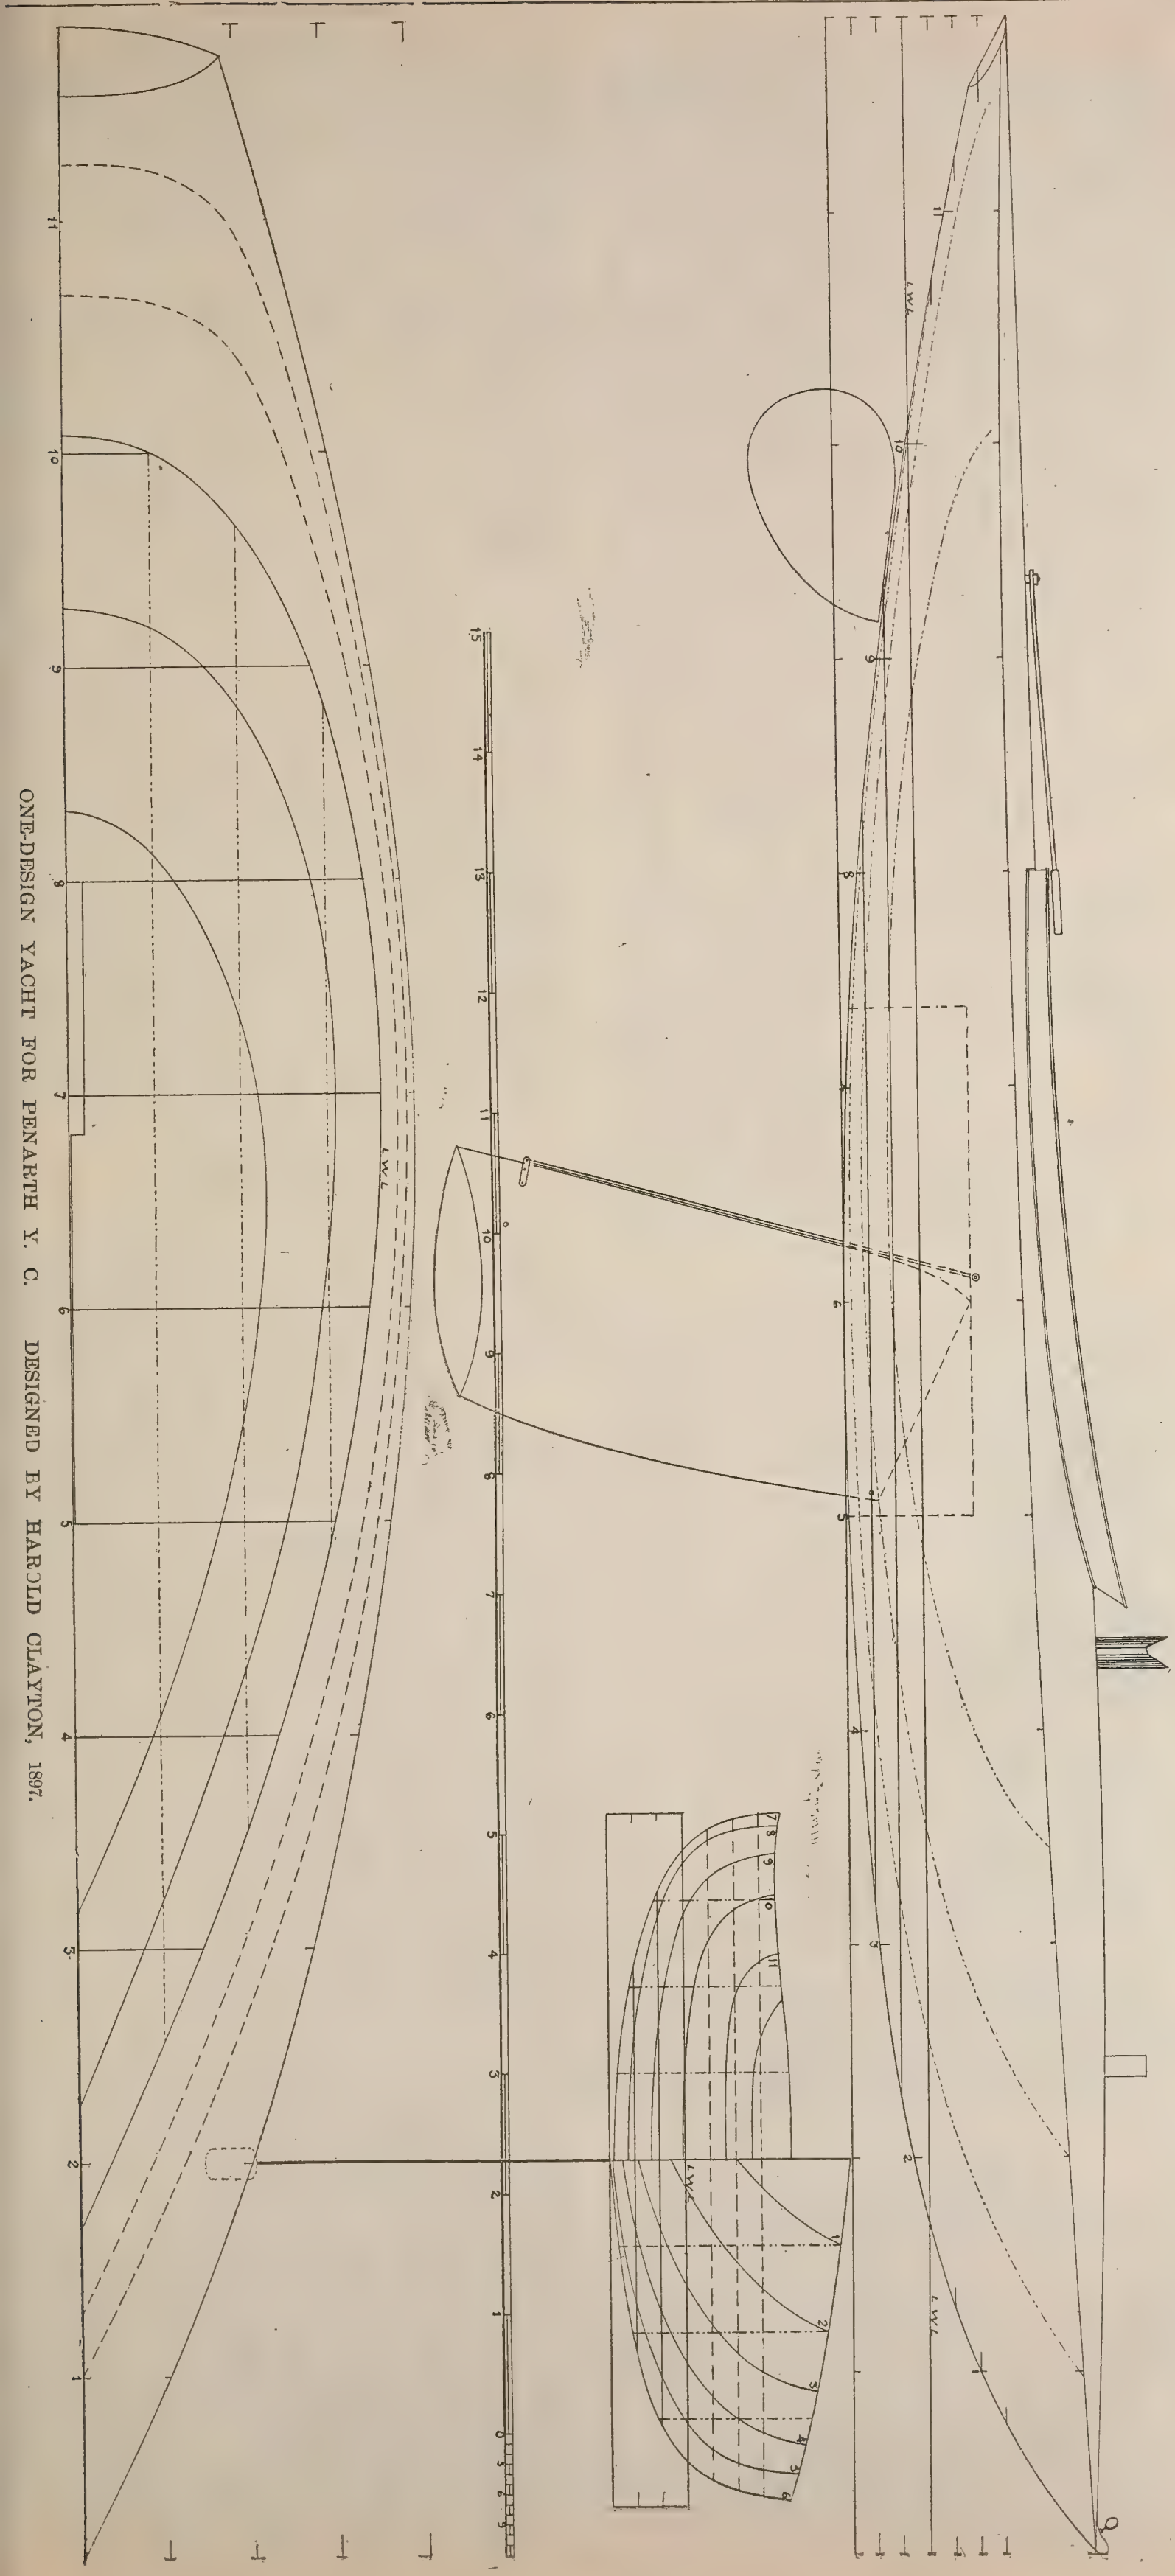
Eclipse lost her topmast.

Seawanhaka Corinthian Y. C.

OYSTER BAY.

Saturday, May 29.



THE Seawanhaka C. Y. C. opened its Oyster Bay station for the season on May 29, a number of yachts being at anchor in Seawanhaka Harbor and many members present. The colors were mast-headed with the usual ceremonies. In the afternoon a race for the 20ft. class was sailed in a fresh N.W. wind, the starters being Shark, Keneu, Asthore and Dad.

Asthore led at the line, with Keneu second and Shark third, but the latter, with a reefed mainsail, soon took the lead. On the last leg of the first round Shark parted her bobstay and was compelled to sail under her mainsail for a time until temporary repairs were made; these were ineffective, and she was finally beaten by Keneu. The times were:

Start 2 P. M.

	1st round.	2d round.	Finish.	Elapsed.
Keneu, M. Clark	2 38 00	3 15 00	3 36 05	1 36 05
Shark, Rouse & Hoyt	2 41 50	3 18 00	3 38 00	1 38 00
Asthore, P. T. Dodge	2 44 57	3 27 45	3 51 00	1 51 00
Dad, L. D. Huntington, Jr.	2 50 45	3 39 00	4 06 29	2 06 29

Dad measures 16ft. R. L.

ONE-DESIGN YACHT FOR PENARTH Y. C.

DESIGNED BY HAROLD CLAYTON, 1897.

Audubon Y. C. Opening Race.

NEW YORK—HUDSON RIVER.

THE Audubon Y. C. sailed its eighth annual regatta on Decoration Day over the club courses on the Hudson River, triangles sailed twice. The wind was S.W., light at the start and increasing during the race. The times were:

	Length.	Elapsed.	Corrected.
CLASS A—CABIN SLOOPS OVER 26FT.			
Vixen, W. H. Phillips	28.04	2 36 27	2 15 02½
CLASS C—OPEN SLOOPS UNDER 25FT.			
Iroquois, W. K. Genet	23.00	2 43 45	1 52 11
Sybilla, J. Kursterner	21.03	2 56 30	2 01 31½
CLASS D—CABIN CATS UNDER 27FT.			
Minnie, P. Griffin	25.11	2 42 25	1 56 17½
White Wings, A. H. Sheff	22.10	2 53 56	2 02 03½
Drift, W. T. Barnard	21.10	2 58 50	2 05 46⅜
Ladas, J. Webber	22.08	Did not finish.	
CLASS E—OPEN CATS OVER 20FT.			
Mary Isabel, F. J. Taylor	22.08	3 01 12	3 05 50
CLASS F—OPEN CATS 20FT. AND UNDER			
Adelle Rae, Chas. Rae	16.08	Disqualified.	
Millie, A. Sassmore	17.03	1 16 43	1 05 16⅝

Corinthian Fleet—20ft. Class.

NEW ROCHELLE—LONG ISLAND SOUND.

THE Corinthian Fleet, of New Rochelle, gave a special race for the 20ft. class on Decoration Day, the prize being a silver cup presented by Vice-Com. Miller. There were but two starters, Keneu, Mr. Clark, and Asthore, P. T. Dodge. Shark was not present, and the new Huntington boat was not ready, having lost her mast on her trial trip the previous day. The course was from off Harrison's Island around Gangway Buoy and Echo Island Buoy, the wind being light and variable. Asthore soon took the lead, and at one time was far ahead of Keneu; the finish was timed:

Asthore.....5 31 00 Keneu.....5 25 30

Yacht Designing.

THE PLANIMETER.

NEW YORK, May 28.—*Editor Forest and Stream:* In connection with the inquiry about a planimeter, I would like to state to your correspondent that the Thompson & Bushnell Co., New York, have a planimeter costing about $7 which reads areas in square inches, and decimals, which I have used very considerably, and found to be extremely simple to use and very accurate.

If your correspondent wants to try anything of this sort I should be glad to have him call on me and I will post him a little concerning its use. The planimeter is to a certain extent a scientific instrument, and the $10 a week salesman usually interviewed at the instrument maker's is not competent to speak on the subject. GEO. HILL.

[A very clear and complete explanation of the planimeter was published in the FOREST AND STREAM of April 14, 1892.]

The Penarth Y. C. "One-Design" Class.

THE Penarth Y. C., of Penarth, Wales, has this year established a new one-design class of 15-footers with lifting fin, and half a dozen boats have been built. The design was made by Harold Clayton, a member of the club, to whom we are indebted for a copy of the lines. The yacht is a handsome little bulb-fin of the following dimensions:

Length over all	21ft.
L.W.L.	15ft.
Beam, extreme	5ft. 9in.
L.W.L.	5ft. 2in.
Draft, hull	7½in.
with fin	4ft.
Freeboard	9in.
Sail area	200sq. ft.
Displacement	1,006lbs.

The following regulations have been drawn up to govern the class:

1. All boats to be built from the accompanying designs and specifications, and under the supervision of the designer.
2. Sail area limited to 200sq. ft., Y. R. A. measurement, to be distributed at the discretion of the owners. Sail area to be measured by official measurer of the class.
3. No boat is allowed any alterations of hull or ballast, and any alteration rendered necessary by change of rig must be notified to the committee.
4. Each boat shall be provided with either tanks or corks, so as to be rendered unsinkable with crew on board. All boats to be so tested by official measurer.
5. Sailing Rules.—(a) Y. R. A.; (b) crews shall be limited to two; (c) no paid hands allowed; (d) each boat shall carry when racing an anchor not under 15lbs. in weight and fifteen fathoms of rope, also a life buoy ready for use.
6. Management of Class.—All members of the P. Y. C. shall be eligible as members of the class.
7. Gentlemen not members of the P. Y. C. may be admitted at discretion of the committee of the class on payment to the designer of his fee of £1 1s. for use of design, and shall be allowed to compete in all races.
8. A committee consisting of boat owners of class (one boat, one vote) shall be formed, which shall decide on all questions (other than racing) concerning boats competing in this class.
9. No alteration or addition to these rules shall be made without a two-thirds majority.
10. All races shall be sailed under the management of the sailing committee of the P. Y. C.

SPECIFICATIONS OF BOATS.

Keel—American elm, 6×1½in. amidships, tapering to fore end.

Stem—English oak, also apron.

Transom—American elm.

Timbers—Bent timbers, American elm, 1×½in.

Deck beams—¾in.×3in. in middle and 2in. at gunwale, of white pine. Beams at each end of well to be of elm, with upright support underneath.

Center Case—Yellow pine, 1in., 5ft.×15in., slot ½in., with larger hole for bulb to come up.

Rudder Trunk—Brass pipe.

Planking—½in. full archangel spruce, picked wood, ten strakes a side.

Deck—½in. spruce, to be covered with calico and painted, the middle plank to be ¾in., and let in flush with the rest. Deck, 7in. round at the highest point.

Cockpit Carlins—1×2in. white pine joined to gunwale by half beams ¾×2in., 1ft. apart.

Rubbing Strake—American elm, 1×1½in., half round.

Coamings—American elm, 4in. high forward and 3in. high aft.

Samson Post—Oak, 2½in. square, to be fitted 4ft. from stemhead.

Mast Step—Block of oak to be screwed on to keel.

Cockpit Floor—½in. soft wood flooring, to be supported on six soft wood timbers, ¾in., to be butted against center case and screwed to skin of boat.

Moulds—Boat to be built on eleven moulds (a full-sized drawing of which will be supplied).

Fastenings—All fastenings to be of copper or brass.

Painting—Two coats of paint inside and one outside, to be supplied.

Rudder—English elm, ¾in.

Weight of Plate—801bs., with bulb 180, made of ¼in. mild steel and galvanized.

Draft with Plate—4ft.

Price of Boat—£20. Estimated price complete, including sails and all fittings, 15 fathoms of mooring line and moorings, £30.

Roval St. Lawrence Y. C.

DORVAL—LAKE ST. LOUIS

THE first race of the season of 1897 was sailed on the afternoon of May 22, the *début* of the new 20ft. class.

Five boats—all new this year from the designs of G. H. Duggan, and built and equipped by the Yacht Company of Canada—were afloat, and all started, although two of them had hardly got the last shackle on board before the preliminary gun was fired, and indeed, one of them, Rogue, was only launched that morning.

The boats, with their bright decks, black top sides and bright metal fittings, are decidedly taking in appearance, and under way are singularly graceful. Any further description of them at this time is something that goes beyond the limits of cold type. There was a hard west wind blowing, with puffs from the northwest, when the boats crossed the line at 4:05 in the following order: Avoca, G. H. Duggan and F. P. Shearwood; Islander, G. A. S. Hamilton, *et al*; Glenowen, Shirley Davidson; Rogue, A. F. Riddell and J. C. C. Almon; Maida, H. B. Young and R. R. Wallace.

All went across when the second gun was fired except Maida, which was handicapped 1m. 10s., and all were under double reefs excepting Maida, which lugged her full mainsail rather than endanger it by reefing. Islander, after one or two bad knock-downs, lost her spar in the first round and was out of it. Avoca gained steadily, and the finish of the first round was as follows:

Avoca	4 41 15	Rogue	4 45 04
Glenowen	4 43 14	Islander	Dismasted.
Maida	4 46 22		

In the second round the wind lightened up perceptibly, and there was no change in the relative positions of the boats, but as it began to darken up and came down hot from the west and south, it was decided to stop the race at the end of the round:

	2d Round.	Elapsed.
Avoca	5 19 42	1 14 43
Glenowen	5 23 15	1 18 15
Maida	5 31 00	1 25 00
Rogue	Did not finish.	

On May 24 the first race for the Ross series was sailed. The day was hazy, but there was a fine breeze from the southwest. Islander, whose broken spar had been replaced by a solid stick, was ready in ample time, and went out with two reefs in, with H. K. Wickstead at the stick. The other four boats were sailed as formerly, and there were two additional entries, viz., Viola, S. Thornton, and Missie, a 15-footer of last year, the Rev. Mr. Kittson, sailed by V. Pelletier.

The start was made at 3:35; Missie got away with a lead, closely followed by Avoca; Islander, Glenowen and Rogue went across almost together, and shortly after they got mixed up with one another in a rather complicated way which cost them some time, but no actual foul occurred. Maida made a clear start, and Viola was some 23m. late, but in spite of this handicap went on and sailed the race. Avoca passed Missie in the first tack, and Maida quickly took second place, Rogue third and Islander fourth, with Glenowen fifth. Missie dropped steadily to the rear, and the first round was completed as follows:

Avoca	3 31 50	Islander	3 34 20
Maida	3 32 50	Glenowen	3 35 05
Rogue	3 33 45	Missie	3 38 10

In the second round Islander, who had gained on the whole fleet on the reach, put Rogue about and walked through her weather, and turned the first buoy in second place, Maida having lost badly on the windward work. The second round was finished as follows:

Avoca	4 03 00	Maida	4 06 20
Islander	4 05 10	Glenowen	4 07 45
Rogue	4 05 15	Missie	4 12 30

During the third round there was no alteration in the position of the boats, excepting that Avoca increased her lead on the fleet, and Islander pulled away from Rogue, and the finish was as follows:

		Elapsed.
Avoca	4 35 55	1 40 55
Islander	4 39 45	1 44 45
Rogue	4 40 50	1 45 50
Maida	4 41 00	1 49 00
Glenowen	4 45 10	1 50 10
Missie	4 52 00	1 57 00

Massachusetts Y. R. A.

THE new book of the Massachusetts Y. R. A. is just out—a very neat volume, for which much credit is due to the secretary, A. T. Bliss. The Association now includes the following clubs: American (Newburyport), Atlantic (Boston), Boston Y. C., Burgess, Cape Cod, Chelsea, Cohasset, Columbia (Boston), Commonwealth, Dorchester, Duxbury, East Gloucester, Hull, Jeffries, Kingston, Lynn, Manchester, Massachusetts, Musquito Fleet, Old Colony, Plymouth, Quincy, Revere, Savin Hill, South Boston, Squam, Squantum, Wellfleet, Winthrop and Wollaston; thirty clubs.

The officers for 1897 are: Pres., Louis M. Clark; Vice-Pres., A. H. Higginson; Sec'y, A. T. Bliss; Ass't Sec'y, R. M. Wood; Treas., Walter Burgess. Ex-Com. Louis M. Clark, A. T. Bliss, T. E. Jacobs, N. B. Stone, J. E. Robinson. Official Measurer, James Bertram, 330 Broadway, South Boston. Sec'y Bliss's address is 111 Milk, street, Boston. The yachts of the Association are measured and classified by waterline length alone, taken with the maximum crew aboard that the owner elects to carry. The classes are: First class, cabin yachts under 29ft. l w.l.; second open class, open yachts under 24ft. waterline; second class, cabin yachts under 24ft. waterline; third class, under 20ft.; fourth class, under 17ft.; knockabout class. The crews are limited as follows: First class, 7 persons; second class, 6 persons; third class, 5 persons; fourth class, 4 persons; knockabout class, 3 persons. The Herreshoff allowance table is used.

Dorchester Y. C. Opening Race.

DORCHESTER—BOSTON HARBOR.

Saturday, May 22.

THE Dorchester Y. C. opened the season with an open sweepstakes race for the 17ft. class on May 22, sailed in a reefing breeze from N.W. that dropped and was followed by a light easterly air in the second round, finally breezing up again from N.W. The times were:

	Length.	Elapsed.	Corrected
Alpine, C. J. Blethen	16.00	1 19 00	0 47 19
Circe, F. L. Pigeon	16.00	1 20 17	0 48 36
Vitesse, C. D. Mower	16.01	1 21 44	0 50 10
Ripple, C. B. Pear	16.02	1 24 43	0 53 16
Hector, F. M. Crosby	16.00	1 28 05	0 56 25
Glide, G. D. Silsbee	15.06	Disabled.	
Anita, W. A. Rose	16.04	Withdrew.	

Prizes—Alpine $12, Circe $8 and Vitesse $5.

Judges—Com. F. L. Codman, Hartford Davenport, Oliver F. Davenport, G. E. Rose, A. P. Nute and W. A. Moulton.

The FOREST AND STREAM is put to press on Tuesdays Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

Lake Minnetonka.

THERE was a big crowd of yachting enthusiasts at Minnetonka on May 15–16, and they had good weather in which to try the new boats that have created so much discussion pending the opening of the season. There was only a light wind, but most of the recently launched boats were trying their wings. Never was there a season on the big lake in which the new ones were watched with such intense interest as this year. Among the first to show up yesterday morning was the Hopkins and Fayram boats. They chased each other across the lake, and in the flutter that was blowing seemed to have a pretty even break. The sails set much better on Hopkins' boat than on Fayram's, but both of them seem likely craft, and there is no telling where the honors will rest when the season is over.

H. C. McLeod went out in the new boat built on his design by Moore and had a fair opportunity of finding out what she would be able to do in light weather. The critics are constrained to admit that this latest turnout doesn't look as fast as Charlotte by minutes. She had a good lively brush with Kite and the old Marie, but didn't do as well by any manner of means as Charlotte would have done in similar weather. Of course there is a considerable allowance to be made for the newness of the boat, her sails being unstretched and all the rest of it; but at the same time it must be admitted that she did not impress Minnetonka sailors very favorably in her behavior yesterday. When a puff struck the new boat she seemed to heel over a great deal too much, and it is much to be doubted whether Charlotte's tenderness has not been emphasized rather than decreased in the new production. The boat is magnificently put together and well rigged, and this advance criticism may prove to have been premature.

Pillsbury's boat was put afloat on Saturday, but she is not yet rigged. From the set of the hull in the water Mr. Pillsbury is going to have a very handsome craft, and one that may affect the season's results materially.

A good deal of work has been done on Watson's boat at the Dyer yard since she was afloat last week. She is having a new heavy centerboard put in her. The Griggs boat also has the mast unstepped, and is being changed in some minor details. She will remain at Minnetonka another week, and then be transported to White Bear, where she will be counted on to carry the honors of the season by her owner. There is no doubt about the speed of this boat, and, moreover, she is as stiff as the orthodox Russian church. Peterson is thoroughly satisfied with the new craft, and in quiet little side remarks to his friends he makes it plain that he expects her to win the honors of the year.

The cynosure of all eyes yesterday, however, was the Ferndale boat, whose handling will be under the captaincy of E. J. Phelps, owner of Alpha. The Ferndale syndicate has succeeded in getting up one of the most freakish-looking creations ever seen on the lake, and while she may sail like a scared greyhound, there is nothing in her construction as she lies at present to indicate any of the whys or wherefores. The boat will be blackleaded and ready to get away by next Saturday. She will be black as a crow all over. The crowds that were down to look at her yesterday were very interested, and some are enthusiastic believers in this type. On the other hand, there were men in the gathering who didn't believe she would be able to sail faster than a canal barge. Anyhow, the new boat will carry sail enough—850ft.—and, moreover, she will have to pay double forfeit for the additional 150ft. over the 700ft. limit. The rudder of this boat, instead of being shipped a foot or two forward, is set right on the stern after the manner of one of the old square-sterned boats. Most of the new ones will be all ready for business next week, and there will be some interesting brushes between them.—*Minneapolis Journal.*

A Very Old Ship.

THE bark True Love, built in Philadelphia in 1764, has been found upon search to be yet afloat in the capacity of a coal hulk, engaged in active trade. This discovery was made through a casualty recorded in the *Maritime Exchange* as follows: True Love, barge, was in collision with schooner Gravesend, of London, off Gravesend, and had port quarter damaged to such an extent that it was found necessary to tow her into Rochester, and she arrived at that place in charge of the tug Commerce. The True Love has not only outlived her builders and their successors, but has also outlived every craft that was built in her time and for many years afterward, and this fact, coupled with the report that the historic old craft is still engaged in active pursuits, places Philadelphia at the very top notch as a ship-building center.

In 1764, when this famous old craft was launched on the banks of the Delaware, although her length was but 96ft. 8in., she was then the largest vessel of commerce that the Delaware had ever floated. Contrast this with the dimensions of the huge Hamburg-American Packet Company's steamship Pennsylvania, whose length is 587ft., and one will be amazed with the magnitude of the modern ship of commerce.

The True Love, upon being completed, sailed away from Philadelphia early in 1765, and no record is had of her return to this city until Aug. 22, 1873, when, at the age of 109 years, she came into port from Ivigtut, Greenland, with a cargo of kryolite in command of Captain Thomas Nathaniel, consigned to B. Crowley. She was discharged here and surveyed by the American Lloyds in October, 1873, and sailed away, never to return again. Upon her arrival shortly afterward in London she was sold and turned into a coal hulk, in which capacity she still serves.

The dimensions of this famous True Love are: Length, 96ft. 8in.; beam, 26ft. 9in; depth of hold, 17ft. She measured 296 tons register, and, like all old craft, carried very little more cargo.

The discovery that there was still afloat a Philadelphia built vessel of such an age has caused much comment on the floors of the Maritime Exchange, and some shipping men are of the opinion that this old craft should, if possible, be purchased as a relic. Records show that the True Love was for a time owned in Hull, England, by G. Dahl previous to her purchase by John S. Ward, of London, and during that time she was engaged in the Baltic trade.—*Philadelphia Press.*

Racing at Hamilton.

THE two yacht clubs of Hamilton, Ont., opened the season on May 24, the Royal Hamilton, with races for the 27ft., 22ft., and skiff classes. In the 27ft. the times were:

Hiawatha	1 23 45	Kestrel	1 30 30
22FT CLASS.			
Rosemary	1 13 20	Scallawag	1 28 12
Koko	1 18 54	Eclipse	1 40 42
Euroclydon	1 28 07		
SKIFF CLASS			
Fir-fly	12 33 07	Atalanta	12 42 20
Buttercup	12 35 30	Stella	Capsiz'd
Surge	12 26 30		

The Victoria Y. C. race was for the 15ft. class and skiffs, Sothis being beaten by Fleetwing, and Firefly winning in the skiff class with trio, Kittie and Dottie in order.

Rosemary is the fin-keel Caruli, designed by Arthur Dyer; Koko has just been purchased from W. G. Mackendrick by Mr. Hunter, of Hamilton. Sothis is Mr. Duggan's first 15-footer of last year, and Fleetwing, we believe, is a new boat designed by him in the fall.

Another International Race.

THE noted canoeist, William Willard Howard, is apparently possessed of an insatiable longing for international races which even the credit for originating the present interesting competition for the Seawanhaka international cup, and the honor of winning the Royal C. C. challenge cup last year has failed to allay. Not even content with the chances of meeting Canada through the possible success of his new 20-footer in the Seawanhaka trial races, he has inaugurated a little international side show of his own, merely as a *bon bouche* to the greater contest. We merely reprint the following from an exchange, without vouching for its accuracy or attempting to correct several apparent errors.

An international yacht race without the usual preliminary was sailed here this forenoon by two of the new candidates for the Seawanhaka cup trial races. The arrangements were made in the quickest trial on record. At daylight this morning Mr J. P. Abbott's crack 20-footer Lalaga, bound from Toronto, where she was built, to Montreal, was found tied up to one of the river front wharves. She was on her way from Toronto to Montreal to compete in the Royal St. Lawrence Y. C.'s trial races for the selection of a yacht to defend the international challenge cup, which the Canadians won from the Seawanhaka Club, of New York, last summer. Lalaga was built by Cuthbert, of Toronto. She was in charge of Mr. Cuthbert's son, an expert yachtsman. Thos. R. Gillespie, of Montreal, was a member of the Canadian party. When the Canadians turned out of the cabin of the cutter this morning they were informed that the new 20-footer Arauca, which was built by L. F. Ferry, of Clayton, for William Willard Howard, of New York, was here awaiting shipment to take part in the Seawanhaka races at Oyster Bay to select a challenger for this same cup, which Lalaga hoped to defend. Mr. Howard, who is here getting his boat ready for shipment, was notified of the Toronto champion's arrival, and at 7:30 A. M. he hastened down to the wharf with an informal challenge for the race. This suited the Canadians. Less than ten minutes' preparations for the race were indulged in. The course was a run to Chapman Shoal Buoy, a beat to windward to a buoy in the upper bay, and a broad race to the starting line. The wind was moderate, with occasional spiteful puffs. Both yachts crossed the starting line abreast, with booms broad off port. Lalaga soon jibed to starboard, and slowly forged ahead, the American boat apparently not getting as good a pull on her mainsail. Arauca kept her boom to port, but lost ground steadily. At the Chapman Buoy she was 25 seconds astern. Sheets were then flattened in for the beat up the river. Lalaga pointed high and footed fast, and in the attempt to point up with her the American fell still further behind. Capt. Charles Seymour, who, with the assistance of Tom Purcell and Will Penny, was sailing Arauca, saw that this was a losing game, and so he gave her a rap full and sent her through the water at a great pace. Arauca could not point with the Canadian, but she dashed through her lee and soon took the lead. From that time on Arauca romped ahead as she pleased. The Canadian gave it up as a bad job when the race was half over. Arauca was at that time 3 minutes ahead and gaining fast. After the race the Canadians continued their journey toward Montreal. This was Lalaga's first defeat. Both boats were handled with great skill.

Winthrop Y. C. Opening Race.

GREAT HEAD—BOSTON HARBOR.

Saturday, May 22.

THE Winthrop Y. C. opened the season on May 22 with a race for the 24ft. and 20ft. classes, but with few starters, two in each class. The start was made in a fresh N.W. breeze, which gradually decreased to quite a light air at the finish. In the 24ft. class Nettie's elapsed time was 1:37:15 while that of Alma was 1:54:12. Nettie is the new keel boat designed by J. R. Purdon for Walter Burgess. In the 20ft. class Harriet's time was 1:19:35 and Ecila's was 1:20:35. On June 5 the first championship race will be sailed.

YACHTING NEWS NOTES.

The Rhode Island Y. C. announces the following fixtures: Ladies' day race, at Pawtuxet, Tuesday, June 22; annual club race, at Potter's Cove, Saturday, July 17; annual open race, at Pawtuxet, Monday, Aug. 23; annual club cruise, July 13–18 inclusive.

A correspondent sends us the following gem in the way of yachting news from a New York State paper: "Charles W. Havens, of Rome, who is one of the best boat builders in the State, has just completed at the Sherman dry dock a handsome double frame sloop, for James Ecret, foreman of the Anchor knitting mill of Whitesboro. It is 31ft. over all with a 11ft. beam. Its average depth under deck is 6ft. 2in. There are five lockers in the cabin, cupboards and closets. It is what is known as a centerboard boat, built of white oak planking 1¼in. thick. The workings of the upper deck is of white pine, finished in the wood. The sloop is now at Whitesboro, being rigged with curtains, draperies, upholstering, etc. Mr. Ecret expects to start about the first of the month with a pleasure party for the Chesapeake Bay. His pleasure trip completed he will leave the sloop with a relative to be used in the oyster beds. The hoist will be 15ft. in the float, aft leach, from tip to boom to tip of gaft, 26ft. The gip will be 16ft. on the boat with 22ft. hoist, being what is known as a sloop rig. The standing rig will be of wire cable and the running rig of the best manilla."

Colonia, schr., Com. Postley, has been on Hawkins's railway, City Island, all winter, and an attempt to launch her was made on May 21, the night tide being favorable. After running down some distance the cradle stuck, and all that could be done was to draw it up again, which was accomplished with some difficulty. The rollers under the cradle were repaired and the yacht was finally launched on May 26 Capt. Charles Barr and Mate Miller are in command, as last year.

The annual meeting of the Interlake Y. R. A., of Lake Erie, was held on May 15, at Toledo, the representatives present being E. W. Radder, Cleveland Y. C.; Geo. T. Bliss, Erie Y. C.; H. G. Look, Detroit Y. C.; D. H. Jones, West End Y. C., Detroit; Geo. F. Anderson, Sandusky Y. C.; L. F. Schimmel, Detroit Y. C., and Henry Tracey, Toledo Y. A. Prior to the meeting the visiting yachtsmen were entertained by Com. Richardson at dinner at the St. Charles Hotel. The programme was arranged for the annual racing meet at Put-in-Bay; Monday, July 5, rendezvous; July 6, 52ft., 42ft. and 37ft. classes; July 4, 32ft. and 27ft., naphtha launches and catboats; July 6, free-for-all cup, now held by Zelma, of Hamilton. It was decided to include the 22 footers in the 27ft. class, the former class not being officially recognized by the Association. Other details of the races, ball, etc., were decided on. Com. Richardson spoke of his recent visit to New York as a delegate to the yacht conference, and all present indorsed the idea of the proposed national union. Mr. E. W. Radder, of Cleveland, was elected as the representative of the Association to any future meetings. Mr. Radder, who has been very active in the interest of the Interlake Y. R. A., and later in the formation of the Lake Y. R. U., read a report on the work of the latter body.

Late last season the steam yacht Alcedo, G. W. C. Drexel, of Philadelphia, while on her way home from the eastward, was compelled, through illness on board, to lie for some days off College Point, where Mr. Drexel was tendered the use of the float and station of the Knickerbocker Y. C. As a graceful acknowledgment of this simple act of club

courtesy, Mr. Drexel has presented to the club a very handsome silver trophy, which, by the decision of the regatta committee, will be sailed for at the annual regatta of the K. Y. C. on June 5. The cup will be given to the yacht making the best elapsed time over the Gangway Buoy course; to become the permanent property of the yacht which shall win it for two years in succession.

The serious illness of Mr. Gouveneur Kortwright has led him to dispose of the new steam yacht nearly completed at Marvel's yard, Newburgh, and a purchaser has been found in Mr. Colgate Hoyt, of Oyster Bay, one of the owners of the new 20-footer Shark. Mr. Hoyt will rig her as a schooner, instead of a yawl, and will find a new name in place of that originally proposed.

Eugenia, steam yacht, J. Gardner Cassatt, arrived at her home port, Philadelphia, on May 21. She left Marseilles on April 25, touching at Gibraltar on April 28, and sailing on May 1 for Fayal, where she laid from May 6 to 8. On May 16 she reached Bermuda, and sailed next day for Philadelphia. Eugenia was designed by Alfred H. Brown, of London, designer of Narada, Enterprise and other fine yachts. She is 149ft. 6in. over all, 133ft. l.w.l., 19ft. beam, and 10ft. 6in. draft. She has but moderate power, with good bunker capacity, being designed for cruising. Capt. C. T. Platt is in command.

Gossoon, cutter, recently purchased by P. T. Dodge, of New York, arrived at that port from Boston on May 26, after a rough passage. Mr. Dodge was on board, accompanied by E. Burton Hart, Jr., W. I. Zerega and F. B. Jones. The yacht will be fitted for racing, being in the 51ft. class, and will sail in the regular Sound races of the season.

The challenge of the Harvard Y. C. to the Yale Cor. Y. C. for an intercollegiate yacht race this year has been declined.

Natka, yawl, has been launched at Baltimore, where she was designed and built by L. J. Nilson for Col. F. de Funiack, of Louisville, Ky., a member of the Corinthian Y. C. of Philadelphia. She is 60ft. over all, 44ft. l.w.l., 16ft. beam and 6ft. draft, with a White & Middleton engine. The model is in every way that of a sailing yacht, with modern ends and lead keel, the engine being purely auxiliary. The interior is well arranged and very tastefully fitted up.

The Yacht Company, of Canada (Dorval and Montreal), has issued a very complete little catalogue of small craft and fittings made by it. The designer and superintendent of the company is our old contributor, H. K. Wicksteed, a cruiser of wide and varied experience in canoes, canoe yawls and small yachts, as our readers well know, and the designer of many good craft of these types. The work of the company in the line of racing yachts can be left to speak for itself, as it has turned out five yachts already for the 20ft. class of the Royal St. Lawrence Y. C., but it is prepared to do good work in the cruising classes as well, some excellent cruising boats of Mr. Wicksteed's design, such as have already been illustrated, being described and listed at very low prices. The company is the agent for the special fittings of the Linotype Co., as made for Glencairn last season and this year for the new 20s; it also handles the new bottom composition used on Glencairn, and other special articles for small racers and cruisers. The catalogue is illustrated by several plates of canoes and fittings.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1896-97.

Commodore, John N. MacKendrick, Galt, Canada.
Sec'y-Treas., John R. Blake, Galt, Canada.
Librarian, W. P. Stephens, Bayonne, N. J.

PURSERS.

Atlantic Division, H. W. Fleischman, 1611 N. 21st St., Phila., Pa.
Central Division, Laurence C. Woodworth, Gouverneur, N. Y.
Eastern Division, F. J. Burrage, West Newton, Mass.
Northern Division, Francis H. Macnee, Kingston, Canada.
Annual dues, $1; initiation fee, $1.

WESTERN CANOE ASSOCIATION, 1895-96.

Commodore, C. F. Pennewell, Detroit, Mich.
Vice-Commodore, Nat. H. Cook, Chicago, Ill.
Rear-Commodore, E. H. Holmes, Milwaukee, Wis.
Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

Canoe Racing in America.

The *Field* says:

The FOREST AND STREAM quotes about half a column of *Field* canoeing notes, but does not give a hint as to its own views on the points therein considered. We are always keenly watching the canoeing movements in America and Canada, and we would, of course, like to know how the English views are accepted in the States. The Americans and Canadians are in just the same fix as to canoeing as we in England were in up to last year; they have got the capsizing machine among them in its prime. The FOREST AND STREAM says, in relation to our R. C. C. penalty for capsizing, "just what the result may be, it is impossible to foretell. It is late in the day to remedy the vast amount of harm that has been done to canoeing and canoe racing by the revolving bath tub, and even though this type be abolished, we doubt whether a new and more useful type will take its place."

To this we say it is "better late than never" to attempt to remedy the result of the evil, and as to the last sentence, no one can say whether "a new and more useful type will take its place," but we can safely say the new type is there ready and can take its place; and, venturing on prophecy, we say it will take its place as soon as the new class is a little more seen and known.

If the "cruiser" class cannot produce a canoe fast enough for successful racing against the revolving bathtub type, it will, none the less, produce a canoe in which the sport and excitement of racing can be enjoyed, and such races will be made pretty hot for the poor racing things. And then when the fun is over and the racing fiddles have retired to their boat-house shelves to dream of possible glory to come next year, the cruiser will be enjoying to the full grand sailing and pleasure cruising in comfort till the winter comes down upon her.

The present situation in American canoeing, from a racing standpoint, is suggestive of the old adage: "All signs fail in time of drought." Thus far there is nothing to indicate that there will be any canoe racing this year, except at the A. C. A. meet, and that of an uncertain quantity. Unless Mr. Butler has a dark horse stowed away at Lowell, no canoes are building; no club races whatever are scheduled, and there is no talk of racing among canoeists. The meet will bring out some racing men and a couple of dozen or so canoes, perhaps half that number of sailing craft, but the brunt of the racing will probably fall on Messrs. Butler and Archibald, with some new men and novices as whippers-in.

The situation here is much less promising than in England, where a moderate revival of canoeing is now going on. By dint of persistent neglect of prohibitive legislation the A. C. A. has produced the revolving racing machine, but this is not, as the *Field* states, in its prime; it has almost passed away. At the same time there is no demand for anything to take its place, that is, anything without a diamond frame and pneumatic tires. As long as the present feeling exists among clubs and individual canoeists, there is little hope of improving the condition of canoe racing by any legislation, however good in itself, in favor of better canoes or imposing penalties on the racing machine.

Rifle Range and Gallery.

New England Rifle Association.

HARTFORD, Conn., May 21.—The first spring meeting of the New England Rifle Association, held at Union Grove yesterday and to-day, has proved to be a great success. The association was formed by the members of the Hartford Rifle Club, Springfield Rifle Association, Citizens' Rifle Club of Meriden and the Independent Rifle Club of New Britain, and has a membership of over 60.

The shoot has been fairly well attended by members of the association, but the greatest interest has been aroused among the local shooters by the presence of such noted shots as M. Dorrier, of the Greenville (N. J.) Rifle Club; and Gus Zimmerman and champion Fred C. Ross of the Zettler Rifle Club of New York city. The work of each of these celebrated marksmen was watched with much interest.

The shooting committee was composed of the following members of the Hartford Rifle Club: H. M. Pope, W. J. Dunbar, J. C. Wiseman, F. K. Rand, W. N. Woodruff, H. I. Strickland and D. S. Seymour.

On the German ring target Zimmerman took the first prize for the three best tickets with scores of 71, 71 and 70. Dorrier scored a 71 and two 69s and took second prize. W. B. Hall and E. S. Pillard, of the New Britain Club, were tied for the third prize of $4. each having scored 208 points. Other leading scores were: Bushholz, of Springfield, 206; Eichel, of New Britain, 200; Woolman, of New Britain, 200; Talbot, of Springfield, 201, and Parmelee, of New Britain, 198.

At the muzzle rest contest, where the Columbia target is used, the best scores were Talbot 6, Stutz 7 and Nettleton 10. On this target the lowest score is the best, the numbers running backward.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

June 7-8.—PARKERSBURG, W. Va.—Tournament of the Mountain State Gun Club. Targets. $350 added. Leon J. Epstein, Sec'y.

June 8-9.—KOKOMO, Ind.—Tournament of the Trap-Shooters' League of Indiana.

June 8-10.—SIOUX CITY, Ia.—Third amateur tournament of the Soo Gun Club. W. C. Wells, Sec'y.

June 10.—BATH, Me.—Sixth annual tournament of the Bath Gun Club. Open to all. Geo. E. Thompson, Sec'y.

June 8-11.—AUBURN, N. Y.—New York State Sportsmen's Association tournament. C. W. Tuttle, Sec'y.

June 9-10.—MONROE, La.—Tournament of the Interstate Association, under the auspices of the Monroe Gun Club.

June 10.—NEWCASTLE, Pa.—Third tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

June 15-18.—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June 17-20.—ANACONDA, Mont.—Thirteenth annual tournament of the Sportsmen's Association of the Northwest and fourth annual tournament of the Montana State Sportsmen's Association, under the auspices of the Anaconda Gun Club. $1,500 added. C. A. Tuttle, Sec'y.

June 22.—OGDEN, Ill.—Second annual tournament of the Ogden Gun Club. Wm. McKinley, Sec'y.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

July 1.—SHERBROOKE, Quebec.—Sherbrooke's grand annual. Inanimates. Open to all amateurs. C. H. Foss, Sec'y, Sherbrooke, P. Q.

July 3-5.—MITCHELL, S. D.—Tournament of the W. J. Healey Hardware Co.

July 7-8.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

July 14-15.—NEW HAVEN, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

July 20-22.—PINE BLUFF, Ark.—Seventh annual tournament of the Arkansas State Sportsmen's Association. Added money announced later. Paul R. Litzke, Sec'y, Little Rock, Ark.

July 21-22.—CRAWFORDSVILLE, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Crawfordsville Gun Club. Chas. E. Lacey, Sec'y.

July 22.—MEADVILLE, Pa.—Fourth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

June 30.—BRIDGEPORT, Conn.—Third tournament of the Connecticu Trap-Shooters' Association, under the auspices of the Bridgeport Gun Club.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 4-5.—INDIANA MINERAL SPRINGS, Ind.—Indiana Mineral Springs tournament. Ben O. Bush, Manager.

Aug. 17-19.—TORONTO, Canada.—Tournament of the R. A. McCready Co., Ltd. Targets. $1,000 guaranteed. Open to all. Write for programmes.

Aug. 18-19.—WARSAW, Ind.—Tournament of the Lake City Gun Club. W. A. Wineberer, Sec'y.

Aug. 19.—WARREN, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept. 6.—MERIDEN, Conn.—Third annual Labor Day tournament of the Parker Gun Club.

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Sept. 28-9.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club. Web. Woodfill, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

A lady's age is always a tender subject, and one that can scarcely be handled gracefully in cold type. The following item from the Boston, Mass., *Traveler* of May 26, is of sufficient interest to the shooting public generally for us to reprint it without any further apologies to Mrs. Frank Butler: "How Miss Annie Oakley manages to look fifteen when the public knows that period is far behind her, is the problem just now puzzling feminine Boston. In a natty little costume of huntsman's green, short skirt, leggings and blouse, with a gray sombrero well set above the girlish braid in which she wears her hair, she is a pretty bit of cool color against the brilliant uniforms of the riders of the Wild West show. She did some splendid work Monday afternoon with a series of handsome guns which would breed envy in the heart of any lover of sport; and when she had finished, she ran like a deer the entire length of the grounds, and kicked up her heels like a young colt as she disappeared behind the curtain of the big white tent. These little frisky bits of business are very fetching, and never fail to elicit applause."

"The Auburn Gun Club takes pleasure in calling the attention of sportsmen all over the State of New York to the rich and elegant line of prizes that are to be found in the prize list of the thirty-ninth annual State shoot of the Association. * * * The attention of sportsmen is also called to the fact that two classes of sweepstake shoots are to be run every moment of the day, and no one is barred from those sweeps. They are open to shooters from every State in the Union." The interpretation of the above means that State events are open only to residents of the State of New York; the other events are "open to the world. Everyone invited." The two classes of sweeps referred to are: On No. 2 trap, four 15-target events, $3, and four 20-target events, $3; targets extra at 2 cents each. On No. 3 trap, four 15-target events, $1; four 20-target events, $1.50; targets extra at 2 cents each. These purses will be divided according to the wish of the shooters. All State event purses (all 25-target events) will be divided into eight moneys under the Rose system.

The "committee of five" appointed at the meeting of New Jersey trap-shooters on May 19 last (a report of which meeting was given in full in our last issue) was held at Blenderman's on Tuesday afternoon, May 25. The committee considered (*inter alia*) the propriety or otherwise of incorporating the New Jersey State Sportsmen's Association, or rather The New Jersey State Association for the Protection of Fish and Game, the title by which the old State Association of New Jersey used to be known. Certain arguments were adduced in favor of incorporation, while scarcely a word could be said against it. But the strongest argument of all was overlooked by those anxious for incorporation, viz., that incorporation would do away with all the irregularities and illegalities that have occurred through their efforts to reorganize a defunct organization. Articles of incorporation and a charter will start the association properly, and it will then be able to go ahead and make a history of its own.

There seems to be an opinion abroad that any member of a gun club that is a member of the New York State Association is eligible to compete for the prizes offered in the State events. The impression is gathered from the sentence regarding the admission of clubs into the Association, which states in substance that any club can become a member on application and by paying the $1 fee, and adds that any member of such a club is eligible to compete in all State events. We take it that only members of such clubs, who are also residents of this State, are referred to, and we think that anybody from outside the State who goes to Auburn with the idea that he can take part in State events will soon find out his error. He need not be disappointed however, as he will find two excellent programmes of "open events" ready for him.

Belleville, Ont., has a Forest and Stream Club. Its officers are: H. Corby, Esq., M. P., President; W. H. Biggar, Esq., M.P., Vice-President; Charles N. Sulman, Treasurer; Joseph Templeton, Secretary. The objects of the organization are the "Protection of fish and game and encouragement of all kinds of legitimate sport." It has a committee on trap-shooting, and has arranged a programme of events for its club members. It also looks after the riflemen who are in its ranks, and has gotten out a programme of events for their benefit, with a committee to see that the programme is carried out. Another committee looks after the fishermen of the club, and plenty of contests are arranged for the followers of Izaak Walton. Taken altogether, the Belleville Forest and Stream Club is an organization well worth patterning after.

Every month during the summer the Hazelwood Gun Club, of Pittsburg, Pa., will hold an all-day shoot at sparrows. The dates for these monthly gatherings are June 17, July 15, Aug. 19 and September 16. On each of the above dates there will be five events of 15 sparrows each, $3 entrance, birds extra, five traps down, 20yds. rise. There will also be a special event each day of 25 sparrows, $5 entrance, same rise and conditions as the other events. There will also be sparrow practice shoots on the second and fourth Saturdays during June, July, August and September. To reach the grounds take the McKeesport electric car of the Second Avenue Traction Co.'s line at the corner of Market street and Fourth avenue; these cars run direct to the grounds.

While in Savannah, Ga., May 18-21, we met a gentleman who was engaged sounding the shooters present as to the advisability of holding a good added money tournament at Nashville, Tenn., during the latter part of September or first part of October. He seemed confident that $500 could be easily raised to add to the purses for such a tournament. If $500 can be raised for that purpose another $500 could safely be added without any difficulty or risk of loss; $1,000 added money, a four days' shoot, $250 each day, with the cheap excursion rates to Nashville owing to the Centennial Exposition now in progress in that city, would mean a large concourse of trap-shooters, and 50,000 targets thrown. If the right people take hold of the enterprise such a tournament should prove the success of the season.

The second tournament of the Connecticut Trap-Shooters' League was held on Monday, May 31 (Decoration Day), on the grounds of the New Haven Gun Club. The heavy and persistent rain that fell until close on to noon kept many shooters away who would otherwise have been on hand. Still seven teams of six men each, together with a round dozen of "extras," make up a total of over fifty shooters, and that's what there was at New Haven, Monday. The team race resulted as below: 40 targets per man (20 known, 20 unknown), 240 to the team: New Haven No. 1, 212; Meriden, 205; Windsor Locks, New Haven No. 2 and Bridgeport No. 2, 180; Bridgeport No. 1, 178; New Haven No. 3, 152.

The Mountain State Gun Club, of Parkersburg, W. Va., offers some solid inducements to shooters to go to Parkersburg after the annual tournament of the Ohio Trap-Shooter's League at Springfield, June 2-4. The Mountain State Gun Club will add $350 in cash to the purses at its two days' tournament, June 7-8. Many shooters will undoubtedly go to Parkersburg and then make their way up to Auburn to take in the last few days of the New York State shoot before moving on to Cleveland.

This is the week of the Illinois State Sportsmen's Association tournament at Watson's Park, Chicago. The State events will be shot on June 1-3, but there will be sweepstake shooting from June 1-6; and with the facilities at the disposal of the management of Watson's Park, it will be no difficult thing for everybody to get plenty of shooting.

Ralph Trimble, of Covington, Ky., has gone West again after a brief stay with us. During his visit to the Eastern cities, Ralph made many friends for the powder companies he represents—Du Pont and Hazard. His good work with the gun did much to attain this end, but his quiet and gentlemanlike demeanor did just as much more.

In addition to the ten-men team from the Dunellen, N. J., Gun Club, there will also be a similar team from the Bergen County Gun Club, of Hackensack, N. J., at the Endeavor Gun Club's grounds, Saturday next, June 5. The presence of these two teams will result in a large attendance and a full afternoon's sport.

On the first day of the Missouri State tournament at Kansas City, Mo., May 17, Sim Glover scored 147 out of 160 shot at (nearly 92 per cent.), but was 50 cents out of pocket! This fact shows two things: First, that the "five equal moneys" system is not equitable; second, that Sim Glover did not join the ranks of the "droppers."

John Tougas, a member of the Worcester (Mass.) Sportsmen's Club, did some good shooting on Tuesday afternoon, May 18; he broke 48 out of a possible 50, this being his first appearance at the traps for the season. Mr. Snell also broke 30 straight during the afternoon.

The Crawfordsville (Ind.) Gun Club will hold a tournament July 21-22, under the auspices of the Trap Shooters' League of Indiana. These gatherings of Indiana trap-shooters are likely to become very popular gatherings with the shooters of that State.

The formation of a State association in New Jersey will do much toward booming trap-shooting in that State. There is plenty of material in New Jersey to make an annual gathering a great success, but no State shoot has been held since 1884.

On Saturday of this week, June 5, the Dunellen (N. J.) Gun Club will send a 10-men team to shoot a return match with the Endeavor Gun Club, on the latter's grounds at Marion, N. J. The first match was won by the Endeavors.

The programmes for the Pennsylvania State shoot at Oil City, Pa., are now ready for distribution. A letter to Mr. H. C. Reeser, secretary of the Oil City Gun Club, will secure you a copy.

The third tournament of the Connecticut Trap-Shooters' League will be held at Bridgeport, Conn., June 30, under the auspices of the Bridgeport Gun Club.

The Missouri State Game and Fish Protective Association claims May 16-21, 1898, as the dates for its twenty-first annual tournament at Kansas City.

JUNE 1. EDWARD BANKS.

Pine Bluff Gun Club.

PINE BLUFF, Ark., May 20.—In anticipation of our State shoot, which occurs in July, our local shooters were out in great shape this evening at Lloyd Sportsman's Park. Out of a possible 30 targets the following score was made:

N. M. Bautt 26, John Wells 25, Dr. H. E. Williams 24, W. B. Sorrells 24, J. S. Ingram 24, J. F. Lloyd 22, John Speers 22, J. A. Coles 22, Geo. Clemens 22, W. T. Simpson 19, Alex Dreyburg 17, E. A. Howell 13, Percy Meyer 1, E. C. Arnoldo 12. E. A. HOWELL, Sec'y.

The Rose System.

UTICA, N. Y., May 17.—*Editor Forest and Stream:* I have been greatly entertained of late by a perusal of the trap editor's notes on the Rose system of division of purses at tournaments, together with recent articles in your contemporaries by Wm. Tell Mitchell and "Professional." I also note your willingness to publish anything on this subject, and at the serious risk of calling down upon my defenseless head the withering pen of the trap editor, I am yet going to "speak out in meetin'" against what I really believe to be the biggest fraud on shooting men yet devised.

Let me preface my statement with an explanation. Two years ago when the Rose system came to my attention, I fell in love with it; I lauded it everywhere I went, and really thought that Mr. Rose had done a great thing. He had done the one thing that had long been a bone of contention, he had stopped "dropping for place." I confess that I tried hard to keep in the same way of thinking, but, alas and alack! the load is too much, and I now confess, and let it be recorded, that I am more ashamed of my advocacy of the Rose system than of any other sin of which I have recently been guilty.

Let me say further, what a considerable portion of the shooting world already knows, that I am not a professional, expert, or semi-expert, but just a plain, ordinary, every-day shooter, who can shoot fairly well one day and fairly poor the next. No gun man or ammunition maker ever hazarded the reputation of his goods by giving me any that I did not settle for; and I shoot a gun made in foreign lands chiefly because I don't want to compromise the reputation of any American-made gun. I once had an American-made gun, made by a friend of mine, and purely out of regard for him and respect for his weapon I laid it away, and bought a gun so well established that my shooting could do it no injury. Therefore, I am one of the fellows for whom this delectable Rose system was made, and I refuse to be benefited (?) by it or to shoot when it is in vogue if I can help it.

I am glad to know that the trap editor is becoming converted and now opposes the Rose system for live birds. The next step is his entire conversion, and God speed the day. If I understand his reasoning, he is against the Rose system for live birds by reason of cost of the birds. Now if I figure correctly, and my early education was not hopelessly neglected, the prices for the two styles of shooting is exactly proportionate; *i. e.*, the number of targets or birds, the amount of entrance and price of birds or targets is in exact proportion, as for instance, take the ordinary shoot of 10 live birds, $10 entrance; birds out at 80 cents each, leaves $7 money for the pool, or 70 cents per bird. Ten targets, $1 entrance, 30 cents out for birds, leaves 70 cents for pool, or 7 cents per bird. In other words, the proportionate price of the pigeon over the target is ten times greater, and the shooter puts in ten times as much money for the greater. Now, if this Rose system is a good thing when you put in $1 to shoot at 10 targets, it should be just as good when you put in ten times as much money to shoot at 10 birds. If it would protect the amateur in the target race, it would certainly take care of him in the pigeon race. The cold-blooded fact about it is, that it will not protect him in either, and the sooner it is recognized the better.

Now, why do I say this? I have been at this shooting game about as long as any. I commenced it at a time when all ties were shot off, and if a man got $1 he knew that he had earned it. I have seen the evolution of guns, targets, ammunition and shooters, and I want to confess that in the good old days, before the time of the "baby" shooter or the fellow who wants all the money because he can't hit a barn, I used to enjoy going to a shoot; but in these days, when the whole idea seems to be to compensate a man for what he does not do instead of "deeds done," I see but little satisfaction. This Rose system needs a new name; it ought to be known as "the system by which everybody is loser and nobody winner."

It is claimed that it is in the interest of the amateur; I say that it is in the interest of nobody. What do we go to shoots for? Is it simply solely and only to lose money? If so, the shooters as a class are asses. I won't personally admit it. I go to a shoot for several reasons, but the main one is that I have a notion concealed away inside my bump of vanity (and who hasn't it?) that I can shoot some. I want to indulge my gambling propensity a little and "see the boys." I go to a good old 40, 30, 20 and 10 shoot. I "see the boys," I indulge my propensity to gamble a little by investing my money, and I go home, loser or winner, as the case may be, with the consciousness that if I shot well I got something for shooting well, and if I shot ill I got nothing, just what a man deserves who shoots ill.

Of course the experience of Dr. Helbourn, of this city, at the Cobweb shoot when he killed 10 live birds alone and got $12.95 against a field of the best shooters in America, killed the Rose system for live birds beyond resurrection, but what it needs now is enough shooters to band together and refuse to attend any more Rose system shoots and finish it for target shooting. I am done personally, although a plain amateur, and it only needs enough shooters to follow to relegate it where it belongs with the 10-gauge guns, black powder, and the other abnormal conditions that progress always produces.

My grievance against the Rose system lies in the fact that it makes me a loser at any shoot I attend, while under the old system I used to sometimes land on the right side. The talk that men don't shoot for money is rot. What do you put up $1, $2 and $3 for? Why not ask a man to travel from Utica to Peekskill, pay $9 railroad fare, $6 hotel bill and $12 for ammunition and shoot for the honor of being first or fifteenth as the case may be? That means $27 expense. Can I, amateur or professional, hope to win $27 under the Rose system, beside paying my entrances, which would probably amount to $50 more? Certainly not. What do I do? I stay at home. What would I do under the old system? I would go. Why? Because I have there a chance of winning those expenses by doing some good shooting. Mr. Editor, you may call that chance of making a "scoop" a gambling chance, an unfair chance or whatever you please, but it is the chance that takes men like myself who pay their own expenses hundreds of miles from home, and be it the veriest "Will-o'-the-Wisp" it will always lead shooters to attend shoots. What seems to have been lost sight of in this controversy is that while it was not always a dead sure thing for Heikes, Glover, Elliott and Fulford, *et. al*, under the old system to get all the money, under this Rose system it is a dead sure thing that no man of my shooting ability could win a cent in a thousand years, while under the old system we occasionally got away whole and a little better.

I have refrained from discussing the manifest inequity of this system, how it does not compensate a good score; but suffice it to say that I take entire issue with any man who asserts that it is equitable, and at some other time I will prove that no system ever devised ever worked such rank injustice or was such an absolute ruin to shooting tournaments as this has been. Now let all the "tender feet" sharpen their quills and I will, the editor permitting, answer them, one and all.

HENRY L. GATES.

Audubon Gun Club of Chicago.

CHICAGO, Ill., May 19.—Below are the scores made at Watson's Park to-day by members of the Audubon Gun Club. The club shoot is at 15 live birds, handicap rise, and allowance of misses of kills:

	Club Shoot.	Tie.
Gillespie (28)	211021210122121—13+2—15	12121—5
C E Felton (28)	221212220021212—13+2—15	20121—4
C B Dicks (29)	1122202122222112—14+2—1t*	2022?—4
H B Foss (29)	212211121011002—12+2—14	.....
T H Hollester (28)	101101022122211—12+2—14	.....
F A Place (29)	120212120121220—12+2—14	.....
P von Lengerke (29)	2222222220?2020—12+1—13	.....
E S Rice (20)	2102102102002?1—10+3—13	.....
Chas Morris (28)	012211200012010— 9+4—13	.....
W L Shepard (30)	0100212022112?1—10+3—13	.....
R B Wadsworth (30)	2002222222221202—11+1—12	.....
J H Amberg (27)	0022210122212?0—10+2—12	.....
F R Bissell (27)	1021210020202?1— 9+2—11	.....
W P Mussey (27)	0112010020?20100— 7+2— 9	.....
C S Wilcox (26)	00?102100100012— 7+2— 9	.....

* Highest possible.

In practice shooting Rice scored 14 out of 20, Wilcox 33 out of 41, Dicks 22 out of 25, Shepard 15 out of 20, Emory 10 out of 15, Mussey 8 out of 15, and Gillespie 9 out of 10.

RAVELRIGG.

Androscoggin Gun Club.

LEWISTON, Me., May 22.—The regular shoot of the Androscoggin Gun Club was held to-day. As the wind blew hard, and now and then a drop of rain fell, the scores are rather lower than usual. Interest in trap shooting is steadily gaining ground in Maine.

In the events given below, No. 1 was at known angles; No. 2 was a 25-target merchandise handicap, known angles; No. 3 was the Doten challenge cup contest; No. 4 was at unknown angles. Scores were:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	*10*	*25*	*25*	*10*	Targets:	*10*	*25*	*25*	*10*
Doten	7	20	22	9	Godfrey	7	19	15	9
Taylor	5	12	20	8	O P Keyes	4	15	12	4
L Keyes	5	20	18	8	Moore	3	13	16	6

In No. 2 L. Keyes received 5 misses as breaks, O. P Keyes 10, and Moore 3. Their totals given above include this handicap allowance.

H. E. DOTEN.

Rolla Heikes has established a new record for rapid work with Winchester repeating shotguns on targets. At the Missouri State shoot he broke 100 bluerocks in 2m. 58⅕s. The targets were thrown from a magautrap.

Western Traps.

ILLINOIS STATE SPORTSMEN.

CHICAGO, Ill., May 29.—The programme of the old reliable Illinois State Sportsmen's Association compares very favorably with more pretentious productions of a similar nature, and there is all reason to expect a good shoot and a comfortable time next week. Considerable feeling among many members of the Association was aroused this week by an unfortunate allusion to the representatives of the Association as "barnacles," in the columns of a sporting paper of this city. Such an allusion would seem to be uncalled for, nor would any reference to it be deserved, were it not for the fact that it bears rather heavily and unjus ly upon a few members of the Illinois Association, upon whom the heat and burden of the day have fallen in the preparations for this year's shoot. All this work has really devolved upon two men of the committee, Mr. R. B. Organ and Mr. W. P. Mussey. Colonel Felton, the president, has been sick and unable to attend to the detail of the work, and others of the committee have been non-resident absentees. In addition to this Mr. Organ has had serious illness in his family, so that all the work has progressed under difficulties. I cannot see that the tournament stands to lack anything of its former prestige or its former distinctive features. There are some things about this Association which are not modern, but not all modern things are good or desirable, and it is no mean distinction to say that Illinois has a shoot different from the average modern trap tournament, which I take to be about as strictly devoid of fun and as full of business as any employment yet engaged in by mortal beings. It is true that we still have the absurd 10-gauge rules, which are a disgrace to any State, because of their essential and absolute absurdity, but it should be borne in mind that these rules were passed upon the Association and upon Chicago by a non-resident vote, and it is a curious fact that the very men who opposed these rules most vigorously are those who are now in the management for the current year, and who are subjected to a criticism which should at least be specific if it claims to be just. Neither Col. Felton, Mr. Organ nor Mr. Mussey would allow the ridiculous 10-gauge rules to last a minute on the record book of the Association if their personal vote could remove them; indeed, Col. Felton has at least once and I think more than once moved to have the rules purified by the expurgation of this clause, though without success. I feel sure that a more careful review of the facts in the case would leave the writer of the "barnacle" comment without any disposition to repeat such charges against the men who have this year had the thankless task of getting up a strong programme in a hard-times year. The real barnacles, if we are to make this a question of shellfish, are to be found among the men who foist such absurdities as the 10-gauge rules upon a numerical minority which possesses a majority in sound intelligence and progressive thought, and not among the men who try to get up a good shoot for the benefit of the whole Association, including the adherents to these archaic rules.

We shall have a good shoot next week, rules or no rules, and barnacles or no barnacles, and it will be far better for all of us brethren to dwell together in harmony.

EUREKA SPECIAL

The Eureka Gun Club, of Chicago, holds a special shoot to-day at the club grounds, Seventy ninth street and Vincennes avenue, beginning at 10 A. M. and lasting till the shades of evening. There are two sets of traps and a full programme of sweeps, including three to be shot under the Rose system and the regular club medal shoot.

CALUMET HEIGHTS CLUB BOOK.

The Calumet Heights Club has issued a unique and attractive club book, setting forth the pleasant features of this happily constituted organization in a way which might be emulated by similar country clubs. The peculiar scenery of the region along the lake shore is illustrated by many beautiful half-tone pictures, all taken from amateur photographs made by members of the club, and the pleasantly written text which makes the body of the book is sufficient to give a very fine idea of the enchantments of the place to one not so lucky as to be a member or a frequent visitor. The different forms of sport obtaining at the club grounds have each a distinct and attractive showing, and all in all the club book is a very fetching souvenir of modern city sportsmanship.

AURORA CLUB.

A two days' shoot was held at Aurora, Ill., forty miles from Chicago, closing May 27, some thirty shooters appearing. Graham, of Aurora, won the silver cup in competition for the State amateur championship.

TWO TUTTLES IN THE FIELD.

Mr. C. W. Tuttle, of Auburn, N. Y., who is intimately concerned with the N. Y. State shoot at Auburn this year, is good enough to write and extend me an invitation to come to the tournament of the Empire State. This would be pleasant though it could not was. Also it would be pleasant to accept the invitation which at the same time comes from Mr. C. A. Tuttle, who lives away out in Anaconda, Mont., and who is also the mainstay of his State tournament. The latter Mr. Tuttle writes that should I see his town in June instead of April I would think more of it, and says the club will welcome the FOREST AND STREAM representative very gladly. It is not needful to see Anaconda in June, for its men make summer where they go; but I can't go to Anaconda any more than I can go to Auburn, owing to a difficulty I have with my astral body now and then. But how does it happen that these two Tuttles are in the field, both with nearly the same name, both at the head of shooting matters in their respective States, and both writing me at the same time, asking me to come and call on them? This is a shore funny world.

NON RESIDENT LIGHTS.

We shall have quite a number of non-resident lights of the trap-shooting world here at the State shoot next week. Fred Quimby is now in town, but says it is possible he will not be able to stay over till the shoot, as he is very busy just now. This would be the first shoot of the Illinois State missed by Mr. Quimby for many years, and it is hardly likely that he will be able to stay away.

Mr. Noel E. Money will go to St. Louis to-morrow night, but will be back here next Wednesday and take a hand in the festivities. Mr. Money is very busy with the new work connected with the recent organization of the American E. C. and Schultze Powder Co., Ltd., this important combination of the two strong firms being necessarily attended with wide-reaching changes and extensions of interests in different parts of the country. Each of these representative powders has had its adherents by scores and thousands, and human mind fails to comprehend the arguments which will be cut short when it comes to be generally understood that both powders are now to be made in America and by the same firm. Mr. Money tells me that the building of the big new plant will mean not only one, but very many busy days at Oakland, and I fancy he will have earned the vacation trip to England which he has promised himself for next autumn.

Harvey McMurchy will of course be at the Illinois shoot. Mr. McMurchy says that there is a perfect craze for trap shooting on the Pacific Coast just now, and that within a few miles of San Francisco or Sacramento the club houses can be counted fairly by the dozen. The sport is on a healthy and permanent footing to all visible intents and purposes, and the second America of the coast is not to be ranked second to any section of the States when it comes to shooting affairs.

Paul North confirms Mr. McMurchy's story of the trap boom in California, and says he has recently put in six magautraps on the Coast, with the prospect of more to follow soon. Mr. North will not attend the State shoot here, having left for Milwaukee last night, but he will be at Springfield for the Ohio State event, of course.

1206 BOYCE BUILDING, Chicago. E. HOUGH.

Cicero Gun Club.

OAK PARK, Ill., May 22.—The regular Saturday afternoon shoot of the Cicero Gun Club was held on the club's grounds (Madison street and Desplaines River) this afternoon. There were eleven members in attendance.

The first event was a match between Knott and W. Einfeldt on 25 live birds and 25 targets, the result of one of those disputes that have to be settled at the trap. It was won by Knott on a total score of 42 to Einfeldt's 41. The scores are as follows:

Live birds;

Knott	2111221222121222211222?22—25
Einfeldt	2•11?221201122111?2?2011—22

Targets:

Einfeldt	1111011111011011111011010—19
Knott	1101110011111101000111110—17

After this event the sweepstake of 7 live birds was shot. Entrance $?.50, two moneys:

Einfeldt	1212112—7	Lowrey	1211120—6
Knott	1222122—7	Barnard	1211222—7
Fox	2221220—6		

Ties shot off miss-and-out, as follows: For first money, Knott won in the second round; for second money, Lowrey won in the first round.

After some preliminary practice by the members, the 25 targets allowed by the club on the trophy contest were shot with the following result:

Banks 15, Von Platen 17, Barnard 15, Cooper 22, Cooper (on back score) 15, Einfeldt 19, Einfeldt (on two back scores) 19 and 17, Knott 17, (on back score) 18, Lowrey 21, (on back score) 17, A. Cheesman 14, W. Cheesman 14, Lawlor 16, Fox 14, (on back score) 18.

IN NEW JERSEY.

A HOT RACE AT BOILING SPRINGS.

May 18.—A 100-target race, unknown angles, $7 entrance, including price of the targets, drew out nine shooters to the grounds of the Boiling Springs Gun Club to-day. Among the number was O. R. Dickey, of Boston, Mass., one of the best shots in the country. He showed up well, but had to take second place, Gus Greiff, who is just now shooting a very hot gait, taking first money with a score of 94. It is worthy of note also that Greiff lost three out of his last four targets, his score up to the end of the 96th round showing 93 out of 96. The 100 targets were shot in a series of five 20-target events. Below are the summaries of each 20:

	1st 20.	2d 20.	3d 20.	4th 20.	5th 20.	Total.
G E Greiff	20	19	18	20	17	94
O R Dickey	20	18	18	19	18	93
G Piercy	19	19	18	17	17	90
C von Lengerge	19	18	18	16	19	90
Capt Money	15	18	16	18	18	85
E A Geoffroy	20	14	19	15	17	85
C R Wise	15	18	15	17	18	83
W Hexamer	13	13	16	12	10	64
Matzen	13	15	14	14	w	16

Six other 20-target events were shot as below:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Dickey	18	20	16	19	20	19	Von Lengerke	15	..	..	..	..	..

Wise	19	..	14	..	..	..	Hexamer	..	..	..	14	13	13 17

W. H. HUCK, Sec'y.

AT ELKWOOD PARK.

May 19.—The first regular target shoot at the Elkwood Park grounds was held to-day. The main event was a 50-target handicap event, allowance of extra targets to shoot at, $2.50 entrance. There were ten entries, two of whom made highest possibles—Green with an allowance of 18 and White with an allowance of 17. All targets were thrown from a magautrap. Scores were:

Daly (10)	1111011001111011110111111111011111111010111—40 1011011101	—7—47

M. F. COOK, Sec'y.

Missouri's State Shoot.

Sixth Day, May 22.

It is only natural that after six days of shooting the entries would fall off somewhat, still twenty men shot through the programme to-day. Jim Elliott heads the list, and the pace that he set was one of the kind that kills. Only six misses out of 160 shot at is slightly the best average made through the whole tournament for any one day. Jim though it was about time for him to have an inning, and he got it to-day. But that little brother of his, Dave, figured somewhat in the shoot, too; his straight in the third event occurred when everybody else fell down, so he scooped first alone. Gilbert had similar luck in the first event.

There were other features of interest in the shoot to-day, but they were at the live bird traps. Four events remained to be shot: a 5, two 7s and a 10-bird event, and the ownership of two cups was involved. This brought about all the dispute. Two of these events were merged together, and a 15-bird race was shot instead. The first 7-bird events had $15 added by Herman, and in the others the choice of the cups went to the first, and the remaining one to the second—not high guns though. Gilbert, Withworth, Glover, Running, Heikes and McMurchy tied on 15 straight, and for a little while there was a shooting match. Glover quit right away, as he missed his first tie bird, which was also his first loss in the shoot. Gilbert lasted just 6 rounds, when he lost one dead out of bounds. Running went out on his 9th tie bird, after killing 23 with one barrel; this bird was also dead out of bounds. This left Withworth, Heikes and McMurchy. The sympathies were all with the boy, but be was forced to quit, as his 14th, a hard one, died out of bounds. The suspense was soon over, for Roll lost the next bird, also dead out of bounds. McMurchy had but to kill to win. The bird he drew was a wicked one, and never faltered from the first, but a good second brought it down at long range. Thirty straights is what it required to win this cup.

In the 14 hole there were ten, and it was equally as hot a class. Herman went out on the second round; McIlhany, Campbell and Jackson on the fourth; Sergeant on the seventh; Curtice on the eighth; Elliott on the ninth, and Gottlieb on eleventh. Of these McIlhany's, Curtice's, Elliott's and Gottlieb's were all dead out of bounds. This left only Parmelee and Rogers to fight it out, and Nebraska was to have the cup. Parmelee missed his twelfth; then Rogers drew a sitter and as it flipped up he tried to catch it, but the referee decided no bird. The substitute that he got was as hot as Tobasco or Jack Parker's shirt. Though hit with both barrels, it fell dead out of bounds. This gave Parmelee another chance, and he won out after killing 7 more straight, Rogers going out on another good one.

Thirty-four shot in the target events to-day. There was also a consolation race for those who had not won first or second during the two previous days. Kune won first in this event. The weather to-day was threatening and one or two showers fell, but not enough to interrupt the shooting. There was $25 added to each event.

SCORES OF MAY 22.

Events:	1	2	3	4	5	6	7	8	Shot at.	Broke.	Av.
Elliott	19	20	19	19	19	20	19	19	160	154	96.2

Kay	..	..	..	..	..	..	14	14	40	28	70

Herman, Norton and Curtice shot in only one event.

GENERAL AVERAGES.

The struggle for the premier position was interesting. Gilbert assumed the lead on the second day and maintained it, though Budd managed to all but close the gap between them on the fourth day when he gained 6 targets on Gilbert, leaving him but a single break in the lead, and one more day of shooting. By the time the third event of the last day had been shot, this, too, had been wiped out; and at the end of the sixth event Budd was one in the lead. But as Gilbert scored 39 out of his last 40, and Budd only 35, Gilbert won out by 3 breaks. In the live-bird events Gilbert also shot well, losing 2 birds out of 10 shot at, including shoot offs.

Budd is scored in the target events 6 breaks ahead of Heikes, who is in turn followed by Glover and McMurchy. The figures are:

	Shot at.	Broke.	Ave.		Shot at.	Broke.	Ave.
Gilbert	800	749	93.6	Cornett	800	692	86.5
Budd	800	746	93.2	Sergeant	800	685	85.6
Heikes	800	740	92.5	Jackson	800	684	85.5
Glover	800	730	91.2	Withworth	800	680	85
McMurchy	800	729	91.1	Parker	800	678	84.7
Linderman	800	720	90	Hagerman	800	677	84.6
Parmelee	800	718	89.7	McIlhany	800	676	84.5
Elliott	800	717	89.6	Gottlieb*	780	695	89.1
Running	800	714	89.2				

* Gottlieb, through some error in the cashier's office, was left out of event No. 2 on the last day, although he had entered "for all day."

THE LIVE BIRD EVENTS.

The live-bird sweeps shot during the week, exclusive of the *Star* cup race, are given briefly in tabulated form. Nos. 1, 2 and 3 were shot on Tuesday, May 18; Nos. 4, 5 and 6 on Wednesday, May 19, and Nos. 7 and 8 on Saturday (to day).

In all these eight events, shot on three separate days, Gilbert scored every bird he shot at; but he was unlucky enough to lose two birds in the championship just when he wanted them. His record for the week on live birds stands 89 scored out of 91 shot at. Two special prizes were contested for in these events, the conditions being that they should go to the local shooter making the highest average. These prizes were a season ticket to the baseball games, donated by Manager Manning, of the local team, and a gold medal, donated by the O. K. Gun Club. Both prizes went the way of many others, Chris Gottlieb winning them. In the table given below it will be seen that his totals are tied by Jim Elliott, but his 25 straight in the cup race is what landed him in front.

GOTTLIEB WINS THE STATE CHAMPIONSHIP AGAIN.

The Individual Championship of the State at live birds is as much one of the features of the annual shoot as the team race. There were forty entries for State championship honors this year, but only one, Chris Gottlieb, managed to score his 25 straight, thus once more winning the championship, as well as the handsome gold medal donated by the Stockyards Gun Club to the winner of this event; this medal carries no challenges with it, but is the absolute property of Mr. Gottlieb. It will be remembered that he also won the championship at the meeting in 1896. His win again this year was a very popular one, as Chris has many friends in this city; in fact he may be termed "Kansas City's pride."

The second prize in this event was a silver water service. For this prize Wilmot, Means, C. Herman, Jim Porter and McCurdy tied with 24 each. They shot the tie off miss-and out, Wilmot winning in the 14th round. Means dropped his 14th bird; Herman his 6th; Porter and McCurdy both went out in the second round of the ties. Scores in this event were as below:

Gottlieb	2221111222122221222222222—25

A RETROSPECT.

The twentieth annual tournament of the Missouri State Game and Fish Protective Association will pass into history as the most successful shoot ever held by this Association. Never during the entire six days did the interest flag, and on Saturday afternoon entries in the live-bird events had to be declined in order that the programme events could be finished before dark. Even then it was after 6 o'clock before the last tie was decided. This was not due to any lack of facilities, for from 1,200 to 1,400 pigeons are trapped in a day. It was right here in Kansas City that the underground system of trapping originated.

There was much interest in this tournament, and it was virtually like conducting two tournaments in one. Both target and live-bird traps were kept constantly in use. In the former there was good added money and several medals; while both medals and some elegant trophies were the attractions in the live-bird events. The programme was the most attractive given to the shooters since the Midwinter. Add to this a week of the finest weather, and the success of this shoot is easily accounted for.

WASHINGTON PARK.

For a number of years this has been the established shooting ground of nearly all the gun clubs in Kansas City, and being well equipped and amply large it followed that the tournament would be held there. For so large a city as Kansas City the park is an accessable one indeed. It requires only about thirty-five minutes ride on the cable and electric cars, and though one change is necessary, one can reach it from any part of the city, and after you have changed from the cable to the electric line, the latter lands one right at the gate of the park. Here one set of live bird traps with the underground system of trapping was run, while two magautraps, with Paul North to look after them, furnished ample shooting for those who wanted that kind of game. These traps did their work as near perfect as possible, and ground out targets with a rapidity that must have been very gratifying to Paul North. On several occasions when one of the expert squad were shooting whole targets or those broken by the shot were constantly in the air. Few targets were broken in the trap and there was scarcely an interruption during the entire week.

Owing to the peculiar formation of the grounds, which rise rather abruptly just back of the live-bird score, shooting can be kept up continuously without interference to either sport. The club house stands on the ridge, and below, perhaps 300ft., are the live-bird traps. To the right of the club house on the ridge are the target traps, which throw the targets out over the ridge into the space below, but without endangering any one there, the live-bird traps being considerably to the left of this. The executive committee, if I remember right, were: Messrs. Lee Porter, W. S. Halliwell and G. M. Walden. Mr. W. V. Ruger filled the thankless, though responsible, position of referee at the live-bird trap. Mr. Ruger is always firm and decisive, and above all impartial. So thoroughly competent a man in this position adds much to the success of the shoot.

MANUFACTURERS WELL REPRESENTED.

The trade was well represented, some very warm members being on hand. Among them were: R. O. Heikes, Dayton, O., and J. A. R. Elliott, both Winchester and E. C. representatives; Paul North, representing the Cleveland Target Co. and looking after the magautraps; Jack Parker, of Detroit, and Mrs. Mult Lindsley, of Cincinnati, O., taking care of the interests of King's Smokeless and Peters' Cartridge Co.; Harvey McMurchy, of Syracuse, N. Y., talking Smith guns; Herbert Taylor, of St. Louis, Mo., representing Du Pont and Hazard's Blue Ribbon; Sim Glover, of Rochester, N. Y., who won the *Star* cup with Schultze powder and a Parker gun; Fred Gilbert, of Spirit Lake, Ia., shooting Du Pont's to the front; Chas. Budd, of Des Moines, Ia., right after Gilbert with Hazard's Blue Ribbon; Frank S. Parmelee, of Omaha, Neb., with his Remington ejector, also well to the fore.

But there were lots of other shooters, too. Below is a partial list of them: J. A. Jackson, Austin, Tex.; F. N. Cockrel, Platte City, Mo.; A. C. Connors, J. C. Higdon, W. R. Nold, J. D. Gardner, St. Louis, Mo.; J. W. Den, Fred Boehmer, Arrapahoe, Neb.; W. F. Den, Brownsville, Neb.; Harry Davis, Richmond, Mo.; Louis Erhardt, B. O. Running, W. T. Lytle, Atchison, Kan.; C. E. Latshaw, George Rogers, Lincoln, Neb.; W. S. Allen, Wymore, Neb.; A. S Miller, New Boston, Ill.; James Stevenson, Bonita Kan.; W. G. Sergeant, Joplin, Mo; G. W. Stevenson, A. H. Barlow, Waterville, Kan.; C. F. Reust, Frankfort, Kan.; C. F. Schott, Washington, Ia.; Dr. C. A. Lee, Odessa, Mo.; J. S. Smith, Minden, Neb.; C. J. Weis, Frankfort, Kan.; J. C. Read, G. F. Brucker, Omaha, Neb.; F. A. Reynolds, Gothamsburg, Neb.; C. M. Sumner, Galena, Kan.; J. J. Dickey, Omaha, Neb; Joe Coyle, Lexington, Ky.; B. B. Lipscomb, Olathe, Kan; Dr. C. B. Clapp, Moberly, Mo.; Tom Clyde, Lincoln, Neb.; Capt. F. W. Foster, Lieut. P. Whitworth, San Antonio, Tex; A. A. Forsyth, Dr. T. Aby, H. W. Stevenson, J. R. Dabney, Monroe, La.; Dr. and Mrs. D. H. Day, Duluth, Minn.; C. Lindvary, Sedalia, Mo; J. R Wilmot, Lexington, Mo.; W. W. McIlhany, Nevada, Mo.; J. W. Barre, Louisiana, Mo.; W. M. Shiras, Ottawa, Kan.; C. D. Hagerman, Wymore, Neb; Sherman Hale, Purdin, Mo.; W. H Allen, T. H. Coran, Pleasant Hill, Mo.; Frank Hodges, Olathe, Kan.; J. W. Sexton, H. W. Koohler, Leavenworth, Kan.

THE ANNUAL MEETING.

The annual meeting of the State Association was held at the Wisconsin Club, President Lee Porter presiding. The meeting was well attended, and the business was transacted with rapidity.

Kansas City was again selected as the place for holding the next annual convention and tournament. It was generally understood that an effort would be made to have St. Louis chosen for holding the next convention, but the promised delegation from that city failed to materialize, and Mr. Herbert Taylor, the projector of this movement, reluctantly abandoned the idea.

The officers elected for the ensuing year are: President, Granville M. Walden, of Kansas City; Vice President, Herbert Taylor, of St. Louis, Mo.; Treasurer, George Knerr, Kansas City; Recording Secretary, Ed Hickman; Corresponding Secretary, Frank N. Casey, both of Kansas City. The appointment of the executive committee was deferred until some future time by President Walden. The date for the next annual tournament will be the same as this year, the third week in May.

Judge J. E. Guinotte, in behalf of the committee that has charge of revising the constitution and by-laws, of which committee he is chairman, reported progress, and said that their work would soon be ready for the printer. He further moved that the frontispiece of the book be a picture of the famous Kansas City four-men team that scored 59 out of 60 in a match with a St. Louis team in 1879. The four men on the team were charter members of the Association; they were: Frederick Fredricks, Durry Underwood, Jim McGee and Emil Work. The only survivor of this record-breaking team being Emil Work.

The meeting then adjourned.

SMALL ITEMS OF INTEREST

What are you going to do about it? Plumber Read made a straight, and blames his new Smith gun and King's Smokeless for causing all the trouble.

For once Glover was guessing. Here was the problem he was up against: 147 breaks out of 160 shot at, and 50 cents loser on the day! Such was his record on the first day.

Grandfather Den and the two lady shooters, Mrs. Day and Wanda (Mrs. M. F. Lindsley), were the center of attraction during the shoot. Mrs. Day handles her gun in a graceful and effective manner, and made several good scores on targets. Mrs. Lindsley also did well on live birds.

McIlhany's numerous friends will be pleased to know that he is back from the West to stay. This means that Mac will be seen at some of the Western tournaments this summer.

Milt Lindsley was unable to get away from King's Mills, but he very wisely sent Mrs. Lindsley to assist Jack Parker in looking after the interests of King's Smokeless and Peters' cartridges.

Bert Taylor, the representative of the Du Pont and Hazard Powder companies, says that he is well satisfied with the result of this shoot. First and second averages in a five days' shoot is quite enough glory for his companies in one week.

Rolla Heikes made a new record for the Winchester repeating shotgun: He broke 100 targets in 2 minutes 58½ seconds with the aid of his pumps and the magautrap.

Linderman is an unpretentious fellow, but no squarer man ever walked down the firing line. Dick always shoots the best he knows how, never kicks, and is a stayer.

There are few, if any, more impartial and capable live-bird referees in the country than Billy Reiger. He is to the West what John S. Hoey was to the East.

It is quite a feather in Glover's cap to have come so far from home and carry off the championship cup, and that, too, right on the late champion's own dunghill. Sim's victory is quite a card for Parker guns and Schultze powder.

Paul North is authority for the statement that 31,275 targets were thrown at this shoot, and that it required only 41,000 targets trapped to bring about that result. It only took from 10 A. M. to between 4 and 5 P. M. to shoot the programme out each day.

And say! Chris Gottlieb "didn't do a thing to 'em, did he?" He won the *Star* trophy in the Interstate target shoot and the medal given by the Stock Yards Gun Club to the winner of that race. He also won the O. K. Gun Club's medal given for the best average by any local shooter in all the live-bird events, and also took the season's baseball ticket donated by Manager Manning for the same thing. He only shot in two more trophy events without success: The *Star* championship cup on live birds, and the silver cup given by Jaccard to the winner of second place in the 15-bird event on Saturday, May 22. He was in the tie for this last cup and scored 10 straight in the ties before being shot out. Parmelee finally won the cup with a total of 32 out of 34.

Places in the *Star* live-bird championship event paid as follows: First, $87; second, $36; third, $19.35; fourth, $19.35; fifth, $8.95; sixth, $5.45.

Below is a condensed list of guns, shells and powders used at this tournament:

Guns: Smith 29, Greener 18, Winchester 15, Parker 15, Lefever 14, Remington 4, and 1 each of the following makes: Francotte, Hollis, Clabrough, Ithaca, Boss, Evans and New Arc.

Shells: Union Metallic Cartridge Co. 57, Winchester Repeating Arms Co. 32, Peters Cartridge Co. 12.

Powders: Schultz 28, Du Pont 26, E. C. 20, King's Smokeless 12, S. S 8, Hazard 5, Austin 2, Walsrode 2, Gold Dust 1, and W-A 1.

PAUL R. LITZKE.

Audubon Gun Club, of Buffalo.

BUFFALO, N. Y., May 22.—The Audubon Gun Club held its regular weekly shoot at Audubon Park this afternoon. Event No. 3 was the club badge shoot, and in this event Morris and Kelsey tied for Class A badge. On the shoot-off Morris won, and his victory now places him on an equal footing with C S Burkhardt and F. D. Kelsey for the Class A badge, each having six wins to his credit. There are only three more shoots for the emblem, so the race is hot beyond question. P. J Myers won in Class B and J. A. Kennedy in Class C.

In the table of scores given below No. 8 was at 5 pairs, No. 9 at reversed order; Nos. 2, 4, 5, 6 and 7 were at unknown angles and were shot over a magautrap:

Events:	1	2	3	4	5	6	7	8	9	10

Team Race at Riverton.

PHILADELPHIA, Pa., May 26.—C. A. Macalester and George Work met defeat to-day on the grounds of the Riverton Gun Club, their opponents being Leonard Finletter and Yale Dolan. The conditions of the race were 100 birds per man, 200 to the team, 30yds. rise, 50yds. boundary.

The birds were first-class, and left the traps very fast, the strong wind aiding them. George Work was out of health and out of form, but stuck to his work until the last shot was fired. The 400 birds were shot at in just three hours and a half. The scores were:

L S Finletter	222•2222221222212222222—24	
	•2222222222222222•22102—22

Down Where the Pineapples Grow.

HOBE SOUND, Fla., May 22.—The regular weekly shoot of the Hobe Sound Gun Club was held to-day with the temperature at 98° in the shade. The following scores were made, all targets being thrown at unknown angles:

Events:	1	2	3	Events:	1	2	3
Targets:	10	10	10	Targets:	10	10	10
McVean	7	10	6	Stokes	0	1	1
Smith	5	5	7	Harrison	0	..	..
Sergeantson	2	4	8	Painter	2	..	..
Brown	1	1	3				

H. D. MCVEAN, Sec'y.

The Waterloo Tournament.

WATERLOO, Ia., May 14.—The tournament of the Waterloo Gun Club was brought to a close to-day after a successful four days of trap-shooting. The attendance was good and the quality of the shooters was decidedly above the average. Heikes, Parmelee, Grimm, Gilbert and Budd, together with J. H. Mackie, Robinhood, Dr. and Mrs Day, etc., were on hand to make things lively in the way of good scores.

Among the others present on the first day were: Buttolph, Iowa Falls; True, Northwood; Gittins and Bloeser, Williamsburg; Bain, Brandon; Wheeler, Freeport; O'Brien, Dubuque; Frazier, Lost Nation; Hathaway, Independence, etc.

On the second day there were several new arrivals: J. C. Ford and J. Mealey, Oelwein; C. B. Everett, Fairbank; N. Glab, Tony Heeb and Fred Tschudi, Dubuque; S. S. Hayes, Ottumwa; R. E. Smith, Mason City; C. F. Grant, A. H. Wallace and P. J. Sheehan, Independence, etc.

Experts weee handicapped in all the events, Heikes, Grimm, Gilbert, Budd and Parmelee being made to shoot at unknown targets, unknown angles. Despite this severe handicap, the quintette rolled up some good scores. Mrs. Dr. Day also shot very well.

On the programme for each morning and afternoon were target events and one live-bird event. In the target events the scorer was M. J. O'Keefe, the referee being Mr. Martin. For live birds L. Van Vleck was referee; J. C Hartman, scorer.

In the table of scores given below Nos. 1-7 were shot on the first day; Nos. 8-14 on the second day; Nos. 15-17 on the forenoon of the third day. Rain stopped all shooting in the afternoon of the third day.

SCORES OF MAY 11-13.

LIVE BIRD EVENTS.

The four live-bird events given below were shot as follows: Nos. 1 and 2 on the first day, No. 1 in the morning and No. 2 in the afternoon. No. 3 was shot in the morning of the second day, No. 4 in the afternoon of the same day. In the forenoon of the third day only two miss-and outs were shot on the live-bird traps. These resulted as below:

Miss-and-out No. 1: Gilbert (32) 10, Cox (28) 9, Budd (32) and Heikes (32) 7, Healey (28) 5, Parmelee (32) and Place (28) 2.

Miss-and-out No. 2: Budd (32) and Heikes (32) 20, Place (28) 19, Dr. Day (28) 2, Cox (28) 1, Gilbert (32) and Wallace (32) 0.

The other scores on May 11 and 12 were as below:

SCORES OF MAY 14.

On the fourth day of the shoot (to-day) the majority of the crackerjacks had left the city. A full day's sport was had, however, and there were sufficient shooters left to make it pleasant for all who went out to the grounds. The morning's programme consisted of four 15-target events and a live-bird event at 10 birds per man. The live-bird event resulted thus:

Smith (27) 8, Gilbert (32) 9, Place (28) 7, Mosher (27) 7, Ward (28) 8, Walker (28) 7, Lies (27) 6, O'Keefe (26) 8, Steege (28) 3, Ford (27) 7, Parmelee (32) 7, Day (28) 9, Clark (27) 9.

In the table of target scores given below Nos. 1-4 were shot during the forenoon, Nos. 5-12 in the afternoon. The live bird scores in the two 10-bird races shot during the afternoon are also given below:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	15	15	15	15	10	10	10	10	5	5	5	5

Boston Gun Club.

WELLINGTON, Mass., May 26.—The Boston Gun Club opened its second '97 prize series auspiciously at Wellington to-day. The weather, though not what might be called favorable, was passably fair, inasmuch as it did not rain. The shooting was fully enjoyed and during the afternoon some very fair scores were made. A number of ladies were present, and besides proving interested and appreciative spectators counted among their number the "high gun" in the prize match. It is pleasing indeed to note the rapid increase of feminine trap shots and also their by no means insignificant success in a field of shooting heretofore apparently closed to them. Minneapolis, St. Paul, Chicago and New York, besides Boston, have representatives now who find it pleasant and healthful to handle the gun in close proximity to brother, husband or friend, and the time will shortly come when instead of it being a rarity for the trap-shooting club to have an honorary lady member, it will be an every day occurrence for them to be on the *bona fide* membership list.

Events as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	10	10	10	10	6	10	15	10	10	10	10	10	10
Gordon	6	8	9	7	1	8	14	6	9	9	8	9	7
Brown	7	5	9	7	2	9	13	8	6	6	4	..	4
Winters	3	9	10	6	4	9	14	6	6	10	8	8	10
Sheffield	..	7	9	7	4	8	12	7	7	10	6	8	10

Cazenovia Gun Club.

BUFFALO, N. Y., May 19.—The day's sport to-day at the traps of the Cazenovia Gun Club called forth a good attendance. Five events at live-birds and five at targets were shot during the day. Dr. W. H. Woodbury carried off the chief honors in the live-bird events, scoring 32 out out of 34 birds shot at. Below are the scores made in those events:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Birds:	7	5	10	5	7	Birds:	7	5	10	5	7
Geisdorfer	5	2	10	..	..	Wheeler	..	..	8	3	..
A P Pope	7	4	10	3	7	Charles	..	..	9	4	7
W H Woodbury	7	5	8	5	7	Gyp	..	..	4	3	..
Dan O'Brien	4	2	..	3	..	Dr Danser	5	..	..	4	..
J Beck	7	3	4	..	..	Bauman	..	..	..	3	..
Charles Klink	5	2	6	3	..	C L Swope	..	..	..	1	..
Edwards	..	..	10	4	5	Estes	..	..	..	4	..

In the target events Charles made the best average, although Waltz was the only one to score 20 straight in the second event. The sweeps were well patronized. Scores were:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	15	20	15	15	10	Targets:	15	20	15	15	10

Pawtuxet Gun Club.

PAWTUXET, R. I., May 22.—The following two events were shot this afternoon by members of the Pawtuxet Gun Club:

Sheldon (0)	111011111111111111111110111—23
Greene (0)	001111111110101111111111111—21
Mooney (2)	111111111010111101011111 0—20
Badmington (4)	011011110011111101011101—18
Arnold (2)	101100101011101101101111—17
Root (4)	111001100111010010111 0111—16
Hawkins (2)	110000011111110100010011 1—14
Armstrong (7)	110101100000000111011 0111—13
Cory (2)	000001100010101001010111 1—11

Thus ended the series of shoots for the W-A silver keg, as W. H. Sheldon has now won it three times. Sheldon was in good form to-day, and as none of the handicap men could tie, no one shot out their allowance. Greene and Mooney also shot well.

Following the W-A trophy shoot came a 25-bird handicap, unknown angles, for five cans of smokeless powder, kindly donated to the club by the Oriental Powder Co., of Portland, Me:

Badmington (4)	1111110101010001111110101010 1—19
Sheldon (0)	111010110101111111101111 —19
Root (4)	101111111011010100111111101 1—22
Francotte (4)	000011101111110111001111010101—19
Greene (0)	101001110111110101101111 —18
Arnold (2)	101010111011100101111 0000 —15
Hawkins (2)	110111000100101111100101 —15
Cory (2)	111101101111000110000101 0 —14
Armstrong (7)	100100101000001110011110 —12
Matthewson (7)	001010101111110000010001 —11
Andrews (7)	001101001000110100000110 1 —10

Mr. R. C. Root, a novice who has come rapidly to the front this year, distinguished himself in this shoot. PAWTUXET.

Earlsville Gun Club.

EARLSVILLE, N. Y., May 22.—A new gun club has been formed here and below you will find the scores made at our first shoot. Hall and Miller have shot before at the traps, but all the others were entirely new at the business. The event was at 20 kingbirds:

Hall	00110010111111111101— 13	Bentley	10001010000110001000— 5
Miller	11001101111011101000 —12	Short	00000001000.01000101— 5
Parsons	00101011101101010101 —11	Dunham	0000000100000001000— 2
Stanton	00001110100110010100— 8	Jennings	00010011100001000100 — 6
Morgan	00010010010011000100 — 6		

GEORGE STANTON, Sec'y.

ON LONG ISLAND.

EMERALD GUN CLUB.

May 18.—The Emerald Gun Club had a good turnout at its regular monthly shoot held this afternoon in Dexter Park. Of the twenty-seven members present, E. A. Vroome was the only one to score 10 straight; seven others came within one of equalling his score. The detailed scores were as below:

Class A, 29yds., 7 points:

M Herrington	2222212202— 9	L H Fogarty	1••2222220— 7
E J Richards	1220202222— 8		

Class A, 28yds., 6½ points:

NEW YORK GERMAN GUN CLUB.

May 19.—There was a good attendance this afternoon at the regular monthly live-bird shoot of the New York German Gun Club held in Dexter Park. Twenty members took part in the club event at 10 live birds per man Dr. G. V. Hudson, Peter Garms and H. Thomforde tied for the club badge on 10 straight. In the shoot-off, miss-and-out, Thomforde lost his first bird Garms and Dr. Hudson fought it out until the 7th round, when the Doctor lost his bird dead out of bounds; Garms thus won the badge by killing his 7th bird. Scores in the badge race and in the sweeps are given below:

	Club Badge.	Ties.	No. 1.	No. 2.

BROOKLYN GUN CLUB.

May 26.—The Brooklyn Gun Club held an all-day shoot at its grounds, Liberty avenue and Enfield street, Brooklyn, to-day. The main event was a 50 target handicap race for a gold watch, an allowance of extra targets to shoot at being allowed the weaker shots.

A high wind was blowing right in the faces of the shooters, making the targets from the magautrap exceedingly hard to gauge. As a result 41 was high for a scratch man, while Justus von Lengerke, with 3 extra targets to shoot at, only beat out that scratch man, Winston, by 1 target, winning the match with a total of 42 out of 53. The wind was rather variable, and at times there was almost enough of it to give it a right to the title of a gale. There were twelve entries in the main event, the scores being as follows:

Winston (0)	10011011111111111010111111110111111111111111011010—	41
Brewer (0)	11010011111111111010011111111111111011111111011001—	40
Swan (12)	01100100110010101001111101001001011111000110001100—25	
	10101000w — 3—28

Answers to Correspondents.

No notice taken of anonymous communications

J. W., New York.—Please answer in your next issue, 1, whether it will be lawful to fish for bass on the New Jersey end of Greenwood Lake on Monday, May 31, and 2, whether I can bring bass to New York city? Ans. 1. Yes. 2. No, the New York season does not open till June 15.

H. F., New York.—Will you kindly advise me of a remedy for canker in the ear? Ans. Pour a little of the following lotion into the ear twice a day:

℞ Liq. plumbi sub. acet. ..... ʒiv.
Aq. ad ..... ʒiv.
Mix. Lotio. A little to be used, as directed, twice a day.

E. R., Port Huron.—Will you tell me in your Answers to Correspondents which dogs are best for rabbit hunting, beagles or foxhounds? If one is better than the other, the reason why? Ans. Beagles, as, being much smaller, they are slower than foxhounds. The rabbit is slower than the fox, is easier to follow, and runs a short race at best. Beagles answer all the requirements, and a pack is cheaper to keep.

NOTICE TO SUBSCRIBERS.

ATTENTION is directed to the new form of address labels on the wrappers of subscribers' copies. The label shows the date of the close of the term for which the subscription is paid.

The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us for a new or renewed subscription. Unless specially requested to do so, we do not send separate receipts.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

Hunting and fishing parties, usually in their eagerness to get to hunting or fishing, are apt to neglect the comforts of the camp; don't make this mistake. First of all, put your camp in order, that full enjoyment of the expedition may be realized, for you are just as apt to get game in sight of camp, in a game country, as by an all-day tramp in the woods. There is an old saying with the hunters, that the man that keeps camp usually kills the most game. Horace Park.

ARIZONA'S HUMPED GAME.

A HUMP is not a thing of beauty, nor the creature that bears it graceful. Moose and buffalo are ungainly beasts, and the mountain goat, with hump and horns, has the contour of a fiend incarnate. But the oddest, homeliest, ugliest game animal in this country is found in the wilds of Arizona. It is a conglomeration of humps and bumps on four legs; and moreover, is quite as ugly in temper as in looks, a surly, savage and malicious brute. As with many unlovely creatures, it is hardy and tenacious of life, and manages to live in deserts where other animals would starve or die of thirst, for nature has endowed it with wonderful powers of endurance. The humps on its back are masses of fat, which it stores up when food is plenty and draws upon as a reserve of nourishment in seasons of privation. More extraordinary still is the formation of its stomach which is provided with a series of little pouches or water cells wherein is stored water sufficient to last from three to five days. As for food, when hard put to, it can live on next to nothing, and of the coarsest at that; and when all else fails it draws on its humps. Most suggestive in illustration of its hardy nature and tenacity of life is the fact that while the other game animals of Arizona, although protected by what protection there may be in the game law, have steadily diminished to remnants, this hardy fellow with the hump, although preyed upon by man and beast alike, has from a small stock in the beginning maintained itself through wanderings in the wilderness for forty years. There is no more grotesque creature included among the game animals of America than the Arizona camel, and its naming in the new law of the Territory may be reckoned as one of the curiosities of game legislation in this country.

The Arizona camel belongs with the earliest game imported into America from abroad. It was put out at about the period mentioned in our notes last week, when the Government was urged to restock Pennsylvania and New York wilderness regions with elk. The intention of those who imported the camel was not to make of it a game animal. It was brought to this country during the administration of President Pierce. By an act of Congress of March, 1855, of that year the Government was empowered to purchase in Arabia a herd of camels, for which $30,000 was paid, to be used in the West for crossing the Great American Desert. It was thought that the adaptability which had made this beast of burden so useful in the Old World would make it suitable for transportation purposes in the barren stretches of the Southwest. The experiment proved a failure, and the camels were abandoned to their fate. Left to their own devices, they must have found in Arizona a country suited to them, for they increased and multiplied, and have from time to time furnished numerous specimens with which to stock circus and menagerie. As the camel is long-lived, living from forty to sixty years, it may be that among the wilds of Arizona there is a venerable patriarch whose frolicsome youth was spent in the desert of Arabia.

A creature which has held on so tenaciously in a strange land deserves the tardy recognition now given it by the framers of the new Arizona game law. May the same kindly fate which has preserved the apes of Gibraltar as sole representative of their race in Europe look out also or the camel, an Old World type in the Arizona desert.

THE SALT-LICK.

A VERMONT correspondent sends us a circular issued by a hotel in the White Mountains, in which is set forth, as an inducement for sportsmen's patronage, a statement that deer hunting is good at the salt-licks in the vicinity. The attraction may appeal to some, but our correspondent doubtless expresses the common sentiment when he writes: "I should dislike to be seen at this house for fear other sportsmen might think me a pot-hunter and a butcher."

A salt-lick is a saline spring, or deposit of salt, to which wild animals resort to satisfy their craving for salt. Sometimes it is called a deer-lick, and when there were buffalo these were buffalo-licks. Both terms have been adopted into our American place-names; the Post Office Directory shows a Deer Lick in Ohio, and another in West Virginia; there is a Buffalo Lick in Arkansaw, another in Missouri, and a third in West Virginia; while Big Bone Lick, in Kentucky, is a salt-lick, deep down in the soil of which have been found the bones of animals which were extinct long before the buffalo passed away.

Every country boy who has spread salt on a flat rock in the pasture for the cattle or the sheep, knows with what avidity the treat was received; and not less familiar to the old-time hunter was the deer's craving for salt, which it satisfied by resorting to these natural stores. The pioneer hunter who required venison counted himself lucky if there was a salt-lick in the vicinity; for then, instead of the long still-hunt, there was only the lying in wait at the lick, to which the game was sure to come. In the days when deer were many and hunters few, this was regarded as a legitimate way to put meat into the pot; it was expeditious, certain, and not fatiguing, and these considerations counted, and counted rightly then. With changed conditions, fewer deer and more deer hunters, the art of lying in wait for deer at a salt lick has generally been put under the ban as unsportsmanlike, and in some States it is forbidden by law. It is looked upon as unsportsmanlike because taking a mean advantage of the game in its necessities, and is outlawed because of its certain destructiveness. Systematic watching at salt-licks would exterminate the game in a district, for first and last every deer would come to the ambush.

THE BOY AND THE ROD.

GIVE the boy a fishing rod. Let it be one he will joy in possessing, as you in yours. This does not mean that it must cost an extravagant sum, but a price sufficient, as your experience and common sense tell you, to insure a really good article, and in measure with your means. Some people have a notion that anything is good enough if it is for a boy—even department store tackle. Department store fishing rods, it is true, are astonishingly low-priced; but more astonishing than the price is the utter worthlessness of the truck after it has been unloaded upon the unwary victim. Give no such trash to the boy you would make an angler, equipped in that style, he will be disgusted at the start, and you will have spoiled a good fisherman in the making. Give him rather an outfit he can take pride in. This is a part of angling: to respect one's self for the possession of reliable tools.

Instruct the boy in the use of the rod. Induct him into the mysteries of the art. Teach him to cast the fly and the frog. It is a part of his education which will come into play when he shall have forgotten all about logarithms and cannot tell a preterit from a rhomboid; and for which, you may be sure, he will ever be grateful to his instructor. When you teach a boy the art of angling you, equip him with an accomplishment for which he will thank you as long as he shall have opportunity to indulge it or memory to recall its indulgence. In making him an angler you are fitting him more fully to get the good out of life—for angling is one of the good things the world has to give us.

Make the boy your fishing companion. It is marvelous how an angling companionship of father and son promotes that comradeship which is the most beautiful relation they can sustain toward one another. As angling is the delight of youth and age alike, so the trout stream has a magic to lesson disparity of years and experience, and to bring old and young into closer sympathy and brotherhood.

Thus it is that in making your boy an angler you are assuring for him resources for pleasure in after life; and in making yourself his angling comrade you are endowing him with a priceless gift of blessed memories in the years to come. This present companionship of the stream, dear as it is now in the experience, will be dearer then in the long looking back. How often and with what feeling have the columns of the FOREST AND STREAM given expression to the satisfaction which is felt in reminiscence of the angling days of one's youth; and all the more precious are such memories, if in the picture of lake or river or stream are seen the faces whose lineaments all the long, long years of man's life, though they be perchance fourscore, cannot dim.

SPRING SHOOTING.

FOR many years thoughtful men have protested against the evil of spring shooting, a practice so particularly improvident that it seems unnecessary to present an argument against it.

Yet with every annual recurrence of the northern migration of water fowl and waders, reports come in and are published, without comment or condemnation, of the great bags made of geese, ducks, plover and snipe.

There can be no argument advanced in its favor but the one stated long ago, without approval, by Frank Forester, that without spring shooting there will be no shooting from midwinter till fall, unless we except that which should not be—summer cock shooting. For no such reason would any right-minded man think of shooting quail that have survived the rigors of winter, nor the ruffed grouse when he is summoning his harem by beat of drum, nor the returning woodcock when he woos his mate in the spring twilight.

Yet why not these as well as the migrant fowl, the plover or snipe, on their way to breeding grounds, or in some instances even arrived there? Why inveigh against egg-hunters when we are doing our utmost to destroy the birds before the eggs are laid?

Let our charity begin at home in giving these wanderers safe conduct through our country in their northward journey. Let us, like nature, take on gentler moods in these spring and summer days, or if we would still be killing and making a noise in the world there are fish and clay-pigeons, and a clear conscience withal. We may be virtuous and yet have cakes and ale.

Then in jocund autumn, when the replenished hordes come down from the north, we may enjoy a full feast of good things, yet tempering zest with moderation, so that those who come after us may not find the meager welcome of an empty board.

SNAP SHOTS.

IN the meeting of the Illinois State Association last week President Felton and other officials declared with some warmth of emphasis that the Association was not a trap-shooting body, but a game protective society. Then the rest of the members put on their sweaters, called pull, and did their level best to show that the convention was practically and actively a trap-shooting tournament, and nothing else. Actions speak better than words. It is vain for the officers to claim game protective purposes and activities, when the performance of both rank and file have to do only with making scores, winning prizes and dividing purses. But there is nothing under the sun to prevent the Illinois Association from achieving success in both these fields, if it really wishes to do so, and will go about it in the right way. The first thing is to divorce the trap-shooting tournament from the game protection convention, following the example of the New York Association. Let there be one meeting for trap-shooting and another meeting for consideration of law enforcement and the interests of protection. By such an arrangement one interest will not conflict with nor absorb the other. Each will have the fullest opportunity for development and achievement. Until this shall be done the game protective function can be nothing more than the farcical pretense it has always been.

The President signed on June 4, the Sundry Civil bill, which suspends until March 31, 1898, President Cleveland's setting aside of forest reserves, in March last.

The Sportsman Tourist.

ALONG THE POTOMAC.

IV.—Mount Vernon.

MOUNT VERNON is about five miles distant from the territory described in previous chapters; and the grounds I have written of were in earlier years a part of the original domain of Washington. This estate, over which my thoughts are now wandering, and which my feet did then, was partly under cultivation, the residue of the cleared portion being in a condition called old fields. These, after having been cultivated year after year until they failed to yield sufficient returns, were abandoned, to recuperate under the benign influence and process of nature's elements.

Although one would suppose that the barren fields would present a desolate and repulsive appearance, such was not the case. Nature, ever kind, displayed her bounty even here. The elements in the soil unnecessary for the production of previous crops had lain dormant, but now became active and covered those abandoned fields with a rank growth of vegetation—sedge grass, briers and wild rose bushes—and the deserted fields became attractive with clumps of blooming roses scattered over the surface, and were favorite resorts and nesting places for numerous birds—some celebrated for their brilliant plumage—and various songbirds. At the head of the galaxy of songsters the English mockingbird was preëminent. The climate and surroundings were perfectly congenial to their nature; so that they were fruitful in progeny and prolific in diversity of notes, the melody of which was truly enchanting, and far surpassing that of a captive bird of the same species. They were not confined nor controlled by man's caprice, but were free as the air through which they winged their flight to some favorite tree in the vicinity of their nests. From the topmost branches at early dawn the male birds, in their respective bailiwicks, join in melodious rhapsody, the thrilling notes of which (unrivaled by any other feathered songster) reverberate from hillside and forest as they are borne along by the morning breeze, and so convert the barren fields to scenes of beauty and pleasure, for those who appreciate sylvan beauties. They also give pleasure and solace to the faithful mates patiently performing the duty of incubation in their adjacent and artfully concealed nests, anxiously anticipating the advent of their expected offspring. Those magnificent songsters are not confined to this locality. Their orchestra embraces all the open land between Washington and Wakefield to my knowledge, and no doubt farther south. When the first rays of the morning sun gilds the lofty foliage their matin songs, as each joins the chorus, fill the vast domain with musical vibrations, which impress the listener with feelings of admiration utterly indescribable. They are still there to greet the rising sun as it lifts its head above the green hills of Maryland; and perhaps to give solace by notes familiar to some solitary pilgrim wandering over the desolate estate of his ancestors, and recalling the happy days of his youth, or gazing upon war's desolation, like Marius amid the ruins of Carthage.

It has always been my impression that those mocking birds were introduced by the English colonists. If so, they found a congenial home. I left their haunts with regret, and passed down to a spot on the brink of the river to a favorite pleasure ground once shaded by a grove of ancient oaks

Where often in youth, and manhood's bright day,
Beneath their great boughs we danced on the green;
But war's dreadful havoc swept them away
And left it a dreary, desolate scene—
Girls were not women in those halcyon days,
Boys were not men at that time;
They freely indulged in innocent plays,
Which made them strong women and men at their prime.

Alas! neither substance nor shade of those patriarchal oaks exist. They were spared no doubt by the early settlers when clearing their land to afford the shade around a splendid spring incessantly gushing from the roots of one of them, sending up a copious volume of cold, clear water. This attractive oasis, which had been protected and cherished from time immemorial as a place of rest or pleasure for all who desired to use it, was destroyed by vandal hands, without ostensible object or advantage.

Yet if those who desecrated this renowned spot had known its historical relations, they would doubtless have exerted themselves to protect and preserve it. This grove of oaks, with its gushing spring, had been from time immemorial a favorite resting place for those of the surrounding country who participated in the pleasures and excitement of hunting and the chase, among them the leading men who adorn American history. As Mount Vernon was but three miles distant, Washington and his neighbors, among them Col. Fairfax, of Belvoir; Geo. Mason, of Gunston Hall; Lawrence Lewis, the husband of Washington's adopted daughter Nellie Custis, and his numerous distinguished guests, frequently reclined beneath the boughs of those forest monarchs, and refreshed themselves from the cool waters of the spring. Classical writers have immortalized the fountain of Clepsydra, as it was in the waters of this fountain the infant Jupiter was washed by the nymphs Neda and Ithom; and to the fountain modern Greeks point with pride. Although we do not claim that our comparatively obscure fountain has been honored by the presence of any young Jupiters, yet we are personally cognizant of the fact that some young American barbarians have frequently partaken of its waters, and enjoyed the shady grove; if any youthful Jupiter had attempted to pollute those waters by bathing there would have been a tussle, and if the modern Greek heroes are fair specimens of those of antiquity, the contest would not have been doubtful. Moreover, as mentioned above, it was honored by many of those great statesmen, whose creations surpassed those of mythology by erecting a national structure surpassing that of Greece in her palmiest days.

When last in the vicinity of the spring, I was reminded of an extremely sad disaster which occurred on board the U. S. S. Princeton, immediately in front of this place, when passing down the Potomac. It occurred during John Tyler's administration, I think in 1843; at any rate he was on board of her at the time. The Princeton was a beautiful vessel, and equipped in elaborate style, and was, I believe, the first United States ship which had applied to her the Ericsson submerged propeller. She was thus in construction a departure from the old style of naval ships, and was brought to Washington for the purpose of affording an opportunity to members of Congress and others to examine her. She remained in this vicinity several months, and during the time made a number of excursions down the Potomac, conveying the Cabinet, members of Congress and other distinguished guests. On the occasion of the disaster there were on board of her the President (John Tyler) several members of his Cabinet, and a number of other distinguished guests, ladies and gentlemen.

She carried an immense gun, said to be the largest in the United States—the Peacemaker. It was part of the programme of entertainment for the guests to discharge that gun, that they might witness the practical mode of handling such an immense implement of destruction. A number of gentlemen were assembled in close proximity when the gun exploded, instantly killing two members of the Cabinet, Messrs. Upshar and Badger, and three others, one of whom was Mr. Gardiner, the proprietor of Gardiner's Island, contiguous to the eastern end of Long Island. Mr. Gardiner's daughter was also on board, and shortly after married John Tyler. Their son represented a district in Virginia in the last Congress.

This familiar locality recalls from the distant past many scenes and incidents of unalloyed pleasure, some of which appear as vivid as of recent occurrence. Among them there was a characteristic custom at that time which never languished in interest or popularity with any class of the people, black or white, until compelled by circumstances to succumb. It was an annual scene of labor and festivity enjoyed by all apparently on equal terms; in fact, the black race assumed control of the principal feature of the entertainment.

A Corn Husking Under the Old Regime.

I will endeavor to delineate the scene and incidents, but words cannot impart to the minds of others the inborn sense of enjoyment experienced by those who participated in those festive scenes of Southern life in the Old Dominion.

Those corn husking festivals united labor with pleasure, and accomplished a great amount of work in a short time under pleasant circumstances. The preparations for the final event (that is, hauling in the corn from the field) was commenced several days before the specified time for the gathering of the clans. All the wagons and ox carts were in requisition, in which the corn was hauled to a suitable place in the vicinity of the barn, and there piled up in a rick 15 or 20ft. high, in length sufficient to contain the quantity or yield of the crop. A rick 150ft. in length is sometimes required to contain the crop of a large plantation. As the preparations approach completion, the time is selected, which is invariably at night, and the invitations are sent to the neighbors, families and servants, which include field hands.

At the proper time the hands assemble around the rick and await the orders of the Corn King, who is not a transient dignitary, selected on the occasion to perform the duties for that time only, but is selected on the ground of his natural ability to perform the duties of leader at all the huskings in the neighborhood, and holds the coveted position until some aspiring rival dethrones him by superior ability to improvise, or by more ready wit or more powerful lungs. He is a leader of his race, and on this occasion this dark-complexioned descendant, perhaps, of African royalty—and in addition to the above qualities possessed of a massive form, assumed an imperious air; all this, with a stentorian voice equal in volume to a fog-horn, impressed those of his race in the lower grades with feelings of pride and eagerness to obey his commands. After his Nigerty ascends his throne (the top of the rick) he assumes a dignified posture, stretches forth his arm, and shouts in a slow and slightly reduced cadence, the others responding in the chorus:

Is you all ready, down dere below?
O—yes—O!
Jerk off de husk en' let her go,
O—yes—O!
Hurry up dere en' don' be slow,
O—yes—O!
Dis I tell you; you got to know—
O—yes—O!
Your neighbor's corn, I tell you so,
O—yes—O!
Is moldin' in de husk, an' 'ginnin' to grow,
O—yes—O!

ABOUT MIDNIGHT.

Master Tom, your niggers is sick,
O—yes—O!
Bring 'roun' de jigger—bring it quick!
O—yes—O!

TOWARD MORNING.

I see signs of de break of day,
O—yes—O!
T'ro' a crack in de cloud; it's coming dis way,
O—yes—O!

The sentiment and words are changed to suit the circumstances occurring during the night. During the early hours of the night the ladies of the household, assisted by their guests and the house servants, prepare the edibles and other accessories necessary to furnish a banquet to satisfy in abundance and variety the entire assemblage, for all, whether known or unknown, are welcome to participate.

Although universal pleasure and jovial sociability characterized those scenes, yet there was an occasional unpleasantness to mar the general joy—and even those had their ludicrous features, which afforded mirth to the spectators if not to the participants. About the finishing of the work at the rick, the mutterings of a controversy could be heard between two male descendants of Ham. The contention was ostensibly in reference to one of the dark brunettes, but no doubt the frequent circulation of the jigger brought on the trouble which terminated in practical hostility.

There was not the slightest effort to make any preliminary arrangements. Not a word in reference to the Marquis of Queensbury rules, and without even sparring for position, they sprang together, their heads striking like cannon balls. In a few moments they were clinched and on the ground, a position they invariably occupied when indulging in this class of athletic exercise—called rough-and-tumble. The combatants in this class of pugilism are restricted to three modes of assault—gouge, kick and bite. The last appears to be in the greatest favor with the champions. They have very little to say. In fact I recollect but one instance during a contest, when the under gladiator remarked to his antagonist: "You kin r'ar, I'll stay wid yu, do." Mementos of those little difficulties were occasionally found. One of my youthful companions picked up the lobe of a gladiator's ear, which he said was nearly large enough for a razor strap. JAS. NORRIS.

MAGNOLIA, Harford County, Md.

ON THE EDGE OF THE GRAN CHACO.

TOLD BY WILLIAM KINGSBURY TO WILLIAM H. AVIS.

Chapter IV.

THE water in the well at the house would sometimes run low, then we would have to take a cask to a fresh-water lagoon about half a mile from the house and fill it. One morning, after filling the cask, I lighted my pipe and lay down in the grass to enjoy a quiet smoke. I had been lying there lazily watching the rings of smoke from my pipe and thinking of far-away home and friends whom I had not seen for nearly ten years. While thus ruminating my hand wandered to my Winchester, and hardly noticing what I was about, I picked it up, rested it across the water cask, and carelessly commenced to aim it at different objects, such as flowers, grass stems and the like. Suddenly, as I swept the barrel in an opposite direction from that in which I had been aiming, I was surprised to have the sights come in range with a large ostrich that was leisurely walking along not more than 150yds. off. The huge bird would walk a short distance with head erect, then it would stop and pick awhile, only to walk a little further and stop and pick again.

I knew the ostrich had not seem me or he would have been off like the wind. That he had seen the horse I did not doubt; but then I knew that the horse was not likely to frighten him, for in all my experience on the pampas I had never seen an ostrich run from an unmounted horse. In fact, I have hundreds of times seen them feed in great numbers right among droves of horses and cattle. In direct contradiction to many accounts I have read concerning the wariness of the ostrich, I can truthfully say that I have on different occasions deliberately and openly walked to within 150 or 200yds. of a troop before they started to run.

Ostriches can swim. As I wish this fact distinctly understood, I emphatically repeat, ostriches can swim. Many and many a time have I chased them into the water, both singly and in troops, and while they were climbing the opposite bank, after swimming the river or lagoon into which I had chased them, I have shot them. Further on I will tell of a chase in which we forced a troop of fully fifty ostriches to swim the Salado River.

Adjusting the sights for 200yds., I carefully aimed just below the wing, near the center of the body, and fired. At the report of the rifle he dropped and commenced to flop around at a great rate. Soon he grew quiet, and when I reached him he was dead. He proved to be a large male, and after cutting his throat I drew his legs over my shoulders and partly carried, partly dragged him to the cart. When I reached the house they were surprised to see me bringing meat as well as water.

One evening I was leisurely sauntering on the pampas with the Remington carbine, which old Francisco Montenegro had given to Jim, when I noticed a troop of four ostriches about 400yds. off. I started to walk toward them and had gone but 100yds. or so when they took fright and away three of them went; the fourth, a large male, however, seemed not to be in as great a hurry as the rest. Instead of running he seemed to prefer to walk, and that is just where he made the great mistake of his life. As he walked along, looking back at me first over one shoulder then the other, he aggravated me to such a degree that I determined to try a shot at him even at that great distance, so, watching my opportunity, I waited until he turned his broadside to me I aimed quickly and fired. I had no idea whatever of hitting him, and my surprise may be imagined when I saw him go headlong into the grass. I hardly believed it possible I had hit him until I walked up and found him dead, shot directly through the heart. I lay claim to no skill in getting that bird. It was a lucky, accidental shot, pure and simple, the most remarkable I ever remember making. The queer part of the whole business is, that try as I would, I never was able to hit anything with that carbine afterward.

Soon after this Jim and I decided to go fishing. The waters of the arroyo San Antonio were still very high, so we judged that many large fish must have ascended from the River Salado.

We started bright and early one morning, so as to fish in the cool of the day. We had caught a heavy string of catfish, more than we really needed, and were about to give up when Jim's line began to run out in a strange, sluggish manner. Giving a quick jerk, he found that he had hooked something heavy, and as he started to haul in hand over hand he had to exert a great deal of strength to keep the line coming his way. We were wondering what was on the hook, when presently an immense turtle poked his head above the surface. Jim worked him carefully to within half a dozen yards of the shore, and as we feared he might make trouble should we attempt to land him alive, I fired a couple of bullets into his head out of my Smith & Wesson. The bullets caused him to become quiet, so we had no trouble in landing him. He weighed about 60lbs.

While returning to the rancho with our fish and the turtle, I saw about 300yds. ahead what I made out to be the antlers of a buck gama showing just above the top of the grass. As his head was below the grass, he did not see us, and as he was to windward, we rode to within 200yds. of him. Dismounting, I handed my bridle-rein to Jim and proceeded to stalk the deer. When I had approached to about 75yds. of him I rose to my feet and, after looking carefully ahead, I could just see the tips of his antlers moving about. I aimed at the place where I judged his body to be and fired.

At the crack of the rifle the antlers disappeared and there was a sudden commotion in the grass, as I could see by the swaying of its top. As Jim observed the success of the shot he immediately hurried forward with the horses. When we reached the deer we found that my aim had been true, as the bullet had passed directly through the

backbone near the center of his body. He was a young buck and in fair order.

There is nothing remarkable about the manner in which I shot this deer, for I had secured many in the same manner before; but tightly entwined around the antlers was an Indian bolas. Two of the balls had been lost, the third still hung dangling from the antlers.

When the deer, turtle and fish had been consumed, Jim and I started on another hunt early one morning. We had now been sleeping under a roof for nearly a month, and as we were yearning to spend a night in the open air, we decided to go as far as the Salado River, camp there that night and return the next day.

Just before reaching the river we saw a doe some distance off in the grass. Jim stalked her and secured her with a charge of buckshot. It was all I could do to persuade Jim to stalk the deer, as he never seemed to care a great deal about hunting anyhow. He almost always insisted on my taking the shots that presented themselves; yet he was the truest friend and best, whole-souled chum I ever sat beside a camp-fire with.

When we reached the river we rode about four miles along its bank, keeping a good lookout the while for a place to spend the night. We met plenty of signs of game, such as the tracks of gama, cervo and other deer. Besides, there were tracks of monte cats, pumas, jaguars, wolves and carpinchas. We also saw a large troop of ostriches, and while passing through a thick monte we came across the tracks of a drove of chanchos del monte (wild pigs of the woods).

The cervo is a fine large deer, larger than our red deer; in fact, it is rather between the red deer and caribou in size. We never met it on the pampas, and it is said that it never, or seldom, ranges south of the Gran Chaco in the Argentine Republic. It is a grand deer, and, so far as I know, the largest in that country, if not in South America. It is gray, and the hide is highly prized by the Indians; they use it in the manufacture of their bolas, lassos, reins and all horse gear in general.

Finally we came to a bend in the river where a narrow pampas skirted its bank. This narrow strip of meadow was covered with such a luxuriant growth of high, rich grass that we decided to look no further for a camping place. Halting under an algarrobo tree, we staked the horses out in the rich grass; then hung our deer up in the tree where it would be safe from marauders. Then we erected a grass lean-to, gathered large quantities of dried grass and filled the rude dwelling full up to the roof for our beds. After a bath in the river we felt so pleased with the world and ourselves, and were so lazy, that we decided to do no hunting that day, but to lie around in the shade and take things easy. At evening over a bed of glowing coals we broiled slice after slice of venison; and supper over, we lounged by the fire, smoking and talking.

It was a delightful evening. A gentle breeze fanned our sun-browned faces and played mysterious tunes through the branches overhead. The light of a new moon crested the tiny waves, that lapped the river's bank, with faint gildings of silver. Strange croaks, groans, sighs and whispers, or shrill pipings and whistlings, would be borne on the air from out the thick monte and heavy grass lining the river's edge. The distant roar of a jaguar could be heard breaking out at regular intervals. Such sounds, however, the hunter and herder of that wild country soon grow used to and no attention is paid to them.

Jim was relating some of his sailor experiences while on the famous trip around the world aboard Lady Brassey's yacht Sunbeam. He had reached a very interesting point in his story when we were startled by a commotion in the grass near by, and experienced rather creepy sensations when we saw, in the faint moonlight, the shadowy outlines of a large puma not more than 5yds. away and looking straight at us.

We grasped our guns and Jim poked the fire, sending up a shower of sparks. I stood with cocked Winchester undecided whether to fire or not. While thus we stood the puma commenced to act in a strange manner. It lowered its head and sniffed around in a queer way, then raised its head and stood and looked straight at us in a way that made us feel none too comfortable. Soon he began to circle slowly and cautiously around the fire, keeping his shining eyes on us all the while. He had nearly completed a circle around us and why I had not fired I cannot tell. Presently he reached a spot where the faint light of the moon shone more strongly on him and Jim and I simultaneously accounted for his strange actions. Could we believe our eyes? Our nocturnal visitor was no puma, but a large half-famished greyhound. He had scented our deer meat and that was what had brought him to our camp.

Cutting off a piece of meat I threw it to him and he swallowed it ravenously. We tried to approach him, but he would run away when we made the slightest move toward him. We gradually enticed him nearer and nearer with the pieces of meat, until finally we could almost touch him. After feeding him fully 10lbs. of raw venison we managed to strike up an acquaintance. That night we lay down to sleep with a dog on guard for the first time since leaving good, faithful Chena.

This dog formed one of our party into the edge of the Gran Chaco, and was with us to the end of our hunt. His breed was mostly greyhound. He was a trifle heavier than the full-blooded greyhound, however, and his tawny, striped color so much resembled that of the tiger, that we decided to name him Tiger. When we became closer acquainted we found Tiger one of the truest and most affectionate of friends. He developed into a great hunter, and after he had regained his strength surprised us by the easy manner in which he would run down and kill an ostrich. He was not unlike other dogs of the country, and we decided that he must have strayed from an Indian or a Gaucho.

We were astir with the sun next morning, and going to the river to bathe found many fresh tracks of animals that had been down in the night to drink. Among the tracks were those of a large puma.

While there was plenty of game here, we decided not to shoot anything (unless a cervo) until nearer the estancia. We had nearly reached the arroyo San Antonio, and as we were then within three miles of the estancia, we kept a sharp lookout for something to shoot. Soon we saw the back of a gama showing above the grass 150yds. off. Dismounting, I took a rather careless aim and fired; I could see the deer bound away at the report of the rifle. I surely thought I had missed him, when Jim let out a yell like an Indian and was away after the buck. Quickly mounting, I dashed away in the rear. When the wounded buck reached the banks of the river Jim and Tiger were pushing him close. Into the river he dashed, but he had hardly commenced to strike out for the further shore before Jim's horse plunged in after him. Jim had grasped his lasso and was now swinging it round and round his head, and as the deer scrambled out into the shallow water that covered the cañada, he hurled the lasso with such precision that the noose dropped squarely over the deer's head, and when I had crossed the river and reached the spot the chase was ended, and all left was to load the wet carcass on Jim's horse. When we had nearly reached the house we saw a doe; I stalked her successfully and killed her within 600yds. of the house.

We received word from H. that afternoon, saying that he would reach Soledad the next day. This was good news indeed for us, as we were growing anxious to continue our journey into the wilds bordering the Gran Chaco.

Soledad was at that time the terminus of the Santa Fé, San Christobal & Tucuman Ry. It was by this road that H. was to come. When Jim started for the station next day to meet H. I took dog and gun and went after martinets. Tiger appeared to have been taught to seek out the birds. While he would not stand on a bird and always flushed it, still, in that country where birds were so plentiful and the shooting so open, it didn't matter if a dog wasn't strictly broken to stand. I watched him closely, and when I was sure by his actions that he was near a bird, I would call out to him: "Chummelly, Tiger! chummelly! chummelly! chummelly!" which means "Sic 'em!" I would then stand ready, and as the dog drove ahead I never failed to get a shot at a martinet.

Sauntering carelessly over the cañada I occasionally dropped a bird, and when I had secured eight I started back for the shanty. There I saw two persons standing by the door—Jim and H.—who came out to meet me. After our greetings he said: "Oh, I say, Bill! there's a party who came with me—a particular friend of yours—who is at this moment in the shanty, and who wants to see you, bad."

"A friend of mine, who wants to see me? Well, who is he?"

"Oh, you'll see who it is all right when you reach the shanty."

Hurrying quickly forward, and wondering all the while who could be there to see me, I soon reached the shanty, and as the door swung open my eyes fell upon a sight which for a moment held me spellbound from wonder, surprise and pleasure; for there, fairly bubbling over with nervous, joyful exuberance, and trying her best to talk and tell me all about it as she frantically tugged at the chain, was good, faithful Chena! Springing quickly forward, I put my arms about her precious neck, and as she licked my face and gave vent to a number of low, tremulous whimperlike sobs, I confess that my eyes were not entirely dry, and that I, too, whimpered once or twice. Good, noble Chena. Sick and deserted, she had taken the back track and slowly and painfully had tottered, staggered and dragged herself with those bleeding feet, hour after hour and day after day through a wild, unsettled country infested by many wild beasts, for more than ninety miles to Los Carlos, the town from which we had started. Here one morning H. had found her hanging around the place where I had last put up. Seeing her pitiful condition, he took her home with him, doctored her up, and decided to bring her along when he came, and here she was, sound as a dollar.

I had many times heard and read of the faithfulness of the dog to man, and this incident, coming under my own observation, but proved to me that that faithfulness can never be overestimated. Poor Chena. We all looked upon her as something higher than a mere brute.

Natural History.

THE WEASEL AGAIN.

Editor Forest and Stream:

A little time since some items appeared in your columns relative to the weasel's cunning and dexterity. I have had experience in shooting at weasels with a rifle—I never killed one in that way though not distant more than 40ft. The little fellows would disappear like a flash, and almost immediately reappear in some other crevice of the stone wall and sit there, apparently laughing at me, while I reloaded the rifle. Then the same thing over again.

One of the best things I ever heard took place in my native town in Vermont some years ago. One of the most reliable and respected men in the village owned a tannery which was often infested by rats. A weasel made war on the rats and killed a number of them.

But one big rat was too much for the weasel, which would always run when his lordship came to the rescue of a smaller rodent. At length the weasel was observed industriously digging a tunnel through a small knoll in the tanyard. Day after day he worked till it was completed. Then he ran through it several times back and forth to test it. All being satisfactory, he then attacked a rat whose squeals soon brought out the big one again. Then instead of running for his house as usual, the weasel, closely pursued by the big rat, ran into the tunnel and the rat after him. Judge of the surprise of the onlookers when the weasel, having run through the tunnel, immediately ran around and entered it again in the rear of the enemy.

After a little time the weasel came out again all right, but the rat did not. The rats were such a pest and the interest in the case so great that an investigation was made. The result was not "anti-trust legislation," but great trust in the weasel He had made his tunnel large enough at either end to readily admit the rat, but in the middle only just large enough for himself. In hot pursuit the rat had become wedged into the small part of the tunnel and was easily killed by the weasel attacking in the rear. Henceforth the weasel was master of the situation in the tan yard.

These facts were vouched for by the above-named gentleman, who was an eyewitness. I should like to know how the author of "Soul in Plants and Animals" would regard this exhibition of the weasel's reasoning power and engineering skill.

And by the way, as I do not believe in post-mortem appreciation half as much as in alabaster boxes for the living, will you please tell Messrs. Fred Mather and S. H. Greene and Rowland E. Robinson that their contribution are very much enjoyed by JUVENAL.

The Woodcock's Note.

Editor Forest and Stream:

I am very much interested in the article in your paper on the song of the woodcock. The song or call has had a great fascination for me since the first time I heard it, and that was when a child.

My father owned a small farm in the town of Greenwich, Conn., and near the barn there was a large rock, where my brother and I would go on nice evenings to use the steep side of the rock as a toboggan slide, and enjoy ourselves as only children can.

It was while playing there that I heard the song of the woodcock for the first time, in a swamp close by, where they would come every spring and seem to enjoy themselves as much as we.

Since then I always listen for the fir t whirring and whistling of wings, and the peculiar call, which sounds to me like pamp! pamp! pamp!

Nothing gives me more pleasure than to listen, on early spring evenings, for the first whirring and whistling of the bird. I have enjoyed that pleasure very much this season, as the swamp not far from the house seems to be full of woodcock. ANNIE M. AVIS.

HAMDEN, Conn , June 1.

Hawk and Carrier Pigeon.

HOLYOKE, Mass., June 1.—Yesterday (Memorial Day), while at Camp Sans Souci, three miles above Holyoke, Mass., on the Connecticut River, I witnessed the ending of a tragedy in bird life. A hawk attempted to fly across the river, which at this point is about 500yds. wide. He was carrying something in his claws, and the load was evidently too much for him, for before he reached the other shore with his prey, they both dropped into the water. The hawk struggled to recover his prize but failed; and a canoe put out from shore and picked up what proved to be a carrier pigeon. Around one leg was an aluminum band with M. G. 26 stamped on it. The head was nearly severed from the body, this probably having been done by the hawk to end his struggles while being carried away. If this meets the eye of the owner he will be interested to learn the fate of his bird. T. J. MORROW.

Game Bag and Gun.

STRAY TRACKS AND LOOSE FEATHERS.

IT is only of late that any accurate knowledge has been obtained as to the limits of range of many game birds—even now much remains to be learned. The woodcock's distribution in particular has been regarded as mysterious, though there is no doubt his wanderings are not restricted as has been supposed. At one time it was asserted that it was not found in Manitoba, and to account for its absence a claim was made that earthworms did not exist in the province, and in consequence there could be no food. Neither supposition is correct. Mr. W. R. Hine, of Winnipeg, has three woodcock that he shot while they were nesting, in the parish of St. Nobert, within ten miles of the City Hall. These other specimens are known to have been shot at various times in the same locality, and scattering birds are found as far west as Souris.

But it it must be remembered that the habitat of game birds is continually being enlarged or contracted, and this fact is perhaps as well emphasized in the Prairie Province as it is anywhere on the continent. Ten years ago the pinnated grouse was unknown north of the forty-ninth parallel, the only grouse found in the open being the sharp-tail, while now the bay will contain as many of the one kind as of the other The pinnated grouse is the more vigorous bird, and appears to be driving the sharp-tail before it. The latter is, however, spreading east, along the line of the Canadian Pacific Railroad, and now affords good sport as far as Peninsula, astation on the northern borders of Lake Superior, 600 miles east of Winnipeg, the species having extended its range over that stretch of country in the past twelve years. As yet it is not found far from the track, as open spaces in the forest are somewhat scarce, but with the advent of settlers and the consequent removal of the heavy timber it may possibly increase.

Canvasbacks have recently appeared in unusual numbers on Lakes Winnipeg, Manitoba and Whitewater, though few are shot owing to their habit of keeping strictly to the deeper parts of the lakes. Chesapeake gunners complain bitterly of the growing scarcity of the canvasback in their waters, and have taken it for granted that the birds were becoming exterminated. May we not rather hope, in view of their sudden appearance in increased numbers on the northern prairies, that they have merely learnt wisdom by experience.

Sportsmen in search of arctic conditions need not go to Greenland; White River, 747 miles west of Montreal, may confidently be recommended. There are moose, caribou, bear and numberless fur-bearing animals; but the man who would secure them must be no feather-bed sportsman. For weeks at a time the mercury remains at 40° degrees below zero, and —68° is sometimes recorded. Winter begins in October, and there is snow in the woods in June. Neither oats or barley will ripen, and potatoes when dug are little watery balls, no bigger than marbles. Snow is sometimes 6ft. deep on the level, and—but why continue? Men, women and children live and appear to thrive in a region more inclement in winter than many a land within the arctic circle.

Some of the limited areas where wapiti, miscalled elk, yet remain, might almost be compared to oases surrounded by a vast gameless desert, from which the chief charm has been taken away; for surely a country from which all the big game has been driven must always be a dreary land for the sportsman. The most accessible of these oases, to those who live in the East, is the Riding Mountain district of southern Manitoba. Elk are there in tolerable abundance, but they are in such easy ground that the Provincial Government has done wisely in throwing the protective arm of the law about them and in forbidding their destruction until 1898. Elk are also found in the Duck Mountains and other isolated ranges of the Province, and provided they can be protected from ruthless slaughter are likely to flourish for generations

to come, as their haunts are absolutely worthless for agriculture, and do not, so far as is known, contain any economic minerals.

There is something pretty about the tinkering of the authorities of the island of Newfoundland with its game laws. As most hunters know, the northwestern coast and desert interior of that Northern island are justly famous for their caribou hunting. Nowhere in the world is the reindeer of so superb a growth, and nowhere, except in this poor land of cod and fog, does *C. Tarandus* grow antlers of such breadth and massiveness of beam, so that it is not surprising that "keen" men have been finding their way from this country and from the British Isles to far off Newfoundland. Those that have done so have invariably been sportsmen, and they have never attempted to shoot down the herds of deer that swarm on the barrens. But this has not strengthened their case with the jealous nimrods who belong to the least progressive colony of white men on the American Continent, and these gentry have continued to bring pressure to bear upon the local legislators until finally laws have been passed of so stringent a nature as to make a successful hunt well nigh impossible—that is, impossible for a visitor. The ingenuous natives may, of course, as heretofore, murder caribou by the thousand with their heavy sealing guns crammed with a four-finger load of buckshot, when the poor beasts are driven by the deep snows of the interior to visit the southern coast, something that happens each winter. First a limitation was put upon the number a man could shoot; then a heavy tax was put upon him in the way of a license; lastly, the open season has been so shortened that a hunter would have to be extremely fortunate, and be favored greatly by the weather to make anything of a bag.

CHAS. A. BRAMBLE.

CHICAGO AND THE WEST.

Pheasants and Puppies.

MR. WM. WERNER, of Chicago, is nothing if not a confirmed enthusiast on dogs. He always has a lot of young ones coming on, besides a few good old ones up his sleeve. He divides his affection for his dogs with his Mongolian pheasants, of which he has a number on his farm in Indiana, as well as a few in his yard at his city home. Here he has a few coops and a little wired-in walk for the birds, which seem to do as well in their limited quarters as so many domestic chickens. The other day Mr. Werner was awakened at about 5 o'clock in the morning by a disturbance in his fowl yard, which he guards as the apple of his eye, and upon going downstairs and into the back yard, he saw a peculiar and interesting sight. Two of his young dogs, a setter puppy only ten weeks old and a pointer puppy ten months of age, had in some manner escaped from their kennel and gotten out into the yard, where they had scented or seen the pheasants in their coop. The puppies were standing on a little platform leading from the barn door, about 5ft. above the pheasant coops, and both were at full point all by themselves, and apparently oblivious of the rest of the world. Mr. Werner says it was one of the prettiest sights he ever witnessed, and he went back into the house and woke up his son, calling him to come out and see the puppies at work. The son arose and went out to the yard in time to see the little fellows still holding their point, and he declared it was the only thing which could have reconciled him to getting up so early in the morning.

Mr. Werner expects two hens to come off their nests tomorrow with at least twenty or twenty-five chicks of pheasants. His experiments with the birds, here in the heart of the city, have more than usual interest, and suggest the possibilities of the industry of raising these beautiful and valuable birds. Mr. Werner's friend, E H. Shorb, of Ohio, writes him that he has now 800 young birds hatched at his place, and 2,200 eggs hatching. There seems to be no limit to the fecundity of the Mongolian pheasant, and it is no bold hope to expect to see these birds common in our covers at no very distant time.

The Velvet Scoter.

Mr. John Townson, of Toronto, is good enough to add still a little more to the accumulating fund of information regarding the black duck or velvet scoter, and goes on to say:

"Observing a flock of velvet scoters flying over the harbor on the 19th of the present month made me think of some correspondence I read under the head of 'Chicago and the West' in FOREST AND STREAM last winter regarding this duck. I was surprised on reading the article to find that they are comparatively rare about Chicago and Lake Michigan, as they pass along the northern shore of Lake Ontario during the month of May in great numbers, although they are not nearly so plentiful during the fall migration.

"I have noticed one peculiarity about the velvet scoter which does not pertain to other wildfowl passing here in the spring, and that is, you may see flock after flock leave the lake for a few hours preceding sundown and head overland in a northwesterly direction, for Lac la Biche or some destination in the far Northwest, where Mr. Thomas Johnston, of Winnipeg, thought he had discovered the breeding grounds of the black duck or dusky mallard, which breeds as far west as Sault Ste. Marie, while further west than that point it is only an occasional visitant.

"I fancy that the scoters in their southerly migration may follow the Atlantic coast; of course, this is merely supposition. However, the fact remains that for every one that passes by here in the fall there are ten in the spring."

The question of the lines of migratory flight, north and south bound, is something of great interest, though open to considerable speculation. It is well known that the wildfowl do not always come back over the same line they take going north. In this part of the country we have far more birds of all sorts in the spring than we do in the fall, the returning flight appearing to go further to the west. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Pheasants in Missouri.

THE Greene County Game and Fish Club, a progressive organization, comprising among its officers and members many prominent business men, is preparing to stock its game preserve on the Sac River with English and Chinese pheasants, some of each of which were secured for that purpose some months ago. The breeding pens now contain twelve English pheasant hens and thirteen hens of the Chinese variety, with an equal number of cocks. The club has 142 eggs setting and sixty ready for the hens. For the purpose of hatching the eggs common bantam hens are used.

GOVERNMENT GAME PRESERVES.

ST. PAUL.—*Editor Forest and Stream:* I have read over the article written by Mr. W. G. Van Name of New Haven, Conn., and while the theory he advocates would be all right if we could make certain conditions, otherwise I don't think it would be practicable. However it may be from Mr. Van Name's standpoint, and the object that he sets forth may be accomplished, as far as the seashore is concerned.

Mr. Van Name says fifty square miles should be set aside east of the Mississippi River. I think if he would just reverse that and say fifty square miles northwest of the Mississippi River, where most of our migratory birds nest, then I think the majority would agree with him.

It is a well established fact that in Alaska alone millions of eggs are taken and sold every year, and of necessity that many birds are killed annually. If the Government is going into the business of protecting our game (which I would not dispute would be a good thing under certain conditions) why not protect our game birds where they nest?

I know that to a great many causes is attributed the scarcity of our duck and goose shooting in the fall of the year, especially here in Minnesota. Some attribute it to the scarceness of water, as a great number of the sloughs and smaller lakes have dried up during the past twenty years; others again to the incessant spring shooting, as our birds are pounded at from the time they leave the Florida coast until they reach here, which is the nesting-grounds for great numbers of them, and as a natural consequence they will avoid covering the same ground, for the reason they were shot at during the spring.

My own opinion in the matter is, that without doubt spring shooting is vicious, and I also think that if we could induce the Governments of Canada and the United States to protect all breeding-grounds of our ducks and geese, there would be far better shooting in the spring and fall, and the game would be more abundant.

In conversation with a gentleman a few weeks ago, who is well posted on such matters pertaining to Alaska, he told me he could not begin to compute the amount of eggs that were taken from there annually and sold for different purposes. He was unable to furnish me with the details in regard to what they were used for at that time, but promised to look the matter up and furnish me with a statement when he returned to Alaska, detailing the purposes they were employed for and about how many were annually destroyed.

I think that this is the very foundation of protecting our migratory birds, and if we could accomplish this, then have the different States along the Mississippi Valley pass laws prohibiting spring shooting, when the birds are going to nest, then I think there would be no need of setting aside fifty square miles east of the Mississippi River.

Of course I am not opposed to any and every kind of game protection that is at all practicable, but it is my firm conviction that the power to protect our game should be reposed in the different States, in order to achieve the best possible results.

I am thoroughly in favor, however, of the United States controlling the shipment of game and making the Interstate Commerce Act apply to game shipped out of one State into another, when it is unlawfull to make such shipment by the laws of that State.

The sentiment of the sportsmen of Minnesota, is not that shooting lessens the amount of game, as long as the bag is limited, and as evidence of this fact we tried to pass a law during the session of the legislature, charging a gun license of $25, the same as Michigan and Wisconsin, but it could not even get a second in the House or Senate.

The citizens of Minnesota welcome the citizens of other States to shoot and fish, as long as they obey our laws. They are not allowed to catch any more than fifty fish in one day, nor kill more than twenty-five birds, and while the law is violated in this respect to some extent, still as a general thing the spirit of the law is respected.

SAM F. FULLERTON, Executive Agent.

Robert B. Lawrence, Esq., chairman of the legislative committee of the New York State Association for the Protection of Fish and Game, writes: I have read the article on "Government Game Reserves" with much pleasure and most heartily approve of the idea. There is no doubt about the sad truth that while the number of sportsmen is increasing every year, the supply of migratory birds is even more rapidly decreasing, and the fact that our markets are open to most of these birds during the entire year makes it most desirable that some such scheme should be tried, if we wish to save our migrants and particularly our seacoast visitors.

As to the practicability of the scheme I feel somewhat in doubt, for so long as each State is at liberty to regulate the killing and marketing of game within its borders, I fear it would not be possible for the National Government to try and regulate it, even to the intent of setting aside places of refuge. It is a great pity that the entire question of game laws is not restricted to the National Government and entirely removed from State control, but that is one of the features of our system of government and the cry is sure to be "hands off" the moment the proposition is made to take anything away from State rights.

If such a scheme, as the one proposed, could be started it would be a great thing for the preservation of migratory fowl of all kinds. The instance of the robin roost near Randolph, N. C., is admirable and to the lover of birds tells volumes.

German Quail in Michigan.

SAGINAW, Mich., May 29.—Several years ago my friend Charles W. Ward brought over from Germany several pairs of German quail and liberated them on his mother's farm at Orchard Lake, Mich. They thrived remarkably well, and the thicket down on the old farm corner soon began to be filled with these birds. On Mr. Ward's visiting his mother at Christmas time a year ago, he made the sad discovery that two alleged sportsmen had been into the cover during the autumn and killed over forty of these birds. He felt all the more cut up about it, as, he said, they were two men who had always had a good deal to say in favor of game protection, and had extolled to the skies their own virtues as sports men. Mr. Ward made a pretty thorough examination of the wood lot and failed to find a bird left; but to day I have a letter from him in which he says that his mother has just written him that there are several broods of the German quail on the farm; so after all some have lived, and if given a chance will, I am certain, do well in Michigan While there is no law protecting these birds in this State, there ought to be a common law of decency that would give them a show to multiply and thrive. W. B. MERSHON.

LEAP-YEARS FOR GAME.

COMMENTING on our suggestion of periodical close years on game, as outlined in our issue of May 29, Mr. S. F. Fullerton, Executive Agent of the Minnesota Game and Fish Commission, writes:

"I have been very much interested in your article in last week's issue. In regard to the South Dakota game laws, they certainly meet with my hearty approval. I think if a scheme could be adopted in all the States that it would be a splendid thing to provide one close year in every five, and, of course, would greatly protect our game and fish.

"But I believe that the only way we will ever save what we have now in the different States is to take it out of the market, adopting FOREST AND STREAM'S plan.

"I believe we have entered the wedge, and, as I said in a former letter, if we cannot drive it all the way home, two years from now we in Minnesota will drive it a good deal further than it has been driven up to the present time, and if we can only prevent the sale of game I for my part would heartily enter into any arrangement whereby our game and fish would be protected for the citizens at large.

"There is no question but what one year in every five, the presidential year, there is much more game killed than in ordinary years. I know myself last fall during the heat of election a great many persons neglected the greatest duty and privilege a citizen could perform or enjoy, the exercise of his franchise, simply because they wished to go out and hunt deer.

"I am satisfied if we had a close season every presidential year much of this wanton slaughter of game would be prevented. I shall watch with a great deal of interest the workings of the South Dakota law." S. F. FULLERTON.

Pennsylvania Association.

LIGONIER, Pa., June 4.—*Editor Forest and Stream:* The thanks of the thousands of sportsmen of Pennsylvania are due the Legislature for passing, and Gov. Hastings for signing the new game law, among the best provisions of which is the prohibition of the sale of game and its shipment out of the State. This is the direct work of the State Sportsmen's Association, and is very gratifying to that body after so many years of hard and fruitless work, and was only obtained by everlastingly sticking at it. The Association has been called nothing but a set of trap-shooters, has been accused of trying to legislate for personal ends, and has been maligned in a great many ways, but these accusations have acted as boomerangs, and sportsmen are realizing its usefulness and recognizing its sincerity of purpose. The Association has been more active the last year than ever before, and its work has been more systemized. It has at last convinced both the sportsmen at large and our legislators, that it is in earnest and that it desires to be known more as the guardian of the interests of game and fish protection than as a set of trap-shooters. The protection and preservation of insectivorous and song birds, game birds and animals and game fish are the aim of the Association, its duty first and last, and the object for which it was instituted. Its highest hopes will be realized when every man in the State who loves nature, shooting and fishing, shall be united in the work of protecting its forests, game and fish. In this connection I appeal to every club, organization, society or individual in the State, who believes in, or has at heart the accomplishment of all or any of the above objects, to join the Association and send delegates to Oil City, June 22.

J. O'H. DENNY.

Credit for Pennsylvania's New Game Law.

HARRISBURG, Pa., June 1.—*Editor Forest and Stream:* The Hon. Frank G. Harris, member of the House of Representatives from Clearfield, Clearfield county, and chairman of the Game and Fish Committee, who has successfully piloted the general game bill through the House, now has the satisfaction of knowing that it has become a law, and he deserves the thanks of all citizens of the State.

Few of the friends of such legislation realize the patience, time and care which a bill of this nature demands from the member having it in charge, to harmonize the varied differences, protect it from objectionable amendments, etc.; it calls out the tact, talent and diplomacy of its champion.

Former experience in his professional duties as an attorney had fittingly prepared him to assume a task of this nature, and he has accomplished the results desired in a most admirable and satisfactory manner. It affords me pleasure to publicly express my personal gratitude and thanks; in doing so I feel certain that I voice the sentiments of many thousands of the citizens of this State.

H. M. F. WORDEN.

Never.

STATE GAME WARDEN CHARLES A. SHRINER, of Paterson, N J., sends us the Commission's new edition of the game laws, with a card showing the open and close seasons by a device of white and black spaces To the various prohibitions contained in the law Mr. Shriner has the following, "which, while not the subject of legal enactment, are recognized as binding laws of behavior by all reputable lovers of the pursuit of game and fish."

Never violate the letter or spirit of the game laws.

Never take more fish or game than you have convenient use for.

Never be insolent or impolite to a landowner who orders you off his premises; for although he may not own the game or fish you are after, he has the right to exclusive possession of his property.

Never fail to destroy a net or trap when you find one set.

Never shoot at a game bird except on wing.

Never kill the last quail in a covey; leave some to breed next year.

Never forget that game laws are intended to improve and increase sport, and not to prevent or restrict it.

The Virginia Eastern Shore.

KELLER, Va., May 27.—Bay birds are still plentiful, giving sportsmen very fine shooting. Trout and drumfish are in large quantities. Members of the respective clubs of Accomac and Revels Island are coming by most every train. We understand that the Revels Island Club are contemplating large additions to their already handsome club building. They have a very valuable property, well located, and altogether free from ocean incursions. T. G. E.

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Sea and River Fishing.

THE GIANT OF THE RAINBOW.

THE love of forests and streams in the heart of man is the benediction of our common mother—the sweet and blessed sympathetic touch with primeval innocence that escapes the sordid, galling bonds laid on by civilization's heavy hand. Most happy he who when the spring comes on like music can heed the whisperings of the pine trees and the babbling of the brooks, and can steal away to shimmering glades and brambled ways.

With the sunny days of May how this longing came upon me! How it baffled me at business, how it troubled me in dreams, would gain nothing in the telling, as each heart has felt its tugging, has resisted, or in yielding known the blessing sure to follow those who hearken to its pleadings and renew their strength for battle by the streams and in the forests.

"Where to go?" is often a formidable question, even to the most experienced, after they have decided upon an outing. There is an unending charm in change, and it always seems that the most pleasure can be derived from fields hitherto untried. In this quandary I turned, as always, to my unfailing friend, the files of FOREST AND STREAM; and no sooner did I read that pleasing letter from the graceful pen of Alex. Starbuck, detailing the record for monster small-mouth black bass taken in the Cumberland River, than I determined to cast a minnow in these, to me, virgin waters, that I, perchance, might feel the rapture of matching skill with some "bull-dog fighter of the rocky reef."

From the handbook of the beautiful Queen & Crescent I learned that there was a good hotel at Cumberland Falls, where the sportsman might be comfortably bestowed and content his soul with angling galore. This was information sufficient, and that night I boarded a train that deposited me at Chattanooga for early breakfast, and two hours later, seated in one of the luxurious coaches of the Queen & Crescent vestibuled, I was gliding along toward my destination over one of the smoothest roadbeds in the world. The scenery along this route is beautiful beyond description, and so excited interest and so filled the sight with grandeur and majesty, that the six hours required to reach my destination were but little heeded so quickly had they passed.

At the station I was forced to confront a rebuff that would have staggered all but a sportsman that loves the woods and the wilds as much for themselves as for the prizes they can yield—the Cumberland River was at the flood from recent rains in the mountains, and the stage to the falls for two days had been unable to make the trip. Mr. Higgins, the courteous agent, however, kindly threw himself into the breach, assuring me that a hail from the shore would bring a skiff from the hotel to convey me over the river, and furnishing me a mule upon which to cover the thirteen miles across the mountains to the spot where the hail would assure me a welcome.

It was not far from noon when I intrepidly climbed to the deck of that mule, a most uncertain craft for the tyro, and steered for the haven where I hoped I would rest me that night. The day was so pleasant, the air was so bracing, and the breezes that came from the South so laden with fragrance of dogwood and honeysuckle and violets, white, yellow and blue, that, together with wood anemone, wild rockets, "green thought in green shade," and the trailing arbutus, transformed every thicket and yawning ravine into bowers of beauty and oceans of bloom, that, forgetful of distance, I abandoned myself to the wild charms about me. Every rod of the way was a journey through wonderland. The road, for the most, has been graded along the comb of the ridge, and not even the Rockies nor the song-famed Sierras have more to reveal of the grand and the possible in scenic effects than nature here spreads to uplift and delight the fortunate passer. So often I paused at wondrous gaze, my soul at obeisance within me, that twilight was fast coming down when the ferry was reached. I saw at a glance that the flood was so great and so angry of rush and of roar that it would be impossible for my shouts to be heard at the hotel, although in plain view and not far away. The evening chill of the mountains was already keen on the air, so I at once cast about for a shelter that night. Half a mile back I had noticed that a small field had been cleared for the plow on the side of so steep a ravine that I marveled how a horse could find footing; and that from deep in the hollow a thin line of smoke was ascending—unmistakable signs of a habitat there. Retracing my steps, I threw down the fence, and, leading my mule, followed a path to the cabin of a true mountaineer—the one man in the world that always welcomes the stranger.

There was but one room to the house, the children were many and of hands not a few; and besides, there was a guest in the gates more deserving of honor than any chance passer, for he had tramped many a mile since the noonday over rough mountain pasturings just to sit by the hearthstone that evening and exchange snatches of talk with the old folks, while their fair, blushing daughter, beloved of his soul, sat in her corner silent of tongue, but with poems of song in her eyes. Slumber to me was a phantom for long after all but myself had been blessed. For hours I gazed at the stars through the unchinked walls and regretfully pondered that unselfish kindness and innocent trust are withered and seared; that humanity falls into ashes when man is refined in the crucibles of education and wealth. Not long after daylight I was invited to breakfast, and then my host ferried me over the river and conducted me to the hotel, where I was warmly welcomed by the proprietor, Col. St. John, and his charming wife, who, during my stay, treated me as an honored guest of the family more than anything else, and left nothing undone that could in any way add to my comfort and pleasure.

For the first three days the river was too high for fishing, but the charm of the mountains and my lovely surroundings was upon me, and I delightfully put in the time shooting squirrels—of which there were hundreds—boating, and studying the curious types that came out of the hills with chickens and eggs or game to exchange, or to labor for an hour or day for most modest sums of coin of the realm. One man came ten or twelve miles with a fox cub that he "low'd" would make a fine pet, and he "reckin'd er quarter" would pay for his time and his trouble, especially as he had no "eend er fun ketchin' him." He really appeared relieved and surprised that no effort was made to induce him to moderate his demands. And another, his neighbor, learning what exhorbitant sums live "varmints" would fetch at the hotel, came down the next day with a pair of black skunks—"er he an' er she"—confidently demanding 35 cents for the two. An emphatic refusal to "dicker," coupled with an earnest request to remove his menagerie beyond the inclosures, aroused his resentment to such an extent that, having complied in so far as the animals were concerned, he deliberately returned to the veranda and for half of the day persistently remained betwixt the wind and our nobility. As evening came on, hoping to hasten his departure, I cautiously approached within hailing distance from the leeward and asked him how far he was from home.

"Er right good bit."

"How long will it take you to walk there. Two or three hours?"

"Several."

"Time you were starting, isn't it?"

"Yes; but I wanter sell them skunks."

"Don't you like skunks?"

"I likes 'em, but I can't wear 'em; I wants some cloth."

I noticed his shirt was in tatters, and his trousers frayed off to the knees, to say nothing of rents and thread-bare places. I interviewed the guests, and found them charitably inclined; so the necessary fund was subscribed and paid, upon the honorable condition that it would be expended for "cloth" at the earliest possible moment, and that he should at once start for home, carrying his "varmints" with him, and should carefully care for them until such time as the purchasers should demand their property. Fifteen minutes later, lounging comfortably in the rockers upon the veranda, we beheld him, with the bagged skunks on his shoulder, swing round the point of a cliff some distance away, and hundreds of feet above us. There was joy in the footsteps that hurried homeward with "fun" gotten gain, and joy in our hearts from the hope that between us the mountains would tower forever.

One day while roaming the woods looking for squirrels, I ran across a typical clearing along the sides of a widening ravine. A native as seamed and as gray as the boulders around him, and withal so weazened and old that he might well have come forth from the same primeval upheaval, was painfully plowing his rough, stony field that was tilted so many degrees that both master and beast seemed in danger of falling as from over a cliff. I induced the old man to sit down in the shade, and, having thawed out his reserve with tobacco and much kindly question, to tell me of his life in these mountains when he and the century were young. His adventures had been varied and many, but mostly with "bar" or with deer, for he had killed in his time "several" of both, which I found in the cautious speech of this country really meant a great many. While we talked the noon hour came, and nothing would do but that I needs must go down to his cabin for a dinner of good corn pone and bacon and the coldest of milk from the spring house. Then he took down his rifle from the stag horns over the cavernous fireplace, and told me with the pride of a child that there never had been in the State of Kentucky just another such "gun" for turkey and deer, and above all "for shootin' at marks," a great sport in this region, though seldom indulged unless there is something to gain by skill at the shooting. It was taller than he, and stocked to the muzzle; and it was battered and shaken and worn, but a good weapon still in hands that were steady, and when sighted by an eye that was true, as two or three deer and about thirty turkeys had attested the past winter when they died at its crack. When I started back to the hotel, my host went with me a mile to show me a tree Daniel Boon once climbed to a cliff and to safety when pursued by Indians. I submitted with grace because the old man had been kind, and because one cannot escape, and there is danger in doubting, a yarn of Tim Marshall or Boon anywhere in Kentucky.

While wating for the river to fall, I found so many delights "to entertain those fair, well-spoken days," that I came dangerously near losing sight of the fishing I had come so far to enjoy. Had the pleasant hotel, the mountains, the river all been mine, as the sole guest to claim them, I fear I should have abandoned myself to their charm, and in idling and rest have concluded my stay without once wetting a line. About the fifth day, however, the river had emptied its flood, the waters had cleared, and the conditions for angling were declared by the wise to be all at their best. In consideration of one cent each a native secured for my use a bucket of fine minnows, and with a first-class boatman to propel me I started out to try the ripples for bass.

The first day my success was not great; I captured but six, and the largest pulled the scales at scarcely 2lbs.; but for the rest of my stay there was glorious sport, for my catch was limited only in number to what I could use without spoiling. The average was good—not far from 2lbs.

In the course of my fishing my boatman had so many wild stories to tell me of a monster of some kind that lived in the pool formed by the falls, that at length, when I had surfeited with the ordinary catch, I was consumed with desire for a try at this "big one," frequently hooked, that had always escaped. For about two seasons, it seems, this fighter terrific, which no one could name, had been known to be in the pool, and many anglers of note having heard of his prowess, time after time had come from afar hoping to bring him to creel, only to find that their skill or their tackle were no match for his craft. It was even averred that in more than one instance the fish had not only escaped, but had captured the rod and the reel so cunningly rigged to destroy him. It seems that he had always been easy to lure, and that his home was just under the spot where the end of the rainbow formed through the spray touches the water—at least, that is the spot at which always his rises were made. To be sure of a strike from this giant, so the tradition ran, one must cast when the sun first smiled over the mountains, and then for an hour, as thereafter, he was sure to retire to some unfathomed deep for the day. I wasted three mornings and most of the fourth in vain effort to bring this champion of his tribe to combat, and had well-nigh concluded that the tale was a myth and I the credulous victim of a countryside jest, when my minnow, a "shiner" about 4in. long, frantically came to the surface, a rushing shadow behind it, that seemed to spring like a tiger from ambush. So fierce was the rush and so cruel the seizing of prey, I could almost have shrieked for the agonized victim, but the song of the reel that now fell on my ear was swelling to cadences sweeter than I ever had heard, and was as vital to pity as the song of Sirens to fear. The battle was on; the instinct of combat enthralled me; every nerve, every thought must be bent upon winning.

My weapons of war were superb—a Chubb rod, a Natchaug silk line and a Milam reel—but time after time during the fight I trembled for fear that an unsuspected defect somewhere in the tackle might cause me to suffer defeat. Once, after a sulk of fully a minute, there came a rush so terrific that it carried my prize almost under the falls and left scarcely 10ft. of line on the reel. What I felt at that instant preceding the turn only an angler can know who has staked his skill on the capture and lost by a few feet of thread. It was about fifteen minutes from the time the fish was hooked until I reeled him toward the ledge upon which I was standing, confident that the prize was mine. Even then a new danger beset me—I could not reach him, and saw from the way he was hooked I could not lift him out by the line. In this emergency I called loudly for help, and was finally heard by Mr. Porch, the accommodating manager of the hotel, who came to my assistance. The monster bass tipped the scales at a little under 6lbs. Not the largest by several that has been caught in these waters, but he broke my record on fishing, and I was delighted.

Whether or not he is the famed giant of the rainbow I am unable to say, but until some lucky sportsman shall produce from that pool his master in gameness and weight, he will be such to me, and so I have named him.

This was a glorious ending for a glorious trip, so I decided that my vacation was over. I have had many an outing in many a wild, but for kind treatment good fare, moderate rates and superb sport, commend me to this. H.

MEN I HAVE FISHED WITH.

XLIV.—The Grand Duke Alexis, of Russia.

IT was in November, 1876, and the newly-opened Aquarium was not well stocked with fishes. The regular collector, Mr. Roberts, was down at the islands in Marthas Vineyard and Mr. Coup said: "How would you like to go down to Currituck Sound and get some fish? There was a man in here yesterday who said that we could get any quantity there. Will you go?"

The case was very different from that told in the last sketch, where any man with experience in ice-fishing would know that there was no chance for success, and I went, under protest. Here was a chance to see the famous ducking grounds, of which I had read, and to return with live fish for the tanks.

"Mr. Coup," said I, "I'd as soon collect for the Aquarium as do any other work, but you engaged me as Superintendent of Fishculture, and have advertised that the breeding of fishes is to be one of the features of the Aquarium, and on your colored lithographs you have advertised me as in charge of that department. Now I have a professional pride in the work and dislike to abandon it for collecting. The California salmon eggs have just come and trout eggs may arrive most any time. Can't you send some other man?"

He thought a moment. The fact was that with the exception of the General Superintendent, Butler, Roberts and myself, all the other employees, from the box office to the tank cleaners, were old circus men, pensioners on Coup, whether he employed them or not, for he had a heart bigger than a bullock's. He had been Barnum's business manager for years, and poor Mr. Penny, who had a useless leg and a crippled arm from a fall from a trapeze, was a sample of his employees. I was the only available man who was an angler or who knew one fish from another. After thinking this over he said: "I want you to go. If harm comes to the salmon eggs I'll take all the blame, but the Aquarium must have some fish, and you're the only man that I can spare who knows enough to go for them; don't stick on our terms of agreement, but help me out of this hole."

"Do you know that Currituck Sound is now all fresh water since the inlet on the north was closed by the sea some years ago?"

"I don't care what it is if you can get fish of any kind. Will you go?"

"Yes, send the tanks to the Old Dominion line, and I'll leave by first steamer for Norfolk."

Presenting my credentials at the office of the little steamer Cygnet, which ran from Norfolk down through the Dismal Swamp canal to Currituck Sound, and asking for terms of transportation for myself and six 30 gallon tanks, the agent asked:

"Is this William C. Coup, of the Aquarium, the same that was Barnum's manager?"

"He is the same man. He quarreled with Barnum, and started the Aquarium."

"In that case you can't pay a cent to this company for passage, meals nor freight; the only condition I will impose is that you take a letter back to my old friend Bill Coup."

The passage down the canal on the Cygnet was uneventful, but as we went through the Sound the wealth of ducks, geese and swans kept calling for attention from one side to the other until Van Slyke's Landing was reached about sundown on Saturday evening.

I was the only guest at the hotel, and there was a prospect of a lonesome Sunday, yet there was much of interest. Mrs. Van Slyke was a widow of strong frame and stronger mind. She was postmistress, hotel keeper, store-keeper as well as farmer, and a character well worth studying. Originally from the rock-ribbed hills of Vermont or New Hampshire, where energy is required to wrest a living from the soil or anything else, she had no patience with the slow, thriftless ways of the men she had to employ. In a chat after dinner, she replied to a question by saying:

"Get along with 'em? That's not the thing. The question should be how do they get along without me? After my husband died I had to lick half a dozen of 'em, white and black. Lordy, I'd take a club or a horsewhip to 'em, and if these were not handy I'd knock 'em down with my fist, an' they soon found out that I would have no foolin'."

Nearly 6ft. and muscular, she carried her 200lbs. lightly; and a look at her face would convince any shiftless beachcomber, black or white, that she certainly would have "no foolin'."

On Monday it rained, and I engaged a boatman and spent the day trying to learn about the fishing spots in the sound, kinds of fish, baits used, etc. In the evening the Cygnet

brought a party of ten persons and trunks and other impedimenta, apparently enough for 100. They were foreigners, and one tall, broadshouldered man with a blond beard gave orders in a language whose sounds were unfamiliar. I watched the party closely and noted that the tall man left at once for the hotel and another attended to the detail of landing the baggage, and that it was all done with a military precision that was delightful, but puzzling; and I turned to the hotel to prepare for dinner.

At a place of that kind, when one is the only guest, the preparation for dinner is narrowed down to a simple washup, but the present occasion demanded a white shirt, with the abominable addition of cuffs, collar and cravat. Surely, evening dress could not be expected, so I togged out in the best I had and waited. Mrs. Van Slyke entered and said: "The tall, handsome man is the Grand Duke Alexis, of Russia, just run down here for a few days' duck shooting, and the rest of the party are his body servants, cooks, etc. He asked who you were and I told him that you came to collect fishes, and he wishes you to dine with him, for he is without company. Here's his card—'Mr. Brown.' We're to call him Mr. Brown while he's here. Do you happen to have a card?"

I did happen to have one, and in due time I followed it in and joined "Mr. Brown" at dinner. Royalty was away out of my line at that day—although I've seen more of it since—and if I felt a trifle uncomfortable at first my host soon stopped that. His cooks had taken possession of the kitchen, and his waiters served as perfect a game dinner in that old-fashioned sportsman's resort as could have been served in New York city. His English was that of an educated foreigner, so pure, so free from chipped words and colloquialisms that it was a treat to listen to him. Few to whom English is the mother tongue, whether on one side of the water or the other, can speak as the educated man does who has had it drilled into him. I wondered what he thought of my careless talk.

As we smoked upon the piazza, Mr. Brown said: "You are collecting fishes, I am informed; is it in the interest of science?"

"Partly in the interest of science. The fish collected will be taken to the Aquarium in New York city for either the amusement or the instruction of the people, the result being entirely dependent on those who see them. The careless ones will pass by some of the most interesting specimens, which a student of nature would dwell a long time upon. To a few the Aquarium is a place of study and scientific interest."

"Please tell me, do you fish for sport?"

"It is my greatest pleasure; but on this trip there is a desire to get fish for the Aquarium in any way, and therefore I come here, not in the character of a sportsman, but of a collector, who will get his specimens in any way that he can, as long as they are not injured."

"I have read much of fishing for sport in English books, but could never understand the sport of angling. In my country, I am a Russian, we shoot for sport, but fish is not considered to be game any more than you would class mushrooms as game because you collect them in the fields. Of course we have our choice fishes, and rank the salmon and the trout above the softer fishes of small lakes, but the English and Americans seem to put the capture of these fishes on a plane with the shooting of deer, grouse, woodcock and ducks. I have not been educated to that point; my countrymen regard fishing merely as a means of obtaining food."

"Yes," I replied, "that seems to be the feeling of all European sportsmen outside of England and its dependencies. The Americans and the Australians inherited their love of angling from England, and it seems singular that other European nations should not have taken up angling as a sport."

"Do you know anything of the art of fishing with the fly? I have read that the casting of the artificial fly was the highest form of angling, but I have never seen in done."

"Yes, I cast the fly some, and am told that there are black bass above this place, and if you care to see how we cast for them I will be delighted to show you, for I brought a fly-rod along, not knowing what use it might be, but I'll not promise you that we will take any fish, for the waters are new to me and I must depend on a native boatman who may or may not know all that he claims." This would "let me down easy" if the bass would not rise.

The morning was a poor one for ducks, and Alexis did not miss any shooting by not going for them. It was bright and clear, with a light wind that made just ripple enough for fly-casting. He had his own boat and I had two, one towed behind with a great iron transportation tank in it, and we went up the Sound some two miles to where my boatman, whose name was Jim, said: "There's lots o' green bass." There had once been an inlet from the sea near this point, but storms had closed it many years before, and the water was now fresh. The bottom bore evidence that it was once salt, by the profusion of marine shells, and I took several flounders which had preferred to remain; perhaps they had bred in fresh water.

When Jim let go the chunk of iron which served as a killock, the water appeared to be about 10ft. deep, and quite clear, under the lee of the boat. I rigged a cast with one fly, a green and gold, and made casts in every direction, beginning at 20ft. and then enlarging the circle, letting the fly sink and trolling it; but not a bass manifested curiosity enough to inspect the fly, as well as we could see for the ripple. To-day I would not be so rash as to make such a venture. Think of the situation. I did not positively know that Jim's "green bass" were what I called by a darker name; nor, if they were indeed black bass, whether they ever rose to a fly in these waters, and I had asked a Russian Duke to see the sport! Worse than that, I had a native boatman to whom the fly-rod was a toy, the fly a doubtful thing for a fish to rise at, while I must have appeared to him like half a dozen durned fools boiled down into one. Jim was being paid for his work, and kept his mouth shut; but, confound him, I knew that he was thinking. This made me nervous; his pale, washed-out blue eyes followed every move; but even in North Carolina it is not permissible to kill a beach comber for thinking. A new, and apparently absurd, style of fishing was on trial before him, and perspiration broke out all over me. I didn't mind the Duke at all, he had read of the art of fly-fishing for salmon and trout, and knew about it theoretically; but Jim was a net-fisherman, who sometimes used hooks on hand-lines, and was, as I believed, boiling inside with contemptuous laughter. If he would only say a word I would brain him with an oar; but he gave no such opportunity.

We all have different sides to our characters. Ordinarily I try to be Dr. Jekyll, but can't always play the part, and am forced to shift to Mr. Hyde; yet something has always restrained me from filling the latter role. Looking back on my murderous instinct that day, I now see that the fault was entirely in my own brain.

The fly was removed and a grizzly king substituted. The colorless eyes of Jim watching the fly-book and the knot in a cold-blooded way that made me wish he would attack me and give me an excuse to kill him, if I could. But he did nothing of the kind. The new fly had been cast several times and then there was a "chug" and a fish of some kind made the reel sing as it bored down and off. The Duke's boat was alongside and I handed the rod to him, having previously told him what to do. He took the rod, but lowered the tip. This he corrected; but, contrary to advice, he began to reel the fish in by main strength on its first rush and the hook tore out, leaving the fly intact. The split-bamboo rod stood the strain nobly, and I fancied that Jim looked with admiration on its curves as a strong fish battled against a strong man. I began to relent.

While the fish rise to a particular fly it is folly to change, and the cast was kept up. Alexis declined to try his hand at casting, and when the second fish was hooked he preferred to see me fight it. He became excited as the bass allowed itself to be reeled up for some feet and then, bending the tip to a low point, made a dash which was answered by giving only as much line as it could earn from the reel on the pliant rod, which kept a constant strain on the fish, even in its leaps from the water, for I never follow the rule to "lower the tip when the fish leaps, lest it strike the line and break free." The quotation may not be exact, but it is the substance of the directions in some angling books, which I cannot recall.

As the landing net brought in the bass, a big-mouth, and Jim put it in the tank to be kept alive, my hour of triumph had come. Jim brought up the tank-boat and put the fish in there carefully, saying as he did so: "That ar' fish fi't like a game cock, an' I thought ev'ry minnit that he was a-goin' to snap that little pole in two, but by jing! ev'ry time the end of the pole was dragged down to the water it sprung up ag'in, and the fish he got plum tired out. I'm durned if it wasn't as putty as a dog fight."

I was again Dr. Jekyll, with a love for my fellow-man, and Jim in particular. Jim assumed a new character. He was no longer suspected of a contempt for me and my methods. How we do warp our judgments by everything pertaining to self!

Mr. Brown thought he now understood how to handle a hard fighting fish, and he did. The next one that was hooked he fought like a veteran, giving line or reeling in as the exigencies of the case required, or I hinted, and he brought to boat a fine big mouth bass of about 6lbs, guess weight. He was enthusiastic; and after taking a dozen more declared that he would introduce fly-fishing in Russia. If he did he has neglected to inform his teacher, but I shall see that a copy of this paper reaches him.

He would not attempt to cast, I did that, and when a fish was hooked let him land it. A new fly was substituted once or twice as the old one became frayed or frazzled, but the grizzly king did so well that there was no need to change the species; a fresh individual sufficed.

It was when we smoked in the evening that my pupil manifested the most enthusiasm. "How they do fight," he exclaimed, "and what a thrill seems to pass up the line, through the rod into your arm until your nerves tingle like an electric shock. And how grand it must be to kill a salmon of 20lbs.! I certainly shall try it the first time I get an opportunity."

The next day opened with a fog and an east wind. A knock on my door was followed by a voice, which said: "Mr. Brown presents his compliments and requests the pleasure of your company to-day on a ducking trip." It was evidently one of the servants of the Duke, judging by the voice and the accent, and I jumped to the floor.

"Tell Mr. Brown that I will join him at breakfast in a few minutes."

I was down first and had my 9-gauge muzzleloader and accessories all in order. Mr. Brown had a muzzleloader, 10-gauge, which he said was a favorite, and two No. 12 breechloaders which were new. He wished to loan me one of these, but I was unfamiliar with that kind of gun and replied that my gun was also a favorite, and if ducks were plenty it would get some. I also declined the offer of a man to load for me. I preferred to do that, and then Jim would be with me. I liked Jim now. He no longer seemed to be studying me, and Jim would be worth more on Currituck Sound than half a dozen strange Russians, and he was. His skill in getting a boat out after a cripple and in putting me where it was likely to rise after a dive, added many a duck to my bag, although my muzzleloader could not always get ready for action as quickly as the guns in the other blind, but after the day's shooting Jim said: "That's a good gun; it ranges well an' hits hard," and I interpreted the words "ranges well" into meaning that it would kill at a fairly long distance. Our birds this day were redheads, widgeon, bluebills and one canvasback. I found that Mr. Brown was well informed concerning the gastronomic value of the different ducks, and I placed my bag at his disposal. His judgment agreed with mine, and although my duties often took me away all day, we dined together every night, and his cook knew how to cook game, a thing that French cooks rarely understand, excellent as they are with all other meats.

Jim had engaged some net-fishermen in both salt and fresh water to bring live specimens of fish, and the collection was growing so fast that I began to fear that I would have to leave this place for the city too soon, and so miss some shooting as well as fishing. I wanted to give Mr. Brown a taste of bluefishing out in the open, and see him handle a big one with rod and reel, for at that time of year they run big, 10 to 15lbs. or more. As Jim did not know the bluefish nor the menhaden by those names, I tried all the various ones for them that I could remember, and finally struck it on "greenfish" and "bugfish" with the aid of diagrams and his imagination, until he agreed that they resembled the fishes in question. But the day for bluefishing never came. Mr. Brown needed but little to make him an angler, and he seemed to have lacked only opportunities.

He had an ambition to kill a swan, and one rainy morning we were in the blinds long before daylight and waited. Several flocks of swans were in sight, but kept out of shot. We had no decoys, and I don't know if they are used for swans; but our blind was in the grass, far out on a point where the great birds swam past when feeding. The rain ceased about an hour after sun-up, and it was a treat to see the swans take wing on the still water, beating it with their wings for half a mile before they cleared it entirely, the last strokes merely dotting the water with the wing tips. We were fairly well soaked as we returned to breakfast about 10 o'clock; a breakfast that loomed up like a mountain when it came on, but which was unlike a hole in the ground when we left the table. You can see a hole in the ground.

A heavy gale from the north necessitated personal care of the floating cars of live fish, and I was compelled to decline an invitation to go into the interior for a day with the snipe or woodcock; we were both strangers in a strange land, and had to depend on the native guides, who were gunners, fishermen and beach combers, as the season changed. But between us and these men stood the mentally and physically vigorous Mrs. Van Slyke. She knew every one of them, and they knew her. A guest in her house could shoot and fish anywhere on her property, and woe be to the boatman, gunner or whoever was employed by one of her guests who was complained of for laziness, neglect of duty or incompetency. He might or might not be given a hearing, but he was sure to get something else. She might not have said, with Othello: "Cassio, I love thee; but never more be officer of mine;" her language would have been quite different and more forcible. Would that more keepers of sportsmen's resorts were like her.

We had more duck shooting and fishing, and the day came when this pleasant trip should end. As we sat on the piazza, smoking, the night before I left, Mr. Brown said: "I was greatly pleased when I asked for terms at this hotel to find that there was only one gentleman here; I wanted rest and recreation and to have the whole place for myself and my retinue; but I am glad that one * * * *." The amount of it was that he did not shoot and fish with his servants, and in America he had done as Americans do.

While I had a full understanding of it he explained how it was much easier for people to call him "Mr. Brown," than to use his titles, and it did seem to be a most sensible move on his part. A few weeks afterward one of his suite brought a package to the Aquarium for me. It was a handsome meerschaum pipe and case. On a gold plate it said: "To Mr. Fred Mather from Alexis; in memory of Currituck." Within a week it was stolen from a pocket in my overcoat.

Those days are among the pleasant memories of life. "Mr. Brown" was a most pleasant gentleman, and to me, at least, was as democratic as the name he assumed. He will probably never be Czar of Russia, for there are two brothers, an uncle and three cousins of the present Czar, who stand between the throne and the Grand Duke Alexis.

FRED MATHER.

MAINE FISHING.

BOSTON, June 5.—The Produce party had fair fishing at Moosehead, though the weather was generally cold and rainy. The Duck Lake Club found very wet and disagreeable weather at the Schoodics. A few salmon were taken, however. Mr. Underwood, who went a week or two before the rest of the club, had very fair fishing. He is much interested in photographing bird and animal life. His owl pictures are wonderful. This trip he succeeded in getting a live and wild raccoon up a tree and photographing him in four or five positions that are truly natural and very remarkable. The Camp Stewart party is out of the woods after eight days' fishing at Upper Richardson Lake. Mr. G. T. Freeman was high line, as usual, with a 4½lb. trout, a 7 and a 7½lb fish. Mrs Moody landed one of 4½lbs. Mr. and Mrs. C. A. Stearns and Mr. H. S Kempton are down for 2½ and 5lb. fish. Prof. J. F. Moody took a lot of brook trout. M. E. C. Fitch, of Waltham, has gone to his salmon river. Mr. D. H Blanchard and Mr. Keeler have been on a trout fishing trip to the ponds in Monson, Me. Mr. Keeler is reported to have taken a 7lb. trout. The Camp Comfort Club is out from Moosehead, with reports of fair luck. A total of 117 fish was the record, including eighty-three square tails and thirty-four lakers. The Mohawk Club, of Haverhill and Boston, has returned with a record of over 100 square tail trout out of Moosehead. C. C. Moore, of New York, is fly-fishing in Aroostook waters and having good success. The coming annual excursion of the Maine Fish and Game Association will take a number of people to the Rangeleys. A scheme is reported to be on foot for opening up more of the wilderness of northern Maine by a line of electric roads from Moosehead to Chamberlain and Eagle Lakes, and steamers on these lakes. It is even proposed to extend the line through to the further Aroostook waters. The sporting and lumbering interests are the ones at the bottom of the scheme.

Sportsmen are returning from the Maine and Provincial waters. Generally their success has been very poor, all newspaper reports to the contrary notwithstanding. The amount of tall lying that is being done in certain Maine papers on the subject of fishing is something remarkable. Almost everybody, according to these reports, gets a big trout or salmon, when the truth is hundreds are leaving the principal fishing resorts—the better known and older ones—badly disappointed. Personally I met a gentleman at the Upper Dam, June 1, who spends from one to five months there every year, and has done so for eight or ten years. He says that the fishing in all that section is terribly poor. Party after party come—many of the people strangers to the region—and go away after a week's stay, without a trout, or only one or two at the most. One party of three—from Philadelphia, I believe—after fishing at the Dam and about there for three or four days without a strike, gave up in discouragement. The gentleman, out of the kindness of his heart, advised them to go to Richardson Pond. I could scarcely sanction his advice, having tried that pond faithfully for a day and a half with only two strikes, and both of these small trout. The blow-hard papers have me down as having caught a 7lb. trout, which is as false as their other reports; the largest trout falling to my score being 2½lbs. I want nothing but the truth told, and feel that no good can come, in the long run, out of the amount of blowing that is being done concerning certain fishing resorts.

Perhaps the want of success for the past ten days at the Rangeleys and other Maine resorts is partly the fault of the weather, which has been remarkably wet and cold. Six out of the eight days of my outing were rainy and generally cold, while it rained nearly every night. Since my return the weather has been little better. Such high water for the last of May and first of June is scarcely on record at the Maine waters. Richardson Lake, Mooselucmaguntic and Rangeley are running over full. All the ponds about these lakes are the highest ever known.

Smelt and the Trout Supply.

Perhaps the poor fishing in Mooselucmaguntic and Richardson lakes is due to the smelts, which have appeared in great numbers for the first time this spring. Perfectly reli-

able guides say that the water has been alive with these smelts. Later they have died by the thousands, and have been seen floating on the surface dead or dying. Every trout caught has been simply gorged with these smelts. This I saw myself, in the case of trout being dressed. The question of these smelts ever having been introduced into the Rangeley waters is a very grave one. Guides and sportsmen who have watched and fished these waters for years, are in doubt, to say the very least, and some of them are mad all through. I heard it freely expressed that the wonderful brook trout fishing of the world, at the Rangeleys, has been ruined by putting in smelts for landlocked salmon food; landlocked salmon that can, at the very best, never equal what the brook trout have been to these waters. As for myself, I have no opinion at present. The smelts in the maw of the trout I have seen, and have seen the dead smelts on the water. I have also seen the remarkably fattened condition of the trout as compared with the fish of the past twenty years, with which I have been familiar, catching and examining them each year in greater or less numbers. Would it not have been much better for the State of Maine, through its Fish Commissioners, to have hatched a great many brook trout each year and put them into the Rangeley waters, thus keeping up the supply of a fish altogether satisfactory, rather than to have been dabbling with fish not formerly found there? Who does not remember the introduction of the English sparrow? Who will claim that natural conditions, as to fish and game, are not the best? X X X.

BLACK BASS CULTURE.

THE few men who for the past two decades fought for a proper recognition of the prince of fishes—the black bass—have reason for congratulation in that the outposts have been gained; that the public is demanding the propagation of the bass, and that the demand is increasing day by day to a point beyond the present possibilities of supply.

It was unfortunate that some years ago two eminent advocates of the black bass, in their enthusiasm for its game qualities, produced the impression that its voracious habits would preclude the possibility of any other fish living in the same stream; and it was equally unfortunate that one of the highest scientists accorded to the bass the lowest scale of economic importance. A review, based on a further and fuller study of the basses in their native waters, has shown the incorrectness of the first position, and inquiry among the fish dealers, fishermen and anglers indicates clearly, and demonstrates fully, the untenability of the second position. In their natural habitat the black basses are found living harmoniously with other fishes, not only in open streams, but in confined ponds; and from every source comes evidence to indicate that the bass constitutes no small factor in the domestic economy of the people living in the Middle and Southern Atlantic and Inland States.

The wonderful power of adaptability (scarcely approached by any other desirable table fish) possessed by the bass for waters of extreme range of temperature and varying conditions of impurity fit it in the highest degree for the widest dissemination. Either species easily and quickly adapts itself to the cold lakes and streams of the far North and Northwest, while the big-mouth luxuriates in the warm tributaries of the Gulf of Mexico from Florida to Texas. I have known them to winter safely under heavy ice, even when ice was harvested from the pond, and have in the following summer found their young thriving in ponds at 98° F.

There can be no doubt that the bass prefer pure, clear, clean water, but there are few game fishes which can with impunity withstand so sudden and marked muddying of the stream or pond, and that not only for a short time, but for days and weeks in succession. One has but to recall the spring freshets of the Ohio, Kanawha, Potomac and other bass streams, to wonder how so game a fish could live through such deluges of mud.

I repeat that, all things considered, no fish offers to the economist the possibilities presented by the black bass. The question of to-day among fishculturists is how best to utilize these possibilities—how to propagate and disseminate the black bass. Several methods present themselves.

The earliest method, and the one which up to this time has produced the most marked effects, is the collection of adults from native waters, and planting them in new or depleted streams. Dr. Henshall, in his "Book of the Black Bass," has given the history of how the Potomac and all its tributaries were stocked years ago by bringing a few adult bass across the mountains in the tender of a railway locomotive; and in a paper of my own (soon to appear in the Bulletin of the U. S. Fish Commission) is an account of the stocking of one of the most beautiful and seemingly impossible streams in Virginia. If the conditions are at all favorable the collection of adult bass is not difficult, nor should their transportation be regarded as hazardous. At the same time I betray no professional secret in saying that with the greatest care in collecting and transporting, it frequently happens that the results fall far short of expectations. It may safely be assumed, that of wild adult bass captured and transplanted to private ponds, from 25 to 33 per cent. will die in from one to eight weeks, and cases have fallen under my observation where the entire consignment died in a short time. Why? It often happens that the collection is interrupted from one cause or another—conditions of weather, water, scarcity of fish, or some other cause—and a part of the consignment is necessarily held for a time in "live-boxes." So far as adult bass intended for brood stock are concerned, an adequate or safe live-box has not yet been devised, nor do I believe it possible that it can be. I am well aware that thousands of black bass have been captured, held in live-boxes, transported and delivered at destination in apparently good condition; but I am safe in saying that in but the fewest instances has the one collecting, caring for and transporting the bass had the subsequent care of them or been in position to observe their condition beyond an hour after deposit or planting. Bass held in the close confinement of a live-box are sure to bruise themselves within a few days. A disrupted scale, torn fin or bruised mouth, unless well and repeatedly treated with salt or other caustic, means fungus, and fungus on fishes under such conditions means death. I have seen it appear on thousands of bass and crappie within thirty-six hours after capture. A small pond having earth and rock sides and bottom will be be found a healthier penning place than any live-box yet devised.

During capture, confinement and transportation, the fish should be handled with the greatest care and every precaution exercised against the least blow or hurt. Very many fish leave the collecting point in good condition and are hurt while in the cans by a reckless use of the dipper or other aerating apparatus, and not a few have been killed by the over use of ice in transit. There is as much danger from a too liberal use of ice on the road as from high temperature. To avoid discouragement and false expectation, it should be noted that adult bass seldom spawn in the season in which they are captured and moved. The nearer to the natural spawning season the capture is made the less is the liability of spawning that year.

The artificial propagation, in the strict sense of the term, of the black bass is, in my opinion, an *ignis fatuus*. By this I mean it is extremely doubtful if we shall ever succeed in artificially impregnating the eggs of the bass as is so easily done with those of the salmonidæ and other fishes. Not only is there a structural difference between the bass and the other varieties referred to, but there seems to be a degree of delicacy (if I may employ the word in this connection) on the part of the bass entirely wanting in the others. Several fishculturists have noticed the fact recorded by Mr. Seymour Bower last year that to extrude even the eggs from the female advantage must be taken of an exact, supreme moment of excitement which has been engendered by the nuptial dalliance of the male. I have tried day after day to spawn a female bass, when the eggs were distending the ovarian sack almost to bursting, without securing the least sign of an egg, and I have seen the same fish a few weeks later pair off and submit to the biting, butting and nosing of the male.

Not only is it difficult to get the eggs from the female, but as yet milt has not been secured from the male except by the Cæsarian operation, the propriety or expediency of which is doubted by some. Many ends justify extreme means, and each one must determine for himself whether he will kill the male fish for the purpose of experiment. The artificial impregnation of the bass eggs, their subsequent handling, care of the alevins and feeding the very young fry, will remain an experiment for some time—possibly forever. I am well aware that a few bass eggs have been obtained and impregnated and a partial degree of success obtained in hatching them in jars, but no positive results have yet been secured at all commensurate with the time, labor and money expended. All negative knowledge, of course, has its value.

Black bass which have lost the shyness and fright incident to capture and transportation, become domesticated, readily spawn, and rear their young in artificial ponds, and on this method the fishculturist must depend for any considerable number of young. They may be allowed to spawn in the stock pond, from one quarter of an acre or larger in size, or annex spawning grounds, as used by Mr. Bower, may be provided. Dr. Henshall has given the best description of a bass nest: Slightly concaved, with a diameter twice the length of the fish. While gravel is undoubtedly acceptable to the fish, and clean small gravel can easily be provided, it is not a necessity, for I have frequently seen bass make a nest on the bare clay. Personally, I have not had the opportunity to fully test the artificial nests devised last year by Mr. Seagle and Mr. Strannahan.

The columns of FOREST AND STREAM have contained many interesting and valuable articles bearing on when the bass spawn. Many of these articles were written from a purely local standpoint, the writers forgetting or disregarding the fact that the season varies for almost every State, and frequently in the same State. Moreover, the season is rarely the same year after year in any one locality. My observations lead me to think that the bass will not be found nesting before the ground becomes warm enough for gardening purposes. For several years I have noticed that the bass commenced nesting when the dogwood was well in blossom, and in the same pond I have known them to continue to nest as late as midsummer. The period of incubation averages about nine days, and the alevin stage occupies about six days more. Shortly after the food sac is completely absorbed the school, heretofore guarded by the parent fish, disperses in search of the natural food—*daphnia, cyclops*, etc. If the pond has been so constructed that a good portion of it is shallow water—from 6in. deep to feather edge—and is old enough to have produced a fair crop of aquatic vegetation, no fear need be entertained that the young fry will starve for the want of this natural food. When about an inch long they will be found foraging on the young *gammarus* and *coriza*, and later on larger crustaceans and smaller fishes.

When a majority of the crop measure 1½ to 2in. in length, it is advisable to remove them from the spawning pond. In the latitude of Virginia, Ohio and Missouri this period will be found occurring about the last of June, a time when all the breeders have not finished spawning.

How to remove the early hatch without disturbing the late spawners was for a time a vexatious problem. Its accomplishment is easy and simple Construct the pond to have a long, narrow neck, not over 4ft. wide, and running to a point where the inflow enters; 10 or 15ft. from the inflow separate the neck from the pond proper by a wire screen. Meshes of ¼ or ⅜in. answer very well. The young bass readily find their way through the screen, and show no inclination to leave as long as food is present. This screened-off neck should be closely watched, not only for the numerous enemies of the young bass, but for any sign of cannibalism. To net the young bass from the neck is such a simple and easy matter as not to require explanation.

Several years ago I recommended a new form of ponds for separating the young fry from their parents to protect the young and facilitate their capture. It was to build the pond in the shape of a dumb-bell, the water to enter at one bell and escape at the other, the upper bell to be shallower and separated from the lower by a wire screen. The spawning occurs in the lower bell and the fry pass through the screen into the upper bell, where they may be allowed to remain longer than if it were a mere neck of a pond.

If it is necessary to keep the young bass for even a day before shipping it is of the utmost importance that they be carefully sorted, and the different sizes placed in different receptacles. In the buckets while being filled at the neck I have frequently observed a bass swallow another a very little smaller than itself.

If the fry are to be kept for several weeks or even days, they must be fed, or cannibalism will surely reduce the number, and reduce it at an alarming rate. Any kind of fish (crayfish are excellent when abundant and cheap) chopped or ground fine, make good and acceptable food for young bass. In fact, I may state I have never known bass fry to accept any food except such as had grown in the water. All the various articles of trout diet they utterly reject (but it should be noted that domesticated adult bass take as kindly to beef liver as do domesticated trout) Bass fry take a fish diet, thrive and grow on it with far less labor, patience and loss of stock than can be accomplished with trout on any known diet. That part of trout culture which is tedious, laborious and hazardous becomes a pleasure when caring for bass fry.

Within the last year or so a practice is springing up of distributing very young bass fry—alevins—from the nest. From past experience I doubt if this class of bass culture will ever meet with marked success Bass alevins are exceedingly tender and are peculiarly susceptible to slight changes of temperature. All things considered, I incline to the use of bass fry from 1½ to 2in. in length and even larger, and it is doubtful, if the distance to be traveled is considerable or the road and appliances not the best, whether bass of this size are not to be preferred to large adults. WILLIAM F. PAGE.

LYNCHBURG, Va.

ANGLING NOTES.

Rainbow Trout.

THERE seems to be a gradual change of sentiment in regard to the rainbow trout. Thousands have been planted and never heard of after the second year. Occasionally we hear of them remaining permanently in the water where planted, and when they do they grow rapidly and to great size. It is more than likely that many of the plants of rainbow trout have been made in waters that were unsuitable to them, but there is a tendency on their part to roam even in waters where they are found at their best. If they remain they afford fine sport, but the question seems to be to find just the waters in which to plant them. This year more large rainbow trout ran up the stream on which the State hatchery is situated at Bath, N. Y., and twenty-eight were captured for breeding fish and confined in the ponds at the hatchery. One of the trout weighed nearly 11lbs.

A gentleman writes me from Jonesboro, Tenn.: "We expect to have a Government fish hatchery in this part of the State, and if our Legislature would stop special legislation on behalf of certain counties we would in a few years have fine sport. We have some trout yet in our mountain streams, and good black bass fishing in some of our rivers. We have a few rainbow trout of from 1 to 4lbs. weight, the result of a planting made about three years ago, and more recently we have put into the stream 8,000 or 10,000 more. All that we need in order to have good fishing in this mountain region is good laws well enforced."

I would like to hear from any region where the rainbow trout remain after they are planted, with character and temperature of water and food conditions.

Mascalonge Hatching.

Mr. Frank W. Cheney, of Jamestown, N. Y., was engaged by the Wisconsin Fish Commission this spring to go to that State and hatch mascalonge, and writes upon his return of his success in the work:

"I have just returned from Wisconsin after what may be called a successful season of work propagating mascalonge. I had but one net, yet I succeeded in securing 2,040,000 eggs and hatched nearly 2,000,000 of fry, which I carried twenty-one miles through the woods in a wagon and over 400 or 500 miles of railroad from Lost Lake, Sawyer county, to Hayward, thence to Ashland, on Lake Superior, where we changed cars and came down the Wisconsin Central R. R. to Fon du Lac and planted the fry in Green Lake. They stood the long journey well. I hatched the fry in a slightly different manner from that practiced at Chautauqua Lake. The mascalonge in Wisconsin are exactly like our Chautauqua Lake fish. We took 85,000,000 pike-perch eggs before we took the mascalonge eggs. Lost Lake is alive with the finest kind of yellow pike. I was in Wisconsin from April 10 to May 21."

Fishing in Maine.

Commissioner H. O. Stanley writes me: "We have been traveling over the State for the last month, giving hearings in regard to special laws, and have had little time for fishing, only putting in part of a day here and there when on good ground. I was at Sebago last Thursday, May 6, and caught four salmon 3 to 10½lbs., and hooked and lost two others by breaking the hooks on tail of Stanley smelt. The fishing at Sebago has been the finest that I have ever known, and many large fish have been taken. Thus far the fishing in Maine is showing up well, and many new salmon ponds are beginning to show fish. The introduction of landlocked salmon in new fields is what will save our fishing for the future. The fact is that the trout in our brooks and streams are pretty well fished out, but the ponds and lakes in Maine are holding their own. The objection of the guides to registering is confined entirely to Rangeley. The guides in other localities favor the law. The fact is, all the guides will come in eventually, and I believe it will become a popular law."

This year the State Fisheries, Game and Forestry Commission of New York has planted landlocked smelt from Maine and New Hampshire in New York waters, and hope to establish them that they may supply other waters in time to furnish food for landlocked salmon. A planting made at a preserve lake near the Adirondack hatchery was very successful, as over two-thirds of the eggs of the smelt hatched. Mr. W. C. Witherbee, of Port Henry, N. Y., Mr. Edward R. Hewitt, of Ringwood, N. J., and Commissioner Thompson, of Northport, L. I., have planted the landlocked smelt in private waters to serve as fish food. The plants made by Messrs. Witherbee and Hewitt were successful, the eggs hatching finely, and I presume Mr. Thompson's plant was equally successful, although I have not heard from him.

Rearing Black Bass.

Mr. Edwin Clark Kent, chairman of the hatchery committee of the Tuxedo Club, has written me of his attempts to rear young black bass, and the details are of such interest he has consented that I relate them as he has given them to me.

Any one who has read Mr. Seymour Bower's paper (read before the American Fisheries Society last year, and printed in that journal soon after), will understand the first steps, for the bass are allowed to pair, make their beds, and it is only after the fry is hatched naturally that they are taken in hand. To quote from Mr. Kent's letter: "My troubles began after the fish were hatched, for I consider it absolutely useless to plant fry. If you do not protect the fish until they are old enough to protect themselves, it is time and trouble wasted. With bass especially the loss takes place after the eggs are hatched.

"After sundry futile experiments in artificial hatching, we built a pool about 60ft. square and from 18in. to 3ft. deep, with an earth bottom covered with clean gravel and sand; rocks also were scattered about to imitate as closely as possible a natural spawning ground. We took twenty bass out of the lake and put them into the pool, which was supplied with the water which passed through the trout hatchery. We watched the bass for some time, but they showed no desire to make their beds, and it struck me that the water,

which was 60° to 62°, was too cold for them. So we led a pipe from the surface of the lake to the pool, and in this way raised the temperature of the water to 73° to 74°. The bass at once responded and built eight nests. I cleaned the pool with hook and line of those which had not spawned. As soon as the swarms rose from the beds we took the old bass away, and then the fun began. The fry absolutely refused to eat anything I offered them. I tried meat and liver, raw and cooked, codfish raw and cooked, etc., but they would have none of it; but they would eat one another. One 1in. long would cheerfully swallow one of ¾in., and seemingly be perfectly ready to repeat the feat. Then we collected water plants, placed them in shallow boxes and put them in the pool. That helped a little, but not much, so I sent the whole force of the hatchery to fill up their spare time sweeping the shallow water of the ponds and lakes near by with mosquito-netting nets. But they could not collect food as fast as the bass would eat it; and about the last of August I gave it up, and took the remaining fry out of the pool. It was a case of the survival of the fittest with a vengeance.

"We got 164 fish about 2½in long, but I figured that they cost us about $5 each, and the finance committee said things. Incidentally I found some of the foes of the black bass fry. Two sunfish got into the pool, how I do not know, except by walking over land; however, there they were, and after trying to catch them I shot them with a parlor rifle while basking. They then held nineteen and twenty-two fry, respectively. A bull-frog also squatted by the edge of the pool and filled himself full, and a bull-frog's capacity is very great. Connected with the hatchery is a rather large pond four or five acres in extent. When the frost came we drew this down, and as far as possible took out all the sunfish, rock bass, yellow perch, etc. Then the following spring repeated operations in the pool, and when the swarms rose dumped them into the pond, and paid no further attention to them. We had only seven nests that year, but despite waste, sunfish, bull-frogs, yellow perch, etc., when we drew the pond the following November we secured over 12,000 little bass about 2in. long, and duplicated the success the following year, since which time we have discontinued the work, as the pond is too big to be handled comfortably, and owing to the large surface of mud exposed the park residents dread malaria. However, we have gone far enough to convince me that with little expense and a simple plant, black bass may be raised to any reasonable extent."

Mr. Kent's letter is valuable, as it shows the difficulties encountered and what must be done to surmount them in order to successfully rear black bass fry. Successes in fish-culture oftentimes comes after repeated failures, and any one who points out what must be avoided is a benefactor to the fish warden. Mr. Kent's observations upon the temperature of water necessary to incite bass to prepare their nests are particularly valuable. I have just been at the State shad hatching station on the Hudson, at Catskills, and the highest the water has been this month (May) is 64°, and the day I left, Wednesday, it was 61°, which would indicate that this year at least it was a wise amendment to the law which put off bass fishing from May 30 until June 15. If the subject is pursued I am satisfied that all anglers who wish to preserve the bass will advocate a close season extending to July 1.

"Setting" a Fly Book.

A friend who has a preserve in the Adirondacks has for a guardian of the property a man who is commonly called Hank, and never by any chance called Henry. Hank is a hunter, fisherman, trapper and story-teller, and one of whom many good stories are told concerning his long career as a woodsman.

I was visiting my friend at his camp, and one evening we were looking over the contents of a well-filled fly book, when Hank came in. The leaves of the book were turned, the contents of the pockets were exposed, and the various flies were commented upon, but not a word from Hank until the book was closed. Then he spoke: "There are more flies in that book than I ever saw together before, and if you will let me take it and "set" it in the lake to-night I will catch more trout than you can haul out of here with two horses."

A. N. CHENEY.

RHODE ISLAND SEA FISHING.

SOUTH PORTSMOUTH, R. I., May 29.—To the lovers of sea fishing it will be of interest to know that the finest fishing to be had in the United States can be found along the shores and on the outer edges and reefs on the line of coast extending from Bateman's Point Island of Rhode Island to Sachuest Point in Middletown, R. I., and the most southern part of that town. Directly opposite Sachuest Point is the far famed West Island Fishing Club, for many years noted for its striped bass fishing. Sachuest Point or Easton's Point being equally as good, but not fished so thoroughly as West Island, except Sachuest Neck, where it has been the good fortune of the writer to fish, boy and man, for the past thirty years for striped bass. Without wishing to be thought egotistical, I may add that no one rod or line has killed more striped bass than mine in Rhode Island waters, which fact can readily be substantiated by local fishermen, and also by the markets of Newport. No doubt some reader will say professional fisherman, and I must plead guilty to some extent. When a boy I followed fishing for pleasure, and it became such a passion with me that I resolved if I ever had my own way to follow it as a business. Fortunately, or unfortunately, when quite young I was placed in a position to make my own choice of an occupation. Fishing, I found, paid well if followed systematically and intelligently; so I went at it, and for the past twenty years have spent all my time during the season fishing. Possibly this declaration may rob this article of what little interest it might possess for your readers, but I assure any brother angler who may read this that although fishing is a daily business with me, I can take the fly rod and feel as keen enjoyment in using it as any one need to; or I can take a 7oz. bait rod and play a black bass, and enjoy every tug and leap of a bronze back, and feel sorry even when the last leap is made and the landing net is under the fish and he is landed. You see I follow it almost as much for pleasure as I do for profit, and to-day if there was not a dollar in it I should fish just the same. It's second nature to some of us to follow the water. But I am off the track entirely from what I started to write.

Your correspondent, W. H. M., speaks of the 18lb tautog caught at Price's Neck in the trap of George Calvert as establishing the record "for that vicinity," which I don't dispute, but I can go a few pounds better for Rhode Island waters. In 1885, I think it was, one was taken at Seaconet Point in a trap, and I saw it weighed, which tipped the scales at 23½lbs. In 1889 one was caught at Coggshall's Point and was on exhibition in the Newport market, that weighed 19½lbs., and again, two years later, one of 20lbs. These are of course abnormally large fish of this kind. The largest I ever caught weighed 15½lbs., and to date is said to be the largest ever caught with hook and line in Seaconet River. On Friday, May 28, I caught three tautog in a day's fishing weighing 10, 8½ and 8lbs.; the total catch was close to 300lbs. There are many catches of from 200 to 300lbs. of tautog taken in a day's fishing in this section; the best fishing is to be had in boats, but those who prefer the shore fishing may have good sport. In season good flounder fishing can be had. During the fall and summer run of round mackerel for the past two years very large numbers have been caught from the rocks; one catch of over 1,200 was made on the rocks on Sachuest Point by two rods in less than seven hours, and for nearly six weeks it was a daily occurrence for parties to drive out from Newport and take from 50 to 200 to a rod. I saw one party of four with four corn bags (such as the Western corn is transported in, holding about two bushels each) packed full for a half day's fishing. There must have been from 1,600 to 1,700 of them in number.

Now, one more fish story and I am done. I can name two men who within the past fifteen years have caught in one day's fishing within four miles of Sachuest Point, R. I., 981lbs. of tautog and sea bass.

WM. M. HUGHES.

IN A FLY-TYING FACTORY.

WHILE the angler of this country stands far ahead in his expertness in casting the fly, it is very doubtful if many know much about the surroundings of the art of fly-tying, or that there is in New York city the only fly factory in this country, and that it is the largest in the world.

At one time Great Britain held the palm for artifical flies and exported them to this country. Now the American flies are exported to England. The superior system of supervision of every process of manufacture and inspection of the finished product is one reason for this; but, undoubtedly the method of "team working" almost universally employed in England is largely to blame for the loss of their trade. By team working is meant that the fly-tying is done at the tenements of the workers and not in a regular factory. In this way one family will, for example, work for years on a very few patterns, and this work becomes mechanical and the tiers lose all interest in it.

In this factory the workers are recruited from the vast population, and no one is employed who does not seem to be likely to take an interest in her work and who is not pretty well educated. Add to this, the American (as in most business) is on hand personally looking after every detail in his factory, pulling the loose ends together, active and intent on getting the very best individual work he can out of his intelligent help.

The factory is on the top floors of a building with the best of light and ventilation, and the first section is the feather storage, where in tin-lined bins are stored feathers from almost every known bird of brilliant plumage, Europe, Asia and Africa not excepted. These are divided in the first instance into those of seafowl and landfowl. The former are most preferred for flies wherever their colors are right, because of the greater amount of oil contained in them, which renders the fly more serviceable and more durable in the water. These feathers are bought from every available source, and so hard is it to keep an adequate supply of the smaller types that it is necessary to carry a stock for four years at least. There is no known or recognized market for them, no set price; the manufacturers find a supply here, there and everywhere, and fix the price according to the quantity. For instance, the barred feathers vary from a quarter of a cent to four cents each. These bulk feathers have to be carefully selected and sorted by girls trained to the work, and they are sorted first to colors, then to quality, then to size. The quality is determined by the closeness of the bars to each other. The size ranges from "14," which are about 1in. long, to "2," which are about 4½in. long; these numbers representing the size of the fly they are intended for. Very few feathers are died, the bulk are used in their natural colors. It takes a girl about twelve months before she is considered competent, as the eye must be educated to tell the distinction between the close running numbers at a glance. Roughly speaking, there are every year about 150 girls taken on for the various departments, to eventually become fly tiers, and out of these not more than ten have the requisite delicacy and quickness of eye and hand.

When the girls sit down to tie, there are ten girls to every hundred told off simply to wait on the fly-makers and bring them the various supplies called for; and these ten girls are kept hustling all the time. The hooks with the gut snells attached are taken in hand, and with the low-priced flies the body is first formed by deftly wrapping around the shank a piece of suitable worsted, this being the base, in varying colors, for the majority of that grade; then a strip of feather is taken of the type suitable for that particular fly, and this is wound around the upper part of the body, so that the quill section (if one may so term the film of skin) lies its full length next to the body, while the bars of the feather stand out in every direction direct from and at right angles to the body like the spokes in a wheel. This sounds very easy, but it is quite a trick to do it properly, and on this point depends the ultimate success of the fly. Then the wings are added, these being another strip of feather bars, deftly tied so that it stands up behind the collar-like strip just adjusted, at an angle of about 45°, and this effect is secured by a peculiar twisting, whipping and knotting of the silk which holds the tiny artistic creation together. While the British flies have wings lying almost flat on the shank of the hook, the American fly has wings standing well up; this being necessary by reason of the more rapid streams in this country.

In the higher class of fly this process of manufacture is reversed to a great extent. Then the bronzed hook, specially tested for temper and strength, having a full hollow point, is taken, and the wing is at once whipped on to the shank, lying flat forward from the barb; then the body of chenille, etc., is whipped on securely, then the tinsel, or whatever the species calls for, and then, the body completed, the wing is bent backward and whipped in its proper position. Thus each portion is separately whipped, and all doubly whipped by the finish at the head, which is then cemented and varnished.

A girl can tie five or six dozen per day of the high grades, and of the cheaper grades a good worker ties from twelve to sixteen dozen per day. This record varies much according to pattern and minutiæ.

It is found necessary to take all these precautions of separate tyings, cementings and varnishings to make the fly as strong throughout as possible, for none but a fly-manufacturer, possibly, fully appreciates the terrific strain placed upon a fly quickly whipped through water, a pressure to the square inch which nothing but the natural elasticity of the feather enables it to bear.

As to the designs of the flies, they are almost all modeled on some insect or bug in nature, the exceptions being certain combinations of colors which have, for some little grasped reason, proved successful in the past. Now a new feature is being taken into consideration, and that is the appearance of the natural fly when wet, and the appearance of the artificial fly when wet. In the water most blues become nearly black, reds become purple, yellow grows several shades lighter, etc., etc., according to the water, and if the insect has, for instance, a pale blue fuzz on a gray skin, and the fly should have a pale blue wing rather long and a slightly darker blue body, in the water it will look to have a body almost black with the wings widely different from the natural insect.

The flies made vary from the tiny "midge" to the great flies which would overlay a dollar; and these are all for trout. The flies for Colorado and Montana are nearly all whipped on double hooks which point out in opposite directions about ½in. apart. The most gaudy and impossible looking specimens, which go to country sections, where there is a demand for them which must be filled, and which are of little use anywhere else in this country, prove good killers in Maine, where the waters are deep, clear and cold. These are the Silver Doctor, Jenny Lind, etc. The very large flies go mainly to Canada and California, and the Northwestern States, where there is very rapid and deep water, and the fish are plentiful; but an Eastern expert would look askance at any fisherman using them in Long Island waters. In the very high priced flies many designs are special, invented by private individuals, who in Europe would carry their own kit and tie them themselves, but who in this busy country of ours have neither time nor inclination so to do.

Some little idea of the detail in manufacturing flies may be gleaned from the fact that at this factory there are turned out every year about 5,000 flies of different kinds, qualities and sizes, and that each individual one of these is made (with few exceptions) in about 500 varieties, such as sizes of hooks, quality of gut, etc., etc., and that about 10,000 of the more commonly asked for varieties are kept in stock from day to day.

When the flies are completed, each separate one is passed before an inspector and inspected for flawless gut, perfect knotting of snell, perfect whippings of fly, perfect cementing and varnishing, and then goes down stairs into stock with a number which shows who made the inspection; and so, if after the flies have been sold and guaranteed as perfect, anything is found wrong and the customer returns the card, etc., which bears the faulty fly, the poor work can be immediately traced. This system works as a preventative and complaints are very few. This is not done in any European factory.

Eighteen years ago Mr. Imbrie (of Abbey & Imbrie, the proprietors of the company) went to Spain and made arrangements for securing proper and adequate supplies of silkworm gut. This gut on which the fly-hooks are snelled plays an important part in the factory, and is all imported from Europe, being the sac in the silkworm, which nature gave it to generate the silk. These sacs are withdrawn from the insect, and then, tightly held between the thumb and finger of each hand, are stretched to about 10 or 12in., in fact, as long as the gut continues round, this being continually tested by the tip of the tongue of the operator, both hands being employed. Quality is roundness rather than weight, and as long as it is round the area of tension is more evenly distributed and the grain of gut uninjured. Thickness only indicates great strength when round, and a flat gut of great width is weaker than a thin round gut as a rule. The quality is judged by appearance, freshness, etc., and it comes ten bundles in a hand, selling by the 10,000. When these are received at the factory each bundle is opened and sorted in sizes as near as possible, and then goes to the knotter, who makes the loops at the opposite end to the hook, drawing them tight over a screw hook in a bench, thus cutting the ends very close, which when the gut (being soaked before tying) dries out, is as hard and tight as if welded. The leaders of various length are no longer lashed in the old way, but by means of a new process are closely whipped and cemented with a waterproof composition which becomes harder with age and more perfect in every way.

It may be remarked that the annoying "snapping" of the fly, breaking it off the line when casting is occasioned, as is well known, by the caster not letting his line get a perfectly straight extension before whipping it forward, but there are also other reasons. One is that the gut is too dry, and that if the gut had been adequately soaked before casting this annoyance would be minimized. Another feature is the new reinforcing of the gut for the higher priced flies, which by bringing the gut back to the free snell, strengthens the snell just where it "snaps," and incidentally gives it a certain stability which makes it "drop" better and straighter. Every piece of gut in this American factory is graded to the hook on which it is to be used, and this is done nowhere else in the world.

Thus the American fly presents almost perfection of art, graded feather, graded gut, graded hook, scientific reinforcement of weak parts, waterproof cementing and greater spring to the feathers by reason of their adjustment, rendering the domestic trout fly, as claimed by the enthusiastic manufacturer, a work of art not ranking behind the paintings of the old masters. In conclusion, the prices of these flies range from 18 cents per dozen to the fisherman, up through the grades of 25, 40, 45, 60, 80 cents, $1, $1.50, $2, $2 50, and salmon flies from $4 to $12 per dozen. Think of the endless detail of the skilled work and then look again at the prices.

The Silver Hook.

WE have received from Mr. Wm. de la M. Cary a copy of his etching entitled "The Silver Hook." We are aware that within recent years theorists have denied the existence of the bare-footed small boy, who catches with his rude tackle more and larger fish than reward the best efforts of the city angler with his fancy flies; and we take it, therefore, as important testimony on the question that Mr. Cary has here succeeded in depicting the youngster in such a lifelike presentment that there can be no question of his actual existence. The picture shows the small boy bartering his string of fish to an angler in consideration of a piece of silver; it is in Mr. Cary's best vein. The plate measures 18×22in. The price is $6 a copy. Mr. Cary's studio is at No. 25 Chambers street, New York.

CHICAGO AND THE WEST.

Fishing Season Open.

CHICAGO, May 29.—May 25 removed the limit on all sorts of game fishing in Wisconsin. From this date on we shall see greater and greater crowds upon the Saturday afternoon trains of the Wisconsin Central, the Northwestern, and the Milwaukee & St. Paul railroads. Thus far the season has been very cold and backward, and fishing has not been attended with the comfort usually associated with green fields, sunny skies and waters which lilt and purl. One of our choice Chicago days, with the thermometer at a trace above freezing, and a raw wind blowing, is calculated to knock the lilt and purl out of things to an extent distressing to the tackle trade.

An Old-Time Fishing Reel.

Mr. Isaac Hitt, of Chicago, recently brought to this office something of a curiosity in the form of an old-time brass fishing reel. This reel he bought in Baltimore, Md., in the year 1851, and he used it in the waters of that vicinity and later on in his fishing near La Salle, Ill., where he resided for some years. This old reel is made of brass and multiplies one time. It has no balance handle and no reel-seat attachment, the reel being confined on the rod by means of a circular clamp operated by a thumb screw, as many reels were made until within twenty years ago. The maker of the old reel is not known, and it is in no way connected with the early Kentucky reels. Most curious of all in regard to this ancient bit of sporting gear is the fact that it still contains a good part of the fishing line which Mr. Hitt put in it in the year 1851, and which he says he is sure has never been changed. This line is a braided silk, and it would indeed be a matter of curiosity if it had lasted all these years, even with less use than that given it by Mr. Hitt. It is possible that this line has been changed without Mr. Hitt's knowledge, though he feels quite sure that it is the old line that he bought with the reel forty-six years ago.

Fishing on the Thornapple.

Lexden, of Michigan City, Ind., writes, giving further information which he has collected for the benefit of FOREST AND STREAM readers in regard to the angling on the Thornapple River of Michigan south peninsula. He says that Mr. Holt, who writes from Cascade, has a trout hatchery at that point. He adds that a favorite way of fishing this stream is to go to Cascade and go up stream with one's boat by wagon for a distance of nine miles, then putting the boat in and floating down stream to the town, thus getting a nice day's fishing. Mr. C. F. Holt, above referred to, says, under date of May 24:

"The bass fishing in Thornapple was as good last season as in many years. The first week in last September, in collecting fish for exhibit at the State fair, I caught thirty-seven in one day, ten of them weighing over 3lbs. These were caught with minnows.

"Bass are now spawning, and seem to be plenty, but there has been very little fishing yet.

Mr. A. L. French, of Fort Wayne, also writes encouragingly below, as does Mr. W. E. Powers, of Hastings, Mich., and it would appear that a stream where one can take thirty-five fish, and may possibly get trout mixed in with his bass, all on a stream with as tempting a name as that of the "Thornapple," ought to be good enough to risk. Mr. French says: "I think the fishing was never better there than it was last year on the Thornapple. I did not come down the river once when we got less than thirty-five fish."

Mr. Powers writes: "I presume you could get fly-fishing in the Thornapple River. We do not fish the river for bass, as we think them grubby in warm weather. The river will be too high for wading until July, then a person would need a boat in places. Some very nice trout have been caught in late years in the river. I can see no reason why two persons with a boat that could be handled around the dams could not have a great time going down the river.

"I don't think any fly fishing is done on the river, and, as I have said, we do not fish the river, Gum Lake being my place for fishing. There we use live bait mostly."

Among the Fishermen.

CHICAGO, Ill., June 5.—Mr. E C. Carter, of the Northwestern Railroad, had the pleasure of being caught in a severe snowstorm while trout fishing in the Escanaba River, in Michigan, on May 31. None the less, Mr. Carter managed to take twenty-four very fine trout during the day. Out here we call a trout a fine one which runs 8 or 10in. in length.

Mr. John Shearson, of the Northwestern dining car department, took quite a little party up to Manitowish last Friday a week ago. They were fortunate enough to take several mascallonge, though none were very large.

No word is yet received from Messrs. Stanton and Willard, who are absent at Squirrel Lake fishing for 'lunge. The season is so cold and backward that it is likely they have met with little success, although they are skillful fisherman. So far I have known of only one good 'lunge coming down from Wisconsin this season, this being seen at the shop of a local taxidermist.

On Sunday evening the following gentlemen will leave Chicago for a three weeks' fishing trip for mascallonge and bass at Habbekona Camp, on Woman Lake, in Upper Minnesota: Messrs. Joseph Downey, H. Leech, W. P. Mussey, C. S. Wilcox, C. B. Dicks, S. M. Sutherland and J. W. C. Haskell. These gentlemen should have very good sport from all accounts, and I look upon their trip with some curiosity, considering them in a manner, the advance guard of the army of sportsmen who I predict will soon invade Minnesota as a new hunting and fishing territory.

About a dozen members of the Eagle River Hunting and Fishing Club left this week for their place on Big Sand Lake, Wis. This club owns about 4,500 acres of land, and is near to good fishing.

The white bass are running now near Holland, Mich., and there should be good black and white bass fishing near there this month.

Mr. Wm. F. Schmidt, of Chicago, writes me thus in regard to bass waters not far distant:

"On Saturday last three of us caught forty-two bass in Eagle Lake, Wisconsin, Kansasville Station, on C., M. & St. P. R. R., seventy miles from Chicago. This lake has not been fished much and has not been advertised extensively. The season opens in Wisconsin May 25, which gives the bass in the southern Wisconsin lakes a better chance to increase. The only fishermen we found there were the same fishermen who have been going there for years.

"This lake, when the water is high in spring, is connected with Fox River, and both large-mouth and small-mouth bass come up into it to spawn, being left there when the water recedes. In this manner it is continually re-stocked. I know of no better lake near Chicago for bass, and none more convenient, trains arriving there in the afternoon in time to fish a couple of hours. Returning train reaches Chicago about 10 P. M. next night or 9:30 the following morning.

"The bait we used was pork-rind, cut to somewhat resemble the shape of a frog.

"You speak of the Prairie River, near Merrill, Wis. Some of my friends have been up there this season. A party of them in two days caught about 100 each, and they are very enthusiastic over it; so you can set it down that the fly-fishing for trout is as good there as ever." E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Catskill Mountain Trout.

NEAR Phœnicia, N Y., on the southern edge of the Catskills, three Kingston sportsmen, Messrs. Arthur Benjamin, Ira C Lowe and Cilbert Barley, took 24lbs. of trout May 31. The party camped over night in Snyder Hollow on the stream, about five miles from Phœnicia, and began fishing at daybreak. Their largest fish weighed 1¼lbs, but the entire catch ran well, and there were few small ones. The water was low, but this did not affect the fishing unfavorably.

As a result of intelligent stocking, the fishing in the Catskills brooks is steadily improving, and the average size of fish taken seems to be increasing.

In Esopus Creek and tributary streams a large proportion of the fish taken now are California trout; but these seem to be equally esteemed with the native trout.

The Kingston anglers have a method of fishing which is said to be very successful.

It is a combination of bait and fly-fishing. The cast is rigged as follows:

First comes a bait hook, then, about 8in. above that, a very light sinker; then in order black Spanish fly, brown-hackle and white-miller. The cast is made to the lower end of the pool and drawn up against the current. If nothing results, the line is allowed to sink and float back with the current. Trout are either taken or attracted by the flies, and afterward the bait has a chance to get in its fine work.

Our reports from Sullivan county show that the fishing at present is very poor. The streams were skinned by the early fishermen, and little or nothing remains for later arrivals. This, of course, is a common story. While the trout are plentiful, big catches are made, and fishing for count is the order of the day.

The local hotel proprietors are too apt to encourage this destructive tendency, as it gives them a chance to boast of big catches made in their neighboring streams.

The logical remedy is to enact a law limiting the number of fish to be taken by one rod in a day. Such a law would not only lengthen the season when fishing is good, but would also tend to protect the small trout, as these would be returned to the water when there was a chance of catching larger fish. J. B. BURNHAM.

Florida "Small Fish."

MR. VOM HOFE has returned to New York after a two months' fishing trip in Florida. His visit to the Texas tarpon country was given up at the last moment, but some of his friends have gone there to try conclusions with the Aransas Pass article.

Mr. Vom Hofe brought to gaff in all ten tarpon. He devoted much of his time to angling for what in contradistinction to their more lordly brethren are called "small fish," fish ranging in weight from 3 up to 25lbs. These fish bite so freely that there is always plenty of fun angling for them. Included in the classification are snook, jackfish, lady or bonefish, sea trout, Spanish mackerel, etc. Two weeks at Punta Rassa were given up to such fishing, and from 50 to 100 fish taken at a time.

Among other trophies of his trip Mr. Vom Hofe shows the whip taken from an 80lb. whip ray, which measures 5½ft. in length. Whiprays and stingrays are speared in shallow water. The guide paddles along very quietly, and the rays, which are dark fish, are easily seen by contrast with the white sand bottom.

The large sawfish taken by Mr. Vom Hofe at Fort Myers was illustrated in our last issue. J. B. B.

American Fisheries Society.

GLENS FALLS, N. Y.—The twenty-sixth annual meeting of the American Fisheries Society will be held at the Russell House, Detroit, Mich., June 17, 18 and 19.

There will be a business meeting the morning of the 17th, and in the afternoon a trip will be made across Lake St. Clair by private steam yacht to Lake St. Clair Shooting and Fishing Club, where dinner will be served. The 18th will be devoted to business. The evening of the 18th the members of the Society will become the guests of the officers of the Michigan Central R. R., and entertained in their private car on a journey to the State hatchery, at Paris, returning to Detroit the next day.

A. NELSON CHENEY, Recording Secretary.

Maine Trout and Deer.

DEAD RIVER, Me., May 29.—Fishing has begun in earnest in this section. Sportsmen are arriving in good numbers and some very good strings of trout are being taken.

Miss Ethel A. Harlow, of Ledge House, caught twelve nice brook trout one day this week.

A large black bear was seen by a party of fishermen at Poplar Brook Falls last week.

Deer can be seen every day from the Ledge House and Cabins in large numbers. Over forty were seen last week from the piazza of the house. This is a fine opportunity for one wishing to get photographs of deer.

Jan. 10.—U. S. F. T Club's winter trials, West Point, Miss.
Jan 17.—Continental F. T. Club's trials, New Albany, Miss.

SCHOOLING THE DOG.—III.

To the beginner, the matter of selecting a setter or pointer puppy is one of great moment, one to be thought over carefully and seriously during a number of days, with such additional data as can be gathered from the advice of sympathetic friends. He will probably be told that the puppy, which outstrips its fellows in the scramble to the feeding dish, is infallibly the best; or that the one which bullies the others and is master of the litter is the best; or any one of a dozen whimsical notions may serve for advice, for however incapable or ignorant a man may be himself concerning dog matters, it is rare indeed when he does not feel competent to give expert advice concerning them. There is no way to determine the puppy which will make the best field dog other than by the way of actual test. And this cannot be applied till the puppy has mental and physical powers developed sufficiently to work afield. All other so-called signs of determining the best puppy are trashy nonsense. The strongest puppy, scrambling first to the dish, may be the most gluttonous, and nothing more. He may be the first to dinner, with no inclination to work. The greatest bully may be a loafer. Nothing definite can be determined by matters of mere whim or fancy. Of course the trained eye of the breeder can detect extreme coarseness or weediness even in young puppies, but even the average physical qualities cannot be predetermined by the appearance of puppies when they are only a few weeks old. A handsome puppy may shape up into a homely dog, and a homely one may mature into symmetrical form. The main points to consider are that the puppy is bright, healthy and vigorous, and that it comes from well-bred parents of good qualities. These attributes do not insure that the puppy will be a good one, but if possessed of these there are then more chances that it will be good. There are well bred loafers, imbeciles and incapables among puppies, and the really good ones are in a minority.

It is much better to purchase the puppy when it is eight or more months old, for the reason that the death rate among nursing puppies is much greater than is commonly known. The puppy, at eight or more months of age, has far greater chances of life than when its age is only a few weeks, and furthermore, the purchaser can have some reasonably definite knowledge of its qualities and capabilities

Still, one must not be too hasty in forming either favorable or unfavorable opinions of young puppies' field qualities, for some puppies are very precocious and show a puppyish enthusiasm for work which ends or lessens with maturity, while others mature slowly, and develop into good or superior dogs notwithstanding a lack of earlier promise. In short, the same tact and good sense, so useful in every-day matters, are equally useful in matters pertaining to the dog.

Good health is essential to the puppy, both to him as a useful organic being, which has certain functions of life to perform properly, but in his capacity as a pupil it is indispensable. When the puppy is in ill health there then should be no attempt train him; he is then as unfit to be taught as the teacher, if ill, would be unfit to teach.

Both that he may have the comforts he deserves and that his health may be good, give him a comfortable place to sleep in, one which is dry, well ventilated and sufficiently warm. His food should be sufficient in quantity and good in quality. If he is a few weeks old, feed him liberally three or four times a day on milk and beef or mutton made into a stew, with cabbage, onions, potatoes, bread. Puppies when growing have a ravenous appetite and require frequent feeding in order to avoid the gorging they practice when there is too long a time between meals.

When he is in age from ten to fifteen months, a light breakfast and a generous dinner at night will be sufficient, and when the dog is fully matured, say from twenty to twenty-four months of age, one meal at night will be ample. He may then be fed on table scraps if they are scraps worth considering as food, for while the fragments left at any table are scraps, there is a wide difference in the food values of those same fragments. Scraps made up of fish bones, potato skins and corncobs would not be of much value, while scraps of good beef, bread and vegetables would be the best of dog food. If there is not a sufficient quantity or quality of scraps, then have the dog's food specially prepared. If he is working regularly every day to the gun a straight beef diet will be the best. Avoid the mistake of cooking the meat too well for the dog. If it is cut into pieces in size about right for a mouthful, then placed in a baking pan in the oven till the pieces are thoroughly hot, it is sufficient. Let it cool and the dog will eat the meat greedily. He will thrive on it. His coat will be in good condition, his spirits high, and he will have the greatest stamina of which he is capable. He will not be afflicted with the annoying and serious bowel disorders which so frequently result from a vegetable diet, and his skin will be free from the diseases which are so offensive to the owner and so harmful to the dog. By some strange fallacy it is commonly believed that meat is harmful to the dog. Many disorders are attributed to its use. Notwithstanding that dogs fed on acorn meal or grain diet are lacking in powers of endurance and are commonly afflicted with mange, the fallacy concerning a meat diet lives on and on. The dog is carnivorous, and therefore when he can choose his diet he will select meat every time. If accustomed to a meat diet it is sometimes necessary to starve him into a vegetable diet before he will accept it, and when he does accept he does so reluctantly, and only at all from the impulse of hunger. He rarely needs any vegetable food with his meat, and when he does need it nature has so ordered it that the dog feels the need and knows instinctively how to satisfy it, for he goes forth and eats grass. In cities, where grass is not obtainable

for dogs, a small portion of vegetable diet now and then may be given, but it is not needed regularly. The great evil in feeding dogs in the city is not so much in the evil effects of meat as in the effects of over-feeding. It is from the abuse of food, combined with insufficient exercise. The dog is fed every time the family has a meal, and on improper food such as cake, pie, highly spiced dishes, and between times the children delight in feeding the dog sugar or candy. Hence such dogs are always too fat, some of them disgustingly so, besides being wheezy, awkward and indolent in consequence, and also predisposed to many diseases. Any food will thus have harmful effects if its use is abused. Violent bowel disorders are frequently cured by a change from a vegetable to a meat diet.

A common argument is that the owner requires three meals a day, and that, therefore, the dog requires the same number. It is as much as to say that one's stomach is the measure of all other stomachs.

The meat eaters require much less food and less often than do the vegetable eaters. The ox eats by the hour; the meat eater satisfies his stomach needs in a few moments. The wolf may not have a square meal in several days, yet he is strong and enduring, though he be gaunt and hungry-looking. It is claimed that domestication has changed the nature of the dog in this respect. Such is mere assertion with nothing to support it. The teeth, digestive organs and nature of the dog are the same, whether he be wild or tame. When he reverts to a wild state he does not seek potato or cabbage patches for food; he kills whatever animals he can to secure the needed supply, and even the domestic dog, in spite of the alleged change of nature coming from domesticity, is known to kill sheep on occasion, besides always showing a natural inclination to pursue rabbits, deer, squirrels, game birds, etc , not for the delight of man, but for his own delight and profit. When the game is captured the unschooled dog shows a purpose of eating it immediately. If it is light and portable, as squirrels, birds, etc., he may take possession and run away with it. Nothing is commoner than to see the amateur and half-trained dog scrambling furiously for a dead or wounded bird, each endeavoring to secure it first—if the dog is most successful the bird is either bolted outright or badly mutilated before the amateur can force him to surrender it—and yet there are many who think that the dog hunts solely for the gratification of his master.

UP A TREE WITH A COON.

A MR. CLARKE, who lives in the Willamette Valley, Oregon, recently told me this experience with a coon.

"One day I was looking through the woods for some stray cattle, my only companion being my big dog Sam. I chanced to pass under the wide-spreading boughs of a young fir tree. About 25 or 30ft. above the ground was a large nest built by a wood-rat. The nest was about as large as a barrel, and was made of large and small leaves, grass, etc. I glanced at the nest and was about to pass on when, to my surprise, I saw a very large coon lying on top of the nest apparently fast asleep. I had no weapon save a large and strong-bladed knife. However, I resolved to make an assault despite the disadvantage under which I labored. I determined to climb the tree and, if possible, dislodge the animal. Sam was a large, powerful dog and a most expert coon fighter, and I had every confidence that he would make very short work of the coon if the creature could be dislodged and brought to earth. Stripping off shoes, coat and vest, and casting hat aside, I started to shin up the fir. My idea was to climb past the place where the coon was perched, and, when once above, I could easily drive the animal down the trunk, or if it took refuge in the branches I could easily shake it out. But I had reckoned without my host. No sooner did the coon see me start up the tree than it ran to the trunk and began to climb for dear life. As I had started after it I proposed to capture it if possible. 'Never mind, my fine fellow,' I thought, 'just climb away, but I'll get you yet, see if I don't.'

"Well, on the coon nimbly climbed, and I followed slowly and awkwardly. Up, up, the animal ascended, and after it I came. Smaller and smaller grew the trunk of the tree, and at the height of about 75ft. from the ground the coon reached a point as far as it dared to go. It had got so far up that the slender trunk was not larger than a man's wrist, and was swaying to and fro. Seeing that the coon could go no further, and as I could ascend no higher, I endeavored to shake the animal out. But that was all in vain. I shook the tree violently until I was completely out of breath, but the coon hung on with the tenacity of a leech.

"Finally I gave that up as a bad job. 'I'll get him yet,' I murmured between my clenched teeth. Next, I cut off a branch about 10ft. long, and trimmed it up. With this I could readily reach the coon; and would you believe it, I could not punch it out to save my life. Every time I reached upward, the coon would grasp the end of the branch in an instant and twist it in my hands. I consider myself a strong man, but, laboring under the disadvantage, I was no match for the cunning little animal Maddened and chagrined by repeated defeat and failure, I made several desperate efforts, and finally cast the stick aside in disgust. All this time the coon kept up a continual snarling and growling, and I could see that, like myself, it was getting pretty mad. Several times it looked as if it was ready to leap down on me, and I have often wondered since that it did not.

"At last a happy idea struck me. The tree was only a few inches in diameter; and why could I not sever it and pitch the creature off? No sooner thought than done. With the sharp knife I rapidly cut into the soft fir wood, and by pushing with all my might succeeded in breaking off the now nearly detached treetop. When the coon discovered that the jig was up and it had to go, it gave a jump and caught on the ends of some branches below. These it clutched desperately, but its momentum was too great. It fell from limb to limb, and found no resting place until the ground was reached.

"Sam saw the coon start, saw the leap and the frantic efforts made in vain to grasp the branches. He measured the distance promptly and with precision and the coon had scarcely touched the ground before the dog was on it like a panther.

It was a short, but very desperate fight Sam came out victor, but not without many a scratch and painful bite. As soon as the coon started to fall I began descending, and, being pretty well exhausted, I came down leisurely. While coming down I could hear the savage fight below in full progress. By the time I reached the ground the conflict was ended. I shouldered the coon, and, reaching the house, my first care was to dress Sam's many painful wounds and make the old fellow comfortable. It was a week or more before he recovered from the effects of his sanguinary tussle. The coon was, without exception, the largest one I have ever seen.

After the excitement had subsided, I began to realize how rash and foolhardy I had been in following the animal up the tree. Had the coon attacked me, it would have compelled me to loosen my hold on the branches to defend myself; I should have undoubtedly been killed outright by the fall, or else very seriously injured. I will never follow another coon up a tree. J. M. BALTIMORE.

SPOKANE, Wash.

E. F. T. Club Derby Entries.

ENTRIES for the nineteenth annual Derby of 1897 have a total of forty-two, of which thirty are setters and twelve are pointers:

WINNIE GLADSTONE—R. C. Cornell's w. and b. setter bitch (Tory Gladstone—Molly).

ZEB—Victor Humphery's b. pointer dog (Kemp B.————).

RISQUE—George Batten's b., w. and t. setter dog (Gladstone—Roderigo Queen)

RACCO—T. E. Batten's b. and w. setter dog (Mecca—Countess Jennie).

MINNIE'S GIRL—Del Monte Kennels' o. and w. setter bitch (Antonio—Minnie T.).

LIBERTY—Del Monte Kennels' w. and b. setter bitch (Sam T.—Gath's Dora).

LIGHTFOOT—Del Monte Kennel's w. and b. setter bitch (Sam T.—Gath's Dora)

TICK BOY, JR—Del Monte Kennels' b. and w. pointer dog (Tick Boy—Jilt).

LEM GLADSTONE—G. M. T. Cantrell's l. and w. setter bitch (Antonio—Cossette Gladstone).

TORY SILAS—F. R Hitchcock's b , w. and t. setter dog (Count Gladstone—Tory Luna).

TORY NOVEL—F. R. Hitchcock's b , w. and t. setter bitch (Topsey Rod—Novelist).

ST. CLAIR—Tyro Kennels' liv. and w. pointer dog (Rob—Ripsay).

TRACKTI—Tyro Kennels' l. and w. pointer bitch (Rob—Ripsay).

SEPOY—Charlottesville Kennels' liv. and w. pointer dog (Rip Rap—Queen III.).

BEGUIN—Charlottesville Kennels' b. and w. pointer bitch (Rip Rap—Queen III.).

GHOORKA—Charlottesville Kennels' liv. and w. pointer dog (Delhi—Selah).

PIN FEATHER—Charlottesville Kennels' b. b. setter bitch (Harold Skimpole—Daisy Croft).

LADY EARL—J. H. Johnson's (agt.) o. and w. setter bitch (Dave Earl—Toney's Lady).

DOCTOR TASSIE—Wm. Elliot's liv. and w. pointer dog (Hal—Kent's Star).

PEARL R.—Dr. M. F. Rogers's b., w. and t. setter bitch (——— — ———).

JESSIE C.—Dr. G. Chisholm's b., w. and t. setter bitch (Hal—Kent's Star).

——— —J. J Odom's b., w. and t. setter dog (Toney Boy—Blue).

JELDA—W. B. Meares' b. and w. pointer bitch (Tick Boy—Abdallah Romy).

FITZSIMMONS—W. B. Meares' b. and w. pointer bitch (Tick Boy—Abdallah Romp).

FAIRVIEW BELLE—W. G. Brokaw's l. and w. setter bitch (Edymark— ——).

HURSTBOURNE JOE—Tobasco Kennels' b., w. and t. setter bitch (Toney Boy—Bonnie Belle).

LADY OF HESSEN—Tobasco Kennels' b., w. and t. pointer bitch (Hessen Boy—Lady of Rush.

ROMANCER—Avent, Thayer & Duryea's Kennels' b., w. and t. setter dog (Topsey Rod—Novelist).

ORLANDO'S GIRL—Avent, Thayer & Duryea's Kennels' b., w. and t. setter bitch (Orlando—Dolly Wilson).

SAM T. II.—Richard Bros' b., w. and t. setter dog (Sam T.—Belle Gladstone).

WHY NOT—Pierre Lorillard, Jr.'s b., w. and t. setter dog (Eugene T.—Miss Ruby)

WISE CHILD—Pierre Lorillard, Jr.'s b., w. and t. setter dog (Eugene T.—Maiden Mine).

MAIDEN MODESTY—Pierre Lorillard, Jr.'s b., w. and t. setter bitch (Eugene T.—Maiden Mine).

LORETTA—Pierre Lorillard, Jr.'s, b. and w. setter bitch (Loris—Kosalie).

LENA BELL—Pierre Lorillard, Jr.'s, b , w. and t. setter bitch (Sam—Minnie B.).

WILL B.—Dr. J. Spencer Brown's l. and w. pointer dog (Rip Rap—Cropie Kent).

KING VICTOR—Geo. E. Gray's (ag't) b., w. and t. setter dog (Victor—Petral).

SPOT'S GIRL—Dr. McLeod's l. and w. setter bitch (Spot's Cash—Minnie B.).

SPOT'S LADDIE—Dr. McLeod's b., w. and t. setter dog (Spot's Cash—Minnie B.).

SPOT'S BELL—Dr. W. G. Moore's b., w. and t. setter bitch (Marie's Sport—West Wind).

MISS MISCHIEF—Richard Bingham's b., w. and t. setter bitch (Dash Antonio—Petty).

HOPE—Joe. E. Mears's lem. and w. setter bitch (Joyful—Thompson's Nora). S. C. BRADLEY, Sec'y.

Dog Owners and Others.

NEW YORK —*Editor Forest and Stream:* I read in the daily press not long since of a number of dogs being poisoned in apartment houses in this city. I have read the keep-your-eye-on-business indignation published by some of the kennel journals over the matter. Of course their grief and indignation are not the result of fair investigation of the matter, they are from trade policy to please readers. Some common sense advice to owners of dogs in apartment houses would be better than the indignation of the Uriah Heep sort.

I do not write this to you, Mr. Editor, with any desire or intention to make light of the interests of dog owners, nor to approve of the poisoning of the poor dogs. What I do write this for is to point out that people in apartment houses who do not own dogs have some rights too. This is often lost sight of. More than that, it is often treated with contempt. If a man or woman owns a dog and keeps him in his or her own apartment, and the dog is not permitted to disturb the neighbors, no one has a right to object. But the dog owner loves his dog, and gives him every freedom of the premises. In every large apartment house there are numbers of dogs as there are numbers of families. Some of the dogs are nervous and waketul from confinement. They bark when they hear any unusual noise night or day, and their endless yap, yap, and bow, wow, day and night, does not make them beloved of the people. One noisy dog may disturb a dozen families. Let anyone protest to the owner against the nuisance, and in place of being politely received and the protest considered, the complainant will have a bitter quarrel on his hands, and will receive insult and foment malicious gossip. The owners will hold indignation meetings and the nuisance will be augmented Sleepless nights caused by the exasperating barking of a pampered, indolent dog, are made light of.

Worst of all, the health of the residents is menaced. From the second floor upward, the difficulty of taking a dog to the street for exercise and natural relief grows more difficult. Many of the tenants are pressed for time, or are too lazy or careless to take their dogs to the street for the necessary purposes, so they turn them into the hallways, with the result that the janitors have a never-ending task to keep the buildings clean. Do their best they cannot keep them clean. After a time there is a most disgusting stench, and the carpets become so fouled that nothing the janitors can do will suppress the stench. To warn the offending tenants brings forth the indignant denial from each that it is his or her dog. It is always the dog of some one else. The ones who do not own dogs protest against the unsanitary condition and refuse to pay rent, or threaten to move, or berate the janitors, so that the revenues of the houses are impaired and the property depreciated in consequence. The janitor is scolded, blamed, or discharged for matters he cannot control so readily as one might think. If he allows the nuisance to continue, the house becomes unsanitary and a menace to health. If he tries to abate it, there is ill-temper and ill-will, and the tenants threaten to leave if the dogs are not suppressed, and other tenants threaten to leave if they are. The janitors, being intelligent, think that if the dogs were removed the cause would disappear.

Janitors have valuable property to look after, and they have to look after a living for themselves and families. Tenants who do not own dogs do not care to suffer from foul smells and noisy nuisances. Where people are ill the nuisance is still more intolerable.

What I wish to do is to point out that there are two sides to this question. When dogs are poisoned, as were the dogs recently on Amsterdam ave., the owners of the dogs may not be without blame. I make a claim that the dog owners have their rights, and that others have rights too.

JANITOR.

Dogs and Gold Diggings.

Dogs have suddenly become more valuable than horses in this section of the Northwest. This state of affairs results from the great and growing demand for dogs to be used in hauling sledges in the Yukon country, Alaska. While thousands of horses for which their owners cannot get $3 a head are roaming over the plains of eastern Washington and Oregon, good-sized dogs are bringing from $15 to $30 each in the local market. At Juneau their value is double what it is here, and on the Yukon River a good dog brings from $100 to 150. To the Yukon miner the dog has become what the reindeer is to the Laplander and the pony to the cowboys of Texas and Mexico—a beast of service and a most valuable one.

Every steamer sailing for Alaska for three months past has borne northward several dozen dogs destined for service in front of heavily laden sledges. They are taken by boat to Dyea, at the head of salt water navigation, and there put into harness to assist in hauling outfits and supplies over the Chilkoot Pass and down the further slope to the series of fresh water lakes forming the headwaters of the Yukon's tributaries. Up to May, when the ice breaks up, dog teams slide over the smooth surface of the lakes with surprising rapidity, considering the loads they haul. There are portages to be made around dangerous rapids, and here again their services are invaluable. Arriving at the central posts, such as Forty Mile or Circle City, both men and dogs take a rest. In most cases the dogs are put into harness again for the trip to the diggings.

The sledge dogs are too valuable not to be well taken care of where that is possible. There owners' first thought in this respect is to obtain plenty of food for them. Their food consist principally of fish, usually salmon, caught in the Yukon River by the natives. An ordinary dog will eat daily 2lbs. of dried salmon, which equals 7lbs. of fresh fish. At Forty Mile last winter dried salmon sold at from 20 to 50 cents a pound, and bacon that was fit only for dogs to eat, sold for 37½ cents a pound. In some of the larger camps on the Yukon dog boarding houses have been established, where the animals are properly cared for at from $6 to $15 a month, according to the season and the price of dog food.

The native Yukon dog is much more valuable than the importations from Puget Sound. The dogs must be acclimated in order to stand the severities of the winter. It is found that dogs taken from Montana and Dakota endure the Yukon winters with less suffering than those bred in the milder climate of Puget Sound. Two splendid specimens of native Alaska dogs were brought here a few days ago, their owner finding it cheaper to pay their passage on the steamer than to have them boarded at Dyea during his trip here for supplies. The animals weigh, one 82lbs. and the other 88lbs. The large one cost its owner $117 at Circle City. It is a cross between a dog belonging to a family of missionaries that went to the Yukon years ago and one that hailed from the shores of the Mackenzie River. Both animals are stout, well proportioned and muscled, and have exceptionally short and heavy necks. Their ears are short and lifted like those of the Eskimo dog. Their coats are dark, and the hair, while not close, is smooth and heavy enough to form a comfortable protection against the Arctic winters and the Yukon mosquitoes, by the side of which the ferocity of the New Jersey variety pales into insignificance. A specially prepared dog food made out of meal and coarse meat from the packing houses is now being manufactured in the form of a cracker and seems likely to come into general use.

Buckskin moccasins are provided by many owners to keep the feet of the animals from being worn raw on the ice and snow. They are about 9in. long and made much after the pattern of a child's stocking. Pack saddles are also coming into use this spring. These are so arranged that dogs can carry a weight of from 10 to 20lbs. besides drawing a sled. The saddlebags fall on either side, and straps are arranged to prevent the pack from sliding forward or backward.

A Tacoma dealer has built up a large business in the manufacture of dog harness. A suit of harness usually weighs 2½lbs. The collar is made to slip over the dog's head, obviating the necessity of buckling it about the animal's neck when the driver's hands are cold and numb. The collar is made of leather faced with sheepskin and stuffed with deer hair.

The hames are inclosed in the collar, and attached to them are buckles for fastening the traces. On each collar are placed rings to which the traces of a dog in the lead may be attached, making it easy to drive teams in tandem. Traces in the harness for native dogs are made of heavy web material, because the dogs eat the leather harness. They devour the collars on sight if permitted to do so. This peculiar carving makes it necessary to keep the animals separated when harnessed, so that they cannot masticate one another's collar. When the web traces become oily, the dogs chew even them, and it is only a matter of time when the web strappings become food for the hungry creatures.

This spring several parties have taken burros and small horses in lieu of dogs for draught and general service beasts. It is claimed that one pony or burro will draw 3,000lbs. on the frozen surface of a lake. Another advantage claimed is that they can be more profitably used as pack animals during the summer. A Circle City firm works a train of thirteen horses, hauling from 800 to 1,300lbs. each on sleds and requiring but three drivers. All returned miners, however, unite in declaring that the dog is holding its own well against the competition of the horse and that dogs will be needed on the Yukon in large numbers for years to come. It is expected that within a few years the Government will be able to supply many reindeer from the herd at Point Barrow.

E. M. McClaine and A. M. Stearns, two Eastern miners, have just started north with a new kind of freight conveyance. It is a water and ice craft combined. The main part is a box, built like a large watering trough, 8ft. long, 22in. wide across the bottom, 3ft. across the top, and 22in. high. Beneath the box are two runners, 5in. high, and a little longer than the bed. The party has six of these conveyances, which will be used as sleds on land and boats on water. For use in the water, two of the sleds will be joined together by blocks at the ends, making a stronger water craft. To each side of the conveyance a log will be attached to render it more buoyant. The trough-like boxes are made of galvanized iron, and it is intended to sell them on the Yukon for bathtubs, the cost of a bath there being $1.—*N. Y. Sun.*

National Beagle Club of America.

THE committees appointed at the last meeting of the National Beagle Club of America are as follows:

Field Trial Committee: Jas. W. Appleton, chairman; George B. Post, jr., A. Wright Post, George Laick, John Bateman, George W. Rogers, G. Mifflin Wharton, N. A. Baldwin, Bradford S. Turpin, George F. Reed, D. F. Summers, Jas. L. Kernochan, Wm. Saxby and A. D. Lewis.

Sub-Committees are as follows:

Selection of Grounds: Jas. W. Appleton, chairman; A. Wright Post, Jas. L. Kernochan, G. Mifflin Wharton.

Judges: George F. Reed and George Laick.

Arrangements at Trials: George W. Rogers, A. D. Lewis, D. F. Summers and N. A. Baldwin.

Finance: George Laick, chairman; George B. Post, jr., G. Mifflin Wharton.

Premium Lists, etc.: Jas. W. Appleton and George W. Rogers.

Marshal at Field Trials: George F. Reed.

POINTS AND FLUSHES.

From Mr. Thomas Johnson, of Winnipeg, whose enthusiasm in field sports and their betterment is without limit, we have received the following information, which is important in its bearing on the forthcoming trials: "That good friend of field trials, Mr. M. Lawrie, of Morris, called on me to-day, and he said that the prospects for a big chicken crop were never brighter. He said that he knows of twenty nests within a radius of two miles of Morris, so that with seasonable weather during their chickenhood we should have an abundance of birds this year."

The list of judges for the N. E. K. C. show on June 19 are: Bloodhounds, mastiffs, St. Bernards, collies and Old English sheepdogs, poodles, pointers, setters, bull dogs, French bull dogs and fox terriers, Mr. H. W. Lacy, Boston, Mass.; spaniels, beagles, bull terriers, Irish, Scottish, Welsh terriers and miscellaneous classes, George S. Thomas, Salem, Mass.; Boston terriers, A. L. Goode, Boston, Mass.

A one-day dog show will be held at Morristown, N. J., some time in this month for local dogs only. It will be under the auspices of the Morristown Field Club. There are a number of fine specimens owned in and about Morristown, and from the great local interest already manifested at least a hundred entries are expected. A part of the programme is an afternoon tea on the club's grounds. Messrs. Elliott Smith and A. C. Wilmerding have charge of the matter.

The American and Continental Sanitas Co., Ltd., 636 West Fifty-fifth street, New York, offers to send free an illustrated book giving instruction for disinfecting in everyday life and during cases of infectious diseases.

Entry blanks of the International Field Trials Club's Derby can be obtained of the honorary secretary, Mr. W. B. Wells, Chatham, Ont. Entries close July 1.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable

THE CARE OF THE WHEEL.

THE pleasure of a long ride is made or marred by the running qualities of one's bicycle.

1. Before starting, oil the bearings of both wheels and also the crank axle.

2. Clean the chain thoroughly, and if you do not find it as limber as a snake, oil the joints of each separate link and wipe off surplus with a cloth.

In any case lubricate the inner surface of the chain with stick graphite or other good lubricant to reduce the friction of the sprocket teeth.

If these details are properly attended to, and five minutes is sufficient for the purpose, you may count upon a smooth-running wheel.

Do not neglect to give your wheel a thorough inspection and cleaning from time to time. Frequent inspections are necessary in the case of a new wheel before it is thoroughly tuned up for the road.

Look out for broken or loose spokes. Sometimes a spoke will snap where it is bent near the axle and escape notice by keeping its position, owing to the fact that it is tied to its neighbor.

Loose spokes may mean the collapse of the wheel. They are commonly found in new bicycles after the first few weeks' riding.

Nuts are also apt to work loose at first. Go over the nuts on the ends of both wheel axles and tighten them up as snug as you can with reasonable muscular effort. Then tighten the nuts on the inner ends of the pedals next the cranks. Bicycles are shipped from the factory with the pedals off, and at the selling agency the pedals are frequently carelessly attached. This is one great cause of broken pedals. Once the pedal is loosened it slips gradually away from the crank, and then some particularly hard thrust strips the thread from both male and female screw and the pedal drops off. The trouble cannot be remedied on the road (except that when the thread is only slightly defaced a short piece of soft wire may sometimes be screwed in with it and serve temporarily), and the wheelman is obliged to ride home with one pedal and get a new pedal axle and crank piece.

Last, but not least, if you value your neck, see that the handle bar is firmly clamped. Also that the saddle post and saddle adjustment nuts are tight.

A good clean-up is desirable once in a while, but not absolutely necessary, as regards the outside. If a man's natural instinct does not teach him to keep his wheel spick and span, the wheel will not necessarily suffer. It may be covered with mud or grease and run as easily and give the rider just as much satisfaction as the most fastidiously kept bicycle, provided, of course, the running parts are in good condition, which is a simple matter to attend to.

It must not be understood that we are in favor of dirty bicycles, inside or out, but people before this have been deterred from purchasing wheels through a mistaken sense of the requirements necessary to keep them in serviceable condition, and it is our purpose to show that no great sacrifice of time or energy is required. What is in reality a simple matter has, to the uninitiated assumed forbidding proportions, chiefly because it is customary to give too many directions. Most riders, after a time, by contact with others, naturally and without effort pick up a knowledge of bicycles and their requirements, and it is time enough then to take them apart and clean the bearings and alter the adjustment and experiment in the ways so dear to some of the dyed-in-the-wool wheeling cranks. But if the rider never gets that knowledge and never has a desire to tinker with his wheel, as is sometimes the case, there is no great cause for worry.

If by any chance the nickeled parts become wet they should be wiped off with a dry cloth, and then afterward if one does not mind their collecting a film of dust, with a greasy cloth. In the case of good dust-proof bearings the easy-running qualities of the bicycle will not necessarily be impaired by going a year or more without cleaning. Of course, grit or dirt in the bearings tends to wear the parts, but a small amount of wear is not such an unpleasant thing as might appear, for after a season's use bicycles commonly run better than at the start. Even if bearings wear out there is a remedy, for new cones and balls are within the reach of all at a slight expense.

Finally, it is perfectly possible to have the maximum of profit and pleasure from a bicycle without any undue sacrifice of time or patience in its care. See that the chain and wheels are lubricated and let the rest of the directions slide. If, however, you are methodical and neat and have a reasonable amount of time and patience, you may go further and keep your wheel like a new pin. It is satisfactory to know that each ball in the bearings is bright as a silver globe and that the spokes are not marred by rust pits, that the adjustment is perfect and that there is no undue wear on any part, that the enamel is glossy and unscratched. All this is good and worthy of emulation, and we have no hesitation in recommending it as the best plan. A well-kept wheel is a patent of respectability, and with experience most riders learn to appreciate this fact in its application to themselves.

One word more. If you have no mechanical ability and no understanding of the whys and wherefores of your wheel, don't try experiments with its adjustment or repair or let friends do so unless you have implicit confidence in their skill and knowledge of your particular mount. All repair men are not to be trusted, and if your wheel develops any ailment it is best to take it to the manufacturer or his agent, as they have a personal interest in the matter and will see that it is put in order properly.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

THE following is from the *Marine Journal*. We quite agree with it in describing Namouna as a first-class yacht, of course, considering the advances made since she was built. At the same time, it is but just to state that "this American vessel" was designed by St. Clare J. Byrne, of Liverpool, Eng., though built, under his direction, in this country. This accounts for her handsome and shipshape appearance as compared with the Delaware-built steam yachts of the same date.

We are pleased to welcome the return of Namouna, James Gordon Bennett's steam yacht, this week. This American vessel is our conception of a first-class yacht. Great credit is due Com. Bennett in the selection of his officers. They are men who could scarcely be replaced, as some of them have been with him from fifteen to thirty years. It is reported that Com. Bennett is to build another steamer. We are informed that this is not a fact, he being well satisfied with the craft he built on the Hudson in 1881, and in which he has made several long voyages in comfort and safety. Namouna, with Mr. Bennett and party, leaves for the return trip to Europe next Sunday.

Useful Yachts.

IT is now many years since the FOREST AND STREAM began its attack upon the then universal type of yacht, the shoal and wide skimming dish, and advocated in its stead for many purposes the deep cutter. Since that time a great many changes have taken place; the skimming dish was driven out entirely for years, to reappear of late in the small racing classes, and in an improved form divested of its sandbags. The narrow cutter was adopted and tried, to be replaced by other cutters of greater beam; both of these types, really of moderate draft, though once considered very deep, have since been superseded by others of far greater draft; and of late years this draft has been accompanied by a cutting down of displacement that has destroyed all semblance of living room. To-day the extreme fin-keel type, with its three marked characteristics of great draft, limited internal space and high speed, dominates all classes, with results that are but too plainly seen on every hand.

One of the most useful of all types which succeeded the skimming-dish was the cutter of moderate beam and draft and in lengths of from 20 to 30ft. l.w.l. These little yachts, as built between 1880 and 1888, possessed in a high degree the two valuable qualities of safety and accommodation, and at the same time they afforded a great deal of sport in racing with each other. That they were slow—not merely as compared with the bulb-fin racing machine, but by far more reasonable standards of speed in yachting—is undeniable; some of them were very slow, indeed; but with even this drawback they had much to recommend them, and they did important work in bringing men into yachting.

In the present condition of designing there is but one reason why something of the same type, but much faster, is not possible; and this reason is the demand on the part of many yachtsmen for the highest possible speed, regardless of all other considerations.

This demand has, in the course of the past five years, driven out the generally useable type of yacht in all classes and sizes, replacing it with the fin-keel machine; the general prevalence of the machine has at last resulted in a counter movement that is becoming more general each year, the establishment of numerous special classes under rigid restrictions as to dimensions, type and construction.

The best known and most successful of these restricted classes in this country and probably in the world, is the knockabout class of Massachusetts Bay. Even here the result of keen racing is now evident, to the marked detriment of all other qualities but speed. Enough has been learned, however, from the experiment, to warrant the belief that it could be extended with advantage to other classes, and the Boston *Globe* discusses the subject in a very thorough and reasonable way, as follows:

The increasing number of 25ft. knockabouts and the steadily growing popularity of the size and type, calls attention to the possibilities of sport in the class, not only the present season, but also in the future under suitable limitations and restrictions. While the handiness and popularity of the 21ft. knockabout is conceded, it is nevertheless true that the usefulness of the class is practically limited to afternoon sailing, and that something larger must be taken when extended cruising qualities are desired. In fact, the 25-footer is a development of the cruising idea, while at the same time retaining much the same racing possibilities and the sport which results therefrom.

It is with the hope of still further increasing the popularity of the class and possibly securing recruits from intending builders who are now attracted to the 21ft. ranks, that the owners of some of the 25-footers are considering the question of having some special racing for boats in the class. The formation of an association which shall keep the class where it ought to be is also in mind.

Marblehead, the port from which most of the boats hail, is named as the likeliest place to have the races, for it is probable that the Corinthian Club would make a special class if there was a certainty of filling it, or at least would give the boats a chance by themselves in its regular club races.

The chief point in which the 21ft. knockabouts are lacking is accommodation below. That many owners desire such accommodation is attested by the large number of boats in the class which are either originally built with cabin trunks or have them added after a season's racing. Hence the 25-footer and its logical development from the smaller size.

A little study of the question shows that the only advantageous sizes of small cruising yachts are those of 24 to 26, 33 to 36 and 45 to 46ft. waterline, since they are handled respectively by the same crews as those of 20 to 21, 28 to 30 and of 40ft. waterline, while at the same time they can be planned more economically below, for the smaller sizes just miss the head room of the larger ones, or the available length to arrange a good cabin plan. Two men can sail a 25ft. knockabout as easily as they can a 21-footer, and so on through the list.

In no class does the improvement in yacht design show more strikingly than in the one in question. Cutting the beam and deadwoods, lowering the ballast in a fin-shaped keel and raising the sides to a good freeboard, have produced a boat which is fast under a moderate amount of sail kept well inboard, is capable of doing its best work in a rough chance, and yet which is good in ordinary weather; and at the same time provides surprising accommodation below, with standing room under the house. The old models of this length were deficient in several of these desiderata, especially in the matter of ease of handling and head room.

The impossibility of getting this cruising accommodation on a 21ft. boat developed the 24-footer soon after the knockabouts proved their quality.

In the winter '93-'94 W. S. Palmer had Eugenia designed and built by Lawley as a handy sailboat with cruising room below. She proved such a clever craft that she was soon followed by Barnacle, an auxiliary craft designed by Arthur Binney and built for C. F. Lyman by the Fore River Company, and by Rowena and Yarico, designed and built by Lawley for Messrs. James Rothwell and Henry Yerxa.

This year's crop shows four boats, two of which are fitted with bowsprit and jib, losing the characteristic of the knockabout rig in this respect only. Three of the four were designed and built by Lawley. The fourth, Wanaissa, was designed by E. C. Jewell and built by Fenton & White, of Manchester.

The later Lawley boats have been really a compromise between the cutter model of Burgess and the deep keel canoe hull of the present day, resembling strongly the English five and ten raters, except that they have more beam. They have good accommodations below, most of them being fitted as follows: Abreast the companionway, two clothes lockers; transoms about 7ft. long, with shallow lockers built in the wings above them: at the forward end of the cabin, buffet on each side; forward of the bulkhead and in the house, with good head room, a toilet room with water closet and folding washstand; opposite this, the ice chest, food lockers, etc.; forward of the mast there is space for a swing berth for a paid hand and miscellaneous stowage.

The Lawley boats and Barnacle are beautifully fitted with hard wood, have much locker and stowage room, their owners taking but one guest. A weak point, however, is the narrow width of the cabin floor and waterways, the latter owing to the wide cabin trunk. This year's boats are somewhat improved in the last respect.

Wanaissa is a little wider than the Lawley boats, and her counter and stern are run out to improve looks and deck room. A narrow hatch house of mahogany has been used, leaving all the width possible for the waterways. As there is sitting room under the deck on all these boats, there is really no reason for using a house wider than the cabin

floor, since it is of no service below and spoils the deckroom. In cabin arrangement, Wanaissa is an example of a boat in the class fitted for more than two men. Locker room has been cut down somewhat, and there will be a 14ft. cabin with 12ft. transoms, making berths for four. The cabin will be divided by curtains if ladies are aboard. In the after end are small clothes lockers, and on the forward bulkhead silver and china cabinets. Two and one-half feet of the house is in the galley, giving head room for toilet and cook's department, while forward of the mast is the usual berth and stowage. By using rather a high side and house, the cabin floor is kept 3ft. wide instead of 2ft. or less. These two arrangements described will show the roominess of the type as far as cabin plan goes.

The important point, however, is that this class is the smallest size of boat in which full head room can be obtained, and yet be readily handled even by one man, although of course two is the smallest number for easy work on any craft.

The question of rig is to be settled by the owner's purposes. If afternoon sailing and single-handed work is most of the programme, the knockabout sail plan is the thing, but for general cruising, especially where a man or boy is shipped as crew, the bowsprit and "divided skirt" forward is far better, above all, if the boat is quite powerful.

Plenty of zest can be found in racing in this class if the owners desire it, and what is better, men building in it have the satisfaction of possessing a craft that is a yacht, and not a sail boat, fit to live or cruise on, yet perfectly available for easy work on short sails, even single-handed. This was the chief quality lacking in the old-time sloop and catboat, as well as in the compromise cutter, of fairly good accommodation, but all "legs and wings."

The formulation of rules for a restricted racing 25ft. class should not be a difficult matter, and with the present nucleus to build upon, and with the advantages of the size fully appreciated, a rapid growth should be assured. A few races this season would help the class in many ways, while its promotion would be a most desirable thing for yachting, as affording a motive for building good, wholesome boats of a convenient size, as against the inevitable necessity of building "machines" in the open and unrestricted classes.

The question may also fairly be asked if it is not in such restricted classes, where racing and cruising qualities are combined, that the future of yacht racing is to be found.

We agree fully with the *Globe's* reasoning, but we are prepared to go further in the belief that the restricted classes, each under special conditions, must before long give place to one uniform measurement rule which shall embody strongly restrictive conditions in itself, rendering special rules and classes unnecessary. As a vital part of such a rule there must be a limitation on construction, more extended, but after the same general plan as the present limitations of the knockabout class.

Of course such a rule would meet with strong opposition from those who believe in unrestricted speed without rules, or with the least possible semblance of a rule, such as mere waterline measurement; and there would be the familiar cry of a "tax on skill;" but we believe that if the clubs possess the ability to formulate a restrictive rule, that will promote a yacht of comparatively full body, moderate draft and sail area and extended lateral plane, and if they have the courage to adopt such a rule, that it will in a short time secure the approval and support of yachtsmen as a body. If there are still those who wish to build and race the fastest possible yachts, there is no good reason why they should not be allowed to do so under any rule, however flimsy, that they may chose to adopt. The result would be the establishment of double classes, the unlimited racing type for one and the wholesome, useable, all-round type in the other. Those who cared to put their money in a Defender, a Quissetta or a Niagara, or even more extreme craft in model and construction, would be at perfect liberty to do so, as at present; and with certainly no worse chance than now of finding others of the same mind to make racing for them. Those who wished, as so many at least profess to, for the opportunity to build again a yacht of moderate proportions and reasonable accommodation and construction and yet to have some racing with other craft of the same type, would have an opportunity, such as does not now exist, to do so. Of course, the technical objection exists that this would mean double the amount for prizes if both classes are to be encouraged; but to this it may be said that any money given for prizes in actually existing classes of the second division would be well spent, and as for the first or machine division, this exists only in name to-day, there being no real racing in any class save the 90ft. schooners, and there is little probability, even as matters now are, of new boats to match Defender, Queen Mab, Wasp and Niagara, and Syce.

It is probable that some experiment in the direction of a new racing formula will be made next fall, and we hope that it may be upon the lines here indicated, of comparatively rigid restriction of extreme features of design and construction, in which speed is at least rated no higher, if as high, as the other essentials of accommodation; seagoing qualities, as influenced by the area and shape of the lateral plane; durability and cost of construction; duration of racing life before being outbuilt, and further utility as a cruiser after being outbuilt.

Such regulations need not apply to the smaller classes under 25ft. l.w.l., but they might well begin with that size, creating such craft as those described by the *Globe*. From this size upward they should cover at least up to 70ft. l.w.l., beyond which size there is no necessity of going, except in the schooner division, where they should include the present largest class, of 90ft. l.w.l.

If such a rule were made strongly restrictive, at least as much so as the present Knockabout rule, and even more rigid in the regulation of midship section and lateral plane, any yachts built under it would be of decidedly better type than those now in the racing, and they would be fast enough to make good sport in their own classes. If such boats were built, in even moderate numbers in three or four classes, the result would be highly beneficial to yachting in all its branches, as all depend more or less on the continuance of general racing. If none were built, the situation would be no worse than that now existing. If there were any yachtsmen who felt that they would be hampered by building craft a little slower than the fastest ever before known, they would still be at liberty to build in the unlimited class, with aluminum hulls, mercury bulbs and any other expensive refinements. If the designers, in the same spirit, felt that they were unjustly hampered in their search for speed, they would also be at liberty to design more useless and costly machines and to induce an occasional rich business man, with an eye to advertising, or a foolish syndicate, to build from their up-to-date creations. As far as we can see, the experiment is well worth trying, and if tried should not be made a fore-ordained failure by too great deference to purely racing ideas.

Toledo Y. A.

TOLEDO—LAKE ERIE.

Monday, May 31.

THE first race sailed under the new Lake Y. R. U. rules took place on May 31 at Toledo, under the flag of the Toledo Y. A. The winners were:

42ft.—Sultana, beating Scud and Oberon.

37ft.—Puritana, sail-over.

32ft.—Eva, beating Viking and Crescent.

27ft.—Typhoon, beating Mabel R., Myrra, Pearl and Sharper.

22ft.—Elfin, beating Flirt.

Riverside Y. C.

The Riverside Y. C. will sail a special race for the 51, 30, 20 and 15ft. classes of cutters and sloops on June 9, starting at 12 M. from Riverside Conn. Trains leave the Grand Central station, New York, at 7 A. M., 9:03 A. M., and 10:06 A. M. The race committee of the club makes the following announcement:

The following races will be sailed under the auspices of the club during this season:

Wednesday, June 9: Special race for the 51, 30, 20 and 15ft. classes of sloops, cutters and yawls.

Wednesday, July 7, and Saturday, July 10: Ninth annual races for all classes. (The race on the first day will be for schooners and all classes of sloops, cutters and yawls 30ft. and over; and the race on the second day for the sloop classes 25ft. and under, and catboats.)

Saturday, Sept. 11.—Fall race for the 43, 36, 30 and 25ft. classes of sloops, cutters and yawls, and the 30 and 25ft. classes of cabin catboats.

The time of starting each day will be 12 o'clock M.

All the races will be open to yachts enrolled in any recognized club, and will be sailed under the rules of the Yacht Racing Union of Long Island Sound. Copies of the rules, charts of the courses, and the schedules of the racing events on the Sound for the season can be had from the committee on application.

Yachts starting in races this season without having been officially measured will be disqualified. All yachts in sloop classes 25ft. and under, and in all catboat classes, must be remeasured this year with weight on board to represent the crew. Mr. E. Frank Lockwood, the measurer of the club, will be prepared to measure yachts at the club anchorage on due notice being given him.

New official racing numbers must be obtaineed this season for all yachts intending to race. These numbers are furnished by Messrs. Rehm & Co., 157 Fulton street, New York.

The Atlantic Y. C. having accepted the invitation of this club to start on its cruise from off Riverside, and to participate in the race of June 7, this event will be of unusual interest. A steamer will be chartered for the use of members and their guests for the day, and will be in charge of the entertainment committee. Facilities will be afforded members of the club to attend the other races also.

A movement is now on foot to establish a special club class of sailing dories, boats that will be useful for fishing and other purposes, to be built at a nominal cost of from $25 to $50 each. Plans and specifications from different builders will be submitted at the next meeting of the club on June 4. In the event of these boats being built, the committee will arrange a series of races for the class in addition to the regular races.

Race Committee—Frank Bowne Jones, George B. Clark, H. W. Tyler.

The Taxation of Extreme Elements of Design.

SINCE the close of the past season the Seawanhaka C.Y.C., in the first place at the instance of Com. Rouse, has had under consideration the question of the improvement of the measurement rule, and though no positive result has as yet been attained in the discovery of a perfectly satisfactory formula, many proposals have been studied and their good or bad points accepted or condemned. Those engaged in the work have been unwilling to accept unreservedly the various crude and ineffective remedies thus far proposed in default of reasonable ground for the belief that they would be permanently beneficial.

The original investigation was directed rather to the preparation of a formula that should, as far as possible, equalize the old and new boats; for the direct purpose of encouraging racing among existing craft. It was soon perceived that such a measure, even though successful in itself, would by no means meet the necessities of the case in regulating the designing of new yachts specially to evade it; the scope of the inquiry was thereupon materially enlarged to include a formula which would produce a more desirable type of yacht than that at present in existence, under the actual test of designing, building and racing for successive seasons. Within a short time a proposal has been placed before the committee which promises more than any yet advanced, and it is hoped that before the time comes for renewed action, at the end of the present season, the committee may be able to set forth a definite proposition for a new rule.

In the meantime it has reverted to the original idea of encouraging racing among existing yachts, and to that end has taken up the formula proposed last fall by Mr. Irving Cox and explained in his letter published in the FOREST AND STREAM of Oct. 17, 1896. As stated in the following announcement of the committee, Com. Rouse has offered special prizes to be awarded to the winners as measured by this formula, in addition to the regular class prizes under the club rule.

In its taxation of excessive draft, overhang and sail area, the formula is designed to meet the prevalent complaints of the owners of the older yachts. It now remains to be seen whether these yachtsmen—and they are by no means few in number—are prepared to support the effort of the Seawanhaka C. Y. C. and its committee to give them what they have asked for—a fighting chance against the more modern yachts.

We beg to call your attention to the accompanying announcement of the special prizes offered by the commodore of the club for competition at the annual race to be held at Oyster Bay, Long Island Sound, on Saturday, June 26, 1897, and to invite you to enter your yacht for that event. The record of recent racing, especially during the last yachting season, has shown conclusively that, under the present rule of measurement for time allowance, yachts of the older type, even such as are of comparatively modern construction, cannot successfully compete and cannot be induced to compete with the few purely racing craft which embody the most extreme development of the elements of speed untaxed by that rule. The resulting indifference to racing in the larger classes has grown so rapidly as to lead to the conviction that unless some new departure is made all interest therein will ultimately cease. In September last Com. Rouse addressed a letter to us, calling our attention to this unfortunate tendency and suggesting that a practical effort be made by modifying the existing rule of measurement on certain proposed lines, and providing for races in cruising trim, strictly defined, to arouse fresh interest in racing and at the same time promote the final solution of the problem of measurement to govern future building. This gave rise to a prolonged and interesting discussion of the subject during the past winter and spring, in which we have had the aid of several well-known yacht designers. Several formulæ have been submitted, which will be of great value in the final determination of the problem. After careful consideration we have reverted to the original suggestion of the commodore, as developed by Mr. Irving Cox into the formula set forth in the accompanying circular, as best adapted to promote the immediate purpose in view. The theory of this formula is so to tax the speed-producing features of the modern racing yachts as to give vessels of the more wholesome and normal type a chance of competing, if not on even terms, at least with some possibility of success. It is hoped that the encouragement of this formula for time allowance and the condition that the race shall be sailed in cruising trim strictly defined, thus avoiding the discomfort and loss of use resulting from stripping cruising fittings on deck and below, will induce a large entry from among the older vessels. It has seemed to us that, if racing in the larger classes is to become general again, some such expedient must be resorted to, and the present is offered, not as a confident solution of the problem, but in the hope that a race for valuable prizes, sailed under these conditions, will be successful enough to arouse a lively interest and that the practical test of the proposed formula will be of substantial value in further efforts to perfect a rule of measurement to govern future building.

We hope that you will feel sufficient interest in the purposes for which these prizes are offered to enter your yacht. The approximate measurement of your yacht under the foregoing formula and any further information which you may require will be gladly furnished by the committee.

The favor of an early reply to the secretary is requested.

Yours very truly,

OLIVER E. CROMWELL, Chairman,
64 Leonard street, New York.
CHARLES W. WETMORE,
30 Broad street, New York.
WALTER C. KERR,
26 Cortlandt street, New York.
D. LE ROY DRESSER,
55 White street, New York.
CHARLES A. SHERMAN, Secretary.
64 Leonard street, New York.

COMMODORE'S PRIZES, SEASON OF 1897.

Commodore Rouse has offered the following special prizes to be competed for at the annual race of the club, to be held on Saturday, June 26:

First.—A prize open to all schooners.

Second.—A prize open to cutters of the first class.

Third.—A prize open to cutters from the 70ft. class to the 43ft. class (inclusive).

The following special conditions will govern the race:

MEASUREMENT FOR TIME ALLOWANCE.

The measurement for time allowance will be computed according to the following formula:

$$\frac{3A+B+C+L.W.L.+\sqrt{S.A.}}{2}=R.L.$$

A=Excess of draft over $1.4\sqrt{L.W.L}$

B=Excess of over all length above 1.33 (L.W.L.).

C=Excess of $\sqrt{}$ sail area above 1.05 (L.W.L.).

CRUISING TRIM.

Yachts must sail in cruising trim, defined as follows:

Cabin, galley and deck furniture, and fittings and equipment to be in place; two anchors and full lengths of chain on board, and at least one anchor on the bow with cable bent; full complement of cruising boats on deck, but not including naphtha launches; lug foresails barred on schooners, and club topsails barred on schooners, cutters, sloops and yawls.

Conformity with these requirements to be subject to the inspection and determination of the race committee.

The Bahamas as a Cruising Ground.

THE following letter, from a yachtsman, may be of interest to our readers in calling attention to a cruising ground for American yachts of small size that has much to recommend it and yet is little known. The cruise to Florida from New York or Boston, now an every-day matter for even small yachts, might be greatly varied and extended by the short trip across from Biscayne to the Bahamas, and with much less risk than that encountered along the Carolina coast:

CAT CAY, Bahamas, May, 1897.—*Editor Forest and Stream:* A few facts about these islands may be of interest to such of your yachting readers as contemplate a southern cruise after the season north.

The climate is well known; suffice it to say that from November to June it is (from a yachtman's point of view) as nearly perfect as possible—the thermometer varying from 65° to 85°, with regular and moderate winds.

The Bahamas lie between 21° and 27° N. lat. and 72° and 79° W. long. The group consists of about twenty inhabited islands and an immense number of islets and rocks. Though of easy access from South Florida—Bimini, the nearest settlement and a port of entry, being less than fifty miles from Cape Florida—they are seldom visited, and except New Providence, on which is Nassau, the capital, they are almost unknown.

A few hours' sail from Biscayne Bay, Fla., brings one to Gun Cay Light, on the western edge of the Great Bahama Bank, which extends south and east for many hundred miles. With an average depth of two to three fathoms, free from obstructions, a bottom of smooth white sand, and absolutely clear water, the banks form an ideal cruising ground for yachts of moderate draft.

Throughout the islands are plenty of excellent harbors, and on account of the clear water a boat drawing not more than 5ft. can go anywhere without a pilot, though if one is needed it is easy to hire a local sponger for a small consideration. The natives are hospitable and obliging. Provisions, such as poultry, eggs, fruit and vegetables, are cheap, but it is advisable to take a good supply of canned goods from the United States, and so avoid the exorbitant duties. There is good fishing almost everywhere, and in some parts pigeons and ducks are plentiful. A description of even the principal islands would take up too much space. From Bimini, with its Fountain of Youth, on the west, to San Salvador, the landfall of Christopher Columbus, on the east, they are full of interest. Were it better known how easy of access they are, the Bahamas would doubtless become one of the most popular winter yachting resorts. H.

Lalage and Handy.

THE two new Cuthbert cutters, which arrived at the Royal St. Lawrence Y. C. on May 29, are very handsome yachts of their type. Lalage, owned by Mr. J. B. Abbott, is a full 20-footer, 17ft. 6in. l.w.l., 7ft. 6in. beam, 29ft. on deck, 3ft. draft of water, with 900lbs. of lead bolted on to the keel, and 500sq. ft. of sail, and will make a very fine cruising yacht, that being the first consideration in her design and build. The hull is very heavy and strongly built as compared with the other racing 20-footers, the only light feature being the standing rigging, and that is exceptionally light, looking as if the first puff of wind would blow it away, but the two weeks' sailing from Toronto, which Mr. Cuthbert reported as the worst weather he ever experienced, failed to damage it. She has a roomy self-draining cockpit with room forward for two to sleep if necessary, and in other respects fully carries out the owner's wish for a fast and safe cruising boat. The other yacht, which will race in the 25ft. class, is the Handy, ownedby T. S. Gillespie, and is a very roomy and comfortable craft. Her speed has not yet been tested, but no doubt will prove satisfactory. As to sea-going qualities, Mr. Gillespie, who sailed her from Toronto with the assistance of J. J. Cooley, reports her as perfectly safe in any weather that can blow. Her dimensions are: 18ft. l.w.l., 28ft. on deck, 7ft. 4in. beam, 3ft. draft, with 1,800lbs. of lead bolted to her keel, and 800sq. ft. of working canvas and 1,400sq. ft. in all. Her general qualities are for comfortable cruising, there being a very neat cabin, with ice-box provision chest, clothes lockers and berths for four. She will not be seen much on Lake St. Louis except for the races, her owner intending to keep her on Lake of the Two Mountains. By the way Lalage is not a word of two syllables, and it is not French. It is a three-syllable word and is pronounced La-la-jee, with the accent on the last syllable.—*Montreal Gazette.*

South Boston Y. C.

SOUTH BOSTON—BOSTON HARBOR.

Monday, May 31.

THE open race of the South Boston Y. C. was more of a drift than a sail, as there was the lightest and most provoking of breezes. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected
Beatrice, John Cavanagh	24.10	4 15 32	3 46 02
Emma C., P. A. Coupal	26.06	4 18 45	3 48 15
Harbinger, W. F. Bache	27.09	4 25 07	3 55 51
Elfreda, B. T. Hall	28.11	4 25 05	3 56 55
Tantrum, F. D. Perkins	24.01	4 28 19	. . . .
Heroine, C. A. J. Smith	27.06	Withdrew.	
Nettie, Walter Burgess	24.02	Withdrew.	

SECOND CLASS—CABIN.

Privateer, A. E. Schaaf	21.00	4 16 37	3 39 38
Clara, Wm. Turner	23.11	4 22 28	3 49 11
Rex, J. B. Farrell	23.05	4 23 45	3 49 52
Whisper, W. H. Stimpson	21.02	4 32 15	3 55 30
Mist, A. H. Merrill	20.06	4 35 50	3 58 09

SECOND—OPEN CLASS.

Hoodlum, A. H. Higginson	23.11	3 57 32	3 24 15
Romance, L. Sears	22 00	Withdrew.	

THIRD CLASS

Nancy Hanks, P. W. Maglathlin	19.03	4 05 44	3 26 50
Alison, H. E. Fowle	19.00	4 11 29	3 31 53
Arab III., W. F. Scott	19.11	4 10 30	3 31 58
Wrinkle, S. N. Small	19.11	4 13 18	3 34 46
Zoe, James McCarthy	17.09	4 22 46	3 40 56
Ecila, J. McConnell	18.07	4 31 03	3 50 27
May R., N. C. Nickerson	17.07	4 40 05	3 57 48
Al Auka, C. H. Crane	19.11	Withdrew.	
Pioneer, H. M. Crane	19.11	Withdrew.	
Cleopatra, H M. Faxon	19.06	Withdrew.	

KNOCKABOUT CLASS.

Cockatoo, C. S. Eaton	21.00	3 54 36	. . . .
Hazard, H H. Sears	21.00	3 57 56	. . . .
Gosling, North & Clark	21.00	3 59 14	. . . .
Sally III., L. S. Percival	21.00	Withdrew.	
Fly, W. O. Gay	21.00	Withdrew.	

FOURTH CLASS

Fantasy, Wm. Allerton	15.03	3 28 19	3 05 10
Circe, L. L Pigeon	16.00	3 45 13	3 13 32
Vitesse, C. D Mower	16.02	3 48 40	3 17 13
Gnome, H. B. Faxon	15.04	3 52 49	3 20 12
Alpine, C. J Blethen	16.04	3 51 50	3 20 37
Coot, Dugo	15.04	Withdrew.	
Flash, H. H. Linnell	16.11	Withdrew.	

The first, second cabin and third classes failed to finish within the time limit of four hours, so a resail for these classes was set for June 5. Both Tantrum and Nettie measured out of the 24ft. class. Gnome protested Circe for sculling. The new Crane boat, Al Auka, led the class for a long distance. Heroine took the ground and withdrew, Emma C. being more fortunate and getting clear.

The winners and prizes were: Hoodlum, $15; Cockatoo, $12; Hazard, $8; Gosling, $4; Fantasy, $12; other two prizes in fourth class subject to Gnome's protest.

Judges: Arthur Fuller and James T. Ball, Thomas Christian, Hiram Cherrington, W. H. Godfrey, John F. Berrigan, Frank Williams.

The resail for the three classes took place on June 5, in a moderate easterly breeze which made a good race. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Harbinger, W. F. & C. F. Bache	27.09	1 45 54	1 16 38
Beatrice, John Cavanagh	24.10	1 50 49	1 18 31
Elfrida, B. T. Hall	28.11	1 47 57	1 19 47
Emma C., P. A. Coupal	26.06	1 53 06	1 22 30
Nettie, Walter Burgess	28.11	1 52 12	1 24 02
Heroine, C. A. J. Smith	25.06	2 00 55	1 31 25

SECOND CLASS CABIN.

Rex, J. B. Farrell	23.05	1 51 13	1 17 20
Privateer, A. E. Schaaf	21.00	1 54 28	1 17 29
Whisper, W. H. Stimson	20.02	1 57 07	1 18 57
Judith, W. B. Pigeon	23.06	1 59 22	1 25 35
Vexer, W. H. Shaw	21.00	2 09 52	1 32 53
Clara, W. Turner	23.11	Withdrew.	
Yankee, C. Mains	21.00	Withdrew.	
Tola, G. Breckinredge	20.02	Withdrew.	

THIRD CLASS

Rooster, C. F Adams 2d	18.06	1 51 11	1 10 26
Arab, W. F. Scott	19.11	1 59 42	1 21 10
Cleopatra, H. M. Faxon	19.06	2 00 37	1 21 27

Zoe, J. McCarthy	17.09	2 06 27	1 24 37
Enigma, G. Maybury	19.06	2 09 59	1 30 49

Knickerbocker Y. C.

COLLEGE POINT—LONG ISLAND SOUND.

Saturday, June 5.

THE Knickerbocker Y. C. sailed its annual regatta on June 5, the course being from off the club house, College Point, around Gangway Buoy and return, 14½ miles. The morning was cold and rainy, with an easterly wind through the night, but a shift to N.W. brought the sun out before noon. The start was made at noon, with a nice N.W. wind; the classes being sent away by the Y. R. U. signals. The times at the outer mark were:

Moccasin	1 25 30	Eurybia	1 37 10
Whileaway	1 26 00	Wawa	1 38 40
Penguin	1 33 05	Gurnard	1 39 00
Gossoon	1 30 50	Mignon	1 45 00
Vaquero III	1 31 03	Nautilus	1 45 10
Hera	1 32 25	Keneu	1 50 05
Musme	1 32 55	Southern Cross	1 53 25

The final times were:

SCHOONERS ALL IN ONE CLASS.

	Length.	Elapsed.	Corrected.
Southern Cross, J. F. Phillips	....	2 59 50	2 59 50
Gabrielle, V. L. Schielz	31.27	Did not finish.	

SLOOPS—70FT. CLASS.

Whileaway, F. H. Boynton	60.19	2 22 10	2 22 10
Penguin, G. E. Briggetson	60.50	2 27 08	2 27 08

SLOOPS—51FT. CLASS.

Moccasin, S. H. Mason, Jr.	47.35	2 23 20	2 23 20
Gossoon, P. T. Dodge	45.50	2 28 15	2 26 42

SLOOPS—43FT. CLASS.

Eurybia, Charles Pryer	40.02	2 36 43	2 36 43
Gurnard, L. H. Zocher	38.88	2 36 19	2 31 37

SLOOPS—3 FT. CLASS.

Mignon, Jos. Fournier	34.16	2 47 29	2 32 14
Nautilus, J. J. McCue	33.00	2 49 11	2 49 11

SLOOPS—30FT. CLASS.

Water Lily, T. Kiernan, Jr.	27.20	3 01 49	3 01 49

SPECIAL 30FT CLASS

Vaquero III., H. B Duryea	30.00	2 20 47	2 20 47
Hera, Ralph N Ellis	30.00	2 24 09	2 24 09
Musme, J. S. MacDonough	30.00	2 27 35	2 27 35
Wawa, J. A. Stillman	30.00	2 27 54	2 27 54

OPEN SLOOPS—20FT. CLASS.

Keneu, M. H. Clark	20.00	2 44 16	2 44 16

OPEN CATBOATS—25FT. CLASS.

Leisure, F. B. Myrick	27.96	3 02 19	3 02 19
Frolic, F. Gauss	27.34	3 12 32	3 11 17

CABIN CATBOATS—30FT CLASS.

Mary S., E. B. Hall	24.70	2 52 00	2 52 00
Dolphin, G. H. Montrose	24.15	3 07 38	3 06 38
Win or Lose, J. S. Appleby	23.75	2 52 35	2 50 57
Ouananiche, Rodman Sands	23.59	2 55 42	2 53 17

CABIN CATBOATS—25FT CLASS.

Violet, G. A. S. Wienors	20.20	3 05 32	3 05 32
Regina, W. B. Scardefield	20.00	3 12 26	3 11 52

The winners were: Southern Cross, Whileaway (class prize and Alcedo cup), Moccasin, Gurnard, Mignon, Water Lily, Vaquero III., Keneu, Leisure, Win or Lose, Violet.

The steamer Aurora carried the members and guests over the course. The race committee included Messrs. O. H. Chellborg, J. O. Sinkinson, J. B. Palmer, S. A. Harms and C. W. Schlesinger.

Royal Canadian Y. C.

TORONTO—LAKE ONTARIO.

Saturday, May 29.

THE Royal Canadian Y. C. opened the racing season on May 9 with a race for the 27ft., 20ft. and skiff classes, sailed in a fresh S.W. breeze. The times were:

27FT CLASS.

	Elapsed.	Corrected.
Waif	1 43 15	1 41 58
Mirage	1 44 00	1 43 58
Wona	1 51 35	1 57 35

2 FT CLASS.

Frou Frou	1 27 00	1 27 00
Halfa	1 37 07	1 37 02
Waif	1 36 30	1 36 12
Kitterlon	1 37 05	1 36 04
Kipstart	Not timed.	

SKIFF CLASS.

C. E Archbald	1 15 40	. . . .
Hayter and McMurrich	1 17 50	. . . .
Mr. Apted	1 18 43	. . . .
Wedd and Smith	1 25 00	. . . .
Mr Parsons	Disabled.	
Francis and Thorne	Disabled.	
Morse and Johnson	Disabled.	

The skiff class is a new one, this being the first trial of the boats in a race. Messrs. Morse and Johnson lost their rudder, Messrs Francis and Thorne broke their boom, and Mr. Parsons found his hollow mast too light to carry the sail. Mr. Archbald has been laid up with a sprained ankle, but managed to get out to sail his boat in her first race.

Hudson River Y. C.

NEW YORK—HUDSON RIVER.

Sunday, May 30.

THE Hudson River Y. C. sailed its annual spring regatta on May 30 in a light and variable wind, the course being a 5-mile triangle, two rounds. The principal incident of the day was a mishap by which George Fisher, owner of the naphtha launch Minerva, was badly burned about the head, face and hands. During the race of the launches a back draft on Minerva blew the burning vapor into Mr. Fisher's face, compelling him to withdraw and to hurry in to the club house, where he received medical aid. The times were:

NAPHTHA LAUNCHES AND OTHER POWER LAUNCHES.

	Length.	Elapsed.	Corrected.
Cleopatra, C. S. Peet	40.00	1 10 40	1 10 40
Elsa, Vice-Com. Chute	18.00	1 58 16	1 13 16
Minerva, Geo. Fisher	....	Did not finish.	

CABIN CAT—ALL IN ONE CLASS.

Minnie, Peter Giffin	25.11	1 42 44	1 42 41
Adeline, T. Trott	26.00	Did not finish.	
Lillie, G. O'Shaughnessy	21.06	Did not finish.	

OPEN CATS—OVER 20FT

Mildred, T. Hall	25.04	1 45 58	1 45 58
Katie R., S. Schmidt	20.05	Did not finish.	

OPEN CATS—UNDER 20FT.

Day off, W. Maloney	16.00	2 24 34	2 24 34
Nixie, G O'Shaughnessy	17.08	Did not finish.	

The winners were Cleopatra, Minnie and Day Off.

Lillie carried away her boom and Nixie parted her gaff lashing, both withdrawing.

Royal St Lawrence Y. C.

DORVAL LAKE, ST. LOUIS.

Saturday, May 29.

A special race for 20-footers for prizes offered by the club, and three pewters as crew prizes, presented by Mr. G. A. S. Hamilton, was sailed over the usual course on May 29. There was a heavy sea running, the result of a continuous hard blow from the southwest, and only three boats came to the line: Glenowen, Shirley Davidson, one of Mr. Duggan's designs; Lalage, J. H. Abbott, designed and built by Cuthbert, of Toronto, and Viola, designed and sailed by S. Thornton.

The starting gun was fired at 4:28, and all the boats went across with three reefs, Lalage being somewhat handicapped by her reefed jib that would not sit properly, while Viola had no storm jib, and was sailed under her reef mainsail alone. As she did not balance very well under this, her work was not very satisfactory. Glenowen led from the start, and won as follows:

	1st Round.	Finish.	Elapsed.
Glenowen	5 01 55	5 36 27	1 08 27
Lalage	5 06 50	5 48 06	1 20 09
Viola	5 08 40	5 54 33	1 26 53

Communipaw—New York Bay.

Monday, May 31.

A RACE was sailed off Communipaw on May 31, the course being an 8-mile triangle on New York Bay. The times were:

CLASS A—OPEN CATBOATS UNDER 24FT

	Length.	Elapsed.	Corrected.
Blonde, J. Carey	22.00	1 34 30	1 34 30
Eureka, Capt. Durham	21.09	1 27 28	1 27 28
Comfort, Capt. Babt.	22.00	1 54 00	1 49 15
Nellie Bly, Henry Stoner	22.06	1 51 30	1 47 15
Adeline, F. Schwartz	23.00	1 37 50	1 37 30
Pilot, J. McMurray	23.09	Did not finish.	

CLASS B—OPEN CATBOATS 20FT. AND UNDER.

Watermellon, Capt. Mitchell	17.00	1 38 00	1 35 00
Osceola, Mr. McGrath	18.00	1 15 00	1 12 00
Willie B, Capt. Bradley	16.00	1 16 00	1 12 35
Nellie V., Frank von Winkle	15.06	1 10 30	1 05 30
Spot	15.05	1 12 00	1 06 30
Jack	15.06	1 11 00	1 11 00
Lough Bery, Carr	15.06	1 43 30	1 35 30

The judges were Daniel Hobart, Nicholas Wortherel, Robert C. Montgomery and Samuel Albert.

Wollaston Y. C.

QUINCY—BOSTON HARBOR

Saturday, June 5.

THE new Wollaston Y. C. sailed its first race on June 5, after a postponement from Monday; the prizes being cups offered by Com. Burgess. The wind was moderate from the East; the times were:

SECOND CLASS.

	Elapsed.
Clara Lou, W. J. Coombs	1 26 47
Burgess, Com. Burgess	1 32 22

FOURTH CLASS.

Thelma, E A. Merrill	1 34 58
West Wind, F. B. Robinson	1 41 34
Estha, H. A. Newman	1 55 30
Doris S., W. H. Cleaves	1 58 17
Sea Gull, H. Rideout	2 01 43
Gipsey, John Stuart	2 28 41

The winners are Clara Lou and Thelma.

Cohasset Y. C.

COHASSETT—COHASSETT HARBOR.

Saturday, June 5.

THE second sweepstakes of the 15ft. one design class of the Cohassett Y. C. was sailed on June 5 in a light S.E. breeze, the times being:

	Start.	Finish.	Elapsed.
Hodoo, Gammons & Wheelwright	3 45 00	4 24 12	0 41 12
Honey, C. H. Cousens	3 45 00	4 34 30	0 49 12
Delta, Ralph Williams	3 45 00	4 42 31	0 54 43
Jap, Bouve & Pegram	3 45 00	4 43 38	0 55 50

Course, 4½ miles.

Winthrop Y. C.

WINTHROP—BOSTON HARBOR

Saturday, June 5.

THE Winthrop Y. C. sailed its first championship race on June 5 in a light S.E. breeze, the times being:

SECOND CLASS.

	Start.	Finish.	Elapsed.
Alma, C. A. Henry	2 35 00	5 53 13	1 18 13
Myth, Howard Gould	2 35 00	3 56 02	1 21 02
Harold, A. T. Bliss	2 35 00	3 57 00	1 22 00
Mist, A. H. Merrill	2 35 00	3 57 35	1 22 35
Myrtle, A. W. Chesterton	2 35 00	3 58 05	1 23 05

THIRD CLASS.

Harriett, L. T. Harrington	2 40 00	3 30 06	0 50 06
Ecila, John McConnell, Jr.	2 40 00	3 36 23	0 56 23

FOURTH CLASS.

Della, W. I. Kelly	2 45 00	3 39 52	0 54 52
Eva, S. A. Freeman	2 45 00	3 41 27	0 56 27
Florrie, H. Waite	2 45 00	3 42 31	0 57 31
Pippin, W. E. Traiser	2 45 60	3 48 07	1 03 07

The yachts are not yet measured, so no corrected time could be computed; but the winners will probably be Alma, Myth, Mist; Harriett; Della and Eva. In the evening a hop took place at the club house.

Bona.

THE cutter designed by G. L. Watson and built by Henderson & Co at Meadowside, on the Clyde, was launched on June 3, and will shortly be ready for racing. Her owner, Prince Luigi Amadeo, of Savoy, Duke of Abruzzi, nephew of King Humbert of Italy, passed through New York last week on his way to Alaska, where he proposes to climb Mount Elias. He is but twenty-four years of age, and a novice at yacht racing. The new yacht, which has been named Bona, and will be under the charge of Capt. Sycamore, who was here in Valkyrie III., is described as follows in the *Field:*

She is planked with yellow pine of about 2in. thickness, with an upper strake of teak; her length on the waterline will be about 75ft., her beam about 18ft., and she will have a uniform draft of about 14ft. The lead keel is a bulby mass, close on 25ft. along its upper run, and rather less below. It is something like 4ft. deep forward, tapering back to over 15in. Its greatest breadth is forward of its center, where it exceeds 3ft., and it is calculated to weigh about sixty-three tons. The mainmast is of Oregon pine, and, with the topmast on end, the distance from deck to truck will be about 100ft. The main boom is 80ft.; it is made of steel and shaped like an ordinary wooden spar. Her bowsprit, of white wood, has 16ft. outboard, and the gaff is said to measure 48ft. The sail plan is computed at 8,500sq. ft., and the rating of the boat comes out at nearly 86ft. linear rating. Bona is to be sheathed with copper, and her internal fittings will be light. A large space has been allocated forward for her crew of twenty hands, and Capt. Sycamore has a comfortable room close at hand. The cabin, or main saloon, is amidships, but the vessel will have no staterooms beyond a large compartment abaft the companion way, with two berths.

Bona is really built to no class, going in with the big boats Britannia, Ailsa and Meteor, though very much smaller. It is possible that she may lead to the revival of this size of yacht, in place of the useless and unwieldy racers of the largest size.

The Shipwrights' Strike.

IT would seem as though the recent strike in the building trade in New York, with no ground save the slightest technical dispute over the nature of a trivial piece of work, whether the fitting up of a few small pipes should be done by plumbers or steam-fitters, was about as foolish as anything of the kind could be; but even this has been exceeded, from all accounts, by the action of the shipwrights of Southampton. In the case of the New York mechanics there was at least the excuse that work was plenty and the employers would be injured more than the men; at Southampton, and in the yacht building industry, the case is reversed, work is not plenty by no means, there is the strong competition of the Clyde to be feared in the best of times, and while the employers must suffer serious loss, it will all fall ultimately on the men. The following account of the trouble, from *The Yachtsman*, is corroborated by accounts from other sources; while we have not heard the men's side of the story, from all that we can learn the following is substantially correct:

The strike of shipwrights at Southampton is extending, and is really giving serious trouble. At present there appears to be no sign of settlement, and work in all of the yards, so far as shipwrights are concerned, is stopped; and as this delay comes at the busiest season of the year, when every owner is anxious to get his vessel in commission, the inconvenience that is occasioned is intolerable. Mr. William Summers, head of the well-known firm of Summers & Payne, who is chairman of the employer's committee, endeavored to smooth matters over, the only return for his kind offices being that his own men, who remained in the yard after the shipwrights at Fay's Day & Summers's and White Bros. had laid down their tools, joined the malcontents and went on strike. Mr. Summers gives the following explanation of the position of those whom he truly terms "the unfortunate employers."

The crux of the whole matter lies in this: should shipwrights or joiners make and fit the bulwarks and wash strakes of vessels? In 1891 rules were drawn up and accepted by the Joiners' Society and the Shipwrights' Society, by which the joiners were to have this work, up to certain limits: and in three of the local yards this practice has been carried out; in the fourth yard the shipwrights have been allowed to do the work. Until three weeks ago the work in all the yards has gone on without dispute.

Now, however, the shipwrights suddenly and without warning have taken up the position of claiming the bulwarks and washstrakes in all the yards. The employers, when challenged on this point, replied in effect, "No, we cannot alter our position unless the joiners agree to give the work to you." Thereupon the shipwrights went out on strike.

The employers' committee then wrote to Mr. Wilkie, general secretary of the Associated Shipwrights' Society, offering the following terms as a solution of the difficulty: "(*a*) That the shipwrights should return to their work forthwith; (*b*) that a committee of three delegates should be appointed by the shipwrights, and a like number by the joiners and the employers, to draw up a new system of working for the future, which should be binding on all concerned, and that the questions in dispute should be settled by this committee; and (*c*) that no bulwarks or washstrakes should be put on by members of either society within fourteen days of the date of this offer unless a settlement as to whose work it should be had been arrived at in the meantime."

One would suppose that a more equitable offer than this could not have been made, but the British workman is inexorable when he thinks he has got the employer by the throat, and the only reply to the employers' letter was what is grandiloquently termed an "ultimatum" from Mr. Wilkie. This demanded: (1) That in accordance with the original custom of the port the shipwrights shall have bulwarks and washstrakes; (2) that a committee of five shipwrights, five joiners and three employers should be appointed forthwith to settle the working arrangements of the future; and (3) failing mutual arrangement, three referees shall settle all disputed matters.

It will be noticed that, with "fairness" characteristic of such disputes, the strikers first demand all that they ask for and intimate that they will accept nothing else, and next, that in the appointment of the joint committee the employers shall number as three to five of either class, and that the workmen agreeing jointly to make any other demands would put the employers in a minority of ten in a committee of thirteen members. All the shipwrights of the port are out except a few in the docks, who form a very small minority of the total number.

The principal new work at Southampton is the new racing cutter for Charles Day Rose, at Fay's yard. Of course this dispute will delay her considerably.

YACHTING NEWS NOTES.

Rajah, steam yacht, has been sold to J. B. Dickinson, who has changed her name to Marcella.

The backwardness of the season has evidently failed to communicate itself to the Pewaukee Y. C. That enterprising organization has already issued invitations to the Oconomowoc Y. C., Oconomowoc Lake Club, the Pine Lake Y. C. and the Okauchee Y. C. to become contestants in a grand interlake regatta to be sailed on Pewaukee Lake this season, at a date not yet announced. The first of such interlake events among these lakes was sailed in 1894, on Lake Oconomowoc; the second on Pine Lake, in 1895, and the third on Lac la Belle last season. Only one such has been given in any one season; each has been a great event socially, as well as from a yachting standpoint, and each has been greater in both respects than its predecessor. In other words, regattas of the genus interlake have had a rapid and persistent growth in public favor, and have become an established institution in local yachtdom. Although the host club in the prospective event is one of the youngest of the local organizations, it manifests a large amount of energy, and evidently does not intend to be forestalled in the honor of giving the interlake event of the season of 1897. Ten new yachts have been built or are in process of building for its members this spring.—*Chicago Times-Herald.*

We print the following for what it is worth; the details are highly improbable, and so far as is known no schooner yacht has been recently in the locality mentioned:

"TAMPA, Fla., May 30.—A passenger from Key West reports considerable excitement there over the report brought in by a sponge vessel of a strange wreck twenty miles southwest near the Fish Light Banks. As told there the sponge divers were after sponges, when they found this vessel lying in 30 or 40ft. of water. She was a new yacht of trim shape and schooner-rigged. Her decks showed evidences of hasty flight, all boats being missing, and the masts gone by the board. The cabins were luxuriously furnished, and in a stateroom was seen the corpse of a young girl in her night raiment, showing that she was drowned at night. The silverware of the vessel and other furnishings were of the handsomest. The vessel seemed intact, save a slight place near the bows, where the lower timbers were crushed in, but not enough, the divers think, to have caused her to sink so quickly. Holes were found in her hull which were sufficient to have sunk her. They seemed to have been made by an auger or something similar, it is said. The divers are a superstitious class, and they did not remain long enough even to get the boat's name, but hurried away as soon as they discovered the corpse in the cabin. It was stated that an expedition was going out from Key West at once to search for it and investigate the matter. No wreck was reported to Key West, and the matter is a great mystery there."

The new Chicago fin-keel, Blade, owned by Vice-Com. Ildo Ramsdell, has been launched and completed. She is very similar to the Herreshoff 30-footers of last year, but was designed by Jos. I. Myer, of Chicago, and built by Mr. Ramsdell himself with the aid of two friends, Henry and Sidney Davis, who have worked on her at night and on holidays through the winter. She is 45ft. over all, 30ft. l.w.l., 8ft. 4in. beam, and 1ft. 10in. draft of hull, total draft, 8ft. The fin carries 5,000lbs. of lead. The sail area is 1,000sq. ft., in mainsail and jib. The construction is similar to the Herreshoff boats, bent keel and frames, but with cypress planking. The general appearance of hull, cabin house, etc., are very like the thirties. The spars are all hollow. The yacht will be raced on Lake Michigan this season.

Hiawatha II., designed and built by C. L. Seabury & Co. for Charles Fleischmann, made her builder's trial on May 27 on the Hudson. With 195lbs. of steam she made about eighteen miles on a run of three hours, the contract calling for a speed of seventeen miles on a continuous run of that time.

Lorelei, sloop, Chas. A. Schieren, Jr., designed by H. C. Wintringham, was launched on May 27 at the yard of the Greenport Basin & Construction Co.

On May 29 the steam yacht Ituna, A. V. Armour, was in collision with the tug Red Ash, of the Central R. R. of N. J., with a car float in tow. The tug was bound down and the yacht up the East River, meeting off the Battery. The proper signals were exchanged, but the yacht struck the pilothouse of the tug, nearly carrying it away. The yacht lost some of her headgear, but sustained no serious damage. The collision occurred in a strong tideway.

The race of the Atlantic Y. C. for the Adams cups, set for June 5, was postponed indefinitely for lack of wind. The next race of the series is scheduled for June 26.

Lufra, Ketch, Sir Cecil Miles, arrived in New York harbor on June 2 and anchored off Stapleton, Staten Island. She left Cowes on Dec. 29, calling at Gibraltar and Madeira and then spent the winter in the West Indies. Her owner left her at Bermuda, returning home by steamer, the yacht coming to New York and meeting bad weather on the passage. She is 120ft. over all, 108ft. l.w.l., 22ft. beam and about 10ft. draft. Capt. R. Root, who is in command, was master of Mr. Asbury's schooner Cambria when she sailed for the America's Cup in 1870. After refitting Lufra will sail for England.

The secretary of the Royal Canadian Y. C. has sent out the following notice: "I beg to advise you that in view of the fact that this is the jubilee year of her most gracious majesty Queen Victoria, and also that there will be no competition for the Queen's cup between yachts over 42ft. corrected length, the Royal Canadian Y. C., with the object of widening competition and benefiting yachting as a whole, is willing to forego its claim in this respect and throw the race open to all classes. It has been decided, with the consent of his Excellency the Governor-General, to celebrate the jubilee of her Majesty by holding the race for the cup on June 22 at Toronto, subject to the terms and conditions governing the same and under the auspices of this club. The course will be as follows; Start at 11 o'clock A. M. off east pier of Eastern Gap, over a triangular course 4 1-6 miles each leg; twice around; 25 miles."

Carrie, steam yacht, built by Brown & Son, at Tottenville, Staten Island, for Capt. I. J. Merritt, was launched on June 5. She is of wood, 96ft. over all, 75ft. l.w.l., 15ft. 7in. beam, with schooner rig. Her engines will be put in at Camden.

The new steam pilot boat designed by A. Cary Smith made her preliminary trial on June 2, from Harlan & Hollingsworth's yard, Wilmington. A run of 7 miles on the Delaware developed 896 H. P., with a speed of 14.18 miles. The contract speed was 11 miles, with not less than 800 H. P. The vessel will be in commission in a week or two. She is a novelty, the first of a new type, superseding the famous fleet of sailing pilot boats. She promises to be a credit to her builders and in every way an interesting vessel, and yet her owners have been able to find no better name for her than the worn and hackneyed "New York."

Namouna, steam yacht, James Gordon Bennett, sailed from New York on June 1 for the Azores.

The Daimler Motor Co. launched on May 29 the yacht Owasco, built for F. L. Humphrey, and on June 2 the yacht Argatee, built for H. S. Thompson.

Lasca, schr., J. S. Watson, was at Venice on May 18 with her owner and family on board. She was to sail in a few days for Southampton.

Canoeing.

A Canoeing Fatality.

THE following, from the Hamilton, Ont., *Times*, is interesting only as showing the folly of such performances, involving serious risk to no good purpose:

A man named James Sickles was drowned in the Grand River at Brantford on May 24, at 11 o'clock, in the presence of 1,000 spectators. For some time Sickles had been giving exhibitions by shooting the dam in the river at the Lorne bridge in an ordinary canoe. The dam, which has a fall of about 8ft., runs across the river about 50ft. below the Lorne bridge. Sickles had been in the habit of advertising his daring feat, and after bringing a crowd to the river banks, taking up a collection, and in return whetting the people's taste for excitement by shooting the dam. On two former occasions he performed the feat with success. He was announced to repeat the trick at 11 o'clock to-day. Shortly before that hour at least 1,000 people lined the banks and the neighboring bridges. Sickles ventured out in his frail bark at the advertised hour. The current carried him quickly down stream, and amid the applause of the crowd the canoe shot the dam. It instantly upset, however, and the occupant was caught in the swirl of the fall and buried under the water. The boat came to the surface, but Sickles never rose again. The drowning alarm box was immediately pulled, and the lifeboat crew promptly responded. The boat was quickly rowed to the place, but no signs of the unfortunate man could be seen. The grappling lines were at once thrown out, but inasmuch as the boat could not go near enough to the falls, it was impossible to recover the body for nearly three hours, when, of course, nothing could be done. Sickles was a private in the Dufferin Rifles, a married man; and a sad incident of the affair was that his wife was a witness of his drowning.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Rifle Range and Gallery.

Chicago Police Revolver Contest.

CHICAGO, Ill., May 29.—A morning paper of this city has inaugurated a revolver championship contest for the city police force, offering as prizes for the same gold and silver medals of some value. The contest is to be held under the auspices of the Chicago Shooting Club, at Burnside Park, shooting beginning at 2 P. M. of June 10 The conditions are printed as below:

"1. The competition for medals offered by the Chicago *Record* will take place at the grounds of the Chicago Shooting Club, Eighty-ninth street, Burnside, June 10, 2 o'clock P. M.

"2. The firing will be under the direct control of the range officer, who will have general supervision of the marking and scoring of the shots

"3. During the progress of the competition no one except the competitors, judges and score-keepers will be allowed on the firing point.

"4. The squads of competitors will be stationed 10yds. in rear of the firing point, where each competitor must remain until called by the score-keeper to take his position at the firing point, and he will remain at the firing point until his score is completed. No man will draw his weapon until commanded so to do by the range officer.

"5. Talking will not be permitted at the firing point, and protests must be made to the range officer at once. Final appeals from the decisions of the range officer must be made in writing by the division inspector of police and forwarded through the range officer to the judges of the competition.

"6. The competitors shall comprise ten men from each of the five police divisions, including headquarters, to be certified to five days prior to the competition by the division inspectors to the judges. These certificates shall be addressed, 'Judges Police Marksmanship Contest,' and must be delivered at *The Record* office within the prescribed time.

"7. Each competitor must wear the regular fatigue uniform of the department, and must use the revolver habitually carried for thirty days prior to the competition. Policemen assigned to duty in citizens' dress will be recognized by their star numbers and will not be required to wear the uniform.

"8. Each competitor shall fire five shots, off-hand. Three shots shall be fired at a distance of 100ft. from the target, and two shots shall be fired while advancing upon the target at double-time when the command to fire is given by the range officer.

"9. The target shall be of the standing silhouette pattern, described as target 'D,' 'Firing Regulations for Small Arms for the United States Army,' Part 4, Chapter 1.

"10. The competitor having the highest score in each division shall recive one of the silver medals offered by the *Record*, and these five men shall compete under the foregoing rules for the gold medal.

"11. In the event of ties the scores must be fired over.

"12. Arthur M. Chamberlin, Second Lieutenant 1st Infantry, Illinois National Guard, is hereby detailed as range officer. He will be obeyed and respected accordingly.

"By order of the Board of Judges.

"HENRY L. TURNER, Colonel 1st Infantry, I. N. G.
"GEORGE M. MOULTON, Colonel 2d Infantry, I. N. G.
"MARCUS KAVANAUGH, Colonel 7th Infantry, I. N. G.
"ALFRED RUSSELL, Major Artillery Battalion, I. N. G.
"EDWARD C. YOUNG, Major Cavalry Battalion, I. N. G."

The style of target to be used in the competition will be a full-length figure. A shot in the head will count 5, in the upper part of the body 4, half-way above the waist line 3, in the heart circle 5, below the waist line 3 and in the legs 2.

The markings, as shown by dotted lines, will be indistinct, and each competitor will be required to judge for himself the location of the scoring points. He will be able to see the figure, but not the markings, the object of this being to compel the men to make quick calculations when firing. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Wahnetah Rifle and Revolver Club.

PHILADELPHIA, Pa., May 26.—The following scores were made to-day by members of the Wahnetah Rifle and Revolver Club:

C Briney, Jr	9	7	8	7	10	7	9	7	10	7—81
P Yost	8	10	9	7	10	9	6	8	6	8—81
T Wallace	9	10	9	8	6	8	7	6	8	8—79
I Yost	10	9	8	7	6	7	5	6	5	5—68
Devoe	9	10	10	9	9	8	8	6	6	6—81

May 29.—The following scores were made to-day: C. Briney Jr., 87 and 85; James Stocks 85 and 76; C. Briney, Sr., 82 and 78.

A combined revolver and rifle match was also shot to-day for the championship of Midvale Steelworks, the contestants being P. F. Yost and Thomas Wallace The scores show that Mr Yost won easily. The conditions were: Yost, 38cal. revolver, 15yds; Wallace, .22cal. revolver, 10yds. The rifles were both shot at 25yds. range: Scores·

A team match between C. Briney, Jr., and James Yost against Thomas Wallace and P. F. Yost, resulted as follows, both teams using .22-caliber revolvers at the 12yds range:

C Briney, Jr.	revolver 91,	rifle 119,	total 210
J Yost.	revolver 69,	rifle 121,	total 190—400
P Yost.	revolver 83,	rifle 123,	total 206
T Wallace.	revolver 41,	rifle 131,	total 172—378

J. S. SHEETS, Sec'y.

Zimmerman and Ross.

GUS ZIMMERMAN and Fred C. Ross, two of the best known rifleshots in this country, will leave on June 17 for Nürnburg, Germany, where they will take part in the international meeting to be held in that city July 4-11.

Zimmerman has been across the sea several times and has been uniformly successful, but this is Ross's first attempt so far as we know. He is practising daily, and expresses himself as satisfied with his work. The work of this pair in the Nürnburg festival will be watched with the closest interest by those they leave behind.

Trap-Shooting.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

June 15-18.—CLEVELAND, O.—Fourth annual tournament of the Chamberlin Cartridge and Target Company.

June 16-17.—FARGO, N. D.—Third annual tournament of the North Dakota Sportsmen's Association. Targets. W. W. Smith, Sec'y.

June 17-20.—ANACONDA, Mont.—Thirteenth annual tournament of the Sportsmen's Association of the Northwest and fourth annual tournament of the Montana State Sportsmen's Association, under the auspices of the Anaconda Gun Club. $1,500 added. C. A. Tuttle, Sec'y.

June 22.—OGDEN, Ill.—Second annual tournament of the Ogden Gun Club. Wm. McKinley, Sec'y.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

June 30.—BRIDGEPORT, Conn.—Third tournament of the Connecticu Trap-Shooters' Association, under the auspices of the Bridgeport Gun Club.

July 1.—SHERBROOKE, Quebec.—Sherbrooke's grand annual. Inanimates. Open to all amateurs. C. H. Foss, Sec'y, Sherbrooke, P. Q.

July 3-5.—MITCHELL, S. D.—Tournament of the W. J. Healey Hardware Co.

July 5.—OTTUMWA, Ia.—All-day shoot of the Ottumwa Gun Club. Open to all.

July 5.—BUFFALO, N. Y.—All-day invitation target shoot of the Bison Gun Club. C. H. Werlin, Sec'y, 1634 Broadway, Buffalo.

July 7-8.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

July 14-15.—NEW HAVEN, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

July 20-22.—PINE BLUFF, Ark.—Seventh annual tournament of the Arkansas State Sportsmen's Association. Added money announced later. Paul R. Litzke, Sec'y, Little Rock, Ark.

July 20-23.—CLEAR LAKE, Ia.—First annual Indian Welf shoot Three days targets; one day live birds. $500 added. For programmes and particulars write to C. M. Grimm, Clear Lake, Ia.

July 21-22.—CRAWFORDSVILLE, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Crawfordsville Gun Club. Chas. E Lacey, Sec'y.

July 22.—MEADVILLE, Pa.—Fourth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 4-5.—INDIANA MINERAL SPRINGS, Ind.—Indiana Mineral Springs tournament. Ben O. Bush, Manager.

Aug. 17-19.—TORONTO, Canada.—Tournament of the R. A. McCready Co., Ltd. Targets. $1,000 guaranteed. Open to all. Write for programmes.

Aug. 18-19.—WARSAW, Ind.—Tournament of the Lake City Gun Club. W. A. Wineberer, Sec'y.

Aug. 19.—WARREN, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept 6.—MERIDEN, Conn.—Third annual Labor Day tournament of the Parker Gun Club.

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Sept. 28-29.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club. Web. Woodfill, Sec'y.

DRIVERS AND TWISTERS.

H. L. Gates, of Utica, N. Y., sent us three weeks ago a long attack on the Rose system, the full text of that communication appearing in our last issue. As explained in another portion of these columns, the letter should have been withheld until after the conclusion of the Auburn shoot, Mr. Gates being afraid that it might be construed into an attack on the methods proposed for running that shoot. Personally, we don't think Mr. Gates's arguments will have kept a single desirable shooter away from the State shoot, while on the other hand it may have had the effect of increasing the attendance by calling out some of the class of shooters for whom such shoots are supposed to be provided.

The Riverside Gun Club, of Red Bank, N. J., and the Central Gun Club, of Long Branch, N. J., shot a 10-men team race on Decoration Day on the grounds of the Red Bank club. The conditions were 50 targets per man, 500 to the team. Riverside won easily, scoring 372 to 314. Oscar Hesse, President of the Walsrode Powder Company in this country, a member of the Red Bank Gun Club, was high, with 46 out of a possible 50.

Extract from the programme for the first annual tournament of the Trap-Shooter's League of Indiana at Kokomo, that State, June 8-9: "Parker Gun Handicap. * * * The highest score which one with an allowance may make is 47 unless a scratch man should break more, in which event his score shall be the highest possible for the other class." Extract from FOREST AND STREAM, June 20, 1896, page 504, under "Handicaps and Highest Possibles": "In 50-target events make the highest possible score 47 (or 48) beyond which no targets can be scored * * * unless a scratch man shall break more than 47 (or 48) in a 50-target race * * * * in such cases *that scratch man's score* to be the highest possible." When we wrote the above we never intended to penalize any man who might break more than 47 (or 48) out of his first 50 targets; but on looking over the item we saw that we had made no provision for a man, *not* a scratch man, who might do so. We, therefore, in writing on the same subject in FOREST AND STREAM of Oct. 3, 1896, three months later, said: "In all handicap events fix a highest possible score, making allowance for the loss of a few targets on the part of the scratch man or men in all events where the number of targets to be shot at reaches 50 or 100 (say 48 as highest possible in a 50-target handicap or 94 in a 100-target race). The number chosen for the highest possible cannot be exceeded unless some shooter shall break more than that number out of his first 50 or first 100, as the case may be; that is, without his allowance. In the event of any shooter exceeding the highest possible, as above, that shooter's score shall be the highest possible, and all shooters tying that score, with or without their allowance, shall be entitled to a portion of first money." In the same article we drew the shooter's attention to the fact that such a system of handicapping could only be brought into play where the Rose system or "high guns" was used. The old "50, 30 and 20" wouldn't do here at all. In the "Parker Gun Handicap" the purse will be divided into ten equal parts, the gun going to the high man, ties for first place shooting off for the gun under the same conditions as in the original race.

The citizens of Sherbrooke, Can., are to celebrate the Diamond Jubilee on Dominion Day, July 1, so the Sherbrooke Gun Club has gotten out a programme to attract shooters to its grounds on that date. The management has decided to adopt the Sergeant system of three traps, the system devised by W. G. Sergeant, of Joplin, Mo., which has been so often described in these columns. A note in the programme states that "as far as possible shooters using black powder will shoot together." All purses will be divided under the Rose system, and the programme of events and varied styles of shooting called for ought to please all who complain of the monotony of target shooting. The shooting is open to all, and will take place rain or shine. We have to thank the Sherbrooke Gun Club for the following very courteous mention of ourselves: "FOREST AND STREAM, the sportsman's weekly, devotes a large amount of space to trap-shooting, and subjects practical and theoretical connected therewith. Subscription $4 a year *and worth it.*" (N. B.—The italics are *not* ours.)

There will be no contest between Ferd Van Dyke and W. H. Wolstencroft for the Austin expert rules trophy, and the reason is not far to seek. Ferd Van Dyke never challenged Wolstencroft, and did not know anything about a challenge having been issued in his name by Winston until the morning of Monday, May 31, when he was attending the New Haven shoot. As soon as he heard of it, Van Dyke said such a match was an impossibility under the circumstances, and added that Winston had never said a word to him about it, and that he had never authorized any such challenge. Van Dyke left New York city on Thursday last, June 3, for Monroe, La., to attend the Interstate Association's tournament in that city, June 9-10. He will not be back until about June 14. Under the terms of the cup, we suppose it now becomes Wolstencroft's property, as he has defended his title to the cup for a period of six months.

The race for the *Recreation* cup is fast narrowing down to two men. The cup represents the amateur championship of New Jersey and Greater New York, and has now been won twice by two men, F. Sinnock, of the Forester Gun Club, of Newark, and J. S. S. Remsen, of the Brooklyn, N. Y., Gun Club. Sinnock won it on June 2 with a score of 95 out of 100; he used a Parker gun and Du Pont Smokeless. His other win was made in February, and, curiously enough, on that occasion he was shooting a Winchester and W-A powder. Remsen always uses a Scott and Schultze. Remsen was tied for second place on June 3 with Edwards, both scoring 93; Van Dyke, who was not eligible to shoot for the cup, broke 94.

The Winchester Repeating Arms Co. have put their new model 1897 repeating shotgun on the market. There are several improvements in this model, among them a button on the right-hand side of the receiver; pressure on this button enables a shooter to open the gun without uncocking the hammer. Another feature is the double extractor, while the rigidity of the slide handle is also an improvement. The stock is also longer, and slightly differently shaped; in fact, the gun is an improvement over the model '93. Van Dyke shot one of these birds for the first time at Hackensack, N. J., on June 2. His work with it showed that he, at any rate, could use it as satisfactorily as his old gun.

W. F. Parker, of the firm of Parker Bros., Meriden, Conn., was one of the few shooters present at the second day's shoot of the Bergen County Gun Club's first anniversary tournament at Hackensack, N. J., June 3. When Mr. Parker first dawned upon us in this section as a trap-shooter, he was easy; that was last fall at the Endeavor Gun Club's tournament at Marion, N. J. Since then we have met him in several places and have become more respectful. At New Haven, Conn., on Decoration Day he shot well up to the front, but on June 3 he was hunting the top holes all the time, finishing with 118 out of 130 shot at.

Paul North has another grievance. A few weeks ago he was in St. Louis and needed a shave; he bought one, and was reclining gracefully in the barber's chair, his chin all covered with the generous lather, when he felt a tap on the shoulder and heard a smooth voice utter the name of "Mr. Isaacs." Paul turned around and faced his interlocutor, whose features at once became suffused with crimson when he saw his mistake. "Oxcuse me, please; I did think you were mein friend, Mr. Isaacs!" And the grievance is that the barber peremptorily refused to cut Paul's throat and end his miserable existence.

The Bison Gun Club, of Buffalo, N. Y., announces that it will hold an all-day shoot on Monday, July 15. Five per cent. of all the purses will be deducted to form a fund for average money, the fund to be divided into three moneys and to go to the "three highest averages made shooting through the whole programme." This will not seem an easy feat when it is understood that the programme calls for fifteen events, with a total of 265 targets for a single day's shoot. All targets will be thrown from a magautrap and will be charged for at the rate of 1 cent each.

Owing to Decoration Day falling on a Monday and our going to press the following day much valuable news matter had to go over, among the items being a review of the programme for Pennsylvania's State shoot. Judging from the programme, outsiders, as well as residents of the State will be well looked after by the Oil City boys.

There will be a great gathering at Auburn, N. Y., this week. The New York State shoots are always very popular affairs, and this year's gathering gives promise of keeping up the reputation made by its predecessors. So far we have not heard of any claimants for next year's shoot.

The programme for the thirteenth annual tournament of the Sportsmen's Association of the Northwest, June 16-19, under the auspices of the Anaconda, Mont., Gun Club has been received. This tournament is open only to residents of the States of Oregon. Washington, Idaho, Montana and British Columbia. Professional shooters and manufacturers' agents will be barred from this tournament. The programme also contains this old familiar friend: "Any person found guilty of dropping for place will have their entrance refunded less price of birds, and be barred from the entire tournament." Under the Rose system, this sentence would be unnecessary.

Among the New York contingent at the Auburn shoot this week will be Justus von Lengerke and Gus Greiff, jointly representing the American E. C. & Schultze Powder Company, Limited, and Francotte guns; Ed. Taylor of the Laflin & Rand Powder Company, and M. Herrington, both of them interested in that firm's W-A powder; J. G. Lindsey and L. H. Schortemeier. The New Utrecht Gun Club will of course be represented in the Dean Richmond cup race on the last day.

The programme for the New Haven, Conn., Gun Club's tournament, July 14-15, under the auspices of the Interstate Association, is ready for mailing. A copy can be obtained by applying either to Elmer E. Shaner, manager of the Association, 122 Diamond market, Pittsburg, Pa., or to G. W. Hazel, secretary of the New Haven Gun Club, 11 Church street, New Haven, Conn. The club adds $100 a day to the purses.

Charlie Grimm, of Clear Lake, Ia., sends us the following notice of a shoot to be held at Clear Lake, June 20-23: "First annual Indian Wolf shoot; $500 added money; three days targets, one day live birds; under the management of C. M. Grimm." Mr. Grimm also states that he will supply programmes and further details on application. Much medicine should be made at that shoot, and the tournament ought to prove a great success.

In a letter which we have just received from Neaf Apgar, dated June 5, he writes. "We shoot every afternoon and fish the balance of the time. I want you to come up and see me, and have a fish." Neaf is now a member of the Boniface tribe, being proprietor of the Pine Point Club Hotel, Orange Lake, Newburg, N. Y. His location is well-chosen, as Orange Lake is a very popular resort, both summer and winter.

On Friday, May 28, the intercollegiate shoot resulted as follows: Yale 116, Harvard 113, Princeton 110, Columbia 106, U. P. 104. The conditions were five-men teams, 30 targets per man. Brewer, of Princeton, made 29 (the high score), Brown, the captain of Yale, being second with 28. The Yale team has been under the tuition of Geo. S. McAlpin, of New York city.

The winner of the New Utrecht Gun Club's Holiday Cup on Decoration Day was Danny Lohmann, a boy about fourteen years old. Danny is a "Class C man," and was allowed under the system of handicapping in use at this club 2 extra birds to shoot at (if he needed them), but Danny had no use for the "two extra"; he plunked out his 10 straight and took the cup. His handicap distance was 28yds.

The difficulties experienced by the trap-shooters of New Jersey in straightening out the muddle into which they have gotten themselves by trying to revive a defunct organization, could have been avoided easily if a brand new association, with a history of its own, had been started. History is made quite cheaply, and that furnished by the old association is hardly of the quality that inspires either confidence or respect.

The Norwalk, Conn., Shooting Association held its third annual meeting on May 24, electing the following officers for 1897-98: President, T. W. Latham; Vice-President, H. A. Gallup; Treasurer, C. F. Stewart; Captain, Frank Reiley. The Board of Directors consists of the above-named officials and Frank Lamkin and George Titus. The secretary seems to have left out his own name, perhaps through modesty.

Another view of the Rose system: "The Rose system was tried in several events. For an ordinary shooter it is all right, but it is not in favor with those who can shoot some." The above is an extract from a report of the Peoria tournament, which appears in one of our cotemporaries. "Those who can shoot some"—there's the rub.

The Endeavor Gun Club, of Jersey City, N. J., killed two birds with one stone on Saturday last, June 5, by disposing of the Dunellen (N. J.) Gun Club and the Bergen County Gun Club at "one sitting." The team scores (9 men to a team, 25 targets per man) were: Endeavor 181, Bergen County 143, Dunellen 135.

The Ottumwa, Ia., Gun Club will hold an all-day target shoot on its grounds on Monday, July 5. All purses divided into three moneys if under twelve entries; over twelve entries, four moneys. Bluerocks will be thrown from a magautrap at 1½ cents each.

The State Sportsmen's Association of North Dakota will hold its tournament June 16-17, at Fargo. All purses will be divided by the Rose system. There will be $25 per day as added money, targets being thrown at 3 cents each. A magautrap will be used in place of five expert traps.

The first annual amateur tournament of the Spirit Lake, Ia., Gun Club will be held July 17-19. This tournament is for amateurs only, and a programme has been prepared that should please the average amateur.

Elmer Shaner was in the city on Friday last, June 4, on his way to Monroe, La. He left by the 5 P. M. train the same evening with U. M. C. Thomas as his fellow-traveler.

JUNE 7. EDWARD BANKS.

Mr. Gates and the Rose System.

BEFORE proceeding to review the arguments set forth by Mr. Gates, of Utica, N. Y., in his letter on the Rose system published in our issue of June 5, it would be only fair to Mr. Gates to explain that that letter appeared in such issue contrary to his wishes. Not that he did not want to go on record as against the system; he only wished us to keep the letter until after the New York State shoot had been decided. His reason was this: The letter was written to us and was in type prior to the issuing of the programme for that shoot; realizing that it might be construed as a direct attack on the management of this year's State shoot, he wrote to us in a hurry to withhold the letter until after the Auburn shoot. Accordingly he withdrew it from the then current issue, only to have it escape our notice in the bustle attendant on going to press the day after Decoration Day. We regret our neglect in this matter, and trust that we have exculpated Mr. Gates from any blame on the part of the management of the New York State shoot.

A LETTER TO BE ANSWERED.

Having appeared in type, such a letter should be answered, as it is the direct result of our request that such articles defending the "old system" and discrediting the Rose system should be sent in for publication.

Our first impression on reading Mr. Gates's contribution was one of regret that an attorney of his caliber should not have been able to make out a better case. And our first impression has not been changed. Mr. Gates unfortunately argues from the standpoint of a man who goes to a shoot, not for the sake of enjoying the sport, the good fellowship that always prevails at a tournament, nor for the purpose of meeting old friends and making new ones, but (we quote his own words) "because I have there a chance of winning those expenses by doing some good shooting." It would be pertinent at this point to ask Mr. Gates whether, if he went on a camp hunt into the Adirondacks for a week, he would consider it necessary to sit down in that camp and play poker for the purpose of making his friends pay for what he is enjoying? When Mr. Gates goes to the theatre, blows himself to an extra good meal at one of the swell restaurants in Utica, or takes a trip to the seashore, is he always on the lookout for others, besides his legitimate clients, from whom he may have "a chance of winning those expenses?"

TRAP-SHOOTING IS DIFFERENT FROM OTHER SPORTS.

Trap-shooting differs from other sports in the respect that trophies cannot always be made the bone of contention; yet, as a sport, it, like all others, needs some incentive to keep up interest in itself, and sweepstakes are the only plausible way in which this can be done so far as we can see. In golf, lawn tennis, yachting and bicycling, there are, as a rule, but one or two prizes per day to compete for; that is to say, the competitions in which an individual can enter in those branches of sport in a single day, are extremely limited. A golf contest practically lasts all day; the same with a yacht race. In lawn tennis it often takes two or three days to decide a single contest, by reason of the "heat system" of finding the winners. In bicycling it is unusual to find a competitor entering in more than two races on a single day.

Again—save in yachting—the immediate outlay for each day's sport is extremely limited when compared with the expense attendant on a single day's trap-shooting. Leaving traveling expenses and entrance fees out of the question—as something incidental to all branches—in trap-shooting there is the additional cost of 200 shells and the same number of targets, an expense that may be roughly figured at $9 per day, in addition to a practically unlimited number of contests.

The number of events to be decided each day precludes a general distribution of cups and trophies, and the natural result seems to be cash sweepstakes of varying sizes. Such are the conditions of the sport. The only question that remains unsettled is that of dividing the purses.

"THE BIGGEST FRAUD."

In speaking of the Rose system Mr. Gates uses some strong language; he describes the system as "the biggest fraud on shooting men yet devised." He then desires to preface that statement by telling us that when he first studied the Rose system he was dead in love with it, but that now it was in disfavor with him. He also tells us that he is "just a plain, ordinary, every-day shooter, who can shoot fairly well one day and fairly poorly the next," adding that he is, therefore, "one of the fellows for whom this delectable Rose system was made."

Is Mr. Gates satisfied that the Rose system does not reduce "those expenses"? Has he ever taken the trouble to work out, as we have done, the results that would have accrued to "a plain, ordinary, every-day shooter" under both systems for a series of tournaments? Don't take a single, isolated case. It would be just as proper for the adherents of the Rose system to quote from solitary instances. The "plain, ordinary, every-day shooter" can never hope to win in the long run; the same class of man in any branch of sport is bound to be a loser oftener than he is a winner; his only hope lies in a handicap. In trap-shooting the above gentleman with three titles is the "producer" (another title), and our efforts and the efforts of the Rose system are directed to make him liable for as small a share of the expenses of running a tournament as possible. The outcry of the crackerjacks against the Rose system is proof positive, if anything further were needed, that the Rose system minimizes their winnings. The conclusion is obvious that if winnings are minimized, the same must apply to losings.

MR. GATES IS MISTAKEN.

Mr. Gates makes a serious error in stating "that the trap editor is becoming converted and now opposes the Rose system for live birds." The error probably arises from Mr. Gates's misconception of what we wrote in our report of the Newburgh, N. Y., tournament, which was as follows:

"But we do think the club made a mistake in dividing purses in the live-bird events on the same plan. For 5 and 7-bird races we have always held out for high guns; say one high gun for every four or five entries. For 10-bird races and events calling for a still higher number of birds, we believe in adopting the same plan, basing the moneys on the number of entries, just as the Interstate Association did in its programme for this year's Grand American Handicap. Our reason for urging this system is the fact that live-bird shooting is more expensive and quite as easy as target shooting, and that, therefore, under the Rose system or under the 'old system' it is quite possible for a man to kill them all and yet come out behind. We would rather see the 'old dropping-for-place system' in force for live-bird events than the Rose system. Make it high guns all the time."

We have always considered the Rose system in connection with target events, and have never argued in favor of its adoption for long or short live-bird races. While we think it might work well in 20 or 25-bird races, we much prefer the high gun system suggested above.

THE CAUSE OF SMALL ATTENDANCE.

In his closing paragraph Mr. Gates evidently desires to lay the blame for small attendances at tournaments at the door of the Rose system. We suppose that he intends us to deduce that such is the case from his arguments, but we must confess our inability to do so. We think there are other reasons, and will advance a few:

No. 1. Hard times. It costs money to go to a two or three days' shoot, and few men have now the means or the leisure to go to such affairs. Business is dull, and must be attended to very closely if a profit is to be made.

No. 2. Number of Tournaments.—Our Fixtures columns for the past few months have shown such a large number of tournaments on the list, that anybody who wished to do so and had the means could have shot along week after week without having to make very long jumps to accomplish his object. This is a very different matter from what it was a few years ago. In the vicinity of all the large cities there is a shoot pretty nearly every week, and the "plain, ordinary, every-day shooter" prefers to attend such shoots to going to the larger affairs and being gobbled up by the experts.

No. 3 "Once bitten," etc. The "plain, ordinary, every-day shooter" has also learned wisdom by bitter experience. He used to go to those tournaments, pay all the expenses of running them and then stuff the pocketbooks of the expert. He doesn't do so any more. The most singular instance of an awakening on the part of the "producers" is furnished us in our correspondent's, Paul Litzke's, report of the recent Joplin, Mo, shoot, where $300 was added to the purses. Mr. Litzke's words on this point are worth noting. It should also be noted that at this tournament the purses were not divided under the Rose system.

A BLOODED TOURNAMENT.

If Mr. Gates and those who think with him want a really blooded tournament, one where they would certainly have "a chance of winning those expenses," let them get up a tournament where all ties shoot off, as in the "good old days" Mr. Gates speaks about. The first one, owing to its novelty to the majority of shooters of the present day, many of whom may also have a "bump of vanity" with a notion concealed inside it that they "can shoot some," might be a success in point of attendance. But what of the second tournament of the same kind?

The arguments he uses contain nothing new. They are the same as those made years ago by the few who made trap-shooting a profession against the many who made it their sport, and they are the same arguments which made the Rose system a necessity.

Programmes for Coming Tournaments.

PENNSYLVANIA'S STATE SHOOT.

So much has been written in these columns of late regarding the Pennsylvania State Sportsmen's Association's annual tournament that very little remains to be said about it. Programmes are ready for distribution, and can be obtained by addressing the secretary of the Association, Mr. H. C. Reeser, Oil City, Pa.

The shoot takes place June 22-25, immediately following the Chamberlin Cartridge Co.'s tournament at Cleveland. Coming as it does on the heels of that shoot, and Oil City being such an easy distance by rail from Cleveland, it is only fair to predict that many shooters will take in both tournaments.

The programme is in the form of a booklet of 128 pages, and is so full of matter, both reading and advertising, that it is rather hard to find what one wants, and having found it, to select what is most important to be noted. The State programme is a good one, and so is the programme of open events. In the former $60 is added to the purses on each of the two target days, while $80 and $70 respectively represent the totals of added money in the open events on the same two days.

For State events on the first day there are three 15-target events, $1.50 entrance, $10 added to each purse; two 50-target events (the Wolstencroft Individual championship trophy and the Parker gun handicap) with $10 added to each purse. The American Wood powder trophy (25 singles and 5 pairs) for three-men teams is also shot on this day. The open events are seven 20-target events, $2.50 entrance, $10 added to each purse, and a 25-target event (Gold Dust powder event), $2.50 entrance, $10 added.

On the second day the State events are: Three 15-target events, the same as on the first day; the Remington gun handicap, 50 targets, $10 added, and the Reading and the Harrisburg trophies for five-men and six men teams, each race at 25 targets. The open events are four 20s and two 50s; the 50-target races are the E. C. cup handicap, $4 entrance, $10 added, and the Oil City *Derrick* event, $4 entrance, $20 added by the above-named newspaper. The 20s are precisely the same as on the first day, $10 added to each event.

On the third day live birds will be shot. The State events will be the Williamsport trophy for the Individual championship of the State, and the L. C. Smith trophy for three-men teams. On the open set of traps there will be four events: No. 1, Smithman Springs introductory, 7 birds, $5, birds extra, three high guns, not class shooting. Nos. 2, 3 and 4 will be 10-bird races, $7, birds extra, high guns, four moneys, not class shooting. The handicaps in the above events will be the same as in the Oil City special.

The Oil City Special Handicap occupies the place of honor on the fourth day, June 25. The conditions are precisely the same as the well known conditions which prevail in the Grand American Handicap—25 birds, $25, birds extra, handicaps 25 to 33yds., $1,000 guaranteed, all surplus added, high guns, not class shooting, the number of moneys being dependent on the number of entries in event of more than forty entries. As in the Grand American, there will in any case be $500 to the first high gun, $300 to the second high gun, and $200 to the third high gun. Handicaps will be awarded by the following handicap committee: Major J. M. Taylor, of the *American Field;* Jacob Pentz, of *Shooting and Fishing;* Will K. Park, of *Sporting Life;* Paul North, of Cleveland, O., and Edward Banks, of FOREST AND STREAM. All handicaps will be announced on the evening of June 23.

Shooting will commence each day at 8:30, and all targets will be thrown from magautraps. Purses in the target events will be divided into five moneys under the Rose system. Special rates have been made with all railroads in the Central Passenger Association on the certificate plan, at a fare and a third for the round trip. Guns and shells should be shipped in care of H. C. Reeser.

The annual meeting will take place, of course, on the evening of the first day, June 22, and will be held in the Arlington Hotel, the headquarters for shooters in Oil City, a rate of $2 a day being made to shooters during the tournament.

THE NEW HAVEN INTERSTATE.

The first target tournament of the Interstate Association in its Northern circuit for the season of 1897, will be held July 14-15 on the grounds of the New Haven, Conn., Gun Club. The New Haven club is practiced in looking after large numbers of shooters, but we think on this occasion it will find that its hands are very full. Trap-shooting has taken such a decided boom in the Nutmeg State and the adjoining States, that we look for really a good tournament as such things go nowadays. The location of New Haven is also favorable for a good attendance, as the city is easy of access from all points in New England.

There are ten events scheduled for each day, five 15-target events and five 20-target events; all the 20-target events and the first 15-target event are at known angles, the balance at unknown angl s. The club adds $100 a day, viz., $9 in each 15-target event, $11 in each 20-target event. All purses will be divided into four moneys under the Rose system. Guns and ammunition forwarded in care of Basset & Reeves, 5 Church street, New Haven, Conn., will be delivered at the grounds.

The club's grounds are easy of access from the center of the city, electric cars running past the door of the Tontine Hotel, the headquarters' hotel during the shoot, direct to the shooting grounds. The Tontine Hotel is on the European plan, with rooms $1 per day and upwards; a special rate will be made to shoooters. To reach the grounds from the railroad station, take any car up Meadow street, and get a transfer for Schuetzen Park.

New Jersey State Association.

THE MEETING OF JUNE 4.

THE efforts of the trap-shooters of New Jersey to organize a State Association, although still somewhat hampered by a few little irregularities, are making tracks in the right direction. The meeting of June 4 at Taylor's Hotel, Jersey City, was fairly well attended, but there is still a certain amount of unexpected apathy on the part of the trap-shooters of this great shooting State in the matter. This is doubtless caused by uncertainty as to what it is proposed the new Association (or the old Association revivified) shall do in the way of looking after the interests of the game and fish of the State, and also in the trap-shooting line. Once the Association is fully launched this uncertainty will disappear, and then without question many clubs that are now hanging back will come forward and join hands with their brethren in helping to push a good thing along.

ELEVEN CLUBS SEND DELEGATES.

When the roll was called it was found that the following eleven clubs were represented: South Side, of Newark, I. H. Terrill and W. M. Smith; Oritani Field Club, Capt. A. W. Money; Jersey City Heights Gun Club, Justus von Lengerke; Newark Gun Club, Jacob Pentz; Elizabeth Gun Club, Robt. E. Chetwood; Arlington Shooting Association, M. Herrington; Boiling Springs Gun Club, E. A. Jeanneret and W. H. Huck; Endeavor Gun Club, Carl von Lengerke and Edward Banks; Passaic City Gun Club, Colin R. Wise and M. J. Coman; Essex Gun Club, W. H. Green; Mattawan Gun Club, W. Hughes.

The Dunnellen Gun Club and the Climax Gun Club were both applicants for membership, and both were elected, their respective delegates, Messrs. A. N. Randolph and J. G. Lindzey, being also on hand. This started the meeting with the unlucky number of thirteen clubs represented, precisely the same number, if we make no mistake, that the old ill-fated association commenced business with.

Capt. A. W. Money, the president *pro tem.*, presided, and his temporary secretary, Colin E. Wise, attended to the clerical work of the meeting.

Before the meeting had been called to order Mr. W. H. Green stated that the notices of the meeting had not been properly sent out, as a certain club that was a member of the old association had not been notified of this meeting. He named, on request, the Essex Gun Club, of Newark. His attention was called to the fact that he was present at the meeting of May 19 as representing that club, and the temporary recording secretary, Mr. Carl von Lengerke, stated that he had mailed a notice addressed to the club's secretary in Newark, not being aware of the secretary's name. As a matter of record some forty-three notices were sent out, but only the above thirteen responded. Several other clubs have, however, signified in writing their intention of joining the Association as soon as it is started.

ANNUAL MEETING SET FOR JULY 13.

The work of the meeting may be shortly stated as follows: The date of the annual meeting was set for July 13, 2 P. M., at Taylor's Hotel. The report of the committee on constitution and by-laws was received and referred to the committee on rules. The present officers were continued in office until the annual meeting. The committee on constitution and by-laws appointed at the meeting of May 19 was continued in office as the committee on rules to report with an amended constitution and by-laws at the above annual meeting on July 13.

There were several little incidents of interest that occurred at this meeting. The first was Mr. Pentz's statement that, as directed by the committee, he had written "a pleasant little letter" to the old Association's ex-treasurer, W. I. Conover, of Marlboro, N. J., in regard to certain funds belonging to the old Association said to be in his possession. To that letter Mr. Pentz stated he had received no reply. From the above it may be gathered that the "$300 in the treasury" referred to at the meeting of May 19 is practically non-existent.

Another incident was the calling the attention of this meeting to the fact that the meeting originally called for May 19 had never been adjourned, as shown by reference to the minutes. After those minutes had been read, Mr. Banks, of the Endeavor Gun Club, asked what had become of that meeting, whether it was still in session, the adjournment in the minutes plainly referring only to the meeting called by the ex-president, Mr. Al. Heritage.

There was some discussion on Mr. Banks's motion that the minutes be amended to show that this meeting had been adjourned, if it actually was adjourned. As it appeared that it had not been so adjourned, except in so far as the second meeting held on May 19, same time and place, the outcome of the first meeting, had been adjourned, the amendment could not be entertained, and Mr. Banks was asked to withdraw his motion. This was done; but the question as to what became of that meeting is still unanswered.

THE COMMITTEE WORKED HARD.

Some words of commendation must be said in regard to the work of the "committee of five" appointed at the second meeting of May 19. This committee has worked hard to unravel the entanglement due mainly to two causes: The muddle caused by trying to galvanize into life an association long since defunct of its own free will; and, second, the muddle caused by electing temporary officers for that defunct association.

The last muddle was the worse one of the two, as the temporary officers were elected at a meeting called at ten minutes' notice, when the constitution of the old organization plainly says that a week's notice of any special meeting shall be given.

Despite such difficulties, the committee has gotten together and worked hard, with a view to giving New Jersey the State Association that it should have. The best thing it has done so far is to urge strongly on the members of the present organization the necessity of incorporation. Once incorporated it will start practically as a new organization, and will have a legal standing; something tangible at any rate, and something which we must own it does not seem to possess as yet.

STATE SHOOT IN THE FALL.

Another recommendation of the committee which seemed to find great favor with the members present, was that looking to the holding of a State shoot early in the month of October, or in the latter part of September. We think there need be no fear that this part of the committee's report will be overlooked when the annual meeting of July 13 convenes.

ON LONG ISLAND.

HELL GATE GUN CLUB

May 25.—The monthly shoot of the Hell Gate Gun Club was held this afternoon at Dexter Park. There was a large attendance, thirty-three members and one guest taking Part in the club race at 10 live birds. Of these thirty-four shooters, only tw , Col. John H. Voss and Conrad Weber, were able to score all their birds. The individual scores were:

Thirty yards, 7 points:

E Doeinck	122•211220— 8	G Nowak	•1•2121102— 7

Twenty-eight yards, 7 points:

J H Voss	1121122111—10	P Woelfel	2222220010— 7
F Trostel	1101111112— 9	H Seaman	1410211•01— 7
P Garms, Jr.	1110•11111— 8	W Sands	0200220202— 5
E Paynter	0111220111— 8		

Twenty-eight yards, 6½ points:

L T Munch	2101100121— 7	E Steffens	10•0111111— 7

Twenty-eight yards, 6 points:

C Weber	1221221121—10	J Hemmels	1112000121— 7
E Metz	1011111122— 9	C Schaefer	0210200111— 6

FALCON GUN CLUB

May 28.—The Falcon Gun Club held its monthly live bird shoot at Dexter Park to-day. The club shoot is at 10 birds, gun below the elbow, 25yds. rise, second barrel kills to count as half a point. Scores were:

		Points.			Points.
C M Meyer	1112111210— 9	8	J Moller	1111112111—10	9½
J N Meyer	1111111111—10	10	J Bohling	0211112202— 8	6

Two matches were shot as below:

	No. 1.	No. 2.
C M Meyer	2222221211—10	1101111111111—14
J N Meyer	2222120211— 9	1111111111110111—14

NEW UTRECHT GUN CLUB.

May 29.—To-day was the semi-monthly target shoot of the New Utrecht Gun Club at the Dyker Meadow grounds. In the class badge contest Greiff and F. A. Thompson tied in Class A; on the shoot-off Greiff won with 22 to 19. In the Bennett cup contest F. A. Thompson was the winner with 22 breaks. This gave him two wins for the cup, tieing him with Greiff; as another win would entitle either of the two to absolute ownership of the cup, they agreed to call off their previous scores and let all the other members in by starting afresh at the next semi-monthly shoot. The detailed score in the above two events are given below:

Club badge shoot.

G E Greiff (A)	1101111111111111111101111	—23
F A Thompson (A)	1011111111110111111111111	—23

A A Hegeman (A)	0011110101010100111011000	—13

In addition to the races mentioned, a list of ten other events were shot. The scores in the first eight are given in the table that follows. No. 9 was at 5 pairs, and resulted thus: F. A. Thompson 8, Adams and Deacon 7, Gaughen 6. No. 10 was at expert rules, and the result in this race was: Adams and Deacon 9, Thompson 7, Gaughen 6. The other eight events were all 10 targets, unknown angles:

Events:	1	2	3	4	5	6	7	8	Events:	1	2	3	4	5	6	7	8

Holiday Cup

May 31.—The programme for the New Utrecht Gun Club's Decoration Day shoot at the Woodlawn grounds included the 10-bird race for the Holiday cup and a 15-bird open-to-all handicap race. The Holiday cup was won by Danny Lohman, a rattling good little shot; Hegeman tied with Danny by virtue of his extra allowance of 1 bird, but withdrew in favor of Lohman without shooting off the tie. The conditions of this cup are: Class A, 10 birds; class B, 11 birds, and class C, 12 birds It will be noticed that Danny Lohman did not need his class allowance, as he killed his 10 straight. In the open-to-all handicap Lair was the only one to score 15 straight; the two Furguesons, father and son, each scored 14. The conditions of this race were $10 entrance, two high guns.

In the smaller sweeps No. 1 was at 5 birds, $3, two high guns; No 2 was a $1 miss-and-out; Nos. 3 and 4 were 5 birds, $2, three high guns; Nos. 6 and 7 were 5 birds, $2, two high guns. Scores follow:

C. R. MIZNER, Sec'y.

IN NEW JERSEY.

CLIMAX GUN CLUB.

May 26.—The Climax Gun Club opened its new grounds at Plainfield, N. J., this afternoon. There was a good attendance of members present, all of whom expressed themselves as pleased with the change of grounds. The background was rather a hard one, but still some good scores were made, as will be seen from a glance at the following records, made in the club shoot:

Goodman (7)	01111111111111100101111111111011	—27
Herrington (3)	11011111111011111111111111110	—25
Brantingham (1)	11111111111111110101111111	—24
Grier (2)	11111101111110011111111111	—24
Van Dyke (0)	11011101111111111111111	—23
Dutchy (0)	01101101111111111111111	—21
Manning (1)	01110111111011111111100111	—21

FORESTER GUN CLUB, OF NEWARK.

May 31.—The Forester Gun Club, of Newark, held a shoot to-day. Heavy rain early in the day kept many shooters from the traps. Nine events in all were shot, and all were at 10 targets. Our new traps threw the targets very swiftly. Scores follow:

Events:	1	2	3	4	5	6	7	8	9
Angles:	K.	R.	U.	K.	R.	U.	R.	U.	K.
J Fleming	5	..	5	4	6	6	4	..	..

BERGEN COUNTY'S ANNIVERSARY.

June 2.—The first day of the Bergen County Gun Club's "first anniversary tournament" was not marked by a large attendance. The members of this Hackensack club could hardly expect many shooters to show up to-day, as the programme was rather a hard one for any but the more expert shots to go up against. Also there was the more attractive programme for to-morrow against them, as well as the recent holiday shoots on Decoration Day. The consequence was that the crowd was small in number but hot enough in quality. From the scores made, it will be seen that the list of lost targets was not large. Captain E. G. Horton acted, as usual, in the all-round capacity of cashier, entry clerk, squad hustler, manager of the shoot and purveyor of good things for the inner man; in fact, he filled about every position possible except that of referee, scorer, puller and trapper-boy. Equally, of course, he filled all his numerous positions with honor to himself and the club. Chas. Dawson was referee and was earnest in his efforts to give everybody his due. The scoring and trap-pulling was just as satisfactory as it could be, while the work of the Hackensack Brigade of Trapper-boys left nothing to be desired. Some of these boys may be perverse little mortals and given to all kinds of deviltry, but it must be said that they can and do trap "outer sight."

As stated above, the attendance was small. There was Ferd. Van Dyke, of the Winchester Repeating Arms Co., shooting the first "Model '97" repeating shotgun that has left the factory; and shooting it "for fair," as the saying goes. Capt. A. M. Money, manager and treasurer of the newly-organized "American E. C. & Schultze Powder Co.," was also on hand, as was Ed. Taylor, of the Laflin & Rand W-A Powder Co. M. Herrington, another representative of the W-A powder, was also on deck, but was not shooting in the form he has recently developed. F. Sinnock, of the Forester Gun Club of Newark, and J. Schenck Remsen, of the Brooklyn Gun Club, were both on hand to try for the cup, and Sinnock, as will be seen, was on top for the second time. (This win of Sinnock's makes him a tie with Remsen, each having won it twice.) Another dangerous man who was present was Gus Greiff, of Von Lengerke & Detmold; but Gus was a little off in his second 25, flinching two or three times with fatal effect. Others on deck were L. H. Byrd, S. Warren and T. W. Thomas, the assumed names of three good shots who had "stolen away." B. James, Ward and Beveridge also took part in some of the events.

The Recreation Cup.

The main event was the *Recreation* cup, representing the amateur championship of the clubs of New Jersey. Among the contestants were the two previous winners—Remsen with two wins and Sinnock with one win. The race is shot at 100 targets, 50 known and 50 unknown, the known angles being disposed of first. Edwards led at the end of the half with 48 out of 50. The third 25 saw him drop back to Remsen with 70 each, while Sinnock with 72 out of 75 took the lead, with Van Dyke as second with 71 breaks. The fourth 25 saw no change in the positions of the four leaders, each man breaking 23 out of 25. Thus Sinnock won with 95, Van Dyke was second with 94, Remsen and Edwards tied for third place with 93. Greiff, who only broke 44 out of his first 50, took a brace and broke 47 out of his second half, finishing with 91. Warren was next with 90, scoring 46 out of his 50 unknown angles.

In the different series Van Dyke broke two straights and Sinnock one. The scores of this race in detail are as follows:

F Sinnock	11111111111101111111111111111101111111111	—47
	11111111111111111111111111111111111111111111011101	—48—95
F Van Dyke	11111111111111111111111111111101101111101011101	—46
	11111111111111111111111111111101111110111111111	—48—94
J S S Remsen	11111111101111111111111111101111111111111111	—47
	11111110111111110111111111111110111111111111111110	—46—93

	11111001111111111111111111111111111101111111011	—46—90
Capt Money	11111111111111011111110111110101011111111111011	—44
	11111111021101011101111111111111111111101111011	—44—88
L H Byrd	01111111111011101011111101011011111111111111111	—43
	11111001101111111011111111101111111110111101	—43—86
M Herrington	11101110001010111011111111011111111101111101111	—40
	10111101111111101111100111101111111111011111111	—43—83
T W Thomas	01111010011111011111111001101011011111110110101	—36
	01111101011011111111111101111110100111101111110	—40—76

In addition to the above scores, James shot at 50 known angles, scoring 43, and at 25 unknown angles, scoring 16; Ward also broke 30 out of 50 at known angles; Ed Taylor shot at 50 unknown angles, breaking 20 out of each 25; Beveridge shot at 25 targets, breaking 19. These four shooters shot along in the different series to make up two full squads.

In addition to the 100-target race for the cup, a programme of seven events was prepared and shot out to a finish. These seven events called for another 125 targets, unknown angles. Only four men shot through, Edwards finishing first with 115 breaks; Van Dyke was next with 113; Capt. Money and Byrd tied for third place with 110 each. In looking at these figures those made in the 100 target race should be taken into consideration. Thus, out of the 225 shot at, Edwards broke 208, Van Dyke 207, Capt. Money 198 and Byrd 196. Scores in the sweepstake events follow:

Events:	1	2	3	4	5	6	7			
Targets:	10	20	15	15	25	20	20	Shot at.	Broke.	Av.
F S Edwards	10	17	15	12	24	18	19	125	115	92
F Van Dyke	9	19	14	12	23	18	18	125	113	90.4
Capt Money	8	18	14	13	21	18	18	125	110	88
L H Byrd	8	16	11	15	24	18	18	125	110	88
M Herrington	..	..	14	13	23	16	16	95	82	86.3
C C Beveridge	..	..	..	13	21	16	..	60	50	83.3
G E Greiff	..	..	13	11	21	..	..	55	45	81.8
J S S Remsen	..	17	14	13	..	..	..	50	44	88
F S Sinnock	9	19	13	..	..	..	..	45	41	91.1
W S Warren	7	18	12	..	..	..	..	45	37	82.2
Ed Taylor	..	..	..	14	21	..	..	40	35	87.5
T W Thomas	..	..	..	9	16	..	..	40	25	62.5

Three extras were also shot, resulting thus:

No. 1, 5 pairs: Byrd 9, Sinnock 8, Van Dyke, Money and Edwards, 7; Warren 5.

No. 2, 15 targets, expert rules: Van Dyke 13, Warren 13, Edwards and Byrd, 12; Greiff and Money, 11.

No. 3, 50 targets, expert rules: Edwards 42, Byrd 37.

Second Day.

June 3.—The second day of the Bergen County Gun Club's shoot was rather a surprise. The day was pleasant, but perhaps a trifle too warm and moist for absolute comfort. There was also not enough wind to make the targets fly at all erratically; in fact, it was just the day for target shooting. But where were the shooters?

The programme was one that should have drawn more than a mere corporal's guard together. The club announced that it would divide $15 equally between the three high guns in all programme events shot between the hours of noon and 5 P. M., exclusive of the 100-target handicap race. In the handicap race it also announced that it would give a cup to the winner of that event. And what was the result in the way of shooters? Four shot in all the programme events up to the last event, when one dropped out, and only three stayed to divide up the $15. In the handicap race there were only four entries for the money and the cup—a handsome stein. Yet, notwithstanding this poor support, the club carried out its promises and did all that it said it would do. The programme was not varied from in the slightest.

Capt. Horton again had to do all the work single-handed, the only member of the club showing up to take a hand being Mr. Van Keuren, and he did not arrive until the programme was almost shot out. The refereeing was again in the hands of Chas. Dawson. Morris O'Connor, the club's regular puller, did his work as usual in a most painstaking and careful manner; Morris's work in this respect has always been of the highest order. The scoring department has generally been a weak point in the Bergen County's *menage*, but in Frank Holden, a recent find, the club has all that it needs in that line. The Yaller Kid and his mates behind the screen did their part of the work all right—save when they sent out two targets together or did some other similar monkey-work.

Among the eleven shooters who faced the traps in one or more events were J. Hildreth, the southern representative of the Winchester Repeating Arms Co., and W. F. Parker, of the Parker Gun Co., of Meriden, Conn. Parker was shooting away up, and showed conclusively that the improvement we noted in his shooting at New Haven on Decoration Day was not merely temporary. His average of 90.7 for 130 shot at indicates that he was holding just about right. Hildreth had only just arrived in the city from a long train journey, and was therefore hardly in a fit condition to point his gun in the proximity of the targets often enough to make a high score.

The handicap race speaks for itself. The handicapping was done mainly by Captain Horton, in consultation with Messrs. Parker and Beveridge. That their work turned out satisfactorily is proved by the fact that Captain Money and George Piercy tied for first place and the cup with 94, Byrd was second with 93. Edwards, who had no excuse to offer, dropped out of sight, ending with 86 out of his 100. On the shoot off Captain Money broke 15 to Piercy's 12, the tie being decided in programme event No. 4, which was shot on the conclusion of the handicap. At one time it looked as if Piercy had a cinch on the cup and first place, as he broke 45 out of the first 46 shot at, but he fell away afterward. Byrd, who was 4 behind Piercy at the halfway, pulled up well and tied him in the end, but lost the chance to tie for the cup by losing one of his 5 "extras." Piercy was the only one to run 25 straight, doing this in his first 25. The scores in this race were as below:

A Money (8)	11011111111111110011011111111111111111111111011111	—45
	10011111111101111111111111111101111101111001011011	—41
	11111111	— 8—94

* For targets only.

As stated above, only three men finished for "the three high guns" average money of $5 to each. Of these Edwards was high with 123 out of 130 shot at; then came Captain Money with 119 breaks, closely followed by Parker with 118 to his credit. These scores were:

Events:	1	2	3	4	5	6	7			
Targets:	15	20	20	15	25	20	15	Shot at.	Broke.	Av.
F S Edwards	15	19	19	15	24	17	14	130	123	94.6
Capt Money	13	18	16	15	24	20	13	130	119	91.5
W F Parker	13	18	20	14	22	18	13	130	118	90.7
T H Byrd	14	19	17	12	23	15	..	115	100	86.9

J Hildreth	..	13	13	9	..	..	..	55	25	63.6
Ward	11	..	13	..	..	..	..	35	24	68.5
Lan	..	..	..	13	..	..	..	15	13	86.6
Everett	..	..	..	9	..	..	..	15	9	60

Several extra events were shot. Two were at 15 targets, expert rules; two at 10 targets, reversed order, and two at 5 pairs.

EDWARD BANKS.

The Joplin Tournament.

JOPLIN, Mo., May 27.—The tournament of the so-called Missouri and Kansas Gun Club came as near to being a frost as any shoot we have ever attended, and that with $300 added money! The class of shooters one would expect to meet at a shoot of this kind were very conspicuous by their absence; in fact, there wasn't one of them there. This perhaps can be attributed to the fact that they were familiar with Sergeant's hobby—extremely hard targets, 20-bird events, and four moneys. This is all very well for the crackerjacks, but $300 is hardly a sum sufficiently large to draw enough of the other class to make a shoot a success. When a producer knows that he must shoot 85 per cent. to be in for money, he is apt to reflect two or three times, and may perhaps inspect his gun and his pocketbook, and after careful consideration put his gun back into the case, and his money back in his pants. There are yet some amateurs who have money to burn, providing they can see some chance to take an occasional piece out of the fire. True, 85 per cent would have won some money at this shoot, but there were several of the 85 per cent. amateurs present, and yet so difficult was the shooting that only one could get a fraction over 80 per cent. Not one of the five crackerjacks, and they were the best in the country, could reach 90 per cent. for the three days. Making the shooting as difficult as it was here never does the sport any good; it more often results in injury, and that is just what it has done in this case. This shoot has given the trap-shooting game a black eye in Joplin and vicinity that it will take some time for it to recover from.

There was a marked contrast between the interest manifested in this tournament and that of thirteen months ago. Then the whole town seemed to be interested in the success of the shoot, and quite a number of the local shooters participated. This time only five took part, and several of these only in one or two events. The entries ranged from fifteen to nine.

Out on the bold prairie, about two miles from the city, is where the shooting grounds were located, and the site was well chosen, the background being excellent. The electric cars landed one right on the grounds. The traps were set on the Sergeant principle, and this, as has been the case everywhere, gave universal satisfaction. There were two sets of traps arranged this way, but one was more than sufficient for the attendance present. Two kinds of targets were used, the red bird and the ones made by the American Target Co., both of which are made at Leavenworth, Kans. They were similar to all other targets, the only difference being the names. The American bird was used on the first and last days and the red bird on the second. The wind blew a gale diagonally across the traps and away from the shooter nearly the entire three days. This of course added to the difficulty of the shooting.

The few who were present are as follows: R. O. Heikes, Dayton, O., Winchester Arms Co.; F. S. Parmelee, Omaha, Neb., of the Remington Arms Co.; Fred Gilbert, Spirit Lake, Ia.; Chas. Budd, Des Moines, Ia., that Hazard-Du Pont combination; Herbert Taylor, St. Louis, Mo., also representing the Hazard & Du Pont Powder Co.; Sim Glover, Rochester, N. Y.; Mrs. Milt Lindsley (Wanda), talking King's Smokeless and Peters Victor shell. Then there was C. H. Calhoun, Wier City, Kans.; Taylor Cox, Carl Junction, Mo; C. M. Sumner, H. T. Leeman and List Carney, Galena; Dr. D. N. Day and wife, Duluth, Minn., and J. W. Den, of Arapahoe, Neb., who had the misfortune to be taken sick and was unable to fire a gun during the tournament. The only local shooters that participated were Kinmouth, Sergeant, Morgan and Cragin.

Only eight shot through the entire three days' programme, though Sergeant really entered all the events, but after shooting at about 10 birds in the first event on the first day he withdrew, as he had then shot himself out of the money.

GENERAL AVERAGES.

The general averages for the three days were:

	Shot at.	Broke.	Ave.		Shot at.	Broke.	Ave.
Gilbert	600	534	89	Glover	600	492	82
Heikes	600	514	85.6	Calhoun	600	489	80.1
Budd	600	493	83	Cox	600	462	77
Parmelee	600	496	82.6	Sumner	600	412	68.6

First Day, May 25.

The first day of the shoot opened threateningly enough, and for a while it rained quite hard, but by 10:30 it ceased. Then a strong wind sprung up that blew chilly across the prairie, making heavy sweaters decidedly comforable. The shooting was extremely difficult, as the targets were thrown very hard; this, added to the wind and the bad light, made straight scores very scarce. Four straight scores of 20 were made during the day, and each one of them was good for first alone. In events 3 and 6, Cox, the one armed shooter, took first alone on 19; Cornett did the same in No. 7, Gilbert following suit in No. 8. In events 9 and 10, 20, 19 and 18 took the three first moneys without a tie. The attendance was insignificant, only fifteen shooters taking part, and only eleven of these shooting in all events.

The averages are puzzling, and will appear rather more so when the class of shooters who were present is considered. Here is food for reflection for those who were not present: Gilbert is high with 86.5; then comes Heikes, who, it is safe to assert, has not been down to 83 per cent. in the last three years. And Glover with 82 per cent! Parmelee with just a fraction over 80 per cent; while Budd, who has recently been shooting so steadily, could not even get up to that notch! How hard the game was is well shown by the averages. With such targets, 20-target races, and only four moneys, it is not surprising that so few of the local shooters wanted any of the game.

Second Day, May 26.

It was confidently expected that some more shooters would put in an appearance to-day, but such was not the case; and not only this, but one of the few who were present had already become gunshy, and had left. That, too, after he had been telling us how he had come to stay, even though there were but 3 entries. Taking the gaff ourselves and seeing others take it, are two different things.

It had been suggested that perhaps if the targets were not thrown so hard that some of the locals might enter. This advice was not heeded, however, and the game went on just as before. The entries were no greater—not even as large as yesterday—but those who did shoot improved their scores. Gilbert was the only one who reached 90 per cent; Calhoun and Budd were second, with 89. Four straights were again the total, and two of these were made by Gilbert; Budd getting one and Calhoun the other. In the 10th event 19 was high, and 14 got fourth, as there was no 16 or 15. Several more of the local shooters took part in a few events—just to be social, so to speak. Mrs. Lindsley (Wanda) and Mrs. Day shot along for birds only. The weather was fine and there was a good wind blowing. With so few entries the shooting is generally over by 4 o'clock.

One interesting event was a miss-and-out, 50 cents entrance, 32yds. rise. In this Taylor broke 5 straight and took the $3, the talent all going out rather easily.

Third Day, May 27.

This was but a repetition of the two previous days. The weather was again fine and the wind still blew from the same direction, though if anything a little stronger than before. The first event had but nine entries, and the only new shooter who participated was Carney, of Galena; he shot in four events.

Gilbert once more led the procession, with Heikes second, neither averaged as high as on the previous day. The same old number of straights were scored—four. Of these two again went to Gilbert, while Heikes and Glover got the other ones. In the first and second event 18 won first without a tie, and in the third and sixth 17 was high. In the third event Morgan won fourth money on 10. After the regular programme was shot the crackerjack squad in an extra event scored 96 out of 100, as follows: Heikes and Gilbert 20, Parmelee and Budd 19, and Glover 18. At this time the wind had decidedly abated and the targets flew more steadily. The same old conditions prevailed: ten 20-target events, $3 entrance, $10 added to each, four moneys.

PAUL R. LITZKE.

The Kansas City "Star" Cup.

KANSAS CITY, Mo., June 5.—*Editor Forest and Stream:* Having noticed on several occasions during the past year several reflections by Dr. W. F. Carver on the standing of the Kansas City *Star* cup as a representative trophy emblematic of the American wing shot championship, I feel it a duty I owe to the Kansas City *Star*, a newspaper on which I am employed, and which devotes probably as much space to the trap-shooting fraternity as any daily newspaper in America, to review the facts which led to the establishment of the Kansas City *Star* cup contests. After the final winning of the *American Field* cup in 1892 by J. A. R. Elliott, who gallantly defended it for a period of two years against all challengers, there was no trophy of any value commensurate with the importance of a championship contest in competition, excepting the Du Pont trophy, which at the time of the establishment of the *Star* cup race was handicapped by a rule limiting the contestants to the use of a special brand of powder, and providing for the redemption of the cup by the donors on payment of $100 at any time they felt like calling it in. I am pleased to notice that the Du Pont people have since modified the rule limiting contestants to the use of any particular powder.

The *Star* cup is a handsome piece of plate, of special design and cost $250 net in cash, and the final ownership will be determined next summer. After the open competition for the *Star* cup in May, 1898, those who have held the trophy by winning it either in open competition or by challenge, are to meet and finally decide the absolute ownership of the cup. Thus the competition for it has an inducement to aspirants for wing-shot championship honors that is not enjoyed by any other championship emblem now before the trap-shooting public. This trophy has largely stimulated pigeon shooting in the West, and has more than accomplished its purpose, which was to add to the interest of the Missouri State tournaments in 1896, 1897 and 1898. Other State associations were not barred from calling it into competition at their annual tournaments, the only requirement being a guaranteed purse of $1,000.

The popularity of the *Star* cup race needs no comment from me, as in 1896 the entries numbered over fifty, while at the last State shoot held here in May, there were sixty three contestants for the trophy, and among them were many of the representative wing-shots of both the East and the West; and it was won by Sim Glover, of Rochester, N. Y. After an excellent race he was tied on 25 straight kills by J. M. Crabill, of Clarinda, Ia.; Chris Gottleib and C. C. Herman, of Kansas City, whom he shot out by killing 5 more straight. Dr. W. F. Carver, who has been favored repeatedly by extensive complimentary notices in the *Star*, shows his lack of appreciation of fair treatment by an attempt to ridicule the donors of a trophy, who sought to encourage championship contests at the trap.

Any championship aspirant who is on the level cannot object to the simple conditions that govern the contest for this trophy, and it has received the indorsement of wing shot championship claimants who stand high in the esteem of the trap shooting world.

The trophy was offered in good faith, and the conditions made broad and liberal, so that it would bring together the crack wing-shots in honest contest, and the final winner will have a trophy of which he may well feel proud.

JAMES WHITFIELD, Sporting Editor, The Kansas City *Star*.

Illinois State Sportsmen's Association.

A LIVELY CONVENTION.

CHICAGO, Ill., June 1,—The twenty-third annual convention of the Illinois State Sportsmen's Association was the most remarkable one held for eight or ten years. Not only was it remarkable for the brisk and lively quality of the proceedings, but the nature of the business transacted was so far out of the ordinary routine of the past five years, that one may indeed well doubt if in all its history this organization has ever held a convention offering more interest

In view of the past records of this conservative body of sportsmen, we had a right to expect that we should be favored with the usual addresses and resolutions about song and insectivorous birds, that we should hear the customary solemn declaration that "this is not a trap shooting body," that we should listen to the customary wrangle concerning the shooting rules, and that we should emerge from the labors of the convention with the same principles, the same rules and the same meeting place for the next convention, which, namely, should be Chicago.

What really happened was far different from the above. The president and directors made addresses brief and much to the point. The song and insectivorous bird reared its head but briefly. The timely resolution was mainly absent. The city of Chicago was not selected as the meeting place. Lastly, best and greatest of all in the idol breaking of the evening, the famous 10-gauge rules of the Illinois State Sportsmen's Association were sent rattling down the grooves of time unattached and looking for a foothold, which they will probably never again have so long as intelligent shooters meet in conclave.

Not only was the 10-gauge clause eliminated from the Illinois rules, but the rules were abolished in toto, the A. S. A. rules being substituted therefor in full. Henceforth the city of Chicago, for many years behind the world in shooting rules, will no longer offer the anomaly of having a special set of rules for two or three days' shooting out of the year. The city of Chicago, in all other matters customarily ahead of the times, has now caught up with the times in this regard, and hereafter shooters may visit this town feeling that they may there meet the same customs which now obtain all over the shooting world. Incidentally, it may be said also that a greater union among the sportsmen of Illinois may be among the possibilities of the future, so that there is at least one chance in a thousand that we may at length accomplish something in the way of game legislation.

THE PRESIDENT'S ADDRESS.

There were present delegates from eighteen out of the thirty-four clubs belonging to the Association. The reading of the minutes of the previous meeting was dispensed with. The address of the president, Col. C. E. Felton, was tinged somewhat with the positive personality of that gentleman, more especially as bearing upon matters of game protection and interstate sportsmen's traffic. Colonel Felton will gradually come to believe wholly in the wisdom of the FOREST AND STREAM Plank—"Stop the sale of game"—but as he is now, he assumes the divided position of sanctioning the use of game as food for man when once the game has been killed. He thinks the sportsmen's papers are a destructive agency, and in this he is no doubt right. His able address is well worth printing in full.

PRESIDENT'S ADDRESS.

Gentlemen: It is a pleasure to me to see so large a number of clubs represented at this convention of the Association; but it it with grief to us all that we miss from our presence an ex-President, who was one of its founders, and who was present at nearly every session during its history—the late Hon. Charles Hern. He was born abroad, of foreign parentage, and came to this country in early youth. He was an ardent sportsman; a true friend; a warm companion. He settled in Indiana, and was favored by the citizens of a prominent county in that State by election to the office of Sheriff He removed to Chicago, and its citizens not only conferred upon him the like honorable and responsible position—that of sheriff of Cook county—but thereafter also elected him treasurer of that county, the most responsible office in the gift of its citizens, and one which he held without the least criticism being made as to its conduct. This shows the possibility of preferment to manly worth, sterling integrity and unceasing effort in this our glorious country; an inspiration to all young men, of whatever nationality, who become its citizens. After an illness of nearly two years, the Father called him to an eternal home above. In life our late brother sportsman never ceased in his admiration of those he loved; and as friend, his heart was never cold; and to worthy stranger his hand was always extended, and the smile of welcome was ever present. We have lost a valued member, and his goodness will ever be remembered by us.

This Association was organized March 10, 1874. Its first convention was held June 2, following, at Chicago. Hon. John V. Le Moyne was its first president. Its membership was composed of individuals, and not of clubs; and this was found to be impracticable. June 20, 1876, the Association was reorganized by the adoption of a constitution making club membership, instead of individual membership; the basis of its organization, and no material change has since been made. I had the honor of being its president when it was reorganized, and the present is the third time I have held the position, for which honor I am more indebted to the good fellowship of its members toward me than from ability to ably serve the purposes of the Association.

What are those purposes? The constitution says: "To secure proper legislation for the protection of game birds and fish during the seasons when it is improper to pursue or to kill them; the encouragement of our citizens in their efforts to increase the varieties of and numbers of our game birds and fish, and the organization and encouragement of subordinate associations and clubs for the vigorous enforcement of all laws against the killing, sale or shipment of, or having in unlawful possession, any such game birds or fish."

By this it will be seen that this is in no sense a trap shooting organization, although, as incidental to our annual conventions, field days are held, at which certain prizes are competed for at the trap, by its members only, notably, a beautiful diamond medal costing $500, emblematic of individual championship, given by the Board of Trade of Chicago, through the kindness of M. O. H. Roache, a member, in 1881, which medal is held in trust from year to year by its annual winner, and a medal or other prize annually furnished by the Association for competition by club teams, and also a cup, which is competed for annually at targets. These three events constitute all the field work of the Association during the year, and this fact puts to blush the accusation, often made, that ours is an Association of trap-shooters for trap shooting only.

This Association has done nearly all that has been done toward the protection of game and against unlawful traffic in it in this State, during its existence as a State. Its chief enemy has been the game dealer, whose commercial interests prompt him to use all necessary means to defeat legislation when favored by this Association. He purchases from market-shooters and sells prior to the open season game birds so young that they might have almost been gathered by hand in the field, without the use of gun. He receives from shippers in other States, after the season has closed, immense quantities of game, secreted in barrels and otherwise, which has been trapped or otherwise unlawfully killed; and he re-ships such game to Eastern markets, or holds it in cold storage for sale to citizens or members of social clubs, who seem to think a table must be garnished with game birds, or a banquet will not be "up-to-date," even if such game is unpalatable and unfit as food for man at the time. Certain Western States are now partly relieving us of the duty of watching our game commission men, however, and their cold storage methods, by the enactment of laws which prohibit the shipment of game from such States. Much better would it be if they would enforce the laws against the unlawful killing. When killed, it is immaterial to game protection where it is to be utilized as food. But if game is not shipped to our markets from other States, we must watch more closely the game dealers, as hungry stomachs will cause open mouths, and open mouths will be filled, by the aid of such dealers, with game killed in Illinois long before the time it is lawful to kill it, unless we are watchful.

Mere shooting clubs are a detriment and injurious, unless they enforce obedience to law in their respective localities They teach men the use of the gun by contests at targets at the trap, and thus create desire to kill birds in the field, and unless the organizations to which they belong make game preservation and not trap-shooting the main motive, little regard will be paid as to numbers of birds killed or the dates when killed I favor limiting the number of birds killed by any one during a season; but when killed, let the owner do as he likes with the game, provided it be used as food for man. Sportsmen do not kill more than they can use or give to their friends to eat; they seldom, if ever, sell game. Sportsmen's papers also cause game destruction far beyond their ability to cause its propagation and preservation Their life more frequently comes from advertising patronage than from lists of subscribers. They advertise guns, ammunition, targets; and urge the organization of trap-shooting clubs and publish the scores made as an incentive to patronage. While many articles appear in the columns of the better class of these journals which are very instructive and enjoyable, as well as useful, the tendency of late has been to admit to their columns matter which, under the guise of communications or "unprejudiced" editorials, is simply intended to create the sale of certain merchandise, or be of use, "as sugar is to an old-fashioned toddy," in sweetening the patrons of advertising columns. Sportsmen's journals are useful, and so are clubs, but let the prime motive be game preservation, and eliminate, as far as possible, the trap-shooting feature, save only as it stimulates toward the suggested purpose. The indifference of citizens who are not members of clubs is another source of game depletion. The law of South Dakota last year gave Sept. 1 as the date of the opening season for pinnated grouse shooting. Citizens of the State, however, left but few birds unkilled long prior to that date, having commenced shooting on Aug. 15. In our State few men care to prosecute violators of the law, being neighbors or friends; and when information is furnished, it is by persons who decline to assist in a prosecution. There should be no friendship between sportsmen and violators which interferes in the least with bringing the latter to justice.

The report of our board of directors will give you certain information not necessary for me to anticipate, and the law committee will report to you as to matters of interest in relation to legislation and the enforcement of the law in our State. Lately, Gov. John R. Tanner has appointed Mr. Harry W. Loveday as game warden, in place of Mr. Charles H. Blow. Mr. Loveday is known to you all, and has often been a delegate to our conventions. You have known him as being almost too warm in his friendship, having too large a heart, so to speak, to be a successful detective and prosecutor; but beyond friendships and beyond heart pulsations stands public duty, and without criticizing the work of his predecessor, as his work is now a matter of history, I think and trust Mr. Loveday will make a record far superior to any so far made, and which will be gratifying to each member of the Association. In substance he has announced as his motto. "No true friend of mine will violate our game laws, and, officially, it will not only be my duty but my pleasure to prosecute successfully all violators." In a letter from him received yesterday, stating that he must be in Springfield Wednesday morning, hence he cannot be with us to-night, he says: "Assure the convention that I am with them in everything that tends to the protection of game and the punishment of offenders of the game laws." It goes without saying that every member of this Association will aid him.

Additional unfriendly legislation has been had in several of our sister States, imposing heavy license fees to non-resident shooters, and but nominal fees to residents. This has caused no little feeling of antagonism among our sportsmen, many of whom are interested in club grounds and otherwise in the States referred to, but I have not the inclination to here discuss the question, nor you the time to listen to me on that subject.

But recent events show that some action must be taken, by legislation or otherwise, by which the persons and property of the owners of lands may be protected from the violence of would be assassins, who are sometimes designated as trespassers or poachers instead of intended murderers. Many clubs own or lease grounds and stock the streams thereon with favorite food fish, and fields with game birds, and endeavor to protect their interests with the aid of reputable employees, that in proper season the members of such clubs may enjoy outings, as relief from the mental and physical strains of city life. Often, as at Tolleston, Ind., where a club, composed of prominent citizens of Chicago, owns property, its employees when in the exercise of their duties in protecting a marsh from poachers, are viciously assaulted—in one case two being decoyed into an ambush and fired upon by two or more assasins, one employee receiving more than fifty No. 4 shot in his shoulder, breast and face, and the other also badly wounded; and in another case a rifle ball was shot through the side and end of a club boat while it was being occupied by an employee Is it a wonder that such acts have led to retaliation by individual employees? which retaliation, while not legally excusable, is not at all unnatural, and borders on the line of self-defense, if it is not such in fact. No good citizen—certainly no sportsman—will trespass or go upon the lands of another for the purpose of shooting, whether it be a farm or a game preserve, when such grounds are posted or known to be private, unless permission has been previously granted It is little enough to ask permission, which, being refused, gives no cause for trespass, nor yet to send a ball to the owner or his employee through the barrel of a Winchester repeater. An unsatisfactory attendant to those outrages at Tolleston was that certain otherwise reputable papers seldom failed to write against the club's methods, and by the tone of their articles inspired the would-be assassins to further outrages.

A feature for congratulation is, in another phase of our Association's duty, that public sentiment against the killing of song birds and birds of plumage and insectivorous birds, is being rapidly formulated, and societies of ladies are accomplishing much to the end desired. The labor is most commendable, but cannot be wholly successful until the "pestiferous" sparrow has been exterminated

Our annual meetings are held in May or June. The State Legislature meets in January, alternate years. It would be best that our convention be held early in that month, that success may follow effort in securing proper legislation. Formerly, our field contests were at live wild pigeons, which could best be secured in May or June. Now they are at domestic birds and targets, and May and June are mating months for the former. I recommend that sections 7 and 10 of our constitution be so amended as to conform to the suggestion.

In conclusion I again thank you for the many honors this Association has conferred upon me and for your kindness and patience upon this occasion.

DIRECTOR'S REPORT.

The report of the board of managers is likewise clear and able and worth use in extended form The futility of past efforts in game law matters was taken up and the hope expressed that should the convention be held earlier in the year, at the time of the meeting of the Legislature, there might be a hope of more successful effort at Springfield. The former game warden, Mr. Blow, was censured by the board and the incoming warden, Mr. Loveday, was promised the hearty support of the Association in any effort looking toward practical protection Lukewarmness of certain branches of the Association was touched upon and full explanation was made of the difficulties attending the work of getting out a programme this year. The report as filed reads as follows:

The President and Members of the Illinois State Sportsmen's Association:

Our Board of Directors, in presenting its report of the work done during the past year, desire in the first place to call your attention to the various difficulties they have labored under. First may be mentioned that not one of the resident four members has escaped a long spell of illness, either of himself or family, which deprived the Board of his services for long periods. Our worthy president, Col. Felton, was himself injured while hunting last fall and confined to the house most of the winter. On two or three members at a time, therefore, including our secretary, fell all the work, and it has been by no means easy.

Early last fall the law committee, at the request of your Board of Directors, and with the assistance of Mr. F. S. Baird, drafted two bills which were presented to the Legislature. Your Board was in attendance at Springfield accompanied by Mr. Baird to plead for the passage of those bills. We had many promises of assistance from members of both Houses, but we had our same old enemy to fight, namely, South Water street, and as usual we were defeated. The first bill, known as the "Game Warden Bill," got as far as the committee on fish and game in the House, but in spite of the fact that it was an eminently just and fair bill, there it was killed. The fate of the other bill will doubtless be the same, as of course it called for protection; protection for the bird, protection for the farmer and protection for the sportsman; but *not* protection for South Water street in its desire to sell game all the year, and hence it is also doomed to die.

We were met by lies, treachery and deceit; our supposed allies deserted us for the enemy; politics and money were, as usual, all powerful, and, as usual, we failed, having nothing but justice to plead for us, nor can we ever succeed if the work is to devolve on two or three men. We obtain no assistance from our brother sportsmen in the country. Not one of them ever turns a finger to help us by obtaining the help of his representative in the Legislature. No country club or city club either, for that matter, ever makes an effort to assist the officers of the Association. Alone at Springfield, without one friend pledged to support honest game legislatien, without help from any quarter, and opposed by an interest which has thousands of dollars at stake, what chance have we for a good law? The present line of action must be abandoned. It can never be successful. Unless every club in this State uses its direct influence through its every member in pledging our law makers in advance to forward the interests of a fair bill, we must retreat from the field where we have so often been repulsed.

We must declare ourselves here to-night Either we abandon the chief objects of our Association, which are the preservation of fish and game, and the enforcement of laws governing such preservation, and devote ourselves exclusively to the sport of trap shooting, or else as clubs and as members we must pledge ourselves to earnest work, and we must keep that pledge. As you are all well aware, far too much time has been already wasted, and already our prairies, our marshes and our streams are too nearly depopulated to admit of further delay or inaction.

We have had a game warden for some years, appointed by that arch enemy of game preservation, ex-Gov. John P. Altgeld. Your Board has during the past year received many complaints of his actions, but it is sufficient at this time, in view of the fact that he has lately been removed from office at the urgent request of your Board, to state that he was thoroughly unsatisfactory to all but South Water street. Our new game warden has pledged his earnest support of the present laws and their impartial enforcement. In every possible manner he should receive the hearty aid of every sportsman in the State, and if his purpose be sincere, he should not be handicapped by even lukewarm sympathy. The fullest support is what is needed. Your Board heartily welcomes Mr. Loveday's pledges, and trusts that through no cause will he fail in his work.

The previous secretary and treasurer of the Association, Herman B. Meyers, deserves your unqualified censure. Although his term of office expired nearly a year ago, neither the present secretary nor your Board were able to get a complete statement of his accounts until very recently, and that proved one of our greatest obstacles in issuing our programme of the present convention. As he was not under bond, unfortunately, we were powerless to compel him to render an accounting; and as he refused to turn over the cash balance in his hands, we were without money for a long time. Your Board recommends that in future the secretary and treasurer be compelled to furnish acceptable bonds, and that it be the duty of the President to demand same.

We would also recommend for various reasons that the date of the convention be changed to one of the earlier months, at least during years when the Legislature is in session. Perhaps then we could accomplish something at Springfield.

In presenting you our programme for this week's sport, we do so, feeling that it would have been a better one had we not met so many obstacles, one of the chief of which is the failure of the great clubs of the State to subscribe according to their means to our cash prizes. As you will note, but three of the city clubs and two from the country have seen fit to respond to our requests for subscriptions. Tournaments cannot be supported that way, and if the clubs want liberal prizes, each should contribute to the support of the Association. We trust the clubs will not be so niggardly in their support another year. We have, however, done the best possible with the means at our disposal; and submit to you the programme, hoping for your approval of our work.

REPORT OF LAW COMMITTEE.

Mr. Mott, chairman of the law committee, reported that his accounting must be largely of a negative nature. There had been no legislation obtained by the sportsmen, nor did he think there would be any change from the present law, unless there might be passed a certain vicious bill, instituted by South Water street and aided by our former respected warden Mr. Blow. He thought there would be no other changes in the game laws at the present session of the Legislature. He did not think the present officers of the Association should be blamed, nor did he think any other officers would have been able to do much better in their position. Mr. Mott referred to the fact that previous to the appointment of Warden Loveday a prominent game dealer had boasted that nothing could be done which could prevent the appointment of Mr. Loveday as warden. To this fact he attached no inferences.

Mr. Mott stated that a recent court decision had passed upon the question of using decoy letters for the purpose of using evidence. A certain Supreme Court had decided that decoy letters could not be used to convict a postal employee of theft. He did not think they could be used to secure evidence in game cases.

SECRETARY'S REPORT.

Mr. Bissell, secretary and treasurer, made a brief report showing that he had received $730 and expended $432.

Mr. Bissell said he had had trouble in getting out a programme, but the delay had been due to the fact that a good contract with publishers could not be closed. He stated that he had had a great deal of trouble in getting a statement of accounts from his predecessor in office, nor could he get access to the books without difficulty. Something in the wording of Mr Bissell's report led Mr. W. L. Shepard, formerly president of the Association, and for many years its secretary, to infer that allusion was made also to himself and his method of keeping the records, and Mr. Shepard, with what seemed quite unnecessary warmth, arose and protested against such accusations. Mr. Bissell explained that he intended no reference to anyone but the secretary who had preceded him in office, and his report was so changed in its wording before being placed on file.

Mr. Forest, of the gun club to which the former secretary belonged, asked of the Chair that he might have a conference with the Board of Directors, looking to the clearing up of the charges against his fellow club member. This conference was held, and restitution of one or two small sums was made to the former secretary, who claimed to have made an unintentional error in entering one name too many in last year's medal shoot.

FURTHER BUSINESS.

A letter was read from the new warden, Mr. Harry W. Loveday, stating that he was obliged to go to Springfield and so could not be present at the convention, but that it was his wish to counsel with the Association and to work with it in all possible ways.

Mr. A. C. Patterson, of Calumet Heights Gun Club, brought up under the head of unfinished business the change in the shooting rules which he had proposed last year, amending Rule 11, on live bird shooting, so that it should not call for the gun to be held below the armpit, but should read, "Position of the gun to be any that the shooter may desire." Mr Patterson stated that the latter clause was now to be found in the majority of the shooting rules all over the country. There was some little talk begun on this motion.

TOM MARSHALL AND THE 10-GAUGE RULES.

But just here is where the fun began. Before Mr Patterson and his friends had been able to crowd the proposed amendment to a vote, there arose from the corner of the room, just to the right of the president's chair, the swarthy face and sturdy form of Tom Marshall, of Keithsburg, one of the best known and most popular shooters of the country, as well as of Illinois and of the Illinois Association. Tom Marshall is a champion shooter, as all readers of trap-shooting columns know. From this time on he may be given a title still more to be coveted and far more permanent. He appeared as the champion of the intelligent sportsmanship of Illinois. By his few words of direct speech, and the magnetism of his personality, he accomplished what the leading men of this association have for years sought in vain to do. He knocked out the fossilized 10-gauge rule.

Mr. Marshall said, "Mr. Chairman, I wish to inquire whether it takes a year to amend the shooting rules of this Association?"

The chairman replied that, while such had been the understanding, and that while Mr. Patterson's proposed amendment had been offered under that understanding, he was unable to find anything in the constitution or by-laws making that the case, nor could any of the oldest members of the Association point out such a clause.

Mr. Marshall then said, "Mr President, I move you that the Illinois State rules be abandoned entirely, and that we substitute therefor those of the American Shooting Association."

The motion was, by conset of Mr Patterson, offered as a substitute to Mr Patterson's motion. The fight was then on at once, and everybody in the room knew that the old-time question of the absurd 10-gauge rules was up again for decision, and that never before had the fight against these rules been so strong or so well led.

A curious complication arose at this time. Col. Felton, the president of the Association, had practically been the author and contriver of the Illinois State rules, although the odious 10-gauge clause had been forced upon him against his will, as of course Col. Felton was intelligent sportsman enough to recognize the world-wide principle of handicap. Col. Felton now saw that if the 10-gauge idea was knocked out by Mr. Marshall's motion he must lose also the whole set of rules which he had labored so earnestly to frame. He therefore decided that he must speak upon this motion, and asked Vice-President Franklyn to take the chair. Col. Felton said that while he did not claim to be familiar with "these Eastern rules," he considered them very imperfect. He said, "If we adopt these rules then we admit that we are a trap-shooting body only. We should not care what the trap-shooting rules of the country are unless we are mostly concerned in trap-shooting." Col. Felton claimed that the Illinois rules were the most perfect shooting rules ever yet framed. He thought that the 10-gauge clause should be modified, as it was not right that 10s and 12s should shoot at the same score, but none the less that clause had been passed as the pleasure of this body, not only once, but more than once. He said he would favor Mr. Patterson's amendments to the position of the gun, but could not tolerate the thought of the abolishment of the rules which made the Illinois State Sportsmen's Association a distinctive body, and not merely one more trap-shooting association.

Mr. Marshall spoke again briefly, jerkily, but forcibly and clearly to the point of his motion, and evidently his audience went with him at every word. He stated that he did not mean this motion to mean disruption, but uniformity, that to take up the A. S. A. rules would be to put the Association in line with the rest of the country, and to follow a course which had been declared a good one by the men of the country who did the shooting and the thinking in regard to the shooting.

Mr. Mott spoke also in favor of the Marshall motion. He said: "Are we so great that we need special rules for ourselves? Why should we not have rules that are good enough for everybody else? Our chairman thinks we should appear to be a trap-shooting body if we took up these new rules, but I think we shall appear to be a trap-shooting body, and a very stickling one if we hang to the old rules. It is beneath us this repeated discussion over these rules. Let us take up the rules which will make us uniform with the rest of the country.

Mr Mott's remarks were greeted with applause, though applause, from the other side of the house came when Mr. Smith spoke in favor of the old-time rules. At this point Mr. Organ made his annual motion to table the whole thing. Ordinarily this motion is carried as one of the formalities of the year, but it was not thus this year. There was a ringing vote on each side, and a division being claimed the roll call was ordered. This was a long process, but before the fourth club had registered its vote the chorus of "Noes" was becoming so steady that Mr. Organ saw the motion to table was lost, and asked to withdraw the motion. The chair decided the motion to be lost. Mr. Marshall's motion then came up and was put with practically no further discussion, although Mr. Baird had risen on a point of information, asking to be informed on certain points of the A. S. A.

rules. Upon the motion being put the chair was unable to decide and a rising vote was called. The secretary tallied thirty-four votes of delegates who rose in favor of abolishing the old Illinois rules. Opposed to these were eleven delegates who wished to cling to the 10-gauge idea. The names of these need not be mentioned, as the majority was an overwhelming one in favor of Tom Marshall, proper handicap, progress and reform.

At last we are modern.

It was decided by vote that the A. S. A. rules shall take effect thirty days from the close of the present tournament.

CHANGE OF DATE.

Mr. Mussey moved that the convention for 1898 should be held with an open date for May or June, but that for 1899, the year of the next session of the Legislature, the meeting should be held the first week in January, for the purpose of better efforts at game legislation. This was carried. Mr. Baird moved that the directors levy an assessment on each club of not over $10. Carried. Mr. Baird moved that the board use diligence in enforcing the game laws of this State. He said: "It is time for us to quit resolving. This motion may mean much or little. I mean it shall mean much." Carried.

THE ASSOCIATION MAKES A MOVE.

When it came to the question of the next place of meeting, the cities of Peoria and Chicago were both put in nomination, Mr. Fahnestock, of Peoria, recalling the partial pledge of the Association of last year to give Peoria the convention this year. Mr. Organ stated that he was a friend to both cities. Chicago had better facilities than Peoria. He did not think more than 25 per cent. of Chicago people would go to Peoria. Still, he would go himself, and was not in the least averse to seeing Peoria chosen. Mr. Fahnestock said that Peoria did not want the convention unless it obtained it unanimously. As to facilities, Peoria could handle the Association. Mr. Allen, mayor of Peoria, said that his city could take care of a political convention, and he allowed it could handle this tournament. Mr. Abner Price at this point arose and made a stinging and vigorous speech in favor of Peoria. He said the Association had practically pledged itself last year and that now it sought to violate this pledge. He said, "If we go to Peoria, we go not for the sake of the trap-shoot, but for the good of this institution." Mr. Price was applauded vigorously. Mr. Mott thought that 1899 would be better than 1898 for Peoria, as that would be a legislative year. Mr. Mussey thought that the new game warden would be better helped by a Chicago board of managers than by a board residing in Peoria. Mr. Price again insisted that the Association was already pledged for 1898, and that its pledge for 1899 should be valued no more than the present one. Mr. Clark, of Peoria, said that Peoria would be a good point to come to to make up the past differences between the sportsmen of this State. Mr. Clark said the sportsmen would never get a game law, because the country shooters always turned in and helped kill the sportsmen's bill emanating from Chicago. The sportsmen of Chicago did not believe in spring shooting, but the members from the lower part of the State could not go to Wisconsin for their spring shooting, and so they got no shooting at all. They would always fight bills in such ways until there was a better understanding on both sides. If this convention should go to Peoria he thought it would be a good time to enlarge its membership and come to a better understanding on protective matters with the lower counties of the State. The question now came to a vote, and Peoria was chosen as the place for the next convention. Election of officers was then called, and there being unanimity among those present, the secretary was instructed to cast one ballot each for the following officers: President, H. H. Fahnestock, of Peoria; First Vice-President, Abner Price, of Chicago; Second Vice-President, Chauncey M. Powers, of Decatur; Secretary and Treasurer, Geo. F. Simmons, of Peoria.

Mr. Bortree at this point introduced a resolution to the effect that the Illinois Association should extend its congratulations to the State Sportsmen's Association of Texas on the efficient game law passed for the protection of "yours and our migratory game." The secretary was instructed to send this resolution to Mr. R. R. Lockett, president of the Texas State Association.

Action was taken by which hereafter each club may be allowed to enter two teams in the club team championship contest, no member to compete in more than one team. A vote of thanks was then passed to the Sherman House for the use of the club room, and adjournment followed.

THE TOURNAMENT.

As usual, the shooting of the two State events at live birds ran into the third day. The entry in the Board of Trade badge shoot, the test of the Association tournament, was eighty-six, a distinct advance over that of last year, which shows that there was good hustling done this year by the directors. The club teams also filled well, and the Smith cup entry reached thirty nine. The weather for Tuesday was cold, and on Wednesday a drizzling rain spoiled much of the enjoyment of the afternoon. Thursday was cloudy and not pleasant, but at no time was the shooting stopped by the weather. The birds, under these mixed conditions, continued to average very good, many in the badge shoot being as fast as would be seen at any time or place. During the rain they of course became less active, and the shooting did not offer so much interest.

CHAN POWERS TAKES EVERYTHING.

Last year, as may be remembered, the Smith cup was won by Chauncey M. Powers, of Decatur. Mr. Powers evidently likes this trophy, for he went out after it again this year, and again took it from the full field of competitors. But he was not satisfied with this. He laid covetous eyes also on the capital prize of the Association, the Board of Trade diamond badge, and when he left the score after the ties, he bore this great emblem of the State live-bird championship for the year upon his lapel. There was no stopping him this week, and fears are entertained that Mr. Powers may want to take home with him our city hall or the Columbus statue. In the ties Mr. Powers was as usual calm, and keyed up exactly right. With him at the home stretch were Tom Laflin (who always gets into the 10 tie nearly every year), and Billy Mussey, who shot birds like a veteran, though he has been out of practice for a long time. At one stage in the tie it practically lay between Mr. Mussey and Mr. Powers, the former having missed a bird. He said to Mr. Powers: "Go ahead now, Chan, and kill your bird." This Mr. Powers was unable to do, and his miss let in the rest for a second tie, so that Mr. Powers had to go on so far as his 14th bird to win. Messrs. Mussey and Laflin divided the merchandise, no one else getting further along than 5 birds in the tie. Score:

First event, for the Board of Trade diamond badge, value $500, emblematic of the individual championship of the State, at live birds, the winner of the badge this year to receive the proceeds of next year's entries for the same prize, 10 live birds, entrance $10.

R A Turtle	2122002201—7	B F Forrest	2200010222—6

In the ties on 9 only six men were in at the end of the first string of 5 tie birds: Woodford, Von Lengerke, W. Dunnell, Ehlers, Dilg and George Kleinman. After the end of the second string of 5, W. Dunnell won on 11 straight.

Ties on 8: Bingham, Portman, Morris, A. Kleinman, Harbaugh, Tate, Frothingham and A. E. Henry divided money after killing 8 birds. Bingham won merchandise (the Spalding bicycle) on 20 straight.

Ties on 7: Roll, Madden and Turtle divided money. Madden won merchandise on 11 straight.

Ties on 6: Hicks and place divided money. Place won merchandise on 8 straight.

Second event, targets. For the L. C. Smith cup, emblematic of the individual State championship at inanimate targets, the winner of the cup this year to receive 60 per cent. and the club of which he is a member 40 per cent. of the entries at next year's inanimate target event, the winner to execute a bond in the sum of $500 to guarantee the production of the cup next year; 20 targets, entrance $5, Illinois State rules:

Mr Powers won the cup with 19. Ties on 18 divided money, and Marshall won merchandise on 9 straight. Ties on 17 divided money, and Hollister won the merchandise with 3 straight. Ties on 16 divided money, and Shaw won merchandise with 8 out of 9. Ties on 15 divided money, and T. L. Parker won with 16 out of 18, Bingham being near him with 14 out of 18.

THE CLUB-TEAM CHAMPIONSHIP.

Open to teams of four men from any club members of the State Association. Entrance, price of birds only.

The club-team event brought out twenty-one entries, and it was noon on Thursday before the result was determined, the three duck-shooting Dunnell boys from Fox Lake, with their friend Pitzen, wiping up the earth with all the city shooters and men from down country, and putting Pestakee club at the front. Before the conclusion of this event the weather had grown cold and the wind was strong. Old shooters present said that they had never seen harder shooting than that offered by the birds on Thursday. Scores:

Pistakee: H. Dunnell 10, B. Dunnell 10, W. Dunnell 9, Pitzen 7—36.
Gorfield: R. Kuss 9, T. P. Hicks 9, Dr. Shaw 9, Neal 8—35.
South Chicago: Larkin 10, Reeves 9, L. C. Willard 9, Watson 7—35.
Eureka: Marshall 10, Bingham 9, Wright 8, Steck 8—35.
Garden City: J. Ruble 10, Amberg 9, A. Kleinman 8, G. Kleinman 7—34.
Chicago Shooting Club: W. P. Mussey 9, M. J. Eich 9, Stone 8, R. B. Organ 8—34.
Blue Island: Krueger 10, Boeber 9, Geo. Roll 9, Borman 6—34.
Dixon: Troop 9, Smith 8, Parkhurst 8, Norris 8—33
Prairie of Chicago: Comely 9, Parker 8, Ehlers 8, Dicks 7—32.
Audubon: McFarland 9, Von Lengerke 9, Frothingham 8, Place 7—32.
Peoria: Portman 9, Sammis 8, Leisey 8, Heilman 6—31.
Evanston: Dilg 10, Schmidt 9, Franklin 7, Jay Smith 5—31.
Gilman: Fortier 10, Tate 8, Madden 7, McBarnes 6—31.
Genesseo: Powers 10, Laflin 9, A. Henry 6, Hasbrugh 6—30.
Douglas: Lansdon 8, Stannard 8, Carter 7, Glover 6—29.
Alpine: Tornette 8, De Paola 7, Barto 7, Simmonetti 6—28.
Elgin: Doe 8, Freeman 7, Adams 7, Nish 6—28.
Duck Island: Shepard 8, A. Price 7, Clark 7, Fahnestock 6—28.
Prairie of Evanston: Peterson 8, Zeek 8, Higginton 6, Harloff 5—27.
Grand Crossing: Roberts 7, Ruple 7, withdrew.
Henry G. C.: Wood 7, Forrest 6, withdrew.

THE OPEN TOURNAMENT.

At the conclusion of the State target event, the L. C. Smith cup race, the target traps were thrown open to all present. A mixed lot of inanimates was used, bluerocks, empires, etc. The weather was none too good at any time for the sport, and on Thursday, a windy day, the shooting was extremely difficult, the targets dancing and dodging in a way which made a straight score something rare and valuable. The entry at no time was very large in the target events, and by Thursday evening had dwindled perceptibly. The beastly Chicago weather took much of the life out of the sport. The bulk of the shooting was at $1.50 sweeps. Scores:

Tuesday, First Day.

At the close of the State events there began a red-hot contest among the cracks at live birds in the open sweeps. This was on Thursday afternoon, when the weather was hard for shooters and good for birds. The best of the shots present had trouble to make a good showing under the circumstances. Powers continued his consistent performance by getting 10 screamers straight, and was tied by Bingham, Harry Dunnell, Abe Kleinman and Von Lengerke. The birds evidently had the best of the game. Score, 10 live birds, $7.50.

THURSDAY.

C. Powers, Ed. Bingham, H. Dunnell, Abe Kleinman and O. von Lengerke, 10; C. W. Budd, L. C. Willard, G. Kleinman, Simpson, Kolanczik, J. A. Ruble, H. Boltenstern, S. Palmer and W. Dunnell, 9; N. E. Money, Fred. Gilbert, Abbott, Paterson, Hicks, Kuss and A. E. Searles, 8; Tom Marshall, Dr. Frothingham, George Roll and J. R. Graham, 7; Kibber 1, Boulfield 4, C. M. Price 5, Conley 5.

On Friday the weather was clear and cold, and the wind was so strong in the early part of the day that the birds were puzzling to the best of the enthusiasts who lingered at the traps. The shooting was confined to miss-and-out sweeps. Toward evening the birds let down a bit, and the scores ran higher at the finish. Friday practically concluded the tournament both at live birds and targets, there having been but a day and a half of live bird shooting and three and a half days of target shooting open for non-residents of the State. Scores in the nine miss-and-outs were:

COMMENT.

The entry of the Du Pont Gun Club, a newly incorporated body, including some of the best shots in the State, was received in the State team championship event with some demur, it being alleged that the club was not regularly a member of the Association. At the talk of a protest the entry of the team was withdrawn.

Dr. and Mrs. D. H. Day, of Duluth, were present and apparently enjoying themselves. Mrs. Day's shooting was of a sort which asks no odds of the best, and her appearance at the score was always the signal for the gathering of interested groups of spectators. Mrs. Day handles the shotgun with a grace and effectiveness rarely seen among the women who shoot at the trap. Dr. Day has in part recovered the use of the hand which was so seriously injured some time ago, and is now enjoying rugged health. He and his wife have attended several shoots on the Western circuit this season.

Chan Powers, winner of the Board of Trade badge, the L. C. Smith cup, the City Hall, Lake Front, etc., did his shooting with a Parker gun. His target load was U. M. C. Smokeless 3in. shell, 3¼drs. Du Pont, 1¼oz. No. 7½shot. On live birds he shot the 3¼in. Green Trap shell, 45grs. Du Pont, 1½oz. Nos. 7½ and 7 shot.

Speaking of mayors, we had three at this tournament—Mayor Marshall, of Keithsburg; Mayor Allen, of Peoria, and Mayor Jake Renm, of Blue Island. Jake was a member of the board of directors and did efficient hustling at the shoot. The people out at Blue Island have elected Jake mayor ever since he was eight or ten years old, and he has a cinch on it for the rest of his natural life. Once he was sick and forgot all about the election, but he came in returned as mayor just the same. It makes no difference how many votes the other fellow gets, Jake Rehm is the only accepted mayor of Blue Island.

Mr. Lou Ehrhardt, of Atchison, was present for only one day of the tournament, but his absence was mentioned with regret by a great many.

Mr. F. H. Hollister, of Chicago, went well to the front in the race for the Smith cup, and says he will win it next year sure.

The ties in the Board of Trade badge divided the money before they began to shoot down to a finish. When the question was put to the ties on 10, Chan Powers was the only one who wanted to shoot it out. He said afterward that had he done this he would have stood to win about $1,000 at this tournament, supposing the entry next year to be about what it was this.

Dick Merrill and Charlie Grimm were absent from the shoot this year, and Chan Powers and Charlie Budd were consequently desolate. These side partners have heretofore been part of the fixtures at this event.

Noel Money has attended two shooting tournaments in Chicago in May and June. At the first one it snowed, and at this one it was too cold to snow. I know he will like the place.

Tom Laflin, as usual, went into the 10 hole on the badge. He says he would rather have the gold watch he got than to have the badge.

I regret to say that S. A. Tucker has laid aside the old shooting coat which he has worn for twenty years. Mr. Tucker now appears in a wide-ribbed corduroy which can stand alone, and is audible at the distance of a block.

Shooters at a shoot do not always know what they are shooting for. I hope that they will not forget the following contributors of cash: E. S. Rice $100, John Watson $100, Decatur Gun Club $50, Winner diamond badge 1896 $50, Audubon Gun Club $25, Evanston Gun Club $20, Garfield Gun Club $10. C. S. Wilcox $10.

Harvey McMurchy did some fine work at the target traps, but was obliged to leave town at the middle of the week.

Italian Joe, of the Alpine Gun Club, the best known plover shooter on earth, was one of the characters of the shoot. I asked him if he was shooting the old scatter gun which I had seen him use on plover, but he said, "No, I shoot-a one-a dem Ella C. Smitta gun now."

Chan Powers's double victory at live birds and targets has

Peoria cannot hold a shoot, but the last heard of Pres Fahnestock and his friend the Mayor of Peoria, they were walking down the railroad track toward home, with their grip sacks carried at a merry angle; and as they looked back over their shoulders at the city of Chicago, they sang a mellifluous duet, the chorus of the old song which begins, "Oh, I dont' know, you're not so warm!"

But we have no 10-gauge rules now.

At last Chicago is modern.

E. HOUGH.

[1206 BOYCE BUILDING, Chicago.

Connecticut Trap-Shooter's League.

DECORATION DAY AT NEW HAVEN.

THE second tournament of the Connecticut Trap-Shooter's League was held at New Haven on May 31 (Decoration Day). The weather was by no means favorable for a large gathering, as heavy rain had poured down since 5 P. M. on the previous evening, and was still coming down with a melancholy persistence when 9:30 A. M., the hour for starting the shoot on May 31, arrived. The clouds every now and then gave out some hopes of better things later in the day, and we understand that certain persons of known probity saw the sun for a few minutes about 8 o'clock, or may be earlier. At any rate the sun did come out about 11:30 and stayed out, making himself a welcome guest by drying everything, even wet sweaters, and giving everybody a chance of a sunbath on the club house porch.

As may be imagined from the phrase "wet sweaters," the boys could not be kept from the traps when once they had reached the grounds. It could rain all it wanted to, but Connecticut isn't a dry State and its trap-shooters don't object to a little water—externally, that is. So it came about that the first two programme events, and an extra to "warm up," were all shot with a steady and wetting rain falling. Then came the change and all was lovely.

THE ATTENDANCE AFFECTED BY RAIN.

But the attendance was affected by the downpour of the earlier hours. Hartford shooters were expected, but none showed up. Meriden sent a squad, but at least another squad had signified its intention of being on hand to take the morning train for the "City of Elms." Windsor Locks, too, was hampered in its efforts to get up a full squad for the team-race, owing to the failure of some of the members of the gun club to put in an appearance. Bridgeport, however, was the banner club among the visitors. Messrs. Blakeslee and U. M. C. Thomas brought a delegation of 14 shooters to the grounds, and they shot right along and made their presence felt when it came to drawing down the moneys dealt out by Cashier Gould to those who "were in for money." The home club had enough shooters on hand to make up almost three teams, the services of Edwards being pressed in to make up the sixth in the third team. In addition to the 42 shooters taking part in the team-race, there were several others unattached, some students from Yale showing up in the afternoon for some practice after their victory in the intercollegiate race with Harvard, Princeton, Columbia and Pennsylvania on Saturday last.

LUNCH, MOSQUITOES, ETC

Although there were not as many shooters present as would have been the case had the weather been fine from the start, there were enough on hand to keep the five traps hustling to get through the programme before nightfall. The home club had arranged everything with a view to the comfort of its guests. The club house was thrown wide open, and a capital lunch was provided free to all.

There were other guests on hand in addition to the shooters, and these guests were neither welcome spectators nor idlers who had just dropped in to look at the shooting. On the contrary, they were as busy as possible all day, and kept others busy, too. These guests were a gang of the most outrageously large and black mosquitoes, who apparently hadn't had a thing to eat since Fast Day. Where they came from it is hard to say, although the swamp behind the club house looked a little suspicious. President Clark and Mr. Bristol, of the home club, accounted for their presence by openly stating that the Meriden boys had brought them down in their grips and turned them loose out of spite. Two very large ones, however, were positively traced to Van Dyke's grip, and this is quite likely, as Van had only left his New Jersey home the night previous. Anyway, there were mosquitoes to give away; we can vouch for that.

President M. H. Clark brought his gun along, but shot only in the team race, preferring to take a hand as scorer, referee or any old thing, so that the attending shooters could have all the shooting they wanted. To Mr. Clark and Mr. Bristol most of the success of the shoot must be given; Mr. Bristol, in particular, was always busy one way or another, and had been on the ground since 7 o'clock preparing everything for the 9:30 opening; there are very few men who can boast "three score years and ten" who can equal Mr. Bristol in enthusiasm, energy and capacity for work. Mr. Gould, as on former occasions, acted as cashier, and did his work for the most part unassisted, and did it most excellently.

THE TEAM RACE.

The team race was, of course, the main feature on the programme. New Haven entered three teams; Bridgeport had two teams on hand, while Meriden and Windsor Locks had one each. The race is at 40 targets per man, 20 known angles and 20 unknown angles.

The known angles were shot first, the teams shooting as a whole, not being split up. The order of shooting was decided by lot, the teams going to the score in the order designated by numbers drawn out of the box. Known angles were disposed of first, and at this style of shooting the New Haven No. 1 took the lead, breaking 108 out of the 120 shot at. The Meriden team was second with 103. Then came New Haven No. 2 with 96 breaks, closely followed by Windsor Locks and Bridgeport No. 2 with 93 breaks each. Bridgeport No. 1 was next with 91, New Haven No. 3 being last with 75.

Then came the unknown angles. At this game New Haven No. 1 increased its lead by breaking 104 to 102 by the Meriden team, Bridgeport's two teams and the Windsor Locks team all tied on the unknown angles with 87 breaks each, New Haven No. 2 dropping down to 84. New Haven No. 3 bettered its total made on the known angles by scoring 77 at unknown angles. It is worthy of note that while so many people *say* they can break more targets at unknown angles than at known angles, yet the New Haven No. 3 was the only team to make more at unknown angles than at known angles. The combined totals of all the teams for each style of shooting show: Known angles 659 breaks out of 840 shot at; unknown angles, 628 breaks out of 840 shot at, these figures give an advantage of 31 breaks to the known angles.

The team averages were: New Haven No. 1 88.3, Meriden 85.4, Windsor Locks, Bridgeport No. 2 and New Haven No. 2 75, Bridgeport No. 1 74.1, New Haven No. 3 63.3. (In the scores of the New Haven No. 3 team, Brown shot in place of Hazel in the second half.) The detailed scores were:

New Haven No. 1.

	Known angles.	Unknown angles.

THE PROGRAMME EVENTS.

In addition to the team race there were ten events on the programme. All these events were shot off, and also an extra at 10 targets, No. 11 in the table below. A straightaway miss and-out, 50 cents entrance, brought the shoot to a close. This had eleven entries, the results being: Van Dyke and M. A. Beers 6, Parker and Coates 5, Hull 4, Edwards and Jordan 3, Gaines and Videon 1, Cowee and Claridge 0. The conditions of this race were all straightaway birds, the shooters going back 6ft. at the end of each round until they reached the club house, which they did at the end of the 4th round, finishing from that mark, about 24yds. rise from No. 3 trap. Scores in the programme events were:

Events:	1	2	3	4	6	7	8	9	10	11

Five thousand seven hundred targets were thrown during the day.

EDWARD BANKS.

Chicago Trap-Shooters.

CICERO GUN CLUB.

OAK PARK, Ill., May 31.—The Cicero Gun Club celebrated Decoration Day by giving a live-bird and target shoot on its grounds (Desplaines River and Madison street). The birds were a fair lot considering the time of the year, and the day was perfect for shooting.

The sweepstakes were all small, owing to the limited number of shooters present; but the enthusiasm was well maintained because of the equality of the shooting, and there were many pretty shots scored at straight away drivers and quick-turning birds. The targets were a hard lot, as the electric pull was in splendid shape and threw them very swift, and the scores were generally disappointing. The first two events were field shooting (we called it jacksnipe), the shooter being 20ft. in front of the traps, walking parallel with the row of traps with the gun over his shoulder. The programme of events, with results, is as follows:

No. 1, 20 targets, jacksnipe, unknown traps and angles, entrance 50 cents: Lowrey 13, Von Platen 10, Barnard 9.

No. 2, 10 targets, jacksnipe, same, entrance 25 cents: Von Platen 5, Barnard 5, Lowrey 8, Weber 9.

No. 3, 5 live birds, entrance $2, two moneys: Barnard 3, Weber 3, Von Platen 1, Lowrey 3. Tie shot off: Barnard 2, Weber 2, Lowrey 2.

No. 4, 5 live birds, entrance $2, two moneys: Barnard 3, Weber 4, Von Platen 2, Knott 3, Lowrey 3, Dr. Mathews 4.

No. 5, same: Knott 5, Barnard 4, Dr. Mathews 4, Weber 3.

No. 6, 7 live birds, entrance $2, two moneys: Knott 7, Heal 7, Barnard 6, Dr. Mathews 4, Weber 3.

No. 7, 7 live birds, same: Knott 5, Barnard 7, Halligan 3, Stickles 6, Noal 6, Weber 5.

No. 8, 15 targets, known traps, unknown angles, sweep, 50 cents: Knott 11, Von Platen 9, Weber 5, Neal 11, Lowrey 10.

No. 9, 10 live birds, entrance $3 50, three moneys:

Barnhrd	2201.01120—7	Neal	2111022222—9
Knott	•2222122•2—9	Stickles	2121220220—8
Beling	2010111222—8	Weber	11110•2•20—6
Steiger	0222100•00—6	Halligan	1022112111—9

No. 10, 15 targets, known traps, unknown angles, sweep 50 cents: Steiger 9, Richards 11, Halligan 11, Lowrey 10, Neal 10.

No 11, 15 targets, same: Neal 10, Lowrey 11, Richards 10, Halligan 10, Steiger 8.

No. 12, 15 targets, same: Beling 5, Halligan 5, Steiger 4, Neal 12, Cutter 10, Richards 6, Long 2, Lowrey 8, Knott 3.

No. 13, 15 targets, same: Halligan 8, Beling 4, Weber 4, Richards 10, Steiger 8, Neal 13, Cutter 8, Long 5.

No. 14, 5 live birds entrance $2, one money: Cutler 3, Barnard 5, Neal 0, Richards 3, Halligan 4, Lindley 1.

CICERO.

Dedham Sportsman's Club.

BOSTON, Mass., May 31.—The Dedham Sportsman's Club held an all-day shoot to-day. The attendance was light owing to the threatening weather, it being showery nearly all day. In the following scores it will be noticed that some excellent shooting was done by both Mr. Cole and Mr. Leverett, the former having seven clean scores to his credit and the latter five. There were 1,530 bluerocks thrown, out of which the members managed to secure eighteen clean scores. All events were at 10 targets each:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18
Smith	7	9	7	7	9	9	9	9	10	7	10	6	10	6	9	8	10	8
Cole	10	10	8	10	8	8	9	10	8	9	8	10	8	7	9	8	8	10

W. D. KENYON, Sec'y.

North Dakota State Sportsmen's Association.

CHICAGO, Ill., June 5.—The third annual tournament of the North Dakota State Sportsmen's Association will be held at Fargo June 16-17, an excellent programme being offered by the managers, Messrs. C. E. Robbins, W. W. Smith and H. E. Magill. The convention will be held the evening of June 16. The magautrap and bluerocks will be used under A. S. A. rules. North Dakota has a State gold badge for the target championship at 50 bluerocks, $3, winner to take 50 per cent. of next year's entrance money.

E. HOUGH.

1206 BOYCE BUILDING.

Portsmouth Gun Club.

PORTSMOUTH, N. H., May 31.—The members of the Portsmouth Gun Club held an all-day shoot at their grounds to-day. They had as guests four members each of the Haverhill (Mass.) and Exeter clubs. The Somersworth Club also intended to participate, but the stormy weather prevented. Notwithstanding the rain excellent sport was enjoyed and some good scores resulted. Dinner was served in the club house, and a fine menu was prepared by the steward, assisted by the ladies of the club.

The day's scores resulted as below, President Newick, of the Portsmouth Club, shooting with the Exeter men in the team shoot. The out-of-town guests expressed themselves as much pleased with the manner in which they were entertained by the local club. All events were at known traps, unknown angles, five traps, six men up, walk-around. The division of sweepstakes was under the Rose system, which proved very satisfactory.

The team race resulted as follows:

Exeter—Newick 11, Colton 8, Bickford 11, Langley 14—44.

Haverhill—Laighton 14, Miller 9, Blake 9, Lambert 10—42.

Portsmouth—Frizzell 13, W. I. Philbrick 10, H. E. Philbrick 9, Noone 10—42.

Sweepstake scores are given below in tabulated form:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Targets:	10	15	10	10	15	15	10	10	10	10	5	10	10	10	10	10

Answers to Correspondents.

No notice taken of anonymous communications

T. S., Philadelphia, Pa.—Please give me the names of bass fishing grounds near New York. Ans. J. E. Waterstone, Greenwood Lake, N. Y.; Bradford Weeks, Milton, N. J.

P. McC., Yonkers.—Please state in your next issue if a bullet any size fired from a rifle straight up in the air has got the same velocity when it strikes the ground as it had when it left the muzzle of the rifle from which it was fired. Ans. No. The resistance of the air reduces the velocity, so that it is considerably less at the moment of impact than at the time of firing.

PUBLISHERS' DEPARTMENT.

Three Great Conventions.

THE Young Peoples' Society of Christian Endeavor meets at San Francisco, Cal., July 7-12.

National Educational Association at Milwaukee, Wis., July 6-9.

Benevolent and Protective Order of Elks at Minneapolis, Minn., July 6-9.

These are all National conventions, and delegates and others interested should bear in mind that the best route to each convention city from Chicago is via the Chicago, Milwaukee & St. Paul Railway. Two trains daily via Omaha to San Francisco; seven through trains daily via four different routes Chicago to Minneapolis; six daily trains Chicago to Milwaukee. Choice of routes to California, going via Omaha or Kansas City, returning via St. Paul and Minneapolis. Through trains vestibuled and electric lighted. All trains run on absolute block system. Low excursion rates to each convention. Ticket agents everywhere sell tickets over the Chicago, Milwaukee & St. Paul Railway, or address Geo. H. Heafford, General Passenger Agent, Chicago, Ill.—*Adv.*

A Vacation Trip to the Tennessee Centennial and the Mountains of Western North Carolina.

WHERE can you go for a short vacation and have a more delightful time than to make a trip to the Tennessee Centennial Exposition at Nashville? The round trip rate, by rail from New York, is only $25.30, good for ten days. The Pennsylvania and Southern Railway operate a through line of Pullman drawing-room and sleeping cars, leaving New York daily at 4:30 P. M. The route is through the "Land of the Sky," Asheville, N. C.—a more delightful spot on earth cannot be found. Stop over and visit the Vanderbilt estate and numerous other attractive points of interest. Write to the New York office, 271 Broadway, New York, for information. Copies of illustrated pamphlet of summer homes and resorts mailed upon application, enclosing 2 cents.—*Adv.*

President McKinley's Trip South.

THROUGH "THE LAND OF THE SKY."

THE President and party will leave for Nashville, Tenn., on June 7, to visit the Tennessee Centennial Exposition. On his return he will stop over at Asheville, N. C., in "The Land of the Sky," for a day or two. This point is located directly on the line of the Southern Railway, the popular route between New York and Nashville. The programme of entertainment at that point has not yet been announced, but arrangements have been made at the Battery Park Hotel for his party; also, he will make a visit to the famous Biltmore estate. There are numerous points of interest around the city which will make his stay in "The Land of the Sky" pleasant.—*Adv.*

Pantasote.

PANTASOTE is a new material manufactured by an old company. It is adapted for a variety of uses. In one form it is used for upholstering yacht interiors; in another for making tents. Pantasote mackintosh is light, warm and waterproof, and as it contains no rubber and is always soft and pliable, it is particularly adapted for hunting coats. Gun cases are also made from pantasote, which do not rust the gun as do those made from rubber composition. In its heavier form pantasote resembles leather, and is used as a substitute for it, while in its lighter form it is more nearly like canvas in appearance and usefulness. Samples and particulars will be sent to those mentioning FOREST AND STREAM and inclosing stamp. Address, Pantasote Co., 39 Leonard street, New York.—*Adv.*

"Among the Ozarks."

THE LAND OF BIG RED APPLES, is an attractive and interesting book, handsomely illustrated with views of South Missouri scenery, including the famous Olden fruit farm of 3,000 acres in Howell county. It pertains to fruit raising in that great fruit belt of America, the southern slope of the Ozarks, and will prove of great value, not only to fruit-growers, but to every farmer and home-seeker looking for a farm and a home. Mailed free. Address J. E. Lockwood, Kansas City, Mo.—*Adv.*

Mullins's Metal Boats.

W. H. MULLINS, Salem, O., recently shipped a carload of double-ender pleasure craft and "Get There" duck boats for use on the park lakes at Denver, Col. Also two "Get There" ducking boats were recently sent to London, Eng., to a large concern who will use a large quantity of them.—*Adv.*

JOHN WOOD, JR., 76 Washington street, Boston, Mass., issues for free distribution a calendar of the fish and game seasons for the New England States.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JUNE 19, 1897.

VOL. XLVIII.—No. 25. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

ATTENTION is directed to the new form of address labels on the wrappers of subscribers' copies. The label shows the date of the close of the term for which the subscription is paid.

The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us for a new or renewed subscription. Unless specially requested to do so, we do not send separate receipts.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii.

And let me add this more, he that views the ancient ecclesiastical canons, shall find hunting to be forbidden to churchmen, as being a turbulent, toilsome, perplexing recreation; and shall find angling allowed to clergymen, as being a harmless recreation, a recreation that invites them to contemplation and quietness. Walton.

The Forest and Stream's Platform Plank.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1897.—No. VI.

COLORADO.

Act of April 16, 1897.—Sec. 27. It shall be unlawful at any time to sell or expose for sale, or to cause or suffer to be sold or exposed for sale, or to kill, capture or otherwise take with intent to sell, or to offer to any common carrier for shipment, or to ship by any common carrier with intent to sell, the head, hide (tanned or untanned), horns or meat of any animal mentioned in this act.

THE FOREST LAKE CLUB CASE.

WITHIN recent years wildwood lake properties have appreciated in value in an enormous degree. The increased popularity of angling, the growth of the outing idea, the participation of the family in the sports of the forest and stream, and the tendency toward club life and fishing preserves—all these have created a demand for fishing waters adapted to club purposes; and as the available lakes have been taken up and the number remaining for such purposes has decreased, the market price has advanced. An instance of the worth of such properties is afforded by the case of Forest Lake Club.

Forest Lake is a charming sheet of water, situated amid the hills in the southeastern corner of the town of Claverack, in Columbia county, New York. It is eleven miles from Hudson, and three and one-half hour's ride from New York city by the Harlem Railroad. The lake, with the entire land surrounding it, is owned by the Forest Lake Club, of Hudson. The organization of the club and the acquisition of the property were due chiefly to the enterprise of the president, Mr. G. Hills, who was the first to discover the charms of the lake, and to recognize its adaptability to club purposes.

The lake is 1,325ft. above tide-water, and from the basin in which it nestles between the forest-covered hills a far-stretching prospect is commanded over a landscape of hill and valley and mountain slopes. The entire range of the Taghkanic Mountains is in view, with the Berkshires beyond. Among the summits is that of Monument Mountain, on the top of which is the monument which marks the meeting there of Massachusetts, Connecticut and New York. In all the view from the club house of well-named Forest Lake not a house is to be seen, and from the entire lake circuit only one house is visible, and that fifteen miles away. Here, within a short drive or bicycle spin from business, the members find themselves indeed in the woods, with the perfect isolation and freedom which others less favored must travel far to secure. A model club house has been provided, and there are boats and boat house, an ice-house, and all the conveniences and equipments of a sportsmen's club. The lake is well stocked with small-mouth black bass, brown trout and pickerel.

This was the situation when, not long ago, the thriving village of Philmont, looking about for a water supply, cast covetous eyes on Forest Lake. In this body of pure water high up among the hills, the town authorities saw a natural reservoir having a fall of 150ft. to the highest point in the village. It was admirably suited to their purpose and they determined to have it. The first advance to the club was an offer of $500 for the privilege of taking water from the lake. Regardful of the law governing such matters, under which the village could have recourse to condemnation proceedings to acquire the lake for a water supply, the club in turn offered the village $500 to keep hands off. The Philmont people then raised their offer to $1,000, while the club held out for $5,000, and offered to go through the form of condemnation proceedings with an understanding that the Commission should make the award in that sum. This was refused; and the village then had recourse to condemnation proceedings. Judge Chester, of Albany, appointed as commissioners Messrs. J. H. Peck, of Troy, and Melius and Meade, of Albany. The Forest Lake Club, concerned more for the principle involved than for the actual money at stake, summoned expert witnesses experienced in buying and selling lake properties and versed in their values as summer resorts, as club properties, and for reservoir purposes. The valuations which these experts put upon the lake and surrounding lands ranged from $15,000 to $25,000. The commissioners rendered their finding last month, awarding the club $9,000 as compensation for the damage caused to the lake by the raising and lowering of the waters, and for the impairment of its commercial value.

THE NEW YORK ASSOCIATION.

A FEW years ago the annual conventions of the New York State Association for the Protection of Fish and Game were so exclusively given up to trap-shooting that all other purposes were lost sight of or systematically ignored. To remedy this condition of affairs the Association was reorganized, on a plan by which provision was made for two meetings in each year, one purely deliberative in the winter, and another for a shooting tournament in the summer. An important and very effective device for giving each of these two activities its fullest scope was the provision of two sets of officials, so that both interests might be maintained by a guiding control actually and actively concerned in their promotion. The plan has worked extremely well; the January meetings in Syracuse have been well attended, and the June tournaments under the management of various clubs have been large and successful events.

A feeling has been growing that it would be expedient, when the time should come, to separate the two activities entirely; to make the State Association for the Protection of Fish and Game simply and purely what its name implies, and to give over the tournaments to a new and separate and wholly independent organization. The time for this, it is thought, has come; and a proposition to that end was made by President Gavitt at the Auburn meeting last week, when a committee was appointed to put the proposal into effect.

Such an absolute division is doubtless desirable. For one thing, it relieves that certain air of grotesqueness which attaches to a trap-shooting meeting held under a long official name whose fitness and meaning are, under the circumstances, a mystery to the uninitiated. The New York Shooting Association, or Shooting League, or Trap League, or some such title, will be less cumbersome and will have the merit of pertinency and meaning. We anticipate for both organizations—the old and the new—many years of useful activity and successful achievement.

PUBLIC FISH IN PRIVATE WATERS.

CONNECTICUT has now joined the list of those States in which the Fish Commissioners are forbidden to stock private waters with fish provided out of the public funds. A law was enacted at the late session of the Legislature, modeled upon statutes in force elsewhere, making public any waters supplied with fish by the Commission. The purpose of such a restriction is of course to put a damper upon the numerous owners of trout streams and bass lakes who are eager to have them stocked for their own private advantage at State expense. Most people count as clear gain and honestly come by whatever they can get for nothing from the public Treasury, whether a salary for services they do not render, smuggled goods, seeds from Washington or fish fry from the State hatchery. Application blanks for fish fry usually contain a statement that the waters which the applicant desires to have stocked are public and not private; but experience has shown that some men holding high positions in the commercial community will cheerfully lie about this, and are not to be trusted. The system of making stocked waters open to the public is the first successful expedient to get the better of such individuals.

It has been suggested by an authority in whom we repose confidence that in making such a provision, even with so good a purpose, a Legislature may have framed a law which will not stand the test of the courts, since it might, under certain conditions, involve an unjust interference with common-law rights.

For instance, if one of several landowners, through whose domains a trout stream runs, should stock his part of the stream with fish from the State hatchery, he would at the same time be stocking the entire stream, both on his own property and on the adjoining property of his neighbors as well, so that under the action of the law their waters as well as his would be declared open to the public, and their right to forbid trespass would thereby be invalidated. Whatever might be the merits of such a case, the principle remains that public funds should provide public fish for public waters, and private waters should be replenished at private expense.

SNAP SHOTS.

Among the historic hoaxes of our times was that recently perpetrated upon the Treasury Department at Washington by a chemist who claimed to have discovered the philosopher's stone, or a process of manufacturing gold from baser metals. As a result of investigation we are gravely assured by the Treasury officials that there is nothing in the scheme; it won't work. The world will have to wait a while longer for the secret of transmuting common clay into gold; and yet we need not despair, for transformations not less remarkable are accomplished every day. It is an easy trick for an Adirondack hotel chef to transmute close-time venison into "mutton," and for a New York restaurant-keeper to change common American quail into imported "royal birds." Such culinary achievements will soon be counted among the lost arts in Colorado if the new law shall be enforced, which forbids including on bills-of-fare any game killed in the State, whether designated by its own proper name or by any false name.

In Louisville and Kansas City the art has promoted industries of large commercial importance. To the office of our frequent contributor, J. M. Rose, of Little Rock, Ark. repaired the other day a fisherman, for advice about net fishing. He wanted to seine Arkansas waters for shovel-bill catfish, buffalo, gars and drum, for the supply of factories in Louisville and Kansas City, with which he had contracts to furnish 5,000lbs. of such fish daily, to be made up into canned Columbia River salmon. The Arkansas law was an obstacle to the proposed seining; but the catfish stock of the Southwest is unexhaustible, and the supply of salmon need never give out.

The abbreviation of the Maine moose hunting season to the last fifteen days of October, and the prohibition of deer hounding in the Adirondacks, have combined to divert from those hunting regions a large number of sportsmen who are turning to Canada for their fall campaign. The outlook is for a great incursion of American hunters into the Provinces.

The plan of Government game preserves outlined in our issue of June 5 by Mr. W. G. Van Name has attracted wide attention and the indorsement of favorable opinion. Last week we printed comments upon it from Mr. Robert B. Lawrence, chairman of the Committee on Legislation of the New York Association, and of Mr. S. F. Fullerton, Executive Agent of the Minnesota Commission. To-day we publish other communications from others whose opinions are not less entitled to respect. Next week we shall have a paper on the game parks of Ontario, written by Dr. G. A. MacCallum, President of the Fish and Game Commission of the Province, in which it is pointed out that what Mr. Van Name proposes for the United States has already been accomplished in a measure in the Provinces.

Minnesota has abolished its discrimination against non-residents. Deer hunting visitors will no longer be required to take out licenses. Future effort will be directed in the line of preventing the marketing of game. There is probably in the whole Union no point outside of No. 346 Broadway, New York, where faith in the efficiency and sufficiency of the FOREST AND STREAM'S Platform Plank is firmer than in the office of the Minnesota Commission.

The Sportsman Tourist.

ON THE EDGE OF THE GRAN CHACO.

TOLD BY WILLIAM KINGSBURY TO WILLIAM H. AVIS.

Chapter V.

THE next three days were very busy ones for us. H. had to buy a full outfit in the horse line. After scouring the country for a couple of days he finally found a couple which he said suited him. They cost him about $70, including a saddle, lariat and bridle.

Fate seemed to snatch some of our belongings from us at times, only to return them at some future period. When we had parted with Chena we never expected to see her again, but fate had provided otherwise; and so it turned out with Jim's horse Zaino, which disappeared on the night of the dance of the little Angelito. The fourth day after H.'s arrival a Goucho boy drove up to the front of the house and tied his horse to a post.

"What a miserable looking animal that is," Jim remarked; "I'm going over to have a look at him." The horse did appear miserable, indeed; its bones nearly protruded through the skin, and on its back were a number of sores; the poor spine stood up in a knotty ridge, and the tail and mane had been cut short. We sat watching Jim, as he went first from one side of the horse then to the other, and we noticed that he was making a very close examination. Suddenly he called out, excitedly: "Come here, quick! Look this horse over closely and tell me if you ever saw him before?"

"For heaven's sake, Jim! This poor rack of bones can't be—and yet I do believe it is your horse—Zaino."

"I know it's Zaino! There goes the saddle, and there goes the bridle after the saddle!' and he hurled them both as far as he was able. "Come, Zaino! come with me." Jim was madder than I had ever seen him, and there was a glitter in his eye. He tied Zaino near the shanty and was washing the horse's sore back when the boy made his appearance. He seemed puzzled for a moment, then, as he gradually took in the situation, he walked over to where Jim was and spoke to him in Spanish. "What are you doing with my horse? I want him right away," he said.

"Where did you get this horse and how long have you had him?" asked Jim.

"He belongs to my father, and he raised him from a colt."

"You lie!" shouted Jim. "Now, pick up your saddle and bridle and get out of here as lively as you know how." As Jim emphasized this command by administering three or four kicks, the fellow was not long in obeying orders. Snatching up the saddle and bridle he started off at a lively clip across the pampas in the direction of Soledad.

Don Antonio, who had witnessed all this, walked over to ask what it was all about. Jim explained matters to him and he said that Jim had done just right. "I'm afraid you'll have trouble with the boy's father, though," he said. "He's a regular robber and a very bad man. I don't like him. Everybody's afraid of him."

"He'd better not come bothering around me much. If he does he'll find one man who don't care a rap for him," Jim replied.

The boy had hardly been gone an hour when we saw a man mounted on a galloping horse coming across the pampas. "I say, Jim, I'll bet that's the old man coming after the horse himself," said H., who had been the first to observe the approaching horseman.

The horseman, a large, villainous-looking individual, soon dashed up to the shanty. He almost threw his horse on its haunches he stopped so suddenly. "Carramba! You give me that horse. What you mean by stealing him from my son? In broad daylight, too. You give him to me directly."

"Where did you get this horse?" asked Jim, coolly.

"I bought him three years ago. He's mine, and you better give him to me, quick."

"I'll give him to you when you bring to me the person from whom you bought him and not before."

"Carramba! you defy me? Be careful, be careful how you play with me." As he hissed the last words he slipped his hand toward a murderous-looking horse-pistol which he carried in his belt.

"Be careful how you play with me or I will surely kill you," Jim replied grimly, as he whipped out his Smith & Wesson and aimed it full at the other's breast. "You can't have this horse," he continued. "He is mine, and here is the certificate which shows when and from whom I bought him." Jim here produced the certificate which showed his ownership of Zaino. "As for you, you are nothing but a contemptible thief. You stole this horse from me, and if I catch you around here again, you villain, I'll put some of these bullets clean through you! Now get out as quick as you know how."

Seeing that Jim was deadly in earnest, the half-breed did not wait for a second invitation to go, but, without another word, wheeled his horse, put spurs to him and dashed quickly away. He turned once in his saddle to shake his fist at Jim, but not until he was safely out of range. We never saw him again.

H. proposed that all hands go next day on a grand farewell hunt, to leave the Don and his family a good supply of meat before taking our departure. Daylight had hardly appeared when, followed by Chena and Tigre, we were on the move. H. was tall and loose-jointed, and why he had selected two horses so small that his feet nearly dragged on the ground puzzled Jim and myself greatly. Never will I forget that morning ride over the cañada of Soledad. H., anxious and eager, was in the lead, and as he went along, bouncing up and down on his little pony, it seemed that he would surely shake apart. Every joint in his body seemed to be working at once, and the flaps of his yellow tourist hat dangling loosely about his face, combined with his ill-fitting, fluttering clothing, to make him the most grotesque and comical sportsman I had ever looked upon. Jim and I followed in the rear and nearly fell off our horses with laughter at some of his ridiculous horsemanship. He was naturally such a good-natured, whole-souled person, however, that he did not mind our laughter in the least. In fact, he seemed to be pleased at his ability to entertain us.

We had covered perhaps five miles, and were following one of the numerous paths made by horses, cattle and other animals through the thick, high grass near the San Antonio, when, without warning, a drove of more than a dozen large ostriches almost sprang from under H.'s horse and were away helter skelter in all directions. Jim's Parker spoke, and down, heels over head, went one of the largest. Jim had caught him just as he was dodging behind a large ant-hill. H. put spurs to his horse and started wildly straightaway after a couple which kept the path we had been following. I fired at one as it swung into a path to the left, and had the satisfaction of seeing it drop. I wounded another, which Chena easily caught and made short work of.

All were now galloping like mad through the high grass, each in pursuit of an ostrich. The bird I was after stubbornly followed the zigzag twists and turns of one of the most crooked paths I had ever seen, and so gave but poor chance for a shot. Soon he came to a staight stretch, however, and his doom was sealed, for the Winchester keeled him over at about 40yds. Concluding that I had my share, I stopped on a slight rise of ground, where I could look down and see, now and then, the upper portions of Jim's and H.'s bodies skimming along above the top of the high grass. The grass was so tall that I could see very little of the horses. Watching H., I heard the crack of his rifle and a loud, ringing whoop, which told of success. Then I saw him bound 2 or 3ft. in the air and disappear. This sudden disappearance, I learned afterward, was attributable to the fact that just as he had dropped his ostrich his horse came to a natural ditch and took it on the fly, while H. flew into the air, coming down on the horse's haunches, ungracefully turned a back somersault, and landed on his back on the ground. After considerable trouble, with Jim's aid he managed to secure his horse and his ostrich, a very well satisfied individual indeed.

We had more game than we knew what to do with. H. had killed one, Jim two, and I three, counting the wounded one, which Chena caught. Besides these six, Tigre had run one down and killed it; so we had seven ostriches, and as we wished to take some venison back with us, we decided to take only the ostrich skins and best parts of the meat.

After our dinner of ostrich meat, we took a two hours' *siésta* in the shade, and then went for a swim. We were not long in getting the horses to the sandy shore, undressed, and mounted on our barebacked horses, were swimming them around in the river. We, horses and all, were enjoying our swim hugely when H. let out a yell and headed his horse for the shore. We were considerably puzzled and not a little alarmed until we saw an ostrich running along the edge of the river. As soon as H.'s horse reached *terra firma* he headed him full gallop for the flying ostrich, and we were entertained by the unusual sight of a perfectly naked white man mounted on a barebacked horse chasing a running ostrich and yelling all the while like an Indian. We soon caught the infection and joined in the chase, but only for a short distance, when the ostrich entered the high grass and we gave up.

While returning to the estancia, H., who was in the lead, stopped his horse suddenly, raised his rifle slowly and, taking a deliberate aim, fired. By the expansive grin of satisfaction which overspread his countenance we knew he had shot something. The something proved to be a fine, young gama buck. Before reaching the house H. stalked another.

The next day, Saturday, we spent in curing the deer and ostrich meat, so that Don Antonio and his family would have enough to eat in the meat line for some time to come.

Sunday was spent under the trees with the Don's family. Jim and I had been with these good people now for a month, and in that time we had enjoyed ourselves hugely. We had almost come to count ourselves as members of the family. That they entertained like feelings toward us was plainly evident by the half-hearted manner in which the songs were sung and the listless manner in which the guitar was played that afternoon. "It will be so lonesome when you all go away," said the old Don, for the fiftieth time that day, when we had gathered with the family for our last supper in their company.

Monday broke fine and clear; not a sign of cloud or mist could be seen. The atmosphere was so clear that objects ten miles away seemed to be but a mile or two from us. As we headed across the pampas in a northerly direction, hands, hats and handkerchiefs were waved until we were no longer in sight.

Our complete outfit consisted of our six horses, a pair of woolen blankets apiece, a tent, one rubber blanket to each man, a small amount of extra clothing, 10lbs. of syerba, 10lbs. of sugar, salt, pepper, 50lbs. of Italian biscuit, about 25lbs. of dried venison and ostrich meat, 500 rounds of cartridges apiece, 200yds. of manilla rope with which to tether our horses (lassos being too good for such work), numerous pots, pans and other utensils.

I rode Spotted Dick, and my pack horse was Santiago. Jim's horses were Zaino and Old Chub. Zaino had not recovered from his hard usage, still we could see that he was daily improving. H. named his horses Blanco and Queen Sabe.

We passed through a country of alternating prairie and thick monte that morning. The clean, pure weather and bright sunshine soon drove away the feelings of gloom that had hung over us all at the start. Game of all kinds was so abundant that we scarcely paid any attention to it. We had dinner on the edge of a wild monte, and took a three hours' siesta in the shade. Just before going into camp that evening we jumped a fine large buck gama. H. fired three times at not more than 75yds. and scored three straight misses. The buck did not attempt to run, but stood whistling and snorting until the last shot was fired, then turned and leisurely trotted away, completely disgusted at the poor marksmanship.

We went into camp near a heavy monte of algarroba, mandua and cactus, and a fine large lake literally alive with waterfowl. The mosquitoes were so thick that we got but very little sleep. We were compelled to keep the fire going all night, for a heavy smoke, but even the smoke did little good. The horses suffered considerably, and we were thankful when morning finally came. The light revealed each of us a sight to look upon; H. seemed to have suffered the most. There was scarcely a square inch of the exposed parts of his body without a huge swollen lump.

[TO BE CONTINUED.]

SHEEP AND SNOWSHOES.—I.

A Winter Hunt on the Summit of the Rockies.

Wherefore.

CHICAGO, Ill., May, 1897.—In this story blend Ai-so pom-stan, Pah-kuk-kus and an umbrella. These be evil agencies. Yet, as in all plays, there must be also a good fairy, so now appears that beneficent genius, the FOREST AND STREAM luck, for which let no man take credit upon himself.

It is known of all men that Ai-so-pom-stan is the great cow moose which stands upon the furthest peak of the high mountains. Ai-so-pom-stan is the maker of the wind. When she moves her ears slowly, the wind is light. When she fans very hard with her ears, there is high wind and storm. This the Blackfeet will tell you.

Pah-kuk-kus is the evil spirit of mischief who lives in the North, where the Crees hunt. Pah-kuk-kus is the ghastly joke-maker of the air. He comes to the lonely hunter, who is camped in the mountains, appearing sometimes as a whirling cloud of smoke or fire or dust. He tears away lodges, and destroys *caches*, and terrifies the hunter by his presence. He is a bearer of a great gun, which he shoots off as he approaches, or sometimes, as he disappears in a trail of smoky cloud. He causes things to disappear, and breeds trouble for the hunter and his friends. Malice is his thought, and he has no pleasure except to disturb and trouble those whom he pursues. He comes usually in the storm, and perhaps grows angry, and tears trees or breaks lodge poles. You may hear him howling as the storm goes by. When you hear the voice of Pah-kuk-kus, it is time to draw the blanket close about you and to keep good watch, for evil is to come.

An umbrella also is an evil influence. Therefore I trembled when I saw that Mr. McChesney, whom I joined at St. Paul on the way out to this country of the Blackfeet, had in his luggage an umbrella. Once a friend started with me to go fishing and he carried an umbrella much to my fear. Him I persuaded to check his umbrella, and leave it at the depot. Yet on that trip, such was the potency of this evil influence even in the summer time, this very man fell out of the boat and was near to drowing, and we took no fish at all. Had he carried his umbrella along all the way, methinks he had been still wetter and mayhap had found a watery grave. In the winter time and in the Rocky Mountains, an umbrella is still more bodeful, though our wise men have not told us of this, perhaps because they have rarely seen Pah-kuk-kus in ths form.

As to the FOREST AND STREAM luck, of that we shall hear duly.

Already we have spoken of the place where these things had their happening, out in the cup of the big plains, and on top of the ultimate range of the great Rockies, where the waters run three ways, into the Pacific, into the Gulf of Mexico and into the Hudson Bay; for in the Blackfoot country the headwaters of the branches of the Columbia, the Missouri and the Saskatchewan all come close up together in some great mountains of high rocks, where the ice never melts at all, and where the snow lies late in summer and in the winter is very deep. It is in these mountains that Ai-so-pom-stan lives, and I doubt not many other spirits. For, though you go to any other portion of the Rockies, from the Cordilleras to the Selkirks's, you shall not feel your skin creep as it does here. Over this region there spreads some wide, mysterious influence, such as you feel nowhere else. This spirit seems to be the guardian of the Grail of America, some jewel whose nature we do not yet know, but which is hid deep in these hills. This may be in the St. Mary's, or in the Two Medicine, or among the big mountains between them or just beyond them toward where the waters fall to the western ocean; but it is there, and feeling this as you approach these mountains at the cañon of America, your skin crawls. It crawls the more if it be in winter, when the mountains are garmented in white. The Indians pray to the tall Chief Mountain. "Here at thy feet the fallen years lie buried," they pray to this mountain, knowing somewhat of its august spirit. And Chief Mountain and the high St. Mary's offer no invitation to you, but repel.

For my part, I did not need to go into the St. Mary's at all, for I already knew how they appeared. I had seen them in a dream long ago. The wise men do not know where we go when we are asleep, and certainly I had seen these mountains, though I was never there in body before. So in body I went with the others to the Two Medicine, and now, whether I sleep or wake, I still visit these mountains in dreams, seeing them in all their snowy splendor, their mysterious, repelling, yet fascinating calm, white, and cold, and reserved and beautiful. If one could only write of this so that all others could see it so! But to really see this you must go to the home of Ai-so-pom-stan in the winter, and to do this you need something of the FOREST AND STREAM luck.

For all this country belongs not to the white men, but to the red men. It is on Uncle Sam's ground, where only fortunate ones may hunt. It is in Montana, but not of it. Nowhere in the Rockies may you legally kill the grand bighorn sheep when you have to climb up to him on snowshoes. Montana say this is illegal; but Uncle Sam, giving to FOREST AND STREAM all good things as a matter of course, said through the Indian Agent, Major Steell, that we might climb to the summit if we liked, and might kill a few head of bighorn rams (not any ewes) if we were able to do so. So far as I know, there has been no other party of white men from the States who have gone into the Rockies in the winter and made a successful camp and a successful hunt for mountain sheep and goats. If they have done this, they must have done it on some Indian reservation, and I know of no other where the sheep and goats could be thus obtained at that season. Therefore, when Schultz and Jackson and Joe Kipp, of the Blackfoot agency, sent on for McChesney and myself, they offered us one of the rarest treats which could perhaps be attained by an American sportsman, and a trip in which there would seem to be some news such as not every journal of sports has ever chronicled. But then, this is FOREST AND STREAM, to which all things come. Thus did the FOREST AND STREAM luck take us to the heart of things, and ultimately baffle even Ai-so-pom-stan and the evil Pah-kuk-kus. So I shall say now, lest there be those who see no prophecy in these opening words, that we did really go into the Rocky Mountains in the dead of winter. We walked over their very tops on the snow and ice. We

lived in camp, some of the time with not even a tent, when the thermometer was known to be 27° and very possibly was 35° below zero. We climbed the white mountains on snowshoes, and we got to the sheep and the goat, and brought out the rarest trophies which can come to hunter in this country, doubly valuable to us in view of the season in which they were taken and the wild surroundings of the unique chase which gave them to us. I do not know of a rarer hunt than this. I do not know of any other country where it would have been possible, nor can I think of any hunt in which I would rather have been engaged.

Al-so-pom-stan Active.

On the first day of our arrival at Blackfoot station, the ears of the old cow moose must have been going at a great rate, for a fearful blizzard swept down from the north and shut in the little prairie town in a sheet of white. We could see only a few yards into the storm, and the cold was intense, as we learned when we sought to give the snowshoe a little breaking-in trial. Our team was all ready to start, and our supplies waiting over at Joe Kipp's store, but we dared not leave the town even to try getting over as far as the agency, which was but eight miles distant, directly over our road into the Two Medicine Mountains, where we intended to make our hunt. All we could do was to sit in the house and busy ourselves putting on finishing touches to our footgear and arranging the clothing we intended to wear. Not once all day long did the storm clear away enough for us to see the mountains, which are easily and plainly in view in decent weather, being only about twenty-five or thirty miles away and appearing, of course, very much closer. The blizzard was a very cold one, the thermometer going to 15° below without any special effort at all. McChesney and I slept in a little board house kept by Salms, the hotelman who feeds the railroad men who live at Blackfoot. In the room was a fine skin of a white-faced grizzly bear, which I am sure I should have stolen if I could by any possibility have gotten it into my pack bag. At the boarding house was still a larger and finer grizzly skin, for which I believe they wanted $50. We also saw many heads of sheep, goats, elk and deer, and knew we were upon the edge of a good game country—what is indeed perhaps the best big game country of the West today. Especially is this a grand country for grizzlies, and I lamented that it was the wrong season for these fellows, so that we should not have a chance to get the long lost grizzly on whose trail I have been for so many years.

On the second morning of our stay at Blackfoot the sun made a feeble effort to peep out, and the snow lightened a trifle, though the wind still kept up and the air was very cold. We concluded we might venture to the agency, so hurriedly loaded into the big sled box our camp outfit and supplies, and piled on top the best we could ourselves. We numbered here four of the party: J. W. Schultz, whom many readers will remember meeting at the Exposition in New York city; Crosby Boak, the teamster, a Westerner of checkered career as we shall later see. Mr. C. S. McChesney, of Troy, N. Y., was the Easternest man of the outfit. Years ago, when both were boys, McChesney and Schultz attended school together, and hunted together, and had good times together back in the hills of the Adirondacks and other places. Then McChesney went to Yale, and Schultz went to the frontier, passing twenty-odd years among the Indians of the extreme West and getting acquainted with the good hunting countries, so that when it came time for him to invite McChesney out for a hunt, he knew what he was doing in regard to game matters. McChesney had never been West before. I had never been so far north in the Rockies myself before, so we both shared the sense of novelty. Dr. Martin, the Agency physician, rode over from Blackfoot with us, but he was not of the hunting party.

It was a bitter wind that swept over the flat country between Blackfoot and the agency, and we had ample opportunity to test the worth of our respective outfits of clothing. We were well covered with a rime of frost when we got to the agency, but Major Steell, the Indian agent, soon had us thawed out, ordering us all to go over to his house and make it headquarters for the rest of the day and night, for it was now thought best not to go any further that day, as the weather was very bad. At the agency we met Billy Jackson, whom we were glad to see, of course, for the sake of auld lang syne. We were busy enough here at the agency for a day, as we had to get the snowshoes in order and pick up some odds and ends of the camp outfit which were lacking. We would gladly have remained here much longer, for Major Steell kept us absorbed listening to his tales of the old frontier. Major Steell is an old-timer of the real sort, having been trader for the American Fur Co. back in about the year 1 of the frontier days. We were now really in the West, the wildest of the West there is left to-day. We were upon the grounds where the buffalo once swarmed, and where the Indians hunted and fought but a very few years ago. We were within seventy miles of the spot where in 1873 the "Baker massacre" took place, in which 283 Blackfeet were killed by Col. Baker's troops. On this same ground, in 1864 and 1865, 1,500 of the Blackfeet people died by the measles. In 1882–83, the season after the buffalo disappeared, 480 Blackfeet starved to death. These figures will show in a way where the Indians were going when their actual condition was first realized by those who have since come to understand the situation better.

It was a land of tragedy, this over which we were crossing, but happily now of a tragedy passing away. We had seen at intervals as we came over the prairies the log houses of the people, and had seen their cattle feeding in herds of hundreds. The Indians do not starve now, and they are warm. They swear by their agent, and petition that he be not changed. And Major Steell, who has lived among these people so long that he can understand them, looks about him in his home at the gifts of friendship they bring him, and about the country where the horses and cattle are, and recounts with pride that his Indians are the foremost tribe of the American Indians in adapting themselves to the new order of things. Both Indians and agent seem happy and contented together, and for once in a way the Indian problem seems one that has been solved.

An Indian agency is perhaps a different affair from what would be supposed by Eastern people. It is no mere collection of rude huts or lodges, but has more the appearance of an army post. The new Blackfoot Agency is built up with comfortable, painted houses of modern appearance, and makes a pleasant though rather straggling little village. Not far away is a church, and not far beyond lies the Government school. There are Government storehouses and offices and hospitals, and some good dwellings where the agency force live, to say nothing of Joe Kipp's main store, a hotel, and several shops of varied nature. The Indians do not wear blankets as general dress, but lean to the clothing of the white men, except the women, who come in on issue days wrapped up in blankets as of old, and of course riding astride their horses. And by this token a blanket is the warmest thing a man can get around him in a Montana windstorm—far warmer than an overcoat.

The Last Night Under a Roof.

By night time at the agency we had all our belongings arranged, snowshoes fixed up, rifles sighted, etc. Major Steell allowed us to leave all our superfluous clothing at his house till our return, so that we were able to leave the agency stripped for the work of the mountain trip, and carrying no superfluous weight along. After these business details, we settled down to an evening of solid comfort, enjoying our last night under a roof. The thermometer was at 6 below toward evening, but inside the house it was glowing warm and comfortable.

Bull Shoe, one of the Indian judges, made us a call during the afternoon, tried a shot with our rifles, and told us something about the Indian laws in the times before he became a magistrate. Some of the Indians call on the Major nearly every day, and he holds quite a levee at times in his little reception room, adorned with Indian implements and works of art. He has a number of fine trophies and skins about the room, and over one armchair has a bear skin. It was noticed at different times that Brocky, and I think Bull Shoe, Eagle Ribs and one or two other Indians, would always decline to sit in this chair when it was offered them. They would sit down on the floor, but would not sit on the bear skin. Major Steell mentioned this fact, and Schultz told him it was because these men all belonged to a society or cult or lodge, or Indian church of some kind, of which the Bear was the "medicine animal." They dared not sit on the skin of a bear, or speak disrespectfully of that animal. Sometimes this society forbids the mention of the name of the bear in the common form (*ki-yu*), but they have some word or other by which they paraphrase it.

Talking over these and other things, we passed a few hours of evening all too quickly. Major Steell is a good story teller, and he has stories to tell, right out of his own life, with no need of varnish or sandpaper. If only the New York papers would lay a pipe line to Major Steell's house, what bear stories they could get! True ones, too! For instance, once upon a time the Major was riding across country, and met up with a whole bunch of grizzlies, eleven of them in all, when he had no weapon along but his revolver. He chased the bears for the fun of the thing, and shot away his revolver loads, his horse once being so close as to jump over one bear. This would be thought a lie in a Sunday paper, where a good many bear lies are thought true.

Major Steell's Story.

Among other stories the Major told was one about things to eat.

"I see you have a good grub outfit along, boys," said he, "and that reminds me of a hunt I had one time, not so very long ago and not so very far from here, although it was in the days of the buffalo.

"There used to be a hunter about these parts by name of Cadotte, a very good hunter, too, and one day a party of us, with Cadotte in the lead, started out for a buffalo hunt not far below where we then were. The buffalo were all over the country, and we made no arrangement for taking any grub along. In those days a man never took anything to eat, for he could always kill a buffalo or some other sort of game.

"We started out on Friday, and soon got to the river, where we expected to find some buffalo, but we found they had moved on out of that part of the country. We, therefore, crossed the river and followed on West, expecting at any hour to run into the herd. To our surprise, we did not find a buffalo, and did not see a head of any other kind of game, either. We rode all day Friday and had not a bite to eat. It was the same thing Saturday, too. We didn't see a bit of game of any kind, and we went to bed mighty hungry. At afternoon of the following day, Sunday, we pulled up—there were six or eight of us along—in a cottonwood grove, without a sign of a bite to eat, and we were more than half-way starved, for we had ridden in the cold for nearly three days and had eaten nothing. We felt pretty blue, and didn't know what to do.

"The problem was solved rather suddenly by Cadotte. We had an old, scabby, mangy dog along with us, which had followed along somewhat unnoticed. This dog passed by Cadotte as he sat on the ground curled up in a ball of despondency, and without saying a word Cadotte pulled out his revolver and shot the dog. Almost at the same time an old owl, startled by the shot, hopped and lit down again on a limb of the tree above Cadotte's head, and he shifted his aim to the owl and shot it also. We did not say much about it, but we went to work and cooked both the dog and the owl, and we ate 'em both up, too. I don't really feel competent to say which was the better to eat, but we were not confined to either one. If we didn't like owl, we had dog, and either dog or owl is a whole lot better than nothing, I will say that much."

"I have every reason also to believe," continued Major Steell later, "that skunk is good to eat, and I know very well that wolf is not bad to eat. But it must be a poisoned wolf. I called one time on a couple of trappers who were wolfing, and they were living much of the time on poisoned wolf. It is a mistake to think that a poisoned animal will poison any other animal eating it. If you should eat of the stomach of a poisoned wolf you could be poisoned at once, of course, and would die; but the flesh of animals is made tender by the action of the poison in the blood, and is not so bad to eat. This may sound like a fairy tale, but any old plainsman will tell you it is true. I can't say that I like owl or dog or wolf very well, now that I can get other things, but don't you turn up your nose at any one of them if you can't do any better. Of course, a good fat dog is good to eat—nice, fat dog, well cooked—clean dog, you know; everybody knows that. But what I mean to say is that even a scabby and mangy dog is good when you have nothing better. Yes, sir, it's mighty good."

Billy Jackson's Story.

"I saw a funny thing one time out on the plains," said Billy Jackson, when it came to him. "I was riding over to a station to do some little errand or other, and as I crossed a bit of prairie I saw a strange-looking thing going around and around, all the time in a circle, a little way off on the prairie. I rode up, and there I saw a band of skunks, thirteen of them there were in all, and they were running around in a circle, one right behind the other, galloping along as if one was tied to another. They looked up at me, but they never did stop a lick, but kept on galloping on around in the circle, as though they were hired to do it and dare not stop. It was too much for me, and I couldn't make it out, so I rode on away and left them a-galloping round and round. In about two hours or so I came back that way again, and blamed if there they weren't still on hand a-galloping round and round in the same circle yet. They looked up at me again, as though to say it was their busy day, but they didn't offer to stop. I went away and left them, and I never did know what they were up to. I never saw any such thing as that in all my life in the West, before or since. They were galloping around that circle all the afternoon, fully three hours."

Schultz's Story.

"I don't suppose there are more than two or three of the genuine old-time war shields left in all this tribe," said Schultz. "I have heard of one, and it is valued at about $100. There are very few of the old war shirts left, either, nowadays. Do you know how a war shield was made, in the old days? Most people suppose it was cut out of the neck of a bull skin, but it was better than that. The Indians would wet and heat and shrink a full-sized bull skin rawhide until they got the whole skin shrunk down to a size not much bigger than the shield. Of course, it was very thick and very tough. It was all right for an arrow or a knife, and in the time of the old Hudson Bay fuques it would stop a bullet, too. You don't see many shields made that way now. They fix them up for show, cutting them out round from a thick skin, but not putting the time and care on them they used to in the old times."

Boak's Story.

"I expect they ain't but one hunter in this whole country," said Boak, the teamster, "an' that's my pardner, Scott." (Boak never got done about talking of his "pardner," for whom he had the old-time pardner's reverent confidence, such as Bret Harte never did and never could exaggerate.) "Me an' my pardner usually get about twenty bears or so each year. A good bear skin is good for about $25 to us, we allow.

"This last season we played in mighty hard luck. Scott, he's a good hunter, but he's always wantin' to do somethin' fer someone else. He was out and killed two good bears, and was in camp stretching up the skins so they would be all right. Along comes a entire stranger to him, and flops down in camp and says he's sick an' can't go no further. He was some prospector, we allowed, though we never did know who he was. Well, this man is sick and hungry, and needs medicine; so Scott he stops work and makes him comfortable, and then he starts off, thirty miles, to the railroad, to get some medicine for the man, which he says he must have. The medicine cost a lot of money, too, to say nothing of the time it took to go git it. But, by gosh! when Scott he gits back to camp, blamed if the sick man ain't blowed his br'ins out, so they ain't no need of the medicine at all! Of course, Scott has to trot back to the town after the coroner, fer it ain't best to have dead men found around your camp careless like, of course. By the time Scott gets the coroner in there them bear skins is spoiled entirely, to say nothing of a week's time lost right when bears is easiest to git. That was tough luck.

"The feller? Oh, we never did know who he was. He like enough lost his grip an' got sick, wanderin' around prospectin'. We buried him all right, but we don't know who he was."

McChesney's Wish.

"I can hardly realize," said McChesney, "that we are really here, out in the Rocky Mountains, in the wintertime. If I write and tell my friends that it is 10 or 15° below zero they'll think I'm lying. I don't see how we'll ever get through the snow over to the mountains from here, for the horses could hardly get over this far across the prairie. Do you think there's anything in this doctrine of transmigration of souls? If there is, I hope with all my heart that after I die I won't get transmigrated into the form of a Montana horse."

How to Use a Buffalo Robe.

Suppose you have a buffalo robe, and you are caught out of a cold night; do you know how to use it? Would you wrap up in it with the hair side next to your body or next to the ground, if you were going to use it for bedding? Probably you would put the soft, curly hair next to you, so you would be warmer, wouldn't you? That is the wrong way to do. The Indian and the plainsman always put the hair side out, saying that surely the buffalo would know which side of his hide to wear outside. A robe with the hair side down keeps the moisture out far better, and is twice as warm as when the skin side is placed toward the ground. This is one of the things we learned in the symposium at Maj. Steell's house, at the edge of the Rockies, as well as many other things of which within patience we cannot now speak.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

Illinois Bass Fishing.

KAMPSVILLE, Ill., June 8.—The fishing at this place has been unusually good during the past week. The high water, which flooded the bottom lands along the Illinois River filled all the lakes and sloughs with black bass, and they are now making their way to the river through the various creeks and ditches. A party of five on June 6 caught 163 good-sized bass, and other parties have been equally successful. Not many fishermen are at this place at present, but a fair estimate of the number of black bass caught within the past four days would be about 570 among eleven rods. Below the dam, which is connected with the Government locks at this place, the water has heretofore been too muddy for much success in catching white bass and jack salmon. Yesterday, however, a number of fine jack salmon were caught, and in a few days grand sport is expected.

FASCES.

NEW BRUNSWICK'S ATTRACTIONS.

THE Board of Trade of New Brunswick recently offered a prize of $100 for the best paper descriptive of "Fredericton as a Sporting Center," and the award was given to our well-known contributor Mr. Frank H. Risteen, of Fredericton. From advance sheets we take the following:

As a region for big game, especially for moose and caribou, the interior of New Brunswick is not equalled by any other section of eastern North America. Its salmon streams are unrivaled anywhere. The game laws of the Province may be briefly summarized thus: The open season for moose, caribou, deer, duck, woodcock and snipe extends from Sept. 1 to Jan. 1. Each hunter may shoot two moose, three caribou and three deer in a season. Non-residents desiring to hunt moose and caribou are required to take out a license, paying a fee of $20 and giving a bond of $100 for observance of the law. No license is required for the hunting of deer. The open season for partridge extends from Sept. 20 to Jan. 1.

The fishery laws are mainly controlled by the Dominion Government. The open season for salmon extends from Feb. 1 to Aug. 15; for speckled trout, from April 1 to Sept. 15; for lake trout and landlocked salmon, from May 1 to Sept. 15.

New Brunswick has not only a greater mileage of railway in proportion to population than any other State or Province in America, but its soil is intersected everywhere by a wonderful natural system of water communication. Well stocked as the whole of the interior is with fish and game of all kinds, the facilities offered for canoeing, camping, fishing and hunting are not equaled in any part of America within easy reach of those who love the forest and the stream. The lakes and rivers which empty into the basin of the St. John are in no way inferior in this respect to those of that far-famed wilderness region watered by the Miramichi, the Nepisiquit and the Restigouche. The Squatook Lakes, Green River, Grand River, Tobique River, Oromocto Lake, Grand Lake—these are terms synonymous with hard-fighting salmon that call for the angler's utmost skill; with gallant warrior trout that ask no quarter; with togue of fabulous weight that haunt the deep lake bottoms; with black duck, teal and broadbills in their season, and with the noblest game animals to be found in Eastern America—the moose, bear, deer and caribou.

A volume would be required in which to catalogue the various canoe trips open to the camper and sportsman by its tributary streams. He may, as did the Indians for ages, urge his way with pole and paddle up the main St. John and, after a short portage, embark upon the Penobscot. He may ascend the Madawaska River, a distance of fifteen miles, carry his "pirogue" over into Squatook River, and thence enjoy a run down stream of seventy-five miles to the place of beginning, by a river that fairly swarms with trout and through lakes that are as beautiful as a poet's dream. He may pole up Green or Grand River and down the spacious Restigouche. He may ascend the silvery waters of the Tobique and thence traverse the Bathurst Lakes and the wild and rugged Nepisiquit. From the latter stream, if so inclined, he may carry into the Upsalquitch, a branch of the Restigouche. At Fredericton he can launch his Milicete canoe when the morning sun is breaking through the river mist and at nightfall pitch his tent upon the level shores of Grand Lake, an ideal camping ground for the tourist who wishes to combine a maximum of water space and grassy mead with a minimum of work.

Owing to its central location, both from a railroad and geographical standpoint, there is no more convenient place of departure for the fisherman or big game hunter than Fredericton. The city lies almost equidistant from the great hunting region of the Canaan and Salmon rivers and that of the Tobique and Miramichi. Between the two, and almost at its threshold, is the Cains River country, renowned for moose and caribou. The sportsman may leave Fredericton in the morning, with his Indian guides, and camp at sunset on the hunting grounds of East Brook Plains. To reach the upper waters of the Tobique or of the Nor West Miramichi will require about three days.

Let us suppose that the reader yearns to shoot a moose, which animal he has vainly sought, it may be, for many moons in Maine or Nova Scotia. He will, if he wishes to hunt in the calling season, need to start for the scene of action not later than the middle of September. The sooner he starts the better his chance will be. He will only need to bring to Fredericton his wearing apparel and his rifle, which latter should be no plaything, but a weapon that will combine paralysis and penetration in a marked degree. Supplies and provisions for the trip of the best quality can be obtained much cheaper at Fredericton than they can be brought here.

A first-class guide will be required, who knows the country well and is really able to call moose. He will expect to receive from $2 to $3.50 per day, according to circumstances. The latter figure may seem high, but the guide is usually a trapper who has a country of his own in which he has built camps and canoes, cut trails and gone to other expense on capital account. Unless he receives good wages as a guide it would pay him to go and shoot the moose himself. At least one additional man, combining the office of cook and packer, will be needed, so that the chief guide may devote his whole attention to hunting. This extra man will ask $1 or $1 50 a day. If a team is necessary to haul the supplies in over the portage road, the teamster will expect to receive $4 a day for himself and team. You will decide that this is not excessive after you have watched him for a few hours battling with the roots and rocks, blow-downs and quagmires of the portage.

To make reasonably sure of bagging a bull moose a trip of at least three or four weeks is necessary. Such a trip should cost from $150 to $200. The sportsman is at liberty to make it cost as much more as he wishes.

By many amateur woodsmen the caribou is esteemed more highly as a game animal than the moose. The great virgin wilderness of New Brunswick at the present day is a caribou paradise. If the moose may be numbered in hundreds, the caribou may be reckoned in thousands. They can be stalked with considerable ease on a windy day, but cannot be run down no matter what the depth of snow, and so they escape the butchery in the close season that too often falls to the lot of moose and deer.

As showing how plentiful they are, it may be mentioned that on Christmas Day, 1894, seven large herds of caribou were visible at once on the ice of Little Sou-West Lake In November, 1895, near Bald Mountain, on the Nor-West Miramichi, two Fredericton sportsmen saw, in the space of three days, 130 caribou. In December last a sportsman from Newcastle, in the same section of country, saw a single herd of caribou in which were fully 100 individuals. In that vast expanse of forest land watered by Green River, Grand River, Tobique, Nor-West Miramichi, Sou-West Miramichi, Restigouche and Nespisiquit, with their innumerable branches, the country is swarming with caribou, and they are thought to be increasing every year. They are practically unmolested by man, and the black bear is the only animal that preys upon them. It is believed that the car bou, which have been almost driven out of Maine by persistent hunting, have taken refuge in large numbers in New Brunswick. The caribou seems to be imbued with the restless spirit of the age. He has no fixed abiding place, and is always in a hurry to reach some other place where he can at once make haste to hurry back again.

Without doubt the best season for hunting caribou is in November when the bogs are frozen and there is suitable snow for tracking, and when their antlers have not yet been shed. Their actions in the presence of man are very eccentric. Sometimes they will stampede at the faintest sign of danger, or no sign at all; at other times they will stand stupidly together or walk aimlessly about while the death-dealing rifle is thinning out their ranks.

Red deer are multiplying rapidly in every part of New Brunswick. They are especially abundant in the South and West. With proper protection they will soon be as numerous as in Maine.

On the headwaters of the Nepisiquit not only are moose and caribou plentiful, but the sportsman may enjoy the unique experience of stalking the black bear as he roams the blueberry-covered hills in September. As a rule, the black bear is about as dangerous as a raccoon or porcupine. At the sight or scent of man he will run like a tramp from a woodpile. The maternal solicitude of the she bear when in company with her cubs, however, is not to be trifled with. Unless you are sure that this particular bear belongs to you, it is well to stand back about 79½ft.

There are several fine salmon streams within a few hours' ride by rail of Fredericton. A few desirable streams are still unleased and may be secured at a reasonable rental from the Crown Land Department. Where the river is already leased it is not difficult for the visiting sportsman, in most cases, by application to local anglers, to obtain the right to fish.

With the possible exception of the Restigouche, the finest salmon river in the province is the Tobique. The angler may leave Andover in the morning by team and hook his salmon for supper, and when the railway is completed to Plaster Rock he will be able to reduce this record by several hours. This beautiful mountain stream has been so well protected of recent years that the fish have become very abundant. The adult Tobique salmon runs from 12 to 20lbs. in weight, and is far more gamy than the Restigouche fish.

A river which shows to some extent the results of inefficient protection, but still affords excellent sport in a normal season, is the Sou-West Miramichi. This was a favorite resort of the late Gov. Russell, Joe Jefferson, the actor, and other well-known American anglers. The cascade of Fall Brook, 120ft. in height, is reached by a few minutes' walk from the main stream, and is one of the scenic marvels of New Brunswick. A ride of two hours by rail brings the sportsman to Boiestown, where the guides will have all in readiness to pole him up the river. The uniform rate these hardy, willing fellows charge for their services is $1.25 per day. Their skill in picking the channel or in breasting and shooting the rapids is a subject of unceasing wonder to all who have ever witnessed it. Whether on the hunting ground or the salmon stream, the uniform testimony of strangers is that New Brunswick guides are honest and cheerful, thorough woodsmen all of them, and anxious only to please.

The trout streams and lakes of the Province are innumerable and, with few exceptions, open to all. When the sea trout are running excellent fishing is obtained at Indiantown, on the Sou-West Miramichi, which is reached in five hours from Fredericton. Cains River, a noted stream for trout, is reached by fifteen miles of rail from Fredericton and a portage of ten miles.

One of the finest trout streams in the province, the Bartibogue River, which was reserved by the Government from the recent sale of fishing privileges, is to be efficiently guarded henceforth, and trout fishing permitted on it with the rod only at a fixed rate per day. The Crown Land Department has determined to vigorously enforce the regulations against netting and spearing not only on the Bartibogue, but Cains River, Renous, Dungarvon and other rivers that have heretofore been poached.

To the mind of the native tourist the Tobique River conveys a boundless vision of all that is wild and primitive for woodland scenery, and all that is exciting and otherwise enjoyable for plenitude of fish and game supply. He who, with birch canoe and brawny Milicete polesman, has ascended its pure, translucent waters to Long Lake or Trowsers Lake, the principal scources of this lovely mountain stream, will have secured a wealth of picturesque experience that will remain with him in reminiscent form as long as life shall last. He will have seen a region untainted for the most part by the touch of man; where forest trails are scoured deep in the solid turf by countless generations of moose and caribou; where the tremulous note of the loon is borne afar on the pulseless wings of the evening air; where the unsophisticated trout will seize a flannel rag as readily as the most alluring fly; where great rafts of black duck arise in clamorous flight at his unkind approach, and where his sleep at night is broken by the sloppy blow of the jumping salmon as he tumbles back in his native pool. Should he ascend the tortuous waters of the Little Tobique, he will find himself on the shores of the beautiful Nictaux Lake, which shines like a gem in its emerald setting at the base of Bald Mountain, the highest summit in the Province. From this commanding eminence the traveler surveys a vast, unbroken sea of foliage, whose undulations roll against the storied cliffs of Gaspe to the north and the coroneted peak of old Katahdin to the south.

In all its essential features, the forest of New Brunswick is to-day what it was in the dawn of history. It is still the forest primeval. Over the rampart hills and under the sentinel stars are streams whose sources are unknown; vast areas of timber land that have never echoed the sound of the woodman's axe or the hunter's rifle; lofty cataracts whose hoarse soliloquy is seldom heard by human ear; beautiful lakes without a name, whose eternal stillness is broken only by the rattle of the kingfisher, the leap of the landlocked salmon, the uncanny laughter of the loon, or the plunging stride of the wading moose. The voyager who seeks these hidden shores will find a gentle, bounteous wilderness "to whose ever-verdant antiquity the Pyramids are young and Nineveh a mushroom of yesterday."

Natural History.

WHITE BUFFALO.

Editor Forest and Stream:

In your paper of May 4 I have read an article on white buffalo by Mr. C. E. Denny, in which he says he thinks such an animal never really existed. I can hardly agree with him, as I have known one among the wood buffalo which could not possibly have been from any domestic stock; and have had two other robes in my possession which appeared, both by the hump on the back and the hair, to have been of pure buffalo.

In the fall of 1854 I took charge of the Hudson's Bay Company post on the North Saskatchewan, in the Blackfoot country; and, as was often the custom, we made relation with some chief, which was done by a complete change of our clothing. The chief always came in his full war dress, with bow, arrows and war robe. During the winter I made a brother of Mah-qua-ah-ma-kan (the Running Wolf), and he gave me a beautiful robe, not quite white, but nearly of a cream color, with some darker places on it, which he prized very much. Again, in 1856, I took the head chief of the Piegans (The Swan) as my father, and got another robe from him, which was a light gray, with a few darker gray spots on it. Both of these robes I firmly believe were *bona fide* plains buffalo.

Now for the wood buffalo, which, I think, affords a positive proof that such an animal has existed. In the spring of 1870 I undertook to establish a new post for the company at the junction of the Clearwater and Athabasca rivers. A band of Crees and a band of Chipewyans lived in that part of the country and hunted between the Athabasca and Peall rivers, as far north as the watershed between the two rivers. At that time a band of about 100 wood buffalo were then alive in that country; the last one was killed in 1887. During the winter of 1870 71 the Chipewyans reported having seen a white yearling calf among the band, which they had fired at several times, again. The following summer the Crees saw it. Next winter it was again seen by the Chipewyans; and then again the following fall my own Cree hunter reported having seen and fired twice at long range at this white buffalo. It was only now I really believed that there was such animal in the country. So I ordered Baptiste Kah ne-pah, one of the Crees, to pitch after the white buffalo, or, as they called it, the medicine cow, and not to show himself at the post until his wife could give me the white robe for my cariole. In March he brought it in, and it was one of the finest robes I have ever seen. The hair was unusually long and fine; the color was like that of a white silver fox, a little darker about the neck; the body very light and in the distance apparently white. This animal could not have come from any domestic stock, as only a few animals were kept at the mission, at the post of Fort Chipewyan, 100 miles off, they never lost an animal, and to the south the nearest cattle were in the Saskatchewan Valley. A. J. MOBERLY.

NORTHWEST TERRITORIES.

Birds and Bird Music.

FERRISBURGH, Vt., June 7.—*Editor Forest and Stream:* From what I hear from the birds' own mouths, I have reason to believe that we have more of them with us than usual in spite of plume hunters, collectors and market shooters. No doubt it is to the latter that we owe the noticeable scarcity of robins and bobolinks in recent years, yet this year there is certainly a fuller early morning chorus of robins than has been heard for several seasons, and a more continuous jangle of the bobolinks' rollicking song comes from the meadow. These birds were prompt to announce their arrival on the established date of May 8. In the evening of the next day we heard a whippoorwill quite near the house. A lot of meadow-larks and flickers came back to us, and more bluebirds than last year, when I heard but two all told. There is a goodly muster of orioles, whom we gladly welcome for their beauty and their song, and for their valuable service in the orchards. Here we are orchardists rather than vineyardists, and the orioles are our friends. If it was a question of apples or orioles, probably I should have to take the side of bread and butter against sentiment; but, as it is, I would rather have orioles than grapes, and robbins than cherries.

On May 10 our cat bird came to his own again in the thicket of Tartarian honeysuckles, without the loss of a note from his medley. June 4 we heard the first cuckoo and the next day a great-crested fly-catcher, which we have not had about the house for two years, though previously a constant summer visitor. His note can have no music in it for any but his mate, but I am glad to hear it again day after day, and to know that a pair are resting here, doubtless with the usual snake skin in the nest, which I hope may prove a mascot to bring good luck or, at least, a charm to avert the ill luck.

The sweet simple note of a wood peewee was first heard June 8, and every afternoon and evening since I have heard at least two chanting their indolent song. There are many virios and some yellow birds and other singers whose songs do not tell their names to my dull ears; but it is good to be told that the summer world is so full of happy life, though one is denied the sight of it. AWAHSOOSE.

The Woodcock's Whistle.

COMMENTING upon the notes of Mr. William Holliday, printed in our issue of May 15, Mr. James Wight gives in the Rockland, Me., *Courier* this "reply to all who advocate the wing theory:"

"Did you ever keep in a cage a beautiful song bird that poured forth a perfect gush of melody for you all day and half the night? And if so, did you ever know him to sing during the moulting season? The moulting season is a very trying time for all birds. They are feeling too poorly to be hunted, too weak to fly, too low-spirited to sing and too sick to be eaten.

"When I hear the familiar voice of a person singing I recognize the voice, even if the songs are different; and when I hear the love song of the woodcock as he woos his mate I recognize the same quality of tone which I hear in the month of October when he has fully recovered from his ill turn and is both fit to hunt and to eat—and as he was not while moulting.

"It is late in October. We go into a piece of woodcock cover, composed mostly of alders; the dog points, a bird is flushed, appears above the tops of the bushes with a shrill whistle—we pull the trigger and he drops, is retrieved and goes into the pocket.

"We go on a few yards. Another bird is found and flushed. Goodness! how he goes. Two shots ring out but he flies off unharmed. Did you hear him whistle? No—he didn't whistle a note. How is that?—he went like a cannon-ball and if the sound is made by the rapid motion of the wings, how can he help whistling, whether he wants to or not?

"He cannot help it, if he makes the noise with his wings; in that case it is merely a case of mechanical action and is classed with the buzz saw. He wishes to place the greatest possible distance between himself and you in the smallest space of time. So the greatest burst of speed must come at the start.

"Now let Nordica or Melba take a whip and swish it through the air, and if the motion is rapid enough there will be heard a whistling sound and it cannot be prevented. But these singers do control their throats, and so do the woodcock.

"But here come a number of reliable gentlemen and say, 'Now we have decided the matter beyond all doubt. We have picked up a wounded woodcock, with half, or perhaps the whole, of his bill shot away. We held him by the legs, he seemed perfectly strong, made his wings go as if he was flying, and whistled like everything. Must have done it with his wings, you see, because he had no bill to whistle with.' Well, Madame Nordica does not sing with her bill. She sings as your canary or as my mocking bird does, or as the woodcock does. When he woos his mate he sings to her with his throat. I have seen many a woodcock burst out of cover without a note, though he had speed enough to give a glorious whistle if the wing theory were true. I have watched many a woodcock fly at a very rapid and uniform rate—whistle and stop—whistle and stop—repeating this performance till he disappeared. If he whistled with his wings this would be impossible, but if with his throat, it is as easy as it is for a linnet or a bobolink, both of which birds sing as they fly.

"I have been taking notes for more than thirty years.

"JAMES WIGHT."

The Monkeys of Gibraltar.

THE monkeys of Gibraltar—the only ones living in a wild State in Europe—have been made the subject of a learned monograph by Don Salvador Calderon, in the eighteenth volume of the "Anales de la Sociedad Española de Historia Natural." The first known mention of these animals, which belong to the plebeian barrel-organ variety (*Inuus ecaudatus*), was made in 1789, in the Memoirs of the Royal Society of Edinburgh. There has been much discussion of the question whether they were originally imported from Morocco or were indigenous to Europe, furnishing proof, in the latter case, of the former connection of the two continents. The Arabs had a tradition that these animals came to Europe by a submarine passage known to them only. It is significant that the Mohammedan writers, in their descriptions of the newly conquered Iberian Peninsula, nowhere make any mention of monkeys. It is only since 1855 that statistical records of the monkeys have been kept at Gibraltar. At that time they seemed to be dying out. Brehm found only eleven in 1856, and a few years later the number was reduced to four. It was then replenished by the addition of several couples brought over from Tangier. This necessity of "colonization" led Blainville to express the opinion that these monkeys were descendants of a domesticated pair that escaped a century or more ago. Their threatened extinction forty years ago was largely due to the fact that many of them were trapped by the owners of fruit orchards which the monkeys used to pillage. This trapping was stopped by a special edict of the Government. At present the colony includes about twenty monkeys. They are seldom visible, except when water is scarce, and it is believed that their principal food consists of the roots and fruits of the dwarf palm (*palmito*), besides scorpions and other insects.—*New York Evening Post.*

Singing Mice.

MR. HOUGH'S reports of the singing mice, whose songs he has so poetically translated for us, reminds me of one that I heard many years ago. I was doing chores in the barn one day in midwinter, when out of a mow of unthrashed oats there came a low, sweet warble, which would have attracted attention at any time, but still more in the midst of the songless desolation of winter. I did not see the singer, but know it could be only the singing mouse, till then a myth. Afterward my brother saw and heard one several times in the kitchen. This one did not warble, but uttered only separate soft musical notes. AWAHSOOSE.

A Two-Headed Snake.

CHAUMONT, N. Y.—Some time in August, 1889, Mr. Will Miller, of Alexandria Bay, N. Y., was rambling in the woods near there and came across a female milk snake, and with her a number of young snakes about 7 or 8in. long. Among them was one with two distinct heads, separating from each other about 1½in. Each head could open its mouth and protrude its tongue independently of the other. This one he caught and carried home in a cigar box It only lived a few days, and he then preserved it in alcohol, where I saw it two years afterward. I also saw it when first caught. READ.

Deer in Rhode Island.

PROVIDENCE, June 10.—Timothy Fanning, who has a farm at Happy Hollow, near the Woonsocket water tank, reports that last Monday while at his farm he saw a deer grazing near him. He says the deer was not frightened at his approach, and after grazing about the place awhile wandered off in the woods and went in the direction of Marionville. W. H. M.

They tell this story of Lord Roseberry, who is a very bad shot: Not long ago he was on the Scotch moors, and having unsuccessfully fired at a covey of birds that rose not more than 20yds ahead, he exclaimed: "It is strange that none of them fell! I'm positive that some of them must have been struck!" "I dinna doot," returned the keeper, with the usual freedom of his class, "that they were struck wi' astonishment at gettin' off sae easy!"—*Outlook.*

The FOREST AND STREAM *is put to press each week on Tuesday Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.*

Game Bag and Gun.

GOVERNMENT GAME RESERVES.

From State Fish and Game Protector Charles A. Shriner.

PATERSON, N. J., June 5.—*Editor Forest and Stream:* Anent the project of securing game preserves under governmental control, permit me to suggest that the preservation of migratory birds would be a mere incident to the greater benefits to be derived from such a project. Take, for example, this little State of New Jersey. In the southern counties there are large areas of what are known as pine barrens, the home for many years of most of the wildfowl in the State. This property could have been acquired a few years ago for a song, and even to-day title might be gained to it for about two songs; it pays little taxes, and divided up as it is among many owners, is of no economic importance to the general public. If this property had been purchased some years ago and shooting on it prohibited, the wild deer would not now be nearly extinct in this State, nor would the white egret have been exterminated. The few people who eked out a miserable existence by chopping down the stunted trees or by trying to coax the soil to grow a few vegetables—attempts almost invariably abandoned after a year or two of experimenting—would have found occupation at something more profitable; no one would have been injured thereby, and the general community would have been vastly benefited.

In the northern part of this State there are thousands of acres of territory which only a few years ago were leased to any person willing to pay the taxes thereon; to-day some of it can still be obtained at a very low figure. If this property had been acquired a few years ago the watershed of the Passaic would not have passed into the hands of a few capitalists, but would have been owned by the public. I know that in other States there are similar tracts of land, valueless if the ownership is divided among a number of private individuals, but priceless treasures in the hands of the Government.

The project presents difficulties, especially in the hands of the National Government officials; but I see no reason why each State should not acquire properties of this kind, and thus preserve not only the migratory birds, but also the indigenous game, the watersheds and the forests.

CHARLES A. SHRINER.

From W. S. Gavitt, President of the New York State Association for the Protection of Fish and Game.

LYONS, N. Y., June 10.—*Editor Forest and Stream:* Referring to a recent article in the FOREST AND STREAM relative to the protection of migratory birds, from Mr. Van Name, I am more than pleased with the scheme advanced and am quite sure that the sportsmen and public generally throughout this whole country are becoming aroused to the necessity of some concerted action looking toward the better preservation of both our game and song birds. As stated, any plan which will afford some additional protection beyond that afforded by the laws of the several States, will be particularly desirable.

It cannot be denied that wildfowl, shore birds and the snipe family, as well as the robin, are being rapidly exterminated, by reason of being disturbed and slaughtered upon their breeding grounds.

If it were possible to so arrange legislation in all of the States and the several Provinces of Canada by some mutual and just legislation, so that it would be unlawful to kill or market birds during their natural breeding season, and proper restrictions in regard to the shipment of game birds, we might expect a large and satisfactory increase, and no refuges would then be necessary.

Public sentiment has long been asleep in the matter, and it is questionable whether it can be sufficiently awakened to meet the urgent demands in the case. With so many conflicting interests and conditions existing throughout this broad land, it would be hard to adopt any plan entirely acceptable, but, in my opinion, until some united effort is made little can be accomplished.

As above stated, the plan of shutting out the killing of game birds during the breeding season, properly graded so far as open dates, to locations or latitudes, the universal prohibition of the killing of song birds at any time, and the discouragement of the use of the plumage of birds for decorations and hat trimmings is, to my mind, the true way of protecting both our migratory and non-migratory birds.

Just how this can be accomplished is worthy the thought and action of every true sportsman in America to-day.

Pending the putting into effect of such a plan, any such scheme as offered by Mr. Van Name is most certainly commendable, and should have prompt consideration by our National Government.

It would certainly offer some additional protection to our migratory birds, and these several refuges might also be used in the propagation of certain game birds by the Government for the purpose of restocking depleted sections of the country, the guards in charge having a double duty to perform.

One thing is certain; something must be done or we shall forever lose that which is so dear to every man who loves the fields and woodland. W. S. GAVITT, Pres.

From Henry J. Thayer, Secretary Massachusetts Gun Club.

BOSTON, June 4.—*Editor Forest and Stream:* I have carefully read, and with much interest, the article on "Government Game Preserves," and wish it were possible to regard it as practical as it would be desirable.

Regarding the desirability of some such system of game reserves, or sanctuaries, I think there is no question; and the greatly increasing number of preserves held by private shooting clubs, or by individual sportsmen in many sections of the East, have already made an appreciable difference in the amount of game both on protected land and the more or less immediate neighborhood. This has been very apparent in many cases which I have known, as well in respect to the migratory as to the resident supply of game. It has sometimes seemed to me as if the game didn't mind being killed so much as being disturbed; and in a number of places where game was carefully preserved and protected, I have noticed that they would leave their sanctuary, to the profit and pleasure of outside sportsmen, and when persecuted return—what was left of them—to the spot where they could dwell in peace, only to try it over and over again.

The practicability of such a system—by National or by State supervision—I greatly doubt, however; although a system of National or State parks or reservations such as we already see a beginning of in many sections of the country, may do a little toward giving our resident and migratory game slight refuge. To give some adequate protection would require the whole country to be covered with a whole network of spots, some suitable to our wood game, some to our marsh, some for our uplands, and some our water fowl.

Would it be of use for National or State government to acquire title to such large amounts of land without an adequate amount of supervision, such as even now almost no State government provides to what it has already? Would any of our States relinquish willingly title to its lands for the National Government to enforce a game law over? Will the National Government buy waste lands at a probably high price for the purpose of preserving game, when it is still practically giving away for almost nothing valuable tracts elsewhere? The project is good—but the result in the next fifty years can only be done by a still further extension of the system of private preserves, wrong to my mind in principle, but the only way in practice to bring the result. A game preserve controlled by intelligent men will always endeavor to have at the end of each season more game than it held the year before, and part or all of the surplus will spread to repopulate the surrounding country. The ordinary gunner in the free woods thinks—probably says—"If I don't get that bird some one else will," and he gets it if he can. If he had been on a preserve he would more than likely have thought, "I guess I can get it next time"—and he doesn't.

The spreading system of private clubs, preserves, and "no trespass" signs are not pleasant to see, and my sympathy is always for the man when I see a trespass sign with a charge of shot in it. Still, it does much good and will do more as it spreads, which it will surely do, and the salvation of our game—resident or migratory—will in the future, I think, depend more on private interests than on legislative enactments. HENRY J. THAYER.

From Hon. Chas. E. Whitehead, of the New York Association for the Protection of Game.

NEW YORK, June 4.—*Editor Forest and Stream:* As to the benefit and feasibility of the United States setting aside certain portions of land as game preserves, I would fully concur in the benefit to be derived from such a protection. The game thus protected would increase rapidly in such places and from thence would distribute themselves over the country at large. As an illustration, the passenger pigeon thirty years ago nested by the millions annually in certain forests in Pennsylvania, about thirty miles south of Erie. They occupied about four square miles of forest and about two nests were built in each tree, each nest holding one squab. The place was annually raided by men who came in wagons from the surrounding country, bringing butter firkins and half-barrels. They established camps in the woods. They either cut down the trees, or, climbing them, raked down the nests. The young birds were cut open, and drawn and spitted on wooden splints, packed in the firkins, salted and shipped to the markets of distant cities. In a few years the pigeons were driven away. They then nested in the Northern Peninsula of Michigan, and were treated in the same manner, and have since disappeared from there. The bird is now unknown. Had the United States preserved these nesting grounds by law and police, this wonderful bird would still have existed among us.

As to the feasibility of the plan Mr. Van Name suggests, you will find it a matter of difficulty. There are so few who take an active interest in such matters that it would be hard to obtain the necessary legislation.

The market-dealers care nothing for the extirpation of game providing they can make a present profit. Every proposed law is resisted by them, or if passed is presently impaired at their solicitation.

Long Island is probably one of the most favored spots in the Eastern States for the propagation of game. You can almost hear the universal howl that would go up if it was attempted by the general government to set it apart as a breeding place and to forbid the use of a gun there. The same feeling would exist among the neighbors of any favorite piece of land from which the sovereign people with its fowling-piece should be excluded.

The only lands that could probably thus be segregated are those in the territories. None more important than that fraction of land bounding the southeast corner of the Yellowstone Park. There is the natural feeding ground and resort of the herds of game that live in the Park. Thither they all go at certain seasons for food and shelter. It is a rough mountainous place and peculiarly adapted to them. Thither follow the hunters for slaughter and extermination. This land should be included in the Park. A regiment or part of a regiment of United States cavalry should be permanently stationed there, with power to exclude hunters and to punish trespassers. Then these various breeds of game would be preserved, and our children's children give us their gratitude. C. E. W.

From Chief Game Warden Edward Tinsley, of Ontario.

TORONTO, June 7.—Mr. W. G. Van Name's excellent article should be most strongly indorsed by all true sportsmen. My friend, Dr. G. A. McCallum, of Dunnville, is writing an article on the "Parks and Reservations of Ontario" for the FOREST AND STREAM which I feel sure will be instructive and interesting to your subscribers.

E. TINSLEY, Chief Game Warden.

Prospecting for Woodcock.

NEW JERSEY, June 10.—While out walking the other day, I happened to think about July woodcock hunting, so I started for some likely grounds, and after going through a wood I came to a little brook which runs down through some undergrowth and low pin oaks. At last I came to a part that had been quite wet, but at present was only moist, perhaps a little muddy. Leaning down, I discovered the billing of woodcock. Then I went home for my dog, just to see whether he had forgotten them or no. On returning, before I reached the place I noticed my dog working, so I watched carefully. All the time he was wagging his tail and going cautiously; I knew the bird was running, else he would not wag his tail so vigorously. In a moment, right alongside the little stream that I had previously gone down, he made a point and up got the woodcock, and a pretty sight it was, too, though the foliage is so dense this year you can hardly see. He went right up straight until reaching the top of the trees, and then went I know not where but I don't think it was far. My dog flushed quite a number, and I think there will be a good many more birds this year than last, perhaps on account of early spring. T. E. D.

A PRAIRIE CHICKEN DIVIDE.

WYMORE, Neb., June 1.—*Editor Forest and Stream:* Fifteen years ago Dick and I were struggling young attorneys of this city. We lived on the same block. He had a wife and two children. He never hunted. Never fired a gun in his life, but could see a "law point" in every circumstance of life. I was a hunter and had a 10 gauge Parker hammer gun and a dog. In those days the law business was my dissipation, hunting was my business.

One hot afternoon in August of 1882, at about 4 o'clock, I was at home when Dick came over, looking very gloomy, and said that his wife and children were all sick, and could not eat anything, and he thought if they had a young prairie chicken they might be able to eat that, so he asked me if I would give him half the chickens I could shoot if he would hire a buggy and take me out. I promptly told him I would. He started for the livery stable, but after going about two blocks came back and said: "Say, if we should only get one chicken under this arrangement, to whom would it belong, you or me?" I insisted that in law it would belong to me, there would be nothing to divide. But he argued that it ought to belong to him, because he was bearing the larger part of the expense, etc., so we finally compromised. I proposed that we should divide the chickens in this way, he to have the first, I the second, and so on. Dick agreed to this and went after the buggy, but when he came back he had a horse and a two-wheeled cart. I had never ridden in one of these carts, but I put in the gun and dog and got in and away we went.

Dick drove, and when out of town about two miles we came to a bridge that had a jump-up of about four inches. We struck it on the full trot, and Dick landed straddle of one of the shafts, the dog went out and so did the gun. I pulled Dick back in, then I gathered up my gun and found one hammer broken off. I let the dog walk, and we started on. I then talked to Dick a little, but will not repeat the conversation here.

About a mile further on the dog pointed in the road, and Dick drove over him, and up went a covey of about twenty chickens. I took a shot at the flock, but of course did not touch a feather. We watched them down less than a quarter of a mile away, and went to them. The dog pointed, the whole covey flushed, and I pulled the trigger of the barrel that had the hammer broken off, but finally gave it up and pulled the other trigger. The chickens all sailed on. We marked them down and followed, the dog pointed, one chicken got up, the old Parker spoke and down came the chicken. This was Dick's chicken, and he left the horse standing and rushed in to retrieve it. He flushed the flock, got his chicken, and started to the cart but the old horse had started for town. I watched the race, well knowing how it would come out. Dick gave it up and came back, the horse and cart went to town. I then talked some more to Dick, and then we followed the chickens. We found them, the old dog pointed, they got up one at a time, and in ten minutes thirteen more of the beauties were retrieved. I picked up two, and told Dick he could have the rest of them. He picked them up, and carried about thirty-five pounds of prairie chicken four miles to town. It was awfully hot; but he got home with his load at last, and never asked me to go hunting with him again.

Dick is now a prominent lawyer of Denver, Colorado, still looking for "law points"; but he never shoots, and I pity him. I am still here. The chickens are about all gone. I am too old and fat to hunt, but I have the little hammerless in the office, and every once in a while I take it out and look it over, point at flies or skeets on the windows, and wonder how anything could get away. Then I take up FOREST AND STREAM and read "Men I Have Fished With," and "Recollections of Iowa," and dream of happy times long gone by. A. D. MCCANDLESS.

P.S.—Dick's wife and children got well.

CHICAGO AND THE WEST.

Ate the Cat.

CHICAGO, Ill., June 5 —The prevailing hard times in Chicago have been the cause of an incident perhaps somewhat unique. I recently had some work done by a taxidermist who had occasion to give out the tanning of some skins. When the tanner, a German by nationality, delivered the skins to the taxidermist, he said that he would like to have his money right away, as times were pretty hard with him. He added incidentally that he had just eaten the family cat. It seems that the *hausfrau* was away on a visit, her especial pet the family cat, being left thus unprotected. The head of the family, being out of refreshments of a solid or liquid nature, killed the cat, for which he had no special love in animate form, and sold the skin, a very fine one, for 30 cents. He completed the matter by eating the cat, which he declared was good. When I expressed some surprise at this action on his part, he answered in a most positive manner that these questions in gustatory matters were all foolishness. "Meat is meat!" said he, conclusively. I had never looked at the matter in exactly this way before.

Western Game.

Mr. Joseph Irwin, of Little Rock, Ark., spent a couple of days in Chicago this week, on his way to Boston and other Eastern points. Mr. Irwin is manager of the Capitol Hotel, at Little Rock, and a very well-posted shooter. He says that the deer and turkeys in Arkansas suffered very severely during the overflow this spring. The residents were out along the bluffs of the streams in numbers, armed with all sorts of firearms, and the deer were shot down by scores and hundreds Numbers of the deer were thus forced to leave their native feeding grounds, and scattered out over the country back from the bottoms, where they had not been so abundant before. The wild turkeys suffered very much It was not the least difficult to kill them in quantities, as a boat could be run directly under the trees where they had taken refuge. As the birds had no place to go except to other trees they were loth to fly, and often the entire flock could be shot out of a tree. Mr. Irwin saw in one lot twenty-eight turkeys which had that day been killed and brought into market, and every one of these was wet, showing that they had all been shot out of trees, falling into the water. The prospect for quail next season he reports to be very good, and the bass fishing is now excellent near Little Rock. Mr. Irwin brings up the curious fact that in Arkansas the open season begins on Aug. 1. Surely, that country must need all its fruitfulness.

Mr. J. G. Smith writes me from Algona, Ia., that the season will be a very good one for pairie chickens. There was a great deal of water in upper Iowa this spring, but the nesting grounds have dried off since then, and during May there was very little rain, so that it was a fine month for the birds. Mr. Smith reports that the lakes and sloughs have filled up again with water, so that he expects to see a flight of ducks during the coming fall.

A Seal Round-up.

I take the following curious item from the press despatches from San Francisco. The idea of branding the seal herd would seem to be a new one, though there is room to doubt that the pelagic sealer will be much deterred in his work by the possibility of getting in a large line of damaged goods. The dispatch reads:

SAN FRANCISCO, Cal., May 23.—Dr. David Starr Jordan, who will be the American scientific representative at the Pribylov Islands this summer, says that as the British Government has not come to satisfactory terms with the United States for the protection of fur seals in Behring Sea the United States will begin this summer, through the Fur Seal Commission, the work of branding the female seals on the Pribylov Islands. This will spoil the skins of branded seals, and so stop pelagic sealing by making it unprofitable. One of Dr. Jordan's assistants, Elmer Farmer, expert electrician, has invented an electrical machine for branding seals, and if it proves satisfactory it will do a great deal toward settling the seal question. There is a possibility that the female seals may be corralled on one of the islands during the sealing season. This will necessitate building about two miles of board fence, and it is not certain yet whether lumber can be procured. It will be done if possible.

Cultivated Ginseng.

All trappers from North Carolina to Maine, and from Wisconsin to Mississippi, know the value of the ginseng root, so fondly loved by the heathen Chinee. This rare and valuable root is something of a source of revenue to woods dwellers in the wilder parts of the country. Naturally, in these progressive days, so valuable a product cannot be overlooked in commerce. A Mr. Page, an Illinois farmer, has been experimenting for some time in the cultivation of the ginseng plant in a domestic state. Like other purely wild creatures, the ginseng plant resented this sort of thing, and at first Mr. Page failed signally in his efforts to tame it. He studied the plant, however, in North Carolina and West Virginia, and has lately made a success in raising it. He has formed an arrangement with a New York capitalist to go into ginseng farming operations in the State of North Carolina, where he expects to make a good many thousands of dollars an acre from his land each year. E. HOUGH.

1206 BOYCE BUILDING, Chicago.

SPRING SHOOTING.

TORONTO, Canada, June 10 —*Editor Forest and Stream:* The opportune and common sense article of Mr. W G. Van Name, in your issue of June 5, has opened the way for all true sportsmen to join in the crusade against spring shooters and pot hunters of high and low degree. To prove the necessity of some such action being taken and the beneficial results that would accrue therefrom, it is only necessary for any doubting Thomas to board one of the numerous pleasure steamers starting from the American shore of Lake St. Clair, where spring shooting prevails, and note the absence of birds, especially waterfowl, until the dividing line is passed, when he will notice that the bays and marshes on the Canadian shore where spring shooting is prohibited, are teeming with ducks of every description, many varieties breeding there.

Many men claiming to be sportsmen are sailing under false colors. Many who are members of so called hunting or sportsmen's clubs, are in a large measure responsible for the continuance of spring shooting. Which is the most to blame—the market hunter, who, in many instances is too ignorant to know that he is doing wrong by shooting game during the breeding season for the support of his family, or the so-called, educated, fashionable member of a sportsman's club, who knowingly does wrong from selfish motives? Where should the example come from? Let us act up to the precept "Where much is given, much is required." Let us hear no more of this class of sportsmen unblushingly sending accounts to FOREST AND STREAM, of the hundreds of ducks or snipe killed by them when unfit for food and resting from their long and weary flight on the way to the breeding grounds. But, says the advocate of spring shooting, "If we do not shoot ducks, snipe, plover, etc., on their way to their breeding resorts, others will!" This is neither a valid or reasonable excuse. A thief might, in the same manner, justify his stealing on the plea that if he had not stolen the articles some other thief would.

When reading the miserable exploits of would-be sportsmen shooting a poor doe or fawn with the aid of jack lights, I cannot help comparing it with burglary and dark lanterns, and conclude that the jack lighter has missed his vocation.

RANGER.

THE INVASION OF MINNESOTA.

Editor Forest and Stream:

For my text, permit me to take the following from "Chicago and the West" of June 12: "These gentlemen should have very good sport from all accounts, and I look upon their trip with some curiosity, considering them in a manner the advance guard of the army of sportsmen who, I predict, will invade Minnesota as a new hunting and fishing territory."

The hearts of all sportsmen should thump and thump again with gladness at the information that Minnesota can be invaded by anyone as a new hunting and fishing territory. Every year of the past twenty or more that State has been literally overrun with fishers and shooters. In the open season, baggage cars are crowded with dogs and camp paraphernalia, the passenger cars have a generous patronage of various costumed shooters, from far and near, in every point of the compass. The roadways throughout that State, so quiet most of the year, afford transit to the farm or livery wagon laden with campers and camp outfits, or shooters and their dogs in search of grounds for the day's sport, or fishers on their way to what is thought to be favored waters, and hurry as they may, there usually is some one before them.

The best known sections swarm with shooters and fishers; whole sections are shot out in a day or two after the season opens, and so it has been for years; the State is raked over from corner to corner for its birds and fish every year. And yet it is about to be invaded as a new hunting and fishing territory.

Already the State has passed a law discriminating against shooters from States which have non-resident license laws, There cannot possibly be the absurdity of a new invasion, but if the same old invasion grows larger with the danger imminent that the non-residents shall strip the country of all its game instead of a reasonable quantity, the time is short before Minnesota has a law similar to that of Dakota governing non-resident shooters.

I would be obliged if you would tell me just what particular part of Minnesota has not been invaded by hunters. Please write the information and send it securely sealed, that I may have a chance to make a break for the favored country. Don't put it in your paper, where others may see it, or I won't get a fair start. GRUMBLER.

Pheasants and Quail for New Jersey.

THE May Report of State Fish and Game Protector Charles A. Shriner records a distribution of ring-necked pheasants, generally in lots of twelve, to these points: Beach Haven, Oradell, Trenton, Salem, Glassboro, Woodbury, Flemington, Asbury Park, Port Elizabeth, Bridgeton, Millville, Manumuskin, Alloway, Hainesport, Browns Mills, Columbus, Mt. Arlington, Newfoundland. In all cases where such arrangements could be made the birds were placed on property where no shooting will be permitted for a year or two, in order to give the birds an opportunity to increase. In many cases farmers owning adjoining properties agreed to prohibit all shooting for a year or two and placed the birds in inclosures for the purpose of collecting the eggs; the latter were placed under hens and the young broods permitted to find their way into the fields and woods. In this way, it is hoped, that this attractive and valuable bird will become acclimated in this State and afford sport for others than wealthy members of clubs. The birds were introduced in this State a number of years ago and experience has shown that in many places they have done well, considerable numbers escaping from the preserves in the northern part of the State. The southern part of the State seems admirably adapted to the wants of the birds, and with judicious protective legislation there seems no reason to doubt that the birds will shortly take the place in a great measure of the fast-disappearing indigenous partridge.

Quail were distributed, generally in lots of 100, to Oradell, Trenton, Salem, Glassboro, Woodbury, Flemington, Asbury Park, Bridgeton, Midvale, Stockholm, Hainesport, Mt. Arlington. This is about one-half of the total number of birds ordered, but the failure to deliver the rest was wholly unanticipated, assurances having been received that every order given would be filled. Considerable disappointment on the part of a number of persons to whom birds were ordered sent was the consequence, but under the circumstances this could not be avoided. As with the ring-necked pheasants the birds were placed where there was good reason to believe they would not be shot off by pot-hunters and in a number of localities where birds were placed no gunning will be permitted for a year or two. The birds all came from the northwest, and consequently it is to be expected that they will not only withstand the rigors of our winters, but that they will increase. All were large and hardy birds, an exceedingly small number being lost in transit.

Pheasants in Texas.

PETTY, Tex., June 8.—*Editor Forest and Stream:* At a meeting of the Waco Pheasantry Club, thanks were voted to the Legislature for protecting pheasants for five years from the gunners. The secretary reported over 200 young birds hatched and in a thriving condition. The best success has been attained with English ringnecks. A quartet of ringnecks in wire-mesh coops have produced 150 eggs, most of which hatched well under hens. The chicks are healthy and feed well on anything commonly used for food among poulterers. Millet seed is particularly good.

The club has distributed eggs in other parts of the State. The supply is not equal to the demand, and no more eggs will be sent out. After the spring broods are two years old the club will turn them loose in McLennan and adjoining counties for the general good of the State. There are no birds or eggs in the hands of the club for sale. The object is to start the pheasants as a Texas bird to supply the place of the extinct prairie chickens. The Pheasantry Club are putting their power in the right direction, and we hope with the aid of all good citizens and our recently enacted game law that the pheasant industry may grow to enormous proportions in this State, as we see nothing to prevent the naturalization and increase of this valuable game bird. Should the club succeed in their efforts to get a supply of pheasants planted in the Brazos bottoms it will induce others in other parts of the State to make an effort in that direction, and we sincerely hope ere the five years' close season on these birds will have elapsed that they may have been scattered all over the State. F. E. W.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

ANGLING IN QUEBEC.

Editor Forest and Stream:

The prolonged and quite unprecedented season of rain that has marked the present spring proved very discouraging for anglers going into the northern woods Fly-fishing has been far from good in most cases, consequent upon the exceedingly high water in both rivers and lakes. A number of good fish have been taken, but the large proportion of the big ones have fallen to the share of the troller. Lake Edward has yielded, and is still yielding, about its average quota of trout from 3 to 5lbs. weight But the record of the season, and for the matter of that, the record of many seasons, has been made this spring upon the Triton Tract.

A distinguished party of anglers from Syracuse, N. Y., arrived here a night or two ago from their club waters on the Triton Tract. Notwithstanding the disagreeable and unfavorably wet weather of the last few weeks, which caused Grand Lake Batiscan to rise no less than a foot and a half in two days, the party secured very good sport The Hon. William B. Kirk, ex-Mayor of Syracuse, killed three trout in one day that weighed 12lbs., and also caught the heaviest fish yet reported from the Tract—a brook trout of 9lbs. This fish was caught on a trolled buck hair fly made by Mr. McHarg, of Rome, N. Y. It took nearly half an hour to kill and was finally netted by Master Edgar Gregory, the young son of the proprietor of the Yates House, of Syracuse, who is a true chip of the old block. The fish is to be carefully mounted and is a beautifully bright-colored specimen of our *Salmo fontinalis*. Another fortunate angler was Mr. M. C. Pierce, of Syracuse, who caught one trout of 8½lbs. and another of 6½lbs. The party saw a magnificent bull moose, which came within 150ft. of them. Some of their

friends, a few days previously, reported having seen no fewer than fourteen caribou.

Gay parties of anglers from New Haven, Bridgeport, etc., have had fair sport on the Nonamtum and Metabetchouan Club limits despite the abominable weather. There is no doubt that the best of the trout fishing is still in store for anglers in the Lake St. John country.

Ouananiche fishing has also opened up late this year. Nothing of any consequence has yet been done on the Grande Décharge, but the boat has now commenced to cross there daily from Roberval. In the mouths of the Metabetchouan and Ouiatchouan rivers the early spring sport was good, and the ouananiche for the most part very gamy.

Salmon fishermen are rapidly leaving for their fishing grounds. Many of the Restigouche and Metapedia anglers went down, including Mr. Sage, of New York; Mr. Stearns and Dr. Campbell, of Montreal, and Mr. Macpherson, of Quebec, are now there. Mr. E. C. Fitch has gone down to the Romaine; Mr. Pike, of New York, leaves for his North Shore stream to-day; Messrs. Keasey, Boswell and Chas. G. Hope, who recently purchased the Moisie for $30,000, went down last Monday and took Messrs. Andrew Allan, of Montreal, and Edson Fitch, of Quebec, with them. John D. Gilmour leaves to-day for the Trinity, and Mr. and Mrs. Walter Brackett, of Boston, for the Marguerite.

E. T. D. CHAMBERS.

QUEBEC, June 12.

MEN I HAVE FISHED WITH.

XLV.—Joe.

As a schoolboy I had, of course, read of the influence of the Gulf Stream on the temperature of the air, but I had also read of the lotus-eaters, in the land where it is always afternoon, and one seemed as real as the other. But to leave New York in February, 1877, when it was so cold that the snow crackled under foot and the steamer was well coated with ice as we passed Sandy Hook, and then to land in beautiful Bermuda three days later and see the crates of early vegetables piled on the wharf, the men in straw hats and shirt sleeves, and to feel the warm wind, was like a fairy tale where the good prince is suddenly whisked to a land of beauty to find the charming princess and escape his enemies.

It took three days to learn where to go to get the best collection of live sub-tropical fishes for the New York Aquarium, and in the meantime to learn much of the town of Hamilton, the chief city, and its institutions, for this trip was my first one beyond the domain of Uncle Sam and everything was strange, from the semi-domestic little ground doves, hardly as large as our quail, to the red-coated soldiers in forts, over which "Old Glory" did not float. I was a "greenhorn"; out West the term would be "tenderfoot"; or, as in New York newspapers some who want situations describe themselves as "lately landed." If I could choose the term to describe my mental condition in a strange land it would be the more polished one of "provincial." That lets a fellow down easy. The "provinces" of the city of New York, and of the backwoods of Wisconsin I was familiar with, from the Bowery to the Bad Axe River, but here were entirely new conditions, perhaps I should say "of environment," to be technically correct.

When I decided to cross the island and make Harrington Sound the base of operations I first gazed upon Joe. He was a colored boy, lightly colored, perhaps of one of the shades of antique oak furniture, or of light ginger-cakes, and apparently about fourteen years old, honest face, bare-footed, straw-hatted with ragged brim, unbleached muslin shirt, and bed ticking trousers with two suspenders. The extravagance in suspenders was noted in contrast with the economy of our own southern darky, who is usually content with one; but economy is not always commendable, a reserve to fall back on is often a wise investment and Joe had it, in case of accident.

Joe had been brought up on the water and could manage a boat either with sail or oar, and for a stipulated amount of £ s. d. he enlisted in my service. He told me that the oysters of Bermuda were not good to eat. This, to a man who had heard so much about good food that was cast aside because some fellow's grandfather did not eat it, made me anxious to eat a Bermuda oyster. In the West they reviled the "mud hen," the "blue peter" of North Carolina, a very good table bird, and the fishermen of the Connecticut River refused sturgeon, the royal dish of England's sovereign, and I had eaten the "proteus," the "lizard" of the Great Lakes, and was unconsciously fitting myself to be a founder of the once famous "Ichthyophagous Club," of New York, which proclaimed that everything that came from the water was good to eat, if you knew how to prepare it. Of course I would eat the Bermuda oyster, and I did. In early boyhood a boy induced me to bite into an "Indian turnip," and then that boy and I fought all over a ten-acre lot, and for weeks after when we met. With mouth aflame, for it got no further, I could not fight Joe, for he had warned me, but the burning was intense—it was agony. Joe ran off and brought some leaves of oleander, which grows on the shore in the salt spray, and told me to chew them, and a partial relief came. Most of the mollusks of Bermuda are either acrid or astringent; in some cases they possess both qualities. This knowledge was obtained at first hand by what may be properly called "bitter experience." If there is an edible mollusk in the Gulf Stream I failed to find it.

If Hamilton had been a surprise to me as a city without dirt, and the white country roads cut through the sandy formation on top of the coral reef, for I believe these islands are the only coral formations on our side of the Atlantic, were wonders, they were only a prelude to more. Carpenters sawed the sandy rock into blocks for building, and into "slates" for roofing, with common hand-saws, and then let the blocks or slabs harden. All this was strange enough, but the water surrounding the island seemed like that which one could only expect in fairyland. No rivers, creeks or even springs, to bring in soil to cloud the water, it was as clear as glass at all stages of the tide.

For a day or two Joe rowed me about into coral caves floored with brilliant sea anemones, and bright with gaudy fishes hovering above them. To him it was an every-day scene, and he took no more delight in it than a man born in the wildest mountains does in the grandest view of peaks and valleys. A man who has always drunk water from a mountain spring has no idea of the taste of good water. Let him spend a summer in New York city, or, preferably, Brooklyn, and then send him back to his mountain spring and he is educated as far as drinking water goes. He never tasted water until his return. My case was similar. I had fished in salt-water, but not in the clear, pure water of the Gulf Stream, where a large fish could be seen at a depth of 50ft.

A few days of this, with trips to St. George's, Somerset and Ireland islands in Joe's sloop gave me an idea of where I wanted to make a base of operation, and no place offered better facilities for collecting than Harrington Sound.* The first thing to be done was to prepare cars to keep fish alive in, and one specially designed for the keeping of an octopus, if only an octopus would come our way. Joe grinned every time I spoke of capturing a live octopus. I've been shaking up my memory to bring up the name that the Bermuda fishermen have for this animal, but the name refuses to come to the surface; it's a queer name, and will probably come to mind some months hence, when I'm not thinking of octopods; that's the way memory has of playing hide-and-seek. When you seek she hides until one has lost all interest in what she hides, and then, when it is of no use, she pops out.

"Joe," said I, "we must get an octopus; it's worth more to me than all the fishes we can get. Tell the fishermen that I'll give $10 for a live one, and if you put me in the way of catching one you shall have the money, in addition to your pay. What do you say?"

"No fisherman ever bothers that thing, only just kills 'em. I know I do' want to trouble one, an' I 'spects you won't want to own one when you see him alive."

Joe could hardly have read Victor Hugo's "Toilers of the Sea," where he makes a dreadful beast out of several kindred creatures; but it seemed that not only Joe, but all the Bermuda fishermen feared this harmless little crab eating animal, whose body is but little bigger than a man's fist and whose eight arms seldom make a circle of 4ft. diameter. With this animal, the cuttlefish and the giant squid, the "kraaken" of Pontipidan, Hugo, like a true showman, made a "devilfish." I had only seen the octopus in alcohol, but had accurate information as to its character and powers, and would try to capture one if one could be found. I knew that the sucking discs on its "arms" were soft, and unprovided with those toothed rims of cartilage which the decapods, or squids, have, and when I told Joe that I would take one in my hand he showed his ivories, and said:

"I 'spect you'd jump out of the boat if one come in after you. We kills 'em by drivin' a stake through 'em, an' w'en one comes outen de water on a stake he takes charge o' that stake; he takes charge o' the boat, an' he'll take charge o' you, too!"

Some two weeks later a man brought me a live octopus on a stake, which had been driven through its body. I declined to buy it, and the man was as surprised as Joe was that I should expect to get one by any other method. "No, sir," said he, "that thing would wind about a man's neck and choke him to death. No man on any of these islands would try to get one if he didn't pin him first." He evidently thought me foolish and ignorant, but did not volunteer an opinion on that subject. He seemed to regret that I would not buy an octopus in the only condition in which he thought it possible to capture one.

We fished with hand-lines for the smaller fishes, all beautiful—the grunts, striped with green and red; the squirrel, a bright red, and the angelfish, whose gaudy colors give it its name. Such colors I had never seen on fishes before, and the question arose as to the number that the tanks could safely carry, and if some had to be discarded which to leave behind. I had bargained for some large groupers with the proprietor of the "Devil's Hole," and felt easy on that score. The hole, as I remember it, was about 20ft. in diameter and some 60ft. deep. The tide ebbed and flowed in it, and you could see clearly to the bottom, and it was well stocked with handsome fishes, large and small, which were fed daily. A high board fence kept out all persons who did not care to part with a shilling, currency of the realm, to pass through the gate and gaze into the "Devil's Hole."

One morning Joe said: "I know where a ——— has a hole." He meant an octopus, but used the local name, now mislaid. The animal is very local. It makes a home in a hole in the coral rock, or in the weeds and lays out its tentacles to fasten on to a careless fish or crab which may chance to pass. After rowing over the ground several times, Joe found the spot, but only a person familiar with the habits of the octopus would have noticed anything unusual among the bunches of coral, sponges, brain-stones and other things which covered the bottom and cast shadows here and there. I certainly would not have given the dark spot a second look, yet there, in about 10ft. of water, lay the animal, curled up in its hole, showing a bit of dark skin and part of a tentacle which was not unlike many other things on the bottom. Our movements had alarmed the mollusk and it had coiled up and was keeping still. Its burrow faced the South and the current. We anchored our boat at both ends across the current, north of the burrow, where its shadow would cause no alarm.

"Now, what you goin' to do?" Joe asked.

"Nothing, only to keep perfectly still and see what that fellow below is going to do. I want you to keep still, don't rock the boat nor strike your foot on the bottom, that's all."

Joe sat in one end of the boat and I in the middle, close to a can containing several live squirrel fish about 8in. long and nearly the color of a boiled lobster, only brighter. I had a deep landing net with a 24in. rim on a 15ft. staff, the bag of the net being 3ft. long, with a full, round bottom. This I placed on the bottom of the Sound, held there by the side of the boat and something on the bottom, the current keeping the bag wide open. Then I lit my pipe and watched what went on below. Brilliant fishes, which are never seen north of the Gulf Stream, played about; now feeding on some smaller life and now chasing each other in play. Crabs crawled about, seeming to avoid the anemones and other stinging things, although their shells may have been complete protection, and I smoked and wondered if any living thing could eat a sea-anemone or a jellyfish, both of which can sting a man after the manner of the weed we call a nettle, and can paralyze some small forms of life on which they feed.

It was getting toward noon, and Joe awoke from a drowse and said he was hungry, so cautioning him to keep quiet and to throw nothing overboard, I raised the lid of the commissary department and passed him a plate containing some slices of boiled ham, three eggs, a loaf of bread and a bottle of coffee. I found that I began to feel as Joe did, only I would not refuse sardines and olives as he had done. After Joe had obliterated a second helping, nearly as bountiful as the first, he slid into a recumbent position and settled back into the slumber which a desire for food had disturbed. I again lighted my pipe and resumed observations on the enemy, while musing on the capacity of darky boys for food and sleep.

Hours passed. The impression that I had was that the octopus, which lay some 10ft. below and half that distance in our front, had dined, just as Joe did, and had curled up, like Joe, mentally saying: "Fate cannot harm me, I have dined to-day."

If I became drowsy no harm was done; there was no need at that spot to look for a changing tide, the current continued in one direction, and the fellow 10ft. below, like the fellows in the boat, would be hungry in time. He had evidently fed before our arrival. As I sat and watched for a movement on the part of this animal, of which I had hope, but little prospect of capturing, I wondered at the theory of those men who advise exercise after a meal; and I saw how an octopus, an animal closely related to an oyster, only it has no attachment to real estate and is destitute of a shell, took its siesta after dinner just as my boy Joe; the cows in the pastures, and our dogs and cats do after they have had a full feed, and saw that nature rebelled against labor on a full stomach. The man who eats a heavy dinner at midday and then goes to work does what a darky boy, a dog, cat, or an octopus would not do. That was the nature of my pipe dream as we lay there in the Gulf Stream with a sleepy darky boy in the boat, a sleepy octopus below, and a drowsy white man on watch.

The sun had, as usual, attended to business and gone into the west; and finally Joe aroused enough to ask: "S'pose he don't come out for a week, isn't you goin' ashore to sleep an' to get some grub?"

"Joe," said I, "sleep and grub we must have, but I must also have that octopus. I'll stay right here until I get that fellow, or until he escapes. If we get short of provisions you can swim ashore, it's only about a mile, and have them sent. You had better go now, and bring out more provisions and some blankets in another boat."

Our boat was a light flat-bottomed scow with high sides, and dry enough to sleep in; but the very heavy dews of the nights rendered it unsafe to sleep out without cover of some sort, although it was warm. The moon was nearly full, and Joe could be seen almost halfway to the shore by his wake in the moonlight as he swam off, the land being about half a mile away. A pair of thin bed-tick trousers and a shirt which was not buttoned at the neck was his entire costume, except a straw hat which he left behind. As the day faded the glory of the moon took its place, the breeze died out, and Harrington Sound was still and unruffled. Even by moonlight one could get an idea of the wealth of color on the bottom in the marvelously clear waters of the Gulf Stream, about an island which had no streams to carry soil into the waters about it. Yet there was that dreamy haziness which gives moonlight its peculiar charm, and involuntarily the dream of Clarence, in Richard III., came up:

> "Methought I saw * * *
> Wedges of gold, great anchors, heaps of pearl,
> Inestimable stones, unvalu'd jewels,
> All scattered in the bottom of the sea.
> Some lay in dead men's skulls; and, in those holes
> Where eyes did once inhabit, there were crept
> (As 'twere in scorn of eyes) reflecting gems,
> That woo'd the slimy bottom of the deep,
> And mock'd the dead bones that lay scatter'd by."

The perfect silence, the solitude and the moonlight, were provocative of weird thoughts, and the time seemed long until the sound of oars told that Joe was coming with the supplies. He had not hurried, he had not been asked to hurry, and, no doubt he had told all the fishermen who lived near him what I had resolved to do, and had listened to their comments on either my prospect of success or my sanity. He rowed alongside, transferred his stores, tied the boat to drift in our rear, ate a supplementary supper and then we rolled up in our blankets.

An octopus has large eyes, and, while classed with the mollusks [soft bodies without skeletons] which have no shells, it has not only a power of motion far beyond that of some fishes, an intellect which prompts a movement for self-preservation equal to that of an insect, but also an eyelid, which fishes have not. As I mused over these things, which books had taught me, the question arose: Was this strange animal, which I sought to capture, a night-feeder, or had it breakfasted early in the day and not being hungry was only a little shy of the presence of our boat? The moon threw no light on the eight-footed creature that lay below. It might be feeding or it might be sleeping, human eyes could not see clearly enough to decide.

Joe slept, and perhaps I may have done the same, but at the first peep of day I was straining my eyes to learn if the octopus was looking for his breakfast. The light was not sufficient to determine this. Joe was snoring, but I took a squirrel-fish from the tank, hooked it below the dorsal fin, put a ¼oz. sinker a few inches above it, and with rod carefully dropped it down above the den of the "devilfish." It had not breakfasted, for an arm shot out and seized the bait with its suckers. My experience as a trout fisher with the artificial fly naturally impelled me to strike, and I struck. The consequence was that the octopus was scared, for it is not a game fish, and the bait floated away.

The toughness of some conchs which lay in the boat seemed to recommend them as bait for the very tough customer which lay below. A shell was broken and a brother mollusk was hooked on deep in the toughest part, with the idea of holding the bait and dragging the animal from its lair. One tentacle after another enveloped the new bait, and I had just now learned not to "strike." Gently the rod drew the tough bait and the hungry octopus from its refuge into open water, while my left hand raised the net that lay below. Joe was still asleep; the octopus hung to his prey while I cautiously brought him near the surface, at the same time following with the net, much as we do when crabbing. My heart beat fast. If the creature became alarmed and let go of the bait would it dodge the net and escape? It surely would not hold on if brought above the surface and be landed like an eel on a bob. I had worked the handle of the landing net upward with the thumb and forefinger until my quarry was within a foot of the surface, and the rim of the net was the same distance below the animal. It stopped feeding and released one tentacle. The time for action had come. The net had been made with a deep bag in order to turn the rim in a way to close the bag and hold the captive, if there should be one to hold.

Dropping the rod overboard, both hands brought up the net with a jerk; but the octopod held on to the rim and did not get to its bottom, the trap failed to work. The commotion awakened Joe, who took in enough of the situation to plunge overboard. As I brought the animal into the air, it

* While this is being written I believe that Dr. Tarleton H. Bean, superintendent of the present New York Aquarium, is covering the same ground in collecting. A few weeks ago I met him in the office of FOREST AND STREAM, and he said that he was going to Bermuda for fishes and should make his headquarters on Harrington Sound.

struck out in all directions to get free, and with one tentacle on the gunwale of the boat, another on the net handle, and a third slapped on my bare left arm, it resisted capture. The drawing sensation of a dozen or more suckers made a tingling like so many cupping glasses, but a grip on its neck with my right hand stopped the power of suction, and the tentacles were limp and helpless, and a live octopus was mine.

The whole affair after the rod was dropped, could not have occupied over half a minute, but it seemed long, and Joe saw part of the fight from the other boat, but did not venture near until the animal was confined safely in a box and the hasp fastened. He then came alongside and recovered the rod, but had no desire to look into the box. Whether an octopus would or could use its parrot like beak in such a case I do not know. I had been told by Prof. Baird that they were harmless if choked, and faith in what he said enabled me to make this capture. Blood showed under the skin on the arm where the suckers had taken hold, and the native fishermen came from the other side of the island to verify the story by seeing the octopus, and the marks on my arm.

Joe grinned when he received the promised reward, and remarked: "A man that lives over on St. George's has got just the boat I want, an' $10 'll buy it, an' he won't take any less, but if I buy the boat there's nothing left for the circus that's comin' next week, an' I dunno."

"When I pay you for your regular work in two days from now, when the steamer leaves for New York, there'll be enough to go to a good many circuses, didn't you count that in?"

"No, sir, I gives all I earn to Mammy; an' I do want that boat and to see the circus a couple of times."

He got it, and when the handsome collection was landed in New York the octopus, which, by the way, could spread about 3ft , was the prize catch, and drew as much attention as all the angel fish and the other brilliant specimens together. The only loss on the trip was one barracouta and the Mangrove crabs, which live partly in the trees or on the rocks, and why they died is a mystery.

Joe was a bright boy and a good boy, and if he is living now I hope he will learn that Dr. Bean is there now, and engage to serve him as he served me. The colored people of Bermuda are a fine lot of men. It is so long since they were slaves, and there is little or no race prejudice in the islands that they have developed into a respectable and self-respecting class, especially the fishermen, who are more independent than many others. Joe wrote me that if I came to Bermuda again to remember him, and added: "I am not so afraid of the —— now. He may take charge of a stake and a boat when a man is afraid of him, but he didn't take charge of you. I can't forget that. Come here again and get some more. Joe."

It would have been pleasant, but I never did.

FRED MATHER.

CHICAGO AND THE WEST.

Trout and Snow.

CHICAGO, Ill., June 11.—The season has continued until this week to be one of exceedingly cold and unfavorable weather. So backward a spring has not been seen for many years, in the opinion of the residents of Wisconsin and upper Michigan, where the anglers of this section most naturally turn for their trouting trips. One has been fairly in need of snowshoes on his trouting trips thus far, and more than one party has met sharp, freezing weather, and has quit and come home in disgust. It was possible to pack one's trout in snow, and one exuberant fisherman declares that his trout were so cold, that after frying them for two hours he was displeased to find lumps of ice in their anatomy.

Mr. W. R. Caldwell, of this city, was out for a week in the neighborhood of Fisher Lake, Pardee Lake, Spider Lake and other good muscallonge waters a week ago, but met the coldest weather he ever experienced in camp. The fishing was poor, and at night the camp was so cold that the whole party froze out and came back to Chicago, resolving to try it later if it ever gets warm.

A number of fishermen have been on the Prairie River, but last week it snowed there to a depth of several inches, and wading the stream was like a cold plunge bath. They had rather a dismal time of it.

Where to Go Trout Fishing.

At this season many inquiries come for good fishing waters for trout and bass. From what I have learned so far this season, I feel very safe in directing trout fishermen to the Prairie River, via Merrill and Dudley, Wis. This stream is now becoming well known, as any good trout stream is sure to be, but it offers attractions not possessed by any other trout stream in Wisconsin that I can at this time recall. It is a stream broad and open enough to admit of fly-casting, and one can really wade and take trout on the fly. Trout are reported to be very numerous in the Prairie River this season, though I do not hear of any very large ones being taken. The stream has been abundantly stocked, and is holding its own well. At Dudley's place there are good accommodations.

Among those on the Prairie River last week were Dick Merrill, of Milwaukee, and Messrs. Davidson, Strong, Fuller and Dr. Shugart, of the Chicago Fly-Casting Club. All these were meeting fair success in spite of the cold weather. Mr. Merrill told me that his largest take was twenty-eight in one day.

I hear that the trout fishing on the White River and Wautoma Creek, near Princeton, Wisconsin, was good this week. The trout there are running larger than those taken on the Prairie River this spring.

The Paint, the Pine and the Fence have all been spoken of by fishermen this spring, though I should consider it problematical whether they offered pleasant sport at fly-fishing now.

Where to go Bass Fishing.

There is reason to believe that bass will bite well the coming week in the lower Wisconsin lakes. Reports from Oconomowoc lakes state that the fishing is very good, and I should think that all the Waukesha lakes would be safe to try, especially as we are promised milder weather now. I have already spoken of the heavy catches made in our old, fished-out Cedar Lake in Indiana. I can recommend especially for this week the Fox River at Algonquin and Clintonville. There should be fair fly-fishing for bass at those points now. J. M. Clark, of this city, in a recent boat trip from Camp Lake to Elgin, found a little fly-fishing on the river. The party took from twenty-five to thirty bass a day, mostly with bait.

I have already spoken of the Thornapple River several times and should be glad to hear from parties who have tried this South Peninsula stream this summer. I can also safely recommend the Kalamazoo River for bass. Take Michigan Fruit Line boats from Chicago to Saugatuck and go up the river by boat.

Bass fishermen should not overlook the Indiana waters mentioned last summer in FOREST AND STREAM as lying near La Porte, Westville, Swift's Siding, etc , etc. The Kankakee River is offering unusually good fishing this year.

MR. J. G. SMITH, of Algona, Iowa, writes me thus on fish and fish protection in his vicinity:

"The water has gone down in the Des Moines River, and we have had so little rain of late that it is quite clear. I was at the river this afternoon, and saw quite a good many suckers, some red-horse and pilse. There were thousands of small fish, all going up stream.

"The fellows here have found out that it is expensive to spear fish. Ten were caught at it this spring. Eight of them were fined $31 each, and the other two $12 each. It was somewhat expensive, but I hope it will teach the boys a lesson that will be of some benefit to them."

Desirable Flies.

Anglers back from the Prairie River state that they have found the professor, coachman and grizzly king among the best flies used. The dark gnats, cow-dung, march-brown and queen-of-the-waters are mentioned also as among the standard flies which do well in Wisconsin. The coachman was probably better last week than any other single fly. The Parmachene-belle, though thought to be a killing fly in some quarters, proved to be poor last week. I have never found this fly of much service in Wisconsin or upper Michigan.

For fly fishing for bass there is a wide range of choice. as the bass is fully as capricious as the trout. Brighter flies serve here than in trout fishing. I have found the Seth Green, polka dot and jungle cock, good flies on the Kankakee, as well as the Furguson and silver doctor. The bright fly known as the Johnson fancy I have found very useful for daytime fishing. For evening fishing, when the caddis fly is rising around the edges of the lakes, I have found nothing so good as the gray drake with upright wing and upturned cork body.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

COLOR VARIATIONS IN FISHES.

PARTLY corroborating Mr. George W. Dearborn's observations on this interesting subject, I cannot share his opinion of "tanning" as being the principal cause of the variation in the color of fishes.

I wish to call his attention to the fact that trout caught in a small stony brook are either light colored or dark, often almost black, according to the different places, sunny or shady, where they had been taken. Many salt-water fishes, flounders and sea-bass, for instance, how a marked difference if taken on feeding places of different character, often only a few rods distant from each other. Everybody must also have noticed the quick change or fading of the color in dead or dying fishes.

My experience is that certain fishes living in clear or shallow water are generally light-colored, while others of the same species caught in deep or dark water, or taken from shady hiding-places, are always very dark.

There exists no doubt for me that certain fishes have the quality to assimilate their "complexion" to the coloration of their surroundings.

The influence of light is certainly the principal cause in effecting these changes, for the production of all color is dependent on light; so the assumed dark color of a fish will certainly fade if it has been confined in prolonged and complete darkness, hence the silvery hue of Mr. Dearborn's pickerel taken through five-months' old snow-covered ice. If smelt, whitefish and others will always appear white, the reason for it may be that they do not possess any coloring matter subject to variations.

I think it probable that the change of color in fishes is effected by the same means as in the chameleon, the tree-frog, the cuttlefish, and some other animals. Some seven years ago, while lying sick in a Syrian town, I had in my possession a number of chameleons, which, during three long and dreary months, were my only companions. During every hour of the day I took delight in observing these curious reptiles and watching their queer ways. I became very much interested in the subject, and have since taken a number of notes from scientific observations on the matter of changes of color in animals.

I refer those who seek information on the mechanism by which these changes are effected, to Milne Edwards' publication about chameleons in the *Annales des Sciences Naturelles* for January, 1834, and especially to Richard Owens' authority in his article on "Cephalopoda" (cuttlefishes), in the *Cyclopedia of Anatomy and Physiology*. Owen notices that the epidermis of some cuttlefish contains a colorific stratum which consists of a very fine vascular and nervous cellular tissue, containing an immense number of small, closed vesicles of various colors. "These vesicles," he remarks, "have no visible communication either with the vascular or the nervous systems, or with each other, yet they exhibit during the lifetime of the animal, and long after death, rapid alternating contractions and expansions." Those contractions and expansions are responsible for the observed variations of color, and the action of light proved to influence them, for "if a separated portion of integument be placed in the dark, and examined after a lapse of ten or fifteen minutes, all motion has ceased; but the vesicles, when re-exposed to a moderately strong light, soon, in obedience to that stimulus, recommence their motions."

Those researches have doubtlessly been continued, and I am anxious to know whether they have been extended to fishes. Some of FOREST AND STREAM's learned contributors are certainly in a position to inform us on this subject.

The chameleon has for a long time been a puzzle to the scientific world, and strange and exaggerated accounts have been given about its power to assume all imaginable colors; theories upon theories have been brought forward to account for the changes of color in these animals of a far-away land; but our humble friend, the cheerful tree-frog, has been shamefully neglected. I am well acquainted only with the European variety, *Hyla arborea*, which in regard to changes of color is quite as remarkable as the chameleon. His mourning coat, which he wears in too close, or dark, or damp confinement, is of a dark spotted gray; but when in more cheerful mood he will assume the exact shade of green of any leaf which he may choose for a hiding or resting place.

These defenseless animals are thus admirably protected through adapting their color to that of their immediate surroundings, from which they are not easily distinguished. Fishes need the same "improved standard" of protection; for the water in which they live, and the rock or sand or plants of the many feeding places over which they have to travel are often of very different color, and are subject to frequent changes of light and shade, and exposed to the varying effects of refraction of light upon the water. A fish, whether swimming in a lake, "suspended in space," or moving over the sunny bottom of a shallow brook, would be a conspicuous object, too easily detected by enemy or prey, if nature had not provided him with the enviable ability of concealing his presence wherever he goes.

G VON HEYSS.

An accepted theory to account for the varying colors of a fish may be found in Poulton's work on the "Colors of Animals." It is in brief this:

1. The color is produced by the pigment cells or coloring matter in or beneath the skin.

2 Varying shades of the color are produced by varying states of concentration of the pigments in the cells.

3 These different states of concentration of the pigment cells are caused by the action of the exterior light which is reflected on the fish's eye, and acts through the optic nerve, the brain and the nerves, upon the pigment cells.

We quote from the chapter on "Variable Protective Resemblances":

The power of color adjustment is very widely distributed among fish and amphibia Instances of the power of rapid adjustment are very common, although most people are not aware of them. Nearly all fishermen know that the trout caught in a stream with a gravelly or sandy bottom are light colored, while those caught in a muddy stream are dark. It is also well known that the same fish will soon change in color when it passes from one kind of background to the other. The same facts are true of many other fresh water and sea fishes. The interior of a minnow can is painted white in order that the bait may become light colored, and thus conspicuous in the dark water where the pike or perch is likely to be found. The change of celor occupies an appreciable time, and the fisherman knows that he stands an extra chance of catching his fish while the bait remains unadapted to its environment. This experience serves to prove in a practical way that the power of changing the color is essentially protective.

The physiological mechanism by means of which these rapid changes of color are effected has been investigated by Lister in England, by Brücke in Germany, and by Pouchet in France. At first sight it appears likely that the light may directly determine the distribution of coloring matter in the pigment cells in or immediately beneath the skin. Each of the various surroundings of an animal would, according to its color, reflect light of a certain constitution, and it might well be supposed that each kind of reflected light would produce a different effect upon the pigment cells. It is, however, now well known that the action is extremely indirect; certain kinds of reflected light act as specific stimuli to the eye of the animal, and different nervous impulses pass from this organ along the optic nerve to the brain, which, being thus indirectly stimulated in a peculiar manner by various kinds of reflected light, originates different impulses, which pass from it along the nerves, distributed to the skin, and cause varying states of concentration of the pigment in the cells. The highest powers of the microscope, assisted by all the varied methods of histology, have failed to detect the connection between the nerves and the pigment cells in the skin, and yet such connection appears to be rendered certain by the fact that light falling on the eye modifies the distribution of the pigment granules. The pigment cells in the skin are often of various colors, and are arranged in layers so that very different effects may be produced by concentration in certain cells, leading to the appearance of those of another color, or to a combined effect due to the colors of two or more kinds of cells.

It has been shown by experiment that blinded frogs had no power of altering their color so as to correspond with surrounding tints. The same facts also have been proved in a most interesting manner by the observations of living animals in their natural surroundings. Thus Pouchet noticed that one single plaice out of a large number upon a light sandy surface was dark-colored, and thus unlike its surroundings. Examination showed that this individual was blind, and therefore unable to respond to the stimulus of reflected light In addition to the light-colored trout usually seen in a chalk stream in Hampshire, England, very dark individuals are occasionally met with. These dark fish could never be induced to rise to the fly. On examination they were invariably found to be blind, the crystalline lens being opaque. Sometimes the fish were blind in one eye, but this did not affect their color. The dark shade appears to come on gradually with increasing blindness, for the depth of the tint varies in different individuals, and sometimes only part of the body (*e g.*, the tail is affected) The blindness probably comes on with age, for the dark fish are always large, generally between one and two pounds in weight.

Cut-throat Trout.

ST. PAUL, June 5.—*Editor Forest and Stream:* I notice in your issue of June 5, page 450, a reference to that variety of the Rocky Mountain black-spotted trout which has come to be generally designated as the "cut-throat trout." In my "Sportsman's Gazetteer," published in 1877, he is called *curinatus* by Prof. Cope, although under a revised nomenclature he lapsed into *purpuratus* Both Cope and Yarrow had already described four different varieties of black-spotted Rocky Mountain trout, in which the markings vary, for description of which please refer to Vol. V. "Zoölogy of Expeditions for Explorations West of the One Hundredth Meridian," p. 694, 1876. I first observed this fish in August, 1881, at Rosebud Lake, at the head of Rosebud Creek, a tributary of the Stillwater, which flows into the Yellowstone, and gave him the name of "cut-throat trout" in my official report, which was a chance thought suggested by the two crimson slashes as wide as your little finger on the lower edges of the gill covers, and which at first sight I took to be blood. These marks, however, I believe are not permanent, but occur only in the rutting season. I also gave the name of silver king to the tarpon the same year.

The cut-throat is properly known as the Yellowstone trout.

CHAS. HALLOCK.

BOSTON ANGLERS.

BOSTON, June 12.—Mr. L. O. Crane is just out from Round Mountain Lake, where he has had good success fly-fishing, landing over 100 trout.

The Haskell or Boston *Herald* party, to Allerton Lodge, Mooseluckmaguntic Lake last week found only fair fishing. Mr. Chapman is reported to have been the most successful fisherman of the party, a 5½lb. salmon falling to his net.

Mr. Frank Wise is back from his fishing trip to the Tusket River, in Nova Scotia. The river is reached by way of Yarmouth, twenty-five miles, or by one or two shorter carriage drives. But the Yarmouth road is rather the best Mr. Wise is so much pleased with his first trip to this river that he will go again. An 8lb. sea salmon fell to his score, while his companion, Charles Boss, caught two salmon. They caught an abundance of trout of from ½ to 1½lbs. Though the water was high, they had excellent sport.

Mr. Walter L. Hill has returned from his annual trip to Moosehead. He was absent from Boston seven days. He saw the sun the day he left, but did not see it again till he got back to the Hub. In spite of this dismal weather, he reports excellent trout fishing, including from three to twenty a day. He also took a laker weighing 10lbs.

Mr. E. C. Stevens and party have returned from an enjoyable fishing trip to Lake Dunmore, Saulsbury, Vt. They were absent but a few days but took many large pickerel, sending out some very large strings One big fellow weighed 8lbs., with others of 2, 4 and 6lbs. They also took one or two big lake trout. Mr. Stevens thinks that a good deal of sport is promised at Lake Dunmore this season.

Mr. Mathew Luce is again the champion cod fisherman. At his last trip, with his boatman, he took ninety codfish off Cohasset. Boston sportsmen who cannot get away for long trips to the trout and salmon waters get much satisfaction from the salt water, which is near and always at hand.

Now and then a large salmon is taken at Lake Auburn, Me. The other day Michael Ready hooked one with nearly 200ft. of line out. The fish made a great play, and it took more than a quarter of an hour to land it. The weight was 8¾lbs. Some good catches continue to be reported from the Schoodic lakes. The papers say that Supt. Maloon, of the Bangor & Oldtown Electric Railroad, has returned from those lakes with a big catch, including two lakers weighing 24 and 18lbs. respectively. The largest fish is said to be the largest on record from those waters. The big fish was taken by trolling, with a double bait of worms and a minnow. It took an hour and a half to land him.

Pretty good fishing continues to be reported at Newfound Lake, N. H. Dr. Q. A. Ballou is reported to have recently taken a salmon weighing 16lbs. H. Crafts and H. Butterworth are also reported to have taken 14lb. trout.

C. W. Varney and son Ralph, of Lynn, have been at Bemis, where the boy is credited with having taken two trout of 5lbs. each. SPECIAL.

ONE MAN I HAVE FISHED WITH.

Frank G. Beach.

Editor Forest and Stream:

I appropriate this caption with due apologies to Fred Mather, coupled with the wish that his felicitous pen might be enlisted with knowledge of the man, to do proper honor to a Waltonian who has made his last cast, and whose kindly deeds by flood and field are worthy of perpetuation in your columns.

Mr. Beach's business activities have had to do with the telephone, which he fostered in its small beginnings, and aided largely in perfecting and developing to its present maturity. He held an honorable place in the business world as general manager of the Central Union Telephone Co., and his untimely death will bear as a personal loss upon every member of the fraternity.

It is of the social side of his nature, however—of his qualities as sportsman and good comrade, that his intimates will dwell upon with loving remembrance, and which fit him to his niche with all true disciples of the gentle art. The best men are at their best under the leveling influences of the camp, when one's cares may be dropped with the official harness, and at such times Beach rejuvenated himself and appeared as the care-free, wholesome, right-minded boy. Better than the bishop in full canonicals is the bishop unbent, as I have observed him, when with none to make him afraid, he dances a pow wow about his first trout, or takes his trick cheerfully in the drudgeries of the camp.

I had not the good fortune to know Mr. Beach for a long period, but sufficiently so to prove the pessimistic libel that men make no friendships, but only acquaintances, after the meridian of life. With men of Beach's type, to whom youth seemed perennial, there is no period of life when one would not respond to the charm of his kindly enthusiasm. He never grumbled—nor rains, nor the spoiled dinner, nor the worst "fisherman's luck" ever pheazed the perfect serenity of his temper—and he never spoke ill of men.

The last time I found him suffering from his malady I persuaded him out of his office and over to the St. Paul train for a couple of days on Keesus, a placid little, four-leaved-clover-shaped lake, near Hartland, meaning to have our dinners al fresco, with Louie Kafmeyer as captain and chef, and, for that matter, philosopher and friend. To those who know Louie and his all-round accomplishments, it will be understood that no little pleasure and healing was likely to come of it.

A five-mile drive after Farmer Marshall's spanking bays landed us at his modern home, where nothing is left to be desired in the way of hospitality or creature comforts. Being pretty well-seasoned boys, knowing there are days and days to come, we take things leisurely in the morning, and stroll down about 9 o'clock to find that our boatman has been waiting since sun-up with a bucket of minnows that on sight stirs our temperature to fever symptoms. We begin casting along the sedgy border of Marshall's Bay, every foot of which is likely to harbor a big-mouth, and are rewarded from time to time with some inexperienced seedlings, which we throw back for the boys who will follow us, with the admonition to "keep in out of the wet." My brother fishes as he does all things, with grace and intelligence; his tackle is dainty—the rod 5ft. in length, in weight an ounce to the foot, the line of braided silk a mere thread, with a single hook; and with a turn of the wrist he has delivered a succulent minnow right in that lair 75ft. away. This far and fair cast fails only because Mr Bronzebacker is elsewhere. Just around the turn, and as the bait touched water off the point of weeds, he struck the mine; for, like a fuse to powder, the explosion followed, the bottom of the lake seemed to blow up like a geyser, and a racket began as if he had hooked on to a couple of wildcats. He had deluded a mighty bass. It is the mistake of your life to suppose the tackle won't hold—Louie and I know better—for in competent hands it has killed its 30-pounder. This aside—the fight is on; Beach is endeavoring to calm his victim, and remarks incidentally while giving it the butt hard, "Oh, come out o' that, old mossy. Here, here! that won't do," and turning to me, "Ain't that a sky scraper, Mike?" as his game makes another furious leap, swearing the while at its captor, who, like Grant, is ever

"Patient of toil,
Serene amidst alarms."

And it is a joy to note the struggle of skill against artifice illuminate the weary eye, and send the reviving glow to his cheek Alas! the mission of this particular bass was merely to point an example of perfect patience in adversity to Louie and me, for it broke away, and as it lit out for the brush on the opposite shore, Beach quietly mumbled after him, "Just tell them that you saw me," while the historian exhibited quite a different spirit, and endeavored to kick holes through the boat.

Any one of the thirty lakes in Waukesha and Oconomowoc counties, accessible from Chicago in three hours by this road, will yield generously of the big-mouth when catered to in this manner; but in still-fishing or trolling the catch is likely to be small. They did not all get away in Keesus that morning, as we counted out twenty-two bass (not at all an unusual number) and a lot of pickerel and other odds and ends, which do not count. Louie thought we had enough (?) for lunch, and as he permits no interference with the culinary management, we were pleased with the opportunity to rest and discuss the cook, as he is not the kind of a cook to cuss. He could have cooked for the jubilee to the Queen's taste, and he served us in some magical manner at once with fish, flesh and potatoes, and possibly the coffee, all hot, from the same pan, and preserved the flavor of each. My comrade, as usual, sneaked all the tid bits to my side of the pan, under cover of some complimentary remarks on what the cook had done for him. Stretched on the greensward, my friend said, with a gratified sigh: "That's the best dinner I ever surrounded, and Charles Lamb ain't in it with me." It appears that when the booking agent put his head in the coach to inquire if they were "all full inside," Lamb replied: "Well, that last oyster pattie did the business for me."

We loafed, "invited our souls," and talked of things, and as one may on such rare occasions, I was permitted another glimpse into an unselfish heart, which, hating shams, held a boundless love for all nature and his fellow-men.

I have been dwelling all winter with delight on the fruition of plans we had shaped that perfect day for the coming season; my best skill and fraternal regard has been woven into a rod which he mercifully believed he would use for many a year with returning health; but, alas! poor fellow, the fatal summons had then been sped. Happily for those who grieve most, his life went out painless, as he would have willed it for every living thing. We have laid him to rest under the leafy shades of Rose Hill, within sound of our beautiful, murmuring inland sea which he loved so well.

Au revoir, brave comrade, dear friend. McL.

SMELT ARE NOT A MENACE.

STATE OF MAINE, Commissioners of Inland Fisheries and Game, Dixfield, Me., June 11.—*Editor Forest and Stream:* I notice in your paper June 5 an article from Mr. Bainbridge Bishop entitled, "Are Smelts a Menace?" The writer, I should judge, is not familiar with the habits and characteristics of the fresh-water smelt of Maine, which is the variety we are introducing into the lakes in Maine. This fish does not feed on the young of other fishes. In that respect they are as harmless as the sucker. Even if they did, they do not come into water where you would find the young trout and salmon, *i. e.*, near the shore. This smelt is only found in deep water away from the shore, feeding mostly from the surface.

If the gentleman has ever been in Maine, the home of the landlocked salmon, and is familiar with their origin, he must know that every lake where they are placed by nature abounds in smelts. He should also know that we cannot successfully raise fine salmon without smelts for food. In every lake in Maine where you find the smelt, there you find the finest trout, salmon and pickerel, and in greater abundance. In every instance where we have introduced the smelt, the salmon and trout have at once increased in size and quality in a very marked degre.

I think the gentleman need borrow no trouble about any harm coming to the trout and salmon by the introduction of the fresh water smelt. We think so much of them in Maine that we are introducing them into every pond adapted to them in the State. We don't intend to introduce any English sparrows. There is none of that blood in the smelt.

H. O. STANLEY.

Rhode Island Salt-Water Fishing.

SOUTH PORTSMOUTH, R. I., June 9.—All fish in this section are much earlier than usual, and it has been an uncommonly cold May. Round mackerel appeared the past week off Burton Reef Lightship of very large size, and took the hook fairly well, one boat taking three barrels of extra No. 1's. About 50lbs. were sent to Boston from Block Island last week. Nearly all of the mackerel sent into Boston market last week and this week up to Thursday night, came from Block Island and Cape Cod waters. These fish did not appear in any numbers last season till late in June. Outside of Sachuest Neck quite a number of mackerel were seen by me, but refused the hook. A few warm days will put them in biting trim. Tautaug ran fairly well during the past week. Weakfish have just commenced to run, a few being taken in the traps, also large catches of sea bass and flounders. Bluefish, a few showing of large size. The first large striped bass was taken last Monday, weight 41lbs.

WM. M. HUGHES.

PROVIDENCE, R. I., June 14.—William Sanderson made a fishing trip to the shore a few days ago and hooked a skate, which he succeeded in landing after a hard fight. It measured 4ft. 3in in length and 3ft. 3in. across its flippers. The fish weighed 72lbs.

Game Warden Fred C. Medbury, of Riverside, enjoyed a good afternoon's fishing in Rehoboth recently. Upon his return he displayed a fine string of trout, the largest weighing 1¼lbs.

John J. Holmes, of this city, caught a tautog weighing 10½lbs. off Allen's Ledge, Nayatt Point, one day last week.

W. H. M.

NEW JERSEY COAST FISHING.

ASBURY PARK, N. J., June 12.—Coast fishing is gradually taking on its accustomed aspect. Bass are as yet not taking the hook as well as anglers could hope for, still enough have been taken to keep the ambition up to the expectant degree. Moynan is already on the grounds and as usual in the lead both in numbers and weight, his heaviest so far at this point is 15½ lbs. Kingfish are fairly abundant, but seem rather reluctant about taking the hook, this may be due to the prevailing cold weather, as they are much more sensitive to water temperature than is the bass. Black bass seem voracious and will take greedily apparently any bait offered. I saw a string of seven nice ones which was taken from one of our nearby lakes this morning. Fishing at Anglesea, N. J, is already at its best. I am in receipt of a letter from my friend L P. Streeter, who generally keeps me pretty well informed as to what is being done in the waters which he frequents. The following record, made by himself, H. W. Quick and Cyrus S. Detre, of Philadelphia, is one I believe which has never been beaten at this season of the year. LEONARD HULIT.

Mr. Streeter's letter was written from Anglesea, June 1, and the report runs: I have been spending the past week here in quest of drum, and as to day closes our fishing I send you an account of our efforts from May 5 to date:

May 5—H. W. Quick, 1 drum, 18lbs.

May 13—H. W. Quick, 1 drum, 16½lbs.; C. H. Detre, 3 drum, 18½, 26 and 54lbs.

May 14—Detre, 2 drum, 23½ and 23lbs.; Quick, 3 drum, 42, 23½ and 21lbs.

May 21—Detre, 2 drum, 25 and 18lbs.

May 22—Detre, 1 drum 24½lbs.

May 27—L. P. Streeter, 1 drum, 21lbs.

May 29—Detre, 6 drum, 61, 26½, 21, 24, 22, 29½lbs.; Quick, 9 drum, 23, 21, 19, 17, 21½, 21, 19, 31 and 19lbs.; L. P. Streeter, 3 drum, 22, 21 and 18¼lbs.

May 31—L. P Streeter, 8 drum, 22, 18, 20, 18½, 38, 15, 22 and 21lbs,; Detre, 25½, 13, 19½, 16½, 21, 17½, 18 and 19lbs.

Detre caught 2 channel bass (red drum) while fishing in the surf for drum yesterday, May 31, we have never done such a thing before in the spring, and it was a great surprise.

June 1—Streeter, 4 drum, 23, 19, 16 and 20lbs.; C. S. Detre, 2 drum, 22 and 18lbs.

To date—Detre, 25 black drum, weighing 565lbs., and 2 channel bass, weighing 35½lbs.; Quick, 13 black drum, weighing 294½lbs.; Streeter, 16 black drum, weighing 334½lbs.

Food for Greenwood Lake Fish.

From May Report of Protector Shriner, of New Jersey.

During the past month a number of wardens were employed at netting the reservoirs of the East Jersey Water Company at Clinton and Oak Ridge. The principal object of the work was securing bait fish for Greenwood Lake, the quality of the game fish in that water having greatly deteriorated of late years, principally, it is believed, on account of a lack of food. Thousands of bait fish were caught, together with considerable quantities of game fish, and these were all taken to Greenwood Lake.

Fortunately an opportunity offered to secure a consignment of the eggs of fresh water smelts, five boxes, each containing from 35,000 to 50,000 eggs being received during the early part of the month. The eggs were of both varieties of the smelt, the large and the small, the former attaining an adult growth of some 5 or 6in., and the latter of 3 or 4in. These eggs were distributed as follows: One box to Lake Hopatcong; one box to Greenwood Lake; one box to the trout streams of Sussex county, emptying into the Delaware River, from which it is hoped the latter stream will receive a supply; two boxes were divided between Culver's Lake, Little and Big Swartswood lakes, Long Pond, Iliff's Pond and Struble's Pond.

The Vermont Pike-Perch Season.

FERRISBURGH, Vt., June 7 —A few nights since I heard the bullfrogs of Little Otter give their first concert of the season, or at least the first I had heard. I interpreted their songs to run, "Come down, come down, now, now," which could be nothing but an invitation to fish for pike-perch, but the call could only be accepted in violation of a most ab urd law which prohibits taking pike-perch in our streams until June 15. If any one can give a reason for continuing the prohibition two months beyoud the spawning time of these fish I would like to know it. AWANSOOSE.

Sullivan County Trout.

WURTSBORO, N. Y., June 7.—Our veteran fisherman, Jacob Hosier, on Saturday of last week landed seven of the finest speckled beauties we have looked at this season. Four of them measured 14in. and three about 18in.

Since the season opened here on May 15, Mr. Hosier has shown us many fine catches from Boshas Kill, but says this was the best day's sport he has had so far. He frequently goes to the mountain brooks and returns with a basketful, but, like all old fishermen, he prefers to hook the big ones, and he says that Boshas Kill is where they grow.

C. B. NEWKIRK.

Death of E. M. Copeland.

MR. E. M. COPELAND, manager of the Mastigouche House, on the Mastigouche Fish and Game Club grounds, Quebec, died on Tuesday, June 1, aged sixty years. The house will now be conducted for members and their guests by Mr. L. B. Copeland, a son of the late proprietor.

WHERE TO GO.

ONE important, useful and considerable part of the FOREST AND STREAM's service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsmen for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

The Kennel.

FIXTURES.

FIELD TRIALS.

Sept. 1.—Continental Field Trials Club's chicken trials, Morris, Man
Sept. 6.—Manitoba Field Trials Club, Morris, Man.
Oct. 25.—Brunswick Fur Club's ninth annual trials.
Nov. 1.—Dixie Red Fox Club's third annual meet, Waverly, Miss.
Nov. 2.—Monongahela Valley Game and Fish Protective Association's trials, Greene county, Pa.
Nov. 8.—Union Field Trials Club's trials, Carlisle, Ind.
Nov. 15.—E F. T. Club's trials, Newton, N. C.
Nov. 16.—International Field Trials Club's eighth annual trials Chatham, Ont.
Nov. 22.—U. S. F. T. Club's autumn trials.

1898.

Jan. 10.—U. S. F. T. Club's winter trials, West Point, Miss.
Jan. 17.—Continental F. T. Club's trials, New Albany, Miss.

THE ETHAN ALLIN SETTER.

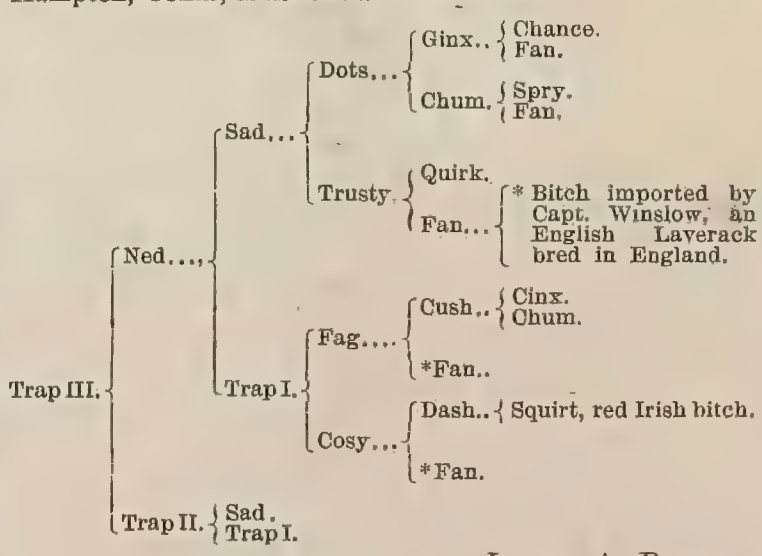
HAMPTON, Conn.—*Editor Forest and Stream:* In respect to the question as to the origin, type and field qualities of the Ethan Allin setters, I will endeavor to give the pedigrees of these dogs as far as their breeding is known, and while these pedigrees are not complete, they will give a fair idea from what blood they were produced. Personally I did not know Mr. Allin, for it was not until after his death that I became directly interested in this strain of dogs, although they were the first bird dogs I ever saw afield or shot a gun over. I first bought puppies of this strain from different parties which proved to be good field dogs, especially so on ruffed grouse, and as this is our principal game bird, grouse dogs were in greater demand than quail dogs; so I took the idea that I would secure a bitch of this strain, and see if I could not breed back and reproduee stock that would be equal to those that I had previously seen and handled. Brood bitches of this strain were hard to secure whose breeding could be established, although dogs that were called "Ethan Allins" could be found everywhere. I finally found one, Trap III., owned by W. W. Jewett of this place, and she was bred to several dogs of this strain, whose pedigrees I traced up and found correct, but the result was far from satisfactory. The pups from these litters were invariably of high strung, nervous dispositions, gunshy and timid. When this bitch was bred out to some good English setter dog, I secured some nice field dogs. It seems to me that the reason is plain when we look at the pedigree of this bitch, and see how her ancestors had been bred in for three or four generations. This same inbreeding is, to my mind, the reason that this strain of dogs has run out so quickly; for it is a fact that while there are some dogs of this strain still living that are fine field dogs, there are but few whose pedigree can be traced back. Most of the Ethan Allins of to-day are dogs known to be at least half English setter blood. Failing to bring these dogs back to the standard that I had been accustomed to, I gave them up, and to-day have not a drop of Ethan Allin blood in my kennels. I inclose the pedigree of Trap III. for three generations, or back to Trap I., and a pedigree of this bitch as far back as Mr. Allin knew it.

It will be seen that the sire and dam of Trap III. were brother and sister, but this was not Mr. Allin's breeding, as I believe that Trap III. was bred by A. B. Boswell, of Danielsonville, Conn. Mr. Boswell owned her sire and dam, Ned and Trap II, they being bred by Mr. Allin.

The bitch Trap I. was considered by Mr. Allin as one of the finest he ever bred, being an orange and white in color and a fine looking bitch. She was also an excellent field performer. She was sired by his dog Fag, a slate-blue, white and tan dog, out of his noted bitch Fan. You will note that the pedigree of Fan is not given, but he says that she "was imported in utero by Capt. Winslow."

Who Capt. Winslow is or was I do not know, but Fan was an orange and white English setter, and was owned and trained by Edward Botham, of this town, who afterward sold her to Gilbert Burnham, from whom Mr. Allin bought her. Fan was a great field bitch, and Mr. Botham bred from her before he sold her, and from this stock he produced some excellent field dogs. He bred her to an Irish setter dog owned by Edgar Newton, and produced a fine litter, chief among them being a dog known as One-Eyed Dan, a dog that enjoyed the distinction of being the finest quail dog in this section. From him was bred some good ones, one in particular, owned and trained by Henry T. Mosley, of Hampton, an orange and white dog that was one of the best all-round field dogs for our New England shooting I ever saw; the last I knew of this dog he was sold and went to some place in York State.

From this bitch Fan, Mr. Allin secured his finest stock, and it was from her progeny that the Ethan Allin setter gained such wide notoriety. She was also a fine-formed bitch, and won the second prize at the Springfield, Mass., bench show in 1874. Her daughter Cosy, whose name you will note in the inclosed pedigree, is the bitch Mr. Allin used to show at the bench shows on point, and was quite a drawing card at that time. By taking this pedigree which I inclose, and going back eight or nine generations and following it down, you will get a pretty good idea of the crosses that were made to establish this strain. There is the blood of the Irish setter and the English traced back to the imported stock; also a strain from the old Pete Tomlinson stock, of New Haven, Conn.—dogs that were considered the equal of any a quarter of a century ago, and I believe they were justly entitled to that credit, for I have dogs now that descended from this same strain that were bred by E. K. Sperry, of New Haven, and they are the best dogs, take them as they run through whole litters, of any strain of dogs I have ever handled. After studying this pedigree one must come to the conclusion that Mr. Allin bred to the best field dogs he could find without regard to breed or pedigree, considering field merit as paramount to all other considerations.



As far as my experience goes I could hardly say that they were an established type, for we see dogs of all colors, lemon and white predominating, yet there were certain characteristics that were usually noticeable, particularly the n rrow, pointed muzzle, "snipe nose" we call it here, and the majority of those that I have broken were of short, compact bodies, straight, flat coats, and rather straight on their hindlegs. In disposition they were mild and gentle.

In the field their style of work was entirely different from our modern English setter, lacking the speed and lofty carriage that is so much admired to-day; but they could maintain a fair rate of speed, and after a few days' work would settle down into a steady, easy lope, and go from morning until night six days in the week, working just as cheerfully the last day as the first. They possessed wonderfully keen noses, stanch as rocks, and manytimes were cautious almost to a fault. Working usually with their noses close to the ground, picking up the faintest scent, working it out in the same manner that a bloodhound would, they were, at picking up an old cold trail and following it out, the superior of any race of setters that ever came under my observation. Their style of working would not have gained for them any notice at a field trial, but here in New England, where most of our shooting is done in the cover, and where the ground is for a greater part of the season carpeted with several inches of dry leaves where scent does not hold and where birds are comparatively scarce, their keen noses and great ability for working out those old "trails," which the average high-headed, dashing English setter would not notice, it won for them a warm place in the hearts of that class of sportsmen that cared little for style or lofty pedigree, but wanted a dog that could be relied upon for a pleasant day afield.

I have personally run an Ethan Allin and a Lewellyn or Lavarack together at brace work, and many is the time that I have known the Ethan Allin to take up one of those old trails and follow it for a hundred yards before the English setter would seem to realize that a bird had been there. I say a "trail," for that seems to me to be the only expression that will cover it. While our English setter, with his head high up and sometimes several yards from the course, actually pursued by the bird "roads" his birds, the Ethan Allin followed the foot scent with nose near the ground, so I make the distinction and call it "trailing."

Grouse, or partridge, was their favorite bird, and with stanchness and caution they would steal upon an old wary grouse with their cat like step that seldom alarmed the bird, and was pretty sure to give the sportsman a shot. When they took up an old trail the only thing to do was to let them alone to work out their own salvation, and if that bird stayed on the ground they would nail him sooner or later. For my own shooting I like a rather fast dog, yet I took great pleasure in shooting over these dogs, and it is with regret that I note that the Etan Allin of my early experience is so nearly extinct.

The orange and white American setter bitch Trap III, whelped in June, 1887, and owned by W. W. Jewitt, Hampton, Conn., is as follows:

LESTER A. PEALE.

SCHOOLING THE DOG.—IV.

SOME of the authorities on the subject of training maintain that the puppy's education should begin when he is very young. In theory, it is very plausible. The teacher thus takes the puppy when its mind is unformed, and then stuffs it with knowledge before anything else has an opportunity to be implanted in it. Thus the puppy is trained from youth in the proper manner, free from the objectionable traits which are supposed to be acquired if he is given too much liberty or if his schooling begins when he has reached maturity. Furthermore, his mind then being more receptive and his character being in the formative stage, he grows into his education as it were.

This is all very pretty in theory. In practice, it is all very wrong. What is called the training of the dog—that is, his training as it refers to working to the gun for his master's pleasure or profit—is really but a small fragment of the dog's education. He in the main acquires his own education, partially from his own observation and partially from the schooling which he derives from everyday association with man. In such matters as prove profitable and therefore pleasurable to him, he quickly learns from his own observation which methods prove most successful, and those he adopts. He quite as readily learns what acts produce pain, and those he avoids. For instance, if he is whipped for invading the pantry or chasing chickens, he associates the acts with pain and avoids them. He quickly learns to detect the signs which indicate punishment; thus the change in his master's voice caused by irritation, or the change from the same cause in his facial expression, is detected instantly if it has previously been associated with punishment, and the pain he suffers through fear and disapproval deters him from committing the objectionable acts.

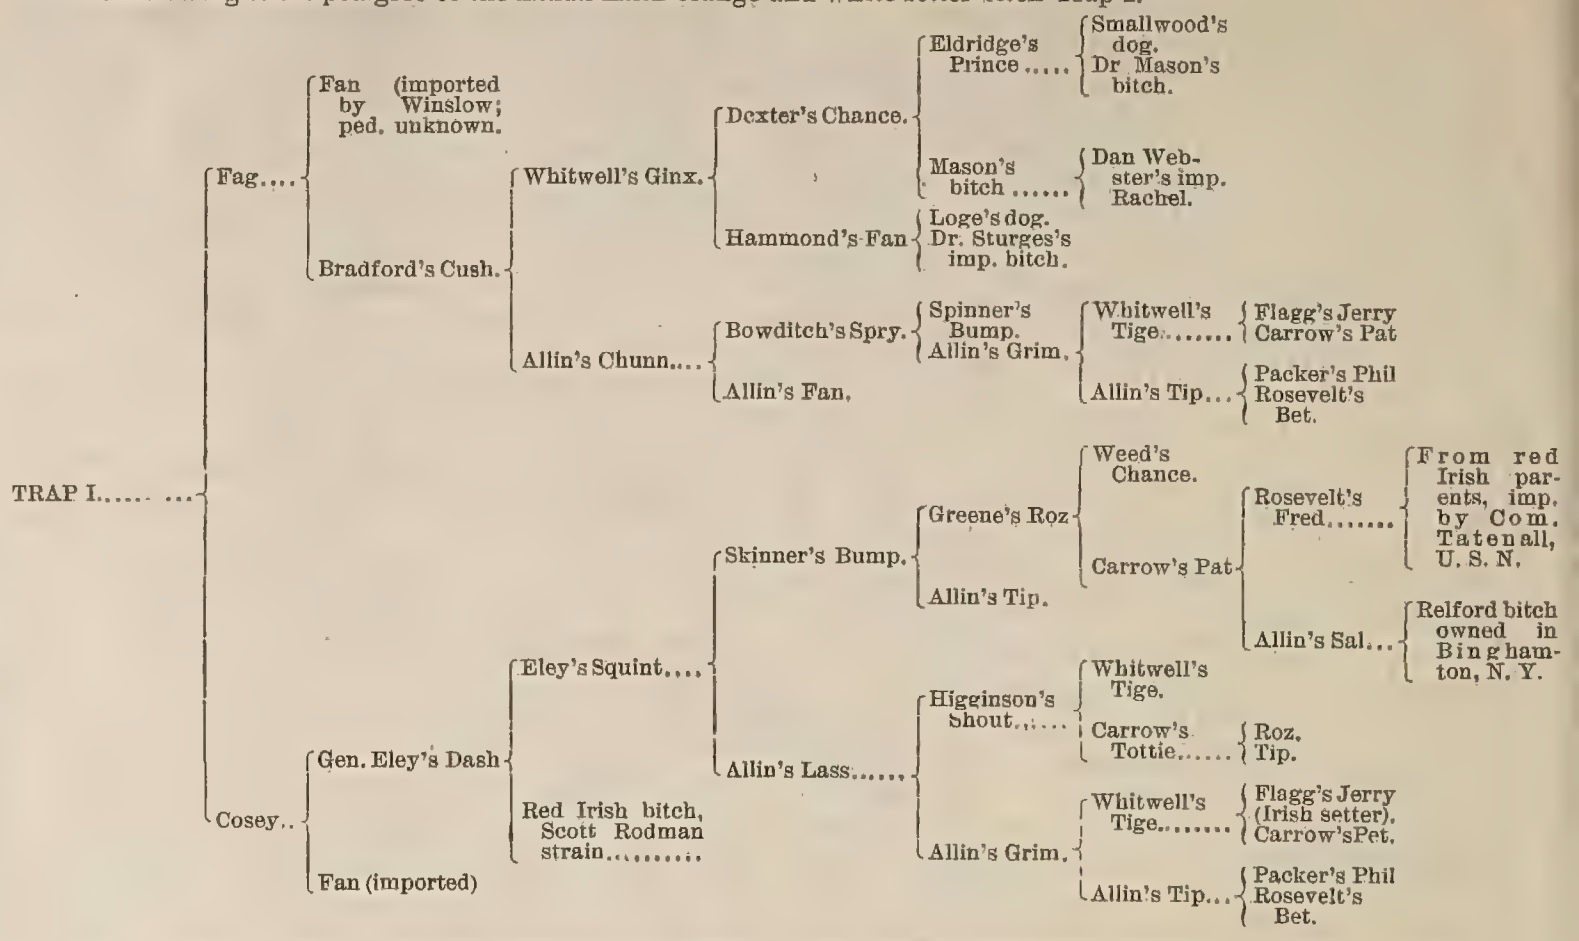
In the household, unconsciously, the dog is receiving his schooling constantly, and in time he learns to fit into the domestic life of the family, unobtrusively, accurately and intelligently. He understands what is permitted to him and what is not, and as there is but very little allotted to him, he recognizes it and keeps within the limits. He sleeps where he can be the most comfortable and yet the least in the way; he waits wistfully and deferentially for his meals; he trots quietly about, giving every one the right of way; in short, he learns to be a part of the domestic life of a family without any particular individual distinctiveness of his own. He learns that strangers are distinct from the family and toward them he feels secure in showing hostility.

If he be a country dog, he learns to hunt woodchucks or rabbits; at first he may consider chickens, sheep, etc., as being lawful prey, but being punished for chasing them, and thus, from associating pain with their pursuit, he confines his pursuit to such animals as prove profitable and pleasurable.

To develop his mental and physical capabilities he must have experience in a natural way. When the puppy is playing with other puppies or with children, such is not idle effort, or positive harm as some men seem to think it. On the contrary, it is the best of schooling. It is a wholesome development by nature's own method. The puppy at play is acquiring a training of all his senses, besides acquiring a knowledge of outside matters. His energies are aroused. He becomes self-reliant, active and skillful. The training at play is the school which fits the puppy for serious work. It is therefore better to leave him largely to his own freedom and resources within proper limits till he is eight or ten or twelve months old, accordingly as he is mentally and physically developed. He then learns ways and means of his own, becomes waywise and secures a general fund of valuable knowledge. Of course, he can be broken of any bad habits, such as chasing sheep or killing chickens; but the special education should be left entirely in abeyance. However, the trainer should permit the puppy to associate with him as much as possible, so that the puppy will recognize him as his master, become fond of him, and develop naturally from the opportunities afforded when accompanying the trainer in his walks through the fields and roads. At the same time the trainer learns the peculiarities and capabilities of the puppy, and can then accurately determine the best method to apply in his training.

As to the training itself, it may be divided into two parts, the yard training and field training.

The yard training consists in teaching the dog such commands as are useful in managing him to the purposes of the gun, such as dropping to order, or to shot or signal of the hand; coming in or going out to order, retrieving and the commands associated with it, and the obedience which comes from discipline, all of which will be fully treated in due place.



The field training consists in giving the dog opportunity to apply his instinctive desires to hunt birds, and then so checking or preserving them in their application as to be of service to the shooter's requirements.

It is commonly supposed that the trainer teaches the dog to hunt birds He does not do so. Domesticated dogs, wild dogs and other carnivora learn to hunt without any teaching. The true trainer is he who can take advantage of the dog's efforts, force him to abandon such methods as are detrimental to the interests of the gun, confine him to such methods as he excels in and which are the most useful to the shooter, and encourage him to work as a team with his trainer; that is, to adjust his effort so as to play to the gun's interest. In this, too, strictly speaking, there is nothing taught. The dog learns it himself from experience, and that, too, without any trainer. For instance, greyhounds learn to run cunning, one hound adjusting his efforts intelligently to the efforts of the other, and using entirely different methods from what one hound uses when in pursuit alone.

The field training of a dog is largely a system of suppression. He is punished for doing undesirable acts, and such desirable ones as he has are preserved. If he is deficient in any natural qualities, the trainer cannot remedy the defect.

The commonest error is that the amateur in his effort to suppress some undesirable trait may suppress several desirable ones, or all, for that matter, as when the trainer endeavors to break the dog of chasing rabbits or birds or breaking shot, and he does it so thoroughly that he breaks

The following is the pedigree of the Ethan Allin orange and white setter bitch Trap I.

the dog from seeking at all. He may punish the dog for mouthing a bird, and thereafter the dog may be afraid to take a bird in his mouth; so that the trainer has suppressed the whole of the accomplishment. The trainer whose skill is such that he can suppress the undesirable traits and at the same time preserve the desirable ones, is the best of trainers. He must be patient, intelligent and good-tempered, besides having the necessary knowledge of dogs and dog character.

The dog will hunt rabbits or sheep with as great a zest as he will hunt birds, in fact, he will hunt them with greater zest and fierceness. Punishment will break him of chasing them, and after a time by habit he will become indifferent to them. But the punishment which breaks the dog from chasing rabbits will also break him from hunting birds, hence it is a common occurrence that when the amateur punishes his dog for breaking shot or chasing birds, he breaks him from hunting them.

For these reasons, two systems of training have had their advocates, one being founded on the theory of no punishment at all, the other on punishment intelligently applied. The true theory is the combination of kindness and punishment which will humanely and most thoroughly accomplish the desired purpose. B. WATERS.

POINTS AND FLUSHES.

THE famous pointer Trinket's Bang (Croxteth—Trinket), died several months ago, aged about fourteen years. He won first in the Western Field Trial Club's All Age Stake, 1885 and divided third with Bob Gates in the National Trials of the same year. He was the sire of a number of superior performers, among which were Cherrystone, Pearl's Dot, Spotted Boy, and he was grandsire of Strideaway and Virginia. His owner, Mr. Wm. Titterington, has suffered a grievous misfortune in the gradual loss of his sanity during the past few years, and a short time since was removed to an asylum.

The Northwestern Field Trials Club elected recently the following list of officers: President, Thos. Stone, Alberta; Vice-President Benjamin Gordon, Winnipeg; Secretary-Treasurer, Thos. Johnson, Winnipeg.

Under date of June 11, Mr. James E Green informs us that entries closed for the open air show at Braintree with a total of 228, as follows: St. Bernards 13, collies 13, poodles 4, pointers 11, setters 4, cocker spaniels 8, beagles 12, bull dogs 17, bull terriers 3, French bull dogs 3, Boston terriers 49, fox terriers 37, Irish terriers 33, Scottish terriers 17, Welsh terriers 3, miscellaneous 1.

Mr. A. B. F. Kinney, President of the N. F. H. A., writes us that there will be a meeting of the directors of the National Fox Hunter's Association at Lexington, Ky., on Wednesday, July 18.

A brawny Swede visited the city hall the other day to procure a marriage license, and a couple of clerks to whom he innocently stated his wishes directed him to the department where dog licenses are issued. He approached the license window diffidently, gave his name and address, and asked what the documents would cost. "It will cost you $1 a year for every dog you keep," replied the clerk. "Dog?" echoed the Swede. "Why, certainly," continued the clerk, "don't you want a dog license?" "Val, no," cried the would-be Benedict, "Ay kain't afford to buy dog dces yar. Ay vant to get only a vooman now."—*Chicago Times-Herald.*

Concerning the dog show of the Morristown Field Club, to be held June 26, only dogs owned by members and friends of members of the Morristown Field Club, Morris County Golf Club and Morristown Club, will be received. Entry fee, $1. Entries close June 18, and are limited to 150. Dogs will be properly classified. Rosettes will be the prizes awarded to first, second and third. There will be an afternoon tea at 5 P. M., to which all interested in the show are invited. Address Morristown Field Club, Morristown N J

The "yaller" dog, a term heretofore synonymous with everything lowly, worthless and neglected, is about to have his day, or bad quarter of an hour, if the tumultuous applause bestowed on a song having vogue in the vaudeville entertainments of this city is any criterion of it. It is a source of regret, however, that even in his ill days the yaller dog should dawn in literature as the hero in a setting of such versification. The chorus is sufficient for one reading, if the reader can imagine a tune of sufficient pathos to accompany it:

"He was only a little yaller, yaller dog,
The ugliest in all the land;
But I'd rather have a wag of my little dog's tail
Than the grasp of a false friend's hand."

THREE several friends in New Brunswick have been at pains to send us a story printed in a local newspaper respecting a moose killed in that Province last autumn by a visitor from Massachusetts. The head of the moose having been left behind him by the sportsman, to be forwarded later, was intercepted and confiscated by the authorities on the ground that the Massachusetts man had not taken out a hunting license. Moreover, the sportsman and his guide having fallen out, the guide now puts forth the tale, which our correspondents send, that the moose was snared and tied fast to a tree that it might be an easy and sure victim of magazine inexpertness. This is not less ingenious than unkind. There is very good reason to believe that in the future, however, New Brunswick guides who escort non-licensed foreigners into the moose woods will be extremely reticent about what happens there; for the Province has just adopted a law which forbids the guiding of hunters who evade the license rules. Its terms are that if any person shall accompany into the woods as a guide one who is not duly licensed for the purpose of hunting moose or caribou, he shall be liable to a penalty of from $20 to $40 or imprisonment. This is a beginning of carrying into practice the Maine system of guide responsibility for the conduct of the guided. Hereafter the geniuses who tie up moose for license-dodging hunters may be depended upon to keep exceedingly mum about it.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. Prepared Blanks sent free on application.

BRED.

Mr. T. E. Moxham's
Rachael, beagle bitch, May 1, to Razzle.
Lizzie, beagle bitch, May 18, to champion Sherry.

Schenectady Gun Club.

SCHENECTADY, N. Y, June 2.—The Schenectady Gun Club is comparatively a new club, having been organized about a year, and after a hard struggle for existence has developed into a strong, well organized club, having on its rolls a large number of the principal business and professional men of this city. Its membership has steadily increased during the winter months, and it now numbers ninety. The club does both trap and rifle shooting, and has been exceptionally fortunate in securing a good location for practice, especially at the traps.

The grounds are twenty minutes' ride on trolley cars from the business center of our city, and the cars stop within 500ft. of our shooting grounds.

Ninety-eight per cent. of our members never shot from traps before joining our club. The interest in trap shooting has steadily increased lately, and for the past two months we have thrown over 8,000 targets. We meet every Saturday afternoon, and cordially invite any members of other clubs to spend an afternoon with us.

The following brief report of our Decoration Day shoot will give your readers some idea of our work at the traps and rifle range:

Four prizes were offered and the members of the club were divided into three classes: A, B and C. Class A shot from scratch; Class C received a handicap allowance of 15 misses as breaks in 100; Class B received 25 allowance. The contest consisted of 8 events at various styles of shooting: Nos. 1 and 8 were at known traps and angles; No. 2, unknown angles, both barrels; No. 3, 5 pairs, known traps and angles; No. 4, straightaways; No. 5, 5 pairs from 1 and 3 traps; No. 6, unknown angles; No. 7, unknown traps and unknown angles Only seven members shot through the programme, and all were members of classes A and B. Below are the totals:

Events:	1	2	3	4	5	6	7	8		
Targets:	15	15	10	15	10	10	10	15		Tl.
J Andrews (0)	13	13	6	12	5	7	7	11		—74
E Murday (15)	12	10	5	9	5	4	4	7	—56+15	—71
W Sauter (15)	9	10	6	10	3	4	7	6	—55+15	—70
P E Berg (15)	6	10	5	9	3	5	4	13	—55+15	—70
J Deland (15)	9	6	3	8	3	4	2	8	—43+15	—58
C Kilgore (0)	10	11	6	8	7	5	3	6		—56
V Walburg (0)	8	6	7	8	4	4	5	8		—50

First prize won by J. Andrews, second by E. Murday; third and fourth prizes were tied for by Sauter and Berg, the latter winning on the shoot-off.

The result of the prize shooting at the rifle range was as follows: Fifty shots were to be fired at the target at 250yds range. Out of a possible 250 points, the scores of the three leaders are: Clay, first prize, 201 points; Turian, second prize, 190 points; Wallburg, third prize, 182 points.

Any communication addressed to Valentine Wallburg, the president, or O. R. Clark, the secretary, Schenectady, N. Y, will receive prompt attention. MADISON.

Missoula Rod and Gun Club.

MISSOULA, Mont, May 30.—The Missoula Rod and Gun Club has been shooting over an old set of traps since the season opened on April 1, and those traps have been breaking an enormous quantity of targets. A couple of weeks ago we subscribed among ourselves enough to purchase a full set of new expert traps, and Paul North's electric pull. To-day we shot at 1,000 targets over them, the traps breaking only two. Below are the scores made, the poor scores being mainly attributable to the new traps, which throw a much swifter target than the shooters have been accustomed to.

Medal shoot at 25 targets, unknown angles: Rogers (winner of medal) 23, Menard 17, Flowers 16, Forbes 14, Mix 14, Eddy 12, Thompson 12, Graham 11.

In another shoot under the same conditions, the following scores were made: Rogers and Forbes 17; Menard, Mix, Flowers and Eddy, 15; Thompson 14, and Graham 12.

The officers of the club for this year are: President, N. W. M. Thompson: Vice-President, L. L. Hunt; Secretary-Treasurer, W. E. Graham. W. E. GRAHAM, Sec'y.

Read to Tatters.

CHICAGO ATHLETIC ASSOCIATION, Chicago, June 7.—*Forest and Stream Publishing Co.:* For several years this Association has subscribed for your publication, and it has been placed on the tables in our reading room. On account of the demand for it, it is handled so much that before the next number comes the last number is in such a worn condition as to be practically useless.

We have made arrangements with our news agent here to again supply us this year with your paper, and we would be glad if you could furnish us with a stiff file cover of some kind, that the paper can be placed in as it is received, so that it can remain there until the next edition is received, when it will be removed, filed, and the new number put in the cover.

Your kind attention will oblige very truly yours,
FRANK W. WENTWORTH, Sec'y.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable

WHEELING NOTES.

LEAKY lamps are a nuisance on bicycles, but it is a fact not generally recognized that they may be a source of danger as well. Coming home from a ride in the country the other day, a wheelman, crossing one of the ferries to New York, lit his lamp, which had happened to be overturned a short time previously, and was surprised to see it at once enveloped in a sheet of flame. His efforts to blow it out were unsuccessful, and it was only at the expense of a burnt hand and a damaged cap that he eventually succeeded in smothering the flame.

A similar accident happened to a rider at Merchantville, N. J. He was calling on a friend and had left his bicycle outside with the lamp still lighted, when a sudden illumination attracted his attention. He ran out and found the entire front part of his wheel in flames. The burning oil had leaked out over the rim and tire, which were completely ruined, while the enamel on the frame was also badly damaged.

Lamps should, of course, never be left alight when not in use, and it is also pretty generally recognized that they will give satisfaction only when conscientiously cleaned and cared for.

Wheeling on the ice, as has been remarked, is the highest luxury of cycling, and probably the least known branch of the sport. Provided there is no water on the ice, rubber tires hold perfectly well for all practical purposes, and no better or less fatiguing surface for long runs could be devised. Last winter a FOREST AND STREAM wheelman hazarded the prophecy that when the North Pole was discovered it would be through the agency of a bicycle, and now in all seriousness comes a proposition to do this very thing.

It is reported that Mr. Hugh Lee, who accompanied Lieut. Peary on his famous trip across the ice fields of Greenland, believes the North Pole can best be reached by the use of the bicycle. He is quoted as saying that the condition of the ice fields in the Arctic, although broken in many places by leads in summer and by icebergs all the year round, present excellent opportunities for the practical use of the wheel. The snow that covers the ice in winter is pounded down by the wind until it is hard enough to bear a man, and the ice itself at times is as smooth as that found in more temperate climes

"When I was with Lieut. Peary on that long trip across Greenland," Mr. Lee is reported as saying, "there were miles upon miles of ice and snow, level and smooth enough for wheeling. I frequently wished for my wheel. If I ever go North again I shall take one with me."

It is said that Mr. Lee is very likely to have the chance of trying the experiment, as he expects to go North again with Peary, and is already making preparations for special tires and equipment.

Lieut. Moss, with his black troopers from the 25th Infantry, is indefatigable in his efforts to demonstrate the utility of the bicycle for army service.

In a few weeks he proposes with twenty picked men, including a surgeon and a cycle repair man, to begin a practice march from Fort Missoula to St. Louis and return, a distance of about 3,000 miles.

The route will extend through southern Montana, the Yellowstone Park, Wyoming, Nebraska and Missouri, with possible detours into Colorado and Kansas. As no appropriation for the purchase of supplies is available, the line of march will be arranged to take in as many army forts as possible where rations can be obtained. When the supplies give out at a distance from a fort they will of course have to be purchased, but for most of the distance the army commissary can be depended upon.

It is expected that over poor roads an average distance of forty-five or fifty miles per day will be covered, while over good roads this distance will be considerably exceeded. Tents are to be taken along and camps will be pitched at night. Much of the cooking will also be attended to by the men, who are provided with light field outfits for this purpose.

The cooking outfits, consisting of dripping pans, bakers, coffee-pots and tin boiler, will be carried in large tin cases fastened to the front of the bicycle.

Blankets, tents, underwear and personal effects, as well as extra rations, will be stored in knapsacks, haversacks or canvas luggage cases, which are fitted in the diamond of the bicycle.

Every other soldier will carry a rifle strapped to the left side of the frame of his wheel, while men not so provided will carry revolvers.

The bicycles for the trip have been built under Lieutenant Moss's supervision, with a special view to rough service. They weigh 30lbs., and are each expected to carry in addition to their rider, about 40lbs. of outfit and supplies. The gear is 68½, 19 and 8, and each bicycle is provided with a good serviceable brake. In selecting tires the factor of resilience has been made secondary to strength, and the result is a very tough and practically puncture-proof tire.

The rims are of steel, which, though more apt to buckle than wood under strains, are better fitted for wet riding. Last year Lieutenant Moss found that after fording streams wooden rims frequently went to pieces, owing to the parts becoming unglued by the action of the water

Comfortable saddles have been fitted to the bicycles, and every caution that experience could suggest taken to ensure against breakdown.

On the march at times the detachment will move in close order, and at times single men or small parties will be detailed for special service. The object of the test is not so much to prove the feasibility of moving bodies of troops on wheels—though this feature will not be ignored—as to develop the adaptability of the bicycle for extended service in courier and patrol duty, and reconnoitering.

Lieutenant Moss has done good service in demonstrating

the adaptability of the bicycle for the army, and the result of his latest experiment will be awaited with interest.

It has frequently been commented upon as an anomaly, that so many of the railroads which have been complaining of the hard times and bad business of their lines should have fought bicycle baggage measures instead of turning to and making capital out of the so-called "bicycle craze," by extending every possible courtesy to wheelmen. There can be no question that there is money for the lines passing through large cities or along popular bicycle routes in a liberal policy in this regard, and there are indications that the railroad magnates themselves are at last awakening to this fact. It is altogether within the bounds of possibility, that before another year is past we shall see the very roads that opposed the wheelmen most bitterly striving among themselves for their patronage and doing all in their power to outdo each other in hospitality.

The Long Island Railroad is a case in point. Within the last few days President Wm. H. Baldwin has made application for membership in the League of American Wheelmen, and written the following letter, which is made public by President Potter, of the L. A. W.:

"I wish to notify you that I have arranged with A. B. Fullerton to represent the Long Island Railroad as a special agent of the passenger department. His duties will be to look out for the bicycle interests; to notify cyclists from everywhere how to make runs on Long Island; to get up printed material and maps showing the different kinds of runs and what roads best to use in making runs; to encourage the different towns on the island to build cycle paths and to arrange proper hospitality; to see that the railroad gives every facility within reason for the proper care and handling of cyclists and their wheels, and in general to make Long Island a cyclist's paradise before we get through with it. I have no doubt you will consider this a step in the right direction."

The Long Island Railroad Co deserves credit for the action it has taken. It is a broad-minded and far sighted policy that does not strive to make the most out of present conditions, which give a practical monopoly, but aims instead to further the interests of wheelmen and railroad conjointly.

Too often railroads act on the principle that cycle paths and improved roads and local hospitality and official courtesy are to be frowned upon rather than encouraged, and it is refreshing to see a position the opposite of this assumed by a road which is not forced to take the step through competition or any particularly selfish interest

Long Island is already the most popular wheeling locality near New York. Its fine system of good roads from the Coney Island Path to Flushing, as well as those from Hemstead to Patchogue and beyond, put it way up in the front as a cycling Mecca.

A new cross island cycling path, which is to extend from Port Jefferson to Patchogue, will soon bring wheelmen from Bridgeport and other Connecticut towns to join the throngs from New York and New Jersey.

Already most of the shady nooks along the best routes are preëmpted by inns and refreshment booths, but these are taxed to the utmost on holidays to meet the demand.

Aside from a few evil minded tack throwers, the native population are hospitably inclined to wheelmen, and now that the railroad has also proffered the hand of good fellowship Long Island may be esteemed the pearl of cycling communities.

Brakes on Bicycles.

FROM time to time the New York *Sun* prints statistics relative to bicycle accidents. As a rule these statistics are reliable and worthy of study, though occasionally, as in the report for May of the present year, an irrelevant note will be found, such as the following: "Scorcher starts for Coney Island with his sweetheart, comes in contact with a clergyman and is married. Damage, $5."

The burden of evidence to be gathered from the monthly compilation seems to point overwhelmingly to the necessity of equipping bicycles with brakes. The following is from an editorial on the subject:

"In, June, 1896, when the number of serious accidents among wheelmen was very large, the *Sun* endeavored to find out their prime cause, and to prescribe a means for avoiding their repetition. A careful study showed that, in four cases out of five, the cyclist responsible for the trouble was unable to control his or her wheel with sufficient promptness. Perhaps a pedestrian would start to cross the street without looking to see if it was clear, and, before he had taken three steps, be knocked down by a bicycle. Its rider had seen the danger, but wasn't able to avoid it. Again, a wheelwomen, careful and experienced as a cyclist, might be descending a hill; her speed would increase with every turn of the wheel, her feet leave the pedals, her machine become unmanageable. until the frightened rider could hold on only and trust in Providence.

"During May, June, and July of last year accidents in and around New York resulting from cyclists poor control of their machines, were reported in almost every edition of the newspapers. And the same kind of reports have been coming in at an alarming rate this season. For example, the other day a scorcher knocked down a boy and broke his collar bone. Cause: couldn't stop quickly enough. Two cyclists smashed together on a hill. Cause: same. Cyclist rode off a pier and was drowned. Cause: as before. On Wednesday last a young wheelwoman was drowned near the town of Garrisons. She was coasting; lost control of her wheel and was thrown into a pond. In short, a review of the bicycle accidents in this city for the months of April and May last shows that, in all probability, two thirds of the mishaps might have been avoided if the wheels involved had been equipped with brakes.

"Last fall inventors gave special attention to that feature of the wheel's make up, with the result that brakes of various sorts may now be had. They are all good; they weigh only a few ounces each, and to have one attached to a wheel costs but a trifle. Wheelmen who value properly their own lives and the safety of others regard a brake as indispensable to safety.

"Riders convince yourselves of the efficacy of this safeguard. Get a brake. You won't regret it, and doctor and undertakers may then take a longer vacation."

The FOREST AND STREAM *is put to press each week on Tuesday Correspondence intended for publication should reach us at the atest by Monday, and as much earlier as practicable.*

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

Copies of the FOREST AND STREAM *race report blanks, for recording and reporting races, will be sent to all clubs requesting them.*

The racing and measurement rules of the Yach Racing Union of Long Island Sound (the Seawanhaka rule, with allowance tables) can be had of Thompson & Co, 55 Dey street, New York; price 10 cents per copy.

The handbook of "Yacht Flag Etiquette" can be had of Rehm & Co., 157 Fulton street, New York; price 10 cents per copy.

YACHT RACING FIXTURES 1897.

THE following list of fixtures has been compiled from many different sources, some of them not official, and it may contain some errors. We shall be glad to have notice of corrections and additions.

Races of the Sound Y. R. U. are marked with the letter S; those of the Massachusetts Y. R. A. with the letter M:

JUNE.

17. New York annual, New York Harbor.
17. Beverly, first open sweeps, Wenaumet, Buzzard's Bay.
17. Cohasset, first club, Cohasset.
17. Burgess, open, Marblehead, Massachusetts Bay.
17. Wollaston, cup, Boston Harbor
17. Corinthian Marblehead, club, Massachusetts Bay.
M 17. Massachusetts, open, off Nahant.
19. Marine and Field, open, New York Bay.
19. Columbia, annual, Hudson River.
M 19. Dorchester, Dorchester Bay.
19 Larchmont, spring regatta, Larchmont, Long Island Sound.
19. Winthrop, ladies' day, sail to Dorchester Bay, Boston Harbor.
19. Queen City, 20ft. and 16ft. classes, Toronto, Lake Ontario.
19. Royal St. Lawrence, 30ft. and 20ft. classes, Dorval, Lake St. Louis.
19. Cohasset, club, 15-footers, 2d cham., Cohasset.
19. Columbia, Chicago to Michigan City, Lake Michigan.
19. American, open race, skiffs, Newburyport.
S 21. New Haven, annual regatta for 65ft. class of schooners, 43, 36, 30 and 25ft. classes of cutters and sloops, 30, 25 and 20ft. classes of catboats, and special class of yawls.
22. Rhode Island, ladies' day race, Pawtuxet, Narraganset Bay.
23. Roy. St. Lawrence, 20ft class, Dorval, Lake St. Louis.
23. Adams cups, 1st race, New York Bay.
24 Absequan, Cricket and 15ft. classes, Atlantic City, Absecon Bay.
26. Buffalo, ladies' day, Lake Erie.
26. Gravesend Bay, cruise, New York Bay.
26 Atlantic, Adams cups, 2d race, New York Bay.
26. Brooklyn, first special, New York Bay.
26. Roy. Canadian, 27ft., 22ft and skiff classes, Toronto, Lake Ontario.
26 Cohasset, club 15-footers, 3d cham., Cohasset.
26. Winthrop, evening race, Winthrop, Boston Harbor.
26. American Cruise, Ipswich Neck, Newburyport.
26. Columbia, 4th and 5th classes, Chicago, Lake Michigan.
26. Burgess, 1st cham., Marblehead, Mass. Bay.
26. Cor. San Francisco, cruise, Petaluma, San Francisco.
26. Taunton, 1st club, Taunton, Mass.
26. Roy St. Lawrence, 20ft. and 15ft. classes, Dorval, Lake St. Louis.
26. Beverly, 1st cham., Wenaumet, Buzzard's Bay.

Y. R. U. of Long Island Sound Racing Circuit:

JUNE.

26. Saturday. Seawanhaka Cor., annual race, for all classes.
28. Monday. Stamford, annual regatta, for all classes.
29. Tuesday. Indian Harbor, special race for all classes of sloops and cabin catboats 30ft. and under, and special class of yawls.
30. Wednesday. Corinthian fleet, annual regatta for 65ft. class of schooners and all classes 51ft. and under.

JULY.

1. Thursday. Horseshoe Harbor, special race for all classes 36ft. and under.
2. Friday. Sea Cliff, annual regatta, for all classes 51ft. and under.
3. Saturday. New Rochelle, annual regatta, for all classes.
6. Tuesday, American, annual regatta, for all classes.
7. Wednesday. Riverside, annual race for schooners and all classes of sloops 30ft. and over.

JULY.

1. Miramichi club cruise, Newcastle, N. B,
1. Royal St. Lawrence club, all classes, Dorval Lake, St. Louis.
1 Royal Canadian Queen's cup, Toronto Lake, Ontario.
M 3. Jeffries, off Jeffries Point, East Boston.
3. Cohasset, club, 15-footer, 4th cham, Cohasset.
3-4-5. Cor. San Francisco, cruise Martinez, Vallejo San Francisco.
3. Roy. St. Lawrence, 20ft. class, Dorval, Lake St. Louis.
6 American, 1st club, Newburyport.
3. Fox Lake, club, Mineola Club, Fox Lake, Ill.
3. Beverly, 2d open sweeps, Wenaumet, Buzzard's Bay.
3-4-5. American, cruise to Boston, Newburyport.
3-10. Brooklyn, annual cruise, L. I. Sound.
3-4-5. Buffalo, Lake Erie.
5. Larchmont, annual, L. I. Sound.
5. Cohasset, club, 15-footers, 5th cham., Cohasset.
5. Burgess, open, Marblehead, Mass, Bay.
5. Fox Lake, club, Dr. Brophy's Cottage, Fox Lake, Ill.
5. Lake Michigan, Y. R. A. annual, Racine, Lake Michigan.
5. Beverly, 2d cham., Wenaumet, Buzzard's Bay.
5. Wollaston, cup and club cruise, Boston Harbor.
5 Cor. Marblehead, club, Massachusetts Bay.
M 5. City of Boston, regatta, off Marine Park.
7. Roy. St. Lawrence, 20ft. class, Dorval, Lake St. Louis.
8. Absequan, open, Cricket Bay, Atlantic City.
S 10. Riverside, annual race for 25, 20 and 15ft. classes of sloops and all classes of catboats.
10. Roy. Canadian, 1st and 37ft. classes, Toronto, Lake Ontario.
10. Queen City, 27ft. class, Toronto, Lake Ontario.
10. Cohasset, club, 15-footers, 6th cham., Cohasset.
10. Roy. St. Lawrence, 20 and 15ft. classes, Dorval, Lake St. Louis.
10. Burgess, 2d cham., Marblehead, Mass. Bay.
10-11. Cor., San Francisco, cruise, San Mateo, San Francisco.
12. Miramichi, Adams cup, Chatham, N. B.
S 12-16. Seawanhaka Cor., trial races for 20ft. class of sloops.
13 Taunton, ladies' day, Taunton, Mass.
13-18. Rhode Island, annual cruise, Narragansett Bay.
13. Fall River, ladies' day, Mount Hope Bay.
M 17. Winthrop, off Winthrop.
17. Cor. Marblehead, 1st cham., Mass. Bay.
17. Queen City, 20ft. class, Toronto, Lake Ontario.
17. Winthrop, open, Winthrop, Boston Harbor.
17. Columbia, annual club, Chicago, Lake Michigan.
17. Cohasset, club, 15-footers, 7th cham., Cohasset.
17. Rhode Island, annual club, Potter's Cove, Narragansett Bay.
17. Fox Lake, club, East Side, Fox Lake, Ill.
17. American, 2d club, Newburyport.
17. Wollaston, club, Boston Harbor.
17. Pewaukee, interlake, Pewaukee Lake, Wis.
17. Roy. St. Lawrence, A, 30, 25 and 20ft. classes, Dorval, Lake St. Louis.
M 19-20-21-22-23. Manchester series, off Manchester.
24. Brooklyn, special, New York Bay.
24. American, cruise to Annisquam, Newburyport.
24. Winthrop, evening race, Winthrop, Boston Harbor.
24. Absequan, Cricket and 15ft. classes, Atlantic City, Absecon Bay.
24. Queen City, 16ft. class, Toronto, Lake Ontario.
24. Burgess, ladies' race, Marblehead, Massachusetts Bay.
24. Roy. Canadian, 27f., 22ft. and skiff classes, Toronto, Lake Ontario.
24. Cohasset, club, 15-footers, 8th cham, Cohasset.
24. Roy. St. Lawrence, 20ft. class, Dorval, Lake St. Louis.
24. Beverly, 3d open sweeps, Wenaumet, Buzzard's Bay.
25. Winthrop, cruise, to Nahant, Winthrop, Boston Harbor.
S 28. Stamford, special race for 51, 30 and 20ft. classes of cutters and sloops.
M 31. Revere, Lynn Bay.
31. Gravesend Bay, cruise, New York Bay.
31. Cohasset, club, 15 footers, 9th cham., Cohasset.
31. Fox Lake, club, Dr. Tooker's Cottage, Fox Lake, Ill.
S 31. Indian Harbor, annual, all classes except cabin catboats.
S 31. Sea Cliff, special, 30 and 25ft. classes, cabin catboats
July 31-Aug. 1. Cor. San Francisco, cruise, Vallejo, San Francisco.

JULY.

Atlantic Y. C., cruise, Long Island Sound:
5. Rendezvous, Larchmont.
6. American, regatta, Milton Point.
7. Riverside, regatta, Riverside.
8. 1st squadron run, Riverside to Black Rock.
9. 2d squadron run, Black Rock to Morris Cove.
10. 3d squadron run, Morris Cove to New London.
11. Informal run, New London to Shelter Island.
12. Race off Shelter Island.

Inter-Lake Y. R. A. Meet, Put-In Bay, Lake Erie:
5. Rendezvous, Put In Bay.
6. 52ft., 42ft. and 37ft. classes.
7. 32ft. and 27ft. classes, catboats and launches.
8. Open, cup held by Zelma.

Lake Y. R. A. Circuit, Lake Ontario:
15. Cobourg.
19. Kingston.
23. Charlotte.
27. Hamilton.
29. Toronto.
31. Niagara.

Larchmont Race Week, Larchmont, Long Island Sound:
17. Open, all classes.
19. Special classes.
20. Rowing and launch races, water sports.
21. Open, all classes.
22. Smaller classes.
23. Schooners and smaller classes.
24. Open all classes.

AUGUST.

2. New York, cruise, rendezvous Glen Cove.
M 2. Burgess, Marblehead, Mass. Bay.
2-3-4. Roy. St. Lawrence, 20ft. class, trial races, Dorval, Lake St. Louis.
M 3. Beverly, Marblehead, Mass. Bay.
S 4. New Rochelle, special classes, 43ft. and under.
4-5-6 Cor. Marblehead, midsummer series, Massachusetts Bay.
5-6-7. Taunton, cruise to Newport, Taunton, Mass.
6. Absequan, invitation race, Atlantic City.
7. Cor. Marblehead, open, Massachusetts Bay.
7. Buffalo, club, Lake Erie.
S 7. Hempstead Harbor Club, annual, classes 43ft. and under.
M 7. Corinthian, off Marblehead.
7. Queen City, 29ft. class, Toronto, Lake Ontario.
7. Beverly, 3d cham., Wenaumet, Buzzard's Bay.
7. Wollaston, ladies' day, Boston Harbor.
7. Cohasset, club, 15-footers, 10th cham., Cohasset.
7. Roy. Canadian, 1st and 37ft. classes, Toronto, Lake Ontario.
7. Fox Lake, club, Island Fox Lake, Ill
7-8. Winthrop, cruise to Marblehead, Winthrop, Boston Harbor.
7-14. Cor. San Francisco, summer cruise, San Francisco.
10. Winthrop, evening race, Boston Harbor.
11. Taunton, ladies' day, Taunton, Mass.
12. Miramich, Stewart pennant, Oak Point race.
M 13. East Gloucester, Gloucester Harbor.
M 14. Squam, Annisquam.
S 14. Horseshoe Harbor, club, annual, classes 36ft. and under.
14. Cor. Marblehead, 2d cham., Massachusetts Bay.
14. Brooklyn, special, New York Bay.
14. Queen City, 16ft. class, Toronto, Lake Ontario.
14. Winthrop, 2d cham., Winthrop, Boston Harbor.
14. Beverly, 4th cham., Wenaumet, Buzzard's Bay.
14. Cohasset, club, 15-footers, 11th cham., Cohassett.
14. Wollaston, cup, Boston Harbor.
14. Fox Lake, club, East side, Fox Lake, Ill.
14-21. Roy. St. Lawrence, 20ft. class, Seawanhaka cup races, Dorval, Lake St Louis.
M 17. American, Newburyport.
S 18. American, special, classes 43ft. and under.
19. Winthrop, cruise to Weymouth, Winthrop, Boston Harbor.
M 19-20-21 Quincy, series, Hull Bay, Boston Harbor.
S 21. Huguenot, annual, classes 43ft. and under.
21. Roy. Canadian, 27ft., 22ft. and skiff classes, Toronto, Lake Ontario.
21. Roy. St. Lawrence, club, all classes, Dorval, Lake St. Louis.
21. Beverly, A. M., Van Rensselaer cup, Marion, Buzzard's Bay. P. M., 2d open.
21. Taunton, 1st cham., Taunton, Mass.
21. Conasset, club, 15-footers, 12th cham., Cohasset.
21. Queen City, 20ft. class, Toronto, Lake Ontario.
21. Burgess, 3d cham., Marblehead, Mass. Bay.
23. Absequan, open, Atlantic City, Thoroughfare.
23. Rhode Island, annual open, Pawtuxet, Narragansett Bay.
24. Minnetonka, Interlake races, Lake Minnetonka.
25. Fall River, open, Mount Hope Bay.
S 25. Corinthian Fleet, special, 51, 30 and 20ft. classes.
M 26. Duxbury, Plymouth Bay.
26. Taunton, open, Taunton, Mass.
M 27. Kingston, Plymouth Bay.
28. Cor. Marblehead, 3d cham., Massachusetts Bay.
28. Buffalo, 27ft. and smaller classes, Lake Erie.
28. Gravesend Bay, cruise, New York Bay.
28. Brooklyn, special, New York Bay.
M 28. Plymouth, Plymouth Bay.
28. Queen City, 27ft. class, Toronto, Lake Ontario.
28. Cohasset, club, 15-footers, 13th cham., Cohasset.
28. 3d cham., Winthrop, Boston Harbor.
S 28. Huntington, annual, classes 51ft. and under.
28-29. Cor., San Francisco, cruise, McNear's, San Francisco.
M 30. Cape Cod, Provincetown Harbor.
M 31. Wellfleet, Wellfleet Harbor.

SEPTEMBER.

M 2-3-4. Duxbury, Davenport cup, special races for second class, Plymouth Bay.
4-5-6. Buffalo, cruise, Lake Erie.
S 4. Seawanhaka Cor., fall race, schooners and 43, 36, 25, 20 and 15ft. classes.
M 4. Savin Hill, Savin Hill, Boston Harbor.
4. Burgess, club, Marblehead, Massachusetts Bay.
4. Roy. Canadian, 1st and 37ft. classes, Toronto, Lake Ontario.
4. American, 3d club, Newburyport.
4. Beverly, 4th open sweeps, Wenaumet, Buzzard's Bay.
4. Cohasset, club, 15-footers, 14th cham., Cohasset.
4-5. Cor. San Francisco, outside cruise, Drake's Bay, San Francisco.
4. Larchmont, 51ft. and smaller classes, Larchmont, Long Island, Sound.
6. Larchmont, fall regatta, all classes, Larchmont, Long Island Sound.
6. New York, Y. R. A. annual, New York Bay.
6. Fall River, club, Mount Hope Bay.
6. Cor. Marblehead, cruise, Massachusetts Bay.
6. Gravesend Bay, special, New York Bay.
6. Pacific, annual, San Francisco Bay.
M 6. Lynn, Lynn Bay.
S 6. Norwalk, annual, all classes of catboats.
6. Cohasset, club, 15-footers, 15th cham., Cohasset.
6. Taunton, 2d cham., Taunton, Mass.
6. Beverly, 3d open, Wenaumet, Buzzard's Bay.
6. American, sweepstakes, skiffs, Newburyport.
7. Roy. Canadian, Prince of Wales' cup, all classes, Toronto, Lake Ontario.
7. Absequan, Cricket and 15ft. classes, Atlantic City, Absecon Bay.
9. Miramichi, Watt cup, Newcastle, N. B.
9. Cor. San Francisco, interclub regatta, San Francisco,
10. Taunton, ladies' day, Taunton, Mass.
M 11. Chelsea, Boston Harbor.
M 11. Y. R. A. rendezvous, Hull, Boston Harbor.
S 11. Riverside, fall race, 43, 36, 30 and 25ft. classes, and 30 and 25ft. classes of cabin catboats.
11. Winthrop, club, Winthrop, Boston Harbor.
11. Roy. Canadian, skiff class, Toronto, Lake Ontario.
11. Beverly, 5th cham., Wenaumet, Buzzard's Bay.
11. Burgoss, cham., sail-off, Marblehead, Mass. Bay.
11. Columbia, annual, open, Chicago, Lake Michigan.
11. Larchmont, schooners (Larchmont cup) and smaller classes, Larchmont, Long Island Sound.
11-12. Cor. San Francisco, cruise, Marin Islands, San Francisco.
S 18. American, fall regatta for all classes.
18 Queen City, 22ft. class, Toronto, Lake Ontario.
21. Absequan, open, Atlantic City.
25-26. Cor. San Francisco, cruise, Dillon's Point, San Francisco.
25. Buffalo, closing cruise, Lake Erie.
25. American, closing race, Newburyport.

OCTOBER.

9. Miramichi, Gould cup, Chatham, N. B.
9-10. Cor. San Francisco, cruise, Corinthian Cove, San Francisco.
16. Cor. San Francisco, closing day, San Francisco.
17. Cor. San Francisco squadron, cruise, San Francisco.

Republic, schr., G. P. Matthews, under charter to Walter Shadbolt, of London, was ashore in the harbor of Kingston, Ja., on June 9, but was hauled clear by tugboats, sustaining no injury.

THE list of yachting fixtures which we publish this week is the longest by far ever published in this country; though by no means complete, as many small clubs have sent in no reports. This list is, perhaps, the best possible index of the true condition of American yachting; and as such it goes a long way toward contradicting the discouraging conditions which appear when we look at the yachting prospect from the ordinary point of view.

This latter, it must be confessed, is anything but encouraging; no race is on for the America's Cup for this season, and little prospect of one for 1898; no large yachts are building, and but two of moderate size; the great Cup racing class is dead and will not figure in this season's events; the schooner division would be no better off were it not that one old boat has been rebuilt, making a duel that will be interesting for a part of the season, at least; the list of possible entries in all of the classes above 42ft. show at best but two or three yachts, and in many cases none at all. Judged by the old and popular standards, the season promises absolutely nothing of interest but the issue between the altered Colonia and the rebuilt Emerald.

The other view, as disclosed by a study of the list of fixtures, is, happily, very different. In the first place, the list shows a remarkable increase in the number of yacht clubs, as compared with a few years back; this increase being divided between new clubs about the established yachting centers and clubs recently organized in entirely new localities. The former clubs bear witness to the increased interest in yachting on the part of the public at large; about Boston, for instance—a locality always noted for its support of yachting and the number of yacht clubs—this number has probably doubled within the past ten years; showing a healthy development of the sport. On Cape Cod the increase is still more marked, and the clubs are strong and prosperous. About New York there has been a similar increase; and, what is quite as important, many of the smaller clubs have taken of late a deeper interest in racing.

The extension of yachting in new localities is going on at a rapid rate and a radical change has been made in the past ten years. On the Great Lakes there has been within a comparatively short time a marked revival, the older clubs have been reorganized and strengthened, new ones have been formed, and all have learned to work together in harmony. On the smaller inland waters in all parts of the country yacht clubs have been established and yacht racing is permanently followed on modern lines and in craft of the latest design. This is notably the case in the lake region of Minnesota and Wisconsin, where the many small and neighboring lakes afford opportunities for other than purely local races. Even in isolated localities, where inter-lake competition is impossible, there are found flourishing fleets of small racers and regular races for them through the season.

Though figuring but lightly in our list, the Pacific coast has by no means stood still, for a long time there was little life in yachting in the leading center, San Francisco, the schooner fleet of fifteen years ago disappeared and left nothing in its place; but to-day the clubs, old and new, are on a better basis, there is regular racing, and in addition the short squadron cruises are very popular. Further north, on Puget's Sound, yachting is making fair headway and quite a racing fleet is growing up, though little is heard of it here in the East.

This growth of yachting throughout the country has had nothing of "boom" nature about it; the organization of many clubs dates back to the days of Puritan and Mayflower, having its origin in the general enthusiasm awakened throughout the country by those great victories, but the growth since then has been by degrees and not by sudden jumps. In common with all clubs, the yachting organizations have suffered severely in membership from the business depression that has prevailed for so long, the accessions have been comparatively few and the losses through members in arrears or resignations at the beginning of the year proportionately large; but on the whole the condition of the majority of yacht clubs, both financially and in the possession of active and enthusiastic members, is prosperous.

Another point disclosed by the list is the growth of a spirit of union and coöperation among the clubs at large, resulting in the formation of associations of greater or less extent, but all tending toward the ultimate formation of one national body. It is interesting to compare the long lists of fixtures arranged by the Massachusetts Y. R. A. and the Sound Y. R. U., to say nothing of shorter lists by other organizations, with the old condition of affairs, under which the clubs of a locality fought for dates throughout the season, sailed rival races on the same days and suffered in consequence from the division of entries and the hostile feelings between members of opposing clubs. A racing yachtsman to-day, about either New York or Boston, may arrange his season's work in April, before his yacht is afloat, deciding what races he desires to enter and making such arrangements as business and other engagements permit for every race of the season. The result is too plain to need comment. Knowing just what to expect in the way of opponents, and being able to prepare his plan well in advance, a man is tempted to enter for the entire series of races instead of leaving it to chance at the last moment whether he will start in each race as it comes on. Then, too, the general competition and the awarding of points and places adds greatly to the interest of the races, in fact, these inducements count more than the money prizes, though this fact may not be generally appreciated.

All of this work, with much more in the way of the improvement of the racing rules, and the general elevation of yacht racing to a higher level, is due to the associations whose names are found in our list.

Still another important detail of modern racing is disclosed by the list—the prevalence of series and class racing. In spite of all that may be said in their favor, the great syndicate racers and royal yachts, such as Defender, Valkyrie, Britannia and Meteor, do but little for yachting at large and the general prosperity of yacht racing; in fact, a long experience in this country has proved that the year of a great international race is always a bad one for the smaller classes throughout the country, the effect being apparent even in the following season. The mainstay of American yachting must always be the general and popular racing, with its accompanying building of a certain number of yachts each year, and in such classes as the average yachtsman can and will build to. The increase of this sort of racing is shown in the table, where series of races covering the whole season are arranged for different classes. In some cases these are the regular classes, in others they are special or restricted classes, adopted in certain localities.

The smallest of these is the 15ft. class, established in 1895 through the challenge of Spruce IIII., and now popular in many parts of the country; the Cohasset Y. C., for instance, has a one-design class that races through the season for series prizes. The next class, from the same origin, is the 20ft., well built up this year in the States and Canada for the Seawanhaka cup races, and figuring largely in the races on the St. Lawrence and on Long Island Sound. The knockabout class of Massachusetts Bay is one of the special features of the season, the keen rivalry and the number of designers and crack sailors concerned making the races of far more than local interest.

In the larger classes up to 51ft. on the Atlantic coast there is a fair amount of racing, very satisfactory, all things considered, in the cat classes and the smaller sloop and cutter classes, but by no means what it should be, either in the entry of old boats or the building of new ones, in the classes over 36ft. r. l. At the same time much has been done in the past two years in the unification of class limits and the weeding out of odd and special classes, so as to throw all future building into a small number of established classes. In the West the racing is now all in fixed classes, the favorite ones being 15 to 20 and 25ft r. l., and many new boats have been built.

To us at least, the outlook as disclosed by the list is most encouraging, both for the immediate present and for the future; there is nothing wonderful or sensational, no world-beater or new marvel of design and construction, but there is ample evidence of a widespread and permanent interest in the sport of yachting among the American people, of plenty of keen and exciting racing by hundreds of yachtsmen in all parts of the country, of earnest work on the part of individuals, of clubs and of associations to further the interests of yachting as a national sport.

There is one point in the list which is too important to be omitted; it shows, as has never been shown before, how completely the control of the yachting interests has passed into new hands. Ten years ago the controlling factors in yachting were the five great clubs: the New York, Seawanhaka Corinthian, Atlantic, Larchmont and Eastern. These clubs made the yachting laws and formed yachting sentiment in this country, with none to gainsay them. The New York Y. C., through its possession of the America's Cup and its absolute control of the conditions under which that trophy might be raced for, occupied a position far above the other clubs, increasing in importance with the successive victories in international racing. The *prestige* and position of the club are as great to-day as ever, in one sense, but its power and influence have disappeared, and its position, in relation to the great body of yacht clubs, is vastly different. The attention of yachtsmen is no longer centered on the New York Y. C. and the America's Cup, but they are now directly interested in their own affairs, their local clubs, their own yachts and others in their class, and the rules under which they personally must race. Under these conditions, it is but natural that they should care nothing for a club which recognizes no yachts as small as those in which they are interested and has no hand in yachting legislation outside of its own fleet of big yachts.

The Eastern Y. C., once the leading club in Eastern racing, has suffered from the disappearance of the large yachts, and is no longer a factor in racing; the control of racing and racing legislation has passed first to smaller clubs that were active in the encouragement of the smaller classes, and later to an association formed of these same clubs, and of which the Eastern Y. C. is not a member. This organization, now strong and vigorous, promises to control for the future all racing in Eastern waters.

The Atlantic Y. C. has, through its size and importance, been included as one of the five great clubs in the past, but these clubs as a whole no longer figure in yachting, and in the future it must stand alone on its individual responsibility; at present it is in an uncertain position, being unconnected with any association, and having no influence on other than its own racing.

The Larchmont Y. C. has within a few years made an independent position for itself by a wise and liberal policy of encouraging yacht racing in all classes; this position is indicated by the fixtures credited to it in our list, races for all classes, with generous prizes throughout the season As long as this policy is retained, the club must rate as an important factor in yachting.

The Seawanhaka Corinthian Y. C. has also been fortunate in its policy, though in a very different direction from the Larchmont; it has, from the first inception of the scheme for a union of the Sound clubs, laid aside all claims of position, size and *prestige*, and entered heartily into the work of organizing and building up the Sound Y. R. U. If it has lost caste in the opinions of its former associates of the "big clubs" in fraternizing on an equal footing with the "small clubs," it has gained much in popular opinion by its energetic and disinterested labors for the good of yachting.

It is plain to-day that the *prestige* of the five great clubs collectively as the trustees and arbiters of American yachting, and also their influence both collectively and individually, has disappeared forever. The control of yachting legislation and yacht racing to-day is in the hands of the different associations, the Massachusetts, the Sound, the Great Lakes; they make the rules and they manage a very large number of the races. They, with other associations and many individual clubs, are tending rapidly toward a closer union, which will still further strengthen them. Our list is not sufficiently complete to show the full strength of such a union; there are still a number of clubs which do little racing or whose fixtures have not reached us, which would join in as a matter of course and in time to take their place in the racing. At the same time it shows where the strength and vitality of American yachting lies at the present time, not, as of old, in the wealth and power of a few of the coast clubs, but in the numerous thriving and active clubs distributed throughout the entire country. The New York Y. C. has lately decided that it has nothing in common with these clubs, apart from the four with which it has long been to a certain extent associated; but on the other hand, this great body of the clubs has nothing to ask of the New York Y. C.; even in its present divided condition it has managed to grow and prosper, and each step toward union adds to its strength.

THERE is something peculiar about the fond tenacity with which the American yachtsman clings to the English term "rater," and persists in misusing it on all possible occasions, and to the confusion of all meaning. In spite of the fact that under no rule, past or present, would they measure of one rating, the new 20-footers are generally called "one-raters," just as the 15-footers are called "half-raters." The latter have all measured, by the only true "rating" rule, far more than one-half, even Spruce IIII, a true half-rater as raced in England, was canvassed on this side until out of the class. The 20-footers of this year, if measured by the rating rule, come out nearly one and one-half instead of one rating, and are in no sense "one-raters." If measured by the present Y. R. A. rule they would be about 24 "linear rating." The so-called "34-raters" of the Larchmont Y. C. were nearer to 7-raters by the rating rule, and the American "25-raters" were really of 2½-rating.

There is but one meaning to the terms "rating" and "rater," for both of which, we believe, the yachting fraternity is indebted to Mr. Dixon Kemp. "Rating" is a yacht's racing measurement by the recent Y. R. A. rule, adopted in 1887 and abandoned in 1896, $\frac{L. \times S.A.}{6,000}$ A "rater," the term being always preceded by a numeral, is a yacht of a certain measurement under the rule, a "20-rater" or a "one-rater," for instance. The rule has never been adopted in this country, and the misapplication of the term is a silly affectation which has no technical justification whatever.

Exactly opposite is the common use of the term "sloop" by Americans. The single-stick yachts of the past ten years—in fact, from Puritan down—have been cutter-rigged, and by all technical definition are cutters—Titania, Katrina, Gossoon, Gloriana, Wasp, Defender, Vigilant, and any number more; in fact, no sloop rig has been put on a large yacht for many years, and even the old sloops such as Gracie and Fanny have been long since converted to cutter rig. In spite of this these boats are still classed as sloops. Of late years the sloop rig has been revived in the smaller classes, such as the 25-footers and 30-footers, which are correctly set down as sloops, but in all of the larger classes the term cutter is the only one that is in any way correct.

THE present week will see three races in New York waters; the annual regatta of the Atlantic Y. C. on Tuesday, the annual regatta of the New York Y. C. on Thursday, and the spring regatta of the Larchmont Y. C. on Saturday. The first two, depending mainly on the larger yachts, promise but few starters: Colonia, Emerald, Amorita, Wasp, Syce and the 30-footers. The race of Saturday will call out a larger fleet, and promises to be very interesting if the weather is favorable. Of course, with good breezes on the Bay and outside the Hook, the continuation of the duels between Colonia and Emerald and Wasp and Syce will be well worth seeing.

Royal St Lawrence Y. C.

DORVAL LAKE ST. LOUIS

Saturday, June 5.

THE second race of the 20ft. class in the Ross series was sailed over the usual course on June 5. The start was made at 3:35, and the day was warm and clear, with a very light air from the southwest.

Seven boats started, going over in the following order: Rogue, Lalage, Millie, Maida, Avoca, Glenowen, and last Islander.

The boats were pretty well bunched at the start excepting Rogue, which got away clear, and at once began to open up a lead which was a long one before she reached the first buoy, then Avoca worked up into third place, and at the finish of the first round caught Lalage, taking second place. Millie rounded fourth, Islander fifth, Glenowen sixth, and Maida seventh. The time was as follows:

		Points.
Rogue	4 08 06	8
Lalage	4 10 07	7
Avoca	4 10 08	6
Millie	4 11 03	5
Islander	4 13 06	4
Glenowen	4 14 01	3
Maida	4 15 02	2

The wind, which had held fairly steady in the first round, now began to die out and came in sheets, first Rogue ran into a calm, Avoca came up and passed her and Glenowen, which immediately on rounding the buoy had freed off and ran up above the current, and now seemed to hold a better wind, and ran up from sixth to first before the first buoy was reached. Then Millie followed in Glenowen's wake, in her turn passed the fleet, came up behind Glenowen and passed her after rounding the spar buoy. At the finish there was not wind enough to bring the boats in. The finish was as follows:

Millie	5 05 04	Islander	5 22 03
Glenowen	5 08 07	Lalage	5 22 04
Avoca	5 17 05	Maida	5 23 03
Rogue	5 20 02		

Place in the Ross series is determined by points, and the standing of the boats as the result of this race was as follows:

	1st Round.	2d Round.	Total.
Rogue, J. C. C. Almon	8	5	13
Millie, Rev. Hy. Kittson	5	8	13
Avoca, G H. Duggan	6	6	12
Glenowen, Shirley Davidson	3	7	10
Lalage, J. B. Abbott	7	3	10
Islander, Arthur Hamilton	4	4	8
Maida, Harrison B. Young	2	2	4

The standing of the boats in the series is now as follows:

Avoca	33	Maida	21
Rogue	31	Millie	13
Islander	7	Lalage	10
Glenowen	22	Viola	9

Gravesend Bay Y. C.

BATH BEACH—GRAVESEND BAY.

Saturday, June 12.

THE Gravesend Bay Y. C. sailed its annual regatta on June 12 over courses on Gravesend Bay and the Lower Bay. The wind was fresh and puffy, from W. to N.W. The times were:

	Start.	Finish.	Elapsed.	Corrected.
CLASS A				
Martha M.	2 08 40	3 52 40	1 44 00	1 41 36
Minnie H.	2 07 50	3 52 45	1 44 55	1 43 47
Ariel	2 06 20	3 50 45	1 44 25	1 44 25
Maggie P.	2 07 30	4 [illegible] 40	2 06 10	2 01 29
Isabel	2 08 [illegible]	Disabled.		
Anita	2 10 00	Did not finish.		
CLASS B				
Eureka	2 06 30	3 15 42	1 [illegible] 12	1 39 12
Madge	2 07 00	3 51 55	1 44 05	1 42 27
CLASS E				
Louise	1 57 10	3 51 30	1 54 20	1 52 42
Liz ie V	1 57 13	3 51 35	1 54 22	1 54 22
Acorn	2 00 00	Did not finish.		
30FT. CLASS.				
Nemo	1 50 00	4 54 50	3 04 50	3 04 50
Yare	1 50 00	Did not finish.		
35FT CLASS				
Arab	1 46 20	4 47 45	3 01 25	2 37 15
Nomad	1 50 00	5 02 43	3 12 43	3 11 44
J. S. M.	1 50 00	5 09 52	3 19 52	3 19 52
Guide	1 50 00	5 18 30	3 28 30	3 28 30
Sea Gull	1 50 00	Did not finish.		
4 FT. CLASS				
Kelpie	1 47 40	4 30 10	2 42 30	2 42 30
Lela	1 50 00	5 33 22	3 43 22	3 43 22

The winners were Martha M., Minnie H. second, Eureka, Louise, Nemo, Arab, Kelpie. Ariel and Minnie H. filed counter-protests on measurement. The committee included Messrs. R. W. Rummell, G. P. Inslee, H. W. Pfalzgraf, J. I. Woods and C. W. Kennedy.

Douglaston Y. C.

DOUGLASTON—LONG ISLAND SOUND.

Saturday, June 12.

THE annual regatta of the Douglaston Y. C. was sailed on June 12 over th usual Sound courses, the club house being towed out for the occasion to the mouth of Little Neck Bay. The entries were comparatively few. The 20-footers are not yet racing, and the thirties were on New York Bay for the day. The wind was light in the morning, the start being postponed to 11 o'clock; but the race was sailed in a good S.W. breeze. Mr. M. H. Clark, owner of the 20-footer Keneu, sailed his catboat Punch for the Webster cup, won by him last year, holding it permanently through a second win. This left Shark without a competitor. The times were:

	Length.	Elapsed.
CABIN SLOOPS—36FT. CLASS		
Eurybia, Charles Pryer	40.02	3 14 13
Mignon, Joseph Fournier	34.16	3 07 56
OPEN SLOOPS—20FT. CLASS.		
Shark, Rouse & Hoyt	19.96	3 03 15
CABIN KNOCKABOUTS—20FT. CLASS.		
Willada, W G. Newman		Did not finish
Margaret, E. Epersbacher		3 24 28
CABIN BOATS—20FT. CLASS.		
Leisure, F. B. Myrick	27.96	3 30 23
Dosorus II, G. P. Vail	29.46	3 19 35
Exonian, W. R Fleming	28.05	3 31 12
Volsung, J. & H. L De Forest	28.55	3 07 48
CABIN CATBOATS—25FT CLASS.		
Mary S., E B. Hall	24.70	3 22 53
Mecca, H. G. Downs		Did not finish.
Win or Lose, J. S. Appleby	23.75	3 13 53
OPEN CATBOATS—20FT. CLASS.		
Starling, E. F. De Levante		Did not finish.
Regina, W. R. Scardefield	19.30	3 18 06
OPEN CATBOATS (FOR WEBSTER CUP).		
Punch, M. H. Clark	22.25	3 07 35
Violet, G. A. S. Wiener	19.83	3 21 09

Atlantic Y. C.

BAY RIDGE—NEW YORK BAY.

Saturday, June 12.

THE Atlantic Y. C. had the honor this season of opening the racing of the larger classes, its annual regatta being preceded by a few days by a special race for two cups offered by Com. Gould, one for schooners and one for cutters and sloops. In addition, the club offered prizes for the 30ft. special class and for catboats. The schooners and cutters sailed the outside course, from off the Hospital Islands around the Scotland and Sandy Hook lightships and home, going by the Spit both ways; the 30-footers sailed a special course: down around the Spit Buoy, then around Old Orchard Shoal Light and home; the cats sailed around the Spit Buoy and home.

Although the 30-footers had been specially provided for by the club at their own request, some of them were anxious to go out of their proper class and to compete with Wasp and Syce for the Gould cup over the long course, Hera having won this cup under similar circumstances last year. This arrangement was objected to by the two cutters unless the thirties were prepared to file their certificates of measurement on the morning of the race, as provided by the rules. As such certificates are not necessary when racing in their proper class, only Hera was provided with one, and though she was entered for the class race, she started with the two cutters for the Gould cup. The starters were:

	Racing Length.	Allowance.
SCHOONERS—COURSE 33 MILES.		
Colonia, C. A. Postley	93.13	Allows.
Emerald, J. R. Maxwell	91.47	1 07
Amorita, W. G. Brokaw	74.82	14 15
CUTTERS AND SLOOPS—COURSE 33 MILES.		
Wasp, Lippitt Bros.	54.97	Allows.
Syce, F. M. Hoyt	50.86	6 20
Eidolon, James Weir, Jr	42.61	21 45
Akista, George Hill	34.75	41 17
Acushla, J. H. Hanan	34.00	43 31
Norota, D. B. Burnham	41.64	23 56
Hera, R. N. Ellis	30.00	.. ..
30-FOOTERS—COURSE 18 MILES.		
Wawa, J. A. Stillman	30.00	.. ..
Vaquero III., H. B. Duryea	30.00	.. ..
Musme, J. M. Macdonough	30.00	.. ..
CATBOATS—COURSE 13 MILES.		
Dorothy, J. Lazarlese	28.61	Allows;
Squaw, H. S. Jewell	27.88	1 08
Qui Vive, G. A. Freeth	24.09	5 58

The first meeting of Colonia and Emerald after the deepening of the latter has been anticipated eagerly by yachtsmen, as these two yachts really represent the only racing of the season in the large classes. The meeting of Wasp and Syce has also been the subject of much speculation and conjecture, the idea being prevalent that the new boat was designed to beat the old one, and that she might reasonably be expected to do so. The grounds for such expectation are not apparent when the two boats are carefully considered. Wasp is a remarkably fast craft, as years of sailing beside Colonia, Emerald, Queen Mab, Gloriana and many other yachts of different sizes and rigs has shown. Though she has never had anything in her own class to race against except her younger sister Gloriana, she has time and again proved her speed near the head of a mixed fleet of both larger and smaller yachts. She is of good construction, with a large percentage of ballast; years of racing have put her in excellent form, and during the past winter she has been thoroughly overhauled and refitted. As compared with Syce, the two have nothing in common except length on waterline—45ft.; Wasp is wider, deeper, carries her lead lower, and she has about 4,300sq. ft. of sail as compared with Syce's 3,300, an excess of about 30 per cent. That she is well able to carry it she has repeatedly demonstrated. While the new boat has probably some advantage in weight of hull and rigging over Wasp, the latter was really ahead of her time in this respect, and left a comparatively small margin for improvement. Just why the new boat was expected to beat the old one off-hand is not quite clear; but this idea helped to lend interest to the first race of the two. Eidolon and Norota, also entered for the Gould cup, had little chance against Wasp and Syce, but made an excellent race with each other, being of the same class. The 34-footer Acushla also started, and with her the new fin-keel Akista, rigged with a leg-o'-mutton mainsail.

The wind was S.W. in the morning and the day was the first for weeks that could be called endurable, being clear, bright and even warm. The yachts delayed as usual off the station at Bay Ridge, so that the committee steamer Luckenback had to tow a number of them to the line. The wind by this time was S.S.W., a fairly fresh breeze. The first gun fired at 11 o'clock, with the start for the schooners five minutes later. Colonia went over promptly with Amorita just on her weather, the latter picked up and overhauled the bigger boat for a minute or two and then Colonia started away and opened out a clear piece of water. Emerald was caught napping by the signal at a distance below the line and had to work up, losing several minutes; the start being from the gun. All crossed on starboard tack, but Amorita, followed by Colonia, soon made a hitch in toward the West Bank, while Emerald held a long starboard tack down the bay.

The whistle for the cutters sounded at 11:10, Hera crossing first, followed by Akista. Syce crossed to windward of Wasp and Norota and Eidolon came after, Acushla being handicapped. Wawa was first away of the 30-footers, followed by Musme and Vaquero III. Squaw led the cats over, Dorothy making a miss of the mark-boat and being obliged to tack again.

They went down the main channel with sheets hardened, Colonia leading the way, but unable to shake clear of Amorita. Syce pointed high and kept to windward of Wasp in a good position; Norota held her place ahead of Eidolon. Long before they reached the Spit Buoy, Colonia and Wasp had each opened up a long lead on her opponent; the times at the turn being:

Colonia	12 11 30	Hera	12 41 30
Emerald	12 17 20	Norota	12 43 05
Wasp	12 25 55	Eidolon	12 44 00
Syce	12 28 20		

Spinnakers were now set, and the fleet ran for the Hook with a very light air. Amorita went in under the beach just inside the Hook for a better breeze and ended by doing a little spring plowing in the hard sand, her deep keel taking the ground about 12:15. She soon worked off and started for home, Emerald having meanwhile passed her.

Outside the Hook the wind was waiting for them, and with a clear summer sky and smooth water the day was all that one could wish for. Emerald picked up now, and before long was abeam of Colonia, passing her to windward, having nearly a minute lead at the Scotland. Wasp dropped Syce very fast when once in the open water, making a hopeless stern chase for the new boat. Before the Sandy Hook Lightship was reached Wasp passed both Colonia and Emerald, and took the lead of the fleet.

The times at the outer mark were:

Wasp	1 56 30	Colonia	2 06 15
Emerald	1 57 30	Syce	2 09 00

Far astern of Syce came Eidolon and Norota, still sailing a very even race; Hera was well astern of them, Akista was pegging alone persistently in the rear, and Acushla had given up and gone home. The wind not only freshened, but worked around from S.W. to N.W on the return, heading the boats off, though the four leaders laid their course up the Bay. With the wind still more ahead, both Norota and Eidolon had to tack as they neared the line. Emerald made fine finish, 5m. ahead of her rival, crossing the line in a good breeze. The rear boats had to beat in all the way from the lightship.

The only interesting event of the finish was the novel and exciting maneuver of Eidolon in standing the markboat, a good-sized catboat, completely on its stern. Norota was hunting Eidolon very closely, and safe to save her time from the leader, Eidolon, after the last tack for the line, being to windward, while Norota, some 50yds. astern, still stood to clear the lee end of the line. In order to cut off Norota, Eidolon bore down on the line and shaved so closely that her starboard shroud picked up the masthead of the markboat. As she was moving very fast, she sat the catboat squarely on end for a moment, the two men aboard nearly falling out; the boat settled down and half filled, and then righted as the masthead slipped clear of Eidolon's shroud. This blundering maneuver disqualified her and gave the race to Norota as a certainty, though she would have won on allowance without it.

Nothing was seen of the 30-footers after they passed the Spit in going out, but Mr. Church, who sailed Wawa, reported to the committee that her boom had touched a mark in jibing and thus disqualified her. The official times were:

	Finish.	Elapsed.	Corrected.
SCHOONERS.			
Start 11:05			
Colonia	3 52 25	4 47 25	4 47 25
Emerald	3 47 55	4 42 55	4 41 48
Amorita	Withdrew.		
Emerald beats Colonia 4m. 30s. elapsed time, and 5m 37s. corrected time.

Vaquero beats Musme 6m. elapsed time.			
CATBOATS			
Start 11:20.			
Dorothy	2 48 00	3 23 00	3 23 00
Squaw	2 54 30	3 34 30	3 28 32
Qui Vive	Did not finish.		
Dorothy beats Squaw 6m. 30s. elapsed time, and 32s. corrected time.			

In spite of the light wind for a short time, the breeze was fairly satisfactory, at times plenty of it; in fact, Syce lay down to a marked angle as she came for the finish; the conditions were such as to make the race a fair one. Emerald scored a very creditable win after her starting handicap, and she is evidently much faster for her longer legs and larger wings. That Wasp beat Syce is no wonder, but there was nothing on the surface to account for the very bad beating, of over sixteen minutes elapsed time. No doubt the latter will improve with further racing, but at the same time she has been out and under way for a month, and was considered to be in fine racing form.

The race was managed by Messrs. N. D. Lawton, David E. Austen and G. W. McNulty.

Model Yachting.

ON June 6 the Wave Crest M. Y. C. sailed its trial races to select a challenger for the American M. Y. C. trophy, the race to be sailed on Labor Day. Two races were sailed, the course being ¼ mile to windward and leeward, the times being:

	Start.	Finish.	Elapsed.	Corrected.
FIRST HEAT.				
Storm	2 21 52	2 37 12	0 15 20	0 15 12
Red Man No. 2	2 22 35	2 36 55	0 14 22	0 14 22
Mercia	2 22 22	2 38 09	0 15 47	0 15 27
Fatima	2 21 57	2 38 40	0 16 43	0 15 56
White Wave	2 22 10	Finished outside.		
Ben Lomand	2 22 11	Did not finish.		
Nylic	2 22 09	2 38 48	0 16 39	0 16 49
SECOND HEAT.				
Storm	2 50 00	3 02 52	0 12 52	0 12 41
Red Man No. 2	2 49 50	3 01 33	0 11 43	0 11 53
Mercia	2 48 20	3 01 15	0 12 55	0 12 35
Fatima	2 48 50	3 03 00	0 14 10	0 13 13
White Wave	2 50 02	Withdrew.		
Nylic	2 50 02	Withdrew.		

White Wave and Nylic left at starting flag, and time taken at expiration of two minutes, as per rule.

Red Man II. was finally selected. The two clubs will hold an open regatta on July 4, open to all model yacht clubs. There will be five classes.

Canarsie Y. C.

CANARSIE—JAMAICA BAY.

Saturday, June 12.

THE opening race of the Canarsie Y. C. was sailed on June 12 in a fresh S.W. breeze, followed by a heavy squall, which broke up the race, only four yachts finishing. The times were:

	Start.	Finish.	Elapsed.
CLASS 1.			
Steeple Jack, C. H. Kent	4 17 11	Did not finish.	
Welfare, Frank Maier	4 17 06	Did not finish.	
Kate, T. Hayes	4 17 20	6 31 43	.. ..
Athala, T. Northridge	4 28 30	Did not finish.	
CLASS 2.

Meteor, Com. C. O. Herx	4 00 57	6 11 50	2 10 53
Lochinvar, James Sabin	4 01 40	Did not finish.	
Ideal, W. H. Sanson	4 02 01	6 11 00	2 08 00
CLASS 4.			
Crest, Walter Smith	3 53 58	Did not finish.	
Wave, C. B. Fitzmorris	.. ..	.. ..	.. ..
Anow, Mr. Winters	.. ..	.. ..	.. ..

Hamilton Yachting.

Two races were sailed at Hamilton on June 5, the Royal Hamilton Y. C. giving a race for 32-footers and 15-footers, and the Victoria Y. C. one for the 27-footers and 22-footers. The results were:

32FT. CLASS START 2:35.			
Erma	4 50 58	Nadia	5 01 55
Nancy	5 01 20	Alert	5 05 54
HALF RATERS—START 2:40.			
Sothis	4 25 50	Ghost	did not finish.
Kink	5 10 18		
27FT. CLASS—START 2:30.			
Hiawatha	4 00 20	Nadgy	4 22 00
Kestrel	4 03 15		
22FT. CLASS—START 2:35.			
Koko	4 13 50	Zanetta	4 27 40
Rosemary	4 15 15	Eclipse	did not finish
Scallawag	4 24 00		

The Rochester Y. C. has issued a very neat little club book for 1897; the club is now in a prosperous condition, with a fleet of fifty-five yachts and a membership of 216.

Minnetonka Y. C.

LAKE MINNETONKA.

Saturday, May 29.

THE Minnetonka Y. C. opened its season with a special race for four classes on May 29, sailed in a strong and puffy northwest wind, the yachts being under two and three reefs. Some of the new boats did not start, though ready for racing. Wizard is a new boat, designed and built by Petersen, of Tartar fame, as is also Pyxie. Gladrene was designed and built by her owner, Frederick Hopkins. Marie II. is a new Dyer boat. The times were:

	Start.	Finish.	Elapsed.	Corrected.
ONE-RATERS.				
Gladrene	3 05 00	4 47 31	1 42 31	1 42 31
Doris	3 05 00	5 10 09	2 05 09	2 05 09
Pyxie	3 05 00	5 11 33	2 06 33	2 06 33
23FT. CATS.				
Katrina	3 14 00	4 57 19	1 43 19	1 41 11
Varuna	3 14 51	Did not finish.		
21FT. SLOOPS.				
Beatrice	3 14 58	5 05 01	1 50 03	1 50 03
23FT. SLOOPS.				
Wizard	3 25 00	4 58 46	1 33 46	1 32 44
Marie II	3 22 05	5 02 30	1 40 25	1 38 32
Kite	3 22 29	5 05 04	1 42 35	1 40 56
Answer	3 21 40	Did not finish.		

Varuna and Answer withdrew. Owing to a misunderstanding as to the finish line, the judges' boat being obliged to change its position, Doris crossed on the wrong side of the mark.

Brooklyn Y. C.

BATH BEACH—GRAVESEND BAY.

Saturday, June 12.

THE Brooklyn Y. C. sailed its annual regatta on New York Bay, starting from off the club station in Gravesend Bay, on June 12, the entries being smaller in number than usual. The wind was light in the morning, but the course was covered in a good S.W. breeze. The times were:

	Length.	Finish.	Elapsed.
SLOOPS—35FT. CLASS.			
Defiance, G. L. Robinson	33.00	3 57 29	2 55 45
Nautilus, J. J. McCue	33.00	4 19 22	3 17 10
Ilikato, E. H. Converse	....	4 21 29	3 13 29
Kangaroo, C. H. Humphreys	31.06	4 26 57	3 23 46
Nomad, W. B. Growtage	26.07	4 55 02	3 51 17
MAINSAIL YACHTS.			
Ethel, F. J. Bergen	....	4 03 42	2 52 33
MAINSAIL YACHTS—21FT. CLASS.			
Amaranth, Edward Salt	....	3 21 00	1 54 59
Jennie B., G. S. Brown	....	3 10 05	1 44 05

The winners were Defiance, Ethel and Jennie B.

Hempstead Bay Y. C.

ELDER ISLAND—HEMPSTEAD BAY.

Saturday, June 12.

The Hempstead Bay Y. C. opened the season with a race over a 10-mile course in a fresh S.W. breeze, the times being:

	Start.	Finish.	Elapsed.	Corrected.

Buffalo Y. C.

BUFFALO—LAKE ERIE.

Saturday, June 12.

THE Buffalo Y. C. sailed its first pennant race on June 12, in a fresh westerly wind, the times being:

	Start.	Finish.	Elapsed.	Corrected.
Dorothy	3 00 00	4 25 10	1 25 10	1 25 10
Sybil	3 00 00	4 26 01	1 26 01	1 24 21
Caprice	3 00 00	4 41 08	1 41 08	1 36 01
Kathleen	3 00 00	4 35 40	1 36 40	1 35 48
Nerena	3 00 09	4 41 40	1 41 40	1 37 25

Important if True.

COM. BERRIMAN has hinted that he will contract with the Racine Boat Co. for the construction of a $12,000 aluminum yacht, 65ft. racing measurement, especially to race the Canada next year. He also says a wealthy Chicago man will contract for an $80,000 steam yacht.—*Exchange.*

YACHTING NEWS NOTES.

Ellide, steam yacht, E. B. Warren, made a trial trip on the Hudson River on June 10, making two runs over a measured course of one mile; up against a strong N. W. wind and high sea, and down under the same conditions, most unfavorable for high speed. The run upstream was made in 1m. 51sec., and the return in 1m. 42½sec.

Lufra, ketch, Sir Cecil Miles, sailed from New York for Cowes on June 10.

Intrepid, schr., has been purchased by Gen. Willoughby Weston, former owner of Wenonah, cutter.

A new yacht club under the name, Lafayette Y. C., has been organized in the upper part of New York, and will make its station at One Hundred and Sixty-ninth street, North River. The officers are: Com., John McMurray; Vice-Com., P. Kelly; Rear-Com., E. Felton; Sec'y, John Martin; Fin. Sec'y, Charles Albertson; Treas., Fred. Schwartz. The first regatta will be held in July.

The Riverside Y. C. was compelled to postpone its special race on June 9; though a number of yachts were present, rain and fog made it impossible to start. The yachts of 30ft. and over will sail the race in connection with the annual regatta on July 7; those under 30ft. will sail on July 10.

Namouna, steam yacht, James Gordon Bennett, arrived at the Azores on June 7 after a passage of 6 days 9 hours from New York.

The Corinthian Y. C. of Philadelphia opened the season with a review of the fleet off the club station, Essington, followed by a reception at the club house. The following yachts were on station: Flagship Alert, schr., Com. C. A. Griscom; Columbia, schr., Vice-Com. J. D. A. Junkins; May, steam yacht, Sara Drexel Fell; Josephine, steam yacht, P. A. B. Widener; Christine, schr., H. A. Linte; Narounga, slp., R. P. White; Katharine, slp., A. N. Chandler; Acme, slp., F. H. Rosingarten; Saracen, cutter, C. H. Brock; Mona, cutter, Robert Barrie; Irex, cutter, M. H. Runk; Clara, slp., W. B. Henry; Roamer, slp., H. C. Boyle; Lern Lenipe, slp., C. H. Brock; Nurralden, slp., Alexander Barrie; Dawn, yawl, Geo. E. Kirkpatrick; Flirt, yawl, E. H. Johnson; Keren, yawl, C. B. Keene; Osceolo, launch, B. Pratt; Amrita, J. W. Martin.

Mr. Ralph N. Ellis, owner of Hera, has arranged two special sweepstakes races for the 30-footers, to be sailed on June 22–24, the start being from off the Hempstead Harbor mark of the Larchmont Y. C. The sweeps are $10 for each race; if four start the second boat to save her stakes; if five start, 20 per cent. to the second boat and third to save her stakes.

The Milwaukee Y. C. is out of the Lake Michigan Yachting Association. This action on the part of the Milwaukee yachtsmen is due to a difference over the arrangements for meeting the expenses of the annual regatta. For the past three years the big regatta of the Association has been held here, the Milwaukee Club paying all the expenses. This year the club did not want the regatta and it was fixed at Racine. The Racine yachtsmen felt they could not stand the burden of expense entailed by the meet and it was decided to assess each club in the Association equally to pay the expenses. This the Milwaukees did not like, claiming that an injustice would be done the smaller clubs if they had to pay the same amounts that were assessed against the larger Chicago clubs, which would be represented at the regatta by a score of boats, while the small clubs might not send but one. Their protests being of no weight, the Milwaukee yachtsmen decided to withdraw from the Association.—*Chicago Times-Herald*

Vencedor, recently purchased by H. M. Gillig, Larchmont Y. C., was shipped from Chicago for New York on June 9.

Canoeing.

Atlantic Division, A. C. A.

CRUISE AND MEET ON THE DELAWARE.

THE long-looked-for river cruising meet of the Atlantic Division is now a thing of the past, and it is safe to say that in some respects it was a canoeing experience which those who were fortunate enough to participate in will remember with unmingled pleasure, and which they will probably pass a lifetime without an opportunity of repeating.

Perfect conditions of weather and height of water in the river made it possible to carry out the whole itinerary exactly as arranged, and the cruise began with the dinner at the United States Hotel at Easton, on Thursday evening, May 27, and ended on the following Tuesday evening at Delanco with nothing but regrets that the experience might be but beginning instead of being a thing of the past.

It was a merry party which tumbled into the welcoming portals of the hotel about 6 o'clock on Thursday afternoon, carrying diversified baggage and wearing rare combinations of cruising and traveling costumes. Rooms were soon assigned and then all sat down to dinner. In the party at this time were Harry C. Allen and Edmund C. Hill, of the Park Island Canoe Association, Trenton, N. J.; Robert H. Peebles and Warren T. Berry, of the Knickerbocker C. C., New York; Woolsey Carmalt, Frank C. Moore, Harry H. Smythe, Frank G. Palmer and James King Hand, of the New York C. C.; Robert Gilchrist, of the Bayonne C. C., Bayonne, N. J.; M. de M. Marsellus, of the Ianthe C. C., and Arthur W. Corning, W. S. Benson and Halbert E. Payne, of New York; Wendel Andreas, of the Bogota B. C., Bogota, N. J.; Frederick B. Lewis, of New York, and Joseph Edward Murray, Vice-Commodore of the Atlantic Division, with Maurice D. Wilt and Will K. Park, all of the Red Dragon C. C., Philadelphia.

The evening was spent amid the glories of the circus, but it would be difficult to say whether the performance in the rings or the fun on a certain portion of the inevitable blue, back-breaking slat seats was the most exhilarating

Every one was under covers at 11 o'clock, however, and when the call came at 6 the following morning, all tumbled down with a healthy appetite and the keenest anticipation of the day's enjoyments that were to come.

We left the hotel at 7 o'clock, with the top of the 'bus which was to carry us over to Phillipsburg piled high with bags, bundles, cameras, paddles, etc., and soon we were by the river bank. In an hour all the canoes at the different railroad stations in Phillipsburg had been gathered together and at half-past 8 o'clock we were off. Two unfortunates, Andreas and Lewis, whose canoe was delayed somewhere between New York and the start, were left in the throes of a long distance telephone box, finally giving up the fight and joining us at Frenchtown in the evening.

With three cheers for Phillipsburg, the twelve canoes pulled out from shore and we headed for the first rapid, a pretty little piece of fast water just below the city.

Mr. Marsellus and Mr. Corning found that their long-unused boat was leaking badly after this drop had been made, and when an unsuccessful attempt to tighten by swamping her for a couple of hours had been made, but with no success, we moved on.

The twelve canoes comprising the fleet were, with two exceptions, all open boats and proved to be well adapted for the conditions met with on this journey.

More perfect weather could not be imagined than we experienced the first and second days of our run. Cool enough to paddle in a sweater, even under the midday sun, and with that same cooling breeze astern wafting us gently toward our destination, is it any wonder that the spirits of all rose until, lining up the cano s across stream, good old "Australia" and "Farmer's Boy" went lustily resounding through the old hills of the Delaware Valley, scaring the natives into long lines of gaping wonderers at the absolutely novel sight on those, or, indeed, on any waters.

Many were the incidents of that day. To recount them would be impossible. New songs and wonderful variations of old ones, oriental dance music from tin-cup cymbal and top-strake drumheads, made weird effects not altogether lacking in humor. Then, too, gunner Park, with his tiny air rifle, would occasionally dart shoreward, and we know that another feathered songster was about to pass away. That was only what we thought, however, for the birds stopped singing only for a moment to turn their heads in wonder at the harmless popping going on beneath. Many of them indeed followed him down stream, chipping a pretty plaintive request to make it go again.

Our usual manner of going down stream was to keep within 100 or at least 200ft. of each other at all times when paddling, and although this was subject to some variations, it was nevertheless the rule and a very good one. Approching a fall or rapid, Mr. Allen, whom we dubbed our pilot, and a good one he was, went in first, and in a long line the rest followed. Nothing prettier or more novel could be imagined, than to get a good position well down the line, and watch the men in front slowly dip, dip in the falls, then tumble about and finally pass out of sight as it came to your turn to be watchful, and heed the tumbling waters and many hidden rocks about. Or again to get through first, and putting about when in still water once more, watch the others with a better view, picking their way bravely through the seething waters of the rapid.

That day we dined well at Riegelsville, close by the river shore, in a good old-fashioned inn, which indeed, with one exception, was the only variety we found along the river. The proprietor was the clerk and porter and anything you pleased, looking his best when he leaned with outstretched arms and his broadest smile behind the high bar in his own tap-room, as we frequently saw him through the slatted green screen which barred the entrance. The guidwife was cook, and of course the boys fared well at her generous hands.

Well, there was a half hour's smoke after dinner in an elevated pavilion by the river bank, and once more we were in the canoes and off for our night's stopping place, Frenchtown, on the New Jersey side of the river. Once more did the favoring winds follow us, and when the afternoon wore on and the chances of good water for a respectable distance seemed good, we brought the canoes side by side and hoisted the little sail, which had fortunately been brought along by the human crustacean of the party, who had by this time donned enough of his bright boiled color to identify the species, and thus we bowled down the river, even getting brave enough now and then to do a light, rapid side by side, much to the distress and discomfort of the canoes, which were tandem and had very little freeboard.

We had many novel and agreeable experiences on the run, but it is doubtful if any were as much appreciated as this comfortable method of progress down the river, with the next man within touching distance, and every one on the cruise within hail when he was not asleep.

We reached Frenchtown at 5 o'clock, and were soon quartered for the night, our boats well up on the river bank and our precious duffle stowed in a convenient freight house. Some of the boys went off for a swim, some quietly changed togs at the hotel, and in an hour we were down to supper of wonderfully good, quick-disappearing chicken. Finally delicious strawberries, which with the richest cream and layer cake that was six-ply, soon put every one easily into a chair on the porch for an hour, while with fragrant pipes we contemplated a rosy world and wished for nothing but a lifetime of days like the one then passing away.

The evening was spent around the boats by the river shore, answering many questions as to our destination, the weight, cost, speed, safety and fun of our craft; and while there Messrs. Marsellus and Corning loomed up in the dusk with their canoe in good shape, and our party was once more complete.

At 10 o'clock everybody was in bed, for unused muscles made even the easy nineteen miles of the day seem a bit wearying.

The following morning at 6 found us all scurrying for first place in the dining room, where a jolly breakfast was eaten, and we were off again for the river. At 7:15 we took our paddles, and with three cheers and a tiger for the town where we had been so hospitably treated, we were off. Again did the favoring breezes waft us onward and downward, and again did we get side by side, and with our solitary little sail do the level stretches in rare comfort, only disturbed by the "Breakaway!" of the Commodore, when the roar of water ahead bade us get our positions in line for some more excitement.

This morning we were to take our first serious bit of falls, Bull's Island Dam, and it was lively work, two of our members, more daring than the rest, coming through in that altogether unprecedented and *outre* manner, side on. To be sure, the style gives you little freeboard if you are still in the boat after it is all over, but it is very exciting and made us all hold our breath for a minute or two.

At noon we were at Lambertville, which every riverman knows, because immediately below it lies the highest falls on the river, Wells'. As soon as we were ashore and our canoes left in the care of some fisherman on a little island near the town, we all walked down the half mile to the head of the falls. There they lay, tumbling and sending up a roar which perhaps made some of us wish that we were safely through it, and this especially after our pilot had announced that we would surely go through. At dinner that day the conversation was somewhat serious, and the boys felt that there was work ahead in a place that has claimed many a victim in boats and men.

When we put off that afternoon everything was well locked in. With knees braced stoutly against thwarts, with firmly-gripped paddles and tightly-pressed lips, we followed the leader into the roar and tumble of waters about Wells', and to their credit and the confusion of the disaster-predicting natives who lined the bank, be it recorded that all came through without mishap. To be sure, there was water in most of the boats, and there had been bumps and a couple had been hung up for a brief but awful moment or two, but then we were still all keel down, and when the mile of rapid rock-bristling waters had been passed everybody stood beside the bumboat and a congratulatory round of grog was drunk to our very good luck.

That afternoon was a long, easy paddle with a destination that put vigor into the arms of the voyagers. For were we not to pass the night in that paradise of canoedom, Park Island? W. C. Lawrence, a member of the Park Island Canoe Association, who had come up to Frenchtown the night before, was with us now, and occasionally said something about the possibility of getting a taste of the shad, for which we saw them fishing everywhere, on the island that night, and then you could see the hungry boats shoot ahead, only to get a fresh impetus when the recollection would wear off and they found themselves back again near Lawrence and his agonizing hints.

A little after 5 o'clock we rounded a bend in the river, and there lay the bright little isle with its snowy tents, and figures waving us their welcome from the bank.

We were ashore at 5:30, and then it was a handshake all around with the jolliest and most hospitable crew who wield the paddle—the members of the P. I. C. A. Here were Gilkeson, Packer, Anderson, Lucas, Fritz, and Allen and Hill who were with us, and later, ex-Com. Dorland, all old friends and good ones.

Soon they had us assigned to tents, which, with blankets and cots, had all been provided by their thoughtful committee. And then when the shadows were beginning to lengthen, the tired paddlers sat down to the most glorious array of planked shad ever gotten together outside of Gloucester in the State of New Jersey. Diagonally across the cosy room of their island club house stretched the long table, and the inspirations of bygone times under these old rafters must have come to some of the older members as the fun began, and the gleaming good will of healthy men who have dined well made the banners on the walls tremble for joy.

Well, all good things come to an end, though they threatened to last indefinitely, at least so far as the Vice-Commodore and Moore were concerned, and we were made up into a party of investigation to do the rounds of the island, and watch the rays of the setting sun as it mellowed the waters of the river, and gave us the promise of another clear day on the morrow.

Soon it was dark, and then the camp-fire was lit. Its warmth was grateful to the sweatered cruisers who sat around and watched its leaping blaze, and soon it warmed them into the good old A. C. A. songs, and made every man grateful for the shelter and hospitable hands into which the wayfarers had fallen that night

In anticipation of a long paddle before us on the morrow, "taps" was sounded at 10, and in an hour every man was under canvas, wrapped in generous blankets and the good sound sleep of the weary.

Next morning we breakfasted, and at 8 o'clock tumbled into the boats and stood by for a tremendous and hearty cheer for the Park Island men, which must surely reverberate in those regions for a long time to come.

We had an escort of three Trenton canoes through the last bit of rapid water we met, and when they left us below Trenton, we settled down to the paddle which was to bring us to our final camp site, Delanco. We soon found that we had a heavy head wind to contend with that day, and to this, at Florence, was added a flood tide that made good muscles, by this time hardened for the task, bend as they urged the boats onward.

We lunched lightly on tea and sandwiches at Florence, and a half-hour's smoke by the shore was terminated by the Vice-Commodore's cry of "Tumble down, everybody," and we made our final start.

The ever-freshening southwest wind soon made us wish for help; and, as if in answer to our prayer, came the boom of a cannon and quickly we were in the midst of Red Dragon men with launch, yawl and 15-footer, and then friendly tow lines set at rest all doubts as to our ability to get in camp in time for dinner, and at 5 o'clock we had every canoe in line on the Delanco beach and the cruise was over.

The camp at Delanco was a comfortable one, made so by a beautiful situation, good accommodations and an excellent mess, under the charge of Mr. A. S. Fenimore, of the camp site committee. That night there was a jolly camp-fire, and the following morning, Monday, we all turned out in prime condition to enjoy the quiet rest of a day in camp.

Races were proposed at an informal meeting, and finally abandoned in favor of a day's recuperation after our three days' journey, and we were again blessed by a joyous, cool breeze which made warm clothes comfortable and even necessary. During the morning the camp was honored by a visit from Henry M. Dater, ex-division purser. In the afternoon we learned of the fate of Messrs. Wilkin, Pinckney, Vernon and Eastmond, of the Brooklyn C. C., who were delayed in starting, and only got as far as Park Island, to return home from there on Monday.

Again came the night's camp-fire, and again the early retiring to cot and blanket.

Tuesday was bright and fair, but with the afternoon came a heavy wind and rainstorm, making things lively for an hour. We broke camp, and the very successful experiment of a river cruise and meet was all over, and universally admitted to be successful.

Better than all was the promise of a good representation at this year's general meet in August, for the universal remark as the last good-bys were said was: "See you at Grindstone."

With Berry in the Bow.

WITH APOLOGIES TO MISS JOHNSON.

ON the recent Atlantic Division cruise my friend, who, with myself made up one canoe crew, were the sole survivors of that first memorable cruise of the Division, which was held in '88, immediately after the subdivision of the A. C. A. Having also attended all of the subsequent camps, I feel competent to write of its relative merits. This year, being blessed with a commodore of conspicuous ability, a commissary general to match, favorable weather, and a "soldier's wind," which followed us as persistently as did Mary's lamb, it seems to me a man would be an unconscionable kicker who would cavil at such a combination.

To many of us rapid running was both a novelty and a revelation, and I may safely say that in one particular it was so to both veteran and novice alike. I refer, of course, to the startling innovation of one of our party—in consideration of whose well-known modesty I will designate as Mr. Plus. For did not he—and right here I would bespeak for him a niche in the temple of fame—conceive the daring plan of running the rapids under sail? No one of our little band, I feel assured, will ever seek to strip the laurels from his brow while the memory of that second day's cruise shall linger. Shall we ever forget how twenty men in eleven canoes floated abreast through the long golden hours, drinking in the river views (with occasional shifts to something stronger), all the while propelled by a five-mile current and Mr. Plus's sail (14sq. ft.).

It may not have been war, but it was magnificent. Lounging there in the bottoms of the boats, watching the fleecy clouds sailing overhead, or anon observing the indefatigable Nimrod of the party sparing the song-birds on either bank with unflagging zeal and a small-bore repeater. It did seem as though the laws of chance must eventually impel some chippy to fly into the leaden hail—but no. The Dragoons, too, afforded us much innocent amusement, for though themselves *chevaliers sans peur*, their boat at the very outset "took water" so copiously as to necessitate a delay of several hours while she swelled. But they pluckily caught us at Frenchtown, our stopping-place for the night.

While I am telling tales out of school I might relate their thrilling adventure of the following morning: We novices had heard much of the dangers of Bull's Island Dam, and when we reached it the Dragoons, evidently unable to agree upon who should have the honor of going through first, compromised in going through abreast. Whether by design or accident we shall probably never know, but right through the "foamer" they went, broadside on, with results that can be easily imagined, and although they filled their boat they cleverly avoided capsizing. All who witnessed this maneuver, while conceding its originality, seemed inclined to question its utility.

We stopped for lunch at Lambertville, where we found Wells's Falls to be as formidable in fact as in reputation. To carry or not to carry was the question, and after a careful inspection from shore, we decided that it could be run, and run it was by every one, and though many of us bumped and thumped upon the rocks, we all got through without mishap. Another party of canoeists followed a day behind us, elected to dodge Bull's Island Dam and carry around Wells's Falls, but then we were merely novices, and you know "Fools rush boldly in," etc.

The close of this delightful second day brought us to Park Island, the home of hospitality and planked shad, where we stopped for the night; and it was here that we made the acquaintance of Christopher Colombo, who never left us for the remainder of the trip. That we were royally treated goes without saying, and next morning when we left we were escorted through Trenton Falls by several members. But now we were on tide-water, and the conditions which had hitherto been unusually favorable, was changed, and with tide and wind against us, when five miles from Delanco, we welcomed the arrival of the secretary-treasurer's launch, which took us all in tow to camp, where we spent Decoration Day very pleasantly, missing no meals at a mess that left nothing to be desired. By next morning most of the members had left for home, among whom were the cruising partners of Mr. Plus and myself; and we, having some time to consume, organized a little side trip to round out the week. The captain of the Alicia took the bow thwart of Mr. Plus's canoe and I secured the Young Stentor in a like capacity, and at about noon of the following day, after shipping our surplus duffle home, we went on to Trenton, where, at our hotel, we had the pleasure of receiving a few of the Park Island men whom we were fortunate enough to encounter. Next morning, armed with the necessary permits and a tin horn, we launched our boats upon the Delaware and Raritan Canal, and it was quite an experience to see the bridges swung and the locks opened through the magic of our permits, which granted such privilegs to "Canal Boats A. and B., Captains P. and M., loaded light."

We paddled and sailed (same sail) for about five miles on the Fourteen Mile Level, then the man in the much-maligned red shirt suggested towing, a suggestion which our energetic quartette caught at like drowning men. So, tying the boats together, with one man steering, the Young Stentor trotted off in fine fettle. Intelligent reader, when in such-like circumstances, always tow. The "mule's" work is not arduous, for with one end of a 30ft. painter fastened about 4ft. from the bow, and the other to a 3ft. stick which is carried behind the back in the hollow of the arms, you will find that you can walk her along at a good rate, for the boat's resistance can be counted as *nil*. The inevitable mile posts were found to be invaluable, as they allotted the labor on an equitable basis, and in no case in changing mules was the intelligent animal known to overstep his "finish" by 1ft. The work of towing is less than that of paddling, with the additional advantage that three of the party are always loafing. This feature I know will commend the plan to all real canoeists.

As the number thirteen had seemed to pursue us on the trip, we unwittingly disembarked at a bridge of that num-

ber to buy a lunch at the store near by. Two canal boats were just approaching. At the tow-path opposite another path diverged at a tangent up-hill, which was not noticed by the captains, who were enjoying a sociable chat, with their boats and mules abreast. At the meeting of the ways the canal-ward mules crowded the inshore ones, which started them up-hill across country, and when their owner discovered his predicament I think he placed us in possession of his candid opinion of those mules without any mental reservations.

As we were embarking here a resident came down the bank and presented the writer with a tract, whereat his ribald companions claimed that the old gentleman was gifted with great intuition, they also brutally said that he had promptly recognized in me the only member of our party in need of such nourishment. At bridges 15 and 16 we were held up by their keepers, who in both cases were women, who inflexibly insisted upon the letter of the law. They had to read the permits and called attention to the fact that our 40lb. boats with a 14ft. sail were a menace to the structure. It is a curious fact that not one man along our route asked for our permits. I don't know whether there is any moral to this.

At Kingston, fourteen miles from Trenton, after locking through we carried the boats down the bank and launched them upon the Millstone River, which is a little gem. At this stage of the water there were no rapids. There are about four dams, however, with easy carries around them. The trees overarch, making a veritable paradise for the landscape painter and photographer. The tree forms are remarkable and the river is so thoroughly protected from wind that the reflections are mirror-like. Its banks are deserted and the animals along its course "are so unacquainted with man" their wildness was shocking to me.

It was here in the late afternoon, on one of the lonely reaches of the river, that we came upon a herd of about forty young steers, or, as our friend in the other boat stoutly maintained, young bulls. The animals evinced much curiosity at our passage, and began to follow us along shore, finally breaking into a canter. To stir them up a bit, I began to wave my red-clad arms and shout at them, when suddenly the other boat, without warning, ran upon a gravel bar, and swung broadside-on to the evident consternation of one of its occupants, who protested that it was no joke, and demanded to know, with much heat, if we wanted to stampede the brutes and have him trampled to death? Whereat we other three only laughed like demons, although I presume the threatened danger seemed very real to our wrought-up friend. Each of us has his *bête noir*, and his was "bulls."

Reaching Millstone shortly after, we decided to stop there for the night, as it was growing dusk, and we expected to meet another dam shortly. The hotel accommodations we found to be but tolerable—the sole exception of the trip. Starting early next morning, we killed a copper-head snake that we caught crossing the river. We intercepted it and dispatched it after a wicked fight, on a gravel bar where it took refuge. It required several good licks from a paddle to bring about its quietus. Soon after, we reached the Raritan, where, several miles below, we were surprised at encountering another dam, with a difficult and long carry around a masonry wall. Safely past this, we sailed through the shallows to New Brunswick, where, after shipping our canoes, we took a swim up shore in the icy waters of the Raritan. Then after doing the town we started for New York, where, over a good dinner, we toasted the Commodore and all the good fellows who were potent factors in the success of our trip.

And right here I should like to express my appreciation of my young cruising companion's willing assistance and unfailing good humor. The absence of some who were naturally expected to attend caused some comment, but in no way marred the trip, as the loss was entirely theirs. Aside from our individual gain in happiness and health, the trip resulted in an addition of six new members to the Division.

And now in the retrospect, how much more profitable a cruise like this appears when compared with the ordinary camp—the ever-shifting panorama of new faces and places being found an effectual safeguard against *ennui;* and when at length your cruise draws to a successful close, and you look upon your bronzed and healthy face, and feel your muscles, grown as hard as nails, you'll probably exclaim with the writer, "Encore!"

Before parting with the boys, I would have them join me in one verse more of the delectable "Christopher Colombo":

While cruising down the Delaware
The A. C. A. got frightened;
For every pair were well aware
Their boats should all be lightened.
But we were coached, as we approached,
Each rapid that was risky;
While in despair each breathed a prayer,
The most of us breathed whisky.

Chorus Such cruising ne'er was found—oh,
In all the world around—oh;
For every man the rapids ran,
And not a soul was drowned—oh!

ROBERT H. PEEBLES.

Toronto C. C.

THE season's programme of the Toronto C. C. has been drawn up as follows:

June 19—Handicap sailing, open to canoes, all classes.

June 26—Handicap sailing, paddle and sail only, novice, single-blade paddling.

July 3—Annual regatta. Events: No. 1, junior singles; No. 2, open singles; No. 3, handicap fours; No. 4, crab race; No. 5, open fours; No. 6, ladies' and gent's tandem; No. 7, open tandem; No. 8, tug-of-war, four in canoe; No. 9, hurry-scurry; No. 10, handicap tandem; No. 11, upset race; No. 12, tilting tournament.

July 10—Handicap sailing, classes 1 and 2 B.

July 17—Camp at Toby.

July 24—Junior double-blade (Commodore's gold medal); handicap tandem, double-blade tandem and handicap fours.

July 31—Handicap sailing, open to all classes, Championship Toronto Bay.

Sept. 4—Fall club regatta. Events: No. 1, international trophy race; No. 2, tandem championship; No. 3, single-blade championship; No. 4, handicap fours.

Sept. 11—Handicap sailing, class B.

The regatta committee for 1897 includes Messrs. D. H. McDougall (chairman), Harry Page, R. M. Bertram, George A. Howell and George Walter Begg (secretary).

Rifle Range and Gallery.

Canadian Militia Shooting Rifle.

MR. FRANK H. RISTEEN, of Fredericton, N. B., whose moose stories have turned the attention of many big-game hunters to the Province and aggravated others who could not go, is not only a good hunter and sportsman, but also a rattling good rifle shot. A late issue of the Fredericton *Daily Herald*, in commenting on this gentleman's shooting in the first match of the Canadian Military Rifle League, tells of his breaking all previous records on the Fredericton range at 200, 500 and 600yds. by rolling up the score of 96 out of a possible 105.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

June 17-20.—ANACONDA, Mont.—Thirteenth annual tournament of the Sportsmen's Association of the Northwest and fourth annual tournament of the Montana State Sportsmen's Association, under the auspices of the Anaconda Gun Club. $1,500 added. C A. Tuttle, Sec'y.

June 22.—OGDEN, Ill.—Second annual tournament of the Ogden Gun Club. Wm. McKinley, Sec'y.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man, $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

June 30.—BRIDGEPORT, Conn.—Third tournament of the Connecticu Trap-Shooters' Association, under the auspices of the Bridgeport Gun Club.

July 1.—SHERBROOKE, Quebec.—Sherbrooke's grand annual. Inanimates. Open to all amateurs. C. H. Foss, Sec'y, Sherbrooke, P. Q.

July 5.—OTTUMWA, Ia.—All-day shoot of the Ottumwa Gun Club. Open to all.

July 5.—BUFFALO, N. Y.—All-day invitation target shoot of the Bison Gun Club C. H. Werlin, Sec'y, 1634 Broadway, Buffalo.

July 5.—LINCOLN, Neb.—All day shoot of the Capital City Gun Club. Targets and live birds. R M. Welch, Sec'y.

July 7-8.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

July 14-15.—NEW HAVEN, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

July 20-22.—PINE BLUFF, Ark.—Seventh annual tournament of the Arkansas State Sportsmen's Association. Added money announced later. Paul R. Litzke, Sec'y, Little Rock, Ark.

July 20-23.—CLEAR LAKE, Ia.—First annual Indian Wolf shoot. Three days targets; one day live birds. $500 added. For programmes and particulars write to C. M. Grimm, Clear Lake, Ia.

July 21-22.—CRAWFORDSVILLE, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Crawfordsville Gun Club. Chas. E Lacey, Sec'y.

July 22.—MEADVILLE, Pa.—Fourth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

July (last week).—MITCHELL, S. D.—Tournament of the W. J. Healey Hardware Company.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 4-5.—INDIANA MINERAL SPRINGS, Ind.—Indiana Mineral Springs tournament. Ben O Bush, Manager.

Aug. 17-19.—TORONTO, Canada.—Tournament of the R. A. McCready Co., Ltd. Targets. $1,000 guaranteed. Open to all. Write for programmes.

Aug. 18-19.—WARSAW, Ind.—Tournament of the Lake City Gun Club. W. A. Wineberer, Sec'y.

Aug. 19.—WARREN, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept 6.—MERIDEN, Conn.—Third annual Labor Day tournament of the Parker Gun Club.

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Sept. 28-29.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club. Web. Woodfill, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties in all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Pennsylvania State shoot is booming away up. At Auburn last week we heard little else but "Cleveland and Oil City." The fact that Elmer Shaner is to manage the shoot has much to do with its popularity, for it is well known that Elmer is about "as good as they make 'em" when it comes to running a tournament. Looking over the programme, it will be noticed by those who understand such things that Elmer has no snap on hand; State shoots with a diversity of events are never easy to handle, requiring considerable executive ability and "lots of help" to make things run smoothly. To make it clear (in case there is any doubt on the point) we will state again that the big live-bird event is open to all, nobody barred. Here is what Secretary Reeser, of the Oil City Club, says, in a letter dated June 11: "Fulford, Brewer, Heikes, Gilbert, Lindsay, Shoop, of Harrisburg, and Burnham, of New York, have already sent out their shells, and the freight agent just 'foned me that he had a half a carload more, so judging from that, some of the boys expect to do some shooting. I guess it is generally understood that our special handicap shoot is open to the world, but it might do no harm to state that fact in your next issue, as some shooters may possibly think it is only a State affair.

Mr. E. Hough, our Chicago correspondent, sends us the following item: "A sad accident occurred at National Park, Milwaukee, this week. A trap shooting match was in progress on the shooting grounds, which are unfortunately so laid out that the line of fire crosses the circular bicycle path Dr. C H Richter was just in the act of firing when a young man by the name of Scott, a son of Dr. Scott, of Milwaukee, came scorching by on his bicycle. A part of the charge of shot struck Scott in the face, destroying his left eye and cutting up his cheek. The accident will put a damper upon the shooting at the park unless a different arrangement of the grounds be made, as the bicyclers are always passing by and are always in danger as the track now lies."

On June 4 Yale Dolan made the great run of 84 live birds straight. The circumstances surrounding the case were these: Mr. Dolan was shooting in a four-handed match, 100 live birds per man, on the Riverton Gun Club grounds, 30yds. rise, 30yds. boundary, with an 18in. wire fence to mark the boundary. His load was as follows: 3½drs. Schulize, one card, one pink-edge, one ⅜ white felt and another pink-edge, with 1¼oz. of No. 7 shot in a U. M. C Trap shell. He started in poorly by losing his 5th, 14th, 15th and 16th birds, the three latter all dropping dead out of bounds. But these four were all that he lost, as he went out with an unfinished run of 84, a most remarkable piece of work, as the birds were good and a strong wind was blowing across the grounds.

The Springfield (Mass.) Shooting Association will hold a targe shoot on June 22. The programme is a popular one: Four 10 targe events, five 15-target events, and one 25-target event. All purses wil be divided into four moneys under the Rose system. Any one can shoot "for targets only."

We have received a communication from the W. J. Healey Hardware Company, of Mitchell, S. D., stating that it has decided to postpone its shoot, advertised for the first week in July, until the last week of that month. The exact dates are not yet settled.

The regular monthly cup shoot of the Brooklyn Gun Club will be held on Saturday next, June 19. The grounds are at the terminus of the King's County Elevated railroad. All are welcome.

Worse weather for trap-shooting than that which favored the New York State shoot we have seldom been called upon to face. Yet notwithstanding all the unpleasantness, the shoot was a success from A to Z.

Jim Elliott gives the "champions" lots to think and talk about in his letter, which we publish this week. Jim is after scalps sure enough—and he'll get some, too!

A gun club has been organized at Warwick, N. Y., with the following list of officers: President, John B. Rodgers; Vice President, C. W. Wissner; Secretary, John M. Servin; Treasurer, J. A. Ogden. Mr. W. S. Lines is the club's captain, and Messrs. F. Dunning, W. C. Eager, and W. S. Lines act as its trustees.

The "$500 added" at the Indian Wolf shoot at Clear Lake, Ia., July 20-23 (*not* June 20-23, as we had it last week), will be added by the following "Heap Big Chiefs:" Chief Dago (C. W. Budd), Heap Talk (Fred Gilbert, Clean Stick (Chan Powers), Buffalo Hump (Frank Parmalee), Moon-in-the-face (C. M. Grimm), High ball (McMurchy), Des-Chree-Shos-Ka (Jack Parker), High Kick (Dick Merrill), Lightning (Tom Marshall), No Talk (Loomis), and Budweiser (Lou Erhardt). Well, sir, if there isn't a pow-wow at Clear Lake next July, we don't know anything at all.

On Saturday, June 26, the regular monthly handicap shoot for the E. C. cup will be held at the Bergen County Gun Club's grounds, Hackensack, N. J. On the same day and at the same time a team race between the home club and the Endeavor Gun Club, of Jersey City, will be decided. This insures a good shoot and lots of it.

We have been asked to call attention to an error in the Pennsylvania State programme, which occurs on page 89. The error is in the conditions of the Harrisburg team trophy, the programme stating that it will be shot at known angles; this is a mistake, as all events will be at unknown angles.

Mr. George Beck, of Indianapolis, Ind., met a severe defeat at the hands of Mr. C. W. Budd, of Des Moines, Ia., in the Du Pont trophy shoot last week. Under 80 per cent. is not Mr. Beck's true average by any means; the score shows that McVey was clearly off, while Dago Chief was right in it. Such is fate.

Conny Furgueson held his end up well in the Dean Richmond trophy shoot at Auburn, N. Y., on Friday last. He scored 13 out of 15, his father and W. H. Lair each accounting for only 11 apiece. Conny is only just fifteen years of age and should make an excellent live-bird shot with a few more years of experience.

George A. Mosher, of the Syracuse Arms Co., was the only shooter in the optional sweep on the Dean Richmond trophy on Friday last to score 15 straight. Thus a nice little sum went into George's pocket, and he smiled.

The Rochester, N. Y., Rod and Gun Club held its annual meeting on June 4, and elected the following officers for 1897-8: President, E C. Meyer; Vice President, Dr. J. S. Weller; Secretary, T. R Griffith; Treasurer, S. B. Williams; Auditor, Wm. F. Brinsmead; Historian, J. P. Pulsifer.

Ferd Van Dyke carried off first honors in the Interstate shoot at Monroe, La., June 9-10, with 368 breaks out of 400 shot at, an average of 90.7. J. A. Jackson, of Austin, Tex., was close up with 362 breaks, an average of 90.5.

W. Ross, of Elizabeth, N. J., flew at too high game last Wednesday, June 9, when he tackled Geo. S. McAlpin in a 100-bird race. Possibly Mr. Ross realizes that fact, too.

S. A. Tucker, of the Parker Gun Company, was in this city to-day. Mr. Tucker expects to remain East for a few weeks, and promises to meet us at Montpelier, Vt., next August.

New Haven, Conn., is going to make its Interstate Association's shoot a dandy. The dates are July 14-15; it is worth while to remember them.

The Capital City Gun Club, of Lincoln, Neb., will hold an all-day shoot, July 5. Both targets and live birds will be used.

JUNE 15. EDWARD BANKS.

Rhode Island Trap-Shooting Association,

PROVIDENCE, R. I., May 20.—In the handicap event which took place to-day on the grounds of the Rhode Island Trap-Shooting Association, F. I. Greener won first prize, Wesley Richards second, W. H. Sheldon third, P. H. Randell fourth, Amos Arnold fifth, and R. C. Root sixth. In connection with this event the W-A silver powder keg was won for the second time by F. I. Greener. He must win it but once more to be permanently entitled to the trophy.

The wind blew quite strong across the traps, making the targets fast and erratic. This made the scores below the average. Scores:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	15	10	25	25	10	10	10	25	10
R C Root	12	3	17	16	4	..	7	10	7
W Richards	10	10	16	20	9	6	8	14	4
S F Wilson	10	5	..	14	..	7	..	..	..
W Mooney	11	7	..	18	..	..	5	..	..
F I Greener	10	9	20	21	.	6	7	..	..
A Hawkins	10	4	..	..	8	..	..	..	..
H Swindells	8	6	14	..	..	..	..	..	..
W Sheldon	10	5	..	18	6	..	9	..	..
J F Rossie	7	..	..	15	..	7	..	..	..
P H Randell	..	..	..	17	..	8	..	..	7
A Arnold	..	..	..	17	..	5	..	..	..
F Graves	..	..	..	..	4	..	..	14	7
F Fisk	..	..	..	..	5	..	..	11	6
C M Staniels	..	..	..	..	..	9	7	12	..
F Arnold	..	..	..	..	..	..	..	..	..
Frank Cory	..	..	..	..	..	..	..	9	6

Nos. 2 and 5 were unknown angles; No. 10, 5 pairs regular angles; Nos. 1, 3, 4, 6, 7, 8 and 9, regular angles; No. 4 was the E. C. handicap powder event.

May 27.—A large number of shooters assembled on the grounds of the Rhode Island Trap Shooting Association Thursday afternoon to witness and take part in the events. The chief attraction was the team shoot between the Pawtuxet and East Providence gun clubs, for a trophy offered by the Rhode Island Association, which was won by the former by a handsome margin. The next principal event was the W-A handicap for members. It was a hot race and was won by a margin of 1 target, and thas enabled the winner, F. I. Greener, to hold the trophy, a handsome silver powder keg, donated by the Laflin & Rand Powder Company. The scores follow:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	15	25	25	25	10	10	25	Targets:	15	25	25	25	10	10	25
F J Greener	10	21	..	..	..	..	19	H Bain	10	16	..	..	4	..	13
E C Whitaker	10	19	..	..	..	..	..	W A Barstow	9	19	13	13	9	7	..

J F Rossie	11	12	..	..	6	..	..	F Arnold	..	..	..	..	6	5	16
R Rodgers	7	..	..	..	..	..	..	C H Staniels	..	..	..	..	..	..	19
H B Barstow	6	..	10	16	..	..	..								

No. 2 was the W A handicap race for members; Nos. 3 and 4, team shoot; No 4 was at unknown angles; No. 6 was 5 pairs doubles.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Cal., May 22.—A somewhat novel match was shot yesterday between D. Faktor and Wm. Glindemann at Shell Mound range. Conditions: Any rifle or any number of rifles, 200yds., 60 minutes actual shooting time, $100 a side. Most rings for 25-ring target to count. Glindemann used four .38 55 repeating rifles, while Faktor chose Scheutzen rifles. Glindemann shot 417 shots, while Faktor fired 295. Glindemann won, making 5,133 to Faktor's 4,956. These kind of matches are not favored by our leading shots.

The semi monthly gathering of the Columbia Pistol and Rifle Club brought out a fair representation and some excellent scores were made, particularly by J. E Gorman, who broke the revolver record of the coast, if not of the United States. In six shots he made 20 points, Columbia target, which means that he placed his six shots in a 3½in. circle at 50yds with a large revolver. His revolver-shooting all day was excellent. A H. Pape lowered his record on the Bushnell medal to a total of 80, a gain of 10 points over the last shoot. The highest scores of the day were as follows:

Re-entry matches, rifle, open to all comers, 200yds., Columbia target. F. H. Bushnell rifle medal and cash prizes, three-shot scores: A. H Pape, 7, 7, 8, 9; F. O. Young, 10, 10; Dr. L. O. Rodgers, 10, 12, 14.

Wm Glindemann military medal and cash prizes, 10 shots, Creedmoor count: E. Hovey, 47, 45; F. O. Young, 47, 46; E Jacobsen, 44; A. H Pape, 45.

Cash prizes on flags, inch centers made during month: A. H. Pape 13, F. O. Young 6.

Pistol, open to all comers, 50yds., Columbia target, Gordon Blanding pistol medal and cash prizes, three shot scores: J. E. Gorman, 8, 10, 12; F. O. Young, 9, 10, 13; A. B. Dorrell, 10, 16.

Diamond pistol record medal shoot and cash prizes, 10-shot scores: C. M. Daiss, 36, 44, 45; F. O. Young, 50.

Howard Carr, any revolver medal and cash prizes, 6-shot scores: J. E. Gorman, 20, 30, 30, 31, 31, 32.

Achille Roos, 22 rifle medal ladies' trophies and cash prizes, 5-shot scores: Ed Hovey 12, E. Jacobson 10, A. B. Dorrell 12, 15; Mrs. O. M. Peck 17, 17; Mrs. C. F. Waltbam 12, 16; Mrs. M. J. White 22, 23; J. H. Dow 25.

Cash prizes on flags, inch centers, made during month on the Blanding medal: C. M. Daiss 3, J. E. Gorman 3, A. B. Dorrel 2, F. O. Young 1. On the .22cal. rifle, Roos medal: A. B. Dorrell 15, E. Jacobson 12, Mrs. C. F. Waltham 4, Mrs. O. M. Peck 4.

ROBEL.

Peoria Gun Club.

PEORIA, Ill., May 28.—The second annual tournament of the Peoria Gun Club was brought to a close to-day after a successful shoot. On the first day the weather was quite cool, keeping many away from the traps, only 24 taking part in the many events decided. As this day was "preparation day," a large attendance was perhaps not to be expected.

On the second day, May 27, the weather was fine, although still a trifle cool, but the attendance was good, 61 shooters taking part in the 13 events on the programme. Quite a number of ladies were present this day, and Capt. Bartlett's exhibition of quick shooting was much appreciated and greatly applauded The third day looked threatening in the morning, but cleared off nicely about 11 o'clock, after a slight rain.

Mr. J. M. Brown, of the Peoria Gun Club, won the gold medal donated by Mr. Crawford for the highest average made by a member of the home club. The medal is a beauty and is valued at $50. The attendance was again quite good, forty-six shooters taking part in the events. The thirteenth event on each of the last two days was a merchandise event, $1 entrance, the prizes in this event being divided into eight groups, class shooting.

In the tabulated scores given below, all events are at unknown angles except No. 9 on the last two days; this event each day was at reversed traps. On each of the last two days the club added $75 to the purses, as follows: On May 27: Nos. 3, 5, 7 and 11, $5 to each purse. Nos. 4, 6, 9 and 10, $10 to each purse, and $15 to No. 8. On May 28: Nos. 3, 5 and 10, $5 to each purse; $7 in No. 4 and $8 in No. 7; $10 in Nos. 6, 9 and 11, and $15 in No 8.

Some excellent indi idual work was done by Messrs Powers, Bartlett and others, and some great squad totals were also rolled up on the second day. In event No. 4 the following scores were made by No. 1 squad: Black and Bartlett 20, Bingham, Powers, Sammis and Heilman 19; total 116 out of 120. On the same day in the next event, No. 5, squad No. 2 made the following scores: Leisy, Tucker, Thompson, Huobell and Zimmerman, 15, J. Hoff 13; total 83 out of 90.

The scores for each day follow:

Preparation Day, May 26.

G. F. SIMMONS, Sec'y

Handicaps and Highest Possibles.

INDIANA TRAP-SHOOTERS' LEAGUE AT KOKOMO.

KALAMAZOO, Mich.—*Editor Forest and Stream:* In FOREST AND STREAM of June 12 under Drivers and Twisters you publish an extract from the programme of the first annual tournament of the Trap-Shooters' League, of Indiana, held at Kokomo, June 8-9 relating to the Parker Gun Handicap. This handicap was shot on June 9 in the afternoon, at a time which was probably several hours after your issue of the 12th had gone to press—yet you had anticipated or foretold a state of affairs in your comments upon handicaps that proved an actual fact at Kokomo in the Parker Gun Handicap event.

This event had twenty nine entries at $5 each, besides several others for the price of targets only. Conditions were: No shooter with an allowance to score more than 47 out of 50, unless this score was surpassed by a scratch man. Scores:

	Broke.	Allowed.	Total		Broke.	Allowed.	Total
Dietrich	48	6	54	Lacey	33	13	46
Wallace	43	10	53	Kinsch	38	7	45
Tillson	46	5	51	Beck	41	4	45
Fortis	42	9	51	Stipp	44	0	44
Wood	39	12	51	Ford	41	3	44
Cumberland	39	11	50	Gill	32	12	44
Pattison	38	12	50	Thompson	40	4	44
Heiney	42	7	49	Voris	43	0	43
Tripp	43	5	48	Griffith	42	0	42
Partington	44	4	48	Ross	42	0	42
Slow	43	5	48	Garland	36	6	42
*Bush	44	4	48	Thomas	38	2	40
Winchester	38	9	47	Gamble	39	0	39
Hill	42	5	47	Huff	34	4	38
Parry	40	7	47				

*In for sweep only.

No scratch man having made 47 or better, and Dietrich with an allowance of 6 having scored 48 without his allowance, the executive committee awarded him the Parker gun, and divided first money among those whose allowance gave them a total of 47 or more, they receiving 75 cents each.

A protest (signed by twenty-five of the participants in the event) was made to the executive committee against the awarding of the gun in a manner contrary to the rules as defined in the programme, but the committee could not see things in any way other than that it was merely the misfortune of the others, whose allowance gave them 47 or more, that they should be compelled to divide first money.

Mr. George C Beck, of Indianapolis, an old-time shooter, well and favorably known, took exactly the same view of the matter as does FOREST AND STREAM, and openly asserted that Mr. Dietrich's score of 48, although not made by a scratch man, increased the highest possible to 48, and that all participants whose allowance gave them a score of 43 or better, were tied with Mr. Dietrich for the gun. It will be seen under these conditions, and from your standpoint that Messrs. Tripp, Partington, Pattison, Tillson, Slow, Wallace, Wood, Heiney, Forbes and Cumberland were in a tie with Mr. Dietrich for the gun, and that the division of the money into ten equal parts would have gone to the following:

First, Bush 48; second, Hill, Winchester and Parry 47; third, Lacey 46; fourth, Kinsch and Beck 45; fifth, Thompson, Ford, Gill and Stipp 44; sixth. Voris 43; seventh, Garland, Ross and Griffith 42; eighth, Thomas 40; ninth, Gamble 39; tenth, Huff 38

The division of the money including every shooter that was not in the tie for the gun, as the division was not the high gun system

Will FOREST AND STREAM kindly give us whatever comments it may deem necessary, with the rules and conditions of the match as published in FOREST AND STREAM of June 12? REN. O. BUSH.

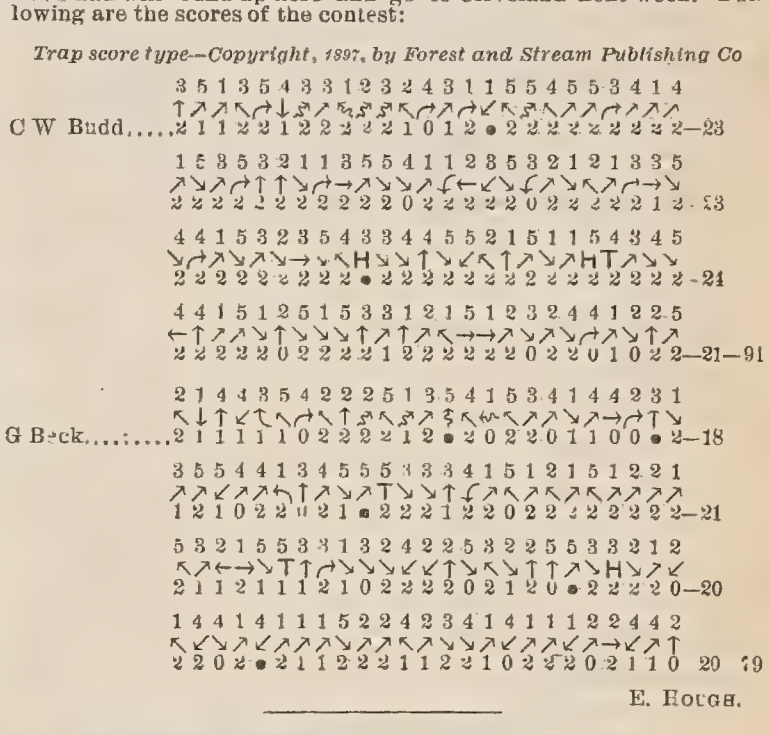
[In answer to Mr Bush's request we will first reprint the Driver and Twister referred to, which runs as follows: "Extract from the programme for the first annual tournament of the Trap-Shooters' League of Indiana at Kokomo, that State, June 8-9: 'Parker Gun Handicap. * * * The highest score which one with an allowance may make is 47, unless a scratch man should break more, in which event his score shall be the highest possible for the other class.' Extract from FOREST AND STREAM, June 20, 1896, page 501, under 'Handicaps and Highest Possibles:' 'In 50-target events make the highest possible score 47 (or 48), beyond which no targets can be scored * * * unless a scratch man shall break more than 47 (or 48) in a 50-target race * * * in such cases *that scratch man's score* to be the highest possible.' When we wrote the above we never intended to penalize any man who might break more than 47 (or 48) out of his first 50 targets; but on looking over the item we saw that we had made no provision for a man, *not* a scratch man, who might do so. We, therefore, in writing on the same subject in FOREST AND STREAM of Oct. 3, 1896, three months later, said: 'In all handicap events fix a highest possible score, making allowance for the loss of a few extra targets on the part of the scratch man or men in all events where the number of targets to be shot at reaches 50 or 100 (say 48 as highest possible in a 50-target handicap, or 94 in a 100 target race). The number chosen as the highest possible cannot be exceeded unless some shooter shall break more than that number out of his first 50 or first 100, as the case may be; that is, without his allowance. In the event of any shooter exceeding the highest possible, as above, that shooter's score shall be the highest possible, and all shooters tying that score, with or without their allowance, shall be entitled to a portion of first money.' In the same article we drew the shooter's attention to the fact that such a system of handicapping could only be brought into play where the Rose system or 'high guns' was used The old '50, 30 and 20' wouldn't do here at all. In the 'Parker Gun Handicap' the purse will be divided into ten equal parts, the gun going to the high man, ties for first place shooting off for the gun under the same conditions as in the original race."

We will now point out to Mr. Bush that according to the programme only scratch men were considered, and that therefore Mr. Dietrich's 48 out of his 50 could scarcely be recognized as setting the highest possible, and we think that the committee made a mistake in awarding the gun as it did. As the programme read, we should have decided that there were fourteen ties for the gun, Mr Bush not being in for the gun. The programme stated positively, "The highest score which one with an allowance may make is 47, unless a scratch man should break more, in which event his score shall be the highest possible for the other class." But no scratch man made 47.

With regard to the division of the moneys, not having a programme by us we must say that we took it that the purse was to be divided into ten equal parts on the high-gun principle. Perhaps we thought so, simply because that is the way we would have made it.]

Budd-Beck.

CHICAGO, Ill., June 7.—Charlie Budd, of Des Moines, Iowa, defeated in very hollow fashion, George Beck, of Indianapolis, in the race here to-day for the Du Pont trophy. Mr. Beck has been out of practice for some time, and such birds as he has shot recently have not been quite so difficult as those he met under the conditions here; still he had a right to expect a little better luck than he had in falling so low as 79 out of 100. The day was bright, and there was something of a wind, so that the birds were by no means easy, though not so hard as they sometimes are at Burnside. The wind was from left to right, nearly parallel with the score, and the bulk of the flight was right-quartering. This made the birds rather puzzling, as they would start straight away, then twist into the wind, and go off to the right at great speed. On some of the far and fast right-quarterers Budd repeatedly showed excellent judgment, striking his bird full and saving it inside the wire, where the least error would have allowed it to skate over on the wind. Beck shot an uphill race almost from the start, and never tied his rival after the first twenty birds. At one stage of the race it looked as though Budd would make a score of 91, but toward the close he let go three birds, which cut him down somewhat, although the total score remained a very creditable one. His 96th bird was missed clean with both barrels, and with his 97th he seemed to be rather careless. He stopped a number of screaming birds in great style.



Beck lost his 16th bird without shooting at it, a bit of powder or dirt having prevented his gun from releasing the safety when he closed it. He pounded along very nervily all through the race, and made some beautiful kills on very fast and strong birds. His special strength lay in the use of his first barrel, which was at times delivered with great speed and accuracy. In his second barrel work, however, he lost in regularity of time to his competitor, who shot in clockwork style all through the race His 89th bird was an incomer which was hit hard. It passed in close to the ground and he could have caught it, but did not attempt to do so, as he was using the dog to retrieve. The bird lit on the edge of the roof directly above his head, and the next instant fell dead inside the boundary. With his 90th bird he was more fortunate. It struck full against the wire, but the dog picked it up dead. His 96th bird was one of great vitality and got over, though hit very hard. It was noticeable that in using his second barrel on a bird on the ground, Beck often missed it almost entirely, the charge going invariably to the right. Evidently he did not allow for the drift of the shot in the wind. Budd said that he allowed fully 1ft. in 35yds. for this drift, and this seemed to enable him to center his birds Out of the 200 birds but one refused to start promptly, and it flew before the flag rope was reached. It was an incomer, and was missed by Beck.

Budd shot a Parker gun and U. M. C factory ammunition, 3½drs. Hazard Blue Ribbon, Smokeless cases, 1¼oz. 7½ shot. Beck used an L. C. Smith gun, 3¼drs. W-A powder, Winchester Leader shells, 1¼oz. 7 shot.

The party from Indianapolis was smaller than had been anticipated by Mr. Beck's friends, for at the last moment a number failed to materialize. Those who came on were Mr. George C. Beck and wife, Mr. E. H. Tripp and wife, Mr John M. Lilly and wife, and Mr. Royal Robinson. Mr. Robinson said that, while the Indianapolis folks would have been glad to see their townsman make a little better score, they could readily see reasons for his not doing so. Mr. Beck is now a man fifty-four years of age, and this fact, coupled with his lack of recent practice, handicapped him very much in a contest with a man ten years younger, who is shooting all the time Mr. Robinson adds that trap-shooting matters in Indiana are apparently looking up, and he thinks that the recent organization of the State League in Indiana will unite the shooters and be of great benfit to the sport. He and his friends wished to be present at the first State tournament at Kokomo this week, but he was unable to attend.

Mr. Robinson handled Mr Beck during the race, and Charlie Grim performed a similar office for Mr. Budd. A nice number of spectators saw the contest, among these Mr. E. S Rice and Fred Gilbert, former holder of the cup. Messrs. Grimm, Gilbert, Marshall, Powers and Budd will round up here and go to Cleveland next week. Following are the scores of the contest:

Trap score type—Copyright, 1897, by Forest and Stream Publishing Co

E. HOUGH.

For the Championship of all Champions.

LITTLE ROCK, Ark., June 10.—*Editor Forest and Stream:* I note in your last week's issue an article from the pen of Mr. Whitfield, which gives the Kansas City *Star* cup, representing the championship of America at live pigeon shooting, a creditable and truthful representation. In the same article he ventilates Dr. Carver's claims to championship honors, and I wish to further inform Mr. Whitfield, who is a young man, with the knowledge gained in twenty-five years of various championships, that I cannot recall where he, Dr. C., ever won or held a trophy which was acknowledged to represent shooting honors par excellence.

With all the championship emblems circulating around, the Kansas City *Star* cup, held by Mr Sim Glover, of Rochester, N. Y., came before the public in a formal and fair way, controlled by an association (namely, the Missouri Fish and Game Protective Association) which was a guarantee of courtesy to all and favoritism to none, and it stands to-day emblematic of the live-bird wing-shot championship of America. In holding this myself a year ago, I was subjected to criticism and through the press an unknown gentleman, who signed himself "Another Elliott" (who was no branch of my family, or he wouldn't have quit so easily), was very desirous and anxious to back a number of shooters against me in pigeon matches at a time when it was impossible for me to comply with his request. Not having a personal acquaintance with him, when the opportunity offered I replied through the press, that I would accept matches with all the gentlemen he desired to back, or any one else who would post a forfeit with an equitable challenge. This frank proposition resulted in bringing out only two representative wing shots of America, Mr. E. D. Fulford, of Utica, N. Y, and Mr. J. D Cay, of Pine Grove, Ky., who complied with my request, and I promptly accepted them on conditions of their own dictation and was successful in winning both matches, which seemed to change the opinion of a few calamity howlers who were asserting that a man was handicapped shooting at live birds by using a Winchester repeating gun, and that even they were ready to shoot me pigeon matches for money

Following the score made against Mr. Gay at Louisville, Ky, killing 93 pigeons out of 100 at 31yds. rise in a 31yd boundary, there were not so many Indian shooters in the woods who were confident they could take old Jim's scalp. Having been recently informed that it is being quietly intimated around that all that was desired upon my part was a forfeit to insure certain persons of my sincerity, and I would then get all the matches I desired. I have at last concluded to humor their whims and post a forfeit with an equitable challenge, which will determine who is the champion of all champions. Referring to my past record, on Aug. 4, 1890, I first won a trophy which was recognized universally as the live bird wing-shot championship honors of this country. I defended it until it became my personal property. After which I shot a number of championship races under contract to do so, and up to the present day, June 10, 1897, I have never yet been defeated in an individual race where the American Championship was involved Paste this in your hat

Recognizing the element of ill luck which sometimes defeats the superior shot in a single race at 100 pigeons, I will make my challenge on a more equitable basis, and the conditions that each and every match to be shot on a separate ground will at the finish demonstrate the winner's right to the title of championship of all champions.

THE CHALLENG

"LITTLE ROCK, Ark., June 10.—I have to day posted a forfeit with the First National Bank of Kansas City, Mo., of $100, and herewith annex certificate of Mr E. F. Swinney, cashier, showing receipt of the same. I challenge any shooter in the world for a series of three or five matches for the Championship of all Champions, $500 a side, to be decided or divided in three or five matches as follows: If three matches, 100 pigeons each match, 100 birds to each man, $100 a side on each individual race, with $100 side bet on the highest aggregate number killed in the three races If five races, each race to be for $100 a side, under either of the above conditions, the winner to take the entire gate receipts, if any are collected, and the loser to pay for the pigeons shot at by both men and all necessary ground expenses which may be incurred. In no instance are there to be two matches shot on the same ground or in the same city, Hurlingham and American Association rules, 30yds. rise, to govern the contest.

I will toss up for the first choice of shooting grounds, which are to be chosen by each man alternately. The first series of matches to commence Sept. 1 to 10, with the man who first accepts this challenge by posting a forfeit, and following in rapid succession with the next in turn who likewise complies with the conditions.

I will accept and put up an additional forfeit of $100 with as many men as desire to compete with me.

My forfeit will remain deposited for your consideration thirty days from the date hereof

Come on, boys, the first come the first served. J. A. R ELLIOTT.

KANSAS CITY, Mo., June 10.—In compliance with the above stated challenge, Mr. J. A. R, Elliott has placed a forfeit of $100 in this bank.

E. F. SWINNEY.
Cashier, First National Bank, Kansas City, Missouri.

New York State Association.

THE AUBURN TOURNAMENT.

THE thirty-ninth annual convention of the New York State Association for the Protection of Fish and Game was held at Auburn, N. Y., June 8, and in connection therewith was held the annual State shoot, June 8–11. The proceedings at this convention, which is now termed the "summer meeting of the Association," will be mentioned first, as we are firm believers in the old motto, *Seniores priores*.

The meeting was held at about 8:30 on Tuesday evening, June 8, in an empty store under the Osborne House. This store, although of ample proportions, was scarcely large enough to accommodate the delegates and others who wanted to be present at the proceedings. As is the case at these "summer meetings," the presiding officer was the president of the home club. This gentleman was Mr. Charles G. Curtis, who called the meeting to order with a brief address. He was supported by Mr. Clarence E. Goodrich, secretary of the Auburn Gun Club, and by Mr. George Peck, of the Auburn *Daily Advertiser* and the Auburn *Review*. On Mr. Curtis's right hand, he was supported by Mr. W. S. Gavitt, of Lyons, N. Y., the president of the State Association proper.

CLUBS REPRESENTED.

Twenty-four clubs were represented at the meeting, the delegates being as follows:

Syracuse Gun Club: C. H. Mowry, A. G. Courtney, C. F. Ayling. Messina Springs Gun Club: A. S. White, Harvey McMurchy. Auburn Gun Club: C. W. Tuttle, J. Henry Kerr, Irving Smith, F. C. Coburn, D. L. Hurlbut. East Syracuse Sportsmen's Association: D. M. Lefever, Charles Frey, W. Morse, C. J. Dalley, A. G. Courtney. Whitestown Gun Club: A. S. Hunter, A. H. Richardson, Dr. J. G. Kilbourn. Watertown Gun Club: W. H. Tallett. Richfield Springs Gun Club: Myron E. Barker, Walter Yeoman. Lockport Gun Club: H. I. Benedict, C. A. Ward, John McDonough. Bison Gun Club: C. H. Werlin, P. H. Siegrist, F. H. Wheeler, F. P. O'Leary. Manitou Beach Gun Club: L. V. Byer, C. Lane, S. Glover, H. Perry. Brooklyn Gun Club: Edward Banks. New York County Gun Club: Edward Banks. Riverside Gun Club: L. W. Davis, Dr. J. S. Weller, Henry Peters. Sterling Rod and Gun Club: Charles F. Wayte. Catchpole Gun Club: E. A. Wadsworth, Benjamin Catchpole, Morris Burke. Charlotte Gun Club: William M. Richmond, Arthur Rickman, Benjamin F. East. Northern Wayne Gun Club: George Wride, Benjamin Catchpole, Charles Van Ostrand. Oneida County Sportsmen's Association: H. L. Gates, Gustavus Dexter, M. M. Mayhew, E. D. Fulford, J. W. Fulford. Rochester Rod and Gun Club: W. C. Hadley, E. C. Meyer, George Borst, Arthur Rickman, Homer Perry. Spencer Sportsmen's Club: H. B. Whitney, C. F. Burnett, Frank Zwilling. Saratoga Gun Club: H. M. Levengstone, Jr. Leatherstocking Club, of Oswego: Max B. Richardson. Audubon Club, of Buffalo: F. D. Kelsey, E. F. Hammond. Binghamton Gun Club: G. W. Kendall and H. W. Brown.

Of the above clubs the following nine were new applicants, who were admitted to membership in due course: East Lockport Gun Club, Brooklyn Gun Club, Catchpole Gun Club of Wolcott, Bison Gun Club of Buffalo, Glenwood Gun Club of Newburgh, East Syracuse Gun Club, Messina Springs Gun Club of Syracuse, Glenside Gun Club of Skaneateles, and the Sterling Rod and Gun Club.

ROCHESTER IN 1898.

After the delegates and their credentials had been inspected, and after the nine new clubs had been elected to membership, Mr. Hadley rose to nominate Rochester for the shoot of 1898. He promised that the members of the Rochester Rod and Gun Club should spread themselves in order to give their guests a good time, and also promised that if everybody did not have that good time the president of the club, Mr. E. C. Meyer, should be hung, drawn and quartered. He also added that the shooters who came to feed should also be fed, and should carry something away with them when the State shoot was over. Over and beyond these promises Mr. Hadley did not go; he had no need to promise anything more, for there was no competition for the shoot in 1898. As, however, we are personally acquainted with the majority of the members of the Rochester Rod and Gun Club, and are well aware of their capabilities for carrying out to a successful conclusion, any tournament of which they may take hold, we can promise that, with nothing more than the above meager details as to what will be done for those who go to the State shoot at Rochester next June to go upon, the State shoot of 1898 will be a big one and a success.

Mr Gates, as representing the Oneida County Sportsmen's Association, seconded the nomination of Rochester, and, as said before, there being no opposition, Rochester it was.

We have omitted to mention that prior to the nomination of Rochester, a motion made by Mr. Schortemeier, of the New York County Gun Club, at the Buffalo convention was briefly treated. The matter was this: Mr. Schortemeier made a motion at the Buffalo convention, in June, 1896, that at the meeting in June, 1897, the members present consider the adoption of a rule that no shoot be held within 150 (or 100) miles of where the shoot was held in the preceding year. As Mr. Schortemeier was not present to look after this motion, the matter was disposed of by Mr. Hadley's motion that the meeting do not consider the question.

The tournament officers for 1898 are the officers of the Rochester Club: President, E. C. Meyer; Secretary, Thos. Griffiths, and Treasurer, Sam'l B. Williams.

THE ASSOCIATION TO BE DIVIDED.

The presence of Mr. Gavitt, president of the State Association, portended something important, and that something soon formulated itself when Mr. Gavitt rose to address the meeting, all other business having been disposed of. And Mr. Gavitt's words gave the members present plenty of food for thought. He was in favor of dividing up the Association into two bodies, as distinct in themselves as are their respective interests, viz, the protection of fish and game, and the encouragement of trap-shooting. Mr. Gavitt pointed out how it had come to pass that the Association had had to hold a summer convention for the edification of the trap-shooters, and a winter convention for the benefit of game-shooters and fishermen. He suggested that the two bodies now become two distinct organizations, one for game and fish protection and one for trap-shooting. He also stated that a committee was now at work on a new constitution and by laws to be adopted at the coming winter convention, and he felt that the change should be made at once to facilitate matters.

To help in this matter Mr. Gates placed the question before the meeting in the form of a resolution. In the discussion which followed, it was evident that the sentiment was strongly in favor of the movement, but Messrs. Hadley, Richmond, Benedict and Banks advocated the appointment of a committee from those present at this meeting to meet with a similar committee from the other body and to prepare for a final dissolution, the committee to report at the summer meeting, at Rochester, in '98. This was ultimately approved of, the chair appointing Messrs. Banks, Gates and Kelsey as such committee. Mr. Kelsey being unable to serve on such committee, Mr. Hadley's name was substituted.

Mr. Gavitt named as the committee from "the other body," to act in coöperation with the above committee: Mr. F. J. Amden, of Rochester, Mr. Geo. R. Peck, of Auburn, and General D. H. Bruce, of Syracuse.

Having no more business to dispose of, the meeting adjourned at about 11 P. M.

A GOOD SHOOT IN BAD WEATHER.

The State shoot of 1897 will go down into history as interesting for two reasons. First, on account of the movement set on foot for the dividing up of the organization into two separate and distinct bodies as set forth above; and, second, on account of its being a good shoot held in about as wretched weather as one could possibly imagine at this time of year. For the first three days there was little pleasure in shooting at all, except for the fun of beating somebody else in the matter of good temper under the most trying circumstances. It rained "real hard" on the first day, and it poured just as seriously and steadily on the second day; on the third day it didn't actually rain much during the morning, but it looked as dull and gloomy as ever; and it did actually clear up at a few minutes to 3 in the afternoon. From that time on all was well.

The attendance was very encouraging considering these disastrous climatic annoyances. It seems hard to keep trap-shooters away from their favorite sport when there's any chance of having a try at a few targets. Then again there are some delights in meeting old friends and making new ones; and these two things are a certainty at any State shoot. The consequence was that, under the conditions, the attendance was all that could have been hoped for.

GROUNDS AND ACCOMMODATIONS.

The grounds were easily reached, being located just at the end of the street car track on Genessee street, in the county fair grounds. It was less than a fifteen minutes' run in the car from the Osborne House to the outside of the grounds. Once at the end of the street car track it was only a couple of hundred yards or so to the main building, which was given up to the shooters and to the exhibitors of sporting goods—a novel and interesting feature of this shoot. We have said that it was only some 200yds. to the main building, and so it was—as the crow flies, or as one would walk in nice dry weather; but with various small morasses to circumvent, you could safely add another 100yds. to the distance traveled on each of the first three days.

THE EXHIBITION OF SPORTING GOODS.

The big building was a perfect godsend in such weather. There was so much space for everybody and everything that we couldn't help being forcibly reminded of the betting ring at the Guttenburg track, which was utilized for the same purposes at the E. C. tournament in May, 1896. The building is built like a parallelogram, with three equal rear extensions. The extension to the right was occupied with the exhibits of the King Powder Co. and Peters Cartridge Co., engineered and overseered by Mrs. M. F. Lindsley herself. Next in order came the stand of the Remington Arms Co. under the care of that most worthy notable, Col. A. G. Courtney, one of its latest acquisitions. Only a step away was the Lefever stand of firearms, with Uncle Dan Lefever and his son, F. Lefever, to look after the interests of the firm they represent. Next to them came Harvey McMurchy and his exhibit of L. C. Smith guns. And, be it noted herewith, that Harvey gave object lessons during the shoot on how to handle these same guns. Billy Crosby occupied a small space in the corner next to the Hunter Arms Co. with a display of some Baker guns, the brothers and sisters of that which he shot into first place for general averages on the Wolves' trap. Von Lengerke & Detmold, with their stand of Francotte guns of all grades, made a very telling exhibit in a prominent place, the stand being the same that the firm showed at this year's Sportsmen's Exposition. We must not forget also that the Hunter Arms Co. also exhibited some of their bicycles, in addition to the guns shown under Harvey McMurchy's care.

Another special feature in this big building was in the center wing, where Mr. George M. Taylor and his help from the Osborne House spread out things that were good to eat and things that were good to drink in such depressing weather. Unfortunately, at most shoots the catering is not looked upon as of vital importance. Too often it is a case of "Oh, any old thing'll do!" But at Auburn the matter was placed in the right hands, and Mr Taylor deserves the thanks of the visitors at this shoot for the manner in which he looked after them. There was plenty of room for all, and, best of all, there was plenty of help to run his temporary restaurant.

In the third rear extension there was nothing on exhibition, as a rule, beyond Paul North, some magautrap fixtures and a few barrels of bluerocks. As these objects could be seen to better advantage outside—that is to say, when it wasn't raining—this portion of the building was not as popular as either of the other two extensions!

THREE CASHIERS' OFFICES.

In the main building were the three cashiers' offices. On the right as you entered the front door was the office presided over by Mr Geo. Hudson. He looked after the Wolves, a large sign bearing the inscription of "The Wolves" telling that class of shooter where his wants would be looked after. To the left, opposite Mr. Hudson's apartment, was another cashier's office, bearing the sigh "The State." Here Mr. Thos. Garret, Jr., and John J. O'Sullivan handled the entries and paid out the cash in the State events. In front of the door was the third cashier's office, bearing the title of "The Lambs." In this office Messrs. Irvin Smith and Fred Bower looked after the Lambs, and some of the Wolves, too, for the matter of that; for many such came thither to dally with "their meat."

Under such conditions as regards cashier's offices, there was little left to be desired by the management in that respect. Outside, however, the management had neglected many things. In two respects particularly had it erred. Not the slightest effort had been made to prepare for wet weather, and wet it certainly was. The merest semblance of an awning covered one of the three scores; shooters had to stand out in the pouring rain and "get it in the neck" in more senses than one, for the rain came from the rear of the scores. In the matter of help, too, the management had run things far too close. There was only one scorer at each trap; scores were chalked up on the blackboard as called off by the referee, but there was no score sheet kept to be any sort of a check on the scorer. As a matter of course, errors will occur and then again they won't occur, but in any case many scores were altered almost at the will of the shooters. As we have said no detailed scores were kept; the results of each squad's work was written down on a score sheet after the totals were made out, and were then filed in the office it belonged to. We believe in having two scores kept all the time, but we also believe in making the blackboard score the official score all the time. It may be said that efforts were made at the start to keep detailed scores, but nobody could work on a score sheet that was wet in a few minutes, and there was not even any protection from the weather for either scorers or referees. A star in the firmament was William Hoagland, the well known pedestrian, who acted as squad hustler and never got tired and hardly suffered any diminution in the matter of throat or lung power even, after three days of consecutive hard work.

In other respects the management did things well. C. W. Tuttle, J. J. Carr, C. E. Goodrich, George Corning, President Curtis, and many others of the home club, did their share toward keeping the shooters moving and making things as pleasant as possible for their guests under the circumstances.

Three magautraps were used, one for each set of events, and each trap took its part satisfactorily. The targets used were bluerocks naturally enough, as only such targets can be used under contract in these traps.

BUT THE PROGRAMME WAS CHANGED.

We have always believed in never changing a programme under any circumstances. Once you have announced through the medium of a programme that you are going to do such and such a thing, we do not believe in ever changing from the conditions announced, unless there is ample time to tell everybody about that change.

The programme of the shoot announced that the Rose system would be used in the State events, and that part of the programme was adhered to. In the programme for the open events for both traps, it was announced: "All money to be divided into six purses, according to the Rose system." In our issue of *May 29*, in "Drivers and Twisters," we made a note that, according to information received from Mr. Tuttle, "the big open sweeps at our coming State shoot will be divided as shooters wish, probably by the old plan while all State events will be divided under the Rose system." With such notice we were prepared for an alteration in the manner of dividing the purses in "the big open sweeps," although we expected that some sort of a vote of those present would be taken to ascertain what the shooters wished. We understood from Mr. Tuttle that an announcement was made before the shoot opened that the old system would be adopted in the open sweeps; but we can assure Mr Tuttle that many and many a shooter who said that they were present at least half an hour before the first shot was fired, told us that they never knew any change had been made until they went to collect their money.

The greatest lamentations arose from the camp of the Lambs, where no change had been suggested prior to the shoot; at least not publicly, for no one could for a moment expect that the small sweeps set apart for the Lambs could be included under the head of the "big open sweeps." Yet they were included apparently, and instead of "all purses to be divided into six purses under the Rose system," it was a case of 40, 30, 20 and 10 under the old system in the 15 target events, and 30, 25, 20, 15 and 10 in the 20-target events. No wonder the Wolves got a benefit when they went to visit the Lambs!

We are not going on record here as in favor of six moneys in either 15 or 20-target events, or of eight moneys in 25-target events; that point is not under discussion; but we do go on record as being against any and all alteration of a programme when once it has been given to the public.

TRADE REPRESENTATIVES.

Among the trade representatives present were: Captain A. W. Money, Manager-Treasurer of the American E. C. & Schultze Powder Company, Limited; Justus von Lengerke and Gus E. Greiff, of Von Lengerke & Detmold; Ed Taylor, of the Laflin & Rand Powder Company, together with M. Herrington of the W-A Powder of that firm; J. Hildreth, of the W. R. A. Company; B. H. Norton, of the Hazard Powder Company; W. L. Colville and J. S. Fanning, of the Gold Dust Powder Company; Mrs. M. F. "Wanda" Lindsley, of the King Powder Company and Peters's Cartridge Company; Dan Lefever and F. Lefever, of the Lefever Arms Company; S. A. Tucker, of the Parker Gun Company; Harvey McMurchy and R. Hunter, of the Hunter Arms (L. C. Smith) Gun Company; Geo. A. Mosher, of the Syracuse Arms Company; Col. A. G. Courtney, of the Remington Arms Company; Billy Crosby, of the Baker Gun Company. There may have been some others, but without any data to go upon, our own having been mislaid, we cannot remember any others.

As for the remainder, we must leave it to our readers to make out their own lists from the long rolls of names we give below in their respective positions annexed to the scores. Suffice it to say that the attendance at the State shoot this year was large, representative and influential (that sounds all right anyway). The way in which the events of each day were shot out to a finish is told below, and it is there that you will have to look for it.

THE STATE EVENTS.

The programme of State events was a lengthy one. For the first day, June 8, there were three such events scheduled, viz, two 25-target events and a 50-target event for the E. C. cup. The entrance fees in the 25-target events were $3, targets extra at 2 cents each; in the 50-target event, the entrance was for "price of targets" with an optional sweep of $8 on the 50. All the purses in the State events were divided into eight moneys under the Rose system, but with the ratio of only 8, 7, 6, 5, 4, 3, 2 and 1. In all the 25-target races, with the exception of the merchandise event, the Auburn Gun Club guaranteed $200 in the purse. On this arrangement they lost money, but not to amount to much. In No. 1 they had 69 entries; in No. 2, 63 entries; No. 4, 60; No. 6, 54, and in No. 7, 42 entries, or a total of 283 entries at $3 per head, a fund of $861 to go to fill the guarantee of $1,000 on the five events. From the above $861 must be deducted the sum of $7, the surplus over the guarantee in the first event; as all surplus was added, the purse in this event was just $207. The club was thus out $143 on the guarantee; but there need be no fear of the insolvency of the Auburn Gun Club on this account, as the merchandise event and the receipts from the sale of about 50,000 targets should be ample to carry them through such a financial cloud. It should be noted that the Auburn Gun Club, to its credit, carried out its "guaranteed" programme to the finish, although sure of a loss in Nos. 6 and 7.

THE E. C. CUP RACE.

The third event on the first day in the State programme was the 50-target race for the E. C. cup. This race was shot right out, each squad shooting out its 250 targets "at one sitting." When the "McMurchy squad" went to the score Stanbrough was high with 46 breaks. The "McMurchy squad," from the first event on the first day until the time when Levengston had to retire on the third day, was composed as follows: McMurchy, Edwards, Levengston, Wagner and Kelsey. This squad had done some good, quick work, and with a view of finding out how long it would take for the squad to shoot its 250 targets, Ed Taylor, by request, held the watch on it in this race without the knowledge of anyone in the squad save one member of it. Its record was as follows: Time 15m. 6s., including all balks (which were remarkably few and far between), and 233 breaks out of 250 shot at, an average for the squad of 93.2. The above rate of shooting is almost equivalent to the trapping of 1,000 targets per hour! Paul North's face beamed with his magautrap smile when he heard the figures.

With such a record it is only natural that the winner of the cup was a member of the squad. Kelsey was the man that took it, with 49 to his credit. Levengston was second, close up with 48 to his name. As there was no 47, third money went to the 46s.

Carr on this day showed what an excellent shot he is. In the State events he broke two 25s straight, and then broke 46 out of 50 in the E. C. cup contest. This gave him a good lead in the State averages, his record for the day in these three events standing at 96 out of 100.

THE MERCHANDISE EVENT.

State event No. 5 was the merchandise event, for which the club had gathered together a very valuable list of prizes. In this event C. A. Ward, of Lockport, N. Y., and Edwards ran 25 straight, and shot off for first choice in the first class of ties. The shoot-off was a long one, as although Ward had run out of his own shells, he found some strange ones that seemed to suit him to a nicety. The scores in the shoot-off were as follows, ties being decided in strings of 10 targets per man:

Edwards.....1111110111 0111111111 1111111111 1111111111—38
Ward .....1111101111 1111110111 1111111111 1111111110—37

This gave Edwards first choice, and he naturally took the Lefever gun. The other ties were decided in a similar way, shoot offs occurring where no agreement was come to.

The list of winners, prizes and donors is as follows:

Edwards, hammerless gun, $80, Lefever Arms Co. Ward, corduroy hunting suit, $20, C. R. Egbert. McMurchy, E. D. Fulford, Mayhew, 100lbs. shot, $7, Leroy Shot Works; case whisky, $12, Paul Jones; Smith hammerless gun, $50, Hunter Arms Co.; bass rod, $15, Abel & Co. Kelsey, Levingston, Ejector gun, $30, Ithaca Gun Co.; case whisky, $12, U. G. & Co. Barker, pair trousers, $10, J. E. Quick. Stanbrough, 100lbs. shot, $7, Leroy Shot Works. Whitney, pair shoes, $8, Hadselle & Walker. Hammond, 100 cigars, $5, Bonaparte Cigar Co. J. W. Fulford, 100lbs. shot, $6. Tatham Bros. Tuttle, etching, $12, Carpenter & Baker. Carr, rug, $8, H. R. Wait. Glover, Ejector gun, $30, Remington Arms Co. Meyer, umbrella, $4, S. E. Bell. Whyte, case whisky, $12, M. F. & Co. Wagner, keg powder, $8, Du Pont Powder Co. Gates, pigeon gun, $60, Baker Gun Works. Wride, fly rod, $7, Horton Manufacturing Co. Borst, rocking chair, $10, F. A. Sinclair. G. Brown, pair M. & W. tires, $10, Morgan & Wright. Davis, fish rod, $5, A. Kraus. Byer, reel, $9, Hendryx Reel Co. Andrews, FOREST AND STREAM, $4, F. & S. Publishing Co. D. Lefever, silver tea set, $30, Rochester Bike Co. Covert, statuary, $10, Trowbridge & Jennings. Foxie, rocking chair, $6, Brixius & Chapman. Knapp, ton of coal, $5.25, T. H. Garrett, Jr. Irving, 100lbs. shot, $7, Leroy Shot Works. Mosher, umbrella, $6, Hislop & Co. Lane, set of carvers, $3.50, P. M. Herron. Corning, reel, $6, Meisselbach & Co. Hadley, gripsack, $4, Knox & Knox. Weller, umbrella, $3.50, Smith & Leonard. Arno, 50lbs. shot, $3.50, Tatham Bros. Wheaton, 50lbs. shot, $3.50, Leroy Shot Works. Siegrist, pair shoes, $4. Mills & Lathrop. Quirk, pair hunting shoes, $6, E. A. Buck & Co. Wayte, keg powder, $5, Oriental Powder Co. Tripp, reel, $3.50, J. Vom Hofe. Stewart, pair trousers, $4, L. Marshall. Wheeler, pair bicycle shoes, $5, G. F. Briggs. Church, revolver, $5, D. A. Smith & Co. Brister, box cigars, $4, Frank Hunt. Courtney, water cooler, $5, Dunlop Hardware Co. Hayes, "Recreation," $1, Recreation Co. Hildreth, "Recreation," $1, Recreation Co.

The scores made in the State events, with the exception of the Lefever medal contest and the Dannister cup race, are given in tabular form as follows:

SCORES OF STATE EVENTS.

The seven events given below in tabulated form were shot as follows: Nos. 1–3 on June 8, Nos. 4 and 5 on June 9, Nos. 6 and 7 on June 10. These events, together with State event No. 9, the Bannister cup event, constituted the eight events that had to be shot in to render a shooter eligible for a "State average" prize. No. 3 is the E. C. cup shoot. The Bannister cup scores are given after the table:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7

THE BANNISTER CUP.

The above table gives the scores made in all the State events that counted for average, with the exception of the 50-target event for the Bannister cup, a silver trophy presented for competition by C. A. Bannister, the popular jeweler of Auburn. This race was shot on the morning of June 11, the last day of the State shoot. State event No. 8, the Lefever medal contest, did not count for the State averages.

The sun was out bright and early, drying up the ground nicely and showing just how pleasant things would have been had he shown up on the morning of June 8 instead of letting old Jupiter Pluvius get in his fine work for nearly three days. It was hot enough to-day, and heavy sweaters were almost an encumbrance, perspiration coming to the front very rapidly. A practice event at 20 targets was shot "for targets only" on the Lambs' magautrap prior to the commencement of the cup race.

At the start of the latter race Kelsey and Edwards were tied for first place in the State averages with 185 breaks each out 200 shot at, Carr being in second place with 182, and E. D. Fulford with 181. The "McMurchy squad"—McMurchy, Edwards, Mayhew, Wagner and Kelsey—was the second squad on the list, and it was expected that this

squad's shooting, with the two leaders in it, would virtually settle first place. Kelsey started off badly, but Edwards didn't drop a bird until his 25th round; after that loss he quickly dropped enough to tie Kelsey with 44 each, the two being still a tie with 229 out of 250 shot at. This left Carr with the hard task of '48 to win, or 47 to tie." He made a great start and it looked as if he was going to regain first place alone after all. He ran straight until about the 30th round, pulverizing every target in excellent time. He then dropped one, but went to the score for his last 10 targets with a total of 39 out of 40 to his credit. He had thus a leeway of 1 miss out of 10 shots, and yet be first for the Parker gun; it looked a cinch for him. But the unexpected happened; he lost his 42d and 49th, tying for first place by virtue of his excellent total of 47. The excitement over this triple tie for first average almost put in the shade Whitney's gallant struggle for the cup, which he won with a total of 48. Fulford also gained 2 on the leaders by breaking 46, thus landing him in second place with 227 breaks out of his 250. The totals in the cup race were as follows:

Whitney 48, C. A. Ward 47, G. Brown 47, J. J. Carr 47, L. V. Byer 47, E. D. Fulford 46, E. C. Meyer 45, Edwards 44, Kelsey 44, Glover 44, McMurchy 43, Dalley 43, Dan Lefever 43, M. E. Barker 43, Goodrich 42, Tuttle 42, J. W. Fulford 42, Arno 41, Wagner 41, Mayhew 41, Courtney 41, Henry 41, Weller 41, Covert 40, Nimrod 40, Knapp 40, Garret 39, Morris 39. F. Lefever 39, Davis 38, Mowry 36, Greiff 36, Gates 36, Willard 35, Palmer 34, Wayte 34, Corning 32, Whyte 31, Hildreth 30, Uncle Ben 27, Ackerman 24, F. Crosby 24.

The conditions under which the race was shot were the same as for the E. C. cup race on the first day, viz.: 50 singles, all at the same time, 10 targets from each position before moving. The optional sweep, however, was changed from the announced "$3 optional on the 50" to "$2 optional on each 25."

THE SHOOT-OFF FOR FIRST AVERAGE.

At the conclusion of the cup race the tie for first place and the Parker gun was shot off. The conditions of the shoot were 25 targets per man. The men were called to the score in the following order: Edwards, No. 1; Kelsey, No. 2; Carr, No. 3. Edwards lost his 6th target, dusting it, but being behind slightly. The next to lose a target was Carr, who apparently shot behind a slightly quartering target, also dusting it, in the 8th or 9th round, we believe. Kelsey kept on breaking all his targets with a steadiness that made it look as if he was sure for a 25 straight. The crowd, however, seemed to be in favor of a close race, as a genuine "Ah!" went up when Kelsey only dusted his target in (or about) the 15th round. It was a tie again, and only 10 more to shoot at. Carr dropped out of the tie very quickly by losing another target, following it up after a brief interval with another miss. Kelsey dropping another target and Edwards breaking straight, the latter won with 24 to Kelsey's 23 and Carr's 22. The Parker gun thus fell into what we consider to be a very fitting place for such a good gun!

STATE AVERAGES.

The winners of the State average prizes, together with their records, are given below, each man having shot at 250 targets during the three days—two 50-target events and six 25-target events:

	Broke.	Ave.		Broke.	Ave.
F D Kelsey	229	91.6	C W Tuttle	217	86.8
J J Carr	229	91.6	Dan Lefever	216	86.4
F S Edwards	229	91.6	S Glover	216	86.4
E D Fulford	227	90.8	C Wagner	215	86
H B Whitney	224	89.6	M M Mayhew	208	83.2
H McMurchy	223	89.2	Covert	203	81.2
C A Ward	223	89.2	H L Gates	202	80.8
M E Barker	219	87.6	C F Arno	202	80.8
L V Byer	219	87.6	A G Courtney	186	74.4
J W Fulford	218	87.2			

THE LEFEVER MEDAL.

This popular contest, as its name implies, is for the diamond medal donated by Dan Lefever, of the Lefever Arms Company. The contest is at 20 singles and 5 pairs. Two years ago, at Saratoga, Uncle Dan won the medal himself, but last year Glover won it (as well as pretty nearly everything else) at the State shoot at Buffalo. Glover repeated his performance again this year by breaking 20 straight in the singles and 8 out of 10 in the pairs. He did not win it, however, without a struggle, as E. D. Fulford, Kelsey and Covert were right after him with 27 breaks each. Both pairs and singles were thrown from the magautrap and, though the double shooting from this trap is decidedly interesting (both targets being at unknown angles), there is quite a large element of luck in the way of "the draw": One man may get "splits" while his antagonist may draw two straightaways. Those who shot at the doubles in this event had to contend with a wind right in their faces, driving the smoke from the first barrel back into their eyes. As both targets do not leave the trap at the same instant, although very nearly so, a shooter had often to take his gun from his cheek after breaking the first target and hunt for the other target, often finding it in the most unexpected places. The scores were:

S Glover	11111111111111111111	11 11 01 11 10—28
F D Kelsey	11111111111111111111	10 10 11 11 10—27

THE FOUR-MEN TEAM RACE.

The four-men teamrace had six entries, the Auburn Gun Club putting in three teams. The other teams were: East Syracuse Gun Club, Oneida County Sportsmen's Association and the Rochester Rod and Gun Club. The shoot is at 25 singles per man, 100 to the team. The Oneida County Sportsmen's Association, hailing from Utica, was the winner with 86 breaks. The teams, with the individual scores were as follows:

Oneida County Sportsmen's Association: E. D. Fulford 23, J. W. Fulford 21, M. M. Mayhew 21, E. L. Fairchild 21—86

Rochestor Rod and Gun Club: S. Glover 22, E. C. Meyer 21, L. V. Byer 20, L. W. Davis 20—83

Auburn No. 1: J. J. Carr 25, C. W. Tuttle 20, Geo. Corning, Jr., 20, Knapp 18—83.

East Syracuse Gun Club: F. Lefever 22, Winsor Morse 20, C. J. Dalley 19, D. Lefever 18—79.

Auburn No 2: T. H. Garrett 23, C. E. Goodrich 23, Whyte 22, Stewart 10—78.

Auburn No. 3: G. Brown 24, Doane 20, Cottle 18, Alexander 11—73.

The prizes in this event were: 1st, 25lbs. Gold Dust Powder; 2d silver pitcher; 3d, 100lbs. of chilled shot and $5 cash, donated by Tatham Bros; 4th, 500 loaded shells, donated by the King Powder Company.

THE DEAN RICHMOND TROPHY.

The Dean Richmond trophy for three men teams, 15 live birds per man, 28yds. rise, 50yds. boundary, took place at 2 P. M. on Friday afternoon. Eight teams entered, the only one from the southern part of the State being the New Utrecht Gun Club, of Brooklyn. The day was a scorcher, with scarcely any breeze, but the birds flew well, many real hot ones leaving the trap during the shoot; they were furnished by L. M. Gilbert & Son, of Philadelphia, and for "summer birds" were among the best we have ever seen.

The result was a surprise, the Onondaga County Sportsmen's Club, of Syracuse being the winner with 43 out of 45. Three clubs tied for second place. Mr. Jacob Pentz acted as official scorer, and Edward Banks as referee. The scores were:

Onondaga County Sportsmen's Club: C. H. Mowry 14, Arno 14, Geo. H. Mann 15; total, 43.

Oneida County Sportsmen's Association: H. L. Gates 14, E. Fairchild 14, E. D. Fulford 14; total, 42.

Whitestown Gun Club: A. S. Hunter 14, Kilburn 13, Richardson 15; total, 42.

Rochester Rod and Gun Club: E. C. Meyer 14, S. Glover 13, L. V. Byer 15; total, 42.

Messina Springs Gun Club (Syracuse): Horace White 12, G. Mosher 15, H. McMurchy 14; total, 41.

Syracuse Gun Club: Andrew White 14, H. Ayling 12, Holden 12; total, 38.

Auburn Gun Club: Carr 12, Corning 14, Tuttle 11; total, 37.

New Utrecht Gun Club (Brooklyn): William Lair 11, Conny Furgueson 13, C. Furgueson 11; total, 35.

HOW THE WOLVES DID IT.

On the magautrap set apart for the sweepstakes of the Wolves, the competition was keen and sharp for first place. The number of entries in these sweeps was satisfactory, and many a thousand targets were needed to settle all the disputes on the programme. Wet weather, a late start and a scarcity of help resulted in a schedule of only six out of the eight programme events being decided on the first day. This left the total number of targets shot at by each man who shot through the "Wolves'" programme at 385, as follows: First day, 105; second day, 140, and 140 on the third day. Only nine men actually shot at all the 385, although many others missed only one or two events. Of those who shot right through, Billy Crosby, of the Baker Gun Co., of Batavia, N. Y., was first by a small margin. Edwards was second and Kelsey third, with McMurchy and Carr close up and tied for fourth and fifth places. Tuttle and Wagner were respectively sixth and seventh on the list. Below are the records of the men who shot in all the events at the Wolves' trap:

Targets shot at:	June 8. *105*	June 9. *140*	June 10. *140*	Total breaks.	Ave.
W Crosby	95	130	133	358	92.9
F S Edwards	93	133	131	357	92.7
F D Kelsey	98	132	125	355	92.2
H McMurchy	97	132	125	354	91.9
J J Carr	96	133	125	354	91.9
C W Tuttle	95	126	130	351	91.1
C Wagner	92	127	130	349	90.6
J S Fanning	91	125	126	342	88.8
H B Whitney	87	118	120	335	87

First place in the above list, however, should really belong to E. D. Fulford, with 345 breaks out of 365 shot at, an average of 94.5. Through some error in the cashier's office Fulford was cut out of event No. 1 on the first day, a 20-target event, and considering that he lost but 5 out of the remaining 85 on that day, it looks very much as if Fulford would have been in first place without a doubt. His records were: First day, 80 out of 85; second day, 132 out of 140; third day, 133 out of 140.

Brewer did not shoot in a 15-target event on the second day, but broke 90 per cent. out of the 370 he shot at. His records were: First day, 89 out of 105; second day, 114 out of 125; third day, 130 out of 140. Glover also shot in all the "Wolves'" events except a 15-target event on the third day. He was apparently out of all form (for him), as he only broke 86.7 per cent. of the 370 he shot at.

DAILY RECORDS OF THE WOLVES.

Below will be found the table of scores made by the Wolves on the first day, June 8. It is always a hard matter to get a shoot of the size of the New York State tournament started on the first day, but at Auburn there was more than the usual delay. This may be attributed in a great measure to the extremely unpleasant nature of the weather dealt out to the local club. It rained all day, and rained *hard* for the greater part of that time. The fair grounds, on which the shoot was held, are on a clay soil, and anything more sticky or more unenjoyable in every way than the condition of Mother Earth on this day, we have never experienced. Gum coats, gum boots and sou'westers would have been the proper attire for a shooter at the New York State tournament of 1897; but very few had gum coats, fewer still had gum boots, while not a single sou'wester was in sight. The result was that wet feet, wet clothes and a decidedly damp feeling about the neck, were the lot of those who went out to smash bluerocks on this date.

Kelsey with seven losses out of the 105 shot at, was high for the day, although Fulford was shooting in wonderful shape, with a loss of 5 out of 85 shot at. McMurchy came in second, with 97 breaks out of 105, and Carr third, with a loss of 9 out of his 105 targets. What each man did is shown in the table that follows:

The rain was still coming down when the shoot was started on the morning of June 9. An early start was made, everything having been gotten into good running shape by the end of the first day. Waterproof clothing for the body was an absolute necessity if one wanted to keep anything like dry, while the morass-like nature of the ground in front of each of the traps was something indescribable. Any shooter who only paid 10 cents for a shine when he got back to the city may be said to have gotten the best of the shoeblack—and there were some who did!

The light was, as on the first day, far from good, and a target that was thrown against any of the big elms that dotted the background at the different sets of traps was anything but a cinch. Still scores ruled high and some good records were made, particularly on the magautrap, where the Wolves did their shooting. Carr, Levengston and Edwards were tied for first place in the day's average with 133 out of 140 shot at. Kelsey, McMurchy and Fulford were next with only 8 losses, a total of 132 breaks each. Crosby, who lost 10 out of 105 on the first day, dropped the same number out of his 140 to-day. Below are the records for this day:

On the third day, June 10, matters in the weather line looked much better, although the sun did not show himself until a few minutes before 3 P. M. Of course the entries fell down to-day, many people having left at the close of the second day's shooting, disgusted at the condition of the weather. The finish of the big merchandise event in the State programme on the second day is always the signal for many to pack up and go. Hence the events to-day on all the traps were shot off rapidly, and an early closing up was a treat after the late finishes of the first two days.

The Wolves got at it as soon as possible, and made things hum on their magautrap. Some more good squad averages were made, and the individual averages rolled high, although some who were high up in the list for general averages on the Wolves' trap dropped back to their fellow wolves; Carr, McMurchy and Kelsey were among this number, each losing 15 targets out of 140 shot at. Crosby and Fulford (the latter keeping up his fast gait) were high with 133 each out of 140. Edwards was next with 131; Whitney, Wagner, Tuttle and Brewer being tied for the next places with 130 each. The above figures tell what any respectable Lamb had to buck up against when he showed his face and money at the desk of the cashier for the Wolves. Below are the records of the individuals:

The Wolves carried out their programme in full to-day as below:

THE LAMBS AND WOLVES IN SHEEP'S CLOTHING.

For the benefit of those who did not want to put up much money when they went out to shoot, a magautrap was specially provided by the management. This magautrap was fairly well patronized—not so much by real lambs as by a large number of actual wolves who dressed up in sheep's clothing for the occasion. As has been stated earlier in this report, entrance fees were half price in the events for the Lambs, and these entrance fees looked quite small and enticing to the semi-expert and novice who wanted to shoot without putting up too much of United States Treasury collateral. For instance: 15 targets, $1, and 20 targets, $1.50, seemed very reasonable; but the true Lambs got it in the neck, as usual. Four moneys in 15 target events and five moneys in 20-target events don't give sheeplets much chance when they have to break 12 out of 15, or 17 out of 20, to get into the money. For that's what they had to in nearly every event so far as the scores tell us, a 15 or 20 straight figuring conspicuously in the scores when it came to dividing up the purses. How the division of moneys was changed to the "old system" from the advertised Rose system, has been mentioned before. A glance at the scores of each day in the events for the Lambs will show that many bit once or twice each day, but finding that there were others who could and did bite harder, packed up and quit the game. Below are given the records on the Lambs' magautrap for each day:

Uncle Ben	11	..	12	..	..						

NOTES.

Dr. Kennedy, of Auburn, was present at the shoot during the greater part of the time. The Doctor had with him a Winchester repeating shotgun with 22in. barrels. It was a curious looking little gun, but the strangest part about it was the muzzle. Dr. Kennedy is the inventor of the square-muzzle gun, and he had given this little gun a square muzzle. He claims that with these 22in. barrels and a square muzzle that he can give any length of barrel and any kind of choke a hard wrestle for first place in the way of pattern.

Uncle Ben Catchpole was one of those who came at the start and stayed until the finish, despite the bad weather. Up in Wolcott, N. Y., the shooters think a lot of Uncle Ben, and have christened their newly-organized gun club after him. Secretary Wadsworth, of that club, and Mr. Morris Burke accompanied Uncle Ben to Auburn.

Paul North is great on titles. The McMurchy squad (McMurchy, Edwards, Levengston, Wagner and Kelsey) were summoned to the score, and got ready to shoot. Mac happened to look at the score board as he stepped to No. 1 mark. "We're not called yet; at least, we're not on the board;" said he. Up stepped Paul, and spake thus: "Oh, yes, you are! Big Chief, No. 1; Much Write, No. 2; Never Answer, No. 3; Wagtail, No. 4; Smallmouth, No. 5. Shoot, No. 1!" Then we knew who had done this thing.

C. A. Ward, of the Lockport Gun Club, made a good record for himself at this shoot. In the merchandise event he broke 25 straight, and gave somebody a hot shoot-off for first choice. He showed up again in the Bannister cup contest with 47, the cup being won on 48. Lastly he figured in the State averages as tied for fourth place with Harvey McMurchy. Ward shoots a Parker gun and 3¼drs. of either Hazard or Du Pont—he shoots just whichever of the two comes to his hands first.

Sim Glover was off in his shooting. Sometimes he would come to the front with a straight, and then he'd drop out of sight practically, with a score that a Lamb might have been satisfied with, but which reflected no credit on Rochester Sim. He won the Lefever diamond medal with his usual combination—Parker gun and Schultze powder. And by the way, the conditions of the Lefever medal contest have been changed this year. Prior to the contest for this medal on June 10, Uncle Dan Lefever, donor of the medal, announced that anybody winning the medal twice in succession (beginning with this year's contest) should become the absolute owner thereof.

There was one party that "went straight" all the time. We refer to the popcorn stand, which did a business we'd have been glad to "go halves" in.

Jack Brewer got his right cheek badly out of shape at this shoot. Fred Gilbert and Jack Winston are not in it with their corn plasters. It required a bunion plaster to cover even a portion of the bruised cheek.

No matter what the weather is, nor how large the attendance may be, so long as W. M. Richmond, W. C. Hadley and Gus Dexter are on hand, it's a State shoot right enough.

Two incidents happened at this shoot. On Wednesday morning a Lamb (Geo. Corning) shot at a target, broke it and also killed a sparrow that was flying across the front of the trap. The same evening, in the last event of the day on the Wolves' trap, a member of the McMurchy squad broke the first 13 straight, missed the 14th, but on the 15th shot broke the target and killed a swallow; result: 15 straight.

"That elm tree" to the right of the background on the Wolves' magautrap was a stumbling block when one got a straightaway from position No. 1. The same tree caused trouble to shooters at the "State events magautrap," while another tree right in front of No 2 score was a dandy to "lose 'em in."

The attendance of spectators on the last day was due more to the fact that live birds were going to be shot, rather than the beauty of the day. If you wish to draw spectators, you must have live-bird shooting 'Tis sad, but true.

The little city of Auburn is famous for four things: Pretty women, pretty homes, the Osborne House, and the jail.

The Lambs had a little playground of their own, but you couldn' keep some of the Wolves away from that playground with a club. "Do you know that there's more money down on the Lambs' trap than at the Wolves'? was a question we heard very frequently on the second day. And yet the sweeps were practically half-price.

The daily papers looked after the shoot well. The Auburn evening daily, the *Bulletin*, and the Syracuse *Standard*, deserve special credit for their work. Mr. Ackerman, the sporting editor of the latter paper, is an enthusastic trap-shooter, but says that it's easier to push a pencil than point a gun. We know that fact from experience.

Greater New York has scared the up-country folk. The team race rule now reads to the effect that members of the same team must be residents of the same county. At least that's the way we understand the situation as it was put to the annual meeting; if we are wrong, the secretary of the meeting will kindly advise us and our readers of the change that has been made in the wording of this rule.

F. D. Kelsey and Hammond were the sole representatives (so far as we are aware) of the Audubon Gun Club, of Buffalo, and neither of the two above-named gentlemen reside in Buffalo. Considering the patronage the club was given last June, it looks as if something like a strong contingent should have been on hand this year. Kelsey upheld his great reputation as a shooter, carrying his Smith gun and Gold Dust powder well to the front. He tied for first average in the State events and won the E. C. cup on the first day with this combination.

J. J Carr, of the Auburn Gun Club, was always on top of the heap His different records speak for themselves. He shoots a Lefever gun and Schultze powder.

The shoot-off for high average in the State events was won by Edwards with a Winchester repeating shotgun and 3drs of E. C. powder.

For the second time during our connection with the trap-shooting world, we have had the pleasure of meeting S A. Tucker, of the Parker Gun Company. Tucker took in the State shoot at Auburn, tearing himself away from the West just long enough to show himself to his friends in the East.

E. D. Fulford, the latest addition to the ranks of the Remington Arms Company, shot away up all the time. E. D says that he is fixed all right now with his gun, U. M. C factory-loaded shells and Schultze powder. It looks as if he was, too. EDWARD BANKS.

Boston Gun Club.

WELLINGTON, Mass., June 9.—Despite the heavy rain of Wednesday, June 9, the Boston Gun Club opened up at Wellington, and five members, whom the deluge failed to terrorize, spent an hour or two pleasantly if not exactly comfortably. Yet the shooting was not half bad, and clad in a sweater a score of five targets could be negotiated, one shooter at a time, without severe drenching. The very heaviest showers were allowed undisputed possession of the platform, while matters pertaining to shooting were fully discussed inside the club house within short range of a roaring fire, and in this way the third shoot of '97 series passed off with more attention and enjoyment than would naturally be expected of so mean and miserable an afternoon:

The following scores were all shot in a steady downpour:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	10	10	10	12	10	10	15	10	10	10	10
Horace	7	9	5	6	5	8	13	9	7	6	5
Miskay	8	7	7	6	3	7	12	8	..	..	..
Bentou	6	6	6	3	7	4	10	6	..	..	..
Spencer	..	..	..	..	6	8	13	8	..	..	..
Sewall	..	..	..	..	1	3	5	7	6	7	7

Events 1, 2, 6, 7 and 9 were known angles; 3, 8, 10 and 11, unknown; 4, pairs; 5, straightaways; 2 yds. rise.

Third contest in prize match, 25 targets, 15 known, 10 unknown angles, distance handicap:

Horace (16yds.)	111110111011111—13	1111101111—9—22
Spencer (18)	111111111110011—13	1011101111—8—21
Miskay (17)	110110101111111—12	1110110111—8—20
Benton (14)	101010111110101—10	0110001111—6—16
Sewall (15)	000000001101011—5	1110101101—7—12

Bunker Hill Day falling on Thursday of next week no shooting will be held on the grounds on Wednesday.

Pine Bluff Gun Club.

PINE BLUFF, Ark., May 26.—Below you will find the score of the Pine Bluff (Ark.) Gun Club at its regular weekly shoot this evening. The conditions are 30 targets per man:

George Clements 23, E. A Howell 23, Dr. H. E. Williams 22, John Speers 21, W. B. Sorrells 20, J. T. Loyd 20, Percy Meyer 17, J. A. Caleo 17, H. E. Martin 9.

On account of a baseball game in our city the weekly attendance fell below the average. E. H. HOWELL, Sec'y.

At Greenwood, S. C.

KNOXVILLE, Tenn., May 28.—Inclosed please find scores made at the Greenwood, S. C., tournament, on May 26.

With an experience covering many years and acquired over a very large extent of territory, I am bound in all fairness and justice to state that never in my life have I seen so well-managed a maiden effort as was this tournament. Be it understood that Greenwood never before had a tournament; therefore, the managers were as inexperienced as anyone could very well be in such affairs. Yet, in spite of this, not one hitch occurred during the day—everything passed off most pleasantly and promptly. The cheers that were given at the close were heartfelt, I swan! for no man that day felt that he was given any the worst of it. On the contrary, we all had a dead square game, and will gladly return to Greenwood at the call, and glad of the opportunity. Our thanks are due to Messrs. R. G. McCauts, R. W. Moore and M. L. Rice, while Messrs. W. G. Chaiffee and J. F. Partlow must not be forgotten.

To the referee, Mr. S. F. Evans, we are indebted much, for his decisions were always promptly and correctly rendered, and the scoring of Messrs. Cook and Middle was done accurately and properly all the way through. Col. J. T. Anthony, perhaps the best known and most enthusiastic sportsman in the entire South, a man whose presence is ever welcome on any ground—one whose hearty manner and genial disposition are hailed everywhere, North and South alike with genuine delight, made on this day the highest average, losing but 3 birds all told, some of which fell dead just out of bounds.

It being customary to give gun and loads of the winner, it is but right to state that the Colonel shot his Parker gun, Schultze powder in U. M. C. trap shells loaded by Krider, of Philadelphia, and great work did he do with them.

The birds were so very good that on the first 10-bird event, out of an entry of thirty-two, for the most part very good shots, only one contestant scored them all, that fortunate and skillful sportsman being Mr. J H. Rice, who has not fired a shot over the traps since '89, albeit a most masterly shot in full practice afield. As this achievement netted him about $120, it is not to be wondered at that he caressingly speaks of his old gun.

The best proof of the extra good quality of the birds is that in shooting the two pairs in match No. 3 hardly ever had one to get another pair because one of the birds did not fly on the instant the ground traps were opened. Those who have seen much double-bird shooting from ground traps will know just what that means without further comment.

Macon, Ga., was represented by Messrs. F C. Etheridge and J. F. Bullard, the former too well known to need special mention further than to say that he is a genuine, clean cut sportsman, splendid shot and most amiable companion; the latter, a young man who is going to make lots of trouble one of these days when he gets accustomed to this kind of shooting. This being his first shoot in public, it is quite safe to predict all of that and a great deal more.

Atlanta should have had a larger delegation. Unfortunately some could not attend. Among those were Dr. Bizzell, Capt. Rawson, Mr. Everett, while Messrs. Heard, Crabb and Avery did their best to keep things moving. Spartanburg had a very strong aggregate of talent, and in Mr. Floyd possesses a splendid shot, a really very dangerous man. Mr. J. W. Todd, of Charlotte, who came along to be with Col. Anthony, shot in fine form, but lack of practice will tell even with such good shots as he is. Mr. I. R. Lowndes came in most gracefully and handsomely at the finish; unfortunately he discovered very late in the day that small loads of powder won't mow down good strong birds inside of bounds. In the last event, when using good strong loads, he did great execution. Experience is about the only way to get at these things, and he is of the kind that can see as far through a stone wall as any one. Look out for him later. Colonel Brock was not properly loaded, and that covers the case. Messrs. McCants and Rice were so busy managing things that they could not be expected to do themselves justice; some one must be sacrificed As for myself, I just sawed wood, and having killed the last 20 straight, scoring but 19, I let it go at that, for on such birds that is a good many for a common every day scrub.

May 29.—In practice on live birds to-day Messrs. Saunderberg, John and Barto shot at 20 each and scored respectively 14, 12 and 15; Ruple and Stone shot at 15 each and scored respectively 11 and 12.

RAVELRIGG.

At the annual meeting of the Montpelie, Vt., Gun Club, held June 7, the following officers were elected: President, Dr. H. A. Fisk; Vice-President, C. H. Ferrin; Secretary-Treasurer, Geo. B Walton; Captain C. C. Barrett; Executive Committee: F. R. Dawley and H. R. Wheelock (in addition to the officers mentioned above).

Pennsylvania State Shoot.

OIL CITY, Pa., June 9.—*Editor Forest and Stream:* Will you please announce in your next issue that the following railroads in the Trunk Line Association have made a reduction in fare on a certificate plan for persons attending the seventh annual tournament of the Pennsylvania State Sportsmen's Association, which will be held here June 22-25 inclusive. This reduction is from Trunk Line territory, *i. e.*, from Niagara Falls, Buffalo, Dunkirk and Salamanca, N. Y., Erie and Pittsburg, Pa.; Bellaire, O.; Wheeling, Parkersburg and Huntington, W. Va., and points east thereof, except in New England: Addison & Pennsylvania; Allegheny Valley; Baltimore & Ohio (Parkersburg, Bellaire and Wheeling and east thereof); Baltimore & Potomac; Bennington & Rutland; Buffalo, Rochester & Pittsburg; Camden & Atlantic; Canada Atlantic; Central of New Jersey; Central Vermont; Chesapeake & Ohio (Huntington, W. Va., and east thereof); Cumberland Valley; Delaware & Hudson; Delaware, Lackawanna & Western; Elmira, Cortland & Northern; Erie (Buffalo, Dunkirk, Salamanca and east thereof); Fall Brook; Fonda, Johnstown & Gloversville; Grand Trunk; Jamestown & Lake Erie; Lehigh Valley; N. Y. C. & H. R. (Harlem and N. Y. & Putnam Divisions excepted); New York, Ontario and Western; New York, Philadelphia & Norfolk; New York Central; Pennsylvania; Philadelphia & Lake Erie; Philadelpia & Reading; Philadelphia, Wilmington & Baltimore; Rome, Watertown & Ogdensburg; Western New York & Pennsylvania; West Jersey; West Shore; Wilmington & Northern; Fitchburg.

Visitors will be required to pay full fare coming and one-third fare returning, but they will be required to get a certificate from the agent where they buy their tickets, otherwise the reduction in the return fare will not be made. Certificates are not kept at all stations, and it may be necessary to buy a ticket to one of the stations where the certificates are kept in order to get the reduced fare. Certificates are not transferrable, and no reduction in fare will be made on account of any persons f iling to obtain a certificate.

H. C. REESER, Se'y.

Audubon Gun Club, of Buffalo.

BUFFALO, N. Y., May 29.—Much interest centered to-day in the badge shoot, No. 3 on the programme. Norris, C. S. Burkhardt and F. D. Kelsey were tied with three wins each for the Class A badge. Kelsey was unable to attend, but C. S. Burkhardt and Norris were on hand. In the event Norris and E. C. Burkhardt tied with 23 each; on the shoot-off Norris won, thus placing him one to the good with only two more shoots to take place. Reinecke won in Class B and J. E. Lodge in Class C.

Among the shooters were Atwater, Angevine and Ward, members of the Lockport, N Y., Gun Club. All the conditions were favorable for good scores, with the result that several were made. In the monthly cup shoot, a handicap affair, six men qualified with the necessary 25 or better; on the shoot-off Woodbury won the cup. Below are the scores made this afternoon, No. 3 being the badge shoot, No. 4 the monthly cup shoot, and No. 7, 5 pairs.

BLUE ROCK.

Omaha Gun Club.

OMAHA, Neb., June 5.—The Omaha Gun Club held its regular weekly shoot to-day, and although the traps were set low and the targets thrown hard, yet the entire club made an average of 83 6 per cent., something remarkable for so many shooters.

W. D. KENYON, Sec'y

Answers to Correspondents.

W. W. Mc, Stevensville, Pa.—U. F T C., P. T. Madison, Indianapolis, Ind.; I. F. T. C., W. B. Wells, Chatham, Ont.; U. S. F. T. C., W. B. Stafford, Trenton, Tenn.

G. R. H., Wayne, Pa.—1. F. F. Dole, New Haven, Conn., can give you the information. 2. In respect to Middy, address Swiss Mountain Kennels, Germantown, Pa. 3. To have the title of champion a dog must have won three first prizes in the challenge class, one of which has been won at a show offering not less than $1,000 in cash prizes.

H. K. G.—On a schooner the ensign is carried at the main peak, the club burgee at the fore truck, the owner's private signal or the flag officer's pennant at the main truck. On a yawl the ensign is carried at the mizzen truck, and one only of the other three flags at the main truck. Full information as to flags will be found in "Yacht Flag Etiquette," published by Rehm & Co., 157 Fulton street, New York. Price, 10 cents.

W. C. H., Saginaw, E. S. Mich.—My four-year-old setter dog has a few sores on his body which have a mattery discharge, and he seems to bite and scratch them at times. The skin on his belly and under his forearms has a reddish appearance and he scratches himself considerably more in the morning than any other time of day. He was troubled with costiveness. The discharges were thin and watery and I thought it was diarrhœa, but I discovered it was costiveness, for I gave him a warm water injection and he passed several hard lumps which had caused all the trouble. Ans.—Treat for worms. Apply following dressing to sores and irritable places daily: Sublimed sulphur, 8oz.; tot. ti. cast, 2 drachms: oil of tar, 2oz.; cottonseed oil, 1qt. Give two compound sulphur tablets (Weyth's) twice a day.

C. W. D., Grand Rapids, Mich.—1. What is the best way to keep live minnows on a fishing trip? 2. What is the best way to keep dead minnows and have them good and sound? 3. Is there any way to keep trout or other fish a few days without ice? 4. How will artificial insects do for bait for rainbow trout, and what ones would you recommend? Ans. 1. Change the water frequently and see that they have a good supply of air. A little salt added to the water is said to have a good effect. The proportion given is one tablespoon to three gallons of water. A device for forcing air into the water, consisting of rubber tube and bulb, is said to do very well in place of changing the water. A piece of ice put so as to keep the water cool is good in summer, while in winter it is a good plan to fill the upper third of the pail with handfuls of clean rye or wheat straw. 2. Pack in wet sawdust and salt or brine, adding a little saltpetre. Coarse straw dampened is also a good packing. 3. Draw them, and after having wiped them dry pack in corn meal in a tight box, filling them also with the meal. If corn meal is not to be had, they may be packed in dry moss. 4. Certain kinds of artificial insects often answer very well as a substitute for flies. The best for trout are perhaps imitations of June bugs or crickets.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JUNE 26, 1897.

VOL. XLVIII.—No. 26. No. 346 BROADWAY, NEW YORK.

NOTICE TO SUBSCRIBERS.

ATTENTION is directed to the new form of address labels on the wrappers of subscribers' copies. The label shows the date of the close of the term for which the subscription is paid.

The receipt of the paper with such dated address label constitutes the subscriber's receipt for money sent to us for a new or renewed subscription. Unless specially requested to do so, we do not send separate receipts.

Subscribers are asked to note on the wrapper the date of expiration of subscription; and to remit promptly for renewal, that delays may be avoided.

For prospectus and advertising rates see page iii

People that have not been inoculated with the true spirit may wonder at the infatuation of anglers—but true anglers leave them very contentedly to their wondering, and follow their diversions with a keen delight. Many old men there are of this class that have in them a world of science—not science of the book, or of regular tuition, but the science of actual experience—science that lives, and will die with them; except it be dropped out piecemeal, and with the gravity becoming its importance, to some neophyte who has won their good graces by his devotion to their beloved craft. All the mysteries of times and seasons, of baits, flies of every shape and hue; worms, gentles, beetles, compositions, or substances found by proof to possess singular charms. These are a possession which they hold with pride, and do not hold in vain. William Howitt.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1897.—No. VII.

KANSAS.

Chap. 135, Laws 1897.—Sec. 6. It shall be unlawful at any time to buy, sell, barter, ship or offer for sale, barter or shipment, within the State of Kansas, any bird or birds named in section 1. [Sec. 1 covers all game birds.]

BIRDS AND REPTILES IN THE AIR.

NOT long ago a staff correspondent writing from Georgia related that while Dr. Hodgeman, of New York, and a friend were quail shooting in the vicinity of Thomasville, they saw a hawk flutter to the ground, and going to it found a small snake tightly wound about the bird's neck with lower jaw set into the bird's body. "After killing the snake in order to release the hawk, they killed the hawk because every hunter does."

The incident of natural history thus reported is one of an extremely interesting series of like happenings, which for close similarity and range over a vast extent of time are deserving of note. The New York sportsmen in Georgia were witnesses of a phase of bird life of which, curiously enough, we have record in the earliest history of this country. The voyagers of the sixteenth century, along with their chronicles of hazardous fortune by sea and land, the exploration of new countries and the planting of settlements in America, found time to note many a natural phenomena not more marvelous than the ways of birds and serpents in the air. In his voyage of 1564 John Hawkins touched at Florida, where he found the French Huguenots under Laudonnière in their fort on the River Mary, afterward the St. John's, and in his description of the country he tells us:

"And seeing I have made mention of the beasts of this country, it shall not be from my purpose to speak also of the venomous beasts, as crocodiles, whereof there is great abundance, adders of great bigness, whereof our men killed some a yard and a half long. Also I heard a miracle of one of these adders, upon which a falcon seizing, the said adder did clasp her tail about her, which the French captain seeing came to the rescue of the falcon, and took her, slaying the adder, and this falcon being wild, he did reclaim her and kept her for the space of two months, at which time, for very want of meat, he was fain to cast her off."

This story, since it is only three hundred and odd years old, is to be counted as modern when contrasted with the next preceding version of which we have note. For this we must go back to a natural history observer of twenty centuries ago. The Greek poet Archias, born B. C. 120, and known to schoolboys even to this day by reason of a celebrated oration pronounced in his defense by Cicero, once wrote a poem celebrating this incident of bird life—with perhaps more spirit in the original Greek than in the tame prose translation:

"A crow, once moving his black wing in the all-shining air, saw a scorpion leaping from the earth, and grasping it, raised it on high; who not slowly wounded with a sharp sting the claw of the bird hastening toward the ground, and deprived him of life. See how the wretched bird received from the scorpion the death which he himself had prepared for another."

For the next version we pass to a period more distant still, a time not less remote than that of ancient Troy, to scenes not less stirring than those of the Trojan war, and to a chronicler not less renowned than old Homer himself. The Trojans under Hector, assaulting the defenses of the Greeks, are stayed by this apparition in the air—the translation is Chapman's:

A high-flown eagle soared
O'er their hosts' left hand, and sustained a dragon, all engored.
In her strong seres, of wondrous size, and yet had no such check
In life and spirit, but still she fought, and turning back her neck,
So stung the eagle's gorge, that down she cast her fervent prey
Amongst the multitude, and took upon the winds her way,
Crying with anguish. When they saw a branded serpent sprawl
So full amongst them from above, and from Jove's fowl let fall,
They took it as an ostent from him.

If these ways of birds and reptiles in the air are thus shown by the records of thousands of years to be old, old ways, of equally long standing is the proclivity of man to interfere, as did the sportsman in Georgia and the French captain in Florida; and to constitute himself a knight-errant to relieve birds or frogs or mice or flies in distress; probably Adam began it in Eden. And now that our Georgia hawk and snake have led us back to the ancient Greeks, here is a pretty bit from one of the old poets, as Englished by Wrangham:

Her web with subtle feet a spider wrought,
And in its toils a poor cicada caught.
Hearing it lowly wail its flimsy chain,
I left not the young songster to complain,
But burst its bonds, and let it loose, and said:
"For thy sweet music, freedom be thy meed."

THE SEASON AND THE BIRDS.

THE general weather conditions of the past spring have been notably distinct from the like conditions of preceding spring seasons. The temperature has been extremely cool, lower than that of any other spring of which there is any record. Cold rain storms have been numerous. In the West there have been a number of severe local storms of the violently destructive kind, doing much damage to property within their area. As a secondary result of the storm season in certain sections, large tracts of country have suffered great loss of life and property from inundation. In the overflowed districts most of the birds were driven out or destroyed, and while the waters in them receded early enough to afford opportunity for the game birds to nest, it is difficult to determine whether a sufficient number of the escaped birds returned to their old haunts to breed, or whether other birds, immigrating from the districts outlying the overflowed area, contributed toward replenishing the losses to the disturbed local game supply.

On the whole, the weather conditions of the past spring are such as would evoke a most unfavorable forecast relative to the breeding of the game birds everywhere in the States and the consequent unfavorable prospect for sport; nevertheless, the reports concerning the matter are gratifyingly encouraging, those from the chicken country particularly so.

As the game birds nest on the ground and consequently their eggs and young are exposed, to a destructive degree, to the effects of heavy rains and cold, either from overflowing the nest or chilling the eggs and chicks, it is marvelous that the numbers of the game birds are so well maintained, the more so when we consider their enormous additional destruction by man, particularly by the market-hunter, as denoted by the enormous supply on hand in the markets in season, and in cold storage out of season.

From the great quail sections the game reports are favorable also, although it is yet too early in the season for definite information.

The prospects are favorable for excellent sport with the dog and gun when the season opens, wherein there is much for pleasure in the present and in anticipation.

Audubon's portrait of the Redhead Duck, reproduced in half-tone, will be given as a full-page illustration in our issue of July 10.

SNAP SHOTS.

WHAT with the sugar schedule and the wool schedule and Hawaiian annexation and Cuban belligerency, there is small hope of action at this session on Senator Proctor's bills for the better protection of fish and game in the District of Columbia. Said Mr. Vest, in a tariff debate the other day, referring to Mr. Frye: "My friend from Maine, with a strong disposition to piscatorial exercises, is compelled to stay here to wrestle with financial and economic questions." That describes the plight of numerous Senators and Congressmen, and there is little likelihood that subjects considered of such minor importance as fish and game protection will be permitted to prolong the session for an hour when adjournment is in sight. But the adoption of Mr. Proctor's measures should involve considerably less than an hour's time in each House, and if the anglers in the Senate would go into caucus they could assure the passage of the bills. We sincerely trust that S. 1487, "for the protection of fish in the District of Columbia," and S. 1488, "for the preservation of game and the prevention of the sale during certain closed periods," may become laws.

The customary complaint is that game is scarce, but we have the recurrent wails from Long Island that the deer are destroying the gardens and eating the cabbages. We observe, too, that Farmer Jones, of Wells, Vt., is to the fore with an application to the authorities for protection against the wild deer which are trespassing upon his lands and destroying his crops. Mr. Jones argues that if the State has protected deer for ten long years until they have become a pest, he has a valid claim to be made secure against them in his cabbages and parsnips. The likelihood is that relief is at hand for such deer-plagued Vermont farmers as can manage to hold out until October, for that month will this year be an open season on deer, and if the New Hampshire Bear Brook scenes described elsewhere shall repeat themselves in the Green Mountains with the deer opening, there will then and there be made an end of complaints from deer-infested farming districts.

The story told in another column of the opening of Bear Brook in New Hampshire, after a close period of three years, demonstrates by the actual circumstances much more effectively than could be done by theorizing the unwisdom of long-term close times. Similar conditions have prevailed in repeated instances of such terms with respect to fish and game. An extended close time, however excellent it may be in purpose and theory, is taken advantage of by the unprincipled fisherman or shooter, who manages to get the cream and leave the skim milk for other folks. If it happens that protection does actually protect a stream until the opening day, there is then such an enthusiastic and lively fishing bee that the waters are straightway reduced to a condition where they are fit for nothing else than another close time.

We print a suggestive paper from the pen of Dr. G. A. MacCallum, president of the Ontario Fish and Game Commission, describing the public parks set apart by the Province of Ontario. The Algonquin and Rondeau parks are, in effect, just such Government game reserves as Mr. Van Name has suggested for the United States. Commenting upon the Van Name plan, Dr. MacCallum writes: "Of course, one cannot help indorsing the idea if it can be done, and I presume it can, for here in Ontario the Government has already done so; and besides this, many large game clubs have done the same thing. For instance, the Long Point Company has one of the best, if not the best, shooting areas in the world; it is twenty-five miles by five miles, and no shooting, other than a little goose shooting in the spring, is allowed, except from Oct. 1 to Dec. 15 in each year, and consequently the water fowl congregate there in myriads. The same may be said of St. Clair Flats reserves."

James Gayler, first assistant postmaster of this city, died on Friday of last week, aged seventy years. He had been connected with the Post Office for forty-two years; and among valuable services rendered the public, he devised and perfected the present registered mail system. For recreation Mr. Gayler was devoted to the study of astronomy and was an enthusiastic fisherman, having been an occasional contributor to FOREST AND STREAM over the signature of Truthful James. He was a man of high character, adorning alike official life and the brotherhood of anglers.

The Sportsman Tourist.

ADVENTURES ALONG THE MISSOURI.

IN the latter part of the '60s large herds of buffalo were rarely found close to the Missouri River below the Yellowstone.

The Rees, Gros Ventres and Mandans were so harassed by the Sioux that they were obliged to keep pretty close to the Missouri; consequently, the herds of large game were kept moving whenever they approached the large rivers. Small game, such as deer and antelope, were fairly plentiful, but shy, from persistent hunting.

In the early spring of 1867 I was with a military command that marched from Fort Wadsworth, Dakota (near the Minnesota line, west of Big Stone Lake), to the big bend of the Cheyenne River near Bear's Den Hill. The previous winter had been a very severe one, with deep snow. The rolling prairies that we traversed were the dreariest within my recollection. They had been burned over in the fall, and were then covered with ice. There was absolutely no feed for two or three days' journey. As far as the eye could see the prairie was spotted with the dead carcasses of buffalo that had evidently died from exhaustion. I remember that we were much impressed with the fact that along our line of march hundreds of these hardy animals had perished from lack of sustenance. How far the mortality extended on either side I cannot say. Not a living thing was to be seen—not an antelope, for nothing could live there except crows and ravens.

I have killed buffalo on the Yellowstone when the cold reached 40 and 50° below zero, and I have noticed that they are quite stupid in extremely cold weather, and are then easily approached.

They were massed in considerable numbers in the valleys near the mouth of the Powder River, having drifted down from the North.

In looking back to that period, it seems like a mystery land, the odorous sage-covered prairies, the sentinel-like antelope that hung on the outskirts of bands of buffalo and guarded them very faithfully; and the great herds as they rushed over the prairies and hills to escape the hunter—all are gone, and the wild Indian, too, and the fear of him.

When I traveled across the country in 1868 from the Red River of the North to the Missouri River, I got in the track of the Red River half-breeds, who came out every summer from the settlements to make *pemmican*. Mouse River heads within a mile of the Missouri and its waters finally empty into Hudson's Bay. In that great stretch of country the buffalo had been driven west toward Milk River, a region where timber began, and the paradise that hunters dream of had a real existence for many years thereafter.

South of the Missouri to the Black Hills and west nearly to the foot of the Rocky Mountains the country was little known, and was given over to hostile bands of the Sioux, who made it very interesting for people along the river by frequent raids. Going to war was the pastime of these Indians until gold was discovered in the Black Hills, when the Government took very decided measures, and after some fierce fighting the hostiles were subdued and a vast tract opened to civilizing influences.

One day in the early fall of 1869 I stood on a point of the bluff overlooking the Missouri River, a few miles above the big, muddy creek that enters the river about thirty-five or forty miles west of the Yellowstone. My rifle and the buck antelope that I had wearily packed up hill and down lay at my feet, while I serenely surveyed the prospect spread before me.

Below lay the valley, with a mile of cottonwood forest to camp, while beyond, the gray, rugged hills reached out to yellow prairie land and the distant divide—the *coteau des prairies* of the Missouri. Winding in and out of this prospect flowed the same old, placid Minne-shu-shu, a mighty river in the time of flood; but now clear and cool as it swept around sandy bars and along willow banks.

After a while I was aroused from the pleasant reverie that had fastened upon me, and in which fancy had conjured Lewis and Clarke's little fleet of perioques stemming the current into unknown and hostile regions in the early days of the century. My day dream was brought to an abrupt termination by the strange and frantic actions of a buffalo cow which was dashing into view over the little ridge opposite and not over 100yds. away, tore down the hill at full tilt, scattering stones, earth and dust in her passage, as with open mouth and lolling tongue, spent, but terror pressed, she stayed for a moment at the sight of me with the startled look of a wild animal brought to bay, then disappeared into the forest.

I looked around to see what had caused this commotion, but nothing in the line of pursuit presented itself.

Down the river, however, I saw something that caused me to pick up my gun and antelope and make preparation to take to "tall timber" in the direction of camp. A thin spiral thread of bluish smoke appeared against the line of cottonwood forest that encroached upon the grassy bottom land, along which a band of ponies, apparently just turned loose, were rolling and feeding.

I knew there were no friendly Indians on that side of the river, and consequently if this was a war party of Sioux, they had made camp in ignorance of their proximity to a cabin of the hated "wa-sit-yu."

For several days' journey south and west the country was infested by the various bands of Teton, Ogalahla and Sans-arcs of Dakota tribes, and the country was as wild as when Lewis and Clarke traveled up the Missouri, and perhaps more unsafe than then.

Fort Buford, forty miles east on the river, was the nearest post, and about 100 miles west was a small trading post called Fort Peck.

No Indians were in sight yet, and I did not want to see any just then; so swinging my antelope across my shoulder, Indian fashion, I proceeded to pick my way down the hill to where a faint deer trail entered the timber. Pushing my way through the willows and rose brush that is found growing in cottonwood forests along the Missouri, I reached at length the edge of a clearing, in which stood our little log cabin.

It was close enough to the river bank to hear the beaver of still evenings strike the water with their broad tails in sport or alarm, or the elk as they waded from the shallow gravelly bar opposite into deep water.

As I stepped into the clearing, after taking a good look at its surroundings, one of my partners came out of the cabin and waited my approach. While assisting me to hang the antelope on the corner of the house, he suddenly exclaimed: "What do you know?"

"Frank," I said, "we have some visitors out on the prairie that will need watching."

"Could you tell what they were?"

"No," I replied, "in fact, I only saw the smoke of their fire and their ponies feeding."

"Oh, is that all?" said he. "Well, I was close enough to get a good look at them before they went into camp. I was starting out at the lower end of the point when I heard the tinkling of the bells on their ponies. I made for some thick willows to the left of the trail that borders the slough, and from that point had a good look at them, as they had stopped and seemed disposed to go into camp. It's a war party right enough, for I saw the par-fleche cases that held their war bonnets and fixin's, but I could not make them out. They are neither Sioux nor Crows. They started again in my direction, and I thought it was time to pike out of that, and here I am."

Ed, the other member of our little coterie, was inside like a sensible fellow making coffee and frying meat, and after washing the blood and sweat from my hands and face, I joined my companions in discussing a hearty meal of buffalo meat, coffee and home-made bread, which means plain bread without any frills.

Little was said until pipes were lighted. Then the subject of the war party obtruded itself and we gave expression to the thoughts in our minds and wondered who they were, and the quest that brought them into our neighborhood.

"I want to know who these Indians are," said Frank, "and I propose to reconnoiter to-night."

It was soon agreed that one should remain at the cabin while the other two started out under cover of night and tried to get as near to the Indians as possible and spy out their intentions.

Ed remarked that he "hadn't lost any Indians and didn't want to hunt any Indian camps." This was said while Frank and I were putting on our cartridge belts and adjusting our knife scabbards.

Picking up our rifles we stepped out into the clearing and took our way silently by a detour through the timber. It was a clear night without any moon, and as we drew near the river we could hear the beaver at play. They would puff along through the water like a toy steamboat, and at sudden noise would flap their broad tails on the water with a report like a pistol and drop out of sight.

There were several openings in the point of timber that lay in the direction in which we were going that made our progress easy. As may be supposed, we made little noise ourselves; but the timber was full of game and animals which we disturbed, for we could hear them jumping and breaking through the brush when we stopped to listen to the noises of the night.

In half an hour or more we had arrived at the strip of willows that Frank had mentioned in the account of the discovery of the war party early in the evening. Muffled sounds came to us as we cautiously threaded our way. The willows were very thick and tall. Along the further edge was a slough, and beyond this the prairie. Soon the tinkling of bells on the Indian ponies picketed or hoppled near the camp was heard, and then arose on the still air a chant or war hymn, that sounded exquisitely weird and wild, and has impressed itself vividly in my memory along with one or two other songs and scenes.*

As the clear but low notes of the Indian hymn rose or fell in cadence, a mad whim seized me to fire a shot over the camp. The frantic but silent efforts of my companion to restrain this impulse nearly made me explode with mirth. We crept cautiously nearer through the willows to where the outlines of men and ponies could be dimly seen. The camp-fire burned fitfully, and a glow from the coals served to lighten the wild faces seated in a circle around it.

The singing might have been a prelude to a feast, for when it ceased slabs of meat that had been roasting over the fire were handed around the circle. I remember well the smell of roasted marrow-bones and burning sage brush. It was a delicious smell, and made me hungry. I saw one strapping fellow, who had a black cloth twisted around his head and fringed leather leggings that came up to his breech clout, but was otherwise bare to his belt, lift a stick from out the ground, on which was stuck a lot of smoking ribs, reach for his sheath knife, and whack off great chunks, which he distributed to those on each side of him in a very ceremonious manner. He then called to some one who was off toward the ponies, and seating himself began to eat. Though we heard them talking very plainly, we were unable to tell what tribe they belonged to. One or two wore their hair dressed in the manner of the Tetons, but we conjectured they might be Cheyennes, a tribe we were not acquainted with, and who rarely came so far up the country then, although allies of the Sioux.

Suddenly right behind us in a cottonwood tree the low hoot of an owl startled us. Was it a real owl, or an Indian signal? The Indians stopped eating at once and listened. One or two looked steadily in our direction, and it seemed as though we must be discovered in our retreat. Motionless we crouched, scarcely breathing, and again came the "hoo-hoo-ah! hoo-hoo!" more mournful than before. Then, to our great relief, there was a sudden swish of wings above us and a dark form sailed out and into the night. As there seemed no prospect of satisfying our curiosity further by remaining in such a trying position, and having no desire to arouse the attention of the keen and subtle red men intent on filling their bellies, we retired silently if not gracefully into the shadows of the forest and made our way back to the cabin.

Ed was on the lookout for us and had some hot coffee ready, which we disposed of while relating our adventures.

"Well," said Ed, "I don't know what we are to do with these pesky fellows hanging around here; liable to come in any day to decimate us. The uncertainty is killing."

Frank mildly expressed himself to the effect that as there were only three of us, "decimate" was hardly the word to use in that connection. "What is the proper word?" exclaimed Ed, testily. "Obsquatulate is more to the point, Ed," I remarked. "Obsquatulate be hanged," said he. "Nice distinctions don't count when a redskin has hold of your scalp."

Our cabin, built of green cottonwood logs, had an even foot of earth on the pinned pole roof and offered a snug retreat—cool in summer and warm in winter. The floor was hard clay. In one corner was an open fire-place and chimney. Three rough bunks, with a buffalo robe and a blanket apiece, a gun rack, a few traps, skins and furs constituted all the property in sight.

We did not look for any attack upon the cabin, such as had resulted in disaster to a party of tenderfeet a year or two previously further down the river. One day a steamer had landed four men at the place, who had high hopes of making a fortune trading with the Indians and incidentally hunting and trapping along the river. A cabin was built and roofed loosely with split logs. All went well until one night a party of Sioux camped in the vicinity. One of the Indians stole away from the party, probably to reconnoiter, but mustered courage to conceal himself at a corner of the cabin near the door, where, with drawn bow and arrow he waited, patiently hours for a chance to strike the enemy.

In the night one of the white men opened the door, stepped out unconscious of danger, and was suddenly transfixed by an arrow, quickly followed by another. The Indian whooped and disappeared. At daylight an attack was made on one side of the cabin, which engaged the attention of the three men inside, while part of the Indians approached from the other side, seized and held the muzzles of the rifles protruding from the port-holes, and tumbled the heavy poles of the roof down on the occupants, who were soon dispatched.

When the steamer returned from its trip to Fort Benton nothing remained but blackened ruins and the mutilated bodies of the men. Healthy men, who lived amid the excitements and vicissitudes of the extreme frontier of that period, did not allow such little details to disturb their natural rest; and prosaic as it may appear, when we turned in to our bunks that night Morpheus owned us until morning.

On that morning a dugout appeared upon the river, and landed to our shore an esteemed trapper friend named Missouri. Missouri was a character in his way. He allowed that two were a crowd. He never had a row with himself about beaver traps or skins, "consequently," said he, "I hunt alone." He was always welcome, but rarely joined our party. Another thing, which to our opulent minds excited mild scorn, he drank gruel or thin porridge in place of coffee. Otherwise he was a good fellow, and full of the personality we chose to associate with "Pike County."

"What do you know?" was his greeting, and without waiting for an answer asked: "How's grub?"

We supplied him with provender in the shape of some fried ribs and some cold boiled beaver tail, with black coffee, and also with information. Enough to relate that after some deliberation, we made ready for the war-path. Life did not seem worth while living while these mysterious natives prowled our neighborhood.

Missouri borrowed forty rounds of ammunition from me, cleaned out his gun and patched his moccasins. Our preparations were soon made, and we sallied forth into the woods, taking the nearest trail leading to the open.

When we cautiously emerged from the timber no sign of a camp was visible. The Indians had disappeared. Nothing remained but a smoldering camp-fire, bones of the feast we had witnessed the evening before, and pony tracks leading to the bluff. And on this trail was a solitary coyote who trotted off at our approach. It seemed a good riddance, but we decided to go upon the bluffs which commanded a view of the broken country that extended back from the river.

As we mounted the hill the country expanded before us in familiar outline of low ridges, and buttes fringed here and there with clumps of low black cedars that at a distance gave the aspect of a rough prairie with buffaloes scattered about it. To our eager gaze nothing appeared, however, and we sat down on the grass for a rest and smoke before proceeding further.

Suddenly an Indian rode into view about 500 or 600yds. away and circled about as though he had just discovered us. Raising the sight on my rifle the proper distance, I drew a bead on him and let fly. Before the smoke cleared away the ground around the horseman seemed to be alive with Indians lashing their ponies in our direction.

In our itinerary no provision had been made for a sudden change of base, but we were certainly of one mind when we dropped behind the hill out of sight and made for the timber line. Prairie strategy in Indian warfare is developed usually under stress of surprise, and is governed by the emergency.

In our case the charge of the Indians was not unexpected after the appearance of the horseman, and was further hastened by my shot, which was intended to develop their intentions, for they started for us at the puff of smoke, and before the bullet had time to reach its destination.

On they came in wild disorder, their bright ornaments of metal and trappings flashing in the sun amid waving feathers and lances. But we did not pause to admire.

We dropped behind the hill and struck out for the timber as fast as our legs would carry us. There is no doubt that we were very anxious to reach that timber in advance of the Indians, and a snap-shot with a camera would probably have detected a rapid calculation on our faces as to the chances in that respect. But we did not have snap-shot cameras in 1869—at least, not on the Missouri River—and we tore across that little stretch of bottom land in a manner that would have been very diverting to some of our friends if they could have seen us, and must have been satisfactory to the Indians, who had divided their force and now came sailing out of coulees on either side of the bluff and spread out along the foothill as we came to a stop near the edge of the timber and turned loose our guns at them. At the first shot they scattered, then charged by our position in a thin line, delivering their fire as they passed. The bullets swept over and around us in close proximity, but as we kept moving in the short sage brush and offered a poor mark, no damage was done.

* Once in Virginia, at the close of the war, the battalion in wh ch I served camped one night near Amelia Court House. Wood was scarce, and few of us had any extra baggage. I had a rubber blanket beside my musket and its accoutrements. In the night there came a heavy storm of rain, which soon routed me out. A short distance away, but within hearing, was a sputtering camp-fire; and ranged around it were five or six soldiers in the same forlorn plight as myself, and singing for all they were worth. The force and energy with which they sang were calculated, I presume, to enhance the comfort of the fire, and dispel the universal gloom. Joining them, I gratefully accepted the smoky side of the fire, and wore out the night; and to this day I never hear the old familiar melodies, "Babylon is Fallen," "Gideon's Band" and "Massa's in the cole, cole ground," but the scene recurs to mind.

Our fire was more effective. Missouri tumbled an Indian off his horse at the first shot and the pony went sailing up a coulee. An Indian on a white horse seemed to be paying particular attention to me and had fired three times at me before he was opposite my position. Although this fight was mostly of our own seeking, I felt it imperative to take the conceit out of this fellow, especially as I had become pretty well warmed up and exasperated by my run to cover, therefore, I drew down on him as he plied whip and lay over on his pony's back, holding his shield of bull hide well to the front. He was going like a streak, and, although I held a little ahead of him, the bullet struck the pony just back of the saddlecloth and he went careering on down the bottom to the edge of the willows. I felt real remorse that I had missed the Indian and shot this beautiful, spirited pony.

While ten or fifteen of the Indians were dashing along the prairie, exchanging shots with us and drawing our fire, several had dismounted below and were entering the timber. Two Indians had been shot in the fight, how badly we could not tell, but they had been assisted out of range; and, seeing the movement to our rear, I called to my companions to get into the timber. In wading across the little slough, which was half filled with mud and water, we lost our moccasins (all except Ed, who wore boots), and as we crawled through the willows to dry land and waited for the Indians to attack, we presented a sorry spectacle. Their shrill cries of encouragement to each other as they fired repeatedly in the direction we had taken seemed very close and we watched for something tangible to fire at in return, but they were too cautious to follow up their advantage in point of numbers.

Take it all in all, it was the funniest skirmish I had ever been at. Not one of us had received a scratch, and it was over in about the time I have related it.

When things had quieted down a little and we had become satisfied that we did not want to hunt Indians any more that day, no time was lost in making our way to the cabin. To do this we had to cross two or three openings that were thickly covered with a minute species of prickly pear that had been killed by fire. We were barefooted, of course, having lost our moccasins.

As we wended our way in single file and finally approached our cabin, we saw two coup sticks, ornamented with black feathers, sticking in the doorway. The war party had been there ahead of us and taken everything in sight.

They had smashed a little Dutch oven we had and knocked a hole in an old gold pan that we used to mix dough in. Their pony and moccasin tracks were all about the cabin. All we saved was the cache where we kept our ammunition and tools, and Missouri's boat, which he had taken the precaution to sink under water.

LUTHER SAGE KELLY.

HOLT'S WOODS.

"This is the place; stand still my steed
Let me review the scene,
And summon from the shadowy past
The things that once have been."

HIGH up on the brow of one of the many hills which encircle a little Vermont town lies an irregular patch of forest known as Holt's Woods. The sturdy old farmer has long since been gathered to his fathers, and some other man now owns that bit of woodland; but Holt's name went with it, and will always remain as a sort of perpetual lien on the property. There is another lien on this piece of woods, which I hold; an intangible one, it is true, recorded in no town clerk's office, and not likely ever to trouble the owner of the land, but which, nevertheless, I would not part with cheaply. It consists of a stock of pleasant memories, and, unlike some other stocks, it pays large and regular divi dends.

Holt's woods was my first hunting ground, and when I recall my feelings as I walked proudly home from it with a new $3 shotgun on my shoulder and carrying my first chipmunk by the tail, I can understand the emotions of Cæsar as he entered Rome at the head of his triumphal train after the conquest of half a world. And this victory was but the first of a series which followed. Red squirrels, gray squirrels and flying squirrels; hawks, crows and owls; skunks and woodchucks; yellow-hammers, wild pigeons and partridges and finally a big red fox—all these fell before the destructive fire of that $3 gun. That this marvelous firearm finally burst in my hands without injuring me was looked upon by some good people as one of the inscrutable miscarriages of Divine Providence, and also as conclusive evidence that I was reserved for a more violent end.

But in spite of this ominous foreboding, the shattered single barrel was replaced with a 16-gauge double, muzzleloader, and it sometimes went off in Holt's woods when the school bells were ringing in the valley below. I am now prepared to admit that this was wrong, especially as I see cropping out in my own boy certain signs of similar lawlessness. But I do not count those days as wholly lost which were spent in that beautiful upland forest.

Even then I had faint glimmerings that the time would come, as it has, when the hours of toil would be many, and the hours of recreation few. It was not altogether bloodthirsty instincts that lured me to these woods. All that was fair in nature seemed to be concentrated in them. Here the wild flowers were first to appear, adder's tongues, hepaticas, wake robins, blue violets and "Dutchman's breeches," many bunches of which were carried home as peace offerings, and seldom failed to accomplish their mission.

Here were the great trees that had never felt the axe, whose rustling boughs made sweet, weird music, and whose falling leaves stirred strange, deep thoughts; lordly oaks and maples, and giant pines and hemlocks, which somehow seemed made for better uses than to be sawed into mere lumber.

Here was the paradise of the birds, the wild, beautiful birds, so seldom seen in this sparrow-ridden section of the country; indigo birds, rose-breasted grosbeaks, wood warblers and hermit thrushes, whose thrilling melody in the deep forest is as sweet a sound as ever fell on mortal ears.

Here, too, were other woodland sounds, the tinkle of the cow bell, the drowsy hum of insects, the long, rythmical call of the yellow-hammer, and the muffled drum of the partridge in the thicket. Although so near to the town that the noise of trains and men and dogs could be faintly heard, here were the wild creatures whose presence adds an untold value to the woods; bushy-tailed squirrels in the tops of the tall hickories; slim weasels making their noiseless way among the leaves and rocks; lumbering woodchucks speeding clumsily to their burrows; tiny wood-mice playing about the old stumps, and, occasionally, the sly red fox stealing cautiously along the wood roads.

When to all these alluring sights and sounds were added the fragrance of the ferns and ripened leaves, the inviting forest paths, the beds of moss, the glimpses of changing clouds and distant mountains, what wonder that Holt's Woods should draw the boy to itself, and in making him its confidant make him its lover as well! ARTHUR F. RICE.

SHEEP AND SNOWSHOES.—II.

A Winter Hunt on the Summit of the Rockies.

The Outfit for the Mountains.

As a certain amount of interest attaches to a winter trip of so severe a nature as that which lay before us, it may be well to mention in some detail the preparations which seemed needful to us.

In the first place, as we had wagon transportation for a part of the way, or up to our main camp, it was possible to take in a tent. We had a good specimen of the best tent on earth and the most practical all-weathers camp-house ever yet invented—the Indian lodge or tepee such as was once the home of all the Western plains Indians, and which has been practically copied by the United States Army in the model chosen for its service tents in the field. For the lodge as a camp-house I cannot say enough, but shall tell more about it later.

This was to be a snowshoe trip, and, therefore, a very important part of the outfit was the snowshoe equipment. Here we had room for choice, and proof of the fact that tastes differ. Rather, let us say that conditions differ. Each part of the country admires its own snowshoe and thinks all others wrong, whereas there is room for quite a reverse view from the other end of the question. The truth is, as any one must know, there cannot be any perfect snowshoe, suitable for all countries, any more than there can be an all-around rifle or an all-around fishing rod. The cold, dry snow of Canada, which falls thin and light, is in no way similar to the heavy, soft, wet snow of the Rockies in the late winter. The thick woods of New Brunswick are very different from the sharp slopes and steep pitches of the big mountains. In one part of the country a close mesh and flat bow are best, whereas in another a wide mesh and very different bow will be much better. I can speak of the variety of shoes which we had with us, and can say that were I to be asked to outfit a party for a similar trip in the same country, I could save some trouble by throwing out some of the shoes we had and changing others in some small particulars.

McChesney brought on three pairs of snowshoes, which he got in Montreal, Canada, in response to Schultz's advice. McChesney had never done any shoeing before, and so took what the dealer gave him. The latter told him that "these were the same sort of shoes which Julian Ralph and Frederick Remington used on their trip in Canada." If this be really true, the latter gentlemen must have been as new at the art as McChesney confessed himself, for a very worthless shoe they were, flat and very wide, with a heel altogether too light and floppy, and a webbing thrown in with a pitchfork, of a cowhide that swelled and sagged fearfully at the least dampening. McChesney wore one of these pairs and Schultz another, and O-to-kò-mi, our Indian hunter (whom we shall presently meet) fell heir to the third pair.

I had along two pairs of shoes myself; one a fine pair of caribou webs, made in superb fashion by A. Pringle, of Stanley, New Brunswick, these being especially ordered for me a couple of years ago under supervision of Mr. Frank Risteen, of Fredericton, N. B., and warranted not to sag. This was really the best made pair of shoes in

DIFFERENT SORTS OF SNOWSHOES.

1. 2. 3. 4.

1. Alaska model, shoe, flat bow. 2. Montreal shoe, flat. 3. New Brunswick trapper's 4. Montana "bear's paw," used by mountain trappers.

our outfit, nor do I think one will find so good a pair in any market. The bow is flat, and the webbing is very fine and tightly drawn. I have no doubt that in New Brunswick they are perfect. In the wet snow of the late winter, where the Chinooks often soften the snow till it is half water, these shoes are too closely woven to be comfortable. They carry a great weight of snow, which will not shake through the mesh. Billy Jackson corralled these New Brunswick webs.

My other pair of snowshoes came to me in a peculiar way. I wanted a pair of moccasins for this trip, and I sent up to Metz & Schloerb, of Oshkosh, Wis., who make very good ones, and inclosed them a four-sheet picture of my foot with about nine pairs of stockings on. They sent me the moccasins, and also, somewhat to my surprise, sent me down a pair of snowshoes, telling me they wanted me to try these on the mountain trip and tell them how they performed. They told me that these shoes were made for them in Canada, but on a model given them by an old Alaska hunter, who said it was the best model for mountain use that he had ever seen. They further said that a number of trappers in Colorado had said these shoes were better than any model they had ever found. In appearance these shoes did not look like anything I had ever seen. They were very long and slim, so long that they came up to my chin when the heels stood on the ground, yet only an even 1ft. wide in their widest place. The heel was very long and narrow, and the toe turned up very high and for a considerable way back toward the toe-bar from the tip. These weird looking shoes seemed impossible machines at first, but I found that they had theoretical features of excellence. The narrow tread should make side hill work easier, and the long upturned toe should ride over all crust, and act as a brake going down a steep hill in deep, soft snow. In short, in actual practice I found these shoes the best I ever put on, and every man of our party who tried them was eager to fall heir to them. Needless to say no one got them, and I prize them now very much if only for historic reasons. Yet I have written Messrs. Metz & Schloerb on what seems to me a possible improvement for this Western mountain work. The mesh sent me was, in these shoes, just that of Canada, tight and close. In the wet snow these shoes therefore carried weight all the time. I would have a pair made with ¾in. mesh at least if I were going this trip again. The proposition is absolutely different from any known to Eastern snowshoe people, who never have the Chinook wind. But as to the model of these shoes, I would never have another now. They balance perfectly, never kick up in the least, and lie so nicely on the snow that one doesn't feel any weight. The shoe is so long it covers all sorts of ordinary holes, and the curved toe always keeps the foot riding over the snow, and not digging into it. It is the best shoe for the mountains in the opinion of all the snowshoe folk I met on the trip.

Later on we met another sort of snowshoe, the "bear-paw," home-made shoe used by the trappers of this country. This is a most incredible affair, and at first I could not believe such a thing could be used as a snowshoe. The shape is a rough oval, 14 by 22in. in size. The lacing is of all sorts of rawhide, and the holes in the mesh are at no place less than 1in. by 2 or 3in. There are gaps in the lacing 4in. by 6in., and the whole is most crudely done, so that you would not think such a shoe would carry any weight at all. Yet the pair of bear-paws now before me as I write carried a trapper fifty-five miles one day over these mountains and valleys. When I add that that same man nearly always snowshoes in rubber hip boots I have gone the limit of credence, and also touched the limit of personal tastes in outfits. With his bear-paws this man (Joe Kearney) gets up a mountain mighty well on the snow, hip boots and all. If I had to use such an outfit I could not go. Yet Kearney approved of my long shoes, and said they were the best things he ever saw. We States people who figure what is the right powder charge, and the right weight of lead, and the right sort of clothes, and the right sort of snowshoes—we are not really sportsmen. The real sportsman is the man who can wear any old clothes he happens to be able to afford, who is satisfied with any sort of gun that shoots hard, and who can go to a willow patch and a beef hide and make him a pair of snowshoes in an hour. That sort of man is mighty apt to know where the game is and how to get to it. The more I learn of camping and hunting the more absurd I think the bulk of our preparations for it. Beware the man with one blanket, one gun and a pair of willow snowshoes.

In this I digress, but perhaps in an allied topic we shall find something of interest and be of distinct service to any one intending a mountain trip on the shoes. This is in the matter of snowshoe straps. Of course, all our snowshoes came to us in the good old-fashioned way, with a bundle of thongs tied to the frames, so that we might put on our own straps as best pleased us. All "store" snowshoes come this way, and hence present a problem to any beginner, for everyone he meets will tell him of a different snowshoe tie, and the clerk who sells him the shoes will of course show him the one and only correct way of putting on a snowshoe. Indeed, nearly any of these different ways will do so long as the beginner stays on the store floor. When he gets out on the wet snow and on the steep hills, it is a different affair.

In the first place, any snowshoe should have a permanent toe strap, separate from the heel strap. There is no tie made which will stay if it be made of one continuous thong acting as toe strap and heel strap also. That is, it will perhaps do for the store floor, but not for the woods. The toe strap is something which changes with the hour of the day and the dampness of the snow, and it should be made adjustable, preferably with a buckle. The heel strap should also be adjustable, but the thong will do here, as it can be rolled back of the heel and so adjusted as it stretches or shrinks. Most thong ties run back double from the toe to the rear of the heel, one strand going back direct and one being crossed over the instep. This arrangement I have usually found all right, except that often the shoe gets frozen full of ice at the edge of the toe-hole, so that the straps will not render through their holes. To prevent this trouble I devised a tie of my own, which I thought would be desirable in the trying work of mountain-climbing. I fastened a 1in. harness ring at the toe hole, one on each side of the foot. To one of these rings I attached a strip of cotton drilling, which makes a far better shoe-strap than any moosehide or caribou-hide thong. My toe straps I had already arranged so that I could take up any slack by means of a buckle, the toe strap being double, crossing over the toe and buckling on top in such a way that the shoe hung nicely on the toe. My moccasins had loops sewed at the back of the heel and on each side. In putting on the shoe I stepped into the toe strap, passed the stout drilling band through the side loop and heel loop of the moccasin, and then tied it as tight as I liked by a single slip-noose through the iron ring at the other side of the foot. This rig I found held the foot freely yet firmly, it being impossible to get the foot away from the tie, which could yet be freed at once by a single jerk. I further improved this tie by having a loop sewed across the toe of the moccasin, through which I passed an end of the toe strap. If I chose to fasten the moccasin thus to the shoe, and make it firmer by passing the strap through the heel loop also, I had an outfit which could not slip and which could be adjusted at once, and in the speediest fashion. I knew, however, that

no shoe tie is good which fastens the foot tight to the showshoe so that it cannot be detached instantly. If I had my toe fast by the toe strap I had either to take off my moccasin with the snowshoe, or to stop to unbuckle the toe strap every time I took off the shoes. This I remedied by using a big over-moccasin, which I left attached to the snowshoe all the time, slipping my foot, clad in a smaller moccasin, into this big moccasin when I put on the shoes.

Some such rig as this, I believe, is as good as any I know for moccasin work on ordinary snowshoeing, and it was the one decided upon by all our party at the time when we arrived at the agency, though we had all decided not to try the moccasin, but to use instead the low rubbor shoe, which we learned to be necessary in that damp snow at that season of the year—late winter. Of course, it may be observed from all this that we were not to use the *skis* at all, the long shoes being out of the question in the continuous climbing and wallowing about in deep and steep places which lay before us.

At the agency we met the issue clerk, Mr. Parsons, a gentleman of an original and inventive turn of mind, and to Mr. Parsons we owe a debt of gratitude greater than any novice of the party can ever understand; for had a novice undertaken our trip with a snowshoe tie such as those prescribed by the sporting goods clerk, he simply could not have made the trip. As it was, Mr. Parsons fixed us all up with a snowshoe rig of his own invention, which brought us all through safely, and which I do not hesitate to call the one and only tie for that rough mountain work. It is not really a tie, but a harness, like that of a skate strap. The toe piece was about an inch wide, with a soft bit of leather under it to protect the toe against chafing by the buckle which regulated the strap. This toe strap passed entirely under the shoe, and was continuous, thus stiffening the shoe very much at a point where the weight causes the most sagging. Back from the toe on each side, and riveted to the strap on each side, ran a single wide strap, which passed back of the heel and buckled at one side. This strap could, of course, be regulated as easily as a skate strap. It was kept from falling down too low at the heel by means of a light strap which crossed over the instep, and which was riveted to the heel strap on each side. In putting on the shoe, one simply kicked his toe into the toe strap, and buckled the heel strap, and there he was! The leather was good stout harness leather from Uncle Sam's shop, and hence much less liable to stretch with a wetting than would be any flimsy thong. It did not punish the foot in the least, and of course, as it was not fast in any way at the heel, it played as freely as though it were made of the softest thongs, though it held the foot from forward or backward slip as though with a hand of iron. Mr. Parsons had been in these mountains on the shoes, and said he had found this the best rig he could get. In this he was surely right. He was good enough to fix up all our shoes for us in this way, and only those of us who had gone through the misery of thong ties before then knew how great a boon he thus conferred on us. The thong and the rag string will do all right for the flat woods, where one can scuffle along almost any way on the shoes; but when it comes to going up and down mountains as steep as the roof of a house, the tie must be something a lot more effectual and permanent. I have never seen the Parsons harness on any snowshoe before, but no other fastening will ever again go on any snowshoes of mine. The only bad feature about it is the disillusionment it implies. Most people who go on snowshoes like to write about the dreaded *mal de racquette*. With this harness there is no such thing. Not to have *mal de racquette*, or any other highly correct ailment, will perhaps deprive the sport of some of its charm to many persons.

After fixing up the Parson's harness, we improved the Montreal shoes by weighting the heels with lead, thus altering the hang of them so they would not flap up at every step and continually threaten their wearer with a tumble.

In the matter of clothing, as I have said, there was the usual personal latitude. We none of us used the moccasin except about the camp, but preferred the rubber shoe, low and soft and waterproof. We all wore the heavy German sock, over one or two pairs of thinner woolen socks. McChesney found his trousers too tight to allow in their compass all the shirts he wanted to wear, so he just let one or two shirts hang down outside, and found a heavy woolen shirt in this way as good as a sweater. Schultz wore a heavy sweater under his corduroy coat. Billy Jackson showed up in a regular Hudson Bay outfit, blanket coat, blanket breeches, long woolen stockings, and blanket hood or "capshaw" attached to his coat so that he could completely cover his head. Sometimes he found this too warm, and then reverted to a soft, wide hat. O-to-kò-mi, our Indian hunter, clung to the white man's dress of many shirts and woolen outer garments. I used the buckskin shirt over a woolen shirt, and wore no waistcoat, and I think a good skin shirt is the best and warmest garment for its weight that a man can put on. At times a heavy snow would wet it a little, but, barring this disadvantage, this garment is perfect. No one can know how piercing a Rocky Mountain wind can get who has not tried it, and I found that buckskin stopped it better than any fabric. As I cannot wear a cap, it seeming too warm when on the march, I stuck to the broad hat, but wore under it a yarn toque to keep my ears from freezing, if the weather got very cold. McChesney also sported a toque, of brilliant red, but preferred a cap to the Western hat.

Knives.

There is no article of the hunter's outfit more abused than the knife in its shapes as offered a long-suffering public. There was no one of our party who had not gotten far beyond the stage where one carries one of those long, sharp-pointed abominations sold in the stores as "hunting knives." Just who buys these things I never could see. Yet we had diverse tastes in knives in our party. Billy Jackson had the great original grandpapa of all the knives, an old, old Hudson Bay cleaver of the type which was once issued by that company to all its men. This knife is much like a Bobo bear knife. It weighs about 4lbs., and has a blade about 3in. wide, so it can be used as an axe, as a meat axe, as a knife, a hammer, or several other tools. The steel in this blade was the best I ever saw. We chopped down trees with this knife, cut tin cans in two with it, split sheep along the back bone with it, and used it with the least of care; yet while my own little trapping axe came out nicked and dull, and my knives needed many sharpenings, as did those of all the others, Billy's big knife was fresh as a daisy at the end of that trip. He gave it to McChesney, I believe, and wherever it is it should be preserved as a valuable relic of the past. It has split many a buffalo in its day.*

Schultz used the knife commonly used by old-time guides and trappers, and really about as sensible a knife as one can take—a good big jackknife, which is good enough to cut, skin or whittle with. McChesney had a couple of straight-bladed knives made according to his notion. I had a short, rubber-handled sheath-knife with a good blade, and also a short skinning knife. I nearly always carry a light axe when I am on a woods tramp, as it comes very useful if you miss connections on getting into camp any night, and is moreover handy in a dozen ways during the day.

Rifles.

Of rifles we had two kinds, both good. McChesney had a half-magazine Winchester, .45-70, with which he had killed a number of caribou in Newfoundland, and which was of course a good gun for big game. I had along two rifles, one a .45-70, which I intended to use, and one a .30-30 nitro Winchester, which I did not intend to use (but which I really did use all the time). This latter gun was very much lighter, of course, than the big .45-70, but to the latter I held to the last moment, knowing how reliable is the .45-70 on heavy game—far more so, of course, as all the mountain men will tell you, than the .45-90, which theoretically should be good but isn't, albeit much exploited in its day. Of course, a .45-90 will kill game, and has killed a lot of it. So will a .44-40, and the latter has killed more game than all the other rifles of the country together, but I wouldn't care for one very much now. Indeed, I don't know that I dare care very much any longer for even the old .45-70 on any game smaller than big bear, or perhaps moose or elk. On sheep or goats—but I am about to digress again.

The way I happened to take along the little Winchester was this: Mr. Hirth, of Spaldings, had this gun, all done up in a beautiful fancy gun case and wrapped in tissue paper. He never shot it, and never would have shot it, but he came to me and said he heard I had no confidence in the small-bore nitro rifles on game, and he wanted to show me I didn't know anything much anyhow. He insisted I take his rifle along and kill him a sheep with it, and to oblige him I took it, not intending to risk much with it. He had it fitted with Lyman sights, front and rear. I tried the rifle forty shots with this outfit of sights, down at the Calumet Heights Club one day before I started, and I never did hit a single thing with it, or even learn where the bullets went. I figured I would do well if I shot that way in the mountains. Then I remembered that maybe the Lyman front sight was not the same height as the front sight issued by the Winchester people when they put out the gun. I hammered out the Lyman front sight and hammered in the plain sight that originally came on the gun; and just then the train whistled and I had to start for Montana without ever trying the gun in that way. At the agency we had the first chance to do this, and improved the opportunity during the afternoon.

Billy Jackson, McChesney and myself all took a hand at sighting this little rifle, and we used the plain front sight, the flat bar rear sight and the Lyman rear sight, all three of them in a line, the Lyman sight being screwed down till the front sight looked just fine enough in the bar notch of the rear sight. Then we knew the alignment was all right, and it was only a question of elevation. All the guides insisted on using the Lyman rear sight and taking off the rear bar with which the gun was fitted as sent from the factory. I have never used a Lyman sight, and was afraid to risk learning it at the time. I was trained by my old father on open sights, on the old Kentucky rifle, and didn't know how to shoot any other kind. Schultz told me that the common fault of over-shooting on game was not so apt to occur with the Lyman sight, so I went so far as to leave the Lyman rear on the gun while we were sighting it, valuing the certainty it thus gave us of always keeping that little fine front sight just so full in the center of the hind sight bar.

We made an effort to shoot a shot or so, but as the sunlight was blinding (we all wore smoked glasses while not actually shooting) we found it necessary to smoke the front sight of the rifle. It was astonishing what a difference this made. The white metal front sight, which had been dancing and glimmering, was now steady and keenly clear to the eye. We began our sighting practice at about 25yds., using a rest, and the three of us, firing one shot each at an inch bull, put three shots at the top edge of it, all so close that the end of a finger would cover them. That satisfied us for that range, and we advanced to 50yds. Here we found the rifle was perfect, putting all the shots on a 3in. black spot, or so close that we were satisfied it was in the holding. At 60yds. we found the practice harder of course, but could always call the shot. There were no wild shots. At 75 Billy fell out of the game, as he made one or two misses, so we set him to tending target. Then we put the pasteboard, with a black spot on it about 4in. or so marked in its center, off at about 90 or 100yds., as nearly as we could tell the distance. Here I fired a half dozen shots, and to my great surprise got one or two right on the black and all the others so near that I knew the gun would do far better shooting than lay in my eyes and hands to do. We did not change the elevation of sights at all, but at 100yds. I held full on the mark. I saw at once that I had never fired a rifle that needed so little nursing on the elevation question, and I could not see how it would be possible to miss a sheep at say 200yds. if one held between the top and the middle of the body with any kind of sight at all, fine, medium fine or full, not using any change at all in the 100yds. sights. Billy said we would be apt to get our shots closer than that.

All at once I gained a great confidence in the shooting of this little gun, seeing that the early bad practice with it was entirely due to the fact that the front sight had not been left on as the factory placed it. With the full set of Lyman sights, this gun needs an entire resighting With the front sight left alone, the Lyman sight or the Lyman rear with the plain bar back sight can be used all right, and will give beautiful results, as we proved very clearly. Moreover, we were startled to see that the soft-nosed bullets smashed entirely through the 8in. cedar post against which our target was leaning, and drove splinters 30ft. beyond it. Billy Jackson said I would be foolish if I did not use that rifle and lay aside the .45-70, and I admitted so much as to say I would try it once on big game if I had the chance. The lightness of the gun was a great advantage in the hard mountain-climbing on the snowshoes, where every ounce of weight counts so much in the day. As I took the little beauty into the house after our tests of it I felt acloud lift from my my mind, for I knew I had a gun with which I could at least hit something, and that my earlier judgment was wrong through my own fault in using the gun. The story of this little rifle shall follow; at present I need only say that I had a big war with Mr. Hirth when I got home, he claiming that I had borrowed his favorite gun from him and would have to return it, and I claiming that I had bought the gun of and neglected to pay for it. The end of the war was that he never got his gun back again at all, though I had to plead a long time before he would accept money instead of the gun. But it's my gun now.

Billy Jackson took with him another nitro small-bore rifle, a Winchester box-magazine, Government model, a still harder hitting gun than mine, though not so handsome we thought. It was arranged that O-to-kò-mi should shoot whichever one of my guns I did not care to use. Schultz did not want any gun, as he said he would not hunt any how. So much for our battery and our outfit. I should not omit to mention as one of our party our dog Shep, a wooly canine, warranted to run cats or mountain lions, and of long experience with a fellow dog, Patty, on the trapper's trail at the summit of the range, where Boak's partner, Scott, was at that time operating.

[TO BE CONTINUED.]

* June 5.—This is a very small world. Mr. McChesney writes me from Troy incidentally as below: "Thursday evening Mr Fred Farmer, of Three Rivers, Quebec, was at the club, and for a couple of hours we hunted moose and caribou, and caught trout all through the country where he is lumbering. He said that a week ago last Wednesday, while some logs were being brought through some of the small lakes, the biggest moose he ever saw came down on the shore, looked at them for a moment and then swam across, passing within about 100ft. of the men on the logs. A few minutes after he disappeared in the woods, he came back again and swam back across the lake.

"While speaking of my big knife presented to me by Billy Jackson, Mr Farmer said that his brother George Farmer, now of Chicago, some years ago brought a similar one down from York factory, where he had been connected with the Hudson Bay Co."

I know Mr. George Farmer, of Chicago, very well, and have heard him speak of the old Hudson Bay knife which he used to see in the fur-trading days, this being, as I take it, identical with the big knife which Billy gave Mr. McChesney. Those were very honest knives, and not built for a few idle moments of whittling on a store box.

Natural History.

GIANT MOOSE HEADS.

THE two great Alaska moose heads illustrated and described in our issues of Jan. 23 and 30 and March 6 have both been sold. Mr. W. W. Hart sold his recently to a gentleman whose name is not stated, and the head belonging to Mr. W. F. Sheard, of Tacoma, Wash., has been sold to Sir Bache Cunard, of England.

Through the courtesy of Mr. L. G. Bigelow, to whom this latter head was consigned in New York prior to shipment to England, a FOREST AND STREAM representative saw it at the Erie freight station last week. The measurement of 73¼in. spread, as given by Mr. Sheard, was confirmed, but though this head has the greatest spread of any heretofore recorded, it is not nearly so fine in other respects as that secured and mounted by Mr. Hart. The palms are not by any means so broad nor have they anything to approach the lineal area of the latter. In fact, aside from its unprecedented spread, the head is a very ordinary one.

The head was found at Pier 21, North River, crated and piled high up on a pyramid of tea boxes. Instead of coming through as ordinary freight from Tacoma, it had been shipped by the tea train which meets the Northern Pacific Chinese steamers. The freight hands thought it came from China, and called it the "Chinese deer."

It was shipped in a slatted crate, which permitted measurements to be taken of the horns, though the head itself was wrapped in burlaps.

The right horn is larger in every respect than the left, though it has only seventeen points, while the left has twenty-two. Three of the latter are underneath the horn, however, including one stub 6in. in length, so that in this respect to all appearances the horns balance very well.

The right horn has about 4sq. ft. of linear surface, and the left about 3⅞sq ft. Both horns are doubly palmated, and in both the extreme width of the front part, exclusive of points, is 16in. The minimum width of the palm itself, measured a third of the way up, is 11½in. for the right horn nd 11in. for the left. The maximum width of the upper palms (exclusive of points) is 15in. for the right horn and 14in for the left. The average width of the right palm is about 13in. and of the left about 12in. The extreme length of palms from extremity of points is 44½in. for the right and 43½in. for the left. These measurements, it must be noted, are taken in the shortest direction and do not follow the curvature of the horn, and such being the case, they do not, of course, give the exact extent of the horns. They will serve, however, to convey an approximate idea of the size.

As the right horn is very much more deeply hollowed than the left, its actual surface is still greater in proportion to the other than the figures indicate. The horns are fluted more than is common in Eastern specimens, and both are dented on top in several places in a way that is hard to account for. The curved outside edge of the right horn has a hole running entirely through that looks as if it might have been made by a bullet, and in line with it on the other horn is a scar that might also have been due to the same cause.

While we have no exactly corresponding figures relative to the moose head secured by Mr. Hart on which to base a comparison, some general measurements taken by FOREST AND STREAM will serve to indicate the superiority of this latter specimen aside from spread.

"The length of right horn, measured from the brow antler to the most distant prong of the palm on the posterior side of the horn, is 55½in.; the length of the palm measured along the curve is 41in., and a straight line drawn from the burr to the most distant point of the palm is 40in. The width of the palm, measured along its posterior side following the curve, is 43in." The spread is 70½in., and the maximum width of palm exclusive of points 29in. From these figures it would appear that the superficial horn area of this specimen is nearly twice as great as that of the other. While, therefore, the Sheard head, with its 73½in., has undoubtedly the greatest spread, it is hardly correct to call it the largest head in the world, or for that matter the finest.

These two great heads came from Alaska almost at the same time, from which it may be inferred that antlers of such unprecedented proportions are not unique in that country, and it is not beyond the bounds of probability to expect them to be duplicated or even surpassed in future.

J. B. BURNHAM.

PODGERS'S COMMENTARIES.

SAN FRANCISCO, June 9.—*Editor Forest and Stream:* I am always interested in articles in the FOREST AND STREAM on the subject of "intelligent brutes" (which does not include some classes of men, as it might), and particularly was I interested in reading the contribution in the last number just received, by Mr. Wingfield, which reminded me of my own experience in horseflesh.

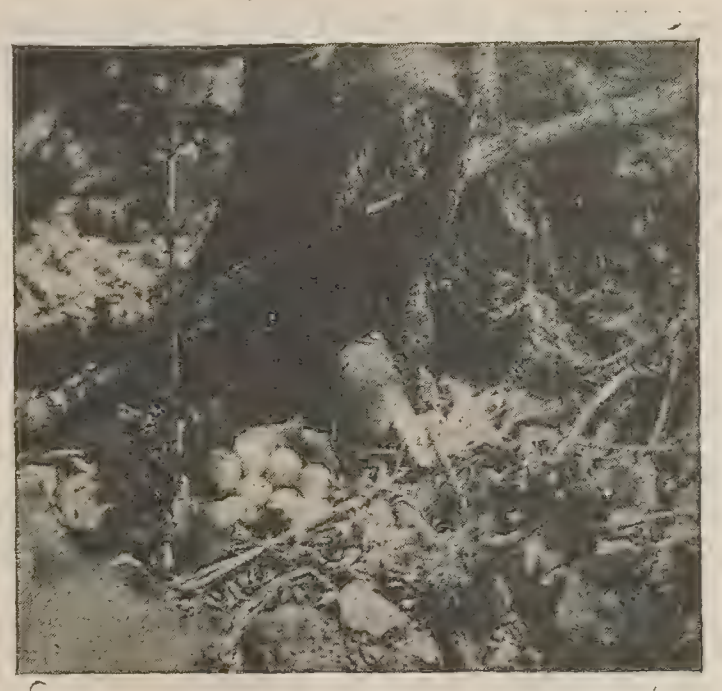
I owned a handsome black horse named Nick; he was not an old one, but if "old" had been preluded to the Nick it would have been very appropriate, as he was a very devil for kicking buggies and harness to pieces, varied by an exuberance of spirits illustrated by running away about every other time he was hitched up. I was loth to part with him, as he was a beauty, and when he felt in the humor would outtrot every team on the road; but my invitations to friends for a drive were firmly rejected, as his little idiosyncrasies were too well known for them to risk their necks. Profs. Gibson and Rarey had not at that time appeared here as horse tamers. So at last, after the wagon and harness repairers had built brick blocks from the bills I paid, I concluded that, as mines were giving out, I would dispense with the luxury of an animal that was of so elevating a character; and he was banished to the country and turned out on a ranch owned by my brother. It is true, I did have one opportunity to make some money out of his accomplishments from a man who owned a mule team, one of which had the usual characteristics of that animal. The owner offered to bet me that his mule could outkick the horse; and proposed a match in which they should be placed "stern on" against an unoccupied building, with harness attached to it, to convey the impression that they were hitched to something valuable; but I did not want to win a poor man's money, and declined.

A month or two later I set out to make my brother a visit, and was met at the station by my sister-in-law and her children with a horse and phaeton. I did not notice the horse until we started, when, to my horror, it proved to be Nick. "My gracious!" was my exclamation, "what are you doing with that horse?" My sister-in-law laughed, saying, "What's the matter with the horse?" "Why," said I, "he will run away, kick the phaeton to pieces and kill the children." "Pooh!" was the reply. "Get up, Nick," accompanied with a smart cut of the whip, something I had never dared. Much to my astonishment, he scarcely noticed it except by a little grunt, and pegged away at a five-mile gait all the way to the house.

My sister-in-law had no fear of horses, was a bold driver, and one day in my brother's absence had had Nick hitched up, although with a full knowledge of his habits. She drove him ten miles, he never offering to kick or run away or pull an ounce on the bit, and became ever after the only horse she would drive. She drove him without blinds, and whenever the family were starting out Nick would turn his head so as to see who was in the phaeton, and would give a grunt, as much as to say, "No fun for me this time." How he would have behaved if only a man were in the wagon is a conundrum; but he became the pet of the family. The children used to enter his stall and crawl between his legs. His only mischievous tendency was to chew up the flowers in their hats with a perceptible smile and a twinkle in his eye, as much as to say, "I must have some fun."

Who says that animals have not a streak of gallantry in their composition, as well as reason? Take the lower orders of mankind, do we not see evidences of their more brutal characteristics in the thousand cases where they kick and beat women to death? The animal, by comparison, is far his superior. In the yard of the house adjoining me, is an immense St Bernard dog, which, contrary to the nature of that breed, is savage, and the terror of the milkman and baker. Looking out of the window this morning, I noticed him rolling on the grass, playing with half a dozen children, strangers to him, who had strolled through the upper gate. They were dragging him by the tail, pulling his ears and sitting on him, and he was evidently laughing—for dogs can laugh as plainly as mankind, with the commendable difference that it is sincere and there is no treachery in it, for, as we know, a man can "smile and smile and be a villain." Give me the dog on the chances any day.

I have referred several times to the expeditions that have been fitted out here to search for treasure presumed to have been hidden on some one of the numerous islands somewhere in the region of Panama, which have been minutely described by numerous repentant gentlemen, ex-pirates, on their death-beds. They have died in all parts of the world, each one being the last and only one left to confess to the capture of numerous galleons, murder of the crews and passengers, and hiding the bushels of doubloons, diamonds and precious stones on some lone and desolate island; then being afraid to show themselves possessed of so much wealth, planning to return for it at some future day; but circumstances over which prevented, and all these millions lay at the foot of such and such crooked tree, near a big boulder and a jack rabbit. As I mentioned in previous jottings, no less than six expeditions have sailed from here in search of that treasure. The last went only a couple of months ago, in command of a woman, who supplied the funds. That expedition is still out, not having as yet put in an appearance to relieve the stringency of the money market. But now comes still another expedition, and it originates from the last place to be expected—Boston! Think of it, that such people could be found in staid, matter-of-fact, conservative Boston! It is incredible; but this time it is to be a dead sure thing. They have had all the particulars—latitudes, longitudes and ear marks—from the only true and original Jacobs of a pirate, with the boulder and jack rabbit tattooed on his arm adjoining the usual strawberry. This time there is no nonsense. I am going down to the wharf to see that expedition off, if I never live to see No. 8 I not only wish to see the expedition off, but I want to see it return; my rear window commands an uninterrupted view of every vessel entering the harbor. It shall be only the deeply laden ones that I shall bring my spy-glass to bear upon, and I will spend a willing dollar in telegraphing the news to the FOREST AND STREAM; and I hope to obtain the largest diamond to present to the editor to wear in his four-in-hand, to the dazzlement of the eyes of the office boy.



San Francisco is preëminent in its characteristics for all sorts of schemes and expeditions of a novel and elsewhere unheard-of nature. One time it is a search for guano, another for some reported volcanic island that has just put in an appearance after the last earthquake. But the last scheme was an expedition that was fitted out here a couple or three months ago to colonize an island reported by the captain of an arriving vessel from the South seas, and described as abounding in cocoanuts, bread fruits, oranges and grass hammocks in which to swing; and lastly, the population consisted entirely of women. All these advantages, added to the prospect of not having to work for a living, proved an irresistible attraction, so an organization was effected consisting of 100 subscribers; a vessel was purchased and fitted out and sailed, laden with provisions, pipes and tobacco and beads for presents to prospective brides as full dress. The expedition touched at Honolulu somewhat subdued in enthusiasm by sea-sickness; and yesterday an incoming steamer, which had touched at the Figii's, reported the expedition at that place, not a little discouraged by want of success. Instead of an Adamless paradise, they had found at all the islands at which they touched Adams very numerous and wide awake and quite indisposed to share their domestic happiness with members of the expedition, the points of their arguments against the expedition being those of very sharp spears. But, worse than all, it was found that a residence in nearly all the islands involved a necessity for a certain amount of work to raise food, which was contrary to all principles of the expedition.

At last accounts they were in doubt as to what to do next and disaffection in the ranks was manifest. A portion were trying to work their way home, and the other had about concluded to sail for the Solomon group, where it was dead certain, if they did but know it, that they would be received with open arms. The Solomon Islanders are a people who have never been civilized or subdued; they have a playful habit of killing every white man that seeks their shores, and are the least discriminating race in their diet of all the South Sea Islands. It matters not what kind of man, black, white, trader, sailor or missionary—everything goes. French, English and American men-of-war have bombarded them and burned their villages, but it makes no difference. They come up smiling every time, and proceed to broil the very next sailor or trader that lands.

PODGERS.

PHOTOGRAPH OF A GROUSE NEST.

RECENTLY I mentioned the attempts which had been made by Mr. D. J. Hotchkiss, of Fox Lake, Wis., to secure photographs of a ruffed grouse which he had discovered on her nest. Mr. Hotchkiss wrote that he had had great difficulty in getting a picture, as the light was so dim at the place where the nest was located. He did, however, secure several pictures at last, and the best of these have been sent to FOREST AND STREAM. Mr. Hotchkiss says that in his attempts to photograph the nest and bird he would have gone further had not the nest been robbed by "one of those collectors." He got good pictures of the nest and eggs, but only one showing the bird on the nest, and that so

NEST OF RUFFED GROUSE.
Photo by J. D. Hotchkiss.

faint that it would hardly admit of reproduction. He was aided in his work by a professional photographer, who had no better success than he did himself. Not content with finding one nest of the ruffed grouse, which would have stood as something of an achievement, Mr. Hotchkiss found another nest, this time one owned by a very wild and wary grouse mother, who would fly away at less provocation than the first grouse required. He got a picture of this last nest with the bird sitting on the eggs, but was obliged to make it at such distance that the bird can barely be distinguished in the picture. All these pictures and attempts at pictures are very interesting to the folk who love either grouse or camera. I mention with great pride the fact that Mr. Hotchkiss, who is a newspaper man, did not shoot the grouse on her nest, which he might easily have done. The newspaper man is very much maligned, as I often have occasion to know.

Incidentally I should say that it was in Mr. Hotchkiss's paper, the *Representative*, of Fox Lake, and not in a Beaver Dam paper, that I saw the notice of the capture of the singing mouse, of which mention was made in FOREST AND STREAM. This mouse could not stand captivity and died after about a week.

E. HOUGH.

NEAR Green Cove Springs, Fla., Mr. Morrison stood behind the corner of a house and held out a razor for Mr. Grover to shoot at with a rifle. When Grover shot the ball struck the razor and broke it. Either the ball or part of the razor ricocheted around the corner of the house and struck Mr. Morrison on the back of the head and nicked the skull for about an inch, taking out a piece of the outside of the skull bone, but not going in far enough to touch the brain. It is a very serious wound, but is not thought to be necessarily dangerous.—*Savannah (Ga.) News.*

The FOREST AND STREAM is put to press each week on Tuesday Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Game Bag and Gun.

THE PUBLIC GAME RESERVES OF ONTARIO.

GAME AND FISH COMMISSION OF ONTARIO, Dunnville, June 14.—*Editor Forest and Stream:* If there is one thing more praiseworthy than another which the people of a State or Province can do for the benefit of themselves and posterity, it is the setting aside of large tracts of land in the form of public parks. It needs no argument to prove the great advantages of these reserves for the use and pleasure not only of the present generation, but also for future generations, when the country shall be inhabited by millions where now there are but thousands. The Government of the Province of Ontario has been wise in this particular in legislating for the formation of the Algonquin and Rondeau parks, at a time when there were few or no settlers' claims to be bought up, and when it could just set aside the lands at first cost.

Algonquin Park.

The act of the Legislature establishing Algonquin National Park (56 Vic., cap. 8) reads that the area set aside is "reserved and set apart as a public park and forest reservation, fish and game preserve, health resort and pleasure ground for the benefit, advantage and enjoyment of the people of the Province." It comprises eighteen whole townships and parts of several others. In all the total area is 1,109,383 acres, being forty-four miles in length from north to south, and forty miles in width from east to west. A large portion is water, including the headwaters of the Muskoka, Madawaska and Petawawa rivers, the Great Opeongo Lake, besides a number of other small lakes and streams; in fact, there is hardly a corner of the park which may not be reached by canoe. The Ottawa, Aruprior & Parry Sound Railway crosses a portion of its southern boundary, and furnishes one means of reaching it.

This great block of primitive wilderness is only about 150 miles from Toronto in an air line; yet, if it were not for the lumbering operations going on there it would be as much outside the pale of civilization as if situated near the North Pole. Only the pine has been sold, and no other forest growth will be touched; everything will be left in its primitive state, and the removal of the pine will not lessen its value as a game preserve or a school for forestry. No doubt it would have been better had the pine been left also, but it had been disposed of before the park was established. The general character of the area is high, rough and rocky, as might be expected, when it is said that it is the most elevated portion of Ontario. The streams have chiefly very rapid currents, some of them before reaching sea level having a descent of over 1,400ft.

Such a tract of woodland, with such stretches of water, could not help being the home of game and fish in abundance, and so it is. The streams are well stocked with such fish as trout, pike, pickerel, catfish and eels, and some of the lakes, as the Great Opeonge, McDougal and Shirley, are plentifully supplied with whitefish and herrings. The woods contain deer in great numbers, and moose are fairly plentiful, while bears and wolves are also numerous, as are the fur-bearing animals—beaver, mink, otter, martin, fisher and muskrat. Of birds the only game birds are probably the ruffed grouse and the Canada grouse, but few ducks are observed there. The sharp-tailed grouse has been taken near the park confines, and doubtless would thrive if introduced. One of the great objects of the park is to use it as a game preserve, in which all the original inhabitants may be preserved, and which may be, as it were, a harbor of refuge for hunted game, and where animals find they are not pursued, there they will soon congregate. The Government also intends to make experiments in introducing other game birds and animals likely to succeed, such as the capercailzie, which would be almost certain to do well. The black grouse may be tried, the sharp-tailed grouse, and perhaps the Mongolian pheasant. Some of the other varieties of deer, as the mule deer, elk, etc., may be tried. In the waters, although well supplied with good native fish, experiments may be made with brown trout and rainbow trout, and no doubt they would do well. Already, since protection has been afforded, the beaver, otter, deer and moose have increased notably. Before the establishment this region was a favorite hunting ground for the trapper; now the wardens not only see that no hunting or trapping is carried on, but every effort is made by the park rangers to poison wolves, which are the greatest deer slayers.

The headquarters of the superintendent and his staff of rangers is at Canoe Lake, near the line of the Ottawa, Arnprior & Parry Sound Railway. There are no restrictions upon visitors to the park, but of course they are not allowed to hunt or kill any of the animals, and in order to fish they must procure a license. It may confidently be said that for tired, weary, worn out business men of the cities, who need a rest and can enjoy nature in its original form, this cool, northern forest offers greater attractions than any other on the continent.

The regulations for the government of the park are as follows:

1 All visitors to the Algonquin National Park of Ontario are required to comply with the provisions of the Park Act (56 Vic., cap. 8), and it is the duty of the superintendent to enforce the same.

2 All parties visiting the park are required to furnish the superintendent or rangers with their names and post office addresses, the proposed duration of their stay, the portion they intend to visit, etc.

3. Visitors are forbidden to cut down, take the bark off of or otherwise injure any standing timber.

4. Hunting, trapping or taking game or other animals or birds of any kind, or fishing with net, trap, spear or night line is absolutely prohibited. Parties offending in this respect render themselves liable to a penalty not exceeding $100 for each offense, expulsion from the park, and seizure and confiscation of their firearms, ammunition, traps, lines and tackle.

5. Fishing with hook and line may be practiced only under permit to be issued by the Commissioner of Crown Lands or the superintendent of the park. No fish may be taken for other purposes than supplying food for visitors or others within the park, and fish when taken must not be carried beyond the boundaries of the park.

6. Visitors must exercise the greatest possible care and caution in the use of fire for cooking purposes, for which purposes only fires may be lit. Where possible fires must be kindled on bare rock or where the smallest quantity of dry

inflammable matter may be found, only down wood may be used for firewood. Fires must not be left burning during absence from camp, but must be thoroughly extinguished by water after using.

7. Not more than one rifle or fowling piece or one revolver or other firearm shall be carried by any party of visitors, and if used for hunting, shooting or molesting animals (except in self-defense) or birds, such firearms shall be liable to seizure and confiscation as above provided.

8. No visitors will be allowed to enter the park during the open season for moose and deer, viz.: from Nov. 1 to Nov. 15 in any year.

Rondeau Park.

Rondeau Park is much less in extent, yet has probably from time immemorial been a great resort for game, especially water fowl. It consists of the strips of land lying between Rondeau on the north and west and Lake Erie on the south and east, and comprises about 5,000 acres of land, chiefly wooded. The marshes near its margin have always been noted for ducks, snipe and woodcock; and now the Government has placed a warden in charge who, besides looking after the park, is engaged in breeding different kinds of game birds with a view to restocking it and other reserves. This year he has 100 young wild turkeys doing well, about fifty English pheasants, and thirty-five Mongolians, in addition to the stock of last year. About three acres are inclosed with wire to make a runway for these birds, and about five or six acres are being inclosed for deer.

This is a small preserve which would satisfy Mr. W. G. Van Name, who urges the reservation of certain game resorts; and I may say that we have in Ontario a number of such reserves where the birds are encouraged to come in the spring and where they are even fed as a greater inducement. No one is allowed to molest them, as it is illegal to shoot in the spring any game birds except geese. This has been the law for a number of years. In fact, no shooting of any kind is allowed between Dec. 15 and Sept. 1 of the year following.

There can be no doubt of the value of these reserves or parks where the birds are unmolested to breed, feed, or go further if they wish. Let each State in the Union adopt laws somewhat similar to those of Ontario—the chief points in which are the non-sale clause and the prevention of spring shooting—and the question of the preservation of game birds is to a great extent settled. Where you have wealthy men and market-shooters shooting here in the North until the season ends, then ruthlessly following the birds South to their winter resorts, pounding away at them all winter, until spring, and even then when those which are left mate and start on their migration North, they are given no rest until they get out of the country into Canada—a place of safety, a veritable harbor of refuge. G. A. MACCALLUM.

Mr. Horandt's Expensive Woodcock Dinner.

CHRISTOPHER HORANDT is a well known and prominent silk manufacturer of Paterson, N. J., and claims to be a sportsman, as he keeps a number of dogs and has several guns During the open season he frequently goes shooting in Sussex county and he prides himself on his accuracy as a shot. Horandt is also fond of the game he kills. Two weeks ago he felt like a woodcock dinner and as the birds were out of season he sent word to his guide, one Charles Conklin, living near Midvale, in Passaic County, to get him a mess. Conklin, who is a well known violator of the law, promptly complied and sent Horandt six woodcock, for which he received $3. Deputy Fish and Game Warden John McLean heard of the transaction, and did not approve of the price the birds brought, as 50 cents each is a low figure even when the birds are in season. He reported the matter to Fish and Game Protector Shriner who at once drew up the necessary complaints. Both the accused were arrested and pleaded guilty; Horandt paid a fine of $120 and the cost of prosecution and Conklin is now serving a sentence of ninety days in the jail of the county. Horandt was asked to assist in paying the fine of Conklin, but refused to do so, remarking that he had paid enough for his woodcock dinner. Conklin says he has letters from Horandt urging him to get a mess of woodcock and "never mind the law."

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

WHERE TO GO.

ONE important, useful and considerable part of the FOREST AND STREAM'S service to the sportsmen's community is the information given inquirers for shooting and fishing resorts. We make it our business to know where to send the sportsmen for large or small game, or in quest of his favorite fish, and this knowledge is freely imparted on request.

On the other hand, we are constantly seeking information of this character for the benefit of our patrons, and we invite sportsmen, hotel proprietors and others to communicate to us whatever may be of advantage to the sportsman tourist.

THE NEPIGON.

MR. WM. MCKIRDY, fishery overseer and outfitter at Nepigon, Ontario, sends out these notes respecting the famous river.

The Nepigon is forty miles long, with numerous lake expansions and surging rapids; its width is 300 to 400ft; water of the purest, clearest kind, and of the coldest temperature; there are nine portages on it, the two longest being two and one-half and one and one-half miles—the rest are short; it is near these portages the best fishing is to be had.

Nepigon station is on the C. P. Ry.'s main line, sixty-five miles east of Port Arthur, where connections are made with the C. P. Ry 's steamers, Beatty Line, and Str. Dixon, from Duluth. The train from the West reaches here at 9:40 A. M , giving ample time to reach the first camping and fishing grounds—twelve miles—in good season, provided arrangements have been made for guides, etc. It is absolutely necessary to arrange for guides beforehand, in order to avoid disappointment and delay—particularly during the months of July and August, when the season is in full blast.

The usual way of "doing" the Nepigon is in parties of two or four. Each canoe (18ft. long) is manned by two Indians, and accommodates two gentlemen and supplies for a ten days' trip. The following is an approximate cost for a party of four for a ten days' trip: Two canoes, 50c per day, $10; one head guide, $2 per day, $20; three other guides, $1.50 per day, $45; rent of one tent and fly for gentlemen, 50c per day, $5; rent of one tent for guides, 25c per day, $2.50; rent of camp outfit (axes, pack-straps, cooking utensils), $7.50; making a total of $90.

Added to this will be the cost of supplies, and this will entirely depend on the varied tastes of the party—the supplies for Indians are flour, pork, tea and sugar. As the Nepigon is particularly a fly-fishing stream, parties wishing to enjoy themselves to the fullest extent take one canoe for each, and also a cook, who can be procured at $2 per day; this of course doubles the expense, but to those who can afford it it is by far the best way. The cost per day for each varies from $3.50 to $7, as to the mode adopted. The guides are Indians and half-breeds who have followed this business for a living for years, and are thoroughly acquainted with all the intricacies of the river, both as to the dangerous parts and to where the best fishing is to be had. They are intelligent and desirous of giving every comfort to their employers, doing all the packing over portages, putting up tents, making comfortable beds, and doing the cooking—in fact are ever on the alert for your comfort. Much of course depends on the head guide, who is chosen on account of his experience and capabilities.

Tourists will find it to their advantage to procure their supplies here, as it will avoid customs troubles when coming from foreign parts, also the disappointment of goods being delayed or lost in transit.

The stream is protected by the Provincial Government, and a license fee of $5 per man for the season is charged to visitors whose homes are outside of the Province of Ontario, and permits are procurable from me.

Mr. McKirdy will at all times be pleased to answer any communications from intending visitors.

Mr. Thomas Johnson, of Winnipeg, writes that upon communicating with Mr. Matheson, manager Hudson's Bay Co., Nepigon, stating how many there are in the party, "the company will supply canoes that hold from four to six people, Indian guides, grub, and in fact everything except yourselves and fishing tackle; they will furnish the latter if necessary. The favorite flies used are Jock Scott, silver doctor, royal coachman and medium-sized salmon flies. You get off at Nepigon Station; the hotel and Hudson's Bay Co 's stores are near the station and right at the river. You can start fishing immediately you embark at Nepigon, and you fish from the canoe. As I said previously, write Mr. Matheson, giving him the number in the party, and all you will require to do is to eat, sleep and cast your fly on the waters of the most magnificent trout stream known to the fishing world." THOMAS JOHNSON.

MEN I HAVE FISHED WITH.

XLVI.—Sergt. E. L. (Jack) Sheppard.

JACK SHEPPARD was one of the best known guides in that portion of the Adirondacks which includes the Fulton Chain and Brown's Tract, for many years, until he removed to Oregon a few years ago. I somehow missed him in my earlier Adirondack trips, and first met him in June, 1882, and spent nearly two months with him. I had been appointed Ichthyologist of the Adirondack Survey by the Hon. Verplanck Colvin, the superintendent of the survey, and he said: "I will detail Jack Sheppard for your especial service, to go with you to collect fishes and aquatic reptiles and crustaceans. He is a steady sober man, who knows how to reach every little out-of-the-way pond where you may find some fishes that are overlooked by sportsmen, and as there never has been a monograph on the fishes of the Adirondacks, I give you my best man."

The surveying party assembled at Blue Mountain Lake, and the start reminded me of an old-time wagon train leaving Leavenworth for Santa Fe, in the fifties. Batteaux for the impedimenta, which comprised provisions, tents, instruments, personal necessities, etc., were loaded down. How many of them were in the train it is impossible to say to-day, but the lighter boats went on ahead through the Eagle Chain of lakes, through Raquette and the Fulton Chain, with their numerous carries, to the rendezvous at the Forge House. There the different parties went their ways; Jack and I went ours. I had all kinds of fishing tackle from fly to bait, with hooks to accommodate any fish, from 3in. to 3ft. long; and gill nets with meshes of different sizes, and a Baird minnow seine. I also had a five-gallon copper tank filled with alcohol, loaned by Prof. Baird, U. S. Fish Commissioner, on condition that all specimens caught should be sent to the Smithsonian Institution.

The gill-nets were used with discretion. We were not after game fishes, nor any others in quantity, and we never took a trout or a pike in them, but we did get an assortment of suckers and bullheads in the nets. We did but little camping on this trip, for Jack knew just how far it was from one "camp" to another, and he reached it every night. These "camps" were really places of public entertainment, since the name of "hotel" has been usurped by every wayside inn and the good old name of tavern has fallen into disuse, there is nothing to take their places. A "camp," in Adirondack parlance, may be a shack where the landlord can accommodate a dozen people, or it may be a hotel, or the summer residence of a multi-millionaire where he entertains his friends. I ask to be believed when I say that we never patronized the latter sort of "camp." We might have done so if we had been sufficiently urged, because mere mortals cannot always resist temptation; so Jack and I stopped at the "camps" where the host had one charge for entertaining the guide and another for catering to the sportsman. We may have missed the bay birds sent from Long Island, the chablis and burgundy, but we had the invigorating ham and eggs, the muscle-building canned corned beef from the Chicago abattoirs, and the ½ gal. jar of mustard pickles which is set on the table when it is opened and never removed until the last bit of cauliflower is gone. A peculiar bit of Adirondack table decoration is the original package in which mustard pickles come; never would the Adirondack "camp keeper" remove these to small, clean dishes. Perhaps he hopes that a fork may not be long enough to reach the last onion; and the jar is clean outside, at least, and a quart jar of mustard pickles well daubed inside is, like Mt. Marcy, a peculiar bit of Adirondack scenery.

Jack showed me the tree where a pair of three-toed woodpeckers lived, and we saw the birds and heard the young clamor for food. This bird is rare everywhere, and Jack said that this pair had nested in the same tree for several years, and that some bird collectors would like to know of the nest. This led to my taking notes of the birds and animals seen, and on looking them over I find the following: "No gray squirrels in the woods, red ones plenty, and some chipmunks; saw six deer on the carries and near Old Forge, one track of bear, one mink, two muskrats, one porcupine and several rabbits; bats frequent on Long Lake, but seen nowhere else. Alvah Dunning had five otter skins." So much for mammals, and this is not intended to supersede "Mammals of the Adirondacks," by Dr. C. Hart Merriam. Birds were thus recorded: "Robins plenty, but only where there was a house and cleared ground. Rare birds were: wood thrush, catbird, kingbird, song sparrow, nuthatch and olive-sided flycatcher. The white-throated sparrow was plenty, and also small woodpeckers, but only three flickers, or golden-winged woodpeckers were seen. In the swamps blackbirds are numerous, and the bluejay was frequent. Of birds rarely seen were kingfishers, crows, one raven, one flock of crossbills on Seventh Lake; one flock cedar birds, one humming-bird on Fourth Lake; one sandpiper, one woodcock, one loon, two blue herons, four bitterns and three hen hawks. Gulls were common on all lakes. Heard seven owls, and saw three nests of the osprey, which is locally called 'fish-hawk'."

"What's the use of such a list?" Jack asked.

"No use whatever to you, but a few men will be interested to know what life is to be seen in these woods in summer. I never got over my disappointment at the absence of singing birds and other visible life the first time I came up here, but it's the same in all primitive forests. As a boy I could stroll about the farms, and see more life in an hour than I can here in a month I mean small life, pigeons, squirrels, rabbits, quail and all kinds of life except deer and bear. The silence of a great forest was oppressive to me at first."

"Yes," said Jack, "life is more plenty on the farms at the edge of the woods and about the small settlements, and the birds and animals there are not as shy as they are in the big woods where it is so still, and they seldom see a man." We were in the Brown Tract Inlet, a very narrow and crooked stream, and suddenly came on a wood-duck and her brood. The young scurried into the reeds while the mother took wing. "There," he said, "that's what you don't see in the streams about Albany, and there's a black duck and brood just ahead."

"Jack," I replied, "as a boy about Albany I've seen broods of wood-ducks every summer, some seasons half a dozen of 'em, but in Wisconsin I've seen broods of different kinds of duck by the hundred."

Then we compared notes and found that we had hunted and trapped over nearly the same ground which I described in FOREST AND STREAM of Oct. 24, 31 and Nov. 7, 1896. Then we began to get acquainted. Jack and Sam Dunnakin, then, and perhaps now, a guide living on Fourth Lake of the Fulton Chain, had spent three seasons hunting and trapping on the Flambeau River, Wisconsin, about 100 miles north of where Antoine Gardapee and I had trapped some thirteen years before. They were there in 1867–68–69. Jack and I tried to converse in Ojibwa, or "Chippewa," as the white man spells it, but we did not get along well; what I had picked up in Wisconsin had been so replaced by the dialect and pronunciation of the Crow Wing branch that we found plain, every-day English, as spoken by the American branch of the family, was best suited to communicate our thoughts.

At the carries Jack noticed that I wanted my pack made up first, and would get off some time ahead of him, and the reason was that the silent forest was before me and I could have a chance to observe any life that came in the way, and if the carry was less than a mile long I would be over it before he started with his noisy boat; for a man can't carry a long Adirondack boat, with the oars lashed in it, bottom up on a neck-yoke, through the woods without alarming every bird or beast within a mile. His head is in the boat, which is tilted at an angle of about 45° to enable him to see, and the stern hits fallen logs which he steps over, or touches a tree on a short turn, the oars rattle, and there is a great racket as he takes the boat over the carry or portage. To me it is as much satisfaction to see wild animals when you come upon them suddenly, and could shoot them, as it is to kill them, especially in the close season.

Stepping softly as possible over a carry, I came suddenly on a family of ruffed grouse, the "partridge" of New York. The young could not fly, and at the alarm note of the mother not a chick was to be seen. She did not attempt the familiar bunco game of pretending to be wounded to induce me to follow her, I was too close to her young, who were almost under foot. She attacked me, and as I held out a foot to her she struck at it like a game cock. She hit my shoe several times, with wings partly spread, and giving the alarm note all the time. Then, having enjoyed her display of motherly devotion sufficiently, I moved off and left her in possession of the field with all the honors. I thought: "Bless your dear motherly heart, I would not harm you nor your precious chicks—at least not before September." If Jack and his noisy boat had been 100yds. behind me that mother partridge would have had her family hidden long before we came in sight.

The grouse were numerous, and for the next fortnight I came on at least a dozen broods without leaving the trails between the lakes. As they became able to fly into the lower branches of the trees at the warning cluck of the mother, it was very interesting to see the little fellows turn their heads to one side to inspect the first man they had ever seen and place a mental photograph of him in their rogues' galleries. In a wilderness this bird when adult takes refuge in trees when alarmed by man or dog, and can be shot at until killed. But the same bird near an old settlement, such as my boyhood covered, knows a trick worth two of that; it leaves the ground like a rocket and puts the trunk of tree between it and the shooter, and away it goes, to our great disappointment. This is the effect of education, and those gentlemen who deny reason to everything except man may grind this fact, for it is a fact, between their molars.

We stopped a while on Big Moose Lake, where Jack had a cabin well stocked with canned goods and other stores for the Big Moose Club of twelve members, when they wished to visit the lake. As we entered the lake an osprey, which had a nest in the top of a dead pine half a mile away, either bid us welcome or scolded us for intruding; I did not speak their language, and so can't say, but we went on. It is a sad commentary on human nature that along many of the waterways where these infrequent birds had their picturesque nests there were signs: "Don't shoot the fish-hawks." The Adirondack guides put up these notices and were willing that the birds should take their toll of trout, bass and suckers in order to see them lend life to the landscape. This of course, is pure sentiment—merely sentiment, for the bird is not useful, yet its flight is beautiful and its nest is a feature in the landscape. What would life be worth without sentiment? Nothing to untold millions of us. Our love of wife, home and family is merely sentiment. Millions of

men have given their lives for what might be called sentiment, and in fact every move a man makes outside of the earning of his livelihood, is inspired more or less by sentiment. But sentiment varies with the individual.

An instance of this fact is apparent in the intellectual makeup of Jack Sheppard. He said: "I don't see what some men want to kill these fish-hawks for unless to brag of their skill with the rifle, if they happen to hit one; there are not enough of them to injure the fishing, and most men like to see them sail in the air when no other living thing is in sight, or to see them hover and dive for a fish." That was a bit of pure sentiment on the part of Jack Sheppard that was a credit to him, but compare the following story.

"Jack," said I, as we sat in the cabin door on Big Moose, enjoying the moonlight, "Mr. Colvin told me about the panther, which you killed while hunting partridges with a light bird gun. He said that you came suddenly on the animal at close quarters, and gave it one dose of No. 8 shot and hurt it badly; it jumped for you and bit the muzzle of your gun before you pulled the trigger and let in a new light into its brain. Is that about the way it happened?"

"Yes, that's correct; I blew the top of his head off with the muzzle of the gun in his mouth, and it ruined the gun; it cost me more that the bounty which the State paid me for killing the panther. I sold the gun to a man for $6 and he had the muzzle cut off where the panther's teeth had bent it in."

Mr. Colvin had not told me this part of the story, and I turned to get a good look at the man who told it in such a matter-of-fact way. He was looking out over the lake, watching the moonlight play on the ripples in a most unconcerned manner. The panther incident was dramatic, and I chewed it over several times before I blurted out: "Jack Sheppard! You don't mean to tell me that a panther bit the muzzle of your gun and that you sold that gun, do you?"

"Yes, why not? The gun was good for nothing unless the muzzle was cut off too short for my use."

Again I looked at the face of my guide, in the moonlight, to try to learn if he really meant what he said or if he was only jollying me. Men of the woods are usually serious men, and not much given to having fun at the expense of the men who may be in their care, and I decided that Jack had merely told a straightforward story of the panther fight and the disposal of the gun. It was the entire absence of sentiment in this case which caused the doubt. I could not reconcile it with his sentimental ideas of protection of birds whose only use to man was that they added to the landscape, a case of pure sentiment.

After turning this over as we smoked in silence for a while, and I began to substitute myself for Jack in the fight, I began to get belligerent and said: "Jack Sheppard! If such an adventure had happened to me that gun would be pensioned and put on the retired list; it would hang on my wall and be cleaned each year from a pension fund of my own, and no millionaire in America could buy that little gun while I was on top of the earth."

That was a bit of my sentiment, and it serves to show how sentiment differs in individuals. But, as a rule, the men who live constantly in the woods, hunting, fishing and trapping, have little of the sort of sentiment which induces the men who do these things for occasional recreation to preserve mementoes of their deeds. The woodsmen look at it in the light of every-day business affairs. An instance of this is shown in the following conversation:

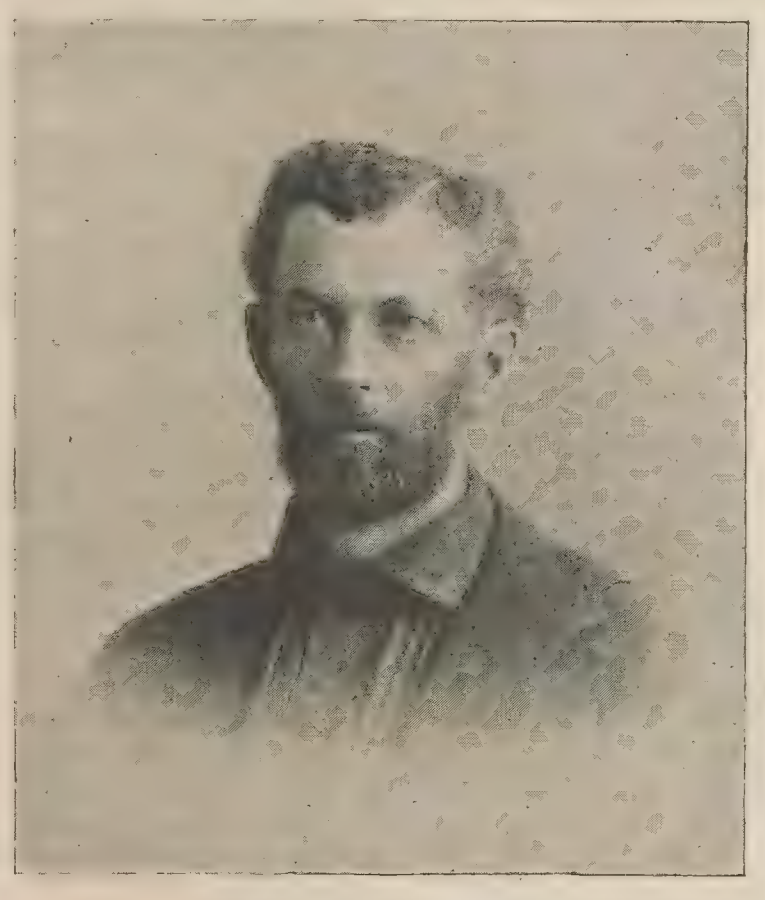
"Jack, I'd like to kill a bear next fall before they go into winter quarters. Can't you manage to get word to me when to come up, say when you find a bear feeding and ranging about some lake, which you may or may not have baited? I couldn't possibly get off for more than a fortnight, but could spare that time."

He gazed out on the lake and the rippling moonlight awhile and then asked: "What do you want to kill a bear for?"

"Because I've never killed one, although I have seen several in the woods; and once while I was sleeping alone a bear came into my camp and ate some trout which had been cleaned and salted for breakfast; and then carried off a 2qt. tin pail nearly full of butter. I have killed much game—from the little teetering sandpiper to a buffalo—but I lack a bear, a moose, a salmon, an elk and a swan to round out the list of American game that ranges east from Kansas and from Minnesota to Louisiana."

Another contemplation of the beauties of a full moon on the lakes, and then: "I don't see what you want to come up here to kill a bear for. It would be an unprofitable trip. There's your car fare, my pay and expenses for two weeks, and maybe you wouldn't get a bear in two weeks. Of course, you might get one the first day, but but you know that there's nothing sure about any hunting or fishing trip. You couldn't do it much less than $100. The skin would be worth $10 to $15, and the meat, if you could get it out of the woods and take it to New York city, might bring as much more, sold by the carcass in the markets. Again, the bear might be killed where the meat could not be got out of the woods by two men. I don't see how there's anything in it for you, if you did come here and kill the biggest bear that ever ranged these woods; do you?"

It was my time to contemplate the mellow scintillations of the moon on a lake, which had tiny ripples on its bosom, made by a breeze so delicate that we scarcely felt it. Jack was undoubtedly right from his point of view, which was a purely business one. Business has hard and fast rules, governed by arithmetic, algebra, geometry and other abominations. It is the antithesis of sentiment, and my desire to kill a bear was entirely sentimental. I had no grudge against any individual bear, and I was cogitating on my desire to kill one of the tribe. If a man had stolen three trout and a couple of pounds of butter from me, I certainly would have no desire to kill the first man I met, even if he were the culprit. Lawyers are said to have a rule that if their case is bad they should "abuse the plaintiff's attorney"; this may not be quoted correctly, for I am not a lawyer, but it leads up to what I said. After gazing at the moonlit ripples, and wondering if a bat had crossed them, or if a brighter flash had caused me to wink the other eye, I formed my column for attack in this way:



"Jack Sheppard, you sold a gun for a few dollars that, if it had been mine, disabled in honorable fight with a panther, no money could buy. In my early life I cared as little for trophies as you do, and a pair of buffalo horns, saved somehow by accident, and a pair of crust snowshoes are all that I have as mementoes of my hunts. If I could come up here and kill a bear and have its skin for a rug on the floor of my den I would feel very tall, and would expect some fellows whom I know to take their hats off to me. The cost of this has not been considered. I go into a friend's den; there is the skin of a tiger he killed in India, a tobacco pouch made from the foot of a swan killed on Currituck Sound, with date written on it. Dining with another friend, I am shown a dilapidated fly with which he took a 35lb. salmon on the Restigouche; it is in a frame that cost more than the salmon was worth; and he points to the scalp of an Indian which he took when his party were hunting buffalo and were attacked by the Sioux. These things make me feel small. Do you understand that? The bear that I want to kill is merely for brag, if you see fit to put it down that way; and I would not mind spending $100 to have a bear-skin rug on my floor, if I had killed the bear."

Jack listened to this, and then made the following proposition: "I might trap a bear, and hold him until you came up to shoot him," when I interrupted with: "I will not listen to any such proposition; let's talk about something else. I believe that we have two new species of suckers that are unknown to science, and I'll get some more of them in the morning while they are spawning in that stream by Pancake Hall, and then we'll go over to Long Lake and see what fish it is that they call a muscalonge there."

Morning came and I got the suckers, and later described and figured them in my monograph on Adirondack fishes, which was printed as an extract from Supt. Colvin's twelfth report of his survey. The osprey, from her nest across the lake, screamed at us, and I told Jadk that I had learned enough of her language during our week's stay to know that she was giving her opinion of a man who would propose to trap a bear for another to shoot, and no doubt that was what worried her.

We went down into the Fulton chain and dined at Bennett's, on Raquette, went down that lake and river, carried into Forked Lake, and again down the river to Buttermilk Falls, where a short carry took us around them. Murray always shoots these falls in his canoe, but no one else does, and we thought it best to carry around. After this a half mile carry brought us into Long Lake, and to Kellog's in the evening.

It so happened that when we reached the hotel the mascalonge question was being discussed by several sportsmen and

SERGT. E. L. (JACK) SHEPPARD.

guides. All with one exception held that the large fish in Long Lake were mascalonge. One of the sportsmen said: "The fish certainly grow bigger than pickerel, but I've seen mascalonge, and they're different." That was his sole argument.

"I tell you," said another, "the 15-pounder that I caught to-day is a mascalonge; no pickerel grows as big as that."

The fish was in the kitchen, and Jack suggested that we should see it, and we did. I introduced myself, explained my mission and said: "Gentlemen, the fish is neither a pickerel nor a mascalonge. Its proper name is pike, although it is miscalled by the name of pickerel in most places. The pickerel proper has a black network on its sides, and seldom exceeds 6lbs. in weight. The pike and the mascalonge both attain a weight of 40lbs. or more, and are distinct fishes. I am satisfied that there is not a mascalonge in the Adirondack waters to day, if they were ever here." And with a brief description of the differences between the mascalonge and the fish before us I closed the lecture on ichthyology to the satisfaction of one of the strangers, at least.

In the morning we trolled with both spoons and shiners and took some pike of 4 to 6lbs., but these were too large for the alcohol tank and we gave the fish to some people who lived on the lake. It's uncommon for an angler to complain that his catch is too large, yet anglers have made this complaint against the brown trout, and they didn't want them for small alcohol tanks, as we did. Finally we took a couple of small pike and then searched for dace, darters and those small deer which the ordinary angler classes as "minnows."

We went back by way of South Pond, Mud Pond and Minnow Pond. (What mean, "ornery" names all original settlers give to beautiful lakes, islands and streams. "Hog Island" and "Hog Neck" occurs many times on the coast of Long Island, while "Round Pond," etc., is frequent in the Adirondacks. They had no poetry in their souls.) Then we carried into Blue Mountain Lake, a handsome bit of water; but it then had no trout in it, at least not enough to encourage a fellow to cast his flies for a week in the hope of taking a rise out of one.

Later in the year I found the pickerel (*reticulatus*) in the waters about Meacham. On our return we fished Little Moose and Panther lakes. Please note the individuality of these names as contrasted with "Long Lake," "Trout Pond," etc. On the latter lake Jack called my attention to the trees which fringed the lake. There was a distinct line of them at a uniform height all around the lake; the line was 5 or 6ft. above the water, and below it the foliage was dark. "It looks queerly," said I. "There are several kinds of trees there, and that line is level and almost continuous. I don't remember to have seen anything like it."

"Can you guess what it is?" Jack asked

"No, I give it up; but put me over to the spring hole you spoke of, and while I pick enough trout out of it for our supper you may give me your theory of how the glaciers marked these trees a million years ago while the trees and underbrush are not fifty years old."

It was now Jack's innings, and he played it for its full value. He put the boat outside a spring hole, and after some experimental casts and changing of flies, I reeled in and basketed a fair trout; he said: "For a man who has hunted and trapped and been in the woods as much as you have, I am surprised that you did not at once see that this lake was a great winter resort for deer and that they trimmed the bushes as high as they could reach from the ice, and so left their mark all around the lake, and that mark remains for years after." Just then a big trout struck my coachman and gave a royal fight. When Jack landed him he said: "Three pounds, if he weighs 1oz.," and his estimate stands, for it is useless to be too awfully exact except in "record" catches. The big trout ended our fishing and the argument about the height that the deer can browse on Panther Lake.

Jack, he has been called "Jack" since childhood, although his initials are E. L., was born in Greene, Chenango county, N. Y., in 1837, and being of a roving disposition wandered off to Ohio, Tennessee and Missouri, bringing up in Kansas in 1856 during the troubles. He then went to Pike's Peak as a Government teamster during the gold excitement, but had to return to New York on account of his health and went to the Adirondacks in 1859. In August, 1862, he enlisted in the 117th N. Y. Infantry, was made Corporal and then Sergeant. Was mustered out with the regiment June 8, 1865, having been on duty every day of his service. Was at the operations in Charleston Harbor and those against Petersburg and Richmond in '63 and '64, and at the capture of Fort Fisher. The recruiting officer put his name down as "Jack" Sheppard, and it so appears in the Adjutant-General's office, from which I got the above record.

After the trapping experience he returned to the Fulton chain in 1870, but some eighteen years later he sold out his cabin at Big Moose and built a small steamer on the Fulton chain. About four years ago he went to Riddles, Oregon, where he now lives. For the excellent picture of this noted woodsman I am indebted to Mr. A M Church, the well-known taxidermist of Boonville and Old Forge, while facts and dates were obtained from the proprietor of Higby Camp, on Big Moose. Mr. Church writes: "You cannot say too many good things of Jack Sheppard." FRED MATHER.

MY FIRST TROUT.

THE remark is often made to an angler or sportsman that there is more in the anticipation of a trip than in the reality. And yet what pleasure one derives from the memory of a trip! With the thermometer 20° below Zero, the wind blowing a gale outside, sucking up the soft-coal sparks through the chimney of the grate fire, as if coal cost nothing, what a pleasure it is to smoke one's pipe, and in the recesses of an easy chair recount the moments spent on some bygone trip of years ago along the banks of a bubbling brook, in the leafy month of June. The singing of the forest birds, the swaying limbs of the fragrant spruce and pine as they gently nod greetings to the summer breeze, the noisy, tumultuous brook, as it speeds its way onward, murmuring to the sea, all return vividly to one's mind

You think of your first trouting trip. You go to the tackle store, and under the tutelage of your friend Will, who already has been initiated into the mysteries of the Maine woods and lakes and who has become well versed in trout lore, you select your rod. Your fishing up to date has been circumscribed by a pole, a line, and a bunch of worms on a hook. Well, that was all well and good, but you are now to tread in the footsteps of the angler sportsman. You must catch trout with a sportsman's tackle and in a sportsmanlike manner.

The obliging salesman deftly joints up a rod and hands it to you. It is so unlike the alder pole you know so well that for a moment you hold the rod in outstretched hand and stare at it, as the tip vibrates under the beating of your pulse.

Will quickly comes to your rescue, and reaching for the rod steps one side into the cleared space, and deftly swishes it backward and forward. I watch him closely, and am a little nervous lest the rod should go to pieces in its bended travels back and forth. The salesman in the meantime has put together a rod which he explains has a little more spring to it and is a little lighter, two requisites seemingly altogether unnecessary. However, under Will's advice, I take the heavier rod, for we are going to Maine, and may strike some large fish. Then comes the matter of lines and reel, then the leader and flies. I am distrustful of the leaders, they look so light and frail; but Will's opinion and word go, and the leaders are laid upon my pile of plunder, Now for flies. Red Hackle, Parmachene belle, Professor, Seth Greene, Moth Miller, Black Gnat and what not, are called for by Will. It's a new experience to me, and I wonder at the assortment but say nothing, for Will is an old hand at trout and he knows what's what.

A fly-book, a landing net, and a creel, make up the burden of my tackle purchases. I look at the little heap as the salesman deftly arranges them preparatory to tying them up, and draw upon my bank account deep down in my pocket.

My list yet calls for a rubber and woolen blanket, a heavy pair of hobnailed shoes, and sundry small impedimenta indispensable for the trip, as we are to camp out and sleep in the virgin forests of Maine, and must be proof against rain and evening dews.

The hour of our vacation has arrived, and with a light heart we board the boat for Boston. At odd moments Will gives me homeopathic doses of advice and bits of information—pointers, in other words—regarding our trip, to which I greedily listen, and safely store up in my memory.

We reach Boston in due course, and taking the train by sundown are at the end of the railroad line, where we take stage for Solon, arriving in time for supper. We are up early, and again take stage for Moscow, which, as Will puts it, is the last we will see of civilization for some days. Here we unpack our trunk, a small affair, used jointly, and don our corduroys, bundle our blankets, hire our guide, and are ready. It is near noon, so we decide to dine at Kearney's hotel. I often wonder if Kearney is yet in the land of the living. We take his son Frank as a guide and off we trudge for the wilderness. We cross the Kennebec on a rope ferry and make tracks for Kearney's camp, on the banks of the first Carry Pond. It's a smooth trail, and after an hour's tramping, in an atmosphere laden with the balsamic exhalations of the trees, we reach a clearing through which we see the lake. In front of us is a cluster of cabins, and Frank's

vociferous greeting is answered by Chester, who comes out of the cook-house, elbow-deep in flour, and greets us with a hearty welcome.

Our quarters are pointed out to us, and we quickly divest ourselves of our packs. At the suggestion of Chester we decide to try the middle pond, which is but a short carry after we cross the lake in front of us. We are soon there. I joint my rod and string it, tying my leader and fastening my flies under Will's direction. Frank bales out the boat, we jump in, and he soon lays us alongside of a bunch of lily pads. He tells us that there's a trout hiding under each leaf. Will insists that I shall start in, I, on the other hand, preferring to watch and imitate him. Of course I am awkward, snare my leader, and commit sundry errors, swishing my flies dangerously near Will's and Frank's eyes, and finally catching them somewhere near the nape of my own neck. But, "there's lot of time," Will says, "so go slow, and don't be nervous." I finally lay my line out upon the water, dropping the flies near the lily pads, when presto! two of my flies disappear. "Strike!" says Will; but I am slow, and the trout spit out the flies before they get a taste of the barb. Will now makes a cast, and like a flash his flies are taken, the three of them. His wrist turns, the rod bends and his line straightens out. Whirr-r-r goes his reel. I watch him with open mouth and staring eyes. The fish weigh about ½lb. each, I surmise, as the net is finally lifted into the boat with its flapping burden. I make a try, and although still awkward I strike a fish and jerk him clear of the water and into the boat. "Stop that," says Will, "you are not fishing with a bean-pole. You don't want to jerk the heads off the bodies of the fish. When your fly strikes the water, the instant you see the slighest commotion of the water quickly turn the rod with your wrist. Don't yank. All you want to do is to set the barb, but not to pull the fish bodily out of the water. To attempt to do that with a heavy fish will mean a broken rod." The fish are plentiful, and as three fish frequently strike and are hooked, it looks as if Will would soon fill the boat. We take off all but one fly and keep only those fish that are hurt badly, returning the rest to the water. Will spends most of the time coaching me, occasionally making a cast to illustrate a movement.

What an enjoyable afternoon that was! How vividly the lake and its surroundings are impressed upon my memory. My first attempt at fly-fishing and the bottom of the boat fairly glistening with the rainbow hues of the trout, tastefully arranged by Frank. It's near sunset. We have enough fish for all in camp for supper and breakfast. We journey back. Some newcomers arrive in camp about supper time, hungry as bears. We hear in the adjacent cook-house the sizzling of the trout and sniff the aromatic flavor of coffee.

Chester quits his cooking long enough to blow gigantic blasts upon his horn, a warning to those out on the lake that trout awaits them in the pan.

It's twenty years ago, but I remember yet how good those trout, fresh from the water and fried to a turn, did taste. And I can distinctly remember with what inward horror I regarded our guide Frank, when I saw him "pass up" the trout, and, reaching over, help himself plentifully to pork and beans, Not that Maine pork and beans are not good; oh, no! but it seemed like ordering corned beef and cabbage on a bill of fare when canvas back duck can be had for the same price.

We spent three or four days at Chester's camp and enjoyed every minute of our stay. We could have stayed with much pleasure until frost and ice came, but we were on a tramping trip and had to see more of the Maine woods before we returned. We regretfully parted with Chester and marched back to Moscow. We staged it up to the Forks of the Kennebec, and there taking a new guide, Sam, laid in a supply of provisions, had them toted to the foot of Lake Moxie, appropriated a boat we found, and started for the head of the lake.

Reaching our destination at sunset we landed, and decided to pitch our tent alongside a brook. It was hustle and hurry to get things in shape before nightfall; boughs had to be cut, bark peeled, wood cut for the night (it was in September and the nights were cool), and last but not least our supper was in order for preparation. In due course our lean-to was in shape, wood piled up, and we sat down to a supper of bacon, potatoes, coffee and bread. We had to catch our trout on the morrow.

We prepared for the night, wrapped ourselvss in our blankets, spreading our rubber blankets first under the layer of boughs and were soon asleep. It was my first night in the open air. Bu-r-r- but it is cold and wet. About 2 o'clock the rain came down in torrents, the wind driving it into our shelter, making things disagreeable in the extreme. Sam was up attending the fire, and soon had it blazing in spite of the rain. We built no trench around our lean-to, and as the ground sloped slightly we found it convenient to get in on our part.

We cooked under difficulties, and as the storm kept up until noon we roofed our shack with rubber blankets and made the best of it. The rain stopped and out came the sun in all its glory. An improvised rack soon served to hold our wet blankets, etc., to the rays of the sun, and between the fire and sun we soon got over the damp feeling.

Eating a hasty lunch we started up the brook to try our luck. Mine was soon decided, for a back-cast snarl on an overhanging limb soon snapped my rod at the second joint, below the ferule. I wended my way to camp, and having no tools I patched the break as best I could, fortifying it with a covering of thin wood and black thread industriously wound around. I had enough of brook fishing; I would try the lake. So, taking the boat out into about 10ft. of water, I dropped the anchor and began to cast. My fly had hardly reached the water when it slowly and deliberately disappeared. Something took it, but it was taken so slowly that I was puzzled. In my anxiety I forgot Will's advice, and am afraid I "yanked," for instantly my rod went in twain at the break, the tip and ferule of the second joint falling in the water.

I reached for it, laid it in the boat, and then by hand began to pull in the rest of the line, never dreaming but that the hook was empty. Lo and behold, as I commenced to haul in the 9ft. leader it pulled taut. I had pulled weakfish and sea bass in with a hand-line and I instantly followed the same tactics, landing a trout in the bottom of the boat that made my eyes bulge, my heart beat, and my hand tremble. As it lay before me I could hardly believe my eyes. But there it was, with the brown hackle fly imbedded in its jaw.

Elated! I was beside myself with excitement. I made up my mind that there must be more in the lake. I would return to camp, resplice my rod and try again.

Reeling in my line I weighed anchor and reached the shore. Sam, who was busy at the camp, was elated at my luck. I had no scales, but Sam, taking a measure from his pocket, measured the length as 21in.

I busied myself with my rod and soon had it spliced again, much clumsier but far stronger than before. I hurried out into the lake and cast again—no rise. After several attempts down went my fly again. I struck—but carefully this time. Whir-r-r- went my reel and away went the fish. What with my inexperience about keeping the line taut, reeling in and giving line, and in addition the rod, because of the splice, bending all kinds of funny shapes, I had a very bad half hour indeed. My fish was well hooked, and after much struggling and effort on my part I gradually drew the fish near enough to get my net under him, when the fight was over. How proud I was! I had played and netted my trout in true sportsmanlike manner! He was a duplicate of my former one. What would Will say when he returned to camp and saw those two giants! It was near supper-time; I pulled up anchor and went in. We wanted fish for supper, but I would not have these fish disturbed until Will had seen them. When Will did return from the brook with a couple of dozen fingerlings it was a sight to see him stare at my catch, and it was some time before I could convince him that I had caught them.

We tried the same spot the next day, but the fates were against us. We could do nothing. We broke camp and started from the lake, stopping and taking a run up Bald Mountain. Returning, we rowed across the lake, hauled up our boat, and tramped to Currytunk, a settlement then consisting of but a few houses. Sam promised us a hospitable farm-house, plenty of good fodder and some fishing. We arrived at our journey's end about 2 o'clock, and in half-an-hour sat down to a farm-house dinner, which we long talked of. Our early breakfast, followed with our tramp up the mountain and our walk to the settlement, put a razor edge upon our appetite.

Near the home was a small lake, called Clear Pond, the water being as transparent as crystal and the bottom of the lake being of white sand At sunset we tried our luck and landed enough trout for our supper and breakfast, with some to spare for the family. They were beautiful fish, all of the same size, about 9in., their scales like oxidized silver and their spots hardly discernible. Their flesh was almost as pink as a salmon's.

Our trip was at an end. The next day we took the stage for Moscow, there we once more dived into the recesses of our trunk, donned our store clothes, and in due time were passing through classic Boston on our way to New York.

That was over twenty years ago. I have fished much since, but I have a vivid remembrance of no such trip as my first one in the wilds of Maine, after the fish of fishes—the *Salmo fontinalis*. CHARLES CRISTADORO.

THE OPENING OF BEAR BROOK.

DUNBARTON, N. H., June 9.—*Editor Forest and Stream:* At the last annual meeting of the Hillsboro County (New Hampshire) Game and Protective Association, Hon. Wm. C. Clarke, Mayor of Manchester (who is one of the owners of the Manchester *Mirror and Farmer* and edits the department under the heading of "Sportsman's Budget"), spoke against the custom of closing certain trout streams in New Hampshire for a term of years, saying that no practical benefit came from so doing, and that it was simply advertising such brooks. He spoke of Bear Brook, in Allenstown (which is considered one of the very best natural trout streams in the State), and predicted that on the opening of this brook (which has been closed during the past three years) on June 1, there would be such a rush of fishermen that the supply of trout would soon be exhausted, and that before the end of the present season Bear Brook would be in a worse condition, as far as the supply of trout were concerned, than when it was closed three years since. To illustrate the correctness of Mayor Clarke's prediction, I inclose this report from the *Mirror and Farmer*. C M. STARK

Tuesday, June 1, marked the "opening" of Bear Brook, the Allenstown tributary, which has been closed to the disciples of Walton for three years, and the brook has seen sights since early morning that surprised the natives for miles around. The eyes of the fishermen who love and obey the law were bulging in anticipation, and the rod devotees pictured to themselves the deliciousness of pulling speckled beauties from the dark pools, one after the other, until the arm grew tired and the basket would positively hold no more. This fantasy would do very well as a pipe dream, but one Manchester man who left for the brook at 11 o'clock Monday night, and arrived there at 3:30 o'clock Tuesday morning, says that nothing but the plain, hard facts will do for him. He came back with a dozen trout (which, if the figures were ascertainable, cost $3 apiece), and a story.

When the Manchester fisherman reached the brook, in one place he found seventeen teams hitched up to a fence, much the same way that the United States cavalrymen would tether their horses when camping out for the night. On pushing forward to the brook there were at least 600 men on both sides of the stream. Men in advanced stages of drunkenness were numerous.

Paths were well worn up and down the sides of the brook. Men were fishing by the aid of torches, and campfires were numerous all along the banks of the stream. The scene resembled an enormous gypsy caravan, unlimbered for the night. Further up the brook were camps of men who had come to remain two or three days. According to all reports there was wrangling as well as angling all along the stream, and if ever there was a merciless massacre of the beautiful trout, it was in this raid of June 1, 1897.

Furthermore, farmers in the vicinity of the brook state that for a month past the law has been unreservedly broken, and that the fishermen who made early visits Tuesday morning had simply the leavings of a gang of poachers who have followed the stream for thirty days previous.

Fishermen from all towns in easy reach of the brook made an early rush for that vicinity, some of the enthusiastic anglers arriving as early as Monday afternoon. All that night a steady stream of teams kept pouring out to the brook. Anglers were there from Concord, Manchester, Nashua, Epsom, Suncook, and probably scores of other places.

The fame of the stream had spread even to Boston, and fishermen from the Hub sought the Mecca of New Hampshire fishermen. The enthusiasts who lived too far from Bear Brook to reach it in teams flocked to Suncook on the cars, and the livery stables did a rushing business transporting these passengers to their tavern. Nearly all day Monday the rush continued, people arriving on foot, on bicycles, and in every description of carriages. It is estimated by some that about 600 or 700 if not more, knights of the rod and line angled for the speckled beauties. Most of those returning from the brook reported fair luck, but it is doubtful if there will be any sport left for future visitors.

Another account of the opening comes from Suncook as follows: The greatest excitement in fishing circles prevailed last night and this morning. Bear Brook and its branches are located in the town of Allenstown and Deerfield, and have been closed for the last three years by the laws of the State. They have been stocked by small fish during these years. Bear Brook has always been the best brook for fishing in this vicinity, and, although it has been protected by law, large strings of trout have been taken from it by those who dared run the risk of being caught.

Nearly every lover of trout fishing in the State was aware of the fact that the law was off to-day, and nearly all made plans to be present at the opening. As early as last week camps were set up on the banks and since that time fishermen have been constantly arriving. Last night all the highways leading in that direction were crowded with teams, and remained so all night. All the houses on the roads near the brook had the appearance of hotels doing a rushing business. The yards were filled with carriages, and the barns, sheds and all available buildings furnished shelter for the horses.

Corn barns furnished shelter for the fishermen who were unable to obtain better protection from the cold weather during their wait for the morning hours.

Teams had arrived from the neighboring towns, and scores of fishermen from Concord, Manchester, Pittsfield, Lowell, Exeter, Boston, Nashua, Lawrence and distant places came by train.

It was estimated that there were more than 500 fishing on the main part of Bear Brook at daylight, to say nothing of the smaller branches. The grand total would probably reach 1,000 or 1,200.

Good catches were reported and some of the trout would tip the scales to 2lbs. Only a small portion of those who went out have returned to-night. It is doubtful if this section of the State was ever before such a resort for fishermen.

We quote the news column of our contemporary, the Manchester *Union*, in furnishing the above report of the reopening of Bear Brook to public fishing after a close season of three years. In the first instance the account is doubtless a fair statement of the conditions as they existed along this brook June 1, and in the second place the opinion expressed, from an outside source, abundantly sustains one frequently given by the writer of this department, to wit, that 'the closing of public brooks for an extended period for the purpose of restocking them with brook trout fry is entirely wrong and against the judgment of about every practical angler I ever met. It means just such a state of things as has been shown the past week and which will continue for weeks to come—the "fishing to death" in one season of one of the best natural trout brooks in New Hampshire, placing it at the end of the season in as bad, if not worse, condition than when it was closed three years ago.

The late Commissioner Hodge had the right idea in regard to stocking trout brooks. He believed, and we fully agreed with him, that the wise and profitable method was to place fry in the brooks annually and let the fishing go on in its natural course. This method has given general satisfaction in the past and promises to, if followed out, in the future, but to close a brook for a term of three years, stock it liberally with fry every season while it is closed and advertise it to the world as an angler's paradise means just what is taking place at Bear Brook—an army of fishermen gathered there with a grim determination to fish the brook seven days in a week until every trout in it that can be caught by hook or crook is taken out. If there was any evidence lacking needed to prove the fallacy of the closing method it has been amply supplied by the Bear Brook case and we hope that the experiment, so disastrous to the Allenstown stream, will never be attempted again in this part of the State. And we do not believe it will be. Certainly two at least of the Fish Commissioners have expressed to me their disapproval of the idea, and as long as the present *personnel* of the commission holds, there need be little fear that the act will be repeated.

There may be anglers who want to mingle in such a Wild West Show as pitched its tents along Bear Brook June 1, but I beg to be excused from any such participation in so-called "sport," and shall continue to take my chances in the good old-fashioned way of fishing brooks that are stocked annually and fished annually in their season. And right here let me say that in my opinion the fishermen who have been most benefited by the closing and reopening of Bear Brook have been the "pot anglers." If they have not already got the cream they will have it before the season is over, and the business man and taxpayer who seeks occasional recreation and pastime in a day a-fishing will find little, if anything to reward his efforts at Bear Brook this season. There will be, of course, some exceptions, but it is good guessing that the market fellows have got, or will get, the "long end" of the Bear Brook burlesque.

And writing of market fishermen compels me to remark that this same gentleman and his brother, the market hunter, "ought to go." How quickly I cannot say, but none too quickly for the good of true sportsmanship and all that it implies. The market hunter and the market fisherman are reaping the benefits of the individual States and the United States in their efforts to increase and protect the supply of game fish, and in eight cases out of ten not one of these "potters" pays more than a poll tax and many of them no tax at all. How long the intelligent patient public will stand this sort of thing in New Hampshire remains to be seen. The Hillsborough County Game and Protective Association, at its last annual meeting this spring, declared itself arrayed against the wholesale slaughter of game and fish as it now goes on unmolested at the hands of the marketers, by endorsing the platform plank of FOREST AND STREAM, "stop the Sale of Game," and no doubt this movement on its part will be followed by others having the courage of their convictions. If the market hunter and fisherman of New Hampshire continues to receive in the future, as he has in the past, such generous treatment at the hands of the taxpayers of the State, and such splendid legal encouragement to fish and hunt for his own pocketbook, then the better class of sportsmen will either have to hang up their guns and fishing rods, or else adopt the advice of Dr. Quackenbos, "Hire grounds and pay for what you get." Which shall it be?

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

THE NE-PEE-NAUK CLUB CASE.

CHICAGO, Ill., June 12.—*Editor Forest and Stream:* The Ne-Pee-Nauk Club House, one of the finest in the West, is located at the west end of Puckawa Lake, Wis.

This lake is a widening of Fox River; in clear water it is about six miles long by from two to two and one half miles wide, is filled with wild celery and is a great resort for canvasbacks, redheads, etc At each end of the lake proper (the open water) are marshes three or four miles in length by from two to three in width. South of this lake and of its west end marsh is a ridge of high land about one mile wide; adjoining this ridge on the south is the Grand River marsh. The river (grand only in name, where its banks can be seen being only two rods wide) flows east through this marsh to Hickory Point, which is the end of the above-mentioned ridge, where it turns and flows north for one and one-half miles through Rice Lake into Fox River. For the three miles before reaching Hickory Point the river spreads out and forms Mud Lake, which is well-named, being all mud and wild rice, and almost impassable with small hunting boats, and with a varying width of from thirty rods to one-third of a mile. This widening was meandered along its low banks by the Government surveyors, and marked on their map as Mud Lake, while Rice Lake and the river itself below Hickory Point and to its mouth were utterly disregarded by the surveyors and not shown as having an existence on their maps.

Of this Grand River marsh (Mud Lake and Rice Lake) the club sought to make a secluded feeding ground for mallards by buying all the lands for about six miles from its mouth, and by keeping the members and every one else off to afford the flocks of mallards as they came down from the North a safe resting and feeding ground. It was to be a sort of duck reservoir, and by keeping out the market and pot hunters (who shoot with headlights at night), the club proposed to give the ducks a safe asylum, and cause them to remain and congregate in large numbers thus affording in their flights to and from this feeding ground good shooting on the adjoining marshes of Puckawa Lake to all shooters.

The first fall that the club successfully preserved this marsh the birds congregated there by thousands (even with the club members shooting them every other day from 9 to 4 o'clock), and every one had fine shooting in the neighboring marshes and lakes, the finest they had had in years. This preservation, while acknowledged by many as a benefit, aroused the ire of the native; and town meetings were held in the surrounding country, where the local orator descanted in eloquent language upon the outrageous infringement of their inalienable rights Stimulated by this vivid portrayal of their wrongs, the trespassers became so bold that the club sought the protection of the courts. The adverse decision of the local judge, who was running for reëlection, was not a surprise to the club, as it was, under the circumstances, expected; so they sought protection for their large investment in mud and wild rice by appeal to the Supreme Court of the State, never supposing that the court could find a mass of black muck and vegetation, with water in sight only in a few holes, to be a lake.

The mistake the club made was in bringing their suit for a trespass upon Mud Lake, which was, as before stated, meandered, instead of for a trespass on Rice Lake, which was not meandered.

In short, the Supreme Court of Wisconsin holds that a meander line is a boundary on a lake, even if it is not navigable; while the Supreme Court of the United States, in the case of Hardin vs. Jordan (140 U. S., 371), holds that such lines are not boundaries, but that the abutting property owners on unnavigable lakes own by converging lines to the center thereof.

Leading attorneys advise the club that this decision of the Supreme Court of Wisconsin would be reversed by the Supreme Court of the United States; but as it would cost about $2,000 and take three years to get a decision, the club has concluded to carry the matter no further, but to leave the native to the full enjoyment of his inalienable right to destroy the best feeding ground for ducks in the country.

A. H. SELLERS.

We append the text of the decision, as supplied by the courtesy of Mr. Robert Lamp, of Madison, Wis.:

STATE OF WISCONSIN SUPREME COURT.

NE-PEE-NAUK CLUB, APPELLANT,
vs
ARTHUR WILSON AND OTHERS, RESPONDENTS.

The action is in equity to restrain trespass to lands. The plaintiff claims to be the owner of certain lands in the county of Green Lake, which border upon a shallow body of water or marsh, popularly known as Mud Lake. It claims, by virtue of such riparian ownership, to be the owner of Mud Lake itself. The lands under Mud Lake are valuable only for the privilege which the lake affords for fishing and the hunting of wildfowl, and for such exercise and recreation. The lake is shallow, so that the lands are in the nature of marsh or swamp lands. In the summer time they produce large crops of wild rice and other vegetation, making a natural resort for wildfowl for a nesting and feeding ground. The plaintiff desired to keep this as a private preserve for a shooting ground and place of recreation for its members and guests. The defendants had, at various times for several years, hunted wild duck and other water fowl upon this lake, and asserted the right and purpose of continuing to do so in the future. The action was brought to restrain them from doing so.

The question controverted is the title to the lands under Mud Lake, whether the plaintiff owns them by virtue of riparian ownership, or whether the title is in the public. This depends on whether Mud Lake is a water course or meandered lake. It varies in width from thirty-five rods to sixty-five rods, and is about three miles in length. In spring and fall, and after heavy rains, the whole surface is covered with water. In summer, much of the water disappears, leaving some considerable expanses of water interspersed with mud, marsh and bog. In the places which are covered by water, rushes and wild rice grow luxuriantly. There are small openings of clear water, but no regular channel anywhere, except at a place called the Narrows, below the point where the alleged trespasses were committed. In ordinary stages of water it was navigable only by small craft like canoes or hunting skiffs propelled by paddles and pushpoles. What is called Mud Lake is formed by the expansion or dispersion of the waters of a small stream called Grand River. After the Grand River enters into and becomes Mud Lake, it follows no defined channel, but distributes itself through the marsh, and appears again as a stream only at or near the point called the Narrows. Mud Lake is, in fact, for the most part a low, wet marsh, producing a large growth of wild rice and other vegetation, and unnavigable by any natural channel by any kind of boat, through its entire length, during the greater portion of the year. The lands bordering upon it were meandered by the Government surveyors. In the field notes it was referred to as a "lake" or "marsh." The court found that Mud Lake is a meandered lake, and the title to the lands under it is in the public and not in the plaintiff, and dismissed the complaint with costs against the plaintiff. The plaintiff appeals.

NEWMAN, J.—The only question in the case is whether the so called Mud Lake is a natural, permanent, inland body of water, such as is not properly a water course, and meandered by the Government surveyors. For, if it is a natural inland body of water which is not properly a water course, the title of the riparian owner stops at the waterline and the title to the land which is under the water is in the State. This Court has laid down one rule for running water and another for lakes and ponds. In the former case the riparian owner owns to the thread of the current; in the latter to the waterline. And no distinction has been made on account of the size of either stream or pond. It is unimportant if the common law, as related to the title to lands under lakes and ponds, was different. It is merely a question of local law Grants by the United States of lands and streams bounded by lakes and streams are to be construed and given effect according to the law of the State in which the lands lie. And each State determines for itself to what extent it will retain and exercise its prerogative over lands under such streams and bodies of water. (Hardin vs. Jordan, 140 U. S. 371; McLennan vs. Prentice, 85 Wis 427.)

It is well settled in this State that grants by the United States, of lands bounded by a meandered lake or other permanent body of water, convey title only to the natural shore of the body of water, while the title to the land which is under the water is in the State. (Diedrich vs N. W. U. R. R. Co., 42 Wis. 248.) And the rule is the same whether the body of water can be made practically usetul for the purposes of navigation or not (Boorman vs. Sunnuchs, 42 Wis. 233) irrespective of its size or depth.

It is undisputed that Mud Lake was meandered by the government surveyors. It is clear that it is an inland body of water of permanent character. While it might with entire propriety and accuracy be called a marsh or swamp, the name by which it shall be designated is not controlling upon the question of the title to its bed. It has very little, if any, movement of its water from its head toward its outlet during the greater part of the year. It is said that the controlling distinction between a stream and a lake or pond is, that in the one case the water has a natural motion—a current—while in the other the water is, in its natural state, substantially at rest, and this entirely irrespective of the size of the one or the other. But not every sheet of water in which there is a current from its head toward its outlet is therefore a stream. (Angell, on "Water Courses," sixth edition, Perkins, section 4f.) It is said that even the large lakes have such a current.

The trial court found that this was not a stream or watercourse, but was a "shallow, muddy lake or marsh." Such it is shown to be by the evidence.

The plaintiff does not own the lake or the soil under it. It is owned by the State. The right of fishing and fowling upon such waters is in the owner of the soil which is under the water. (Hardin vs. Jordan, supra; 8 Am. and Eng. Ency. of Law, 31; 12 id., note on page 165 and cases cited; Washburn on Easements, star page 410; Bristow vs. Cormican, 3 App. Cases, 441.) In this case it is in the public, which has not, in any way, granted its right to the plaintiff. The plaintiff's right to hunt and fish over this lake was equal to, but not superior to the right of either defendant. It had no cause of action against the defendants. Its complaint was properly dismissed on the merits.

The judgment of the circuit court is affirmed.

"FOREST AND STREAM'S" BIG FISH RECORD.

A provisional list of big fish of various species, supposed to be the largest of their respective kinds captured or possessed in America.

FOR particulars respecting the fish here enumerated see our issue of Feb. 27, 1897, and later issues. The salmon, in that issue credited to ex President Arthur, should have been assigned to Mr. R G. Dun, of this city. This list is subject to correction if any one can supply authentic memoranda of larger specimens, or record fish of other varieties than those here named.

SALMON (*Salmo salar*), 54LBS.—Killed with fly in Cascapedia River by R. G. Dun.

SMALL-MOUTH BLACK BASS, 10LBS.—Caughs in Round Pond, Warren county, N Y., by Nathaniel Parker.

MASCALONGE, with hook and line, 47½lbs., caught in St. Lawrence River by John B. Spafford, Jr., and Capt. James Millward. The late Dr. Elisha Sterling, of Cleveland, O., speared a mascalonge in Sandusky Bay that weighed 80lbs.

BROOK TROUT (*Salvelinus fontinalis*) —The employees of the Maine Fish Commission netted a trout in Rangely stream that weighed 12lbs. and returned it to the water after weighing it.

STRIPED BASS or rockfish (*Roccas lineatus*).—Weight 7lbs. dressed; caught by Wm. M. Hughes at Sachuest Neck, Rhode Island.

LANDLOCKED SALMON.—Weight 30lbs., taken from spawning bed by New Hampshire Fish Commission, Dan Hole Pond, 1896.

PIKE, commonly called pickerel (*Lucius lucias*), 35lbs.—Caught in Lake Le Bouef, Erie County, Pennsylvania, by Charles Phelps.

YELLOW PERCH, or ringed perch (*Perca americana*), 5lbs.—Caught by Pick Squires in Schroon Lake, N. Y.

Parlin Pond, Maine.

PARLIN POND, Me., June 16.—The fishing in the ponds about here has been very good, both for early bait-fishing and later for the fly. Since the season opened nearly 1,500 trout have been taken from Parlin Pond. Fifty of these averaged in weight 1¼lbs.

In spite of the bad weather more than the usual number of sportsmen have come for the early season, and the summer-resort keepers are looking for a good year.

Mr. Lancaster holds the big trout championship for this season thus far. His weighed 4lbs., and while other ambitious anglers have come near snatching the honor from him, none have yet quite succeeded

The deer are as thick as usual, and are seen daily in the clearings and around the pond. A milk-white deer frequently makes its appearance

Geo. S. Pond and H. R. Stowell, two veteran sportsmen, arrived last week. Mr. Pond has visited Parlin Pond every year except one, of fifteen years. Mr. Stowell has been here usually twice a year, for eight years. KING FISHER.

Potomac Bass Law.

A SUBSCRIBER of the Baltimore *Sun* writes from Kearneysville, W. Va., in response to the query raised as to whether the tri-State bass law protects those fish in the Potomac and its tributaries: "An angler from Jefferson county, W. Va., says yes, the bass law does protect. From fifty bass caught on June 1 but five or six had spawn, and they were the smaller ones. Our fish were from 2½lbs. down to the limit in length."

MAINE FISHING.

BOSTON, June 19.—Fishing for trout under a boom of logs may not always be practical, but it is possible that these fish delight in hiding under such obstructions. It seems that a big boom of logs covered one of the best fishing grounds on the upper end of Lake Mooselucmaguntic for several days this spring, somewhat to the disgust of the anglers quartered at the Oquossoc Angling Association club house. They had to wait patiently till the boom was towed away. Then the trout begun to bite at once, and the members of the party took forty-seven big fish in one day, the string weighing 174lbs. The fish were all trout; no salmon being in the number.

Commissioner Carlton is out with another letter defending the famous Guide License law, in the newspapers. Some of the Rangeley guides have registered. Others have not, and say they are going out of the business after July 1, the limit of time for registration. The Moosehead guides are not agreed as to the matter of registration. Some have registered; others have not and say that they shall not. Sportsmen to Moosehead are not pleased with the registration law. One of them, a visitor to that region every year for eight or ten years, says that he will not employ a guide who is registered. He does not wish to be reported to the Commissioners or anybody else. He is willing to obey the laws of the State as to close time, numbers of game animals and birds, and weight of fish, but as for employing a man to do his work that is bound by law to report him, he will not. On his fishing and shooting trips hereafter in Maine he intends to take "a companion or a friend"—not a guide—and at the end of the trip make him a present.

Even at the celebrated Poland Springs the fishing is not all spoiled and the guests love to fish. In one hour last Friday Mr. J. B. Sawyer took three black bass from Middle Lake, the united weight of which was 6lbs. The next day he followed this success with a string of seven fine bass.

There are reports of good bass fishing in the Winthrop, Me., lakes, Maranacook and Anabesacook. Cobboseecontee is also turning out some fine strings of pickerel and black bass. Mr. Brown, of Boston, was fishing for bass there the other day, below the dam. He had already taken several good bass when he had a magnificent strike. He landed his fish after some fighting, when it proved to be a beautiful trout of nearly 3lbs. weight It is explained by the Maine Fish Commissioners that the bass are rapidly exterminating the pickerel in the waters of Kennebec county, and that the trout and salmon are beginning to flourish.

C. F. Nason, of Lewiston, caught a salmon of 4¾lbs. from Lake Auburn on Tuesday last. Other salmon are taken very frequently, and more is the wonder when it is considered that the lake is so near to the two cities and is fished to excess.

Late reports from Sebago show that the landlocked salmon season there has been the best on record; at least, was for the first ten days, and reports of catches are remarkable. Mr. R. P. Woodman is back from a short and uneventful trip to that lake. He only fished a little, and took one or two salmon, the time being too late; but his guide of many seasons, C. J. Shaw, known to all his sporting friends as Kit, has had out some very successful parties, as he almost always does. One gentleman, a Portland real estate agent, rotund and enthusiastic, took five salmon in one day, from 3 to 9lbs. weight. When the big fellow was brought to the net—that net is only 4ft. deep, at the end of a stout bamboo 10 or 12ft. long—when the fish came out of the water in this net, wielded by Kit's dexterous arms, the fisherman shouted, "Ye gods!" and sunk exhausted into the bottom of the boat. He had fought the fish for over an hour.

Recently a deer was taken alive, swimming in Lake Auburn, and the captors desire to hold the animal for a park projected somewhere in the neighborhood. Fish and Game Commissioner Henry O Stanley is reported to have told a newspaper reporter that there is no way out of the matter but for the captors to pay the fine and let the deer go. "It will not do to let this case go unnoticed." Last winter a law was passed allowing deer to be taken alive for park or exhibition purposes, under permission of the Commissioners; but no such permission has been granted in the Lake Auburn case.

Mr. L. O. Crane's fishing trip to Round Mountain Lake, Maine, was really more successful than noted in the FOREST AND STREAM last week. He really took considerably over 200 trout, making catches of thirty or more at several trips, all on the fly, and generally put back into the water. His companion, Mr. Hemmingway, was also very successful for the short time he fished, taking nearly sixty trout. Mr. Crane and his father will visit that resort again very soon.

SPECIAL.

Chicago Fly-Casting Club.

CHICAGO, Ill., June 19.—Herewith is the record of our contest to-day. Messrs. Peck and Bellows were tied in the bait-casting, and in the casting-off Mr. Peck won. He now holds the four medals for long-distance fly, distance and accuracy, accuracy and delicacy, and bait casting. To-day's scores:

	Long-distance fly, Feet.	Distance and Accuracy. Per cent.	Accuracy and Delicacy. Per cent.	Bait-casting, Per cent.

The Giant of the Rainbow.

SOMERSET, Ky., June 14.—I was very much interested in H.'s description of his trip to Cumberland Falls, forty miles from this place; but wish to place him right as to the "Monster of the Falls." The above fish is a pike (*Esox lucius*), and has been hooked by good fishermen, but, alas! not landed; it is said he is at least 5ft. long and will weigh from 40 to 60lbs. If H. will visit this city in October, any member of the "Pumpkin Hollow Fishing Club" will take pleasure in showing him the place where Mr Bartells caught the 7lb. 2oz. small-mouth black bass, and where his mate or his grandfather lives. We expect good fishing in a few days and will report luck. J. M. R.

A Few Days in Maine Woods.

BOSTON, June 19.—*Editor Forest and Stream:* A week ago it looked very much as though my luck wouldn't be reported in your excellent paper this year. I had a chance to get away, but I knew the conditions of weather and water were all against me. However, after two postponements, I decided to take chances, and last Monday found me on board the train bound for Redington, a saw-mill station on the Phillips & Rangeley Railroad fourteen miles before you get to Rangeley. The day was a changeable one—sunshine and clouds, with an occasional shower—and the ride was a delightful one, the train service over the Boston & Maine, the Maine Central and the narrow gauge, from Farmington up, being excellent, as it always is. The broad fields of grass never looked better, and a big hay crop—always an important one in Maine—is an assured fact. Six-thirty the train pulled into the station and the first person to greet me was Willis Eaton, chief clerk of the Redington Mills Company, to whom I am indebted for many courtesies. I also found my old friend, W. H. Harrison, who has resumed charge of the boarding house, and who is always ready to go fishing. The management of the company has changed hands since my last visit, Mr. Fletcher Pope being in charge of both the mill property and the Phillips & Rangeley Railroad. Mr. Pope is a capitalist and a business man, he is also a keen sportsman and is an expert with rod and gun. He has already made suitable arrangements to entertain sportsmen who may come to Redington in the fishing and hunting season; a private dining-room is provided, the rooms are neat, the beds good and the food is all right, and plenty of it. Parties desiring to go up to the Dead River will be carried up on the spare engine that is always kept in the yard, and brought back in the same way. These improvements are so in line with what my ideas have been that I am glad to give them the publicity of your columns, for the efforts of Messrs. Pope, Eaton and Harrison are in the interests of true sportsmanship, and deserve success. And I can truly say that to the man who likes stream fishing, I know of no place that offers attractions equal to Redington. The Auberton stream, the Redington brook and the Dead River are all handy, and they are teeming with trout, and it is never difficult to get a good mess of a size sufficient to clear the law in all cases. And then the pond—that is too easy—you simply go and sit on the logs that line the shore, and catch ¼ and ½lb. trout, with an occasional larger one—the smaller ones are always returned to the water. Of course, the weather and water conditions were such that the fishing was not as good as usual, or as it will be later. Tuesday was an off day, and I got but few; but on the next day on the Redington stream, below the dam, I struck them in great shape, and got all the fish any reasonable man ought to have in one day's sport. Thursday morning I had lots of luck in the pond, and the net result was that I brought to Boston nearly as fine a lot of fish as is my usual custom. The water is rapidly running out, and the fishermen who are fortunate enough to drop a line into the streams I have mentioned, within the next week or ten days, will get fine sport. I only wished I could have remained longer, but "business is business," and I was obliged to get into line after a few days of my favorite pastime in a delightful country. WM. B. SMART.

Blue Herons as Fish Destroyers.

STATE OF MAINE.—Commisioners of Inland Fisheries and Game.—Dixfield, June 16.—*Editor Forest and Stream:* You ask me why we ordered our wardens to shoot the blue herons that gathered at their nesting places in Maine. For the reason we have found them the most destructive bird of the trout and salmon we have in the State. Not only will they kill and eat the small fish of 6oz. and under, but, they will kill the large trout of 3 and 4lbs. At Auburn, and also at Monmouth, they killed several 3 and 4lb. trout, by spearing them with that long bill of theirs, making a hole in the fish like driving in a board nail. I picked up several large fish they had killed in that way. Quite a large number of our large spawning fish that came into our rivers at Auburn and Monmouth bore the mark of the blue heron. We caught them at it and are not mistaken about it. They would stand in the brook like a statue, motionless, and woe to any fish that passed. If small, they landed the fish in their stomachs; if large, they struck and wounded them out of pure cussedness.

They are a night, as well as a day bird. As I understand it there are two varieties, day and night herons, they are both culpable. I have often caught trout that bore their marks, but not until last fall did I know what had done it. Last fall we caught them in the act, also gobbling the smaller fish. I have no sympathy for the blue heron, I consider them worse than the mink or fish-hawk. We have had several letters from philanthropic gentleman asking us to spare this bird, but if they had seen what I have seen them do to our trout and salmon both large and small, I think they would sign a petition for a bounty on their scalps.

HENRY O. STANLEY.

New Jersey Coast Fishing.

ASBURY PARK, N. J., June 18.—Great changes have been wrought in surf fishing during the past week. The warm weather and westerly winds have sent the fish shoreward, and good catches of kingfish and plaice is now the order of the day. To-day several weakfish were taken from our pier, a circumstance that never occurred before in this month, as we never get them in the sea before August and rarely earlier than September, when they begin moving southward, and press close inshore the spearing and sand lant, upon which they feed in a most ravenous manner.

A monster school of bluefish broke in close to shore this morning and became easy prey to the hand-line men who could procure boats. They would undoubtedly have run directly into the surf, as they were feeding upon a school of menhaden; but the crew of a menhaden steamer spied them out and endeavored to lay a net around them, but the blues, alert to their danger, took French leave to the music of applause and hand-clapping from anglers and spectators on beach and pier, so the menhaden men, like many another pirate, had discomfiture for their pains.

Our genial fish warden, James F. Edge, has just caught a 27½lb. striped bass, and with the fish slung over his shoulder by a rope he is being paraded through the town in ex-Senator James A. Bradley's private carriage, driven by the Senator himself. This fine specimen was brought to beach on a nine-thread linen line and 3-0 Limerick hook.

LEONARD HULIT.

Prophetic Fish.

IN an article on fishing in West Africa, Mary H. Kingsley writes: "The lagoon fish are not particularly good, as a rule they are supremely muddy and bony; they have their uses, however, for I am informed that they indicate to Lagos when it may expect an epidemic; to this end they die, in an adjacent lagoon, and float about upon its surface, wrong side up, until decomposition does its work. Their method of prophesy is a sound one, for it demonstrates (*a*) that the lagoon drinking water is worse than usual; (*b*) if it is not already fatal they will make it so.

Iowa Black Bass and Pike.

CHARLES CITY, Iowa, June 15.—As soon as June freshets are over on the Cedar, there promises to be the best black bass and pike fishing in many years. Bass taken are running small; the larger ones no doubt are still on their spawn beds. The largest black bass thus far taken, on June 14, weighed 4¾lbs. A wall-eyed piked weighing 10½lbs. was secured the day before. Crappies, Oswego bass and pickerel are biting better, and average larger than last season.

SCHOOLING THE DOG.—V.

As these instructions are written mostly for the benefit of the novice, it is necessary to give a list and definition of the commands in common use in handling the dog. Of course any one can train his dog to obey any commands he chooses to adopt, as there is no inherent potency in one word as compared with another when used as a command; but when one buys or sells a dog for field work it is well to know and use such commands as have received the sanction of usage. In any case it is desirable, for the sake of convenience, that each command consists of not more than one or two words, and these should be distinctly different from those used in any other command. Nearly all the commands have corresponding signals, so that the shooter may be able to handle his dog silently when working near game, or, for that matter, when working at all; but they are specially useful when there is any probability that the shooter's voice would alarm the birds. The signals also serve to assist in handling the dog when the shooter's voice cannot be readily heard, as when the dog is working far away, or when he was upwind from the shooter. The following are sufficient for the requirements of field work:

"Come in" is the order which denotes that the dog is forthwith to come to the trainer. A few prolonged blasts on the whistle have the same significance.

"Heel" is the order given to the dog when he is to get behind, and follow behind the trainer. A motion of the hand to the rear is the corresponding signal.

"High on," some years ago, was considered the most elegant command to use in ordering a dog to begin ranging. "Go on," or "Get away," is the command now commonly used for that purpose. A wave of the hand forward, or a wave of the hand accompanied with a snap of the finger or a simple click of the tongue has the same significance.

"Drop" is the command commonly given when the dog is required to lie down. The orders more in use some years ago are "Charge" and "Down Charge," but they are now almost obsolete.

The right or left hand raised a little higher than the level of the head is the signal for the dog to drop.

"Hold up" signifies that the dog is to rise to his feet, and therefore it is given to him when he is dropped or lying down. A slight beckon with the hand or forefinger has the same significance. As the dog is rarely in the position required by the drop except when obedient to that command, the signal to rise is in accord with his inclination, hence is soon learned and eagerly watched for. A click of the tongue also serves the same purpose.

The dog can also be trained to obey orders given by the whistle, each order having a distinct note or notes which are used invariably with it. This, however, is an unnecessary refinement and of but little practical use in actual work. They are, moreover, rather difficult to teach to any dogs other than the most intelligent ones.

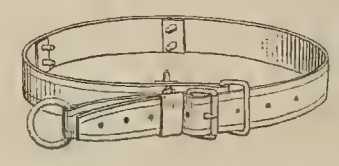
The foregoing are the commands which are used the most, and they are of constant service, whether the dog is idling about the house or working in the field.

"Fetch" is the command used in ordering the dog to retrieve. "Find" denotes that the dog is to seek for a dead or wounded bird. "Seek" and "Seek dead" are sometimes used for this purpose, but less so now than formerly.

Obedience to "Toho" was formerly considered an essential in a dog's education. It is the order which denotes that the dog is to stop and stand still. The trainer was supposed to derive great assistance from it in teaching the dog to point, for in times past it was commonly supposed that the trainer taught the dog to point. As "Toho" was very plausible in theory, and served well to stuff a part of a book on instruction, it did a grateful service in that respect. It is one of the most difficult orders to enforce, and the discipline required to make the dog reliably obedient is, in most instances, a hundred times more difficult to establish than it is to teach the dog to point. After the trainer had taught it by much pains, he had little opportunity to use it; for, inexplicable as it is, few if any considered the fact that out of the total opportunities for the dog to point birds, the trainer would not know the correct time and place wherein to order the dog to make his stand, he not knowing where the birds were, or indeed whether there were any at all. If by any chance the trainer did know where the birds were he could seldom get the dog into the right position to fit the order—for it did follow as a sequence that if the trainer saw the birds the dog could scent them—and the attempt to get him in the right place with the bawling out of "Toho" at the same time seldom failed to flush the birds. Again, if the dog by chance did stop to the order without having a scent of the birds it was a meaningless act, and if he really got a scent of them, he in his excitement paid no more attention to the order than he paid to the murmur of the breezes. He might be delightfully obedient in the yard, or even in the field when game was not present, and absolutely unmanageable when on game. A further absurdity is that the dog learns to point from experience, some taking to it quite readily and naturally almost from the beginning. To force a dog to stop and stand still when he is roading does not constitute a point. Nevertheless, a few of the old school will maintain that they taught their dogs to point in that manner, when in fact the dog learned to point in spite of it. The arm extended at a little less than a right angle from the body was supposed to be the signal which denoted Toho. Most dogs which were obedient to it were good for little else.

Long commands, such as "Come here to me, I tell you!" or "Dead bird, hunt it up!" or "Hie, there! what are you about?" should be avoided if the trainer can possibly do so, but if he must talk or perish, it is better then to use plenty of words.

"Hi!" or any other exclamation consisting of a single word, may be used to command the dog to desist from undesirable acts or to attract his attention to a signal. One word serves the purpose better than more, particularly if the more are epithets.



Whatever words or notes of the whistle or signal are used to denote the command, they should be used alike invariably, so that they will always have a fixed and definite meaning to the dog. Sometimes the beginner, when the dog, birds and himself are excited, will deliver a continued discourse to the dog, which for any beneficial effect might better be delivered to the trees.

Teaching the dog obedience to the foregoing commands and giving him the necessary discipline to make obedience habitual, can be done in what is called his yard training

The implements commonly used in training are the whip, whistle, check cord and spike-collar, the latter being heartily denounced by many sportsmen as being an instrument of unnecessary cruelty. Again, others object to the whip for much the same reason. Whether they are cruel or not depends entirely on the manner in which the trainer uses them. If he loses his temper and then beats and chokes the dog to gratify it, the whip or collar are used cruelly, but so would any other article under the same circumstances. The fault then lies with the trainer and not with the instruments. If he cannot use the whip or collar as useful adjuncts to the training, it is then much better not to use them at all, and the use of his boots or the first club at hand is not permissible at any time. Indeed, if he finds that his temper is beyond his control and that he cannot refrain from punishing his dog unnecessarily in consequence, it is better to give up the attempt at training. Anger and violence unfit the trainer to teach and the pupil to learn. But, cruelty being inflicted, the trainer should blame himself and not the instruments used.

The whip is commonly used to punish the dog for any misbehavior, though some trainers use it to assist in forcing the dog to retrieve. The whips most in favor are those which are flexible and, therefore, easily stowed in the pocket. The ones heavily loaded with iron or lead at the butt should never be used, as there should be no intention to kill the dog at any time as part of his training, and the whistle in the end of a whip is also a very useless article. The trainer should select one which tapers nicely to a point which ends in a linen or silk cracker, as the crack of the whip will, at times, serve the purpose quite as well as its direct use.

The spike-collar should be both of good material and simple in construction. Its purpose should be solely to inflict pain without any accompanying physical injury, hence the points should not be long and capable of piercing the skin when ordinary force is applied. Though commonly called a spike-collar, it is a combination of spike-collar and choke collar. It has been claimed that the choke-collar without any spikes serves all purposes for which a collar is needed in training the dog. However, it is far more cruel than a spike collar. It requires more force to make it effective, and the consequent choking and shocking injures the whole organism, differing thus from the local harmless hurting done by the spikes. The correct use of the collar will in due time be fully treated in connection with the subject of retrieving.

As to the material and construction of the collar, a brief description will suffice. The material should be the best medium weight harness leather, free from sponginess or flaws. For convenience in using it the collar is made in two pieces as shown in the cut herewith presented. The longer part should be about 22 or 24in. in length by 1¼in. in width. The strap when looped should play through a square, or more properly an iron parallelogram, for if a ring be used instead the collar when in use will roll and twist and thereby impair its efficiency. The inside dimensions of the iron parallelogram must be governed by the width of the strap and the thickness of the leather used. The shorter strap, 2 or 3in. in length, has a square buckle in one end and a ring in the other. The spikes, screwed through a steel plate on one side of the leather strap and secured by nuts on the other, should project about ⅜in. or ⅝in., and the points should have a very short bevel so as to hurt the dog without injuring him or inflicting unnecessary mutilation. It should always be kept in mind that mutilation or real injury is neither desired nor intended, and also that the least possible punishment which will accomplish the purpose is all that is necessary or desirable. B. WATERS.

The Chicken Trials.

MR. G. B. BORRADAILE, Honorary Secretary-Treasurer of the Manitoba Field Trials Club, writes us that chickens are reported to be plentiful all over Manitoba and the territories, and that the well-known handlers Messrs. Stoddard, Rose, Nesbitt, Richards, Mayfield and McCartney have signified their intention to be present. The advertisement of the Manitoba Field Trials Club, contained in the business columns of this issue, give all required information concern

ing the club's stakes. As the time is short between now and the closing of the entries, the supporters of field trials should not procrastinate. Send in the entries at once.

The meeting at Morris, Man., has every essential of a great trial. The competition in its entirety will be under the auspices of three clubs—the Continental, Manitoba and Northwestern, and the management is in charge of famous, skillful sportsmen. No doubt but what the meeting will be the most important one ever held on chickens, considering all the circumstances. There is but one factor which could possibly detract from its importance, namely, lack of entries. The managements have worked diligently, have arranged prizes, etc., and the owners must do the rest. They should manifest their appreciation by a staunch support. It is useless for clubs to guarantee large purses if owners are apathetic. In fact, clubs will not do so long. However, from the indications, there will be a gratifying support. But owners should endeavor to make them greater than any preceding trials of the kind. Aside from the interest of the trials, the season at that time is when the birds and fish are ripe. As one drives along or rides on the train through the wonderful prairie country there are the broad fields laden with an abundance of the grains which contribute so generously to the world's food supply.

From horizon to horizon is waving grain or corn, or grain in stacks. About or in them is where the chickens love to feed. In the woods are ruffed grouse in abundance. In the lakes and streams are gamy fish. There is sport for those who love the gun or rod or canoe. The air is pure and bracing. Besides the immediate pleasure of such a trip is the material gain of good health following bodily and mental recuperation. Besides entering their dogs, the owners should not fail to be present in person.

PROPERTY IN DOGS.

THE legal recognition of the dog, relative to being a domestic animal, as in the eye of the law are horses, cattle, etc, and as therefore being classed as property, is slow, irregular and patchy in its coming. The cause of the adverse circumstances cannot be in any public lack of interest or hostility to him, for no other animal is so universally owned and esteemed. If the matter of appreciation was the sole factor to be considered in relation to the matter, the dog would soon be regarded as the most valued article of property. While there is a general appreciation of the dog in the abstract, in the concrete the material value of the dog is generally confined to his owner or the family which harbors it. To all others he may be offensive, or a noisy nuisance, or a harmful depredator.

The horse, the sheep, the ox, etc., have a fixed standard market value regardless of ownership; the cur dog in most instances has no value whatever except to his owner and his family, and such value as he has is one of sentiment only. It is therefore the dog versus the neighborhood.

North and South there are millions of worthless curs, the distinguising features of which are that each individual differs from every other one in size, color, parentage, though all are alike in possessing in common a peevish disposition and a vagabond nature. To recognize such a mass of rubbish as being property would be an insult to the common sense of the people, particularly to that of the taxpayers. By far the greater number of worthless curs are owned by people who pay few or no taxes, and are financially irresponsible, as the very poor in the North and the negroes of the South. The whole wealth of a negro family may be amply stored in the corners of a 10×12 cabin, with room left for the family to live in; yet few negroes are so poor that they do not own from one to a dozen detestable curs.

The taxpayer and property owner suffer serious loss from the depredations of the lawless, half-famished curs. Poultry, eggs, sheep and young pigs fall a prey to them on opportunity, and in some sections much harm is done to growing corn by them. They strip the ears and eat them when they are in the milk.

It is useless to plead that horses and cattle break into cornfields, etc., and do damage, and thus plead an offset to the depredations of the curs. Horses and cattle can roam only within a limited section, are easily detected, the damage done is comparatively trifling, and horses and cattle having a universal market value, the owners are financially responsible and the damage can be collected. The dog can prowl over a whole country in the night, is infinitely cunning in his depredations, is difficult to detect, and could do more damage in one night among a flock of sheep than a horse could do in a year in a grain-field. It is claimed as a statistical fact that the number of sheep killed by dogs in Ohio in 1895 was 30,883, valued at $80,647; and the number injured by dogs was 23,406, the estimated damage to them being $33,870. This is the damage done in one State. The total of the United States must be an enormous sum. On account of the losses in sheep-growing, due to the killing done by vagrant dogs, the industry has been checked in some sections, and many States have found it necessary to reimburse the owners for the losses caused by dogs, or else lose the industry and the consequent taxable property of the State. Some States levy a tax on dogs to meet this contingency.

The difficulty in making progress as to property in the dog lies in that the owners of good dogs generally make common cause with the owners of curs against any law imposing any special license fee or taxation on dogs, or restrictions on their ownership. The owner is rare indeed who thinks his dog should not be privileged to bark all night if such be its pleasure, or run through his neighbor's grounds when in the mood of strolling; and, if the dog be filthy in its habits, the owner rarely considers it an offense of sufficient importance to notice.

Of course, there are careful owners, and well-behaved, well-bred valuable dogs. They are in a minority. We are well aware of their existence, and we champion their cause. We are not writing of them at this time. We are showing what is harmful to them.

So long as the thousands of curs exist with their present freedom, and their ownership is so careless of their doings and so financially irresponsible as to their depredations, just so long will dogs be wholly or partially *ferœ naturæ* in the eye of the law.

In respect to any laws which have been passed, making dogs subject to taxation or to license fee, or to wholesome restriction, it has been the policy of nearly all dog owners to complain of the hardship worked by such laws and to denounce them as unfair in themselves and as unjustly discriminating against the owners of dogs as compared with the owners of other animals. It furthermore has been the policy of nearly all the kennel journals in this country to fall in with the humor of their patrons, and inasmuch as they could rant and inveigh louder and longer than said patrons, so much the more was their wisdom greater and their loyalty proven as it related apparently to their patrons' interests, though really pandering to their whims and unreasoning selfishness. No class can expect to have its public rights impartially considered if it refuses to consider the same rights of others.

If each State would pass a law and enforce it after it is passed, discriminating between the well-bred dog and the cur, by imposing a license fee of $5 or more on the cur, the latter would soon be driven out of existence. The well-bred dog then would be free from the odium he now shares with the cur depredators, there would be a greater demand for dogs of pure breeds, and, being then property in fact instead of being such largely in the fancy of the owner, they would soon be recognized as property in law.

So long as owners grieve at the restrictions which are intended to give their dogs protection and ignore and fight such to the extent of their powers, so long may they expect to stay at a standstill so far as the legal property interest of the dog is concerned.

Correction.

Editor Forest and Stream:

I note two errors in list sent you which please correct. Sport should be entered as Sport Mc A. Hamp S.—C. T. Eastman's l. and w. pointer dog (Von Gull—Rip Rap's Flake). Count Edward—W. McKerr's b., w. and t. setter dog (Count Eric—Ann). W. S. BELL.

POINTS AND FLUSHES.

MR. A. B. WINGFIELD told in our Natural History columns the other day of a dog which seemed to know when its death was proposed to its master. Here are two similar cases, recorded in the *Springfield Republican:*

"Allen H. Norton, of Winsted, Conn., is the owner of a farm over the line in this State. For many years Mr. Norton has had on the farm a dog of cocker spaniel and hound breed, which has been of considerable use about the place, and also a good hunter of coons and other game. But the dog is now twelve years old, minus some of its teeth and getting feeble, so it was thought best to shoot it. Consequently, about two weeks ago, the man in charge of the farm took the dog out in the lots to dispose of it. He laid his gun on the ground and proceeded to dig a grave for the dog, while the faithful animal lay beside the implement intended soon to end its life, and watched the hole in the ground gradually grow deeper. The man had nearly finished the excavation when the dog suddenly sprang to its feet and rushed from the place. For the first time on record it refused to respond to the man's call, but hurried to the river bank, swam to the opposite shore, disappeared in the woods and is still absent. A similar case occurred about a month ago. William R Griffin, of West Winsted, remarked to some of his friends that he intended to kill his dog. A short time afterward the dog disappeared and spent a week in another part of the town. When the animal finally returned, the arrangements to shoot it were carried out."

Mr. W. B. Wells, honorary secretary of the I. F. T. C., informs us that Messrs. John Davidson, of Monroe, Mich., and E. Warner, of Detroit, were selected to act as judges at the next field trial meeting of the club, to be held at Mitchell's Bay, beginning Nov. 1. He further states that "already a number of entries have been received for the Derby, which closes July 1. The call of Bob White is heard throughout the country, and the indications are good for an unusually large crop of birds."

The third annual sweepstakes of the American Spaniel Club are announced by the executive committee. The balloting for judges is now in order. No ballot will be received later than July 15.

Wheeling.

Communications for this department are requested. Anything on the bicycle in its relation to the sportsman is particularly desirable

IN THE CATSKILLS.

NEW YORK, June 10.—*Editor Forest and Stream:* B. has a cottage in the Catskills, near Hensonville. The Saturday before Decoration Day he decided to go up to put the place in order for the summer, and upon his invitation H. and myself went along. Mrs. B. was also in the party.

We took the West Shore Railroad to Kingston, the Ulster & Delaware to Phœnicia, and the narrow gauge Stony Clove Railroad to Hunter. For the last seven miles of our journey we had brought along our bicycles, and at the various changes we took good care to see that they were properly transferred, as we had no wish to see our plans go wrong for lack of conveyance at the last stage of our journey.

From Kingston the railroad follows up Esopus Creek, which is a good trout water in its upper reaches. The ascent was gradual here, but when the change was made at Phœnicia to the narrow gauge, conditions changed, and the grade became very steep.

The road twisted in and out along the sides of mountains, always keeping a little above the bed of the stream, which comes racing down the bottom of the Clove, and at times the engine got into a brown study in its tussle with the principles of gravitation and fussed about it, and ran so slow that one could have gotten off and picked wild flowers, or ran around in front of the engine, if he had been so minded, without danger to himself or risk of losing the train.

We were told that this railroad is nine and seven-eighths miles long, and is thus exempt from the law which regulates the maximum fare to be charged by roads ten or more miles in length. As a matter of fact, it charges at the rate of 10 cents per mile, or thereabouts.

It was said that there were some doubts as to the correct measurement of the road, but that if it should turn out to be up to the ten-mile limit, the owners, to continue their monopoly, would only have to chop off some inconsequential fraction of a mile, which would probably not even necessitate the moving of their little frame station and freight sheds.

No doubt, considering the grade and the necessarily limited business of the line a great part of the year, there is plenty of excuse for a high passenger tariff. It takes the train an hour to make the trip, and perhaps the charge is based on time rather than on distance.

At Hunter we found our bicycles in good condition, and, strapping on our rods, guns and other impedimenta, were soon across the bridge spanning Scoharie Creek and spinning down the village street. At the first turn on the right we encountered a steep ascent, and, though H. made a spurt and climbed several hundred yards up the hill, he was not loath soon to dismount and join us, pushing our machines up the steep grade.

The hill was at least a mile long, and it seemed as though we had climbed 1,000ft., when we at last reached level ground again, and stopped to take in the view.

The country near by was mostly cleared and farm land, but beyond were thickly wooded mountains, including those of the Hunter Range.

As we were about to mount to continue our journey, we espied, 200yds. away on a side hill, a large woodchuck lying full length in the mouth of his burrow. This was accepted as a challenge to the riflemen of the party, and B., as having his rifle in position to be got at easiest, accepted it. The woodchuck, however, did not suffer, aside from the shock to his nerves caused by a bullet hitting the ground directly under him and covering him with yellow clay from his own particular dirt pile

A little further on the road began to descend, and H. scorched down the first hill, leaving a trail of flying dust and scattered stones. But for these stones, the road, in its present condition, would have been good wheeling; but the fact of their presence made cautious riding necessary in most places, and, when going down hill, there was always danger of an upset from this cause. H., however, paid little attention to the stones. The next hill was a bad one, and B. warned him of the fact.

Despite the warning he started down it at a good pace and soon was going at a racing gait. A stone jarred his wheel so that his lamp went to pieces and flew in all directions. The next obstruction threw his feet off the pedals and his wheel was beyond control. No doubt H. wished at that moment for a good hand brake—I know the rest of us wished it—but he had always held brakes in supercilious disregard, and as he was an expert rider and powerful back-pedaler, he had never before had any real need of one.

The loose stones, thank-you m'ams, and steepness of the grade combined, with high initial speed made braking with his foot out of the question, and H tore down the hill attempting nothing more than to keep in the road, and was out of sight in a moment. The others of us picked our way cautiously down, using our brakes and back-pedaling at the same time. Around the second curve we came in sight of H. sitting beside the road, still alive but very pale. To particularize, as a matter of fact, his face was the gray-white color of a bromide photograph. He had received a severe shaking up and his bicycle was wrecked.

He showed us where the bicycle had struck a slot in a stone culvert after a wide swing into the ditch at the side of the road, and here he had parted company with it. Twenty feet further down the road (by paced measurement) was a scooped-out place where he landed after his header. Fortunately he struck sideways, and most of the force of the fall was taken by his hips, which saved him a broken neck or collarbone.

Seeing H. wasn't killed we all fell to and gave him a scolding, which was principally deserved because he had not regarded the warning about the dangerous character of the hill. Then we looked over the ground and at the crevice in the culvert and decided that it was a case of "put a bicycle in the slot and take a header."

"Lucky for you that you didn't get a little further down the hill before you went off," said B. "There's a little house around the corner where Lew Butts lives with his eleven children, and you would have carried them all into the creek."

It was beginning to get dark, and we still had four or five miles to go before we could get supper. It seemed as though we would be obliged to walk, and that H. would have to carry his wheel instead of having it carry him. The wooden rim of the front wheel was snapped squarely in two in one place and badly split in another, and the spokes were all bent and tied around the forks. The tire had parted company with the rim, but fortunately was intact. We considered the case, and decided that the bicycle was not quite beyond repair. At any rate, it could be pushed along the road if the front wheel was put together.

So we set about doing this. First, we cut the ends of the broken rim so that they would dovetail together, then two of us sat in the road opposite each other, bracing our feet against the rim, and bending the ends at angles with the natural plane of the wheel to get them together.

Then by pushing and pulling, with the assistance of the third man, who kept the ends touching, we got the points back almost to the normal plane, and wrapped them tightly with tire tape.

The straightening process had tightened all the spokes with the exception of one directly at the broken place, and the wheel looked about as good as ever. The rim was further "trued" by laying it across two low stones and standing on it where it was out, and afterward the tire was put on and pumped up as hard as we could make it, pumping by turns and helping the man along who was doing the work by some snappy song. Finally the tire was tied in place by tire tape—the most useful single article in the wheelman's repair outfit.

The wheel ran very well when set up in the fork, and we were surprised at the success of our experiment. H. was even persuaded after a time to try to ride on a level place, and made good progress. Two days afterward he was going down breakneck hills on it, and it had carried him a good many miles without any mishap. So much for the rough-and-ready expedients of the road.

B.'s cottage is beautifully situated in a little glen near the top of the divide above Hensonville. Here for the next two days we amused ourselves walking, wheeling, shooting at marks and woodchucks, which are more plentiful in the neighborhood than any other place I know of, and fishing.

Monday morning I tried my luck on the stream between Hensonville and Windham, and though I did not reach the brook till after 9, and found a number of other anglers had preceded me, I succeeded in catching an even dozen trout before 11. Two of these were very fair size, but the others were mostly small, and I returned several of them to the water.

I had to return before the others, and so left Monday immediately after dinner. Most of the way to Hunter was down-hill, and as there was very little walking to be done I covered the distance in three-quarters of an hour. Coming over the following day, the others made exactly the same time, including the man with the broken wheel, who had completely recovered from his shake-up, and rode as recklessly as ever. He still thinks he can get along without a brake, and neither argument nor experience will convince him to the contrary. J.

Yachting.

As the yachting journal of America, the FOREST AND STREAM *is the recognized medium of communication between the maker of yachtsmen's supplies and the yachting public. Its value for advertising has been demonstrated by patrons who have employed its columns continuously for years.*

YACHT RACING FIXTURES 1897.

THE following list of fixtures has been compiled from many different sources, some of them not official, and it may contain some errors. We shall be glad to have notice of corrections and additions.

Races of the Sound Y. R. U are marked with the letter S; those of the Massachusetts Y. R. A. with the letter M:

JUNE.

26. Buffalo, ladies' day, Lake Erie.
26. Gravesend Bay, cruise, New York Bay.
26 Atlantic, Adams cups, 2d race, New York Bay.
26. Brooklyn, first special, New York Bay.
26. Roy. Canadian, 27ft., 22ft and skiff classes, Toronto, Lake Ontario.
26. Cohasset, club 15-footers, 3d cham., Cohasset.
26 Winthrop, evening race, Winthrop, Boston Harbor.
26. American Cruise, Ipswich Neck, Newburyport
26. Columbia, 4th and 5th classes, Chicago, Lake Michigan.
26. Burgess, 1st cham., Marblehead, Mass. Bay
26. Cor. San Francisco, cruise, Petaluma, San Francisco.
26. Taunton, 1st club, Taunton, Mass
26. Roy St. Lawrence, 20ft. and 15ft. classes, Dorval, Lake St. Louis.
26. Beverly, 1st cham., Wenaumet, Buzzard's Bay.

Y. R. U. of Long Island Sound Racing Circuit:

JUNE.

26. Saturday. Seawanhaka Cor., annual race, for all classes.
28. Monday. Stamford, annual regatta, for all classes.
29. Tuesday. Indian Harbor, special race for all classes of sloops and cabin catboats 30ft. and under, and special class of yawls.
30. Wednesday. Corinthian fleet, annual regatta for 65ft. class of schooners and all classes 51ft. and under.

IT must be admitted that up to the present date, but three weeks prior to the trial races, the defense of the Seawanhaka international cup is far ahead of the challenging side. The local division of the defending fleet, on which, of course, the main reliance is placed, that of the Royal St. Lawrence Y. C., now numbers eight or nine boats, and they have been under way for over a month, five regular races having been sailed. The usual amount of petty defects has been discovered, and no doubt much has been done to remedy them, the boats now being, from all accounts, in pretty good shape. What is being done in other parts of Canada is not yet apparent, but it is certain that from Toronto and other places yachts will be sent for the trials, through which a defender will be chosen. Mr. Duggan has started to build a new boat, to be ready for the trial races.

On this side, up to the present time, very little has been done to test and improve the boats, and the racing has been limited to two or three starters. The two Crane boats have been under way for some weeks about Boston, doing plenty of sailing, but no regular racing in the class. One Huntington and one Olmstead boat has been raced a few times about the Sound, and the new Gardner and Cox boat has sailed in three races. Last Saturday the fleet numbered five, and by next Saturday three or four more may be added. If a really fast boat is to be developed, it will be necessary to race as many of the boats as can be got together, and as frequently as possible. In this work it is by no means the fastest and best design which wins, but the boat, whether good or only medium, which is most thoroughly and carefully worked up to racing form. The best boat that can be sent to Canada has no picnic before her, but work of the hardest kind if she is to bring back the cup. A simple failure to do so involves of necessity no discredit on the challenging club, but it has a reputation to sustain in sending a representative that, even though a little slower than the home boat, is a thoroughly creditable production in design, construction, fitting and working up.

FOR a year or so past all the spite and malice for which the Boston *Herald* is so noted, has been directed against the Seawanhaka Corinthian Y. C., the latest attack being as follows, apropos of the New York Y. C. year book: "The new racing rules appear in the book for the first time, and some are un-American beyond question. The rule limiting draft is the work of men who neither build nor help others to build, piazza yachtsmen, who have more to say about how yachts should be built and raced than those who spend thousands annually in the sport. The Seawanhaka contingent of the New York Y. C. is doing our greatest American yacht club no good, and the sooner its members repeal the silly measurement rules made last winter the better. Neither are the elements or the ideas of the ½-rater and its 'year-old brother,' the 20-footers, suited to America's greatest club."

We are quite ready to concede to the *Herald* even the amount of ignorance of current yachting displayed in the above, but had it wished to be either honest or truthful in its criticism it could readily have ascertained the facts of the case. The new draft limit originated within the Larchmont Y. C., and with men who own and race large yachts; they, with at least two of the designers, indorsing it heartily. It was formulated and introduced in both the New York and Larchmont clubs by Mr. John F. Lovejoy, a member of each of these clubs and not of the Seawanhaka C. Y. C. Mr. Lovejoy is a Boston yachtsman long resident in New York, where he enjoys the reputation of a skillful and practical yachtsman and one of the best Corinthian skippers. While we are opposed both to the draft limit and other amendments of the rules proposed by him, we fully recognize his position as an expert in all that pertains to yacht racing, whether at the helm of a yacht or in charge of the committee boat; the fact that he is in no sense a "piazza sailor" is quite as well known as that he is directly responsible for the draft limit.

The proposed change was accepted without opposition by the New York and Larchmont clubs, while on the other hand the Seawanhaka C. Y. C. opposed it at the start, and only accepted it for the sake of uniformity long after the others had. It has no bearing whatever on the 15 or 20ft. classes, as these are governed by special rules, but was devised solely in the interests of several very large yachts.

THE four races thus far sailed have been interesting only through the meetings of Colonia and Emerald and Wasp and Syce. The results thus far are not conclusive in the first case, but Colonia has done decidedly the better work down the bay, in waters where Emerald's crew is at its best, her owner having raced on them for many years in all classes of yachts. The closest and only really good race yet sailed, that at Larchmont on Saturday, was too nearly even to be at all decisive. This is very fortunate, as the sole hope of schooner racing for the season rests on the prolongation of this one issue, between Emerald and Colonia; as soon as either has scored a few decisive wins, the sport is over for an indefinite time.

In the singlestick division the interest is far less keen, as it is already evident that Syce is no match for Wasp, as the latter is now kept and sailed; of course the new boat is capable of further improvement and the old one has probably reached the limit, but it is very unlikely that by the end of the season the verdict of the first races will be reversed.

THE two Crane boats, Al-Anka and Pioneer, are doing very good work about Boston, the former in particular. The third boat, Momo, has been shipped from Ogdensburgh to Boston for trial with the others, but the three will probably be shipped to New York this week. Both Pioneer and Al-Anka have been altered from the leg-o'-mutton to the goff rig.

Beverly Y. C.—First Sweepstakes Race.

WETOUMET BUZZARD'S BAY.

Thursday, June 17.

THE 246th race, first open sweepstakes, was sailed June 17 in a moderate breeze. S.W. at start, but shifting forty-five minutes later to S., giving the larger classes a long and short leg on what was intended for a dead beat.

The new boats did well, Thordis winning easily in second class, she is a new Hanley cat and a very good boat. The new Opossum, belonging to Mr. Bob Emmons and built by Herreshoff, is a little beauty and very fast and able. Grilse did not have a fair chance, as an old sail was on her, which consists of two big bags and a tight spot between, this her owner had no means of knowing until just before the start.

The new cruising class had only two boats on hand, but both were handsome, able and fast. When the other six are ready to race it will be a lively class. True Blue showed up very well at Marblehead a week before coming round, beating all the new knockabouts, Herreshoff boats included, but did not meet Cock Robin.

First prizes were taken by True Blue, Thordis, Daisy, Melro and Vif. Second prizes were taken by Kalama and Grilse. Third prize was taken by Bernice. True Blue, Thordis, Bernice, Daisy, Melro, Nobska, Imp, and Opossum count one for pennant. Anonyma and Grilse count one-half each for pennant.

	Length.	Actual.	Corrected.
CRUISING CLASS			
*Robin Hood, B. Y. C., C. S. Dennison	22.00	2 16 55	2 04 44
*Royal Blue, B. Y. C., C. H. Jones	22.00	2 23 03	2 10 54

Coquette, Mon. Beach, W. W. Phinney	18.01	2 13 51	1 55 46
FOURTH CLASS SLOOPS			
*Opossum, B. Y. C., R. W. Emmons	19.00	1 55 23	2 38 35
*Grilse, B. Y. C., W. E. C. Eustis	19.00	2 00 01	2 43 13
*Heiress, B. Y. C., George G. Amory	19.00	2 06 02	2 49 14
*Fin, B. Y. C., L. M. Stockton	18.01	2 08 37	2 50 03
FIFTH CLASS CATS.			
Vif, B. Y. C., A. Winsor, Jr.	15.00	1 54 55	1 33 33
*Imp, B. Y. C., George G. Debney	15.00	1 58 40	1 37 28
*Hebe, B. Y. C., John Parkinson, Jr.	15.00	2 01 40	1 39 28

Championship will be won by boats getting best score in the four sweepstakes and five Corinthian races, boat owned and sailed by members of club, and making best actual time counting one; second boat, if she beats a competitor, half. Those marked with a star were sailed and owned by members. BLUE, WITH A GOLD CASTLE.

Massachusetts Y. C. Open Race.

NAHANT—MASSACHUSETTS BAY.

Thursday, June 17.

MASSACHUSETTS Y. R. A. RULES.

THE annual open race of the Massachusetts Y. C., the once famous Bunker Hill Day race of the original Dorchester Y. C., was sailed as usual, with good entries and favorable conditions. The course was a triangle, starting off Nahant, then out to the Graves Whistling Buoy and the Winthrop Bar Buoy, 10 miles. The first leg was to windward in a moderate and steady S.E. breeze, but the wind fell light on the second leg, the finish being slow. The times were:

Arab III, W. F. Scott	19.11	2 26 14	2 26 14
Wrinkle, S. N. Small	19.11	2 26 39	2 26 39
Yahoo, K. Horton	19.11	2 32 46	2 32 46
The Jag, Chas. Hayden	19.11	2 33 30	2 33 30
Spook, A. Parker	19.11	2 33 32	2 33 32
Mephisto, Jas. Spratt	18.00	2 42 01	2 38 58
Omene, W. P. Parker	19.11	2 43 43	2 43 43
Harriet, L. T. Harrington	19.11	Withdrew.	
Nancy Hanks, P. J. Maglathlin	19.06	Withdrew.	
FOURTH CLASS.			
Circe, F. L. Pigeon	16.00	2 28 31	2 26 45
Vite-se, C. D. Mower	16.01	2 29 00	2 27 24
Alpine, C. J. Blethen	16.11	2 27 57	2 27 57
Fantasy, W. Allerton	16.11	2 28 19	2 28 19
Gnome, H. B. Faxon	15.09	Withdrew.	
Ripple, C. B. Pear	16.00	Withdrew.	
Perhaps, J. E. Robinson	16.11	Withdrew.	
Attilla, A. A. Higgins	14.00	Withdrew.	

Elfreda lost her bowsprit and Beatrice parted her bobstay. Al-Anka made a very close race with Rooster, losing on allowance by a few seconds. Yankee protests Rex and Arab protests Alison for fouling. The judges were James Bostram, F. H. Perrin, J. A. Barbey, Jr., T. W. King and S. P. Perrin. This is the first trial of last year's Cock Robin with the new boats; she won very easily, with the Lawley boat, Gosling, second.

The Thirty-foot Class.

A SPECIAL race of the 30-footers was sailed on New York Bay under the auspices of the New York Y. C. on June 17, open only to yachts of the class owned by club members. The course was from off Buoy 13 around a markboat off Old Orchard Shoal, thence around Buoy 12 on the Southwest Spit, 16 miles. Only four boats started—Hera, Musme, Vaquero III. and Wa Wa. The day was cloudy and unpleasant, with a very light E.S.E. wind in the morning, shifting to S.W. and dying down before the finish.

The start was made from the gun at 12:15, with a strong ebb down the course and little wind for maneuvering. Hera made a good start on the windward end of the line, Vaquero coming close after her and crossing with good way on. Wa Wa barely drifted across, and Musme was handicapped. When partly over the first leg the wind headed and made a beat, the times at Old Orchard mark being:

Hera	1 58 30	Musme	2 09 10
Wa Wa	2 08 50	Vaquero	2 10 30

They reached across with a moderate S.W. wind to the Spit, but lost the wind in coming up the Bay and drifted for hours. Vaquero took the ground and towed home, the final times being:

Start, 12:15:

	Finish.	Elapsed.
Hera, R. N. Ellis	5 45 50	5 30 30
Wa Wa, J. A. Stillman	7 43 50	7 28 50
Musme, J. MacDonough	7 44 20	7 29 20
Vaquero, H. B. Duryea	Withdrew.	

Columbia Y. C. Annual Regatta.

NEW YORK—HUDSON RIVER.

Saturday, June 19.

THE 13th annual regatta of the Columbia Y. C. was sailed on June 19, the times being.

	Start.	Finish.	Elapsed.	Corrected.
CLASS C—CABIN SLOOPS, 30 TO 38FT.				
Cygnet	11 00 00	Did not finish.

Philadelphia Y. C.

TINICUM—DELAWARE RIVER.

Saturday, June 12.

THE Philadelphia Y. C. sailed its 21st annual regatta on June 12 over one of the club courses on the Delaware River, to New Castle Flats and return, 15 miles each way. The day was fair, with a 10-knot breeze from N.W., very puffy at times. The times were:

	Start.	Finish.	Elapsed.	Corrected.
FIRST CLASS.				
Helere	11 15 00	3 13 19	3 48 19	3 44 43
Karl	11 15 00	3 54 15	4 09 15	4 03 15
Ibis	11 15 00	3 59 58	4 44 58	4 36 52
SECOND CLASS - SLOOPS OVER 40FT.				
Julnar	11 15 00	3 54 55	4 09 55	4 09 55
Mull	11 15 00	4 0 39	4 53 39	4 48 47
THIRD CLASS—SLOOPS OVER 30FT				
Zeelan	11 00 00	4 01 51	4 01 31	4 48 32
Weona	11 00 00	4 00 19	5 00 19	5 00 19

Schemer was disabled and withdrew, her steering gear breaking. Helene wins a leg for the Singerly cup, presented by Wm. M. Singerly for the yacht in first class, mixed rigs, winning the greatest number of races this season. Julnar wins a leg for the Commodore's cup, presented by Com. Francis Shunk Brown for the yacht of the second class winning the greatest number of races through the season. The judges were George D. Gideon, George T. Whitaker and George W. Fite.

Detroit Y. C.

DETROIT—LAKE ST. CLAIR.

Monday, June 7.

THE Detroit Y. C. sailed a regatta on June 7, the times being:

	Start.	Finish.	Elapsed.

Vencedor.

THE Chicago fin-keel Vencedor, recently purchased by H. F. Gillig, arrived on June 14 at the works of the Gas Engine & Power Co., Morris Docks, New York, where arrangements had been made to launch her. She was accompanied by her former owner, E. C. Berriman, of the Lincoln Park Y. C., who has superintended the shipment, and will remain here to sail in the boat in her first races. She was loaded at Racine on a large flat car, with her fin on another car. It was hoped to fit the fin and launch her early in the week, fitting her out in time for the Larchmont race of Saturday last, but this could not be done; however, she will be ready this week. It is uncertain as yet just what her measurement will be, and where it will place her; though she raced last year on a waterline of 43ft., and a racing length of but 45ft., she needs considerably more sail, and probably can with advantage be trimmed to a waterline of 45ft. or more, with still more canvas than on the shorter waterline. It is hardly likely that she can be placed in Wasp's class, but she will probably go against Syce in the 51ft. class. Mr. Berriman was on the Atlantic Y. C. steamer on Tuesday, and sailed on Emerald on Thursday. It will be a matter of general satisfaction if the yacht is, for the first time, put at a trim which will show just how fast she is; and this is quite possible under the rules on the Sound.

New York Y. C. Annual Regatta.

NEW YORK—NEW YORK HARBOR.

Thursday, June 17.

THE New York Y. C. went through the formality of its annual regatta on June 17 with most unsatisfactory results. With the best of weather the event would have been tame enough, being confined to yachts enrolled in this club only, making a very small entry list; but the weather was of the worst, completely spoiling the day for all parties, yachtsmen, committee and spectators. There was little wind to speak of, but from all quarters, the sky was overcast all day, with light rain at intervals, and the race after a little life at the start, dragged into a weary drifting match, the yachts finishing at midnight.

The entries were:

95FT. CLASS—SCHOONERS—RACING TRIM.

No.		Length.
5	Colonia, C. A. Postley	93.13
7	Emerald, J. R. Maxwell	91.47

85FT. CLASS—SCHOONERS CRUISING TRIM.

8	Iroquois, C. Rouse	82.29

75FT CLASS—SCHOONERS—CRUISING TRIM.

1	Amorita, W. G. Brokaw	74.82

CLASS G CUTTERS—RACING TRIM.

11	Vigilant, Percy Chubb	
1	Bedouin, J. Murray Mitchell	

Allowed by special agreement 32m 50s.

60FT. CLASS—CUTTERS—RACING TRIM.

30	Wasp, H. F. & R. L. Lippitt	51.97

60FT. CLASS CUTTERS—CRUISING TRIM.

10	Eclipse, L. J. Callanan	55.68

51FT. CLASS—CUTTERS—RACING TRIM.

34	Syce, F. M. Hoyt	50.86

51FT CLASS—CUTTERS—CRUISING TRIM.

9	Choctaw, J. Montgomery Strong	46.13

43FT. CLASS CUTTERS—RACING TRIM.

36	Norota, D. B. Burnham	41.89

The usual prizes for both racing and cruising trim were offered, and the committee had exerted itself energetically to drum up entries, but as appears, with poor success. Of the eleven entries, five, Emerald, Colonia, Wasp, Syce and Norota, were entered for the same reason as in the preceding races of other clubs, that their owners are racing men and propose to start in all races open to them. The other entries merely testify to the personal exertions of the committee and the *esprit du corps* of a very few members, who have entered their yachts solely to make a show in the great function of the yachting year; especially is this the case with Bedouin and Vigilant, a most incongruous pair, starting under a special agreement merely to fill out. Having no competitors, Iroquois and Amorita did not start. The five smaller cutters were placed together, sailing without club-topsails.

The start was made from off Buoy 13, just outside the Narrows, the schooners, with Vigilant and Bedouin, going out and around the Sandy Hook Lightship, the smaller cutters rounding the Scotland, all going and returning by way of the Southwest Spit. At 11 A. M., the hour for starting, there was a light E.S.E. wind and the young ebb was well under way; the flagship Corsair, with Com. Morgan and Fleet Capt. J. Beavor Webb on the bridge and a large party of ladies and gentlemen about the decks, lay off the starting line in company with the club steamer Cepheus and the committee boat Luckenback, on which latter were Dr. J. C. Barron, Dr. W. Barton Hopkins and J. Frederick Tams, the regatta committee. All of the yachts were ready at the line, except Bedouin, Eclipse and Choctaw; these beating down very slowly in the light air. It was not until 11:45 that the first signal was given, by the whistle, as the gun missed fire. Ten minutes later the old reliable whistle again did substitute duty for the handsome bronze yacht cannon on its teak carriage, and the cutters came for the line, the start being with the 5-minute interval for crossing. They went over very slowly, Choctaw first, with Wasp close beside her, followed by Eclipse and Vigilant. The handicap gun, at 12 M., which, by the way, was also a whistle, was the starting signal for the schooners, Emerald following Vigilant across the line, with Bedouin, handicapped, under her lee. Colonia came next, followed by Syce, the latter going on starboard tack just on the line; Norota was last, with a bad handicap. The start was officially timed as follows: Preparatory 11:45; start, cutters, 11:55. Handicap, cutters; start, schooners: 12:00:00.

Choctaw	11 53 23	Bedouin	12 00 22
Wasp	11 58 49	Syce	12 00 35
Eclipse	11 59 17	Colonia	12 01 04
Vigilant	11 59 59	Norota	12 03 15
Emerald	12 00 10		

Bedouin, Syce and Norota were handicapped.

All crossed on port tack except Syce, she going about on the line and standing across to the eastward of the fleet. After waiting to start another race, the committee boat started after the fleet, now going down at a fair speed with the aid of the tide. Wasp was leading, with Vigilant some distance astern, while Colonia, in the first ten minutes, pulled out a good lead on Emerald. At the head of the Swash, about four miles from the start, Vigilant passed Wasp at 12:45, the smaller boat, in cruising trim, carrying a jib-headed topsail. Vigilant carried a club, but of course her rig has been reduced this year to proportions more suitable for her new use as a cruiser than the old. At the same time, she carried a row of heads along the weather rail that was strongly suggestive of her racing days.

The wind fell still lighter as the leaders neared the Spit, a breeze was visible to the westward, over Raritan Bay, and at 1:26 the first puff of it passed over Vigilant, Wasp and Colonia, and struck Emerald and Syce, putting them on starboard tack. Three minutes later the leaders caught it, with a light shower of rain. There was no strength in the wind, and the procession dragged slowly past the Spit buoys, being timed:

Vigilant	1 33 15	Syce	1 42 55
Wasp	1 35 50	Emerald	1 46 06
Colonia	1 38 50	Bedouin	1 50 28

Sheets were eased to port and spinakers slowly bloomed to starboard for the run to the Bell Buoy, the larger yachts standing by it on the same course for the Sandy Hook Lightship, while the smaller headed up for the Scotland Lightship.

From this point on the race lost all semblance of interest, and is not worth noting in detail. Vigilant and Colonia kept closely together as they drifted toward the lightship, where they were timed:

Vigilant	3 37 30	Emerald	3 51 30
Colonia	3 39 15	Bedouin	4 09 00

Vigilant had been over two hours in running the 9½ miles from the Spit to the turn, in perfectly smooth water.

Meanwhile Wasp had turned the Scotland at about 2:27 (the timing was not accurate), with Syce some ten minutes astern, and both were standing in for the point of the Hook, with no wind to speak of, being finally compelled to anchor. Eclipse and Norota, in spite of the disparity in size, were making a pretty close race on even time, bound out for the Scotland.

The big yachts found the wind N.W. at the Sandy Hook Lightship, but later on it shifted to N.E., with light rain at times. The times at the Bell Buoy off the point of the Hook were roughly taken as follows: Wasp 5:15, Colonia 5:21, Vigilant 5:23, Emerald 5:26. Syce was not timed at this mark.

The committee boat left the leaders slowly drifting inside the Hook and went up the Swash to the finish line off Buoy 13, anchoring and waiting with the best possible grace until about 8 P. M., when she weighed anchor and started down—in rain and mist—to hunt the missing yachts. Emerald went by in tow of a tug, but Colonia, Wasp, Vigilant and Bedouin were discovered after a long hunt drifting near the Southwest Spit. Here the tug left them and returned to the city, a timekeeper being placed on one of the markboats. A finish was finally made, as follows:

SCHOONERS—95FT CLASS—RACING TRIM 33 MILES.

	Start.	Finish.	Elapsed.	Corrected.
Colonia	12 01 04	11 15 30	11 14 26	11 14 26
Emerald	12 00 10	Withdrew.		

CUTTERS CLASS G RACING TRIM—33 MILES.

Vigilant	11 59 59	11 09 00	11 09 01	11 09 01
Bedouin	12 00 00	11 33 00	11 33 00	11 00 10

MIXED CLASS CRUISING TRIM—26 MILES.

Eclipse	11 59 17	*12 59 00	12 59 43	12 59 43
Wasp	11 58 49	10 19 00	11 00 11	11 00 04
Syce	12 00 00	11 48 30	11 43 30	11 43 24
Choctaw	11 58 23	Not timed.		
Norota	12 00 00	Not timed.		

* A. M. Friday, June 18.

Colonia wins the class prize, and the prize for the best corrected time for schooners.

Bedouin wins the Class G prize.

Wasp wins in the mixed class

Colonia wins the class prize, and as far as possible on her merits, she made a good lead at the start and held it fairly all day. Bedouin made up her time in the drifting about the Spit and beats Vigilant; Wasp wins in the mixed class.

The attendant fleet was by no means remarkable considering the importance of the occasion, for either size or quality. The handsome flagship Corsair, designed by Mr. Beaver Webb, had for company her two sister ships Intrepid and Sultana, both thoroughly ship-shape and stylish, and Narada, originally Semiramide, designed by Alfred H. Brown, looked the ship that she is. Another English steam yacht with the fleet was the old schooner Hildegard, once owned by the Prince of Wales, and brought out to this side some years ago by George Gould, who recently sold her to B. M. Whitlock. During the past winter she has been altered to an auxiliary under the supervision of Mr. Wintringham. With a taunt mainmast and square-rigged on the fore she looks very well indeed, and though comparatively little space has been given up to her machinery, she is making 11 to 12 miles in her regular running. In the "protected cruiser" division were Alicia, Hiawatha II., Clermont, Viking, Elsa, Sybilla, Sappho, Nirvana and Now Then. For once Electra was not seen at a New York Y. C. regatta. The converted tramp, Scythian, was also out with the fleet. The schooners were Sachem, Iroquois, Clytie, Cavalier, Coronet and the yawls Flying Cloud and Huron. The cutter Mineola, Rear-Com. Belmont, sailed with the fleet all day, greatly improved in appearance by black topsides and coppered bottom, and looking almost like a Fife boat.

Dorchester Y. C. Open Race.

DORCHESTER—BOSTON HARBOR.

Saturday, June 19.

MASSACHUSETTS Y. R. A. RULES.

THE open race of the Dorchester Y. C. was sailed on June 19 in a strong and puffy S.W. wind, which disabled a number of the yachts. Flea and Gosling were dismasted, Ida J. lost her topmast and Addie her bowsprit; Privateer broke her mast truck at the head. The incident of the day was the sailing of C. H. Crane's new twenty, Al-Anka, with a crew of five men; she beat her class handsomely, including such boats as Rooster, Nancy Hanks and Cleopatra. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Addie, R. C. Nickerson	25.03	1 41 56	1 10 08
Ida J., F. E. Beckman	28.04	1 39 17	1 10 34

Minnetonka Y. C.

LAKE MINNETONKA.

Monday, June 7.

THE first race of the Minnetonka Y. C. was sailed on June 7, the times being:

FIRST CLASS SLOOPS.

	Start.	Finish.	Elapsed.	Corrected.
Wizard	3 31 31	5 22 42	1 51 11	1 50 09
Tartar	3 30 25	5 23 20	1 52 55	1 51 09
Breeze	3 31 05	5 23 21	1 52 16	1 50 00
Kossack	3 30 35	5 24 01	1 53 26	1 52 26
Marie II.	3 32 20	5 24 20	1 52 00	1 50 07
Charlotte	3 31 25	5 24 22	1 52 57	1 51 13

23FT. CATS

Varuna	3 31 11	5 42 42	2 21 31	2 21 31
Pinafore	3 21 05	5 45 47	2 24 42	2 20 59

ONE RATERS.

Pyxie	3 14 50	5 33 10	2 18 20	2 18 20
Gladrene	3 14 50	5 34 12	2 19 22	2 19 22
Answer	3 14 50	5 39 45	2 24 55	2 24 55
Doris	3 14 50	5 48 40	2 33 50	2 33 50

Wizard protested Breeze for fouling a mark, the protest being sustained. It was decided upon investigation that the official timing of Marie II. was wrong by five minutes, the correct time being 1:55:07 instead of 1:50:07, as in the table.

Hull Y. C. Invitation Race.

HULL BOSTON HARBOR

Friday June 18.

MASSACHUSETTS Y. R. A. RULES.

THE Hull Y. C. sailed an invitation race for the third and fourth classes and knockabouts on June 18, the wind being E. to S.E., light and variable. The times were:

THIRD CLASS.

	Length.	Elapsed.	Corrected.
Cleopatra, H. M. Faxon	19.06	2 28 47	2 01 22
Omene, W. P. Barker	19.11	2 28 45	2 01 07
Arab III., W. F. Scott	19.11	2 29 17	2 02 19
Nancy Hanks, P. W. Maglathlin	19.06	2 30 00	2 02 35
Al Anka, C. H. Crane	19.11	2 33 31	2 05 11
Enigma, G. M. Maybury	18.03	2 35 21	2 06 32

FOURTH CLASS.

Alpine, C. J. Blethen	16.11	2 28 49	1 58 23
Gnome, H. B. Faxon	15.03	2 36 06	2 04 04
Vitesse, C. D. Mower	15.06	2 37 45	2 05 22
Flea, E. A. Boardman	16.11	2 37 10	2 06 44
Sphinx, Arthur Keith	16.11	2 42 25	2 11 59
Fantasy, W. Allerton	16.11	Withdrew.	
Hector, F. M. Crosby	16.06	Withdrew.	

KNOCKABOUTS.

Gosling, Clark & North	21.00	2 35 54	.....
Hazard, H. M. Sears	21.00	2 37 03	.....
Sally III., L. S. Percival	21.00	2 37 40	.....
Jacobin, F. E. Jacobs	21.00	2 40 15	.....
Fly, W. O. Gay	21.00	2 41 46	.....

The judges were C. V. Souther, J. J. Souther and Charles A. Cooley.

The prizes were $15 to first, $10 to second and $5 to third in each class

Cohasset Y. C. 15ft. Class.

COHASSET, MASS.

MASSACHUSETTS Y. R. A. RULES

THE Cohasset Y. C. sailed its first championship race for the 15ft. one-design class on June 17 in a very light S.E. wind, the yachts drifting part of the time. The times were:

Start 11:50:00.	Finish.	Elapsed.
Blind, F. H. Pratt	1 04 16	2 14 16
Mermaid, W. R. Sears	1 12 07	2 22 07
Hoodoo, Gammons & Wheelwright	1 15 30	2 25 30
Delta, R. B. Williams	1 22 46	2 32 46
Jap, Bouve & Pegram	1 23 13	2 33 53
Honey, C. H. Cousens	Withdrew.	

The judges were D. N. Tower, Paul J. Bates and H. B. Tower.

The second championship race was sailed on June 19, in a reefing breeze from S.W., the times being:

Start 3:30:00.	Finish.	Elapsed.
Delta, R. B. Williams	5 03 29	1 33 29
Blink, F. H. Pratt	5 06 23	1 36 23
Honey, C. H. Cousens	5 10 08	1 40 38
Jap, Bouve & Pegram	5 12 36	1 42 36
Hoodoo, C. W. Gammons	5 12 48	1 42 48
Swallow, J. Richardson	5 13 10	1 43 10
Mermaid, W. B. Sears	5 13 31	1 43 31

Atlantic Y. C.

BAY RIDGE—NEW YORK HARBOR.

Tuesday, June 15.

THE annual regatta of the Atlantic Y. C. was sailed on Tuesday, June 15, over the regular club courses in New York Bay and outside the Hook, the larger yachts going past and around the Scotland, the two schooners also turning the Sandy Hook Lightship. But for the fluky wind, the day would have been perfect; summer had come at last after a wet and disagreeable spring that lasted almost to the middle of June, and Tuesday was clear and warm, with a blue sky and bright sun, except for a short time in the afternoon, when a brief squall passed over the Bay. The members and guests of the club turned out in goodly numbers, the big steamer Gen. Slocum being well filled. This part of the fleet, under the care of Messrs. Sanford and Church, fared very well all day, enjoying a good view of all parts of the race, with the usual accompaniments of an orchestra and a good caterer. The regatta committee, Messrs. Lawton, Austen and McNulty, had the big tug Luckenback, successor to the old boat so well known a dozen years since in similar work, especially in the Puritan-Genesta races. As to the starters, the list was quite as good as is to be expected at the present time; some of the entries, as usual, did not appear, but their places were taken by other boats, the total being twenty-two, as follows:

SCHOONERS—95FT. CLASS.

	Racing Length.
Colonia, C. E. Postley	93.30
Emerald, J. R. Maxwell	91.47
CUTTERS.	
Wasp, H. F Lippitt	51.97
Syce, F. M. Hoyt	50.86
CUTTER SLOOPS—43FT. CLASS.	
Eidolon, James Weir, Jr	42.61
Norota, D. B. Burnham	41.64
SLOOPS—36FT. CLASS.	
Akista, Geo. Hill	34.75
Acushla, H. W. Hanan	34.00
Defiance	34.80
SLOOPS—SPECIAL 30FT. CLASS.	
Vaquero III., H. B. Duryea	30.00
Hera, R. N Ellis	30.00
Wa Wa, J. A. Stillman	30.00
Musme, J. A. McDonough	30.00
CABIN CATS—30FT. CLASS.	
Lizzie V., W. P. Vreeland	29.96
Dorothy, C. F. Larzelere	28.61
Squaw, H. S. Jewell	27.83
Volsung	28.55
CABIN CATS—25FT. CLASS.	
Qui Vive, J. A Freeth	24.09
Uncas, J S. Negus	21.41
Ethel, E. H. Bergen	21.71
OPEN SLOOPS—20FT CLASS.	
Asthore, P. T. Dodge	20.00
Shark, Colgate Hoyt	20.00

Amorita was entered in the 75ft. schooner class to sail alone, but did not start. The rebuilt Eclipse was entered in the 60ft. class against Wasp, and the rebuilt Iola in the 51ft. class with Gossoon against Syce. Gossoon was not ready, being in the Atlantic Basin, where she was refitting for racing; Eclipse and Iola were under way with the fleet, but did not start, so Wasp and Syce were put together. Eidolon and Norota are both in the 43ft. class, making a good match, and the new Akista comes well within the 36ft. class with Acushla and Defiance, the latter justifying her name by disregarding all rule and custom to the extent of sailing without racing number or flag. Volusia was entered in the class, but did not appear. The thirties of course were closely matched, as were the cats and the two 20-footers.

A light S.W. wind in the early morning raised some doubts that were, unfortunately, more than borne out by the results of the day; when the yachts gathered about the line outside the Narrows just before 11 o'clock, there was hardly enough wind for them to work against the strong tide, half of the ebb being gone.

The preparatory whistle at 11 o'clock, found Colonia and Emerald in very close company near the westerly markboat, Colonia to windward and inside, and both with barely more than steerage way. While awaiting their gun at 11:05, Colonia hailed for room at the mark, and the two came so closely together that her bowsprit threatened to sweep Emerald's deck, but was shoved off by the crew of the latter. The exact details were not discernible from the steamers, all at the other end of the line, but Colonia set a red flag before she crossed the line and filed a written protest after the race. Emerald led over the line by a distance of a couple of hundred yards, both on starboard tack. The four cutters were to start at 11:10, and Syce and Norota, the latter sailed by Mr. Irving Cox, went over promptly. Wasp and Eidolon, however, were caught by the tide just outside and below the line, and for nearly ten minutes they lay motionless beside the western markboat, unable to get headway. Eidolon finally crossed the line just before, and Wasp just after the gun for the 30-footers, at 11:20. As all starts were from the gun this meant a loss of nearly ten minutes. Meanwhile the 36-footers had gone away at 11:15 in company with the catboats and 20-footers. The thirties made a good start, but Ethel and Shark were handicapped some six or seven minutes.

Once away, with a strong tide setting them to windward, the yachts made good time down the main channel. The two cats, Volsung and Dorothy, stood well over toward Norton's Point, but all of the others stuck closer to the west bank. There was wind enough, light as it was, to make a very interesting fight between Emerald and Colonia, the two traveling quite fast; Colonia weathered out on the other, and at the end of about forty-five minutes from the start Emerald found herself in a bad place, to leeward of Colonia and with Flynn's Knoll under her own lee, as the two, on starboard tack, stood down for the Southwest Spit buoys, still a mile or two distant. Emerald went about, which brought her on port tack, with Colonia so close to her that she was compelled to tack again at once in order to clear; Colonia stood on and when the two went on port tack at 12:05 she was well out in a snug weather berth. Wasp was hunting Syce very hard and made up a half of her handicap in the beat to the Spit, doing very good work. The fleet was well split up by this time, the smaller boats sailing various courses. The last seen of the tail end showed Shark, after a bad handicap, running away from the 21ft. catboat Ethel in a wild chase after Asthore; as results showed, she more than caught her. The times at the Southwest Spit were:

Colonia	12 22 45	Syce	12 15 15
Emerald	12 25 50	Wasp	12 40 20

The order of the thirties was: Musme, Wa Wa, Vaquero III. and Hera.

With the S.W. wind now very light and flat streaks of calm showing under the Highland shore, booms were eased to port and spinnakers set and braced well forward, Colonia carrying hers on the mainmast, while Emerald's was on the foremast. Syce handled her spinnaker very quickly on the turn, a little later setting balloon jibtopsail; the schooners set their ballooners as well. Nearly half an hour was wasted on the couple of miles from the Spit to the Bell Buoy off the Hook, where sheets were hardened and small jiptopsails set to meet the outside breeze, which proved to be S.S.E., making a close reach to the Scotland, in which Colonia gained more than the times show, as Emerald had picked her up some on the run to the Bell Buoy. Norota and Eidolon, after going straight down the Swash, were picked up outside the Hook, the former far in the lead. Neither of the schooners fetched the mark. Colonia went on port tack at 1:15, followed by Emerald at 1:16:30. At 1:18:40 Colonia was about again at the mark, passing a minute later. The times at the Scotland were:

Colonia	1 19 40	Syce	1 40 00
Norota	1 20 40	Wasp	1 43 00
Emerald	1 23 15		

With a nice breeze abeam and smooth water, the four miles to the Sandy Hook Lightship were soon covered, the times being:

Colonia	1 40 15	Emerald	1 44 00

They ran in with the wind well aft, falling in with Syce and Wasp as all neared the bell buoy, the two carrying spinnakers to port; with a flood tide and light breeze passed inside the Hook.

When well inside, at 2:30, the sky clouded and rain fell heavily for a short time, then the wind jumped around to N.E. and fairly hammered the boats for a few minutes; jibtopsails came in quickly; Syce, with topsail sheet started, laid down and rolled out a lot of green bottom; Wasp also heeled over, but carried her canvas through it all. Colonia lost the clew of her large jibtopsail, and the sail slatted until it was badly torn, and Emerald, some distance astern of the others, lost one of her headsails. The squall left them all on the wind on starboard tack for the Spit, where they were timed:

Colonia	2 44 00	Wasp	2 44 40
Syce	2 44 00		

Emerald was a long distance astern and was not accurately timed. The wind now fell flat, the rain being over, leaving the yachts to drift. Emerald carried a little breeze with her, rounded the Spit with a very neat turn, and was up with the others. For half an hour they drifted with a mere air from S.W.; at the end of this time Syce set her spinnaker to port, while Wasp, close aboard of her, was making a little headway with mainboom on that side. The thirties were scattered over the Bay; Hera apparently with a long lead, over by the East Bank.

About 3:50 there came a little wind from S.S.W., driving them home with spinnakers to starboard. The last half hour was interesting in a way, though the race had long since ceased to be other than one big fluke. Emerald and Colonia came up side by side, the former taking the lead below Swinburn Island. Wasp and Syce were also coming along for the finish, while Acushla was leading Akista by an eighth of a mile; at the same time the three following thirties were gaining very fast on Hera. Near the line Colonia picked up a bit and ran up on Emerald, but to no purpose, especially as she had over a minute to pay in time. Emerald crossed with a clear lead, and Syce led Wasp easily over the line.

The real fun was with the smaller classes. Vaquero headed a group of four or five boats, including Acushla, Musme and Hera, which came up very near to the easterly markboat, while further to the westward and some little distance astern were Wa Wa and Akista. The leading group stopped of a sudden as the wind left them in the ebb tide, Syce, just ahead and over the line, also starting down the Bay stern first. Wa Wa and Akista, however, were able to barely stem the tide, and worked up very slowly for the line. Wa Wa was timed a few seconds ahead of Vaquero, while Akista finished some minutes ahead of Acushla, the latter being compelled to anchor. The official times were:

SCHOONERS—95ft. CLASS—COURSE, 33 MILES.

Start 11:05	Finish.	Elapsed.	Corrected.
Colonia	4 41 55	5 36 55	5 26 55
Emerald	4 40 55	5 35 55	5 34 48
Emerald wins by 2m. 7s.			
CUTTERS—60 AND 51FT. CLASSES—COURSE, 25½ MILES.			
Wasp	4 43 33	5 38 33	5 38 33
Syce	4 44 59	5 39 59	5 35 05
Syce wins by 3m. 10s.			
CUTTERS—43FT. CLASS—COURSE, 21½ MILES.			
Start 11:10.			
Eidolon	Not timed.		
Norota	4 28 00	5 18 00	5 16 35
SLOOPS—36FT. CLASS—COURSE, 21½ MILES.			
Start 11:10.			
Akista	5 07 25	5 57 25	5 57 20
Acushla	5 13 30	6 03 30	Not meas.
Defiance	5 16 10	6 06 10	6 06 10
Akista wins by 8m. 50s. from Defiance.			
SPECIAL 30-FOOTERS—COURSE 18 MILES.			
Start 11:20.			
Vaquero III.	5 05 45	5 45 45	.....
Wa Wa	5 05 05	5 45 05	.....
Hera	5 10 45	5 50 45	.....
Musme	Not timed.		
Wa Wa wins by 40s.			
CATS—25 TO 30FT.			
Start 11:15.			
Lizzie V.	2 50 30	3 35 30	3 35 30
Dorothy	2 54 00	3 39 00	3 36 51
Volsung	2 51 27	3 36 27	3 34 59
CATS—20 TO 25FT.			
Qui Vive	3 11 57	3 56 57	3 56 57
Ethel	3 22 02	4 07 02	3 59 37
20FT. CLASS.			
Start 11:15.			
Asthore	3 09 02	3 54 02	.....
Shark	3 02 37	3 47 37	.....
Asthore wins from Shark by 6m. 25s.			

The list of winners shows little or nothing of the real work of the yachts. On the wind down to the Spit, from the bell buoy to the Scotland and on out to the turn Colonia did the better work; Emerald picked up in the light air inside the Hook on the way out, and again coming in, the race in from the point of the Hook being all a fluke. Wasp did excellent work all day, cutting down half of her big handicap early in the race. Norota apparently sailed a very good race, though her only competitor managed to get lost, so that no comparison of time is possible. In the Upper Bay after the race there was a brisk N.W. breeze.

Racing at Hamilton.

THE Royal Hamilton Y. C. sailed a race on June 12 for the 27 and 23ft. classes, Kestrel winning in the former and Koko in the latter. In the skiff class Stella won. The Victoria Y. C. sailed a race on the same day for the 32ft. and 15ft. classes, the times being:

32FT. CLASS.

Start 2:30.	Finish.	Elapsed.
Erma	4 42 20	2 12 20
Nancy	4 46 00	2 16 00
Alert	4 47 30	2 17 30
Echo	Did not finish.	
15FT. CLASS.		
Start 2:35.		
Sothis	4 03 45	1 28 45
Fleetwing	4 10 00	1 35 00

East Gloucester Y. C. Pennant.

GLOUCESTER, MASS.

Thursday, June 17.

THE East Gloucester Y. C. sailed its first race on June 17 in a fresh southerly breeze, the times being:

	Elapsed.	Corrected.
Brownie, Wheeler	1 34 32	1 02 02
Luna, Hildreth	1 31 50	1 02 38
Hoodoo, Wheeler	1 39 29	1 04 47
Ariel, Gosbee	1 32 34	1 05 41
Skeedadle, Merchant	1 30 31	1 06 05
Coot, Brown	1 39 03	1 06 26
Bird, Pinkham	1 54 52	1 18 26
Lucy B., Strople	1 44 33	1 21 19

Brownie wins the first leg for the pennant offered by Frederick Pigeon.

Larchmont Y. C. Spring Regatta.

LARCHMONT—LONG ISLAND SOUND.

Saturday, June 19.

THE Larchmont Y. C. sailed its usual spring regatta on June 19 under very favorable conditions, a very good race resulting. The race was an open one, and thirty-four yachts took part. Prizes were offered in all the regular classes and a special prize was offered, in addition to the class prize, for the larger schooners, Amorita thus going in with Colonia and Emerald. Several new yachts made their racing debut, the Cary Smith yawl Sakana, owned by Oliver Adams, the new Olmstead 20-footer Montauk, the new Huntington 20-footer Skate, owned by Irving Cox. Queen Mab was ready to meet Wasp for the first time this season. It was expected that Vencedor would be ready, but she was not. Course No. 5, the Parsonage Point-Red Springs triangle, 10¾ miles, was sailed, two or three rounds according to the class.

The start was set for 11:30 A. M., but there was so little wind that a delay of an hour was made. When the preparatory whistle blew at 12:30 there was a fresh southerly breeze, making very smart work at the start, which was from the gun. Emerald and Amorita started well, but Colonia lost over a minute. The wind worked to the westward and came in fresher as the race proceeded, moving the fleet along at a good speed. This made a reach to the first mark, a beat to the second, and a reach in. The times of the larger yachts were:

	1st round.	2d round.	3d round.
Emerald	1 27 30	1 17 20	1 15 22
Colonia	1 29 51	1 15 28	1 13 46
Amorita	1 39 19	Withdrew.	
Queen Mab	1 35 47	1 30 19	1 27 41
Wasp	1 34 41	1 33 42	1 33 46

Emerald lost the tack of her balloon main topmast staysail on the last leg and finished with the sail adrift, beating Colonia by a bare 10 seconds corrected time. Queen Mab saved her time easily from Wasp. Syce disposed of Uvira without trouble; the latter is no match in form or construction for the new fin-keel, and what she gains this year through a new and larger rig is fully off-set by extra ice box, galley and furniture below. In connection with the three previous meetings of Wasp and Syce, it is interesting to note that in this race, over the same waters at the same time, though not in the same class, Wasp beat Syce 6m. 10s., for the two rounds, and allows her just 4 minutes. Sakana relinquished all of her chances to pick up a gentleman and lady from the keel of a capsized catboat off Matinnicock; the new Webber boat Surprise won very easily in the same class. In the 20ft. class the honors went to the two Huntington boats, the new one, Skate, winning easily, with Kenue a good second. The former 21-footer Minnetonka sailed as a catboat. The official times were:

SCHOONERS—75FT. CLASS—REGULAR—32¼ MILES.

	Start.	Finish.	Elapsed.	Corrected.
Colonia	12 35 00	4 34 05	3 59 05	3 59 05
Emerald	12 35 00	4 35 12	4 00 12	3 58 55
SCHOONERS—SPECIAL CLASS—32¼ MILES.

The race was managed by Messrs. H. C. Wintringham and H. W. Coates, of the regatta committee.

Royal St. Lawrence Y. C.

DORVAL—LAKE ST. LOUIS.

THE third of the Ross series races for the 20-footers was sailed on Saturday, June 12, the start being made at 3:35.

The weather was very uncertain, with heavy squalls from the westward, making it a difficult matter to canvas the boats. Just at the start there was a very heavy squall, and the boats went down and wallowed in it for some time, but they were all apparently uncapsizable, for, although some of their lee spreaders were in the water, they all got on their feet again and went on.

Avoca worked up into a lead in the first fifteen minutes and began to pull steadily away from the fleet. The first round was completed as follows:

Avoca	4 19 20	Islander	4 23 30
Glenowen	4 22 20	Maida	4 24 00
Rogue	4 23 06	Millie	4 28 35

During the second round there was no change in the position of the boats, but Avoca continued to increase her lead, and it was completed as follows:

Avoca	5 01 40	Islander	5 09 23
Glenowen	5 06 20	Maida	5 17 25
Rogue	5 05 25	Millie	5 37 10

On the third round Rogue and Islander passed Glenowen and the result was as follows:

		Points.
Avoca	5 43 20	24
Rogue	5 53 20	19
Islander	5 55 35	16
Glenowen	6 01 18	19
Maida	6 16 30	12
Millie	6 49 13	9

The second club race for the 15-footers was sailed over the same course, only two rounds being sailed, and the result was as follows:

	Start.	1st Round.	2d Round.
Viva	3 45 00	4 28 25	5 25 25
Titania	3 43 00	4 41 25	5 25 35
Anita	3 45 00	59 35	5 39 55

Andria.

THE European edition of the New York *Herald* publishes the following account of the new steam yacht Andria :

The steam yacht Andria, which the Ailsa Shipbuilding Company, of Troon, recently built from G. L. Watson's designs to the order of John E. Brooks, of New York and London, has just completed her official trials on the Firth of Clyde, and these proved of a highly satisfactory nature.

The Andria is 161ft, on the load waterline, 23ft. 6in. beam and 14ft. 3in. moulded depth, and with all her ballast and other appurtenances, with tanks full and bunker coal on board, has a displacement of about 430 tons. According to her specifications she was to maintain a speed of fourteen and a half knots on the double run from the Cloch to Cumbrae lighthouses.

The Andria is perhaps the most complete little steamer Mr. Watson has yet designed, and certainly in appearance she is more captivating to the eye than many of the recent steam yachts the Glasgow designer has given out.

The space area under the deck has been largely drawn on for her machinery and fuel accommodation, but, notwithstanding, the remaining footage has been very judiciously apportioned and deck house accommodation has been largely wrought on for saloon and cabins. The fittings of the boat, although not elaborate and over grand, are tasteful and light, while every comfort and convenience one could ask for is in evidence in the internal detail of the ship. Ventilation and light are two of the leading features of her inner minutiæ, and these have been secured at the expense of the latest ventilating appliances and the most thorough and complete electric light installations.

The steam steering gear, binnacles, windlass, capstan, telegraphs, search light and guns are all of the most approved and up-to-date fashion, while the general arrangement and get-up of her boats and deck fixings and fixtures are such as to give her deck plan a pleasing and finished look. On her several runs between the lights she had Mr. Brooks and party, Mr. G. L. Watson and representatives of the builders on board. On the distance, which is ten knots, the vessel well maintained her speed, and as the mean between the down and return run, she attained the goodly speed of 14.66 knots.

The Jubilee Cup.

THE following yachts have entered for the Jubilee cup race from Dover to Heligoland:

Schooners—Ariadne, 380 tons, the Hon. Mrs. Meynell Ingram; Amphitrite, 161 tons, Sir Frederick Wills; Asterope, 161 tons, Mr. Albert Wood; Cetonia, 203 tons, Lord Iveagh, K. P.; Reindeer, 106 tons, Mr. S. P. Mumford; Day Dream, 59 tons, Mr. Allan F. Penraven.

Yawls—Edwina, 55 tons, Mr. A. C. Bailey; Cygnet, 57 tons, Mr. E. M. Nelson; Speranza, 101 tons, Mr. E. S. Revett; Corisande, 160 tons, Lord Cowley; Freda, 120 tons, Mr. Wyndham Cook; Julianar, 120 tons, Sir George A. Pilkington; Lady Ruth, 47 tons, Mr. H. W. Trollope; Merry Thought, 73 tons, Mr. Cecil Quentin; Anemore, 96 tons, Mr. J. H. Haggas.

Ketches—Goddess, 176 tons, Mr. F. W. L. Papham; Carriad, 129 tons, Lord Dunraven.

Cutters—Caress, 67 tons, Mr. H. T. Van Laun; Creole, 54 tons, Lieut.-Col. Villiers Bagot; Sibyl, 45 tons, Mrs. E. H. Middleton; Gwynfa, 57 tons, Mr. T. Hewitt Myring.

The race will start from Dover on June 23.

Corinthian Y. C., of Philadelphia.

ESSINGTON—DELAWARE RIVER.

Saturday, June 19.

THE Corinthian Y. C., of Philadelphia, sailed a special race on June 19, the times being:

Start 3:07:	Finish.	Elapsed.	Corrected.
Lenni Lenape	4 57 30	1 50 30	1 50 16
Flirt	5 01 20	1 54 20	1 52 43
Dawn	5 00.34	1 53 34	1 53 34

Marine and Field Club Special Race.

BATH BEACH—NEW YORK BAY.

Saturday, June 19.

THE Marine and Field Club, of Bath Beach, sailed a special race on June 19 in a light and variable wind, the times being:

Start, 12:05:	Finish	Elapsed	Corrected.
Penguin	2 21 30	2 16 30	2 12 38
Gossoon	2 23 45	2 18 45	2 12 55
Saona	2 32 00	2 27 00	2 14 16
Swanannoa	2 19 30	2 14 30	2 14 30
Aglaia	2 45 00	2 40 00	2 13 25

YACHTING NEWS NOTES

A new yacht club has been organized on Geneve Lake by residents of Chicago who summer at the lake, the name being the West End Y. C. The officers are: Com., Edwin Norton; Vice-Com., Henry Ayer; Sec'y, Percy Eckhart; Treas., Arthur Norton; Regatta Committee: H. L. T. Nightingale, Charles Ayars and A. E. Wells; Measurement Committee: Byron Bryden, William Hodgkins and Charles Sweet. Some form of length and sail area rule will be adopted and sandbags will be prohibited. Races will be held every Saturday.

Eleanor, steam yacht, under charter to Oliver H. Payne, sailed from New York on June 19 with Mr. Payne and a party on board for a long cruise in European waters. Capt. Scott is in command.

Yampa, schr., R. S. Palmer, arrived at Southampton on June 8, making the passage from New London to the Lizard in 15 days 15 hours. She made two runs of 314 and 311 miles. Mr. Palmer has joined her by steamer.

Valiant, steam yacht, W. K. Vanderbilt, sailed from New York on June 15 for a cruise in European waters.

Lufra, yawl, Sir Cecil Miles, from New York for Cowes, was spoken on June 17 by the Cunarder Umbria, in lat. 41' 55", long. 53' 54".

Ituna, steam yacht, A. V. Armour, arrived at Campbelltown, N. B., on June 6, having left Halifax on June 4.

The race of the Royal Canadian Y. C. for the Murray cup, on June 12, resulted as follows:

	Elapsed	Corrected.
Aggie	1 44 50	1 44 50
Vivia	1 57 10	1 53 37

The Indian Harbor Y. C. will hold a special race on June 29 for yachts of any organized yacht club in the following classes: Yawls, 51ft. and under; special 30ft. class, 30ft. cabin cat class, 25ft. cabin cat class, 25ft. class open sloops, 20ft. class. Entries should be made to the chairman of the regatta committee, F. S. Doremus, 20 Nassau street, by Friday, June 25. The race will be under Y. R. U. rules.

The annual regatta of the Seawanhaka Corinthian Y. C. will be sailed on June 26, off Oyster Bay. The race will be under Y. R. U. rules, and prizes will be given in all the regular classes. A number of special prizes are offered, the Leland cup will be raced for by the 20ft. class, as will the Center cup, and Com. Rouse has offered three prizes, for schooners, for cutters over 70ft. r. l., and for cutters over 36ft. and not over 70ft., under the formula devised by Mr. Irving Cox. Entries must be made in writing to Chas. A. Sherman, 677 Leonard street, New York, up to noon on June 24, the racing programme may be obtained at the same address.

Raccoon, sloop, the Herreshoff 30-footer, has been purchased by N. D. Lawton, of the Atlantic Y. C.

Veda, sloop, the latest of the 30-footers, has just been completed by the Herreshoff Mfg. Co. for Cornelius Vanderbilt, Jr.

On June 1 a yacht club was organized at Barrie, Ont., the name being the Barrie Yacht Club. The officers are: Com., Capt. Whish, R. N.; Vice-Com., Mr. J. Carley; Sec'y, Dr. T. W. Addison; Treas., Dr. R. Raikes; Referees, Messrs. S. Lount and W. A. Boys; Official Timekeepers, Messrs. D. Powell and R. A. Douglas; Official Measurers, Mr. P. F. Ewan and Dr. T. W. Addison; Executive Committee, Messrs. J. W. Stone, W. Webb and H. A. Sissons; Official Starter, Mr. N. Grose.

The trustees of the Sea Cliff Y. C. have decided to substitute for the annual regatta scheduled for July 2 a special club race open to all yachts enrolled in the club. Prizes will be given in all classes where two or more boats compete. Le Grand L. Clark, chairman of the regatta committee, will receive entries.

Ellide, steam yacht, E. B. Warren, made another fast run on June 19, covering a mile on the Hudson River in 1m. 37½s. Her formal trial will take place this week.

The Royal St. Lawrence Y. C. proposes to take special steps to prevent the crowding of the course by excursion and other boats on the occasion of the international races in August for the Seawanhaka cup. A very large attendance of spectators is promised, as all of Canada is interested in the defense of the cup.

The steamer Bay Queen has been chartered by the Riverside Y. C. to carry members and guests on the occasion of the annual regatta, July 7. She will leave East Thirty-first street at 8:30 A. M., sharp, reaching Riverside at 11 A. M. and calling at the club house, returning to New York after the regatta.

Canoeing.

AMERICAN CANOE ASSOCIATION, 1896-97.

Sec'y-Treas., W. D. Stearns, Detroit, Mich.
Executive Committee: R. M. Lamp, Madison, Wis.; C. J. Steadman, Cincinnati, O.; F. W. Dickens, Milwaukee, Wis.

The W. C. A. Meets at Delavan.

THE committee of the W. C. A. has set as the time and place of the summer meet, Aug. 7-17, at Delavan Lake, Wisconsin. This is only one of the many regular summer-resort lakes of lower Wisconsin, and in the humble opinion of the writer, no better than Madison or any of many similar places, and not a place for a genuine canoe meet. It is the judgment of the body, however, that this is the place to go, so it is to be hoped that the boys will all fall in line. So far as the lake itself and its camping facilities are concerned, it will do very nicely—as nicely as any dooryard lake can—and there is no reason to suppose that a good, lazy loafing time will not be had. The meet will be rather Western this time, it is thought, and especially will it be much a Wisconsin affair if present signs be accurate in their predictions. The Milwaukee boys are going to turn out in great force, and there will be enough from that city alone to assure a good meet and a jolly good time. There will be plenty of sailing and fishing and good bathing, though no cruising. The Milwaukee contingent will go in unique style and will present an imposing summer attraction on Delavan. Skipper Holmes will sport lavender-colored sails, skipper Merrill will have sky-blue ones, and others will follow with a variety of color schemes in their rigging. There seems a determined effort among the canoeists of this section to make the meet a success. The attendance is sure to be larger than it was at Mullet Lake last year, and nothing but obstinacy can prevent anybody who attends from having a jolly good time. The only reservation about it is that there are so many localities like Charlevoix or other southern Michigan points which appear to offer advantages so much superior to those of any inland Wisconsin water. The majority goes, however, so it ought to be made unanimous, and that very heartily.

E. HOUGH.

1206 BOYCE BUILDING, Chicago.

A. C. A. Camp Grindstone.

ON the invitation of Vice-Com. Burns and Purser Macnee, of Kingston, Com. MacKendrick, together with several members of the Kingston Canoe and Yacht Club, had a most enjoyable sail on the tidy little yacht Hustler from Kingston to Grindstone.

A night was spent at Clayton, where Capt. Wilson, of the Pastime, was seen and final arrangements made for the transportation from Clayton to camp. Early the next morning a fair breeze took the party over to the camp dock.

It is the general opinion that the islands never looked prettier than they do this year, on account of the great amount of rain. Flowers are abundant on the camp grounds

A luxuriant growth of rye surrounds the mess tent. The Commodore assures the temperance man of the party that it will disappear before the camp opens.

The water is 8in. higher than at the same time last year.

But little damage has been done by the winter winds.

A few tent floors have been destroyed and several trees uprooted.

A call was made on Mr. Delaney. He has a good stock of ice laid away and reports his spring chickens growing fast.

Arrangements were made with him by which a good path will be made between Squaw Point and the mess tent.

Everything points to a most successful meet. Large delegations from Rochester, Buffalo, Kingston and Toronto have already bespoken camp sites from Chairman H. C. Morse, of Peoria, Ill.

Tandem Canoeing.

R. B. BURCHARD and Edith Russell Church will be married at Little Compton, R. I., by the Rev. Dr. Sunderland, of Washington, D. C., on Saturday, June 26.

Mr. Burchard is yachting editor of *Outing* magazine, and was at one time editor of the *American Canoeist* in connection with Col. Chas. Ledyard Norton. He was vice-commodore of the New York C. C. for several terms while C. Kirk Munroe was commodore, and he succeeded Munroe when he retired from office.

Miss Church is the daughter of the late John Church, of Cincinnati, O. She went through school in Boston and has spent several years in study and travel in Europe.

The main-sheet crew of Mr. Burchard's cutter Nita, consisting of Messrs. Prentice Shethar, Henry A. Rush and George Valliant, tendered their captain a farewell dinner at the Union League Club on June 18, and Mr. Burchard's associates in the Nu chapter of the Delta Kappa Epsilon fraternity, all of whom are married, welcomed him as a Benedict with fitting festivities on the 26th inst.

Mr. Burchard has won an enviable reputation as a cruising canoeist of the original type. He has made the cruise of the St. Lawrence River from Clayton to Quebec, being one of the few white canoeists who have run all the rapids. He has also cruised on the Atlantic Coast from New York to the Bay of Fundy in a canoe-yawl, with S. R. Stoddard, the photographer.

A. C. A. Membership.

APPLICATIONS for membership may be made to the purser of the division in which the applicant resides on blanks furnished by purser, the applicant becoming a member provided no objection be made within fourteen days after his name has been officially published in the FOREST AND STREAM.

Trap-Shooting.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for almost a quarter century.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

June 22-25.—OIL CITY, Pa.—Seventh annual tournament of the Pennsylvania State Sportsmen's Association, under the auspices of the Oil City Gun Club. Targets and live birds. Black powder barred. Special event: 25 live birds per man. $25, $1,000 guaranteed. Send entries to H. C. Reeser, Sec'y, Oil City, Pa.

June 30.—BRIDGEPORT, Conn.—Third tournament of the Connecticu Trap-Shooters' Association, under the auspices of the Bridgeport Gun Club.

July 1.—SHERBROOKE, Quebec.—Sherbrooke's grand annual. Inanimates. Open to all amateurs. C. H. Foss, Sec'y, Sherbrooke, P. Q.

July 5.—OTTUMWA, Ia.—All-day shoot of the Ottumwa Gun Club. Open to all.

July 5.—BUFFALO, N. Y.—All-day invitation target shoot of the Bison Gun Club C. H. Werlin, Sec'y, 1634 Broadway, Buffalo.

July 5.—LINCOLN, Neb.—All day shoot of the Capital City Gun Club. Targets and live birds. R. M. Welch, Sec'y.

July 5.—HOBE SOUND, Fla.—Tournament of the Gilbert's Bar Gun Club.

July 5.—HAVERHILL, Mass.—Tournament of the Haverhill Gun Club.

July 7-8.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

July 8.—ORANGE, Mass.—Tournament of the Orange Gun Club. W. L. Mann, Sec'y.

July 14-15.—NEW HAVEN, Conn.—Tournament of the Interstate Association, under the auspices of the New Haven Gun Club. Wm. H. Hazel, Sec'y.

July 20-22.—PINE BLUFF, Ark.—Seventh annual tournament of the Arkansas State Sportsmen's Association. Added money announced later. Paul R. Litzke, Sec'y, Little Rock, Ark.

July 20-23.—CLEAR LAKE, Ia.—First annual Indian Wolf shoot. Three days targets; one day live birds. $500 added. For programmes and particulars write to C. M. Grimm, Clear Lake, Ia.

July 21-22.—CRAWFORDSVILLE, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Crawfordsville Gun Club. Chas. E. Lacey, Sec'y.

July 22.—MEADVILLE, Pa.—Fourth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

July (last week).—MITCHELL, S. D.—Tournament of the W. J. Healey Hardware Company.

Aug. 4-5.—LEWISTON, Me.—Tournament of the Interstate Association, under the auspices of the Androscoggin Gun Club.

Aug. 4-5.—INDIANA MINERAL SPRINGS, Ind.—Indiana Mineral Springs tournament Ben O Bush, Manager.

Aug 17-19.—TORONTO, Canada.—Tournament of the R. A. McCready Co., Ltd. Targets. $1,000 guaranteed. Open to all. Write for programmes.

Aug. 18-19.—WARSAW, Ind.—Tournament of the Lake City Gun Club. W. A. Wineberer, Sec'y.

Aug. 19.—WARREN, O.—Fifth tournament of the Pennsylvania and Ohio Border Gun League. Geo. H. Jones, Sec'y.

Aug. 25-26.—MONTPELIER, Vt.—Tournament of the Interstate Association, under the auspices of the Montpelier Gun Club.

Sept 6.—MERIDEN, Conn.—Third annual Labor Day tournament of the Parker Gun Club.

Sept 14-16.—KANSAS CITY, Mo.—Tournament of the Schmelzer Arms Co. Merchandise and amateurs

Sept. 15-16.—PORTSMOUTH, N. H.—Tournament of the Interstate Association, under the auspices of the Portsmouth Gun Club.

Sept. 28-29.—INDIANAPOLIS, Ind.—Tournament of the Trap-Shooters' League of Indiana, under the auspices of the Limited Gun Club. Royal Robinson, Sec'y.

Oct. 6-8.—NEWBURGH, N. Y.—Annual fall tournament of the West Newburgh Gun and Rifle Association. First two days, targets; third day, live birds. $50 average money to three high guns in all programme target events. Open to all.

Oct. 13-14.—GREENSBURG, Ind.—Shooting tournament of the Greensburg Gun Club. Web. Woodfill, Sec'y.

Pennsylvania Tournament.

OIL CITY, Pa., June 21.—*Special to Forest and Stream:*—The prospects for a successful State shoot are very flattering. The boys are coming in good numbers, every train being reponsible for three or more shooters from different parts of the State. The candidates for the open events are decidedly warm in quality. McMurchy, Heikes, Trimble, Grimm, Budd, Powers, Fulford, Gilbert, Glover, Fanning, Van Dyke, Dickey, Redwing, Brewer, Courteney, and others are among the number who have entered, for the opening events of the first day.

This afternoon there was some preliminary practice, eight events being decided, four of them at 15 targets and four at 20 targets. The shooting was extremely difficult on account of the hard background, which is a well-wooded hill, against which it is almost impossible to see the targets. In addition to this the targets were thrown from the magautrap a distance of fully 60yds Gilbert and Fulford were the only ones to score 20 straight, and both these straights were in the same event. One 15 straight was made during the afternoon, Dickey being the fortunate man. From this it will be seen that the game was a hard one. The Oil City Gun Club has gotten everything in good shape, and it only needs fine weather (and that seems a certainty) to make the State shoot of 1897 a success in every way The accommodations are first-class, and Manager Shaner says that he will have no trouble in running off the programme each day in good time. The entries for the big 25 bird event, $1,000 guaranteed, will close to night, and the number of entries to date is stated to be something in the neighborhood of forty. A few more entries are certain to drop in, and it is likely that the full number of shooters in this event will reach the fifty mark.

EDWARD BANKS.

Oneida County Sportsmen's Association.

UTICA, N. Y., June 15.—Below you will find the scores made in the regular weekly club shoot of the Oneida County Sportsmen's Association. The shoot is at 15 singles, expert rules, and 5 pairs Scores:

C. R. MINZER, Sec'y.

The Chamberlin Tournament.

CLEVELAND, O., June 19.—*Editor Forest and Stream:* The fourth annual blue rock tournament given by the Chamberlin Cartridge & Target Co., ended yesterday in a most flattering and satisfactory manner.

The tournament was held on the grounds of the Cleveland Gun Club, an organization having a membership of about 100 prominent sportsmen. The grounds are easily reached by electric cars; after alighting at Kershaw avenue one walks about two squares to the foot of the street where a long steep pair of steps lead to the club grounds proper, situated on a high plateau and being in extent some twenty acres. A 5ft. cinder path leads due south from the steps to one of the largest, handsomest and best finished club houses in this country. It is of three stories, painted a rich warm yellow and finished throughout in hard wood, with an abundance of closets, gun racks, chairs and other necessary qualities. Large porches extend from one end to the other on both the first and second floors.

The upper story is occupied by William Cottshott and family, having charge of the property and being constantly on hand, so that members or their friends can have a day's sport at any time.

Running north and south some little distance from the club house stands a long structure or shed in the shape of a crescent, covered with a corrugated iron roof which completely protects shooters from inclement weather. In the center of each end small rooms have been built for the use of trap-puller, scorer, etc. In fact, all arrangements are complete. Two magautraps were in constant use during the shoot and gave perfect satisfaction, very few targets breaking in the traps; and never at any time was the shoot delayed by reason of breakdowns, or from any other cause. A description of the surroundings is absolutely necessary, as it is the only thing which tends to mar the otherwise perfect location. Shooters face almost due east and must contend with a background composed of heavy trees of various sizes and shapes, above which issue dense volumes of inky black smoke from the immense plant of the Cleveland Rolling Mill Co., a concern employing in the neighborhood of 3,000 men.

Paul North was tireless in his efforts to make everything pleasant for the visitors and at the same time prevent any unnecessary delays. How well he succeeded can best be attested by the fact that after the first gun was fired in the morning there was not a break until all events were finished. As soon as one squad would finish shooting the next one would take their places, and thus it continued for the three days. Another pleasant feature was the complete absence of any kicking over decisions, scores or anything else.

J. E. Brocklesby, compiler of scores, had a private office on the second floor of the club house, and his work was executed in such a neat and systematic manner that every one made favorable comments. Messrs. J. H. Webster and James Mitchell had charge of the cashier's office, both gentlemen being exceedingly courteous, discharging their duties perfectly, and making many friends. William Cottshott refereed at the No. 1 trap, his decisions being so equitable that no objections were heard during the three days. R. J. Bissett, superintendent of the Chamberlin cartridge factory, acted as puller. No. 2 trap was most excellently managed by popular Charles North, referee, and Al Barton, superintendent of the Chamberlin target factory, acting as puller. A. W. Jenkins, the inventor of the magautrap, was constantly on hand in case his services should be required, which was very seldom, consequently his hands were not even soiled during the entire shoot. The traps worked perfectly, so that his smile of triumph is justifiable. So much for the general description of location, appointments, etc.

Among the visitors from out of town were noticed the following formidable list: C. Grimm, C. Budd, F. Gilbert, H. McMurchy (Hunter Arms Co.); R. L. Trimble (Du Pont and Hazard Powder Cos.); J. L. Winston (Austin Powder Co.); J. S. Fanning (Gold Dust Powder Co.'s interests); Wm. Crosby (Baker Gun Co.); Col. A. G. Courtney (Remington Arms Co.); R. O. Heikes and Ferd Van Dyke (Winchester Arms Co.); E. O. Bowers and L. Gorham, of Sistersville, W. Va.; C. H. Foxie, Buffalo, N. Y.; L. Burton, Norwalk, O.; Sim Glover, Rochester, N. Y.; Jas. Cowan, Manayunk, Pa.; P. H. Siegrist, E. C. Burkhart and L. Northrup, of Buffalo, N. Y.; F. A. Gillespie and F. N. Robinson, of Findlay, O.; J. A. Flick, Ravenna, O.; C. A. A general summary of the ammunition and guns used: Du Pont 21, E. C. 18, King's 11, Hazard 9, Gold Dust 6, Schultz 6, Oriental 2, W. A. 2, Austin 1.

Shells: Leader 36, Repeater 4, Smokeless 26, Trap 3, Nitro 3, Peters 9.

Guns: Smith 31, Parker 20, Winchester 11, Lefever 8, Remington 3, Greener 3, Francotte 2, Baker 1, Wesley Richards 1, Weston 1, Prechtel 1.

First Day, June 16.

The first day opened dark and sultry, threatening rain; but toward noon a strong lake breeze sprung up, and the atmosphere cleared, so that the afternoon was delightful. Hundreds of visitors were present, among them many ladies, who keenly enjoyed the sport. Seventy-three men participated in the first event, and the list of entries averaged that number during the day. Eighteen men were classified as experts, or manufacturers' representatives, who had to pay $4 per day extra for the privilege of shooting, viz.: Thursby, Gilbert, Wheeler, McMurchy, Crosby, Heikes, Fulford, Glover, Fanning, Grimm, Budd, R. Trimble, Winston, Van Dyke, Rike, Courtney, Parker and Parks.

Thursby was high on average with 135 out of 140. Followed by Gilbert with 132, Wheeler with 131, McMurchy 130, and Crosby 129.

Following are the scores; Asterisks back of name designating those who paid $4 extra each day. All targets used through the tournament were blue rocks.

One hundred and forty targets constituted the day's programme. Shooting commenced at about 9 A. M., and at 5 P. M. all events were finished, which recorded a day of trap-shooting seldom equaled in point of attendance, freedom from mishap and those disagreeable bickerings incidental to the average tournament.

In events 1, 2, 3, 4, 5, 6, 7 and 8 the money was divided into five purses, while in the 25-bird event there were half as many $5 purses as there were entries.

Second Day, Thursday, June 17.

The second day opened anything but favorable, in fact, a number grumbled that just at this particular time such weather should prevail. The sky was a dull leaden hue, with heavy clouds hanging overhead, but, like the previous day, a strong breeze sprung up, and made pleasant shooting in the afternoon. The heavy black smoke from the rolling mill hung like a pall in the eastern horizon, which seemed to swallow the targets immediately after leaving the traps. However, some most excellent scores were made, 155 targets constituting the programme. Grimm won high average, scoring 146, Gilbert and Upson second with 145 each; Thursby and Hood third, with 144; Crosby, Glover and Fulford, fourth, 143; McMurchy and Heikes, fifth, 142.

The amateurs' averages were won by Red Wing, 140; Shorty 139, Young 138; E. Trimble, Forrester and Lane, 137; Goss and Gambell, 136.

In events Nos. 3 and 6 for the Diamond trophy watch charms, donated respectively by the Du Pont and Hazard Powder companies, there was lively competition. In No. 3 Crosby, Thursby and Parker tied with 25 straight. The programme stated that all ties on the trophies would be shot off in the next regular event. Parker and Crosby each scored 12 out of 15, and Thursby scored straight, which entitled him to the prize. Parker objected, stating that he did not understand it that way, and it was finally agreed to shoot off the tie after the regular events, Parker making the best score and taking the trophy. In event No. 6 Shorty, C. Ross, Fulford, Crosby, Bower, Hood, Snow, Gilbert and Parker tied on 24. Parker, having won the Du Pont trophy, was not eligible for this one, and did not take part in the shoot-off, which was won by Fulford.

Following are the scores in full:

Upson and Hood having scored over 90 per cent. yesterday, moved up into the $4 class. Money divided as on the preceding day.

Third Day, Friday, June 18.

The third day was an ideal one for target shooting. The sky was clear and perfect, a gentle breeze stirring, but not enough to affect the targets in their flight. On this day the place was crowded with spectators, much interest being manifested in the races for the Hazard and Du Pont Diamond trophies at 25 targets. The first race for the Hazard prize resulted in a tie on 24 between Glover, Heikes, Henry, Budd, McMurchy and Thursby. In shooting off the tie in the next event Heikes scored straight and won the handsome emblem. In the next 25-bird race for the Du Pont diamond locket Messrs. Redwing, Rike, Spross, Grimm and Thursby tied on 25 straight. In shooting off it was hotly contested for. Redwing and Thursby out shooting all others and tying each other a number of times before a decision was reached. Thursby finally winning by 1 bird. Following are the scores in full:

Events:	1	2	3	4	5	6	7	8		
Targets:	15	20	25	15	20	25	15	20	Total.	Grand Total.

* Means $4 extra per day men.

Redwing having scored over 90 per cent. yesterday moved up into the $4 extra per day class.

Champions and Trophies.

Editor Forest and Stream:

About two weeks since the public interested in shooting matters were treated to a dissertation upon championship trophies, criticism of Dr. W. F. Carver, the advertising of J. A. R. Elliott and a very mild attempt to discredit a world's championship emblem to-day prominently before the shooters of the world, known as the Du Pont smokeless powder championship trophy.

While the writer has no wish, and in fact, does not propose to engage in a controversy with Messrs. James Whitfield or J. A. R. Elliott, he begs to ask of these gentlemen that they confine themselves in their challenges and criticisms to those who have willingly given offense.

The letter of Mr. Whitfield opens the way for a peculiar style of controversy which Elliott is not slow to avail himself of, and since to the writer's certain knowledge the Elliott article was prepared before the Whitfield article appeared in print, the suspicion is not unreasonable that both were born at the same time and should acknowledge the same parent.

It is not my purpose to offer anything in defense of Dr. W. F. Carver. That gentleman is thoroughly capable of defending himself with either pen or shotgun. This fact has been demonstrated.

The trophy, of which Mr. Elliott has so much to say, appeared upon the firmament in 1896, and, if Mr. Whitfield is correct, "entries numbered over fifty;" and at the last open contest for this trophy, held in Kansas City "in May, there were sixty-three contestants for the trophy."

It would further appear that there has been but two challenges to individual contestants for possession of this cup. Mr. Whitfield boasts of this record, and criticises the Du Pont trophy as being handicapped by certain rules, which it would appear that neither he nor certain other gentlemen approved.

Now, let us look at the record of this Du Pont trophy, so alarmingly troublesome to Mr. Elliott and his immediate following.

It was offered at an open contest at Baltimore, Md., in October, '95. The rules and conditions governing open contest and governing successful winner or holder are known to the shooting public and need not be discussed

Michigan Trap-Shooters' League.

GRAND RAPIDS, Mich., June 1.—The shooting season for 1897 opened here yesterday with the tournament of the Michigan Trap-Shooters' League, given by the Valley City Gun Club. Ben O. Bush, of Kalamazoo, acted as manager to the satisfaction of all. The attendance was considerable of a surprise, for though the Valley City Club does nothing by halves, and their tournaments in former years left nothing to be desired, this was looked on as rather an off year, and the usual inducements to draw a crowd were omitted. During the first day there were thirty-four visitors shooting, besides a good representation from the club. The average number of entries in the eight regular sweep events was twenty-eight.

At a business meeting of the League, held in the parlors of the Livingston Hotel last evening, officers were elected as follows: President Joseph Marks, of Detroit; Vice-President, J. G. North, Pontiac; Secretary and Treasurer, W. H. Brady, Detroit; Directors: Mr. DeRoo, Holland; Thomas Graham, Sault Ste. Marie; Charles J. Bousfield, Bay City; C. B. Kelsey, Grand Rapids, and the officers.

It was voted to hold the next shoot in Detroit the last week in June on some open date to be selected by the Detroit members. E. C. Merrill, on behalf of the Bay City Gun Club, of Bay City, invited the League to give a shoot in that town in the near future, and it was voted to go there for the July meet.

The second day was an improvement over the first in conditions, the cold, raw wind having ceased and the mercury going up to a point where overcoats were unnecessary. This not being a holiday a number of those present the first day were not able to attend, but the fact that 4,562 targets were thrown in regular events and 180 in the extras shows that the trap was busy. In the two days, counting extra events, 9,804 targets were thrown from the magautrap with an intermission each day of an hour for dinner at the Country Club Casino. Usually the gun club has had a lunch served on the ground in tents, but this year we were not going for a record and thought a good meal well served would be preferable. The scores on both days are given below:

First Day, May 31.

Calkins	18—61	Bairt	18—54
Walton	21	Thompson	19
Gilmore	19	Watts	18
Coleman	19—59	Pixley	13 50

Event No. 8 was the E. C. cup handicap race, 25 targets per man, allowance of extra targets to shoot at. This event had twenty nine entries, and resulted in a tie for the cup between Parker (scratch), Vosburg (32) and Ferguson (32), each of them making 25—the highest possible. On the shoot off Ferguson won, again making the highest possible, as against Vosburg's 25 and Parker's 21.

Event No. 6 was the contest for the expert, semi-expert and the amateur medals, 25 targets per man. In the expert class the scores were: Waruf, Graham and Renwick 24 each, Willard 23, Parker and Bush 22, Schelling and Davidson 20, North 19, Thompson and Wharton 18, Cold Blast 15. The ties on 24 were shot off at 25 targets, Graham and Renwick again tying on 24, with Waruf out on 23. On the second shoot-off Renwick won with 23 to Graham's 21.

In the semi-expert class the scores were: Marks and Widdicomb 23, Karstens 23, Osman 19, Walton 18, Ferguson 13. The tie on 23 was shot off, Widdicomb defeating Marks with 23 to 21.

The amateur's medal was shot for as follows: Merrill and Brady 21, Elkerton and Scott 18, Webb 17, Lisle, Bousfield and Pixley 14, Schumway 12. The tie was shot off, Merrill winning with 19 to 18.

Event No 10 was the handicap contest for the W-A trophy. This event had 23 entries, and was a handicap affair with extra targets to shoot at. The race resulted in a tie for first place on 25—the highest possible—between Graham (scratch), Davidson (27), Walton (23) and Scott (30). On the shoot-off under the same conditions, Scott and Walton again tied on highest possibles, while Davidson dropped out with 23 to his name, and Graham with 22. The second shoot-off resulted in a win for Walton, who again broke 25 out of 28, Scott being able to score 24 out of 30.

WOLVERINE.

Missoula Rod and Gun Club.

MISSOULA, Mont. June 7.—Below I give you scores made at our regular weekly medal shoot, as follows. Conditions: 25 bluerocks, known traps, unknown angles:

R E Rodgers 19, J. Forbes 18, R A Eddy 21, C E Flowers 7, J. P. Menard 17, L. L. Hunt 9, H W. Thompson 15, W. E. Graham 14.

Mr. Eddy won the gold medal and R. E. Rodgers the silver medal.

A practice shoot followed at 5 pairs, in which the following took part:

H. W. Thompson 2, R. E. Rodgers 4, R A Eddy 10, J P. Menard 8.

WALTER E GRAHAM, Sec'y.

Omaha.

OMAHA, Neb., June 12.—The Omaha Gun Club's regular weekly shoot took place on the club grounds, across the river, this afternoon. Scores:

Kenyon	1111111111111110111—19	Brucker	1011111110101110111—16
Hughes	1110011111111111111—18	Loomis	1111010110111110011—15

W. D. KENYON.

Down Where the Pineapples Grow.

HOBE SOUND, Fla., June 12.—The Hobe Sound Gun Club held its regular weekly shoot to day. The sand flies and mosquitoes were very lively and made things pretty interesting for the four shooters who had energy enough to turn out. Temperature, 96° in the shade, and "those things" is enough to dampen any one's enthusiam and shirt; but the standbys were on hand and did their usual poor shooting.

Serjeantson	0111111100110111111110101111110—22

ON LONG ISLAND.

NEW UTRECHT GUN CLUB.

June 5.—The New Utrecht Gun Club has closed its live-bird season for the series of 1895-97. To-day's shoot was the last, and there will be no more live bird shooting at the Woodlawn grounds until Labor Day, Monday, Sept. 6. C. Furgueson was the winner of the club shoot in Class A, his son, Conny, winning in Class B. Dr. Wynn, a guest of the club, shot at 20 birds and scored them all. Below are the details of the events decided:

	Club shoot.	No. 1.	No. 2.	No. 3.
C Furgueson (A, 30)	2222222222—10	22223—5	22•22—4	22022—4
J Gaughen (A, 28)	0221222122— 9	22211—5	.....	.....

* Guest.

Bennett cup, 25 targets, unknown angles, class allowance handicap:

Class A: John Gaughen 22, Donley Deacon 20, F. A. Thompson 20, Platt Adams 18, D. C. Bennett 17.

Class B, allowance 2: Dr. O'Brien 17, C. C. Fleet 17.

G. E. P., Sec'y.

PARKWAY ROD AND GUN CLUB.

June 9.—The Parkway Rod and Gun Club held its monthly live bird shoot at the Old Mill Creek grounds. Lee Helgans won the Bookman medal after a tie with Henry Bramwell and John Wye, all three scoring their 7 birds. The tie was shot off miss-and-out, Helgans winning in the third round. Scores:

Class A, 18yds. rise:

L Helgans	1221211—7	J Bennett	2222210—6
H Bramwell	2211111—7		

Class B, 25yds:

J Wye	2112111—7	H J Selover	0022122—5
G Torborg	0222211—6	C Schwach	2012101—5

ERIE GUN CLUB.

June 9.—The Erie Gun Club, of Brooklyn, held its monthly live bird shoot at Dexter Park this afternoon. Seven members were present to take part in the club event. Charles Plate, Blakeley, Fuchs and J. H. Plate were the respective winners in their classes. Scores:

Class AA, 20yds. rise:

C Plate	1211110—6	J Plate	2210011—5
H Dobrmann	1202110—5		

Class A, 28yds:

H Blakeley	2120012—5		

Class B, 27yds.:

G Fuchs	2022110—5	F Gref	1001210—4

Class C, 26yds.:

J H Plate	0012221—5

EMERALD GUN CLUB.

June 15.—The Emeralds were in good form to-day, five clean scores being made in the regular monthly club shoot of this popular New York organization. The shoot, of course, was held at Dexter Park. The roll call showed thirty members present, a large number for any club to turn out. The straights were made by L. S. Fogarty, J. S. S. Remsen, Dr. Hudson, Gus E. Greiff and G. B. Hillers. Scores were as below:

Class A, 29yds., 7 points:

L S Fogarty	2221112221—10	E J Clark	0121022121— 8
G Greiff	1111122112—10		

Class A, 28yds., 7 points:

J S S Remsen	1111221212—10	F W Place	1112212110— 9
Dr Hudson	1111111121—10	J H Moore	1102•1212— 8
H P Fessenden	0111112212— 9	W A Sands	0112221220— 8
T Short	1112•1•121— 9	E A Vroome	1100210•12— 6
M Herrington	0122111122— 9	W Amend	0111010210— 6

Class A, 28yds., 6 points.

IROQUOIS RIFLE AND GUN CLUB.

PITTSBURG, Pa., June 3.—The third monthly shoot of the Iroquois Rifle and Gun Club took place to-day at Howard station. There was a stiff wind blowing, but, nevertheless, some good scores were made. Old Hoss and Alex King were both credited with straights in the 20-target event, while King broke altogether 112 out of 120 shot at. The shoot commenced at 1 o'clock and was kept up until too dark to see the targets. The scores were:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	15	15	15	15	20	15	15	15	15
J Motz	8	13	10	12	14	18	12	14	12	13

J. MOTZ.

HAZELWOOD GUN CLUB.

June 5.—Four 15-target events were shot to day on the grounds of the Hazelwood Gun Club; each event was $1 entrance. The scores were:

No. 1: Wilbert 10, Fleming 9, Crossland 8, Burchfield 7, Nacayama 5.

No. 2: Fleming 14, Crossland 13, Wilbert 7, Nacayama 6, Burchfield 4.

No. 3: Crossland 13, Fleming 11, Wilbert 10, Burchfield 5.

No. 4: Crossland 11, Wilbert 8, Nacayama 8.

B. B.

EAST PITTSBURG GUN CLUB.

June 6.—The final shoots for the E. C. Powder cup took place on the grounds of the East Pittsburg Gun Club during April and May. Ten members took an active part in the race, and nine finished their 400 targets. Mr. Whiting was unable to complete his strings through starting too late. Uncle John won the trophy with the great total of 358 breaks out of 400 shot at, an average of 89.5, a capital average for an amateur. His victory was a most popular one. At the 200 mark the race looked a very interesting one, Mack leading Uncle John by 1 bird, and Sharrard close up in third place. In regard to powders used, I would state that E. C. was used exclusively. Scores and totals follow:

	1st score.	2d score.	3d score.	4th score.	Shot at.	Broke.	Av.
Uncle John (3)	86	94	88	90	400	358	89.5
Sharrard (0)	85	87	92	84	400	346	86.5
Mack (3)	91	90	75	88	400	344	86
Ferguson (5)	80	80	82	86	400	347	77.8
Williams (6)	79	71	75	80	404	305	71.9
Coney (0)	83	80	74	80	400	317	79.2
Shaw (0)	87	70	73	64	400	294	73.5
F McIntosh (13)	62	83	70	68	452	283	62.6

Whiting	87	..	..	..	100	87	87

S. P. SWENSON, Sec'y.

Audubon Gun Club, of Buffalo.

BUFFALO, N. Y., June 5.—There was a large attendance at the regular weekly shoot of the Audubon Gun Club to-day. Among the several visitors was Mr. Kent, of Toronto, who did some creditable work, when it is remembered that he is a comparative novice at the targets. The club badge shoot was No. 3. The winners were: Forrester in Class A, E. Reinecke in Class B, and J. Kennedy in Class C. In Class C, J. T. Stewart was a close second. Through an error of the secretary, Mr. Lodge was credited as winning last week's shoot, when the honor, as a matter of fact, belonged to Mr. Kennedy. The badge series ends this week. The summary of the day's shooting follows:

Events:	1	2	3	4	5	6	7	8
Targets:	10	15	25	15	15	15	14	15
C S Burkhardt	8	13	23	12	9	12	10	11

Event No. 7 was at 7 pairs.

June 12.—To-day was the last of the series of badge shoots for the season of 1896-97. L. G. Northrup won the gold medal in class A, while C. S. Burkhardt F. D. Kelsey and Alexander Forrester are tied for the second trophy in that class. Northrup won the club shoot eight times. E. N. McCarney won in B class and J. A. Kennedy in C class.

Arthur Coombs was the winner of the year's gold badge with George Zoeller in second place. Coombs also won the attendance medal with E. C. Burkhardt second. In the prize contest for straight scores Forrester and Kirkover are a tie. E. C. Burkhardt took the prize for the greatest number of targets broken during the year.

Below are the scores in to day's shoot:

Events:	1	2	3	4	5	6	7	8
Targets:	10	15	25	15	15	15	20	25
C S Burkhardt	7	10	18	10	14	12	18	13

Trap in Arkansas.

LITTLE ROCK, Ark., June 3.—The annual convention of the State Band Association took place at Forth Smith, May 26. In order to add to the attraction, the committee in charge decided to add bicycle races and trap-shooting to the programme. The event of interest to the shooters and the general public was the team race for a purse of $50—$30 to the first and $20 to the second team. The conditions of the race were: Four men to a team, all members of the same club, 25 targets per man, entrance free and no charge for targets. As the event had not been very well advertised, there were but four teams entered, a number which could have been materially increased had the event been generally known to the shooters in the State. Little Rock, on the spur of the moment, managed to send a team, which, however, by no means represented its shooting strength, but nevertheless managed to win first money, even though they had one shooter on the team of uncertain quality. Fort Smith had two teams entered, and their first team won second money. The scores in the team race were as follows:

Little Rock: Conner 22, Duley 21, Woodson 20, Lenow 17—80.

Port Smith No. 1: Matthews 24, Echols 15, Boyd 15, Leach 15—69.

Rogers: Daily 22, Parks 16, Bryant 15, Edelin 13—66.

Fort Smith No. 2: Meyers 18, Bloodworth 12, McDonald 12, Bollinger 11—53.

After the team race the following sweeps were shot, all 15-target events, $1 entrance; when more than twelve entries, four moneys, under that three moneys:

Events:	1	2	3	4
Matthews	14	14	14	14
Conner	15	11	11	12
Dr Daily	10	9	10	14
Durden	11	10	12	10
Woodson	9	12	10	14
Parks	8	9	10	10
Lenow	9	..	11	..
Wirsing	8	..	..	..
Meyers	..	..	..	12 11
Thomas	..	..	..	13

Events:	1	2	3	4
Leach	12	13	13	12
Echols	11	12	14	10
Bryant	10	8	12	13
Edeline	10	10	9	5
Duley	9	11	11	13
Boyd	9	10	..	..
Ogelsby	8	..	..	..
Littlejohn	3	..	..	..
Baptist	..	..	..	13

It will be seen that young Matthews did the best shooting, losing just 1 bird in each event. His 24 in the team race was also the top score in this event. Had the rest of the team displayed the form that he did they would have had a walkover. Leach's shooting in this event was the surprise of the day. Conner made the only straight score of the day, in the first sweep. Leach was the fortunate one, he was in for money in all the sweeps and three times was alone. In the first event he took third without a tie, and in the second and third he got second without a divide. The team race would have proved an interesting contest if Pine Bluff and Hot Springs had been represented. Pine Bluff can now muster a strong team, and they would doubtless have been in evidence had they been present.

The visitors in attendance were Col. J. A. Woodson, W. R. Duley and Dr. J. H. Lenow, Little Rock; J. W. Bryant, Parks Rogers and H. A. Durden, Greenwood. The visitors were all highly pleased with their trip, and were loud in their praise of the liberal manner in which the shoot was conducted. Much of the success is due to the hustling qualities of Stuart Miller. He took care of everybody and everything. The renewed interest manifested in trap-shooting all over the State is very gratifying, and the approaching State tournament was the chief topic of conversation.

PAUL R. LITZKE.

Pine Bluff Gun Club.

PINE BLUFF, Ark., June 4.—Below you will find scores of the last shoot of Pine Bluff Gun Club. The weather was perfect, and nothing but darkness could stop the boys from shooting. Messrs. Paul R. Litzke and John Pemberton, of Little Rock, was with us. Mr. Litzke is secretary of the Arkansas State Sportsmen's Association, and was down here in the interest of an annual tournament in July, which we expect to make the most attractive of any shoot in the South, and hope to have a large attendance.

Below are the practice scores shot to-day:

One hundred targets per man: J. T. Lloyd 82, John Speers 82, E. A. Howell 80, Geo. Clement 76, John Pemberton 74.

Sixty targets; W. M. Bayt 47, Dr. H. E. Williams 44.

Forty-five targets: John Wells 36, W. F. Fergus 36, J. A. Cales 28, Perry Meyer 29, H. E. Martin 29, E. C. Arnold 15.

Thirty targets: W. H. Longford 19, Paul Litzke 12.

E. A. HOWELL, Sec'y.

Moscow Gun Club.

Moscow, Lackawanna County, Pa., June 5.—Below are the scores made in practice by members of the Moscow Gun Club:

Twenty five targets per man: F. M. Spencer 18, Geo. Rafferty 15, A. Depew 14, M. Gilland 14, B. Schank 12, S. W. Travis 12, Dr. Longstreet 11, Geo. Cossler 11, F. Rafferty 10.

Fifteen targets per man: Geo. P. Shaw 10, O. L. Travis 8, Z. La Bar 5.

E. Noack broke 4 out of 10, and J. C. Peck 2 out of 5.

This is a new club, and all the shooters are green hands at the sport. Our president is Mr. Geo. Rafferty and our secretary Ralph Dixon.

June 12.—Practice scores made at to-day's shoot were as below:

Twenty-five targets per man: A. Depew 18, S. Travis 13, Geo. Rafferty 12, Wm. Halderman 10, Barney Schank 9.

Fifteen targets per man: Wm. Eschenbach 11, G. W. Cossler 8, O. Travis 8.

RALPH DIXON, Sec'y.

Indiana Trap-Shooter's League.

KOKOMO, Ind., June 9.—The first annual tournament of the Trap-Shooter's League of Indiana was held at Kokomo, Ind., yesterday and to-day. It was a very enjoyable occasion. The attendance far exceeded the most sanguine expectations of the management, the interest being so keen that the entries on the second day fell but little short of the first, as is usually the case with all two-day tournaments. The trains began to bring in the shooters on Monday afternoon, among the first to arrive being Ed Voris, who was one of the western team to shoot in the American handicap, and C. E. Lacey, of Crawfordsville, Ind. The evening and night trains brought in a number of shooters from various points, among whom were: Willard Thomas, Logansport, Ind.; Al Barton, Findlay, O.; M. Forbes and A. Wuchner, Hartford City; C. F. Knothe, Fort Wayne; W. Woodfill, C. D. Tillson, W. S. Winchester and D. A. Myers, Greensburgh, Ind.; H. B. Hill, A. Gamble and J. Kirsch, Aurora; J. B. Stipp, Bedford, Ind.; Dr. C. C. Everts, John M. Lilly, E. H. Tripp, Geo. C. Beck, Dr. Britton, T. H. Parry and S. C. Griffith, Indianapolis, Ind.; E. R. Kerstetter, W. S. Gillmore and C. A. Davisson, Elkhart, Ind.; J. Penn, Cincinnati; F. J. Kiley, Marion; J. C. Small, Aurora; Capt. A. W. du Bray, Dayton, Ky.; E. F. Weisner, Marion; W. C. Pattison, Indiana Mineral Springs; Ben O. Bush, Kalamazoo, Mich.; D. U. Ford and T. Edwards, Anderson, Ind.; C. L. Bender, Muncie, Ind.; O. P. Garland, Marshall, Ind.; J. L. Deitrick, Waveland, Ind.; J. L. Head, Peru; J. R. Bruner, A. W. King and J. W. Dawalt, Wabash, Ind.; Mr. King, Renssalear, Ind.; Mr. Al Bussell, Leesburg, and Mr. Irwin, Warsaw, Ind. John Parker, of Detroit, Mich., came in on Tuesday morning and took charge of the management, which is sufficient evidence that everything went smoothly. Jack is a superb manager and is very popular with the shooters.

The morning of the first day dawned clear and bright, giving promise of propitious weather for the successful carrying through of the largest tournament ever held in Indiana.

The boys having arrived on the grounds early, a little practice shooting was indulged in, and promptly at 9 o'clock the first squad was called up and shooting began, Mr. Griffith, of Indianapolis, winning the principal prize, a Remington gun, on a score of 25 straight. Following are the scores for Tuesday, June 8:

Events:	1	2	3	4	5	6	7	8	9	10	
Targets:	15	20	15	20	15	20	15	20	15	25	Ave.

THE ANNUAL MEETING.

On Tuesday evening the annual meeting of the league was held and much interest was manifested, fifteen of the eighteen clubs being represented. The election of officers resulted in the selection of Mr. J. L. Head for President; D. A. Myers, Vice-President; Royal Robinson, Secretary-Treasurer; D. A. Myers, C. L. Bender, C. E. Lacey, J. B. Stipp and E. R. Kerstetter Executive Committee, to serve during the ensuing year.

During the meeting Mr. Pattison, on behalf of the Indiana Mineral Springs Co., very generously offered the league a medal valued at $50 to be awarded to the high score made by a team of three from any league club, which offer was accepted and a vote of thanks tendered the donors. A badge, emblematic of the individual championship, was ordered purchased, and it was decided that the high scores in the first three events of Wednesday morning should be declared the winners for this year.

Second Day, June 9.

The shooting of the second day was fully up to the standard of Tuesday, Mr. Penn coming up to the front and shooting nearer his usual form. The grand average prize of $25 was won by Mr. Voris, of Crawfordsville, who also won the individual championship medal. The Parker gun was won by Mr. Deitrick, of Waveland, on a score of 48:

L. W. CUMBERLAND.

Ohio Trap-Shooters' League.

SPRINGFIELD, O., June 4.—The eleventh annual tournament of the Ohio Trap-Shooters' League took place here Wednesday, Thursday and Friday, June 2-4. The tournament was held on the grounds of the Springfield Gun Club, which are conveniently situated within about ten minutes' ride on the electric cars from the heart of the city. All the appointments and paraphernalia were of the finest order and the shoot was run in a remarkably smooth and commendable manner; no objections of any nature were uttered during the entire shoot. The management provided liberally for the comfort of visitors, some five or six large tents and a commodious club house tending to give plenty of room and make the arrangements perfect in every respect. One magautrap was continually in operation and in addition, a set of bluerock expert traps was also used, targets being thrown under the Sergeant system, which, as all know, is on the order of shooting under the magautrap rules. Every precaution was taken to prevent delay on account of inclement weather. The shooters were protected by a permanent roof, which was more like a regular house; long rows of gun racks and benches making a most desirable convenience.

The first day opened rather threateningly, the sky being of a leaden hue, and with strong gusts of wind blowing directly over the traps, which made the targets very erratic in flight, and misses of frequent occurrence. Some forty-five sportsmen took part during the day, speculation being rife as to the rather small list of entries. This was generally conceded to be on account of the Rose system of division, especially with so many points, viz., five moneys in all 15-target events, and six moneys in the 20-bird races. A number of visitors left for home at the close of the first day's programme. Still for all that the system divided the money so evenly that no one came out a large winner, while those making an average of 85 per cent. pulled out a little ahead. In the regular open programme events for the three days, Ralph L. Trimble won first average, closely followed by Rolla O. Heikes and Frank S. Parmelee.

Following are the first day's scores, with Trimble and Heikes tying for first average, Parmelee second and Ketcham third.

SCORES OF JUNE 2.

The *Sportsmen's Review* cup was won by Heikes in shoot-off.

The second day also opened threateningly, heavy clouds scurrying across the sky, with frequent showers. The shoot, however, went on as usual, but strong gusts of wind and at times heavy rains made shooting much more difficult than on the previous day. When the last event for the day was finished it was found that Mingo and Heikes were tied for first average, with R. Trimble and Wheeler close seconds, and Parmelee third.

John Strong, of Springfield, surprised his many friends by winning the L. C. Smith cup, which is emblematic of the Ohio State championship. Following are the scores as made in that race (after which the regular open results follow):

Strong 47, Heikes 44, Rike 44, Peck 42, Norton 42, Mingo 41, Alkire 41, McDonald 39, Ketcham 39, Young 38, Jack 36, Sangler 33, Morrow 16.

SCORES OF JUNE 3.

The third and last day opened anything but favorably. The weather was miserable in the morning, but became pleasant in the afternoon, and as a consequence the attendance of spectators was very large indeed, probably 100 ladies gracing the occasion with their presence. A great incentive for their presence being the knowledge that their local pride, Mrs. Anna Myers, was to participate during the day, and to compare the results with those as made by Mrs. M. F. Lindsley (Wanda). It is due Mrs. Myers to state that she made a very favorable impression on all those who witnessed her shooting, and she bids fair to excel in the art of trap-shooting. It must be borne in mind that she has only been shooting for about six months, but for all that she handles a gun perfectly, and centers the targets in expert style. In the E. C. cup race she scored 30 out of 50 at unknown angles, which with her handicap of 20 made a clean score of 50. Messrs. Norton, Myers, Mingo, Reese and Foley, who with their respective handicaps tied with Mrs. Myers for the trophy, did a commendable thing by relinquishing their claim and presenting the cup to Mrs. Myers as a token of their appreciation of her skill.

Following are scores as made in the cup race:

	H'dicap.		
Mrs. Myers	30	19	49
Foley	29	20	49
Norton	46	3	49
Myers	39	10	49
Mingo	49	1	49

Trap in Little Rhodey.

RHODE ISLAND TRAP-SHOOTING ASSOCIATION.

PROVIDENCE, R. I., June 3.—The fourth series of prize shoots was held by the Rhode Island Trap-Shooting Association to-day, and was known as the Du Pont Powder event. The attendance was light owing to the holiday shoot this week. The handicap shoot for four cans of Du Pont powder at 25 targets, known angles, was won by the following: First, R. C. Root 20; second, J. F. Rossie 18; third, Amos Arnold 17; fourth, S. F. Wilson 17. The latter was a scratch man, Root, Arnold and Rossie having a handicap of 3 and 5 respectively. Several other events were carried out, more in the line of practice. A few double-bird events were shot off and the honors were divided evenly between Root and Wilson. Next week will be King's Smokeless Powder event with several prizes. A special event of 10 birds for a can of Du Pont powder, donated by R. C. Root, was shot off and was won by Amos Arnold with a score of 9 after the regular events were carried out.

PAWTUXET, R. I., June 5.—The Pawtuxet Gun Club held a shoot to-day. Two special events were on the programme. No. 1 was the Fisherman's handicap, No. 2 the E. C. and Schultze Powder handicap. These events resulted thus:

No. 1: Arnold (4) 22, Sheldon (0) 21, Mooney (3) 21, Root (3) 21, Armstrong (7) 21, Badminton (4) 18, Thorne (7) 18, Inman (7) 17, Greene (0) 16, Bain (5) 12.

No. 2: Armstrong (7) 21, Inman (7) 20, Greene (0) 19, Arnold (4) 19, Sheldon (0) 18, Mooney (3) 18, Badminton (4) 15, Matthewson (7) 14, W. L. Cory (guest) 13, Root (3) 12. Bain and Perkins retired without finishing their strings.

June 12.—The Fisherman's Handicap had thirteen entries to day and two guests in addition. The scores were: F. Cory (0) 20, Sheldon (0) 20, S. D. Greene, Jr. (0) 18, Mooney (3) 18, Arnold (3) 16, Hawkins (4) 15, S. Wilson (0) 14, D

Tournament at Marlin, Texas.

MARLIN, Tex., June 3.—Inclosed please find scores made at the three days' tournament—May 25-27—held here under the auspices of the Marlin Gun Club. The attendance was hardly as large as expected, owing to the shoot of the North Texas League, held at Bonham the same week. However, there were from 75 to 100 different persons who shot during the tournament, and it would be difficult to find a more gentlemanly crowd gathered together under any circumstances. Everything passed off as smoothly as could be expected, and the club was highly complimented by many of the visiting shooters. On the night of the second day an excellent banquet was served at the Opera House, tendered by the ladies of Marlin in honor of the club and its guests. Ninety-six covers were laid twice. This was probably the most enjoyable feature of the event to the shooters, although the ball given by the young men of Marlin the following night at the roof garden of the Natatorium was highly appreciated by about seventy-five couples, who partook of the refreshments served and danced until daylight.

The weather during the three days was all that could be asked for, except that it was quite warm for this season. Five expert traps were used, and it might be well to say here that the next shoot we have there will be at least two sets of traps and officers used. We have learned that shooters want to shoot, and not watch somebody else shoot half the time. Twice the business might have been handled, and by classing the shooters after the first day according to their averages would be better. The Rose system was used mostly, although the old system was effective when desired by our guests.

In the 9th event of the third day expert shooters were handicapped; shooting from the 10-gauge line and at unknown traps and angles, which reduced their percentage somewhat.

Will Holland, a veteran at the trap, and who has probably won more money than most any one shooting, attracted a great deal of attention—at least his old-fashioned L. C. Smith 10-gauge gun did, loaded with black powder. Some of the spectators believed he shot 1½lbs. of powder and filled up the remainder of the gun with shot. This latter was not true, however. Will knows his gun is not bored for nitro, as well as a few other things, and, although he has not shot at the trap for four years, his average shows he has not lost the trick to any extent.

The handsome gold medal was won by Mr. Nalle, of Austin, Tex., for highest score in first 15 targets shot at. Other valuable prizes were about evenly distributed among other "crackerjacks."

The scores of May 25-26 are given in two tables, the target scores being separated from the live bird scores. In the table of target scores Nos. 1-5 were shot on May 25, Nos. 6-12 on May 26. In the table of live bird scores Nos. 1-3 were decided on May 25, Nos. 4 and 5 on May 26.

TARGET SCORES OF MAY 25-26.

D. M. ELDRIDGE, Sec'y.

The Parkersburg Tournament.

PARKERSBURG, W. Va., June 8.—The two days' tournament of the Mountain State Gun Club of this city closed this evening. The shoot proved quite a success despite the depressing weather conditions that prevailed on both days. On the first day there was a strong wind blowing, while it rained hard almost the whole of the day; on the second day it was dark, cloudy and windy. One magautrap and a set of expert bluerock traps were used. Bluerock targets, of course, were thrown. All moneys were divided by the Rose system; four moneys in the 15-target events and five in the 20-target events.

The club's grounds are located on a high plateau just back of the city, where the background is rather poor, the mountain to the right and trees to the left. The club has a good club house, provided with everything that conduces to comfort. The shelter of the house and tents was much appreciated, as was the dinner, which was served at the grounds. Mr. Leon J. Epstein, the club's secretary, worked like a beaver all the time, and to him is most of the success of this shoot due. As one of the visitors, I can say that we were all entertained most hospitably by our hosts. Below will be found a list of those who were present at the shoot, as well as the records of both days and the general averages of those who shot through the programme.

THE VISITORS.

F. E. Mallory, Parkersburg, W. Va.; E. O. Bowers, Sistersville, W. Va.; J. F. Mallory and S. T. Mallory, Parkersburg, W. Va.; William Spangler, Columbus, O.; R Clark, Parkersburg, W. Va.; D. M. Wallace, Sistersville, W. Va.; F. C. Percival, Parkersburg, W. Va.; L. Gorham, Sistersville, W. Va.; F. M. Keiser, Parkersburg, W. Va.; A. W. West, Portsmouth, O.; Dr. E. E. Sample, Huntington, W. Va.; H. E. Norton, Ironton, O.; C. E Verges, Lowell, O.; G. L. Alford and P. Schlicher, Marietta, O.; E. Trimble and R. L. Trimble, Covington, Ky.; F. D. Alkire, Woodlyn, O.; F. H. Snow, Brooklyn, O.; J. L. Winston, Washington, Ind; A. J. Russell, Greenville, Pa.; Dr. F. H. Hibbard, Frost, O.; H. Waters, Baltimore, Md.; R. O. Heikes, Dayton, O.; F. Parmelee, Omaha, Neb.; C. A. Young, Springfield, O.; E. D. Rike, Dayton, O.; T. S. Bibbee, Elba, O.; J. H. Mackie, Cincinnati, O.; W. H. Wheeler, Marlboro, Mass.; S. McDonald, Dayton, O.

R. W. EWALT, Sec'y.

Monroe's Interstate.

MONROE, La., June 10.—The fourth target tournament of the Interstate Association for 1897, which was held at Monroe, La., June 9-10, was like its predecessors in many respects. The attendance was not large, in fact, much less than the members of the Monroe Gun Club had had reasons to expect. This can be attributed to a number of causes, but to none so much as to the recent disastrous floods along the Mississippi River. It is in this section that most of the Mississippi trap-shooters live; so that it was hardly to be expected that these people could find time to shoot at the trap; especially as the water has only recently receded. Then, too, the programme was hardly such as the amateur would relish, ten 20-target events is a pretty stiff game; one that will really test the metal of the best of them. This doubtless kept some of the weaker shots away. The tournament, however, was by no means a failure, as more than 8,000 targets were shot during the two days.

THE CLUB WORKED HARD.

The club had spared no effort to make the tournament a success, and had invoked the fostering hand of the Interstate Association. It has excellent grounds, equipped with everything necessary for conducting a modern tournament; but its chief object was to secure the executive ability of Mr. Shaner, and in this respect they made no mistake. For this reason, nothing need be said as to the management of the tournament. Mr. Shaner is well and favorably known in his capacity as manager of the Interstate shoots, having served the Association in that position for five years. Everything passed off smoothly, and the programme was generally shot out by 3 o'clock, and that, too, without any special effort on the part of the management. The targets were thrown from a magautrap, which did its work with a rapidity that was astonishing.

The following were in attendance: Ferd Van Dyke, Dayton, N. J., representing the Winchester Arms. Co., and shooting one of their new '97 model guns; U. M. C. Thomas, Bridgeport, Conn., representing the U. M. C. Co. Then there were J. M. George and A. H. Piety, San Antonio, Tex.; J. A. Jackson, Austin, Tex.; Will Miller and Dave Porterfield, Vicksburg, Miss.; H. L. Baker and Frank Arrighi, Natchez, Miss.; John R. Maxwell and J. Broyles, Columbus, Miss.; E. M. Lindsey and J. T. Welch, Robeline, La.; A. W. Huey, Magenta, La.; R. L. Pruitt, West Point, Miss., and J. T. Lloyd, Pine Bluff, Ark.

GENERAL AVERAGES.

Thirteen shot through the two days' programme, and of this number four belonged to the home club, this speaks well for the club, and is in marked contrast to what one generally sees at tournaments of this kind. Van Dyke was at the top with 90.7, with only one more break to his credit than Jackson, who is next with 90.5. Then comes Dabney, a member of the club, who is nearly 5 per cent. ahead of Piety, who follows him. The remaining nine are all closely bunched. The order in which they finished is shown below, each man shooting at 400 targets:

	Broke.	Ave.		Broke.	Ave.
Van Dyke	363	90.7	Forsythe	322	80.5
Jackson	362	90.5	Arrighi	321	80.2
Dabney	349	87.2	Miller	318	79.5
Piety	335	83.7	Porterfield	307	76.7
George	331	82.7	Stevenson	295	73.7
Huey	327	81.7	U M C	281	70.2
Aby	325	81.2			

First Day, June 9.

Sunshine is very essential to the success of a shoot, but that of today was rather too fierce and penetrating, and everyone avoided it as much as possible. Elmer Shaner's face never looked rosier; his Japanese helmet has been shipped to New Haven, where next month it may perhaps see service. The programme was a lengthy one, but the entries were not large, as only twenty-four shooters took part, though eighteen shot through. This alone requiring 3,600 targets. Most of the shooters had had some experience with magautrap, but it proved as deceptive as ever and nothing phenomenal was done in the way of scores. One of the best features of the day was Dabney s run of 42 straight. Aside from this misses occurred quite regularly and straights were hard to get. Only once was there more than one in any event, that being in the ninth, when Jackson, Dabney and Miller were credited with 7 points each for straight scores. There were four other straights made during the day. Dr. Forsythe got one in the first, Van Dyke one in the fifth, Dabney began his run in the eighth, and then when it became necessary for Van Dyke to go straight in the last event in order to tie Piety for first average he just went out and did it. Thus Piety and Van Dyke were tied for the position of honor; then came Jackson, while Dabney and Arrighi were tied for the next place. The programme consisted of ten 20-target events, entrance $2.50, $10 added to each. After the programme was finished there were two extra 15-target events. One had seventeen entries and the other twelve.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.

Swartz	..	..	10	..	..	..	..	..	..	..	20	10	50

Second Day, June 10.

It is rarely the case in a two days' shoot that any new arrivals put in an appearance on the last day, and there was no exception to the rule here. The entries fell off considerably, several of the visiting shooters having gone home. Only thirteen shot through the programme to-day. The bright particular feature of the day was Jackson's great shooting; he started off a little slow, but after the fourth event he was very much in evidence. He made three straight scores during the day, and also has a run of 50 to his credit. On the first day Van Dyke led him by 3 breaks, but to-day he all but succeeded in closing the gap; one target only separated them at the finish. Van Dyke also shot well again, but let down perceptibly in the last two events. Here he dropped 7 birds, more than in any other two events of the shoot. Dabney, too, kept up his good form, as he was again third. With this exception, all the other contestants let down, and the averages are not nearly so high collectively as yesterday. Scores of 14 frequently got in for money. The programme was an exact repetition of that of the previous day.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.	Av.
Jackson	17	19	19	16	20	17	18	20	20	18	200	184	92
Van Dyke	20	19	19	18	18	17	18	20	17	16	200	182	91
Dabney	19	18	17	17	16	17	19	16	17	19	200	175	87.5

Piety	14	12

Boston Gun Club.

WELLINGTON, Mass., June 2.—The usual coterie of enthusiasts gathered at Wellington to-day, Wednesday, for the second shoot in the second '97 prize series, and a beautiful day it was; quite sufficient in itself to draw twice the number from the realms of business and work. But one holiday had already broken the week, and though the weather of Monday, Decoration Day, was evidently intended for trap-shooters of Baptist denomination only, so that comparatively few in this vicinity indulged in this particular form of sport, some of our regular participants find it difficult to secure two days off out of six, not to mention the Saturday half-holidays now so universally bestowed in the months of May, June, July and August. Summer vacations are coming, too, and already the Boston Gun Club's ranks are being depleted to a certain extent. Next week Mr. Gordon and Mr. Woodruff will be missing; the former off to his summer home in Falmouth, Mass., the latter to New Hampshire in preparation for a later more extended visit. About the time of shore-bird shooting the series will be ended, and then *au revoir* until the bleak winds and snows again whistle about the club house, and the days of fall hunting are so far gone as to create a desire to still burn powder at something, if only asphalts, for the benefit of an afternoon's enjoyment—and the ammunition manufacturers.

In the match to-day Gordon and Eastman were high with 22 out of 25, and the shooting of the latter was for the whole afternoon of a high order, excepting perhaps on doubles. Scores as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	10	10	10	6	10	15	10	10	10	10	10	10	10
Gordon	7	7	6	4	10	13	9	4	7	9	6	8	..
Brown	4	6	7	3	7	10	8	4	5	6	..	..	..
Miskay	6	5	7	4	8	11	10	7	7	8	8	..	6
Sheffield	8	8	8	3	9	12	6	6	9	7	8	6	..
Woodruff	6	7	6	2	8	10	8	8	6	7	..	..	..
Winters	9	8	7	4	8	10	9	8	9	8	10	8	7
Eastman	8	9	8	1	9	13	9	10	10	10	7	..	8
Benton	4	6	4	3	4	4	8	4	..	..	..	..	..
Horace	6	7	6	3	9	12	5	7	6	8	..	8	..
Spencer	8	8	..	3	7	11	8	8	8	9	7	7	9
Wild	..	..	..	..	7	11	5	6	4	..	..	4	..

Events 1, 5, 6 and 8, known angles; No. 10, same with use of both barrels; No 4, pairs; Nos. 3 and 12, reverse pull; Nos. 2, 7 and 9, unknown; Nos. 11 and 13, expert rules.

Match scores, 25 targets, 15 known and 10 unknown, distance handicap:

Gordon (17)	111111110111110—13	0111111111— 9—22
Eastman (16)	111011110111111—13	1111111011— 9—22
Miskay (17)	011101111100111—11	1111111111—10—21
Spencer (18)	100111101111011—11	1111010101— 8—19

Adams	..	..	..	2	3	4	..	..	..	5	..	..	..	..
Bryan	..	..	..	..	..	8	8	7	8	9	5	7	7	4
Short	..	..	..	..	..	5	6	7	6	7	..	..	..	..

Events 1, 8 and 9 were at regular angles; events 2, 3, 4, 5, 6, 7 and 10 at unknown angles; 11 and 12 were 5 pair doubles each, and events 13 and 14 were "snipe" shoots, unknown traps and angles.

June 12.—The Haverhill Gun Club held their regular weekly practice shoot this afternoon. The attendance was very light. Below find scores made:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
George	8	9	7	7	9	9	9	10	9	9	8	5	5	7	9	9
Miller	7	9	7	..	6	..	..	2	8	7	..	..	..	..	..	..
Brooks	7	6	7	5	8	..	..	..	..	..	..	..	..	..	..	..
Stevens	..	..	..	9	..	9	..	..	..	8	9	..	..	2	8	..
Webster	..	..	..	6	5	8	8	7	5	6	6	6	4	7	6	5
D S Short	..	..	..	..	..	3	5	5	..	..	..	..	..	..	..	..
E B Short	..	..	..	..	..	..	..	..	8	9	10	..	..	..	..	..
Leighton	..	..	..	..	..	3	5	..	..	..	..	..	..	..	..	..

All events were at 10 birds. Events 1, 7, 8 and 11 were at regular angles; event 12 was a "snipe" shoot; event 13 was at 5 pairs, and the remainder at known traps, unknown angles.

In the evening of the same day the club held its first annual meeting, at which the following officers were elected for the ensuing year: President, Geo. H. Leighton. Vice-President, D. S. Short; Secretary and Treasurer, Geo. F. Stevens; Captain, S. G. Miller. Dr. Sherman and Edward George were chosen as members of the executive board, to serve with the president, secretary and captain.

The club finds itself at the end of its first year out of debt and with something in the treasury, together with a comfortable and well appointed house and grounds. It was voted to hold an all day shoot on the Fourth of July, and to extend a special invitation to the members of the Exeter and Portsmouth gun clubs to be present with their ladies.

It was also voted to continue the offer of $10 cash bonus for each and every conviction of violators of the game laws effected by our deputy game wardens. GEO. F. STEVENS, Sec'y-Treas.

Charleston vs, Savannah.

CHARLESTON, S. C., June 6.—The first team shoot for the championship cup presented by the E. C. Powder Co. to be contested for by the Palmetto Gun Club, of Charleston, S. C., and the Forest City Gun Club, of Savannah, Ga., took place to-day at Charleston, and resulted in a victory for the Palmettoes, the score being 321 to 287. This, however, is but one of the four matches necessary to win the cup, which will be decided on the result in a series of seven shoots. The next match will take place in Savannah one week hence. The scores in team shoot and several sweepstake events follow:

Charleston.

GEO. H. HAINES, Sec'y.

IN NEW JERSEY.

TEAM RACES AT MARION.

June 5.—The Endeavor Gun Club shot a couple of team races today at its grounds, Marion, N. J. The opposing teams were the Dunellen Gun Club's team and a team from the Bergen County Gun Club. It was at first intended to shoot two distinct races—one with each team—but it was finally agreed that the one score of the Endeavors should count against each club The result was an easy victory for the home team in both instances. The scores were:

Endeavor Gun Club: J. S. Dustin 21, Ed Taylor 23, C. W. Billings 21, A. R. Strader 21, Edwards 20, E Ingram 20, L. Piercy 18, G. Piercy 17, Eddie Collins 17—181.

Bergen County Gun Club: Herrington 21, H. P. Fessenden 19, Blauvelt 19, Raymond 16, Jackson 15, Snyder 15, Osterhout 15, Whyard 13, Cruger 10—143.

Dunellen Gun Club: Lindzey 19, Baron 18, Seeley 17, Giles 16, Dr. Fletcher 15, Meta 14, Banta 12, Slape 11, Osborne 11—135. A. R. S.

BOILING SPRINGS GUN CLUB.

June 5.—The regular monthly cup shoot of the Boiling Springs Gun Club was held this afternoon. The attendance was quite small compared to what these monthly gatherings usually register. The triple team race at Marion kept many of our shooters away. In the cup shoot F. Hall and E. A. Jeannerett, our president, tied for the trophy; Hall won, as the tie was decided by the toss of a coin. Below are the details of this race:

Club shoot:

F Hall (2)	1111111111111111111111111011101111111111111111111111—48 01 — 1—49

Massachusetts State Shooting Association.

BOSTON, Mass., June 17.—The Massachusetts State Shooting Association held its eighteenth annual tournament to-day on the grounds of the Boston Shooting Association at Wellington. Shooters from nearly every club in the State were present, and in the evening the Association held its annual meeting. The officers elected for the ensuing year are: President, E. B. Wadsworth; First Vice-President, V. D. Kenerson; Second Vice-President, Wm. Allison; Secretary, O. R. Dickey; Treasurer, Thomas Howe; Directors, J. S. Sawyer and R. G. Chisley.

To-day's scores were:

B. S. A.

The P. and O. Border Gun Club League.

NEW CASTLE, Pa., June 12.—Below are the scores made at our tournament on June 10—both league shoot and sweepstakes. The weather was fine and the attendance was large. E. D. Ries, president of our club, died on June 1; death was caused by an accident at the furnace of which he was manager. Mr Ries was held in high esteem by all the shooters in the Pennsylvania and Ohio Shooting League. John L. Winston was placed under an extremely heavy handicap at our shoot, so shot for targets only.

The team race resulted in a win for the home club by two breaks over the Warren team, Greenville being a good third. Below are the details of the race:

New Castle.

Uxbridge Gun Club.

UXBRIDGE, Mass., June 12.—The Uxbridge Gun Club held a tournament, a miss-and-out merchandise event, and a team race, on its grounds to-day. Delegations were present from the Worcester Sportsmen's Club, Woonsocket (R. I.) Gun Club, and Pawtuxet (R. I.) Gun Club.

The first event of 15 birds, regular angles, had twenty-eight entries: Walls 14 and Dr. Hammond 14, first prize; Root 13, Burbank 13, second prize.

No. 2, 10 birds, unknown angles: Ford 10, first prize; Noyes, Day, Card and Smith 9, second prize.

No. 3, 15 birds, reversed angles: Whitin 13, Ford 13, first prize; Bucklin, Kenerson, Walls, Mich, Seagrave, Hammond and Link 12, second prize.

No. 4, 10 birds, unknown traps: McClellan 9, Card 9, first prize; Mansfield, Kenerson, Ford, Smith and Provo 8, second prize.

No. 5, 15 birds, regular angles: Dr. Hammond 15, Kenerson 15, first prize; Root, Ford, Burbank and Whitin 14, second prize.

No. 6, 20 birds, unknown angles: Walls 20, first prize; Noyes 19, Ford 19, second prize.

No. 7, 20 birds, unknown angles: Ford 19, first prize; Link 18, second prize.

Nos. 6 and 7 included a team race of eight men each between the Worcester (Mass.) Sportsmen's Club and the Uxbridge Gun Club, with 40 birds, unknown angles, allotted each shooter. Below are the full scores in this event:

Uxbridge.	No. 6.	No. 7.	Total.	Worcester	No. 6.	No. 7.	Total.
Whitin	13	9	22	Smith	17	15	32
Burbank	15	16	31	Knowles	12	13	25
Day	14	16	30	Rugg	19	15	34
Mansfield	15	17	32	Kenerson	17	15	32
Ford	19	19	38	Walls	20	16	36
Noyes	19	14	33	Snell	14	13	27
Gibson	13	15	28	McClellan	10	15	25
Johnson	18	12	30	Parker	11	13	24
	126	118	244		120	115	235

No. 8 was a miss and-out, with eleven merchandise prizes. Missing on the first shot by some of the crackerjacks on the ground was an entertaining feature. There were twenty-two entries in this event, Dr. Hammond winning first prize.

No. 9, 13 birds, regular angles: Whitin 15, first prize; Day 13, second prize.

No 10, 10 birds, unknown angles, one money: Whitin 9, Ford 9, divided.

It is expected the return match will be shot at Worcester on June 26. GEO. F. DAY, Sec'y.

Hosensack and Limeport.

HOSENSACK, Pa., June 7.—The Hosensack and Limeport gun clubs held a joint shoot here to day. In the 25-target race the following scores were made:

H B Schantz	1101111101101111110111011—20
J P Weiss	1011010110110110110110111—17

In a shoot at 6 live birds per man the following scores were made:

M Brey	122121—6	H T Erdman	202111—5
H D Schwartz	022111—5	J P Weiss	211001—4
G Wieand	122022—5	M Schaffer	001200—2
O J Engleman	100101—3		

H. T. ERDMAN.

Gilbert's Bar Gun Club.

HOBE SOUND, Fla., June 5.—The Gilbert's Bar Gun Club held its second shoot to-day. The score appears below, and as usual is a fine collection of goose eggs. We shoot on the island between the Indian River and the ocean, and the southeast trade wind coming off the ocean, which is hardly 100yds. from our traps, makes the flight of the bluerocks somewhat erratic. It's a good deal like woodcock shooting in a dense cover. Sometimes you get him, but more often you don't.

The club has arranged for a tournament on July 4, which comprises ten 10-bird events, entrance 50 cents each, money divided jack rabbit system, surplus divided 40, 30, 20 and 10 per cent., also a team race, five-man teams, from all along the Indian River. We have entries from four teams and expect to hear from several more:

Events:	1	3	Events:	1	2
Targets:	10	10	Targets:	10	10
Tyndall	3	0	McVean	5	..
Sewall	1	1	H W Bessey	4	..
Stokes	3	..	Serjeantson	4	6
Harmer	2	..	Hoke	3	3

By the way, the first broods of quail are fully fledged and are flying about, and the old birds are preparing for the second broods. I have found several nests of eggs already and the prospects are good for plenty of birds next winter. H. D. MCVEAN, Shooting Master.

PUBLISHERS' DEPARTMENT.

Personally-Conducted Tours via Pennsylvania Railroad.

THAT the public have come to recognize the fact that the best and most convenient method of pleasure travel is that presented by the Pennsylvania Railroad Company's personally-conducted tours, is evidenced by the increasing popularity of these tours. Under this system the lowest rates are obtained, for both transportation and hotel accommodation. An experienced tourist agent and chaperon accompany each tour to look after the comfort of the passenger.

The following tours have been arranged for the season of 1897:

To the north (including Watkins Glen, Niagara Falls, Thousand Islands, Montreal, Quebec, Au Sable Chasm Lakes Champlain and George, Saratoga, and a daylight ride down through the Highlands of the Hudson) July 27 and Aug 17. Rate, $100 for the round trip from New York, Philadelphia, Baltimore and Washington, covering all expenses of a two weeks' trip.

To Yellowstone Park on a special train of Pullman sleeping, compartment and observation cars and dining car, allowing eight days in "Wonderland," Sept. 2. Rate, $235 from New York, Philadelphia, Baltimore and Washington; $230 from Pittsburg.

Two ten-day tours to Gettysburg, Luray Caverns, Natural Bridge, Virginia Hot Springs, Richmond, and Washington, Sept. 28 and Oct. 12. Rate, $65 from New York, $63 from Philadelphia. Apply 1196 Broadway, New York.—*Adv.*

A Great Train to the Seventh Annual Convention of Baptist Young People at Chattanooga, Tenn.

THE grandest trip of the season has been arranged, over the Southern Railway, for Chattanooga and Nashville. A personally conducted party will leave Boston July 12, New York July 13, returning July 24, visiting Washington, Asheville, Chattanooga, Nashville, Norfolk and Old Point Comfort. A most delightful vacation trip for the old and young. This is the official tour for the delegates from Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, eastern Pennsylvania, Maryland, District of Columbia, and the Virginias and Carolinas. A large delegation from Connecticut and New York will join the party.

Write to any agent of the Southern Railway for full particulars, descriptive matter of the great route to Chattanooga "through the Land of the Sky." New York office, 271 Broadway; Boston office, 228 Washington street.—*Adv.*
